## II. Background

The Commission directed the NRC staff in Staff Requirements Memorandum (SRM) "COMGEA/COMWCO-14-0001—Proposed Initiative to Conduct a Lessons Learned Review of the NRC's Force-on-Force Inspection Program" (ADAMS Accession No. ML14043A063) to conduct a lessons-learned review of the NRC's force-on-force inspection program. Through this review, the NRC staff identified that, in certain cases, licensees have implemented immediate compensatory measures where such measures are not required by NRC regulations and guidance. The NRC staff identified proposed enhancements to the force-on-force inspection program and communicated these to the Commission in SECY-14-0088, "Proposed Options to Address Lessons-Learned Review of the U.S. Nuclear Regulatory Commission's Force-on-Force Inspection Program in Response to Staff Requirements Memorandum—COMGEA/COMWCO-14-001" (ADAMS Accession No. ML14139A231).

One of the proposed enhancements was to issue a generic communication to licensees clarifying when compensatory measures must be immediately implemented. In SRM-SECY-14-0088, "Proposed Options to Address Lessons Learned Review of the NRC's Force-on-Force Inspection Program in Response to Staff Requirements—COMGEA/COMWCO-14-0001" (ADAMS Accession No. ML14353A433), the Commission directed the staff to issue a proposed generic communication to clarify the NRC's expectations regarding the implementation of compensatory measures. Therefore, the NRC is issuing a draft RIS to communicate with stakeholders on this matter.

The intent of this RIS is to remind addressees of the requirement for implementation of compensatory measures, supported by a site-specific analysis, to ensure that their physical protection program maintains, at all times, the capability to detect, assess, interdict, and neutralize threats, as identified in Section 73.1, "Purpose and Scope," of title 10 of the *Code of Federal Regulations* (10 CFR). Compensatory measures must be implemented for degraded or inoperable security systems, equipment, or components, and for protective strategy deficiencies

identified during performance evaluation exercises and drills. Licensees should use a site-specific analysis, based on all available information, to determine the specific timeframes and measures to compensate for protective strategy deficiencies, or degraded or inoperable security equipment, systems, or components.

## III. Proposed Action

The NRC is requesting public comments on the draft RIS 2016-XX. The NRC staff will make a final determination regarding issuance of the RIS after it considers any public comments received in response to this request.

Dated at Rockville, Maryland, this 24th day of February 2016.

For the Nuclear Regulatory Commission.
