SUPPLEMENTARY INFORMATION:

Title of Collection: "National Science Foundation Proposal/Award Information—NSF Proposal and Award Policies and Procedures Guide".

OMB Approval Number: 3145-0058.

Expiration Date of Approval: October 31, 2018.

Type of Request: Intent to seek approval to extend with revision an information collection for three years.

Proposed Project: The National Science Foundation Act of 1950 (Public Law 81-507) sets forth NSF's mission and purpose:

"To promote the progress of science; to advance the national health, prosperity, and welfare; to secure the national defense. . . ."

The Act authorized and directed NSF to initiate and support:

- Basic scientific research and research fundamental to the engineering process;
- Programs to strengthen scientific and engineering research potential;
- Science and engineering education programs at all levels and in all the various fields of science and engineering;
- Programs that provide a source of information for policy formulation; and
- Other activities to promote these ends.

NSF's core purpose resonates clearly in everything it does: Promoting achievement and progress in science and engineering and enhancing the potential for research and education to

contribute to the Nation. While NSF's vision of the future and the mechanisms it uses to carry out its charges have evolved significantly over the last six decades, its ultimate mission remains the same.

Use of the Information: The regular submission of proposals to the Foundation is part of the collection of information and is used to help NSF fulfill this responsibility by initiating and supporting merit-selected research and education projects in all the scientific and engineering disciplines. NSF receives more than 50,000 proposals annually for new projects, and makes approximately 11,000 new awards.

Support is made primarily through grants, contracts, and other agreements awarded to approximately 2,000 colleges, universities, academic consortia, nonprofit institutions, and small businesses. The awards are based mainly on merit evaluations of proposals submitted to the Foundation.

The Foundation has a continuing commitment to monitor the operations of its information collection to identify and address excessive reporting burdens as well as to identify any real or apparent inequities based on gender, race, ethnicity, or disability of the proposed principal investigator(s)/project director(s) or the co-principal investigator(s)/co-project director(s).

Burden on the Public: The Foundation estimates that an average of 120 hours is expended for each proposal submitted. An estimated 50,000 proposals are expected during the course of one year for a total of 6,000,000 public burden hours annually.

Dated: May 11, 2016.

Suzanne H. Plimpton,
Reports Clearance Officer, National Science Foundation.

SUPPLEMENTARY INFORMATION:

I. Introduction

Under Section 2.106 of title 10 of the *Code of Federal Regulations* (10 CFR), the NRC is providing notice of the issuance of ESP No. ESP-005 to the Permittee, and under 10 CFR 50.102(c), the NRC is providing notice that the ROD has been issued. With respect to the ESP application filed by PSEG, the NRC finds that the applicable standards and requirements of the Atomic Energy Act of 1954, as amended, (AEA) and the Commission's regulations have been

met. The NRC finds that any required notifications to other agencies or bodies have been duly made and that there is reasonable assurance that the site is in conformity with the permit, the provisions of the AEA, and the Commission's regulations. Furthermore, the NRC finds that the Permittee is technically qualified to engage in the activities authorized, and that issuance of the permit will not be inimical to the common defense and security or to the health and safety of the public. Finally, the NRC finds that the findings required by subpart A of 10 CFR part 51 have been made.

Accordingly, the ESP was issued on May 5, 2016, and became effective immediately.

II. Further Information

The NRC has prepared a final safety evaluation report (FSER) and final environmental impact statement (FEIS) that document the information reviewed and the NRC's conclusions. The Atomic Safety and Licensing Board (ASLB) issued its Initial Decision on April 26, 2016, following the March 24, 2016, mandatory hearing on the staff's review, authorizing the NRC staff to issue to PSEG an ESP for the PSEG Site. The ASLB's Initial Decision constitutes the NRC's ROD. The NRC also prepared a document summarizing the ROD to accompany its actions on the ESP application; this Summary ROD incorporates by reference materials contained in the FEIS. The FSER, FEIS, Summary ROD, and accompanying documentation included in the ESP package, as well as the ASLB Initial Decision, are available online in the ADAMS Public Document collection at <http://www.nrc.gov/reading-rm/adams.html>. From this site, persons can access the NRC's ADAMS, which provides text and image files of NRC's public documents.

III. Availability of Documents

The documents identified in the following table are available to interested persons through the ADAMS Public Documents collection. A copy of the early site permit application is also available for public inspection at the NRC's PDR and at <http://www.nrc.gov/reactors/new-reactors/esp.html>.
