SUPPLEMENTARY INFORMATION:

I. Abstract

The USGS is authorized under SECURE Water Act Section 9508 to assist state water resource agencies with improving their water use data collection activities. USGS has implemented the Water Use Data and Research program (WUDR), to work with state water agencies in gathering and analyzing their data, and assists this effort via cooperative agreements. WUDR will be used to improve the collection and reporting of water-use categories by state agencies, including categories of water use that were previously collected by the USGS National Water Use Information program but discontinued due to limited resources. This collection will also be used in reports to Congress on water resources in the nation. Grant funds will be announced and awarded as part of a competitive process that will be guided, annually, by a technical committee whose members will include representatives from the stakeholder community as well as USGS. Water Use Data and Research Program funds will be coordinated with a single agency in each State. Collaboration and coordination with USGS personnel will be required as part of the Grants program. Data must be stored electronically and made available at the 8-digit hydrologic-unit code (HUC-8) and county level in formats appropriate for existing USGS databases. Additionally, methods used for data collection (estimated values, coefficients, etc.) and a description of data quality assurance and control will be required.
