*Title Associated Form, and OMB Number:* DoD/USAF Military Aircraft Overflight Study.

*Needs and Uses:* The information collection is necessary to obtain acoustical noise data and visitor survey data, to estimate a dose-response relationship between sound from military aircraft overflights and effects (reactions) on visitors to National Park Service (NPS) areas. This study builds upon research conducted by the National Park Service to examine the dose-response relationship between sightseeing aircraft overflights and NPS visitor reactions. Because of the different characteristics of sounds from military aircraft, the dose-response relationship for these types of aircraft overflights may be quite different from the relationship developed for sightseeing aircraft overflights.

*Affected Public:* Public visitors to National Park Service areas.

*Annual Burden Hours:* 250.

*Number of Respondents:* 1500.

*Responses Per Respondent:* 1.

*Average Burden Per Respondent:* 10 minutes.

*Frequency:* One time.

#### **SUPPLEMENTARY INFORMATION:**

##### **Summary of Information Collection**

On-site interviews will be administered with visitors at selected sites within NPS areas. Concurrent with the on-site interviews, sound recordings of the exposure to aircraft overflights (and other noise sources) will be taken to determine the "noise dose" experienced by each visitor. The noise doses will be matched to the responses obtained in the visitor survey. A minimum of 300 visitors and a maximum of 500 visitors will be surveyed at each of three potential sites over a period of 4-5 days at each site. A maximum total of 1500 park visitors will be surveyed. The interview will take approximately 5-10 minutes to administer and will be conducted with all eligible adult members of sampled groups.
