**DEPARTMENT OF DEFENSE**

**Department of the Army; Corps of Engineers**

**Notice of Availability of Draft Environmental Impact Statement (EIS) for Proposed Open-Water Placement of Dredged Material at Site 104, Queen Anne's County, Maryland**

**AGENCY:** U.S. Army Corps of Engineers, DoD.

**ACTION:** Notice of availability.

**SUMMARY:** In accordance with the National Environmental Policy Act (NEPA), the U.S. Army Corps of Engineers, Baltimore District, is initiating a 45-day public review and comment period of the draft EIS for the Proposed Open-Water Placement of Dredged Material at Site 104, located in Queen Anne's County, Maryland. The EIS was prepared to (1) identify and evaluate the potential environmental impacts associated with the proposed project and (2) to develop a document for the public to use to participate in the District's decision making process. Specifically, the EIS identifies existing conditions, identifies any anticipated changed environmental conditions, re-examines previously collected data in light of new or updated methodologies, collects new environmental data, and evaluates alternatives to address the purpose and need of the project.

**FOR FURTHER INFORMATION CONTACT:**

Questions about the proposed action and the draft EIS can be addressed to Mr. Wesley E. Coleman Jr., Baltimore District, U.S. Army Corps of Engineers, ATTN: CENAB-PL-P, P.O. Box 1715, Baltimore, Maryland 21203-1715, telephone (410) 962-4713 or 1-800-295-1610. E-mail address: wesley.e.coleman@usace.army.mil

**SUPPLEMENTARY INFORMATION**

1. The Maryland Port Administration (MPA) and the U.S. Army Corps of Engineers (USACE) are responsible for maintaining, through periodic dredging, the 126 miles of Federal navigation channels that serve the Port of Baltimore. Continued maintenance dredging is required to ensure the efficiency and safety of the approach channels to the Port of Baltimore. Maintenance dredging of the Chesapeake Bay approach channels requires the removal of approximately 3.5 million cubic yards (mcy) of

material per year, excluding material from the Virginia channels, Baltimore Harbor channels, and additional channels north of the Sassafras River that are dredged by Philadelphia District (CENAP). Several new-work dredging projects are currently proposed to improve navigation safety and efficiency for the Chesapeake Bay approach channels over the next several years. These new-work projects would require the removal of an additional 18 mcy of dredged material from the Chesapeake Bay approach channels over that time period. The Baltimore District is evaluating Site 104 as a potential open-water placement area for this maintenance and new work material. Therefore, the U.S. Army Corps of Engineers, Baltimore District, is now preparing an Environmental Impact Statement (EIS) for the Proposed Open-Water Placement of Dredged Material at Site 104, Queen Anne's County, Maryland.

2. In accordance with the National Environmental Policy Act (NEPA), the Corps of Engineers, Baltimore District, is initiating a 45-day public review and comment period for the draft EIS for the Proposed Open-Water Placement of Dredged Material at Site 104, located in Queen Anne's County, Maryland. Site 104 is a previously used 1,800-acre open-water placement site located approximately 2,000 feet north of the Chesapeake Bay Bridge, east of the navigational channel, and 1 mile west of Kent Island. Site 104 was established in 1924 by the U.S. Army Corps of Engineers, and was used for the placement of dredged material through 1975. Currently, the site is approximately 6.8 km (4.2 miles) long and 1.1 km (0.65 miles) wide. The depth ranges from -12.8 to -23.3 meters (-42 to -76 feet) mean lower low water (MLLW). If a decision is made to use Site 104, placement would be restricted to areas deeper than the -14 meter (-45 foot) contour interval to achieve a final site elevation of approximately -14 meters (-45 feet) MLLW. Placement would occur only between October 15 through April 15, thus avoiding the most sensitive periods for most natural resources of concern in the area and minimizing nutrient and water quality impacts. Two potential types of placement are proposed for the site: bottom release scow of mechanically dredged materials or controlled bottom pipeline placement of hydraulically rehandled dredged materials.

3. Studies to date indicate that open-water placement of dredged material at Site 104 would have both negative and positive environmental impacts. The
