

system if South Oakford Station shuts down. DTI states that a permanent solution to this situation is to uprate certain of the storage pipelines in the southern portion of the Murrysville Storage Pool to 225 psig, which is a higher MAOP than that portion will achieve.

DTI notes that the pipelines would be uprated using US Department of Transportation regulations, guidelines, and procedures and additionally the uprating of these storage pipelines will have no effect on the design capacity of the Oakford Storage Complex or on the design capacity of the DTI system.

DTI states that no new facilities are required, consequently, there is no cost to DTI, or its customers, associated with increasing the certificated MAOP of these storage pipelines to 225 psig.
