

TABLE 1—POPULATION ABUNDANCE ESTIMATES, TOTAL LEVEL B TAKE, AND PERCENTAGE OF POPULATION THAT MAY BE TAKEN FOR THE POTENTIALLY AFFECTED SPECIES DURING THE ROCKY INTERTIDAL MONITORING PROGRAM

Species	Abundance *	Total Level B take	Percentage of stock or population
Harbor seal	¹ 30,968, ² 24,732	203	0.6–0.8
California sea lion	296,750	720	0.2
Northern elephant seal	179,000	40	<0.01

* Abundance estimates are taken from the 2014 U.S. Pacific Marine Mammal Stock Assessments (Carretta *et al.*, 2014).

¹ California stock abundance estimate;

² Oregon/Washington stock abundance estimate from 1999—Most recent surveys.

Small Numbers Analysis

Table 1 in this document presents the abundance of each species or stock, the authorized take estimates, the percentage of the affected populations or stocks that may be taken by harassment, and the species or stock trends. According to these estimates, PISCO would take less than 0.8% of each species or stock. Because these are maximum estimates, actual take numbers are likely to be lower, as some animals may select other haulout sites the day the researchers are present.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the mitigation and monitoring measures, which are expected to reduce the number of marine mammals potentially affected by the action, NMFS finds that small numbers of marine mammals will be taken relative to the populations of the affected species or stocks.

Impact on Availability of Affected Species for Taking for Subsistence Uses

There are no relevant subsistence uses of marine mammals implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act (ESA)

None of the marine mammals for which incidental take is authorized are listed as threatened or endangered under the ESA. Therefore, NMFS has determined that issuance of the IHA to PISCO under section 101(a)(5)(D) of the MMPA will have no effect on species listed as threatened or endangered under the ESA.

National Environmental Policy Act (NEPA)

In 2012, NMFS prepared an EA analyzing the potential effects to the human environment from conducting

rocky intertidal surveys along the California and Oregon coasts and issued a Finding of No Significant Impact (FONSI) on November 26, 2012 on the issuance of an IHA for PISCO's rocky intertidal surveys in accordance with section 6.01 of the NOAA Administrative Order 216–6 (Environmental Review Procedures for Implementing the National Environmental Policy Act, May 20, 1999). We have reviewed the application for a renewed IHA for ongoing monitoring activities for 2016–17 as well as results from the 2014–15 monitoring report. Based on that review, we have determined that the action is very similar to that considered in the previous IHA. In addition, no significant new circumstances or information relevant to environmental concerns have been identified. Thus, we have determined that the preparation of a new or supplemental NEPA document is not necessary, and will, after review of public comments determine whether or not to reaffirm our 2012 FONSI. The 2012 NEPA documents are available for review at www.nmfs.noaa.gov/pr/permits/incidental/research.htm.

Authorization

As a result of these determinations, we have issued an IHA to PISCO for conducting the described activities related to rocky intertidal monitoring surveys along the Oregon and Washington coasts from February 3, 2016 and end on February 2, 2017 provided the previously described mitigation, monitoring, and reporting requirements are incorporated.
