SUPPLEMENTARY INFORMATION

I. Abstract

The economic census, conducted under the authority of Title 13, United States Code (U.S.C.), is the primary source of facts about the structure and functioning of the Nation's economy. Economic statistics serve as part of the framework for the national accounts and provide essential information for government, business, and the general public. Economic data are the Census Bureau's primary program commitment during nondecennial census years. The 2002 Economic Census covering the Information; Professional, Scientific, and Technical Services; Management of Companies and Enterprises; Administrative and Support and Waste Management and Remediation Services; Educational Services; Health Care and Social Assistance; Arts, Entertainment, and Recreation; and Other Services (Except Public Administration) sectors (as defined by the North American Industry Classification System (NAICS)) will measure the economic activity of 2.5 million establishments. The information collected will produce basic statistics by kind of business on the number of establishments, receipts/revenue, expenses, payroll, and employment. It will also yield a variety of subject statistics, including receipts/revenue by receipts/revenue line, receipts/revenue by class of customer, and other industry-specific measures. Primary strategies for reducing burden in Census Bureau economic data collections are to increase electronic reporting through broader use of computerized self-administered census questionnaires, on-line questionnaires, and other electronic data collection methods.

II. Method of Collection

A. Mail Selection Procedures

Establishments for the mail canvass will be selected from the Census Bureau's Business Register. To be eligible for selection, an establishment will be required to satisfy the following conditions: (i) It must be classified in the information; professional, scientific, and technical services; management of companies and enterprises; administrative and support and waste management and remediation services; educational services; health care and social assistance; arts, entertainment, and recreation; or other services (except

public administration) sector; (ii) it must be an active operating establishment of a multi-establishment firm (i.e. a firm that operates at more than one physical locations), or it must be a single-establishment firm (i.e. a firm that operates at only one physical location) with payroll; and (iii) it must be located in one of the 50 states or the District of Columbia. Mail selection procedures will distinguish the following groups of establishments:

1. Establishments of Multi-Establishment Firms

Selection procedures will assign all active operating establishments of multi-establishment firms to the mail component of the potential respondent universe. We estimate that the 2002 Economic Census mail canvasses will include approximately 429,000 establishments of multi-establishment firms.

2. Single-Establishment Firms With Payroll

As an initial step in the selection process, we will conduct a study of the potential respondent universe. This study will produce a set of industry-specific payroll cutoffs that we will use to distinguish large versus small single-establishment firms within each kind of business. This payroll size distinction will affect selection as follows:

(a) **Large Single-Establishment Firms.** Selection procedures will assign single-establishment firms having annualized payroll (from Federal administrative records) that equals or exceeds the cutoff for their industry to the mail component of the potential respondent universe. We estimate that the 2002 Economic Census mail canvasses will include approximately 706,000 large single-establishment firms.

(b) **Small Single-Establishment Firms.** Selection procedures also will assign a sample of single-establishment firms having annualized payroll below the cutoff for their industry to the mail component of the potential respondent universe. Sampling strata and corresponding probabilities of selection will be determined by a study of the potential respondent universe conducted shortly before mail selection operations begin. We estimate that the 2002 Economic Census mail canvasses will include approximately 72,000 small single-establishment firms selected in this sample.

All remaining single-establishment firms with payroll will be represented in the census by data from Federal administrative records. Generally, we will not include these small employers in the census mail canvass. However, administrative records sometimes have fundamental deficiencies that make them unsuitable for use in producing detailed industry statistics by geographic area. When we find such a deficiency, we will mail the firm a census classification form to collect basic information needed to resolve the problem. We estimate that the 2002 Economic Census mail canvasses for sectors covered under this submission will include approximately 490,000 small single-establishment firms that receive these classification forms.
