## NUCLEAR REGULATORY COMMISSION

### Docket No. 50-263

#### Northern States Power Company; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-22 issued to Northern States Power Company (the licensee) for operation of the Monticello Nuclear Generating Plant, located in Wright County, Minnesota.

The proposed amendment would evaluate the unreviewed safety questions associated with the increase in calculated peak suppression pool temperature and the reliance on containment pressure to compensate for the deficiency in net positive suction head for the emergency core cooling

system pumps following a design basis accident.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment requests involve no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

(1) *The proposed amendment will not involve a significant increase in the probability or consequences of an accident previously evaluated:*

These changes do not affect the physical configuration of the plant or how it is operated. These changes:

(1) Document the acceptability of the limiting mode of long-term post-LOCA [loss of coolant accident] containment heat removal that has been analyzed and found to be acceptable.

(2) Document the acceptability of the use of a limited amount of post-LOCA containment overpressure to assure adequate NPSH [net positive suction head] for ECCS [emergency core cooling system] pump operation.

The changes clarify the Technical Specification Bases to correctly describe the design and licensing basis for containment spray/cooling equipment and ECCS pump NPSH following a loss of coolant accident.

The original Monticello FSAR [final safety analysis report] identified the most degraded condition for containment spray/cooling equipment availability. This condition could occur following a postulated loss of offsite power and loss of one diesel generator. One RHR [residual heat removal] pump and one RHRSW [residual heat removal service water] pump would be available under these conditions. An update of the containment pressure and temperature analysis following completion of the Mark I Containment Long-term Program in the early 1980's
