*Nature and Extent of Confidentiality:* There is no need for confidentiality with this information collection.

*Needs and Uses:* In the 3.5 GHz Order, the Commission adopted rules to protect existing licensees' registered base stations in the 3650–3700 MHz band from harmful interference from Citizens Broadband Radio Service users for a fixed transition period. Pursuant to Section 96.21(a)(1) and (2) of the Commission's rules, during the transition period, existing licensees will receive protection for operations that are within their Grandfathered Wireless Protection Zone, provided that: (1) The stations were registered in the Commission's Universal Licensing System (ULS) on or before April 17, 2015; and (2) as of April 17, 2016 the stations were constructed, in service, and fully compliant with the relevant operating rules.

The 3.5 GHz Order established rules for commercial use of 150 megahertz in the 3.5 GHz Band and creates a new Citizens Broadband Radio Service. The rules create additional capacity for

wireless broadband by adopting a new approach to spectrum management to facilitate more intensive spectrum sharing between commercial and federal users and among multiple tiers of commercial users. Freeing additional spectrum is one of the Commission's core spectrum policy goals and the President's Council of Advisors on Science and Technology recommended that this band would be particularly well suited for spectrum sharing.

Before the release of the 3.5 GHz Order, the band segment was currently reserved for use by Department of Defense (DoD) radar systems and commercial fixed satellite service (FSS) earth stations (in the 3600–3650 MHz portion of the band), as well as Grandfathered Wireless Broadband Radio Services. The *3.5 GHz Order* established a roadmap for making the entirety of the 3.5 GHz band available for commercial use in a phased manner. This sharing arrangement is part of a broader three-tiered sharing framework enabled by a Spectrum Access System (SAS). The SAS incorporates a dynamic spectrum database and serves as an advanced, highly automated frequency coordinator across the band.

Incumbent users represent the highest tier in this framework and receive interference protection from Citizens Broadband Radio Service users. Protected incumbents include the federal operations and FSS earth stations described above and, for a finite period, Grandfathered Wireless Broadband Licensees. Non-federal incumbents must register the parameters of their operations with the Commission and/or an SAS to receive protection from Citizens Broadband Radio Service users.

On August 19, 2016, the Wireless Telecommunications Bureau (WTB) and Office of Engineering and Technology (OET) released a Public Notice adopting the final methodology for determining Grandfathered Wireless Protection Zones for existing licensees in the 3650–3700 MHz band, establishing a baseline contour used to protect these areas. See 47 CFR 96.3 (Grandfathered Wireless Protection Zone), Wireless Telecommunications Bureau and Office of Engineering and Technology Announce Methodology for Determining the Protected Contours for Grandfathered 3650–3700 MHz Licensees, GN Docket No. 12–354, Public Notice, FCC 16–946 (Aug. 19, 2016). The Public Notice reiterated that licensees are required to certify which of their base stations were constructed, in service, and in full compliance with the rules by April 17, 2016. At the same time that licensees certify to the above

they must identify whether or not that base station has unregistered Customer Premises Equipment (CPE) and the distance to the furthest registered CPE for each sector.

The Commission's rules establishing registration and construction requirements for Grandfathered Wireless Broadband Licensees are intended to distinguish between “real” networks that have received substantial investment and provide socially productive service from “paper networks” whose only effect is to restrict spectrum accessible by the Citizens Broadband Radio Service. The revised information collection under sections 96.21(a)(1) and (2) will help the Commission and the SASs protect these existing networks from interference during the transition period while promoting spectral access and efficiency by new users in the band and is an important step in making this band available for commercial use. Further, the information will allow the licensees that have invested in such networks to receive interference protection as afforded by the rules.

Federal Communications Commission.
