SUPPLEMENTARY INFORMATION:

I. Abstract

Federal investments in ecosystem
restoration projects protect Federal
trusts, ensure public health and safety,
and preserve and enhance essential
ecosystem services. These investments
also generate business activity and
create jobs. The Economic Impacts of
Ecosystem Restoration project aims to
increase the availability of information
on the costs and activities associated
with ecosystem restoration, and to gauge
the economic effects of these
investments to local economies. The
project is comprised of a series of case
studies that quantify the economic
impacts of restoration projects. The case
studies include examples of
collaboratively funded and managed
projects to restore a wide range of
degraded, damaged, or destroyed
ecosystems. In addition to providing
improved information on the economic
impacts of restoration, these case
studies highlight DOI restoration efforts
and tell personalized stories about each
project and the communities that are
positively affected by restoration
activities. Project methods include the
collection of primary expenditure data
and economic input/output modeling.
Results from the first phase of case
studies are available online at [https://
www.fort.usgs.gov/economic-impacts-
restoration](https://www.fort.usgs.gov/economic-impacts-restoration) and in a USGS report titled
'Estimating the economic impacts of
ecosystem restoration—methods and
case studies'. The report provides a
detailed description of the methods
used to estimate economic impacts of
case study projects and also provides
suggestions, lessons learned, and trade-
offs between potential analysis methods.
This second phase of case studies aims
to refine the survey methods and fill in
some data gaps on specific types of
restoration activities.
