Agency Information Collection Activities: Submission for OMB Review; Comment Request, National Emissions Standards for Coke Oven Batteries

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this document announces that the following Information Collection Request (ICR) has been forwarded to the Office of Management and Budget (OMB) for review and approval: National Emissions Standards for Coke Oven Batteries, part 63, subpart L; OMB No. 2060-0253; EPA No. 1362.04.; expiration date is April 30, 2000. SUPPLEMENTARY INFORMATION:

Title: National Emissions Standards for Coke Oven Batteries, Part 63, Subpart L; OMB No. 2060-0253; EPA No. 1362.04; expiration date is April 30, 2000. This is a request for a revision a currently approved collection.

Abstract: These standards apply to owners or operators of by-product and non-recovery coke oven batteries, whether existing, new, reconstructed, rebuilt or restarted. It also applies to all batteries using the conventional by-product recovery, the nonrecovery process, or any new recovery process. Applicability dates vary depending on the emission limitation the affected facility is subject. The National Emissions Standards for Coke Oven Batteries were proposed on December 4, 1992 and promulgated on October 27, 1993. Under this rule, all existing batteries must choose a compliance track. Three compliance approaches are available under the rule: the "MACT (Maximum Achievable Control Technology) track," the "LAER (Lowest

Achievable Emission Rate) extension track," and straddling both tracks (until January 1, 1998).

Owners or operators of coke oven batteries, whether existing, new, reconstructed, rebuilt or restarted, are required to comply with the following monitoring, recordkeeping and reporting requirements:

Monitoring Requirements Include:

1. Daily monitoring of coke oven batteries by a certified observer for each emission point and calculate the 30-run rolling average.

2. Daily performance tests for each coke oven battery are needed to determine compliance with the visible emission limitations for coke oven doors, topside port lids, offtake systems, and charging operations.

3. Monitoring of pollution control equipment operation and maintenance (*e.g.*, flare system).

4. Daily inspection of the collecting main for leaks according to Method 303.

Recordkeeping Requirements Include:

1. Maintain records of the startup, shutdown, or malfunction plan developed under section 63.310.

2. Maintain records of the coke oven emission control work practice plan developed under section 63.306.

3. Maintain records of maintenance and inspection on leaks for by-product coke oven batteries.

4. Maintain records of daily operating parameters and design characteristics for nonrecovery coke oven batteries.

5. Maintain records of bypass/bleeder stack flare system or an approved alternative control device.

6. Maintain records onsite for at least a year and must thereafter be accessible within three working days upon the Administrator's request.

Reporting Requirements Include:

1. Submit one-time notifications to elect a compliance track and to certify initial compliance.

2. If applicable, respondents also would submit one-time notifications or requests for constructing a new, brownfield, or padup rebuild by-product coke oven battery using a new recovery technology; restarting a cold-idle battery shutdown prior to November 15, 1990; obtaining an exemption from control requirements for bypass/bleeder stacks by committing to permanent closure of a battery or using an equivalent alternative control system for the stacks; and obtaining an alternative standard for coke oven doors on a battery equipped with a shed.

3. If a malfunction occurred, respondents must notify the enforcement agency and follow up with a written report. A report also would be required if coke oven gas were vented
