

notification is .5 hours. 400 notifications \times .5 = 200 hours.

Needs and Uses: Section 76.958 states that a regulated cable operator that proposes to change any rate while a cable service tier rate is pending before the Commission shall provide the Commission at least 30 days notice of the proposed change. The information will be used by the Commission to ensure that regulated cable operators give the appropriate notice to the Commission concerning proposed rate changes while they have cable service tier complaints pending before the Commission.

OMB Control Number: 3060-0570.

Title: Section 76.982, Continuation of Rate Agreements.

Type of Review: Extension of a currently approved collection.

Respondents: State or local governments.

Number of Respondents: 25.

Estimated Time Per Response: .5 hours.

Total Annual Burden to Respondents: We estimate that 25 notifications are annually filed by franchising authorities who wish to continue to regulate rates under existing rate agreements. The average burden on franchising authorities is .5 hours per notification. 25 notifications \times .5 hours = 12.5 hours (rounded up to 13 hours).

Total Annual Cost to Respondents: Postage and stationery expenses are estimated to be \$1 for each filing. 25 notifications \times \$1 = \$25.

Needs and Uses: Section 76.982 provides that franchise authorities who were regulating basic cable rates pursuant to a rate agreement executed before July 1, 1990, may continue to regulate rates during the remainder of the agreement. Franchise authorities must notify the Commission of their intentions to continue regulating rates under the rate agreement. These new requirements ensure that cable subscribers nationwide enjoy the rates that would be charged by cable systems operating in a competitive environment. These notifications enable the Commission to determine the extent of rate regulation agreements that pre-date the 1992 Cable Act and that are still in effect.

Background

Under a Memorandum of Understanding (MOU) signed in December 1990 with DOE, replaced by an MOU signed in 1996, the Department of Health and Human Services (HHS) was given the responsibility and resources for conducting analytic epidemiologic investigations of residents of communities in the vicinity of DOE facilities, workers at DOE facilities, and other persons potentially exposed to radiation or to potential hazards from non-nuclear energy production use. HHS has delegated program responsibility to CDC.

In addition, an MOU was signed in October 1990 and renewed in November 1992 between ATSDR and DOE. The MOU delineates the responsibilities and procedures for ATSDR's public health activities at DOE sites required under sections 104, 105, 107, and 120 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or "Superfund"). These activities include health consultations and public health assessments at DOE sites listed on, or proposed for, the Superfund National Priorities List and at sites that are the subject of petitions from the public; and other health-

related activities such as epidemiologic studies, health surveillance, exposure and disease registries, health education, substance-specific applied research, emergency response, and preparation of toxicological profiles.

Purpose

The Savannah River Site (SRS) Dose Reconstruction Project supports research which evaluates past releases of radioactive materials and chemicals from the SRS to the surrounding environment. The CDC and the Radiological Assessments Corporation are conducting a study of the SRS to determine whether past nuclear materials production caused offsite health effects. Phase I of the study involved the most comprehensive review of records ever undertaken at any of the U.S. weapons facilities. Phase II, to be completed in the fall of 1998, uses information from Phase I to estimate past releases of radionuclides and chemicals from the SRS. The research team has also analyzed the offsite environmental measurements of these materials performed since the early 1950s.

This series of public meetings will present the study results to date, and will provide an opportunity for individuals to comment on the research and to provide any new information concerning past SRS operations. Public input and the promise to provide clear and easily obtained sources of public information are important parts of this study. Newsletters are being published regularly that provide updates on the progress of the research and fact sheets, highlighting specific research topics, are being released as well. Individuals with information of possible value to the study are encouraged to attend public workshops. All public workshops will be held in South Carolina and Georgia, and will be announced in newsletters.

Agenda items are identical for each meeting and are subject to change as priorities dictate.
