SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a currently approved information collection.

VMS and electronic monitoring systems collect important information on fishing effort, catch, and the geographic location of fishing effort and catch for certain sectors of the Atlantic HMS fleet. Data collected through these programs are used in both domestic and international fisheries management, including for law enforcement, stock assessments, and quota management purposes. Atlantic HMS vessels required to use VMS are pelagic longline, purse seine, bottom longline (directed shark permit holders in North Carolina, South Carolina, and Virginia), and gillnet (directed shark permit holders consistent with the requirements of the Atlantic large whale take reduction plan requirements at 50 CFR 229.39.(h)) vessels. In addition to VMS, pelagic longline vessels are also required to have electronic monitoring systems to monitor catch and account for bluefin tuna harvest and discards.

The National Marine Fisheries Service (NMFS) Office of Law Enforcement (OLE) monitors fleet adherence to gear- and time-area restrictions with VMS position location data. Gear restricted areas and time-area closures are important tools for Atlantic HMS management that have been implemented to reduce bycatch of juvenile swordfish, sea turtles, and bluefin tuna, among other species. Electronic monitoring data from the pelagic longline fleet includes bluefin tuna discard and harvest information. These data are used by NMFS to accurately monitor bluefin tuna catch by the pelagic longline fleet, to ensure compliance with Individual Bluefin Quota (IBQ) limits and requirements,

and to ensure that the Longline category bluefin tuna quota is not over-harvested. VMS reporting of bluefin tuna catch is used to monitor the status of IBQ allocations in real-time.

Atlantic HMS fisheries are managed under the dual authority of the Magnuson-Stevens Fishery Conservation and Management Act (MSA) and the Atlantic Tunas Conservation Act (ATCA). Under the MSA, management measures must be consistent with ten National Standards, and fisheries must be managed to maintain optimum yield, rebuild overfished fisheries, and prevent overfishing. Under ATCA, the Secretary of Commerce shall promulgate regulations, as necessary and appropriate, to implement measures adopted by the International Commission for the Conservation of Atlantic Tunas (ICCAT).

II. Method of Collection

First-time VMS respondents must install a VMS unit and submit an activation checklist to NMFS via mail. Hail-out, hail-in, hourly position reports, and bluefin tuna catch reports must be submitted to NMFS via the VMS communication system. First-time electronic monitoring respondents must have an electronic monitoring system installed by a NMFS contractor. Electronic monitoring data must be submitted after each pelagic longline trip via mail.
