SUPPLEMENTARY INFORMATION:

I. Abstract

Title 13, section 182, of the United States Code authorizes the Secretary of Commerce to conduct surveys deemed necessary to furnish annual and other interim current data on the subjects covered by the Census of Governments.

The recent development of public services dubbed "Electronic Government," or "E-Government," is a result of the rapid growth of computer access and the Internet. The emergence of electronic technologies has fueled a significant change in the public sector's manner in conducting its business. Current measures of public activity—established in a period before computers—do not provide gauges of this new and important change. The public sector is a major component of the economy, as both a purchaser and deliverer of goods and services. It is important that our Nation measure this development because the potential effects of this new technology include the promise of greater efficiencies in the delivery of public services, more effective communications between the public and its government, and a wider scope of public services available to more people.

The Census Bureau plans to conduct a survey of state governments in order to begin measuring the scope and effects of this new activity. The survey's broad definition of E-Government includes any government process conducted online, employing computer enabled electronic devices. Title 13, section 182, of the United States Code authorizes the Secretary of Commerce to conduct surveys deemed necessary to furnish annual and other interim current data on the subjects covered by the Census of Governments. This survey concentrates on three different measurable parts of total Information Technology (IT) and E-Government:

(1) Infrastructure—the costs to governments of providing electronic hardware and software that form the backbone of E-Government, and the personnel and organizational supports for total IT and E-Government;

(2) Processes—the E-Government interactions of citizens, businesses, and other governments with their governments; and

(3) Transactions—measurements for these E-Government processes.

The Census Bureau, as the premier national data collection agency, is uniquely situated to measure E-Government. The current Census

Bureau measures of public sector economic activity—used by Federal data analysis agencies such as the Bureau of Economic Analysis and the Federal Reserve Board—provide an important basis for making informed policy decisions. The addition of E-Government information will help governmental leaders at all levels formulate policies that will improve our entire governmental system. Other users of these data will be the State and local governments and related organizations, public interest groups, the academic community, and many business, market and private research organizations.

II. Method of Collection

Basic questionnaires will be sent to the primary technology offices within each state, with additional forms, designed for specific types of departments, agencies, and offices, etc., also incorporated. Information from state governments and the District of Columbia will be compiled by office staff from questionnaire responses collected via standard mail and the Internet.

The Census Bureau will also research the feasibility of developing cooperative data sharing and central collection arrangements with the state governments to minimize respondent burden.

Electronic data collection and dissemination will be developed and incorporated.
