

DEPARTMENT OF JUSTICE

Antitrust Division

**United States v. Microsoft Corporation;
Public Comments**

Pursuant to section 16(b) of the Antitrust Procedures and Penalty Act ("Tunney Act"), 15 U.S.C. 16(b)-(h), the United States hereby publishes the Tunney Act public comments it received on the Revised Proposed Final Judgment in *United States v. Microsoft Corp.*, Civil Action No. 98-1232, pending in the United States District Court for the District of Columbia. The United States has previously published in the **Federal Register** a complete list of the names (as provided in the comment) of all individuals or entities submitting public comments; the number of pages of each comment; a unique tracking number assigned to each comment so that each comment may be located on the Department of Justice's website; and an index to the comments organized by six categories based primarily on the level of detail of the comment. The United States has also previously published its response to the comments and a description of the process by which interested individuals and entities may access or obtain copies of the comments as being published concurrently with this list.

In addition to the publication in the **Federal Register** of the comments, the list of names of individuals submitting comments, the index and the United States' response to the comments, electronic copies of all comments are available on the Department of Justice's website at www.usdoj.gov/atr/cases/ms-comments.htm. Interested persons may also request a copy of the one or more CD-ROMs containing the full text of the comments by contacting the Department of Justice in Washington, DC at Antitrust Documents Group, 325 7th Street NW., Ste. 215 North, Washington, DC 20530, Telephone: (202) 514-2481, Fax: (202) 514-3763. The United States will provide free of charge one copy of this CD-ROM or set of CD-ROMs to each individual person and five copies to each library or other institution that requests it. The United States will provide, at cost, additional copies above these limits to individuals or institutions upon request. The United States has filed the comments on CD-ROM with the Clerk of the United States District Court for the District of Columbia.

Subject: Microsoft settlement

Dear Sir or Madam:

The DOJ has sold the public down the river by not breaking up Microsoft. Breaking the company up would not have lessened its assets only its MONOPOLY POWER. The DOJ has partnered with George W. Bush to repay Bill Gates for his generous campaign contributions to him and the GOP party. There is nowhere the public can turn anymore now that our Justice Department has sold out to politics. There is no other explanation the public will believe.

You've made your bed with Bill, now sleep in it. A monetary fine means nothing to the world's richest man—losing his power over the industry does. As you attempt to settle with him, he is already targeting LINUX for the Internet market—he has learned nothing, except whom to contribute to for favors. You people can spin it anyway you like, we, the public, see it for what it really is. There is no longer equality under the law, there is no longer equal enforcement of the law, the law is Dubya.

Subject: Microsoft

I very much support the overturn of Judge Jackson's ill-advised court ruling and the softening of the government's approach to Microsoft. Gates and his company have built without question the premier operating system and peripherals in the world. Would any of us want to depend on other products? I wouldn't and suspect that most people would line up on my side. Why do we try to penalize successful companies who pay more and more taxes as they become more successful?

Believe me, if any of Microsoft's competitors had built the same so-called monopoly, they would be screaming like banshees if the government or anyone else tried to break them into pieces. We operate by the golden rule; whoever has the gold rules. That would be Microsoft. Leave them alone and let them continue to make great products, make lots of money, and pay lots of taxes so the Department of Justice, among others, can exist.

Thanks for the opportunity to give my opinion. I love America and our capitalistic system. There will always be big guys and little guys, and no amount of governmental intervention will ever make things even. I want to be president of my company, but maybe I don't have what it takes to get to the top. Microsoft has what it takes and has proved it in the marketplace. Why hasn't Netscape, Linux, etc., etc. been able to do the same? Because they're not as good.

Thanks,

Subject: against

I have reviewed the available details of the proposed settlement with Microsoft and find, in my opinion, that it does little to serve the public interest. What it does is serve Bill Gates and company with a vaguely worded settlement that delivers a light tap on the wrist, complete with a side wink. It appears to me to be just one more case of Republicans serving their corporate support base at the expense of those who actually VOTE.

Subject: Windows WITHOUT Internet Explorer—Make they give us a CHOICE.
Currently, MSOft has access to EVERY computer in the world because they FORCE us to have Internet Explorer on our computers. With this access their Monopoly will ONLY GET STRONGER.

I am a candidate for the Nevada Assembly District 18 and am going to introduce a bill that will require Any Software Company that sells software IN NEVADA to have Support IN NEVADA. Microsoft's claim that they HAVE to hook Internet Explorer onto Windows is FALSE. If they were forced to provide 2 versions of windows one WITH IE and one WITHOUT IE we would have a choice.

As it is ALL computers that run Windows are FORCED to have IE available, taking up valuable Disk space if we choose to run another browser.

Thank you for your consideration.

MTC-00000006

From: Don Williston
To: Microsoft ATR
Date: 11/16/01 11:27am
Subject: settlement

My comments about the Microsoft settlement:

1. Unlike Standard Oil and American Tobacco, whose products were static in design, Microsoft's product is dynamic, constantly striving to be adequate.

2. The error in the action against Microsoft is not that Microsoft was innocent, it is that the laws protecting Microsoft's product(s) are not proper for the intellectual property

markets, and the appropriate remedies must come from the Congress and not the Courts and not the Justice Department.

3. What Microsoft owns is not property at Common Law; instead is property and property rights created by Congress. Article 1 Section 8 provides Congress with the power: To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries.

4. The key work in the Constitution is LIMITED.

5. Secondly, the monopoly laws are to protect consumers, not competitors. Congress should be encouraged to clarify the property rights of copyright holders and patent holders, limiting their authority to license through OEM's to consumers, and requiring that the consumers have rights directly to the manufacturer. OUTLAW the term re-seller. Require Microsoft to support its products free for a period, perhaps no more than 3 years, but the three years runs from the time of the final sale of the product (i.e. Windows 95 was last sold as a new computer install when?, certainly more recently than 1999), not the time of original marketing. Tort laws have held companies liable for products manufactured many, many years ago.

I wanted to buy the pared down version of Windows since day one. This is an obvious case of bundling forced upon the consumer. Buying Windows is buying much more than an operating system—it's buying a way of life (any Microsoft president jumping around on a stage will tell you that too.) I don't want a religion, a culture, a virtual reality, or a new way of thinking, looking, or dealing with the world. Thank you. I like to control that on my own. Just give me the choice to buy the OS alone.

Subject: Proposed settlement

To whom it may concern:

It is my strong feeling that this proposed settlement makes a travesty of the very notion of anti-trust law. It completely ignores the evidentiary foundation of the case and does absolutely nothing to impede Microsoft's continued stifling of innovation in the software industry. There's nothing more to say; this proposed settlement should be laughed out of court as the travesty of justice that it represents. It responds to the finding that Microsoft is both a monopoly and has seriously abused its monopoly status with meaningless "remedies" that do nothing to alter the fundamental practices by which Microsoft makes a laughingstock of the notion of "free markets".

Sincerely,
Harry A. Huff

Subject: the focus is off on why MS is a monopoly

Hi

From what Joe Public can tell about this case is that the big cause for alarm is that microsoft bundles application software with the sale of its OS. I do not believe that this should be the sole focus of why MS business violates anti-trust law. Have you ever tried to buy a PC with intel architecture without buying MS's operating system? Do not bother, it is impossible for consumers (businesses may do this when they buy machines en mass). I cannot buy a new machine to install another OS on it without buying Windows with it. If I already own windows and my hardware becomes outdated, I cannot decommission my dinosaur and install the OS I already own onto my new hardware. This is not a fair marketplace. Other superior operating systems have come and gone because of this practice and it really pisses me off. It is a shame, because microsoft actually makes some fine, high quality products. They do not have to practice business this way to remain profitable.

Cheers

Subject: Antitrust case

Dear Sir or Madam:

I am writing in response to the antitrust case against Microsoft. I've used computers regularly for nearly 20 years now, and been exposed to numerous software programs in this time. Microsoft by far, manufactures superior products, and offers great user-friendly tutorials to clients to ensure peak performance. No other company can claim their product operates better than Microsoft's line of OS products. And recently, I did buy a new computer with the new XP software. When I loaded the CD burning software, Roxio, into my computer to copy some music, it failed repeatedly, even tho I selected it as my default software. Finally, frustrated with Roxio, and the lack of instructions to overcome problems with the software, I removed the program, and used the Microsoft XP CD burning software. No problems whatsoever, and it has some great enhancements that I never even could've imagined.

As a former DJ, I was extremely impressed. Once again, the reason why Microsoft has the undisputable market lead is because they make superior products, and people want them. They should be commended for such efforts & not reprimanded because they are "too big." They are a model for many American companies to emulate!

Sincerely,

Carolyn O. Martin

Subject: Microsoft "settlement"

An even casual study of the Findings of Fact after the finish of the trial indicates that a differentiation must be made between a computer operating system and applications which run on that system. The crux of Microsoft's anti-competitive actions lies in the intermingling of applications and the operating system. In lieu of breaking up Microsoft, the company must be restricted to selling the operating system separately from its applications. This, with the provisions of the settlement opening the API's to developers, would generate competition and greatly benefit the consumer. Other operating systems would now also be able to complete, affording still more choices to the consumer.

Subject: microsoft decision

To whom it may concern,
I understand that you are looking for commentary on the recent Microsoft decision.

Frankly, I believe that the planned decision does not go far enough to constrain Microsoft. Microsoft has already proven that they have ignored previous oversight/probation initiatives and that they will continue their previous practices. Why should the govt trust them? Their new operating system, Windows XP, which further degrades customer choices, proves MS's continued intent to ignore any restrictions. I assume that you are aware that Microsoft is now threatening patent violation action against companies that work to provide software interoperability with Microsoft products. The best most recent example is Windows Media.

I would challenge the argument that we should let Microsoft off the hook because it's the best thing out there. I use Microsoft Office because I have to, not because I think it's great. The sole reason is for the sake of compatibility with so many of the people that we communicate with across the country. I find Office in general and MS Word in particular to be a bloated poorly performing package that I spend way too much time trying to undo what it thinks I want it to do instead of what I want it to do. That's the general spirit of MS; they try to tell you what you want instead of letting you decide what you want and then force it on the end user.

Please continue to pursue Microsoft in the spirit of the original antitrust suit.

Sincerely,

Mark W. Noakes

Date: 11/16/01 11:42am
Subject: microsoft is getting off easy. . .

I don't know what happened, but the DOJ has sold us all out. Once this settlement passes, we are all screwed. Microsoft is simply too big, too powerful and has no problem with continuing to abuse its monopoly over others. Unless you break up the company, no punishment will be effective enough.

Microsoft is too big ... it can get into any industry at any time. No one can stop them because they have funds to absorb years of losses if necessary, in order to kill or take over competition. Xbox is a classic example of this. Only Microsoft would have the balls to enter the video game market at such a late stage, and take on power house companies like Sony and Nintendo. Why do you think Sega left the market? They had no chance knowing Microsoft was coming. Something needs to be done about this company.

MTC-00000017

From: Gary Sparks
To: Microsoft ATR
Date: 11/16/01 11:44am
Subject: Anti trust

Sir or Madam

I have watched the proceedings against Microsoft with wonder and disbelief. Punishing a company that has created one of the most innovative and beneficial products in the history of man for protecting and promoting its product is amazing to me.

This is not a case of "ma bell" having all of the land facilities locked up forcing the consumer to use their services and products but of a company in a new industry that has a significant head start. They have every right to protect their market share as well as keeping the "formula" safe and intact for their operating system. There are truly other alternatives for consumers who wish not to use their products but the consumer has made the overwhelming choice to use the superior product.

This case reeks of special interest and of politicians again looking for the handout at election time. Internet and word processing technology is a gold mine that many would like to reap the benefits of but at the expense of a company that has done the due diligence and brought forward a product that appeals to consumers, businesses and yes even Governments. Don't punish a company for protecting and promoting a product that thru time has proven to be a valuable component of daily life throughout the world and dig a little deeper into your "soul" and do what is right. Free trade and enterprise is based upon the "right" of a company to grow and flourish.

This industry has more than enough room for someone to come up with a better widget but until that time don't hamstring someone for protecting their own. I wish someone in this instance would tell their opponents that they need to quit crying and make that next

earth shattering step into the 21st century but don't snip at the heels of those who were brave enough to try.

Thank you very much

Gary Sparks

Subject: Consumer Comment

I am a user of Microsoft operating systems and applications in my small business. I believe the proposed settlement is inadequate to protect consumers and will not help much needed competition, especially in the application space. I have selected many non-Microsoft applications because of their features and reliability. But I have found it increasingly more difficult to stay with these applications as I have upgraded to new Operating Systems. They are often not available at the same time as the OS nor do they take advantage of the new OS features. I would strongly recommend that you reconsider your agreement decision. I would favor a ruling that forced Microsoft to make the OS sources available publicly so all vendors have an equal opportunity to use the capabilities. I worked in the early days of UNIX and in that experience consumers got the very best applications at the time because of the open source to the OS.

Subject: Comments on Microsoft Case

The Declaration of Independence proclaims that the government's fundamental purpose is to protect the rights of the individual, and that each individual has an inalienable right to the pursuit of happiness. Throughout America's history, this noble idea has protected the individual's right to pursue his own happiness by applying his energy to productive work, trading the products of his effort on a free market and rising as far as his abilities carry him.

Over the past century, however, this freedom has been under attack, and one notorious avenue of this attack has been the antitrust laws. Under the guise of "protecting the public," these laws have allowed envious competitors and power-hungry officials to attack successful businessmen for the crime of being successful. It has led to the ugly spectacle of the creative geniuses of the business world—the men who have made this country great—being branded as oppressive tyrants, whose hard-won business empires must be broken to pieces and subjected to the control of government regulators.

The Justice Department's current suit against Microsoft is the latest example of this trend. It is based on envy for the productive ability of Microsoft and its founder, Bill Gates. The result of this suit, if successful,

will be to deprive Mr. Gates of his right to control his own company, and to deprive the company of its ownership and control of its own products.

The Justice Department's case—and indeed the entire edifice of antitrust law—is based on the bizarrely inverted notion that the productive actions of individuals in the free market can somehow constitute “force,” while the coercive actions of government regulators can somehow secure “freedom.”

The truth is that the only kind of “monopoly” that can form in a free market is one based on offering better products at lower prices, since under a free market even monopolies must obey the law of supply and demand. Harmful, coercive monopolies are the result, not of the operation of the free market, but of government regulations, subsidies, and privileges which close off entry to competitors. No business can outlaw its competitors—only the government can.

I hold that Microsoft has a right to its own property; that it has the authority, therefore, to bundle its properties—including Windows 95 and Internet Explorer—in whatever combination it chooses, not by anyone's permission, but by absolute right. I hold that to abridge this right is to attack every innovator's right to the products of his effort, and to overthrow the foundations of a free market and of a free society.

I do not want to live in a country where achievement is resented and attacked, where every innovator and entrepreneur has to fear persecution from dictatorial regulators and judges, enforcing undefined laws at the bidding of jealous competitors. I realize that our lives and well-being depend on the existence of a free market, in which innovators and entrepreneurs are free to rise as far as their ability can carry them, without being held down by arbitrary and unjust government regulations. As a concerned citizen, I ask that the Justice Department's case against Microsoft be dismissed. I call for a national debate over the arbitrary and unjust provisions of the antitrust laws and for an end to the practice of persecuting businessmen for their success.

Subject: Settlement thoughts

I feel that the Dept. of Justice has let the common people down. Microsoft's punishment is nothing more than a light slap on the wrist. This will not help any business that is trying to compete with MS. With MS's history of giving away a competing product for nothing until a smaller competitor is out of business. This then allows them to charge any price and the consumer will have no where else to turn.

Microsoft is a monopoly (only good result of this case so far), and the bundling practice is bad for everyone except Microsoft. I don't blame them and I honestly believe that any company in their position would have done the same thing, but they are the company in that position and the Department of Justice has the responsibility to protect smaller businesses and the consumer by placing fair restrictions on this type of practice. Even if those curbs are temporary and reviewed based on competition in the future by independent parties.

Subject: Microsoft Anti-Trust Suit Remedies

I strongly disagree with the actions you (the US Government and the Justice Dept) are taking in this matter. I am IT professional with over 20 years of experience and your suit appears to be all about choice. Well guess what, there are lots of choices. If I don't care to run Microsoft Windows with Internet Explorer, I don't have to. And if I do and want to use some other browser, nothing prevents that either. I can choose Linux, Unix, Sun Micrographics, Apple/MacIntosh, and several others both on the workstations and the Servers.

Microsoft and Windows are popular because they create good products which have made it easier today than ever for everyone from 1st and 2nd graders to senior citizens to use and own a computer. You don't have to know how to configure a TCP/IP interface on your home computer and what choices to make when you need an internet browser if you are a consumer when you choose Microsoft's various consumer level products. They have integrated it specifically to make it easier.

But if I'm running Windows on my computer and I want to install Netscape and use it, I can. If I want to use AOLs “integrated browser” I can do that. My choices are limitless, whether Microsoft chooses to offer an integrate product, or a stripped down version.

Why are you wasting my valuable tax money pursuing this action. Bill Gates is the richest man in the world because the American public (and the rest of the world) tried it and liked it, not because there isn't any other choice as you try to infer. Bill Gates through his foundation is doing more than anyone else in the world with regard to charitable contributions in a variety of areas and all around the world. And because of his wealth, he pays more taxes, which goes to pay your salaries, so why not pursue something important. You want to talk about Monopolies and Anti-Trust... what about AOL/Time Warner

Subject: Thoughts

I think that the antitrust settlement is very sufficient and enough resources have been wasted on this case.

I, as a consumer, do not feel hampered by Microsoft at all. Many companies have chances to enter markets or come up with competing operating systems or browsers and beat Microsoft at their own war.

They haven't. This settlement will allow the government to settle their needs and prove they didn't waste valuable taxpayer money and it will remind Microsoft that they are still the best and why everyone wants to take them down.

Subject: Anti-trust suit against Microsoft

I feel that this whole action against Microsoft is not only an assault against Microsoft, but it is an assault on the free market economy, the capitalism of this country that has made this one of the most prosperous countries in the world.

Microsoft is good, they have a good product that people want and other

companies want to be associated with it. In a competitive business environment there will always be winners and losers, it's the nature of the beast, and there are far too many whiney people in this country today who seem to feel that their wants are more important than anyone else's; 'I want so you have to gimme.' These are simply spoiled brats, bullies whining because somebody else has a better product (or toy) than theirs. That's life in the big city! To sue a company because they have a preferred product is a waste of everyone's time and money. I have an invention, and those who know about it want it, and there is nothing else on the market like it. If I was forced to give it up or give my secrets away because some whiney cry baby didn't think of it first I would feel this whole country had gone to hell in a hand basket, and it would be time for me to leave it.

Subject: Unfair trade practices

The settlement is a win-win for Microsoft, and a big lose-lose for consumers. Microsoft's illegal dominance and unfair practices are evident from the earliest days of its inception when it deceived IBM with the lack of an OS and scrambled to put one together after the fact.

It is further illustrated when the Hard Disk manufacturers devised a better method for the technical architecture of disk storage. Microsoft rejected their proposal keeping the hardware industry firmly in its' grasp. Then there was the use of unpublished code MS used to its advantage in developing proprietary software, while forcing the competition to program long subroutines around these discrepancies. MS continually disavowed this practice in public disclosure, until it was publicly documented by credible software experts.

Microsoft has continually advanced, and still does, the practice of marketing vaporware to stymie the competition and engender hesitation in corporate and end

user purchases. This had forced other companies to fold, sell out, or otherwise cancel their development plans as a result.

The debacle over Java, and legal battles with Sun, have caused an otherwise beneficial software platform for uniting all types of machines and code into a single working environment was the furthest thing that Microsoft wanted. It would have severely undermined their current dominance and future plans to continue with that strategy. So MS developed their own form of code and imposed it on the market. Sun has a much system, but it was a threat to MS and could not be allowed to stand in their way.

The entire computer industry, technology, and the many other side benefits of this new technology has revolutionized the world. However, it has suffered long periods of indecision and product development as a result of MS's desire and bullying to dominate the industry.

There are many examples of these facts along the highway of development littered with the corporate corpses of those who tried to offer better products and strategies. They were run over, bought out, silenced, and even worse threatened with protracted legal battles to which MS has a bottomless pit of funding for legal engagement and harassment.

The best strategy would have been to spit the company into two parts, but this will not happen unfortunately.

They will continue to dominate the world with its' poorly written, unsecured, and otherwise buggy Windows software systems and architecture. They have as yet been unable to develop code that is anywhere as secure as Novell. Novell is just one more example of a market that MS has targeted for domination. Sure Novell made some fatal mistakes, but they still have a much better networking structure that is more secure than MS could ever hope to achieve. Settling this case is giving Microsoft the green light to continue its' illicit and illegally gained monopoly and stranglehold of the industry.

Yours truly,
Chuck Pfeiffer

Subject: proposed settlement

November 16, 2001

Dear Sir or Madam:

If this email address is open for the general public to offer opinions on the proposed settlement with Microsoft, I would like to add mine. I have worked in the computer industry since 1985. I remember the days when a disk formatted on one proprietary version of DOS did not run on another. I also remember when computers were too expensive and too cumbersome for the technology challenged.

This all changed as a result of Microsoft's vision. Computers are in almost every home and most people do not know what they would do without one. I shudder to think at what would happen if the penalty were to break up Microsoft or if the penalty was so severe that they would shut down their operation.

The proposed settlement is a good mix of punishment to ensure they do not engage in further predatory practices and ensuring that the volatile world of information technology does not take a giant step backwards.

Thank you,

Edward W. Scott

Subject: Microsoft

Really, really disappointed in the settlement Justice has made with Microsoft. The evidence was clear, the history of Microsoft disregarding any penalties imposed upon it is clear and the offending practices continue. Justice has sold out the American consumer. The only way to get Gates and his company to stop is to disengage the operating system from the applications software. You have not only abandoned that option you have reduced the penalties to meaningless self-monitoring. No one believes that after years of abusing and ignoring the Justice Department, the recent settlement will suddenly make Microsoft behave. Even less do we believe that the Justice Department will actually employ resources toward monitoring and controlling Microsoft, much less impose fines that will matter.

We trust the government to step in when a company has proved themselves to be untrustworthy, to have severely injured their customers and to have taken from the market any other option or choice in the form of a true competitor. Microsoft has done all these things. If you don't believe this it can only be because you do not use a personal computer. I have many Microsoft applications on my computers. None of them work together. Errors and crashes are constant. Explanations and support are rare. True support costs \$295 per incident. The most devastating viruses out today exploit the faults of Microsoft's software. Microsoft sells inferior products only because the government has allowed a monopoly to exist and grow out of control and now refuses to correct or even truly acknowledge the mistakes that have led us here.

Microsoft and its' leaders are arrogant, selfish entities that cannot be trusted to monitor or control themselves. The Justice Department was our last hope. You have abandoned us when the evidence was clear. We are greatly disappointed. You should be ashamed.

Subject: Disappointed in compromise

I'm extremely disappointed in the compromise proposed by the Justice Department. Microsoft, even with the threat of the Justice department hanging over their heads, has continued, in the Microsoft XP product, to conduct illegal trading practices. Specifically, Microsoft is packaging free firewall software into it's OS. Like a drug dealer hooking the new unsuspecting junky, Microsoft has announced that it will provide the software free for a short period of time. The new junkies, I mean Users, will become accustomed to the firewall interface, software vendors will write software that can work with the product, and then Microsoft will start charging for its use. Why would a consumer go out and obtain a similar product when Microsoft is already giving it to them bundled in their OS, free? The answer is, they won't.

I was disappointed that the breakup of Microsoft was pushed off the list of penalties for the company. Their OS is substandard to almost every other OS on the market. It lacks administrative support for enterprise usage, and even after stealing innovations from all the other OS's (to many to name), it lacks ease of use and reliability. Just look at how users in your own office fix problems on their Personal Computers. I bet it is the new and improved Microsoft way, they reboot them. Before Microsoft, it was rarely necessary to reboot a machine, just to fix a problem. Downtime in the office was almost non-existent. Even with its proven track record of crashing unexpectedly, it is still forcing it's way in to our nations datacenters. I feel the only reason that it has managed to penetrate into every corner of the market place is due to their office products and the need to provide compatibility for them. Since their office products are so tied into their OS, a user is required to buy their OS to run their office products. Other people wanted to share documents and information, so they bought similar office software and now Microsoft is everywhere.

A truly open market would have Microsoft building their office products for all commercial OS's (Solaris, Linux, HP-UX, MAC). The only way that can happen is if

Microsoft Office and the other Microsoft software is excised from the Microsoft OS and their profits are not tied together.

My perfect IT world is one where I have the choice to choose the best OS. The choice to add any software package that I want, and have that software compatible with all other similar software packages.

Date: 11/16/01 12:04pm
Subject: Please explain

Can you please tell me what the settlement contains and how it will prevent MS from it's unfair advantage?

Their code is billions of lines long, their projects are hundreds of thousands. How can 3 people going through the corporation really monitor what they are doing? It's impossible unless they move nearly the speed of light.

Besides, if they break the rules again, you just extend the penalty by 2 years?

I'm disappointed in our government and how they are handling the case. They are considered guilty, and the only punishment the government is imposing is not a punishment, but preventive measures that are not guaranteed to work. Please consider the tech-heavy states' opinions. If competition is to thrive again, and help our economy it will be the tech-heavy states that will be the ones who bring it back.

We're in bad economical times now. You can help bring it back.

Subject: Microsoft Anti-Trust Settlement

This settlement is bad and will do nothing to alter microsofts behaviour and does nothing to make restitution for their previous unlawful conduct. The main problems as I see it are

1) the term is too short—given that most of the restrictions come into play at some future date (the release of windows xp service pack 1) the restrictions will likely only be in place for 3-4 years.

2) The document is riddled with vagueness and get out clauses. Where microsoft is required to describe the ways its software and communications protocols work it is also allowed to withhold any information which could compromise security. It is easy to argue that any knowledge of how a network protocol works could compromise security and sidestep this whole provision.

3) All previous illegal conduct is essentially excused as long as they stick to the terms of this agreement—this seems very wrong—essentially corporate probation with no real punishment at all.

4) Microsoft has a history of flagrant non-compliance with such consent decrees—this whole case started because of their refusal to comply with the previous settlement. The talk of the government seeking criminal penalties and civil fines should microsoft not comply with this agreement gives me little comfort—what criminal penalties where

imposed for breaking of previous agreements?

As a minimum any acceptable settlement must include an element of punishment of both the company and its board of directors for operating in an illegal manner.

Subject: Microsoft sanctions
Justice Dept.,

Nothing less than dividing Microsoft's operating system group from its applications group will ensure that they don't use tactics such as inventing non-standard standards (and not properly sharing them).

Their development tools division should probably become a third group (or at least in the application group). This is what has given them an unfair advantage over application software vendors. They will continue to have this advantage even with full-disclosure of their 'standard' interfaces due to the fact that they will have first knowledge of them. Furthermore, I do not believe that they will properly share all information needed for a competitor to properly interface to their software.

Current Microsoft practice continues to assert Microsoft 'standards' in place of existing ones, even while this case is in court! C# is one of the latest examples of this.

From the business side, one has to wonder what legal competitive advantage a non-disclosure agreement has to offer. Microsoft certainly abused this medium and should be summarily punished for it by preventing them from making any more such agreements.

While I admire Microsoft's business vision of selling flashy, mediocre software to the largest, if not most technically ignorant, population, I still have to wonder just how much Microsoft's success has set back the software industry. IBM's OS/2 and various unix operating systems as well as some well designed real-time operating systems still

offer greater robustness and easier operation and troubleshooting than MS Window's.

My fear is that Microsoft's flashy system and sleazy business practices will continue to obscure superior operating systems (like it obscured OS/2 Warp). Their applications will still be preferred over competitors, even if their competitors do actually get the correct interface information, if only because the Microsoft product will be perceived to work more seamlessly.

In the end, it is my hope that the Justice Department dispenses true justice, not just a slap on the hand of Microsoft that kicks all their competitors in the teeth and ruthlessly manipulates an unsavvy public.

Sincerely,

Richard V. Molen

From: Rich Schaefer

To: Microsoft ATR

Date: 11/16/01 12:14pm

Subject: The DOJ is wrong with in this case.

To whom it may concern:

I don't know where to begin. I am a republican. I work for a computer distribution company, voted for Bush, am all for capitalism and our way of life. However,

it is clear that this Department of Justice is just out of touch with the real issue of this case. This was not a case about web browsers. It is a case about a company that enjoys a monopoly status, has clearly abused it and as a result has eliminated any competition and innovation. This all has come at the expense of the American consumer and fair competition in an open market economy.

There is little doubt that Microsoft is a monopoly. Two courts have already rendered this in their opinions. If one visits a retail store and buys an IBM compatible computer, there is no choice regarding the operating system. You will buy a computer with a Microsoft operating system.

If I recall my college days as a political science major, the Sherman Anti-Trust Act was signed into law to prevent any one company from having an unfair advantage. Further, the core of this act was to ensure competition in the market place. The logic is competition benefits the consumer, establishes fair pricing and a market value for a product or service as well as the natural creation of new companies/industries and thus more jobs. The overriding goal is a diverse market place operating under a diverse economy while keeping America gainfully employed and spending back into the economy. Thus, all benefit. It appears the DOJ attorneys should crack open a Constitutional Law text and brush over the fine points of the Sherman Anti-Trust Act, it's impact upon commerce and it's application to the present, as this may have been forgotten.

How is this hurting competition and consumers? Microsoft as a monopoly is free to charge whatever they want for their operating systems and applications. And this they do. Microsoft distributes it's product three ways; by selling to name brand computer manufacturers, through "channel" distribution and finally in retail outlets. Name brand computer manufacturers (Dell, Compaq, IBM, Toshiba, etc) pay about one third less for operating systems and application software than a channel distributor, like Tech Data, Ingram Micro, ASI or D&H, even though name brand manufacturers and channel distributors are purchasing roughly the same number of operating systems and application software from Microsoft. This unfair and predatory pricing policy Microsoft maintains is unfairly exploiting the consumer by ultimately charging them substantially more. This pricing scheme is ultimately putting small distributors and independent businessmen and women out of business. Quite frankly, they cannot compete with name brand products because of the outrageous prices they are forced to pay for the same operating systems and applications, being purchased by channel distribution in the same volume as name brand companies.

If anyone has been paying attention, they would have realized that many independent computer resellers have had no choice but to close their doors this year because they cannot compete. Even in bid situations, where the federal and state governments, are supposed to show favor to the "small, minority owned, disadvantaged business,"

these very people cannot fairly compete because of the inflated prices they must pay for Microsoft operating systems and applications.

I say to you that these monopolistic behaviors on the part of Microsoft have a ripple effect through out the entire industry. As a result, the backbone of the American economy, the small businessman, is being destroyed. It is hard to fathom the DOT not opening their eyes and seeing reality.

I find it equally hard to understand that, under normal circumstances, when a company manufactures a product, they are in liable and responsible for it's support. However, Microsoft totally avoids this responsibility. Instead, they force the hardware manufacturer to do this for them. For example, if I own a computer (and I do) and have problems with the operating system, why is it I am forced to get support from my hardware vendor? My hardware vendor did not make the operating system. They are responsible for the hardware. In stead, if I must turn to Microsoft, who has the tenacity to call me a customer, for technical support they will promptly ask me for a credit card number before I can even speak to a technician. This is Microsoft's standard operating procedure. It is yet another example of them taking advantage of their monopoly status and the consumer being hurt by it. Microsoft is set up to collect money and little else.

On top of that, Microsoft's paranoid history is one of wreckage. Any company that ever developed a product that Microsoft saw as a real or imagined threat, that company was either swallowed or put out of business. Microsoft used their monopoly leverage and lack of competition in the operating environment arena to destroy the problem. Untold product innovations have been destroyed before they were even imagined. Untold fortunes were never realized and an untold number of high paying, rewarding jobs for the American economy were never realized. Consumers and technical innovation have again been compromised by monopolistic behavior.

This Department of Justice and John Ashcroft should be ashamed of themselves. The bottom line is this whole fiasco will return to federal court a few years down the road. It will make this administration look primitive and out of touch with today's business and legal climate. It is clear that this administration's DOJ is clearly in over it's head with respect to subject matter of information technology.

Respectfully,

Rich Schaefer

Subject: Remedies inadequate

As a worker in the technology industry, I am disappointed in the proposed remedies in the Microsoft case. Microsoft will not cease it's anti-competitive behavior voluntarily, and is continuing to enter markets with inferior products, using it's dominant market

position to eliminate competition in those markets (see the current PDA wars). When Internet Explorer was introduced, it was very inferior to the current market leader (Netscape Navigator). Microsoft then proceeded to give their product away (Can anyone say "predatory pricing"?). With the sole goal of eliminating Netscape so they can dictate how the internet is used. If they end up owning 95% of the browser market, as they do the desktop market now, they can ignore internet standards and become a standard unto themselves (which is already happening). Also, the one competing consumer platform, the Apple Macintosh Operating System, is said to only survive due to Microsoft Office being developed for that platform. In short, Microsoft is no longer concerned about competing, nor just profit, but control. The company should be broken up into at least two separate companies, with Explorer being stripped out of the OS and put into the hands of the Applications group. Yes, Judge Jackson's ruling was a good remedy. If anything less punitive occurs, Microsoft will continue laughing all the way to the bank. What the Justice Department is trying to settle for is an inadequate and ignorant solution.

Subject: comment re: proposed microsoft settlement

Dear Sirs/Madams:
Unfortunately, I would have to say as an IT professional with over 11 years of experience in the industry, that the results you've come up with really won't do anything to curb Microsoft's horrible and bullying business tactics and equally will do nothing to help us as consumers. They will continue to push their way through the Technology industry and leave unsuspecting consumers, and other software developers "in their wake". They care nothing for the consumer (except as far as their own pocketbook is concerned), and even less for other software developers, who incidently typically produce software of a higher quality and more stable, but who also typically get run-over by Microsoft either directly or indirectly (through their agreements with computer vendors). As it is, if I want to buy a personal computer from Dell or Gateway without Microsoft Windows on it and have something like Linux on it, I can't ... as a consumer, that makes me quite angry. And after a few minutes with the computer vendor on the phone, I find out that Microsoft gets money for each and every

system regardless of whether or not Windows/Office is on the machine, and that's why they can't ship it to me with Linux. That sort of situation is RIDICULOUS!!! I can't even get a computer with Windows 2000 and Office 2000 anymore ... I must buy Windows XP ... and I don't like it! Thanks for "helping" us out as consumers, and in the IT/Computer industry (please note the sarcasm).

I was hopeful that you would've come up with an settlement which could help avoid some of this, but unfortunately, it would appear that Microsoft has yet again gotten their way, and others are left to deal with the aftermath. If this was the result, you should've given up the case years ago and not wasted our valuable tax dollars on it.

Subject: Microsoft penalties

Thanks a lot for giving a convicted monopolist pretty much everything they wanted after you already won the case. If the Justice Department really thinks it's imposed penalties that will stop Microsoft's monopolistic behavior, then it needs to hire some people that are more in the know with the technology industry. If the Justice Department wanted to protect Microsoft, since it's such an "innovator", they should know better than to take advice from the marketing department of the company they're prosecuting. I'm very dissapointed at how poorly the Justice Department has handled this affair. As a consumer, and an American, I feel really cheated.

P.S. I am hoping that there was no political motivation behind the handling of penalties. Whether or not the anti trust laws are an appropriate blockade to Microsoft's activities is for a judge to decide. Anybody working for the prosecution in this case who deliberately chose to pursue weaker remedies because they felt "no business should be hassled by the government" ought to be fired for not doing their job.

Subject: Microsoft settlement

Dear Justice Department,
I am deeply concerned about the settlement being proposed with Microsoft in the anti-trust matter. I do not believe the current settlement is sufficient to ensure a healthy, open, competitive environment in the future. I have been working in the personal computer industry since 1985, and observed Microsoft's ruthless behavior first-hand.

In the late 80s and early 90s, there were several choices in desktop operating systems (DOS, OS/2, Windows, Macintosh), several choices in word processing software (WordStar, WordPerfect, Word), several choices in Internet Browsers (Mosaic, Navigator), and so on. As Microsoft gained market share, they unfairly used that influence to eliminate competition. Since Microsoft has so many revenue streams, they did, and still do, offer(ed) certain products at a total loss, for the sole purpose of eliminating their competition. Their bullying tactics have sent chills through the entire IT industry, and still exert a profound effect.

What happened to the other word processors? What happened to the other desktop operating systems? What happened to the other Internet browsers? In each case, Microsoft had the inferior product, yet somehow prevailed: WordPerfect was the better word processor, OS/2 the better operating system, Navigator the better browser, Novell the better file server; yet a combination of good marketing (quite legal), behind-the-scenes bullying (illegal), and unfairly written contracts (also illegal) gave Microsoft the unfair advantage.

When the free-market system operates correctly, price/performance tends to drive the better and more economical products to the top. This clearly did not happen anywhere that Microsoft was involved. The Internet-WWW browser market is a key example. The WWW specification was specifically designed to be completely platform independent: any server operating system, any client operating system, and any browser software could be used, completely transparent to the end user. Due to Microsoft's bullying, this is no longer the case: Microsoft's products create web pages that only function properly with Microsoft's browser. Due to Microsoft's market share, and the dominance of the IE browser, it has now become very difficult for users of other browsers and operating systems (for example, Linux users) to complain to web site owners that the Microsoft-ified web site won't function with their Linux-based web browser. The (Linux, OS/2, Nextstep, etc) user then has no choice but to use the

Microsoft browser, on a Microsoft-supported operating system, if they want to use the Microsoft soft-ified web site.

Microsoft's rejection of the de-facto Sun Java standard leads to a new version of Microsoft's browser (Internet Explorer 6) that does not support Java, further compounding compatibility problems in the WWW space. Only a company as large as Microsoft can exert the weight necessary to incapacitate and open standard, and they appear to be succeeding.

I could also write pages on the billions of dollars in cost increases that the corporate world, and end users, have suffered due to incompetent Microsoft software. In thousands of cases, companies and individuals were forced to use the Microsoft product, despite its inferiority, due to unfair market practices. In the long run, these companies and users suffered a tremendous economic impact trying to use products that were not yet ready for public use.

As for the future, Microsoft is already behaving questionably in regard to the upcoming Tablet PC market. Articles on this matter can be found at www.wired.com that express the problem.

In order to ensure a competitive environment in the future I would propose the following:

That Microsoft be separated into the following divisions:

Operating Systems (Windows 98, ME, XP, 2000, etc)

Internet Products (Internet Explorer, Windows Media Player, etc)

Application Products (Office, Word, Excel, Access, etc)

Infrastructure Products (SQL Server, Mail, Outlook, etc)

I would also propose that Microsoft be forced to open portions of the Microsoft operating systems specifications, so that other application developers could enjoy that benefits that Microsoft applications have had for over a decade. Further protections would be necessary to prevent collusion between the different formerly-Microsoft companies after the separation.

My knowledge of this problem is not unique by any means, but please permit me if may to humbly express my background: I have been working in the IT industry since 1985, consulting to small clients as well as Fortune 500 customers, on issues including network design, the Internet, security, infrastructure, servers, and personal computers. I have been certified under respective programs by IBM, Microsoft, and Novell. I appreciate your time and consideration in this matter. If I can be of any assistance, please do not hesitate to contact me.

Subject: Settlement.

This settlement is still too much to impose on a private enterprise. This whole suit never should have been filed. Microsoft is not a monopoly. There are several alternatives including linux, OS/2, Solaris for X86, Dr.DOS (yes, it does still exist despite claims to the contrary by the prosecution), PC-DOS (I just bought the 2000 version from IBM last month). This suit wrongfully damaged the global economy to an extent that it may not recover for 5-8 years. As an independent software developer I (as well as most others in my field) rely and depend on various operating system features and functions to be available in a given version of an operating system. Microsoft has provided these functions and regularly upgrades them through service packs and Internet Browser upgrades (this is an important example of code reuse where commonly used routines are used by multiple applications and sometimes the OS itself, a point not understood by the so-called experts that testified in this kangaroo court proceeding). Almost all third party applications that use tcp-ip networking rely on pieces of the IE Browser and require a minimum version of that Browser in order to function correctly. I have many customers who use Netscape as their Browser of choice, but have realized performance and stability improvements by keeping the IE Browser up to date. If IE had not been "bundled" with the OS it would have cost most third party developers so much as to make continued support impractical and therefore truly reduce software competition and choice for consumers. Where was the DOJ when SUN controlled the workstation market so totally that even IBM didn't even try to compete? Where was DOJ when SUN was gouging the market for 4-10 times what a competitive product would have cost, especially when a huge number of these workstations were being paid for by the taxpayers for use by the government and government contractors? The only true justice would be if Microsoft was declared not to be a monopoly and those responsible for starting this whole antitrust action to be jailed for crimes against the United States and crimes against the global economy.

A very dissatisfied customer of the DOJ, which is a true monopoly.

Subject: (no subject)
Gentlemen:

I have been using PC's since 1977 and since the debut of the MS operating systems with the advent of the IBM PC MicroSoft has consistently tried to force (and has almost succeeded) all other operating systems out of business. They do this by incorporating packages into the OS (currently varying versions of "Windows") that are usually sold as stand-alone, by using their marketing power to force the authors of most software to write only for MS-based systems, and by forcing PC dealers to put only their (MS) products on PC's if they wish to continue

doing business with MS. restricting any changes to the product the dealers and/or customers might wish.

The MS products are over-hyped and have a history of failing when released, the most notable example being "Windows 95", which was usually not installable when first released, and required special downloads adding to the cost of the product. Additionally, they never really complete one product and eliminate the bugs in it, preferring instead to leave users with junk while they go on to the "new, improved" next edition of the product, always at increasing cost.

The oft-stated resolution is to by another product if you do not like "Windows"; what product would that be that runs the software that is so prevalent in the industry? Linux is mostly a server platform and Unix as so unfriendly to users so is restricted to scientists and engineers. The only other package would be the Apple Operating System, and that requires a specific computer and package that at a minimum is twice as expensive as a standard PC with software.

The roll-over by the Republican party to the big campaign contributor Bill Gates and MS is no solution at all; merely a wink, a nod and a "Gee, you really should be more careful!" kind of warning. At the very least MS should be forced to sell only a striped down version of its OS, minus any enhancement that is currently being sold as stand-alone; better yet would be to break the company into two independent segments, with Bill Gates prohibited from any dealings/ownership/stock in one of them.

If this is not possible then the OS should be treated as a monopoly in the interest of the nation and tightly controlled as public utilities used to be before greed got the better of this nation.

I realize the government will probably bury this response, but it sure would be nice if for once it acted for the good of the people instead of a corporation or political party; it would also be nice if the judge in the case had a chance to see it before it is shredded. In any case, I am sure you will not mind if I forward a copy to various industry publications.

Thank you for your time.

Subject: comments on proposed settlement
Dear DOJ officer,

I am writing to express my concerns and severe dissatisfaction regarding the proposed settlement in the anti-trust case brought against Microsoft. The settlement has practically no punitive measures for past misconduct, or remedies to repair damage caused to consumers because of past microsoft misconduct. It is ridiculous that MS is to keep all the benefits of the actions it took, even though they have been legally identified as conflicting with existing laws. If I were to rob a bank, would I get to keep the

money, with the judge telling me "don't do that again", and assigning my best pal to make sure I follow that advise??

The proposed oversight committee to enforce prevention of future transgressions is a farce. Being on MS payroll, and with MS having significant influence on who will be part of the committee, I have zero confidence in the committee's effectiveness or motivations.

MS practice of pushing its products based on the companies superior capabilities in the manipulation of intellectual property laws, rather than technical innovation or economic value, has continuously hampered innovation, harmed consumers, and suppressed any kind of competition from taking hold. The remedies *must* include full, and unconditional, disclosure of all windows API's to the general public, and only a breakup of the company that separates the OS division from the application division will be able to enforce this behaviour (out of economic necessity if the OS part of the company intends to stay in business).

Especially with recent events in mind, this country cannot afford to project the appearance that the DOJ is nothing more than a pawn of corporate america, where Lady Justice is anything but blind to enough political clout or economic influence.

Thank you for your consideration.

Respectfully,

Ralph Ewig

Subject: Comments about the antitrust case against Microsoft
Folks—

I saw that one could mail here comments about the antitrust settlement. Here are mine. I'm both a consumer of electronic goods, and a programmer.

The anti-trust settlement that was presented to the judge did not go far enough. Microsoft needs not just a watchdog around them, they need clear rules (without exceptions or time limits) to limit their ability to for anti-competitive marketing. This includes:

- Allow computer mfg the ability to put multiple OS on the computers they make, with NO penalties from MS. (Ever)
- Allow computer mfg to customize a MS-Windows installed PC any way they want, with NO penalties from MS. (Ever)

These are the two most important items that Microsoft should never challenge. The reason is simple: Microsoft only wants Microsoft tools on their systems. Computer mfg are more likely to listen to the buying public on what they want. MS isn't. So, if a computer mfg wants to put a dual-boot Windows/Linux with Opera for the web browser together, MS should not be able to dictate otherwise. No financial penalties should be levied by MS to the computer mfg.

Far too many times has MS abused its position against other companies. (Stacker is one case that pops to mind, but I'm sure you folks have your list) As a developer, I'm tired of MS bullying people around their platform. As a consumer, I'm tired of not having choice

in the market. Regardless of the lies that MS says, they do not innovate. They do provide a service, but its not innovation. They take other ideas and re-work them, extending them with proprietary API's so no one else can hook into their service. (Such as Kerbose for security. They got all the benefits from the free software, but them made enough (1) small changes so that other kerbose systems were incompatible with their NT servers.) They did that with IMAP (MAPI), SMTP, SNMP, etc. They tried to do that with Java. (C# was the result of failing at taking over Java) They have caused much in the software world to not progress. Yet they continue to market their innovative ability.

DOJ, please, you've got to help. MS abuses their position constantly. The settlement needs to be on the side of the consumer, one that can react quickly to when MS messes up. Help the other companies in being able to deploy their software, rather than having MS have a lock on the major computer mfgs.

Thank you.

Virtually,

Ned Wolpert

Subject: Concerns regarding Microsoft settlement

I think that the currently proposed settlement is pathetically weak. I think the this administration is caving in to Microsoft in a desperate hope that it will somehow get the economy going again. They are sacrificing justice and long term security for all in the computer industry (except those who work for Microsoft) in hopes that somehow this will get the economy back on it's feet. Microsoft has a long history of violating every agreement that they have made, not just with the DOJ but with computer manufacturers and competitors in the software development arena. Many an extinct company has rued the day that they entered into an agreement with Microsoft only to have the company come out later with either it's own version of the software, or with it bundled into the operating system.

I think that the quote from Bill Gates says it best: (Microsoft's chairman, Bill Gates, on Thursday defended the settlement as tough but one that "we're really pleased to have.") [pulled from CNN's website]. Microsoft wants this settlement so bad it isn't funny. They will be classifying everything as anti-piracy or security to keep it private, and then when they absolutely can't fight it any longer, they will drag their feet in disclosing the information so that it is obsolete by the time it is released. Microsoft's history in destroying it's competitors is well know. I know of Java developers now who are looking to transition to Microsoft's new development program for the sole reason that Microsoft has dropped Java. They think that is the Kiss of Death for Sun and that there is no reason now to keep working on Java. This is but one example of how this industry is cowering in fear of Microsoft and how every company dreads the day that Microsoft

comes out with a product that competes with their own.

The current agreement will do nothing to save Sun, nor will it help save any of the other companies who are in a losing battle with Microsoft. I also think that it is sad that the government is completely ignoring Microsoft's handling of it's Passport product. That should have been one of the things built into this agreement is something to place constraints on Microsoft's ownership of a great deal of private information. Windows XP was the biggest blow personal privacy on the internet since Microsoft got it's first T-1 line to the internet. Another sad development is the state of the server market. Microsoft has already won the desktop war and is using that monopoly to kill off any competition that it has on the server side of things. Novell, Sun, and others are barely holding on due to the license agreements that Microsoft is putting in place to guarantee that if you use Windows and Office on the desktop, that you will use Windows as your server as well. Too much critical information is being placed on these servers to trust Microsofts horrendous track record when it comes to security, quality, and new licensing agreements to trust them with a monopoly of the server market as well.

It is kind of funny, but also kind of scary, when any computer magazine quotes someone in the computer industry who has anything bad to say about Microsoft how they always want to be anonymous. When a network administrator at a utility company says he wants to be anonymous for fear of getting Microsoft upset that says a great deal about how out of control that company is. Many of us Network Administrators were cheering for the DOJ when this trial started. We had hoped that the sanctions would be severe enough to keep at least some of us from having to become Network Administrators on Windows XP networks. None of us want to work on Microsoft networks because they are flat out inferior to the competitions products, however we are all smart enough to read the writing on the wall and realize that Microsoft will soon own this market as well and we will have no choice but to either work on XP servers, or get into a new career field. Now we are all shaking our heads and are sorry that we got our hopes up. That is why I am so upset about how poorly the government has handled this settlement.

If you need to reach me for more comments feel free.

Subject: Antitrust settlement.

To whom this may concern at the ever changing U. S. Department of Justice,

I am disappointed with the outcome of this trial. It solves nothing. Microsoft will go

about doing business in the same manner that they always have. Throw little innovative companies out of their way by including their own version with the operating system. Their version, when first introduced is always a watered down, less capable version. But, most people are lazy, they do not want to down-load and install. However, I'm not. I want choice. I want the best program out there. This entire thing has soured me on computers and also this system that is commonly called justice'. Here you have a clear monopoly, declared this by two levels of the federal courts, with a wrist slap. Do any of you actually think they will abide by these latest remedies when they have ignored them before? Had they been 'taken to task' then, we would still have multiple browsers to choose from. I have read the "Proposed Final Judgment" in its entirety. For every remedy, there is a fine print loophole that Microsoft can use to do nothing. This "Proposed Final Judgment" is a travesty.

Where do these remedies address to problem of Microsoft forcing us to buy a version of their operating system when we purchase a computer? When I purchase a computer, I am buying hardware. I will choose what operating system meets my needs best. I do not want it forced on me. Do you people actually think that Microsoft Windows is the best that the human species is capable of? If not, how can this better one even have the slightest chance of 'getting its head above water for air' with a system of forced purchase of the other guys product in place. And now, what about media players and image processors? These two things have been bundled with the latest Microsoft operating system et.al.'. How many more little companies, you know the ones that actually take the risk in first developing this software, are going to die off because 'Johnny come lately' Microsoft is now bundling lesser copies of their work with an operating system'. Microsoft is only using these people as developers and marketing so later they can leverage them right out of existence by bundling to an 'operating system' declared as a monopoly.

I know the computer industry has fallen upon hard times, but this does not change the law. Microsoft was in violation of the Sherman antitrust act. From where I sit, you have done nothing to stop them. You will not even slow them down.

Subject: microsoft settlement

The proposed settlement below is unacceptable as a solution to past monopolistic practices by Microsoft. "Not long after the DOJ settlement, Microsoft announced it had agreed to another settlement regarding a separate class-action suit brought against the company by numerous parties that alleged overpricing of

Microsoft products. The settlement forces Microsoft to donate software, hardware, and services to America's poorest schools.

This type of settlement would simply introduce Microsoft to a market where they could further extend their monopoly. A better solution would be for Microsoft to pay a specific amount of money to each of these poor school districts to be used for non-microsoft products only, such as computer hardware. Then a company such as RedHat or Apple could donate software for these systems or part of the Microsoft fine could be used to purchase this software.

Allowing Microsoft or any company to donate their own product as part of a fine or punishment is akin to the drug dealer giving away the first few highs to get his clients hooked!!

Subject: Microsoft Settlement

I am disappointed by the terms of the Department's proposed settlement with Microsoft, which I believe to be excessively lenient to Microsoft and not in the best interests of the public. The settlement does too little to restore competition to an industry dominated and abused by Microsoft's exploitation of its monopoly in operating-system software. Under the settlement Microsoft can continue to use its inside access to its operating-system technology and its monopoly market power to suppress competition by other companies.

During the last presidential election it was reported that Microsoft and its employees made substantial financial contributions to the Republican presidential campaign. It was then speculated by the press that Microsoft believed that by doing so it would receive lenient treatment from the Department of Justice if George Bush won the presidency.

It now appears that the money donated by Microsoft and its employees to the Republican Party was money well spent. While the donations are not likely to be provable criminal bribery, the donations certainly show that money can buy (the Department of) "Justice."

Subject: Opinion on the US vs Microsoft Settlement

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

I understand you are seeking feedback on the proposed Dept of Justice settlement with Microsoft at this address. I don't know what purpose that could have at this late date, but since you asked...

I believe the Department of Justice has made a mistake in settling this case. The points of law were clear— Microsoft misused its monopoly position in the industry to illegally stifle competition and attempt to control the market. Further, they did this over a period of years in a repetitive way in spite of a previous court judgement that went against them for doing this very thing. Their strategy has been clear from the beginning ... they regard themselves as the controlling force in the market and will ruthlessly suppress or drive out of business anyone they choose in order to achieve their ends of continuous growth. Any market they focus on tends to suffer as competition withdraws in the face of the onslaught.

Further, the consumer is hurt by this tactic as competition (which controls prices in a

free market) withers. Innovation is stifled because no true competitor is allowed to exist once Microsoft targets a market. The consumer is presented with an increasingly Microsoft-only solution when it comes to buying or configuring a personal computer. This is not a good thing.

The Department of Justice had Microsoft cornered, finally, after years of pursuit and the expenditure of large sums of money. The evidence had been gathered, legal prosecution had been pursued in the courts, and Microsoft weighed as guilty on multiple counts ... senous violations all. The judgements were upheld at each level of appeal. The Government had won. I was stunned when I heard that the decision had been made to drop the attempt to split Microsoft into two parts and instead drop back to a light slap on the wrist with a few minor economic sanctions and controls.

I believe this—Microsoft absolutely must be separated into two companies. It is the only solution that will remove the threat from the computer world we now have. I have no problem with Microsoft as a company that creates and sells operating systems. I also have no difficulty with Microsoft as a company that sells the dominant desktop productivity products in the world. But the coalition of the two is a poison trap for the American economy— because Microsoft uses their productivity products as the leverage to keep their customers in line and away from the competition in the operating system arena. Why doesn't Microsoft Office exist on the Linux desktop systems? It's because Microsoft knows it would undermine their sales of operating systems to big companies, some of whom would love to move off of Windows. So they carefully steer clear of offering Office on Linux and retain a stranglehold on desktop systems.

I am not a Linux fan, but I absolutely want such products to flourish in the United States or else we will fail to make the progress we need to in the computer world, or worse— other nations will take the lead we once firmly had in this industry and leave us behind with our doddering Windows systems as they move on to better and more efficient systems. Microsoft must not be allowed to be the single innovator left in this country because, like all large companies, they are neither agile enough nor creative enough once they reach that size to retain those traits. I am also not a Microsoft hater. I do in fact love Excel, and I can tolerate Windows though it is not my favorite operating system. Visual Basic is a good product. Powerpoint is adequate, and though I don't particularly care for Word, I will grant that it works well enough for those that can master it. What I don't like is the fact that most of the products Microsoft makes are items constructed in such a way as to sell more and more of them ... and worse, they are constantly intertwined in such a way that you have to get all of them whether you want them or not. Microsoft candidly admits that their software licensing mechanisms are changing recently solely so they can extract more money from their customers, and not because there is any impression of value received for that money. Microsoft has lost

their way in that regard, and in a free market they would be avoided by some, and fall to a 2nd or 3rd choice by others. But in today's computer world you have no choice—you have to go with Microsoft because of their monopoly position.

I do not believe any of the settlement clauses which have been discussed as the fallback position of the US Government will have any effect. Microsoft has been down that road before and been shown to ignore such constraints when they are imposed. I do not believe it will be any different this time. They will bide their time, stay below the radar for a couple of years and then quietly continue their march to overwhelm anyone who seems to be a competitor. Having spent this effort uselessly twice already, I don't see the Government trying once again in 2006 to resurrect this dead horse, and at that point Microsoft will have their full victory and walk away laughing.

Only by having diversity and competition in the US computer industry can we hope to stay in our leadership role in this rapidly changing and evolving world. It is good to have multiple sources for innovation, and it is good to keep the marketeers out of the leadership role in such fast-moving industries. This will not happen with an intact Microsoft. You had the solution; you had them where you wanted them; and you had right on your side. You stayed your hand for the wrong reasons—which I believe turned out to be political expediency because of the new administration, and changed priorities in the Department of Justice. But in doing this political turnabout you betrayed the American people, whose fate was entrusted to you by our Constitution. The legal system was the only lever which could have made a difference and changed the course of the future. I sincerely regret that you failed to have the courage and the foresight not to see how urgent and how critical your role was.

My dwindling hope lies with the few States that appear willing to continue to push this case, but the chance of their achieving anything other than monetary concessions is impossibly remote. Only the Government could have taken the admittedly drastic step of dividing Microsoft in two. That option is now over, for all practical purposes. I have watched the computer industry grow from the time I was a college student in the 60's and first fell in love with computers. I watched IBM's excesses in the 60's and 70's as their arrogance drove all before them, similar to Microsoft, and I watched as they later lost their stranglehold on this industry in the 80's as new technologies overcame their ability to adapt. And I watched Digital Equipment Company as they soared to the top of the industry in the 80's, losing their way as they failed to understand the critical importance of personal computers. And I saw the rise of Microsoft during the 80's and 90's, leading to the same type of arrogance IBM used to show 4 decades ago. The difference is this—Microsoft has a stranglehold not only on American businesses but also on the American consumer. Their fingers reach deep into all levels of the world economy for individuals and companies and governments. IBM never had that reach. Microsoft is so

entrenched in the way computing is done that inertia alone will keep them there for at least a decade even if they stumble badly in their direction. That is “forever” in the computer world, where 5 years is a generation. It is critical that their decisions be made in the face of competition, and not by a monopoly posture in an industry they believe they own. Good luck with whatever you will do with this issue. I am disappointed and disillusioned that the Government chose to yield the winning hand as they did, and seems not to understand what they have done or what they have lost. I hope my point of view is more gloomy than necessary, and that events will work out for the best for America. However, I have built my career on being right about technical trends. If I had to bet on someone, I'd bet on me ... not on you.

Subject: Proposed settlement is inadequate

I am an independant computer consultant and advanced PC user. I have been following the Microsoft antitrust case for years and have been hoping for a decisive result which will protect me and my clients from MS's well-known predatory business practices and attitudes.

The least I was hoping for was a breakup of the monopoly into 3 companies: Operating Systems; Applications; and Games. With perhaps another company for internet and/or wireless functions. The joke is that in the short run Gates et al would scream about the breakup, but it would improve the competitive environment. In the long run, the rich would get even richer, as has happened with the ATT breakup where people who held their “baby bells” would have done wonderfully.

I know you will get millions of messages, pro and con, so I won't run on. However you decide, I have vowed to wean my clients away from MS products and get them into Linux and Apple (of course, MS owns a huge stake in Apple as well).

Microsoft free by 2003!!!

I want to run them out of business altogether.

Subject: Ruling opinion

First, I am not a microsoft basher they have done some good and some very bad things to the computer industry. I, as many others have to use Microsoft's products. Microsoft insists that they integrate things into Windows to help the user. I believe that they integrate to help Windows maintain its dominance. The perfect example is what they

have done with their new version of Internet explorer. How does not offering Java or QuickTime support Help users? It doesn't it FORCES people to use Windows Media player and Active x.

So, the effect of that is, if you want people to have access to your web page you MUST use microsoft programming tools. Does this help Business? What about Microsoft's New version of MSN blocking all but internet Explorer users, does this help users?

The thing that the Justice Department should be worried about is .NET and Passport.

Here's why:

1. you must use windows because their are few real competitors that are brave enough to take microsoft head on for the desktop computer market

2. people use Internet Explorer because it is integrated into windows

3. when using windows & internet explorer the computer urges people to setup a

passport account and they finally give in

4. millions of peoples personal and credit information is now sitting on Microsoft's servers

5. by holding such valuable information microsoft has painted a giant bulls eye on its self for hackers to try and hit

6. Microsoft's history with computer security is dismal, how times a month are they issuing patches to fix security holes in Microsoft's IIS which runs the servers containing peoples information

7. the bottom line is that millions of peoples lives can be harmed by Microsoft's software and practices if microsoft is not limited in some way What is Antitrust Law For? PROTECTING & HELPING PEOPLE!

How does it control microsoft for them to make its windows code available to developers so they can build better programs for the monopoly? It actually helps microsoft because they get more stable programs to run on windows and it dose not address the problem of WHY Windows is running on over 97% of computers WORLD WIDE.

It may not matter but its my opinion.

Subject: The current proposed settlement does not protect me from Microsoft's abuse of its monopoly power.

The Justice Department has failed me, my community, and the business I work for.

This settlement is barely a slap on the wrist. How does this punish Microsoft in a manner commensurate with their crimes against the businesses and the citizens of America?

Microsoft must be forced to sell a product without a built-in browser or any of their other built-in, insidious, low-quality products. Microsoft must be prevented from bullying PC manufacturers. Microsoft must be humbled, punished, and have its power reduced.

Additionally, Microsoft should pay huge fines for its crimes. Where is that in the settlement?

Now, Microsoft is trying to bribe the nine states that, correctly, don't agree that your settlement is fair or effective. Microsoft is offering them money in exchange for signing up to your settlement. This stinks, if you'll pardon my language. It stinks of back-room deals and a Justice Department that would rather be incarcerating minorities than safeguarding the right to a free and fair market. Where are the conservatives? It seems like the Justice Department is being run by folks with some radical ideas about why they should not enforce the laws of this nation and the rulings of its judges. That, in my opinion, is not justice. Please change your stance and craft a more punitive settlement. Thank you.

To: Microsoft ATR
Date: 11/16/01 5:13pm
Subject: Microsoft antitrust settlement
Dear sirs:
I respectfully would like to tell you that the settlement you have arranged with Microsoft IS BAD!

"Microsoft Chairman Bill Gates on Thursday defended the settlement as tough but one that "we're really pleased to have." Nine other states led by California, Iowa and Connecticut rejected it and will ask U.S. District Judge Colleen Kollar-Kotelly to impose tougher penalties during hearings next year."

This statement from today's AP news say it all. Can the DOJ honestly say the settlement is one that "we're really pleased to have."? I don't think so. You just think that it is all you can get without taking it through the courts, where you know you would end up getting much more. Then why is Bill Gates saying it?

"The department promised in its 1995 settlement that it would "end Microsoft's unlawful practices that restrain trade and perpetuate its monopoly power." Yet as Sporkin rejected it, he complained that, "simply telling a defendant to go forth and

sin no more does little or nothing to address the unfair advantage it has already gained."

This statement from the AP also sums it up. Microsoft is NOT repentant. They have been screwing small companies since before 1995 and still continue to do so. They have no interest in competition for the public good and will continue any other noncompetitive way to wield their monopoly to gain market share in any area possible. All the current settlement does is tell them to go and sin no more. If they had actually been penalized the first time, they might not have sinned again ... and again ... and again. By not penalizing them now, you are telling them that they can do anything they want, knowing that the worst that will happen is that they won't be allowed to do it anymore.

How can you think about all the companies that Microsoft has forced under by including similar software in Windows at "no extra cost", and say that this settlement is fair and that Microsoft should not be punished. Don't fool yourselves, this settlement is only a slap on the wrist to Microsoft and DOES NOT PUNISH THEM AT ALL.

The only way to punish Microsoft and to be sure that they cannot do this again is to break them into two companies: Operating System and Application Software. They used their OS monopoly to create software against which no other company could compete, e.g., MS Office, Internet Explorer, Disk Scan, Disk Defragmenter, etc...

This settlement is only in the best interests of Microsoft, not the public, and should not be pursued.

Subject: Microsoft Settlement

I do not agree with the current settlement in this case. Microsoft is an abusive monopoly whose anticompetitive behavior has been ongoing, consistent, and damaging to consumers and to the market place.

History is littered with products that Microsoft continues to bundle products for no other reason than to destroy competing products. And they leverage their dominance of the desktop to the fullest.

They continue to cite "consumer demand" for their bundling actions, but I defy you to find one legitimate study of consumers that would indicate a requirement, or even desire for Microsoft's actions. Certainly I doubt seriously that there would be justification for many of the "features" in the Corporate environment.

I have been in the computer business for over 20 years and have dealt with all the largest computer companies. None have exhibited the disrespect for security, stability, or features that Microsoft has demonstrated—for years. None have so clearly leveraged their product with the destruction of competition as the aim. None have so distorted the English Language ("innovation" comes to mind), either.

Please do not fold on the issues. Microsoft earned strict, severe and lasting punishment

for their actions. They are a monopoly; they are anti-competitive; and they show absolutely no signs of changing.

To: 'microsoft.atr(a)usdoj .gov'
Date: 11/16/01 5:23pm
Subject: Microsoft Antitrust Solutions
Greetings.

I just wanted to write to say that I agree with the current US Government DOJ solution-set to the Microsoft Antitrust allegations.

As a Network Administrator in a mid-sized company (US-owned), I feel that it is Microsoft's right to innovate their product with the addition of browsers and add-ons and like programs—built into the OS. Even Microsoft's competitors wish to be able to innovate their products without government intervention.

Each of the companies that instigated the DOJ investigation and suit had the opportunity and the will in the past to be monopolies—Novell was a virtual monopoly in the NOS market, Netscape was a Monopoly in the browser market. Each lost market share due to poor market positioning—Novell insisted that it be deployed and maintained by expensive Novell—trained engineers, Netscape was too unstable to be a pleasing browser experience. The computing consumer has benefited immensely from the easy availability of Microsoft networking and Internet Explorer stability.

The question remains, however; Was Microsoft engaged in practices that were 'beyond the pale' in their agreements with other companies? That answer is clearly 'Yes' and therefore sanctions should clearly be brought against Microsoft for their behavior in this regard. However, splitting up the company and a forced-reveal of the crown jewels of their business—their source code—is also clearly beyond the mandate of proper sanctions for these actions.

Computing in the world has clearly benefited by having a world software leader, who is at the least benevolent, and at most paranoid. Sometimes leaders need to be brought back into line, but they don't necessarily need to be deposed.

Subject: Microsoft punishment
Dear DOJ,

Your settlement with Microsoft does not punish Microsoft in any meaningful way. Regardless of the enforceability of "behavioral changes" spelled out in the settlement, the fact remains that Microsoft is getting off scot-free for decades of criminal

behavior. Your settlement lets Microsoft executives behave in public as if they never did anything wrong. Your settlement is an insult to the hundreds of thousands of hard-working, creative computer industry workers who's lives have been and continue to be diminished by Microsoft's bullying.

Please punish Microsoft as severely as they have illegally punished everyone who has tried to compete with them for the past twenty years—by levying billions of dollars in fines (to be distributed to university and national laboratory computer science research and development departments) and banning all public advertising and marketing of Microsoft products for ten years.

This settlement is ten years late for the countless operating system, word processor, spreadsheet, presentation, email, media player, 3D API, programming tool, and web browser software developers out there, but if you instituted real punishment sufficient to cause Bill Gates and Steve Balmer to be forced to resign, at least the playing field would be level for the few of us who are left standing.

Subject: MS Settlement

Dear Sirs,

I do not agree with the terms of your settlement with Microsoft. This company entered into an agreement with Justice in 1995 and immediately broke it. This has caused great expense to the taxpayers.

Microsoft does not innovate and develop new ideas in application software. They simply steal their ideas from other software developers and add it to their operating systems and force OEM's to exclude the competing software.

Microsoft will, in my opinion, find a way around the limitations in your agreement with them and continue business as usual. In the future how many software developers will want to spend a lot of time and money to develop new software technology only to have Microsoft steal their ideas and put them out of business?

Because of their tactics, we will never know what the PC computing experience

might have been. Microsoft writes unreliable and insecure software, but because of their monopoly, hard-working, more talented software developers were railroaded right out of the business and never had a chance. Just imagine if we had an operating system that didn't crash every time you turned around. We will never know now and that is sad.

Ranet Hesse
Trial Attorney, Antitrust Division
US Department of Justice
601 D. Street NW Suite 1200
Washington, DC 20530

This is in response to Justice Department solicitation for input to the settlement with MS.

MS is a company of which it was found GUILTY of violating the federal law. Courts have already determined that Windows OS is a monopoly. Now you are talking about Settlement?, and defending the decision to so?. Please, show me where else the Federal Government "settled with law breakers about their punishment. MS Broke the law now it has to be convicted and pay the price. Period.

Windows OS have reached this level of market share through outright illegal, and unfair business practices. For past two decades, MS ripped us, the consumers of our hard earned money, and still continues to do so. In my view, DOJ is completely on the wrong track in dealing with MS.

Having "three representatives watch MS business practices" is like having your dog to guard the meat. I do not wish to see my tax dollars are wasted on bogus government oversight on a company which its executives stick their thumb up everybody's nose.

Any fair settlement which serves consumers interest, should allow competition in the marketplace for the OS.. Therefore, Windows entire code MUST be accessible to other competitors to such a degree where they can CLONE it to run all existing windows based application and middleware programs, un-impeded by bogus copy right laws. Where, these competitors can also bundle any middleware S/W with their Operating Systems, just as much as MS does today. Had IBM had such an access to these codes in the past, their OS2 Operating System would have been today just as successful as Windows. Please, don't believe to MS and their supporters FUD (Fear Uncertainties, Doubt) about the "nightmare" and "confusion" from which it may result in multiple OS's. In every industry, all competitors form a committees to set interface standard.

It is true with the lightbulb, automobile tires, and million and millions of other products. There is no reason where competitors in the OS as well can't do the same.

I object to the provision of this settlement with Microsoft.

Thanks

Subject: COMMENTS

I have been building PC's for several years and I own a Macintosh computer

Microsoft has been selling defective operating system software to the public for at least eight years. Their systems consistently freeze and crash. When the public gets fed up they come out with a new system with more defects than the last and they charge lots of money for it. Their marketing department blames their software problems on third party software which is false.

They get away with it because they have on competition in the OS arena and the settlement does nothing to address this key point. Macintosh systems and Linux, which are superior systems to Windows, don't crash but they have effectively eliminated those platforms by coercing the third party software publishers into not writing for it. The most popular flight simulator program, Microsoft Flight Simulator, isn't published for any platform other than Windows. BTW, it crashes for no reason at the worst time.

There new OS. Windows XP, is set up to steal information off the user's hard drive for their use.

These guys are crooks and because of the money they have paid to buy off the Congressmen it will be impossible to stop their relentless pursuit to control not only the computer field but also almost every product we will be using in the future, from air conditioners to vcr's and any other electronic device.

In 13 years that I have owned Macintosh's, I reformatted the hard drive once. In 2000, I reformatted the PC hard drive seven times because of their crappy software.

They should be required to share their source code and THEY SHOULD BE FINED AND REQUIRED TO REBATE MONEY TO THE PUBLIC AND THE GOVERNMENT FOR THIS ABOMINABLE BEHAVIOUR.

Subject: Microsoft antitrust settlement

I still cannot see how the agreement reached with Microsoft addresses their illegal gains, nor how it can seriously prevent such a determined violator (who still denies that it has committed wrong, even after the appeals ruling!) from continuing its illegal behavior. Further, they continue to use their monopoly in the OS to force monopolies in other areas of computing.

This is as if there was 1 mall in town (the internet) and all stores have to be in that mall, and the owner of the mall makes everyone enter the store through his own shop—and actively tries to deter customers from continuing into the mall!

This settlement is bad for the people, bad for the economy, bad for a competitive environment, and bad for justice. [I don't know how you could get out of it, but you should certainly try.] David Massey

MTC-00000081

From: Joseph Wood

To: Microsoft ATR

Date: 11/16/01 5:57pm

Subject: Opposed to Terms of Settlement

The evidence of monopoly pricing by Microsoft is plainly seen at any store that sells Windows XP. The Professional edition costs 199.00 and the home about 99.00 and that is just for upgrade. Add \$100.00 to that if it is a new purchase.

Windows XP is simply an operating system and should sell for no more than \$50.00 for a brand new copy if that much. But since they are the only game in town if you want your software to be compatible then you get to pay their price.

The settlement does nothing to address pricing of MS monopoly products.

Oh and if you want to run MS Office be prepared to empty your entire wallet. Their new activation technology could only be done by a monopolist, no one would subject themselves to it otherwise. Oh, and another point. The fact that Bill Gates is happy with this settlement should be all the evidence needed to know it does not do enough.

Is there really anybody who does not work for Microsoft (or is an MS Shareholder) who thinks this is a good settlement? I think not.

MTC-00000082

From: Maarten Legene

To: Microsoft ATR

Date: 11/16/01 6:02pm

Subject: just order Microsoft to do three things.

The antitrust issue is basically about two questions:

1. What should be in an operating system and what shouldn't?

2. If it should be in an operating system, where should it be in there?

Ad 1.

Internet Browsers, E-mail handlers, Word Processors, Image manipulators, Speech recognizers are no part of an operating system. These are applications.

The OS is the necessary software between applications and the hardware. No less, no more.

So in reverse: if it's an application, it's not a (part of an) operating system.

Ad 2.

Printerdrivers should be stored and found in a folder: printerdrivers

Videodrivrs should be stored and found in a folder: videodrivrs

fonts should be stored and found in a folder: fonts

etc etc etc.

Windows hides almost everything in places nobody can reach. The structure of Windows is violating free enterprise.

So the anti trust regulations should be:

A. Order Microsoft go offer Windows as an OS only, and define the OS as mentioned above.

B. Order to create a Microsoft OS company and a Microsoft applications company, with a Chinese Wall between those two.

C. Order the OS company to restructure its OS in a way that it will show a clear structure for everyone, including non-microsoft application software creators.

Best regards / Maarten Legene

Subject: settlement doesn't do enough

I believe Ralph Nader and James Love's open letter (<http://www.cptech.org/at/ms/rnj12ko1larkotellynov501.html>) does a good job of expressing my concerns about the settlement reached with Microsoft.

I especially believe that any settlement must free consumers from being required to use Microsoft software. To this end, I believe that Microsoft's proprietary protocols and file formats (i.e. the .doc format used by Word, and other office software file formats, as well as protocols such as SMB/CIFS). Consumers currently must either use Microsoft's office suite or products with, by far, inferior support for the .doc file format in order to view documents that the vast majority of computer users currently create. This has been going on long enough that Microsoft has practically eradicated all other office suites formerly available for the Windows operating system. See also Andrew Tridgell's concerns that the settlement will allow Microsoft to continue withholding information about the SMB/CIFS protocol (<http://linuxtoday.com/newsstory.php3?ltsn=2001-11-06-005-20-OP-MS>).

The restrictions set on what Microsoft can require OEM vendors to do or not do is a step in the right direction but not near enough, especially now that there are very few companies in a position to take advantage of these changes. This may have worked well several years ago, but I doubt that it would be very effective today.

I urge you to take Mr. Nader and Mr. Love's comments, as well as the concerns I have expressed above seriously when reviewing the settlement.

Sincerely,

David B. van Balen

Subject: Settlement with Microsoft
11/16/01

Dear Sir or Madam: I believe that the proposed settlement with Microsoft is extremely biased in favor of Microsoft.

1. It does not punish Microsoft for their demonstrably illegal, anti-competitive behavior. Since when do we simply ask convicted criminals to not do it again? Let the punishment suit the crime, no more no less.

2. It does not adequately protect the consumer or competing companies from repeated anti-competitive behavior by Microsoft. Even my own untrained eye (with respect to legal issues) found gaping loopholes in the agreement. I remember Microsoft squeezing through much smaller loopholes when they last settled with the government.

We deserve much better from our Justice Department.

Subject: MS breakup required

The current penalties for Microsoft will not bring them to justice. There are more than enough vagaries and loopholes to allow them to continue stifling competition and growing their monopoly. The only way to successfully prevent the company from continuing in its stifling monopoly of the market is to break up the company.

However, "horizontal" breakup into an OS company and an applications company will not help. It should be broken up into two or three companies "vertically", i.e. companies that have both OS and applications elements. These companies can later choose whether it is better business to focus on one of those areas, but more competition is needed both in the OS market and the applications market, in addition to the growing-together of OSes and applications which a horizontal breakup would address.

Subject: Microsoft antitrust suit

I may not know all the details of the settlement, but I think this is just another slap on the wrist for Microsoft. I do know in the settlement that the school systems do not have to use Microsoft products.

Basically this settlement is a payoff for Microsoft. Microsoft is getting a few things out of this. One of the groups that is suing them is now off of their back, Microsoft gets to look good by "donating" money to poor school systems, they have an opportunity to take over another area of software that they are not the market leaders (school systems), and they proceed as normal in their business practices. I am not saying MS should be split up, but I'm not against that either. They treat OEM's and even consumers like crap. Just look at the new licensing agreements. These new licensing agreements are just a slap in the face of all them people settling their cases against MS.

Please do something that could get more consumer choice in the OS and app market.

Thanks,
Dan Verbag
Systems Administrator

PS—Don't you think all the virus problems are enough evidence that there needs to be more choice and competition?

From: Steve Amos
To: Microsoft ATR
Date: 11/16/01 6:32pm
Subject: Microsoft Settlement Comments
To the DOJ,

I am not an employee, nor a competitor of Microsoft. I have no interest in software other than as a consumer. The following is my comments regarding the settlement with Microsoft. Do believe Microsoft should be penalized for their behavior. The agreement should include Microsoft being regulated by the FTC (Federal Trade Commission). This would be the proper agency to enforce penalties.

Do not want Microsoft broken up. This never made sense legally. Do want Microsoft Operating Systems to allow easy installation of competitor products. Before releasing new or revised operating system, require Microsoft to release copies of new software 60 days prior to release to other software companies to test compatibility with their products. Microsoft will have to make the operating system compatible or ?dll? conflict free. This will keep a level laying field. Microsoft Office, Net and Future products also need a level field with interacting products. A similar 60 day industry pre-release needs to be part of the settlement.

Next require Microsoft to adopt suggested retail pricing, and let the market price their products. This system has worked for automobiles and other technology. The competition will drive down prices for consumers. A fine would be appropriate to cover the expense of the court case. However I am against excessive fees. They drive down stock prices and set unreasonable standards for civil judgments. \$5 million as a fine would be excessive in my judgment.

This concludes my comments about penalties for Microsoft. I appreciate your taking the public comment into consideration. If any of these comments are unclear, please email me at problemsolver@eyecrime.com or call 949-380-1250.

Subject: The Settlement Doesn't Address
Market Dumping

Dear Department of Justice, You obviously don't have a clue as to how the high-tech marketplace works if you think that the proposed settlement will eliminate Microsoft's illegal practices, prevent recurrence of the same or similar practices and restore the competitive threat" the company faces from rivals.

I will leave the detailed arguments to people better versed in these types of legal discussions, but as someone who works in the industry I can assure you that I for one don't believe that this settlement is an effective remedy. The long and the short of it is this: Without the leverage of the Windows operating system, many if not most of Microsoft's inferior freestanding products would have long since failed, and the honest companies creating competing products would actually be able to sell their products at a profit and continue the cycle of investment and invention.

Instead, you have a never-ending cycle of small start-up companies who take their products to market and are systematically squashed by free products from Microsoft. This 1) discourages innovation and entrepreneurialism, 2) discourages venture capital investment, 3) concentrates wealth and power rather than distributes it, 4) discourages economic expansion and 5) winnows the ranks of companies who can go into the global marketplace and help bring foreign dollars back home.

This is market dumping! The Japanese did it to us in the late 70's & 80's and America raised holy hell. Microsoft does it to us in the late 90's & 00's and America turns it's back on us. I think the real problem here is that the justice department fails to recognize the similarities between VCRs, cars and software. Telling Microsoft that it has to allow other companies to put their free software on the desktop, does not address that the software should not have to be free to compete with Microsoft in the first place.

Hire some people who understand how the world really works.

Subject: Lets get this behind us

Lets get this behind us. From what I have read, the agreement sounds fair all around. The ones that are still making a big noise, and will continue to do so, are those people associated with Microsoft competitors.

Yes, there are competitors. They would like to see Microsoft put out of business or crippled so bad that they could sell their products without any major Microsoft competition and maybe become king of the hill. I am not a Microsoft employee or associated with the company in any way. I am a user of Microsoft products, as are a great number of people who are making all the anti Microsoft noise.

There are other choices out there for those that want to use them. Lets close this chapter and get on with more important business. I am a taxpayer and don't want to see anymore tax money spent on this.

Subject: I am a consumer

I am a consumer and came across this address while reading news on my email (on the free Outlook Express that came with Windows 98..)

It mentioned "The Justice Department also set up an e-mail address where consumers and companies may send their comments about the antitrust settlement. The address is "microsoft.atr@usdoj.gov" and will operate for 60 days."

My opinion is that this whole trial was brought about do to "PAC money" from competing companies of Microsoft. And, it's conclusion by the current judge is a blessing and the way it should be handled... BUT it should have never gotten to this point in my opinion... I feel that those companies that PUSHED so hard to see Microsoft punished should be financially responsible for the litigation expenses rather than the American Taxpayers and Consumers.

From: Mike Kolitz
To: Microsoft ATR
Date: 11/16/01 6:58pm
Subject: The settlement is good for this country

DOJ, Microsoft, Judge Kollar-Kotelly and others, I have read the settlement, and have come to my own conclusion that this is a fair and just settlement. Personally, I don't believe that Microsoft ever deserved any of this, but as the Appeals court did find that they illegally maintained a monopoly, then so be it. Let me explain briefly why I believe this settlement to be adequate.

It punishes Microsoft by restricting the contractual agreements that it can enter with OEMs, effectively ending that method of monopolizing the market.

* It was agreed upon by both the DOJ and Microsoft, which would indicate that Microsoft would happily follow these guidelines, and is fully intent on doing so.

* Microsoft realizes that it's reputation has been tarnished. Reputation is very important business, and Microsoft realizes that it has a lot of "making up" to do if it wants to win that reputation back.

* This settlement, by requiring Microsoft to release technical details about it's

Windows desktop and server operating systems, as well as Microsoft Middleware, will restore competition in the marketplace by balancing the technical playing field.

I personally feel that Microsoft has always produced higher-quality software than it's competition as a result of talent, not abuse of power, and the restrictions placed upon Microsoft by this settlement will allow Microsoft to do just that, while punishing them fairly and justly for the times where they did "cross the line."

Please consider this in your findings.

Thank you.

Subject: Too early?

I think the settlement came too early. I know of at least two products which, according to their tech support people, require Internet Explorer to operate. These are Dragon Naturally Speaking (a speech-to-typing program) and Adaptec Easy CD Creator. The fact is these program may rely on some DLLs installed when IE is installed, but they certainly do not require, or even necessarily use IE in their operation.

I suspect this insistence that IE is a "requirement" indicates collusion.

Subject: the penalties against Microsoft

It is just my opinion, but my opinion is one that I must express. ...

If we wonder just how it is that computer technology has come so far in such a short period of time, then we need only look so far as Microsoft. Have they been ruthless in conducting their business? Yes. But that ruthlessness has allowed for there to be universal standards which have produced conformities that alone have propelled the development of this technology. We can all be certain that without Microsofts approach we would be years behind where we are now. It seems to me that penalizing a company for doing business, in a calculated and efficient way, is not only contrary to the American dream, but is also contrary to what American business needs—these days especially. If you want to halt rapid progress, and/or, if you want to set American business and the economy back, then do proceed. Its not like the debacle of the Bell break up is non-sequitor here.

Subject: "Settlement with Microsoft"!! HAH!

This a farce!! Microsoft has hurt so many people put out so much crap and computer soft ware that only marginally works because they dominate the market. This is not fair nor right.

They need to be censured by the bigger "bully." My Win 98 was rushed to the market and used to crash constantly, It's better now but still not reliab;le. I call it crash trash!!!

Their Hotmail system is so full of holes that I get trash and Spain all the time and I only used it to one person. I was getting the trash Spain before that.

Someone used Hotmail to put the Trojan Horse virus on my computer via my AOL account.

I screamed at Hotmail and they told me that after a visual inspection of that account's activity, that they would cancel it because they were surfing looking for passwords!!!

And it took manual intervention to do this!! The world's "premier" software company had to manually do this!!

Hotmail was free and anybody could get it with absolutely no verification of critical personal data. I asked them how they could be so irresponsible to allow such terrorist activity!!!

Break them up!!!!!! Sanction them!!! Fine them billions!!!

Teach the bastards a lesson.

They also do things like this constanmtly: put out a cheap imitation product, at low or no cost, run the competition out of business and then dominate.

They are too dominant and need to be taught a lesson!!

Subject: MICROSOFT SETTLEMENT
Dear Sir/Madam:

I believe that the appeals court has been very wise in the microsoft case. I am a consumer of microsoft products.I believe that business must be allowed to grow and profit in America to keep free enterprise alive. I do feel that Microsoft was restrictive in sharing their knowledge and that the threat of a Monopoly was a concern.I believe that consumers and business's benefit when companys have the right to develop products and prosper from that development.

I realize that software is the product many companys have to offer and that when a large corporation like Microsoft has the technology to prevent the copying of their products it would benefit other companys if Microsoft would sell them that technology. The question I pose is should a company be forced to sell their secrets?

Perhaps the real issue is how long a company may keep new technology to themselves before they must sell/share that technology?. The Drug companies have a system that seems to work to keep the cost of making drugs affordable.

Thanks for listening,

A Consumer

From: Bill Binkley
To: Microsoft ATR
Date: 11/16/01 7:39pm
Subject: MicroSoft

To whom ever can help!

Important points:

FIRST ... consider how MicroSoft, (MS) gets market share for products.

There was products for word processing and MS did not have a product. At that point in time Word Perfect was the premium word

processing software. MS came out with MsWord which was not as good and gave it away. Most people opted for the free Ms Word even though it was not as good and thereby MsWord gained market share. NOW MS gets several hundred dollars for these products. In current environment you have to have MS's word processor on your system. The same thing is true for MS's spread sheet software, Excel, and for the Internet Explorer, (IE) browser being incorporated as part of the OS. Without the Windows OS monopoly these things could not have been possible. Competition is great but should be on an even playing field.

SECOND ... MS is taunted for being innovative. When IBM designed the first PC they thought that the market place for a PC was in the 100's of thousands. Therefore they did not want to design an OS. Gates and crew purchased the DOS from a company for less than \$100,000.00 for use by IBM for the PC. Later MS incorporated the Graphics interface from Apple. With this Windows OS monopoly they have and are still forcing PC users to use their products because of the uneven competition.

THIRD ... The browser war is the most recent example of the arrogance of MS. There is absolutely no reason that IE should be part of the Window's OS. The Windows OS is still unstable and incorporating the IE makes it more so. Since the IE is part of the OS is why the IE has considerable more security problems than other browsers. A lot of viruses only attack a PC if you use IE. If you have to reinstall the Windows OS, (the resolve some illogical problem) you have to remove IE, reinstall Windows, then reinstall I. With IE you can only have one version of the software on a PC. This creates additional problems for designers and users as some web sites only work with a certain version level of browsers. For example on my PC four versions of Netscape are installed and IE 5.5. I would like to have IE 5.5 and IE 6.1 both installed to test software I am writing. Web software has to be made to work with the majority of browsers and with the most used versions of those browsers.

SUMMARY ... At a minimum the IE should be a separate product and not part of the Windows OS. This would not hinder MS from being innovative in any way.

Date: 11/16/01 7:40pm
Subject: blindly dominated

Unfortunately, most Americans (due to ignorance of software and the history of DOS, WIN 3.1, etc) have no idea of the damage that Microsoft has done. Sure, one could claim, "well they were just boosting the economy, keeping people employed, yada, yada." But what about the bugs, the memory leaks, the "undocumented features" of oh so many Microsoft products ... they have cost companies so much money. And it's all because one man, Bill Gates, was so greedy that he sacrificed integrity and blindly

shoved his product in the faces of a nation. Like so many crooked companies, he didn't care about the consumer. He didn't care about quality. He only wanted the mighty greenback in his pocket.

And all this time, the glorious yet fragile facade of Microsoft shields the unsuspecting, ignorant, and innocent people of this nation from the truth that lies rotting beneath. This rot affects the integrity of a nation, only encouraging more companies and big business to give up on the people and scramble for what we have been told by so many to hold dear, wealth. But again I ask, at what cost.

Subject: MS penalty

Your proposed penalties of Microsoft aren't nearly enough to restore competitiveness! Microsoft has been found guilty, and I as a consumer and as a taxpayer expect appropriate action from the government. However, what I see is an apparent decision to move on to other things, and do whatever you can to settle this quickly. Don't do this! The computer industry is important to the American economy, and far too important to leave to Microsoft's domination!

I have watched Microsoft since the 1980's, and I firmly believe their business practices have caused a lot of harm to the software industry, and to me as a consumer. What no one knows, and what I can only imagine, is what the software world would be today if Microsoft hadn't put so many competitors out of business. Would we have Windows if Apple hadn't developed the Mac system? Would we have Excel without Lotus 1-2-3? Internet Explorer without Netscape? The list goes on for most all of Microsoft products. Without the other companies, Microsoft would have had no ideas to copy from, and in addition very little reason to innovate. Now that these other companies have become minor players, they aren't able or willing to commit major resources to development. Microsoft claims innovation, but has only displayed innovation when it comes to using their software to achieve business goals. Innovation for providing truly better software is left to people outside Microsoft; when a successful improvement emerges then Microsoft takes it. I want the justice department to take the responsibility of protecting a vital element of modern life, and the proposed settlement does not seem to do that. I don't want a facade; I want strong measures that truly level the playing field so that real competition thrives again in the software world. Come on guys, do your job!

Subject: Microsoft Settlement
Gentlemen:

I strongly object to the proposed Microsoft settlement—I believe that the requirements are far too little when one considers the damage that has been done to the millions of existing users of their Windows O.S. The settlement will do absolutely nothing for me, as an end user of Windows. I will still be stuck with operating systems (I have 3 of them ? all Windows 98, 2nd Edition) that have embedded in them many completely unwanted and totally unrelated functions that occupy hard drive space and slow down my computers. I will still be stuck with an 0.8. that does not interface well with other, non-Microsoft software, resulting in frequent system freezes. Historically, each version of Windows that Microsoft releases promises to correct the bugs in previous versions, only to have a whole new set of bugs show up. They never seem to correct all of the bugs in a given version before releasing a new version—this leaves the user stuck with the problems.

It is my opinion that Microsoft should be forced to provide current users of Windows 95, 98, 2000, and ME with a means to TOTALLY remove unwanted functions that have been illegally bundled with the basic Windows O.S.—such as their Internet browser, e-mail, and messaging. They should be forced to support previous versions until all of the bugs have been addressed and corrected.

They should also be forced, in the future, to totally separate the Windows O.S. from their other software. Windows would then be marketed as a basic O.S. for which the code has been provided to other software developers so that their software can operate seamlessly with Windows, instead of freezing the system. Their other software would then have to compete fairly with software from other companies. As it is now, they have an extremely unfair advantage. They have literally destroyed Netscape and Lotus, both of which have products that are far superior to the comparable Microsoft software. Netscape used to be the dominant web browser until Microsoft used their monopoly on the Windows O.S. to destroy them—even though the Netscape browser is still superior to the Microsoft browser. The Lotus 123 spreadsheet used to be the only spreadsheet to have until Microsoft began to force computer manufacturers to offer their Office bundle with their computers. Lotus 123 is still far superior to M.S. Excel!!!! Unless Microsoft is forced to fully separate Windows as an O.S. (for which they, unfortunately, have a monopoly) from their software (for which they do not as yet have a monopoly), they will ultimately force other software companies into the same fate.

Finally, Microsoft should be forced to make each new version of Windows backward compatible with software that ran satisfactorily on previous versions. For example, I have no intention of upgrading to the XP version because it is my understanding there are many incompatibilities with other older software, even though it is not widely publicized. I have no intention of spending thousands of dollars to upgrade to newer versions of other software just so that I can boast the latest version of Windows and encounter a whole new range of operating bugs.

Microsoft cannot be allowed to continue to use their monopoly to drive other companies to the wall, as they have done in the past.

Sincerely,
Marvin K. Rohrs, P.E.

From: Larry E. Rhoads
To: Microsoft ATR
Date: 11/16/01 7:48pm
Subject: Ability to purchase optional Operating Systems

My concern is that this settlement does not provide any remedy to the many years which Microsoft has controlled the PC distribution in relationship to consumers choice for the operating systems available on a single PC. For example not even IBM could sell me a PC which had a dual boot option where I could order Windows and Linux or any other combination of other operating systems. The salesman response is that no one ever asked for that option even though I had just made that request. When you pushed the issue it was then said it was not done. No one would say that they didn't have a choice.

Microsoft is still not playing on a level field in relation to the consumer where their controlling tactics have now left no viable alternatives in many areas. It is great to get free software for a year or two but then it is not much fun to find that this is the only version of that type of software now available. Then you find that to continue to use that software you are forced to buy a new license at a price which is now more than three times what it should be. Most companies can't use the free trick because they don't have the level of control or resources to destroy another competitor. Microsoft has and still does. I don't think this settlement goes far enough and the level of oversight is not nearly strong enough to provide an effective punishment or deterrent.

Sincerely
Larry Rhoads

Subject: Opinion
Hi,

I'd just like to express my opinion on the entire Microsoft anti-trust issue. For many years, Netscape had a monopoly on the browser market with no real competitors. This allowed them to dictate standards that all web developers were forced to accommodate if they wanted their sites to be viewed. Nobody said a word about Netscape. For many years, Norton Utilities held a virtual monopoly in the hard drive management and repair category of software. Another example is Sun with it's total domination of the Internet server market for so many years. Does anyone else remember the total dominance of CPM in the workplace prior to DOS and then Windows? My point is that every apparently monopolistic hold on some aspect of the computer industry has

been broken by one or more companies with better products at some point. Microsoft got to it's current level of dominance by offering better products, plain and simple. This is called competition and isn't that what a capitalist society is all about? The PC industry has also benefited from the fact that wide adoption of Microsoft's exceptional products has created standards which allowed the industry to progress at a much faster pace. Without these standards, I am convinced we would be at least a decade behind where we are now. With all of this in mind, I obviously believe that your settlement with Microsoft is a good thing for everyone. I also believe the economy will bounce back quicker under the unfettered leadership of Microsoft and it's visionary leader. No, I don't work for Microsoft. I even get annoyed sometimes with them when their software crashes. But honestly, their software crashes less often than most and I use it constantly. Kudos to your team for working out a reasonable solution without killing a technological leader we need during these harsh times.

Best regards,

—Bill

Subject: Requested Microsoft Settlement Comments!

US Dept of Justice:

What you guys did was flat-out, awful ... You dragged America's most premier company through a worthless public battle for what... so a few second rate companies that can't compete with Microsoft products anyway can get a place on their operating system ... and at who's added expense ... yeah, the working consumers!!!

We weren't idiots ... a free Microsoft browser built in to their operating system was a cost/benefit to the consumer ... if for whatever reason a consumer wanted a browser other than the one Microsoft was providing for free, that was always an option to the consumer if they were willing to pay extra for the value they perceived getting from some other browser ... and the Windows Operating System was always built for compatibility to other browsers being installed. You guys got foxed into spending a bloody fortune in public taxpayers' money just so McNulty can attempt to sell his 'piece-

of-shit' applications that he couldn't/won't be able to sell on his own anyway!!! So what was the point to all this nonsense ... I think whatever Microsoft had to yield to get rid of you Reno morons, it was far more than you deserved ... This case could never be defended as a protection of competitive benefits for the consumer ... had you won, we would have paid much more for acceptable software applications provided by the best in the business!

You ought to give the settlement back ... you never were fighting for the public's rights/benefits from the beginning ... you just fought McNulty's fight for him and lost like he would have lost had he fought this fight on his own!!! And for the states' AGs to be now fighting over whether this is the proper settlement of this case is even funnier ... most of these AGs still haven't found the pc on/off switch!

This case was a complete waste of time and money and you only got to wrongfully harm America's most prominent and productive company ... Oh yeah, I have never worked for the Government or Microsoft, so my comments started from a neutral position.

You were the Bad Guys on this one!!!

MTC-00000115

From: Kevin Ulland

To: Microsoft ATR

Date: 11/16/01 8:01pm

Subject: Microsoft Trial—Question about dissenting states

Hello, my name is Kevin Ulland. I fully support the settlement between the nine states, the DOJ and Microsoft. I don't believe Microsoft is a monopoly that has abused it's power, and Microsoft hasn't ever hurt me, the CONSUMER. But that's not what's at issue here.

I believe that the settlement that the DOJ and Microsoft agreed to is fine. It not only tackles the anti-trust "violations" but also addresses the market and Microsoft's role therein. I am happy to see that nine of the eighteen states have signed on, but I am frustrated by the remaining states who wish to proceed with the trial. I have a question about those nine states.

I live in Washington State. I am happy with Microsoft, I like Windows XP and it's features. I use Passport and love the fact that it's integrated into the OS. It saves me time! I love Internet Explorer. It renders beautiful web sites, and being a web developer, it's a great application. Netscape is non-compliant with the standards and mis-interprets code all of the time, creating ugly sites and interfaces. I DON'T want Microsoft to stop innovating. I want the next version of Windows to be even more rich with features. If Massachusetts or California go into the hearings in March and get extra sanctions or limitations applied to the deal with Microsoft, those limitations had better not effect me here in Washington, or any of the other 41 states! Just because California is listening to the special interest groups from Silicon Valley and Microsoft competitors and

NOT it's consumers, that should not affect me in my state. I remember my US history, and I remember that we all started out as separate states, like little nations, and we created a federal government to oversee national issues. But laws passed in California do not apply in any other state, and I am hoping that a ruling against Microsoft for California, or the other nine states only applies in those states. If California law can't affect me here in Washington, why should a ruling for California affect me as well? Will a ruling for the nine states affect the other 41?

Please answer this question, because I think it is vitally important that as a consumer I know what is going to happen to Microsoft and the software I use in my life and work. It is wholly unacceptable that these nine states' problems with Microsoft affect the rest of the nation. The settlement with the DOJ can affect all of the states, because it is an agreement with the Federal Government...

Thank you,
Kevin Ulland

Subject: Microsoft: Mother of Computer Viruses

Microsoft's well-documented battle against Java seems like an old story, but the casualties are still mounting. As a cornerstone of their battle against JAVA, and any platform-independent APIs, MS introduced and expanded the scripting capabilities of their applications to allow web-based scripting. This has been the basis for vastly destructive computer viruses (worms) from Melissa to code-red. While Sun spent many dollars and man-years making Java highly secure, constraining the scope of its actions, and designing it for internet activity, Microsoft rushed its existing scripting system into the internet business without any precautions. This has made it trivial to create worms which access a user's MS Outlook addressbook to spread themselves. MS negligence in this area verges on criminal. While the media cites "Internet Viruses" and, especially now, various agencies are looking with renewed concern at computer security issues, the quiet truth is that these viruses are virtually all limited to Microsoft's shoddy applications. In this area in particular, their dominance is fundamentally dangerous. Like a crop with insufficient genetic diversity, an internet without diverse servers, apps and O.S.s is more vulnerable to any single virus. The fact that Microsoft's OS monopoly leverages their applications hegemony makes these vulnerabilities more severe, and allows mediocre development to combine with a careless and hurried approach to security.

The current proposed settlement does very little to reintroduce competition or diversity into markets that MS has already swallowed. It does absolutely nothing to address the systematic degradation of computer security which Microsoft P.R. describes as innovation. Well-publicized security holes in

WindowsXP and MS Passport/Wallet systems should be troubling, but the unpublicized gaps sure to be lurking in a system of this complexity, from a group with this track-record of negligence should be terrifying. Microsoft's incompetent domination of the internet should be seen as an issue of national security, and yet it is being swept under the rug like a mere industry anti-trust squabble. Please save us!

From: Justin Hopper and Bogdana Manole
To: Microsoft ATR
Date: 12/6/01 1:38pm
Subject: Absolute Outrage

I am a long-term software developer and user of Microsoft's products, however that does not blind me from their unjust business practices. I have seen once strong products like Netscape Navigator, Quicken and WordPerfect, literally crumble as Microsoft pushed it's way into the markets. Everything that is developed by Microsoft creates a further dependency on their products, including the operating system. What we have seen over the past years is more and more software products being developed by Microsoft. It used to be an operating system and now the company offers a complete end-to-end solution for IT businesses in just about any market. Where's the diversity?

I currently reside, in Romania, a former Communist country. I can tell you first hand the dangers of a monopoly. For example, there is one telecom company in Romania (sound familiar) and the whoever wants to make a phone call must pay them a set tariff. Who ever wants to set up an ISP must pay them a set tariff. Who ever wants to receive extra phone services or even make and international phone call, must pay them a set tariff. If the consumer does not like it then who do they have to turn to? Noone! They are stuck with whatever price Romtelecom sets. Now tell me how this settlement is going to prevent this from happening to the technology market.

The decision to make Microsoft give its software away for free to public schools is almost funny. Not only does it give Microsoft's operating system a leg up in what may be one of the only fields that it doesn't have control over; but it will probably be the end of Apple Computers. This is an ingenious idea and whoever came up with this proposal must have done so knowingly. The Department of Justice looks like a naive child being led by the giant software developer to do whatever it wants. Who is running the court-case, Microsoft or the DOJ? Sometimes it is hard to know.

Sincerely,
Justin Hopper

Subject: Microsoft settlement—comments

The settlement with Microsoft was terrible! It does practically nothing effective to stop this monopoly, and in fact, they are going ahead full speed to take over the internet as much as they can. Even if they do not comply with the mild constraints, there are no really effective enforcement procedures. The hands of the enforcers are, to a great extent, tied. At best, they would get another mild slap on the wrist.

I use an alternative browser (Opera), and Microsoft seems to have started attacking this browser as well. Many Opera users have complained to them about this, but their response has been **quite** poor. It would seem that they are out to eliminate it, or at least marginalize it, as they did with Netscape. One could go on and on with more examples of their predatory practices, but I'm sure you get the idea.

I'm just an ordinary user—I don't work for their competitors, and have no ulterior motive for writing to you. I just want you to know how an "ordinary Joe" views the settlement. It makes one wonder how much "justice" they bought with their large political contributions. Thanks for listening,

Department of Justice,
RE: Microsoft Settlement

My thoughts are simple regarding this complicated software business. As I read from public sources for settlement details; the settlement clearly fails to punish the Microsoft enterprise for its corporate behavior. Time has gone by and the justice system may have indeed forgotten about the failed companies due to Microsoft business practices. All of the failed businesses led to (1) lost competitive ideas, (2) lost employment, and (3) failed dreams. Long gone are companies like Netscape, Borland and others. Further the notion that Microsoft would give software operating systems, support and applications to the poorest schools appears to increase the footprint of the Microsoft monopoly. This may actually

be worse than doing nothing. I do not envy your team in finding resolution with this matter or the tobacco matter, but please secure TRUE resolution. In my humble opinion, Microsoft needs to be broken into smaller companies like Judge Green did with AT&T.

thank you for you time and consideration,

From: Joven Joven
To: Microsoft ATR
Date: 11/16/01 8:17pm
Subject: Microsoft Anti-trust lawsuit settlement.

The current proposal for a settlement to this case is weak, and does nothing to help the IT community. The option to force Microsoft to either disclose the source code of Windows, or make them ship Windows in a stripped down manner without any additional software would have been a much better option. Microsoft is counting on the pervasiveness of their applications to force users to use them, and eventually have no option but to pay for their services. I use Hotmail because before Microsoft bought it, it was a very good free web based email system. Now that Microsoft has bought it they've been constantly sending me mail

pitching their new services. I don't mind this at all, its Microsofts right to promote their services, considering the fact that Hotmail provides no significant revenue outside of advertising. On the other hand, Microsoft should not make it difficult for a user to use one Microsoft service that they've paid for and avoid another. MSN Messenger on Windows XP is a prime example of Microsoft's practices. Every few times XP loads, customers have to constantly cancel the sign up feature if they don't want to use it. This goes way beyond simple marketing. Unlike Hotmail, which is a free service, Windows is something a customer pays for, and by doing so they should have the right to not be bothered about other Microsoft products. Internet Explorer is also another complete pain. By tying IE so deeply into Windows, Microsoft users have no real choice but to use it. By trying to give out such a pathetically weak settlement, you are ensuring that Microsoft continues to bully users and other sectors of the IT industry into being exclusive Microsoft customers simply by the way they ship software, not to mention the history Microsoft carries of bullying computer manufacturers and retailers by threatening to deny them licensing. Microsoft can very easily maintain its monopoly if you either force them to disclose their source code or sell an 'OS Only' version of windows, as long as they switch tactics from bullying to shipping stable programs.

Another thing that should be seriously considered before the US court system gets plagued by class action lawsuits is to order Microsoft to either discontinue, or completely overhaul their Outlook Express and ISS programs. These two applications have plagued internet users all over the world with viruses coded to exploit the vast security holes in these systems. Placing penalties on Microsoft for putting off repairing security holes would be an excellent idea, as it would reduce the frequency of virus attacks such as Code Red and Nimda, as well as the latest fiasco involving Microsofts 'My Wallet' feature, which had a security hole so obvious it took a programmer only 30 minutes or so to exploit it in able to steal credit card numbers from Microsoft users who utilized the service.

Obviously I am not the only one who thinks this way, as several state officials have shown by turning down the settlement agreement, as well as the entire European Union's plans to bring Microsoft to task.

MTC-00000125

From: Peter Seebach
To: Microsoft ATR
Date: 11/16/01 8:24pm
Subject: Anti-trust settlement

Any settlement should reflect the repeated and flagrant abuses Microsoft has engaged in, even during the ongoing trial. At a bare minimum, those harmed by Microsoft's practices should be compensated in some way. The original court findings remain; Microsoft broke the law. Any settlement that lacks a substantial and meaningful penalty is itself a flagrant disregard for judicial process.

In the long run, it's probably not necessary to split Microsoft—and indeed, you can't fix a monopoly on software by splitting it up. What the government can, and should, do is make sure that Microsoft's competitors are competing on a level playing field. This means *NO* barriers imposed by Microsoft to getting competing products shipped with computers. No special "Windows" key trademark licensing. No agreements that systems *must* boot Windows. No special high prices for vendors that don't support Microsoft enough. Everyone has to get the same price, no matter what, from Microsoft—any other solution lets them impose multi-million dollar "fines" on vendors as punishment for non-cooperation. Furthermore, their file formats and standards need to be opened up.

Past that, perhaps the best thing to do is simply to try the principals of the case for perjury; they clearly lied to the government, and no one should be able to get away with that.

Subject: Thank you for using Pollit.com's Mail Form! (fwd)

I believe that any settlement that would have a chance of restoring competition to the computer industry would require at least the following:

1) All terms must be enforced by a non-Microsoft party with full access to all Microsoft resources, including source code. Microsoft cannot be trusted to voluntarily comply with any agreement.

2) All communication protocols used by all microsoft products must be fully documented. Such documents must be made available to any and all parties for any reason, free of any charges or limitations in use. Microsoft is not allowed to change their protocols until 90 days after documentation of such changes are made available to any parties requesting them, free of charge or limitations in use.

3) The previous term must also apply to all Microsoft APIs (Application Programming Interfaces).

4) Microsoft may not keep agreements secret. In particular, the terms of the current OEM agreements, currently protected as "trade secrets" must be disclosed.

5) Microsoft may not use agreements with Computer OEMs to restrict in any way the addition of other software to the computers, along with Microsoft products. In particular, OEMs are not to be prohibited from selling "dual-boot" systems, where the system can be booted into Windows or into some other operating system, such as Linux or a form of BSD or BeOS.

6) Microsoft may not use their licensing terms to stop users or developers from using Open Source software or Free Software.

7) Microsoft may not meddle in the the legislative processes of Fderal, State or local governemnts or bodies that make recommendations to them, with their work on UCITA being a prime model of behaviour that is prohibited to them as a monopoly.

8) Micorsoft services (such as MSN) may not require the use of microsoft software by users wishing to use the service.

9) Microsoft services, such as MSN, must not be forced upon users thorough exiusive contracts with ISPs or LECs (such as Qwest).

Subject: Comments on the Proposed Microsoft Settlement

I am a computer strategy consultant, and advise large corporate clients on software technologies.

I speak here not on behalf of my firm, but as a concerned citizen.

I oppose the proposed settlement with Microsoft. The Government has already attempted to modify Microsoft's behavior with conduct remedies, and these have proved ineffective. Microsoft's behavior in bundling additional functionality into its Windows XP operating system, and in subverting open standards, indicates that the firm continues to abuse its monopoly position. This will have long-term adverse consequences not only to other software developers, but to their clients, including the large corporations that I advise. These costs and risks are passed back to the consumers, and are damaging to the US economy.

It is evident that the DOJ's settlement is a political, not legal, remedy, and that it reflects the an unstated policy of tolerating monopolistic behavior. If the Government is opposed to anti-trust law, then it should convince Congress to change the law, not subvert it through ineffectual sanctions.

A minimum acceptable settlement would require Microsoft to unbundle its applications from its operating system (OS), make public the Application Programming Interfaces (APIs) that connect these applications to the OS, and refrain from implementing proprietary extensions to US and international standard interfaces. Microsoft should have no input into the staffing of any oversight body that is chosen to monitor compliance; instead, it should be staffed based on recommendations of industry organizations that are not funded or dominated by Microsoft.

Regards,
Alex Barnes

From: Morss, Charlie
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/16/01 8:44pm
Subject: Bundling of alternate OS not allowed
Hello,
Please do not agree to any settlement that would restrict OEM's from bundling alternate

operating systems when selling a machine with a Windows OS on it. Currently, it is my understanding that a OEM can not include a free version of Linux, BE, or any other OS without violating their contract with Microsoft. Microsoft may actually allow it, but the OEM losses their discounted pricing from Microsoft, essentially making it impossible for them to do any bundling on their own.

This practice is clearly an illegal use of their monopoly.

A settlement that does not take this into account assures that Microsoft's illegal monopolistic practices will continue (they will never have any "real" competition, contrary what they seem to indicate).

Thank you for considering this issue,
Charlie Morss

MTC-00000139

From: Scott Johnson
To: Microsoft ATR
Date: 11/16/01 8:46pm
Subject: Microsoft anti-trust settlement fair and just, I support 100%

The anti-trust settlement reached between Microsoft and the US Department of Justice is fair and just, and I feel it addresses the issues that led to the trial.

The states which remain participants in the anti-trust action against Microsoft are simply trying to protect companies operating within their borders, and their demands are unreasonable. I strongly urge the US Court of Appeals to recognize this and to find in favor of Microsoft against those states that choose not to accept the current settlement.

We must remember one thing above all else... Antitrust law does not allow punishment for a company simply for being a monopoly, nor does it allow punishment for a company that puts its competitors out of business through ruthless competition. Microsoft may in fact be a monopoly, but it has not abused that position (yet) by using its

market dominance to unfairly price its software. Yes, it is a ruthless competitor, but that is not illegal.

The Sherman Anti-Trust Act was designed to protect consumers from companies who abuse their monopoly power to raise prices. In the last ten years, Microsoft has not significantly raised the price of Windows. Case dismissed.

Some claim that Microsoft has been raising prices, as proven by the fact that Windows pricing has remained stable while other component prices in computers have declined. This argument is ludicrous.

Consumers now receive for free software they used to have to purchase seperately from Windows: web browsing software, music recording software, and more.

It is rather generous of Microsoft, in my opinion, to continue to price Windows at its current level. In every other business one can think of, new features cost money. Buy a car, get a stereo, and it will cost you more than if you purchased the car alone.

Don't listen to the states. They simply represent the voice of jealousy, and they are using the courts to achieve what they could not achieve in the marketplace. The settlement is fair.

MTC-00000143

From: Andreas Pleschutzniq

To: Microsoft ATR

Date: 12/6/01 1:38pm

Subject: Personal opinion to the Microsoft settlement

First I don't understand the thought process of why this half way solution of imposing some restriction on Microsoft is even thought about. Microsoft has shown in the past that they do not honor such restrictions or try to find a loophole, or turn the words until it suits their needs.

Secondly and even more important I don't understand the justice behind that. Here is someone has been found guilty of a crime and still show no remorse and we do not punish them as the law would call for, but strike a weak deal with them. In the past the splitup of ATT was the best that could have happened to the customer because it reopened the market. My personal belief is that this should happen to Microsoft as this (the breakup) would force the Mini-MS companies to compete and thus have positive influence on the market.

Here is how I could imagine how the market could be made better: Suppose Microsoft got broken into 2 or more companies which in my opinion could be

a) The OS (Windows) company

b) The Application company (Office, ...)

This would lead to the situation that the Office company would want to sell as many copies of their Software as possible, and thus they might want to port their Software to other OS's. Since now Windows no longer has the advantage of being the only one that has this office suite they would have to compete in the open market with features, stability,... as they could no longer rely upon being the only one having this office suite.

Just my \$0.02

Subject: Microsoft settlement

To the Microsoft antitrust attorneys,

I strongly object to the terms of settlement of the Microsoft case. MS was proven in court and by appellate review to be a monopoly (which is no crime), but to have repeatedly and to the profound harm of its competition, abused this monopoly power (which is a crime).

There are two issues:

1) Justice: They clearly broke the law. To be let off with a slap sends a clear and unambiguous message that they can get away with it, to their shareholder's advantage and the disadvantage of other businesses competing in their ever-expanding fields.

This encourages them to do it again, knowing they are big enough to get away with it. I don't think this is what T.Roosevelt meant by the word 'bully'.

2) Policy: Who in their right mind would now invest in a field of business that might *someday* be a field that MS decides it wants to dominate? The effects on competition, the putative underpinning of our economy, are devastating.

This was a very unfortunate decision.

Subject: Proposed Settlement

Gentlepersoris:

Although I disagree with the Courts findings that Microsoft violated any U.S. statutes or common law, I believe that the settlement agreed to by Microsoft should be approved.

I am at a loss to understand how the Justice Department can justify spending tens of millions of dollars to prosecute a case where the parties seeking protection from alleged monopolistic practices were competitors of the defendant. I thought the public policy behind anti-monopoly statutes was to protect the public. Just how was I harmed by receiving free software, especially software that was superior to that of the competition? Since when is the Justice Department's job to protect corporations whose products are inferior and non-competitive in a free market? Isn't Justice bothered by AOL's acquisition of Netscape? How is this different than Microsoft's situation? I don't know of any law that states that business is supposed to be easy or nice. Tough competition breeds better products at cheaper prices.

Companies that can't compete should get out of the business. I don't see any justification for punishing the successful.

Thank you for this opportunity to comment. Hopefully the Department of Justice will find better uses for its budget than continuing its blind crusade against Microsoft.

Subject: What about XP?

Hello at the DoJ

While the courts have been prevaricating over what penalties to impose on Microsoft the grotesque monopoly has delivered its ultimate coup—Windows XP—which represents nothing less than a nose-thumbing of the whole anti-trust case. This operating system, and the characteristic business practices associated with it, will do more to strangle competition on the desktop than all of the previous MS operating systems put together. Why hasn't this product been taken into account? Why is Microsoft able to continue with its monopolistic practices?

American business law is a sham. There is no justice. Big business can buy its way out of anything.

Subject: please reconsider

The proposed settlement with Microsoft will do nothing to prevent their abusive of their monopoly position. In fact, it is because of their repeated violations of previous consent decrees that they were investigated for the most recent antitrust trial. There appear to be essentially no teeth at all to the proposed settlement. I fail to see the point of adding time to their being under court ordered review if they violate the court ordered review?!

More importantly Microsoft doctored evidence in the trial, Bill Gates failed to show up and testify but rather sent in videotape where he acted arrogantly and continued to produce software that stifled competition. Many more anti-competitive acts and tactics have come out of Redmond since the trial first started which show their lack of concern for current US law.

Lastly, and probably most importantly, is the fact that Microsoft was found guilty and the guilty verdict was upheld. I am at a loss to think of any case, particularly one this high-profile and this handily won, where the guilty criminal was allowed to negotiate their punishment!? The mind boggles...

Please use the full force of antitrust law to restore healthy competition to this most vital part of our economy.

Sincerely,

Don Bivens

 Subject: Proposed remedy isn't tough enough
 To Whom it May Concern,

Your proposed settlement with Microsoft is too weak. You won the case, yet Microsoft calls the settlement "fair," a definite sign that you could and should have got more.

As punishment for violating the probation imposed by Sporkin/Jackson in August 1995, you are sentencing Microsoft to more probation, with the threat of extending that probation if they don't comply. Microsoft's demonstrated practice of disregarding constant decrees, coupled with the vague language of this new settlement will not change Microsoft's behaviour in any way. Further, where are the penalties for criminal conduct that Microsoft has repeatedly been found guilty of? (Sporkin: "simply telling a defendant to go forth and sin no more does little or nothing to address the unfair advantage it has already gained.") "Civil fines" mean nothing to a company that increases its cash reserves by billions per month. A structural remedy would have been suitable; Microsoft got that judgement thrown out not because of any inherent flaws in it, but because of Jackson's protocol breach. Why is it now your position that this remedy is no longer necessary?

You are quoted as saying you were looking for the "most effective and certain relief in the most timely manner"—why are you not trying for a "suitable penalty given the scale and scope of the violations"? Need I remind you that you won the case? "Timely" is a joke; the damage has been done, and the third parties who have been trampled by Microsoft's monopolistic behaviour seek a "proper" rather than "timely" settlement.

As someone who has been actively involved in computers for well over half my life, I urge you in the strongest possible terms to SERIOUSLY RECONSIDER seeking more in your proposed settlement with this convicted criminal monopolistic bully.

Extremely disappointed,

 Subject: Consumer input regarding Microsoft

As a consumer I believe through the computer operating system and add-ons Microsoft has developed, purchased or otherwise acquired it possesses too much control over data and normal information processing. It should be obvious to the most casual observer that Microsoft intends to be the one and only provider of not only your computer's operating system but the one and

only provider of any software package which allows or enhances the sending and receiving of information via your computer or internet appliances such as mobile telephones, televisions, hand held devices, etc. In today's technology world it is no longer relevant to say that he who controls the gold—controls. Microsoft has all the gold it needs combined with dominate marketing and power over competition to buy or bury them which effectively means Microsoft is not only the information processing leader but controls the information—controls. Microsoft provides what appears to be a superb product but who can challenge them or make what would be improvements to their product. No one dares.

 Subject: The DOJ-Microsoft settlement could not be better.

This will benefit consumers. Anti-trust law should not be used to protect competitors like Sun, AOL, or Oracle. Competitors should have to compete. The law should not do their competing for them. Sun and AOL have tried to use this case to destroy their competition. Microsoft is dramatically bringing down the cost of large computer server installations and Sun does not want the price to come down. Sun wants to maintain crazy, high prices for server systems. AOL has a browser that competes very well with the Microsoft browser. The fact that AOL inexplicably pulled that product from the marketplace has nothing to do with Microsoft. If AOL would distribute that browser today it would reclaim 40% or more of the market. This is truly the only reason that AOL does not distribute its browser; they want to make Microsoft look bad. Watch my words, as soon as this antitrust case is finished AOL will suddenly decide to use their own Netscape browser and it will receive a wide audience and distribution. It would have a broad user base today but AOL refuses to distribute or support it because then it would be too obvious that Microsoft did not 'crush' Netscape. AOL simply removed it from the market.

The current settlement with the DOJ and Microsoft is excellent and is all that is required.

 Subject: Microsoft—Anti Trust

Dear DOJ, First I would like to say that this legal proceeding must be handled with great care. It is very economically important to settle a case like this so everyone comes out ahead. It is obvious at this point that your expert opinion is that conduct provisions be established to bring about a beneficial SETTLEMENT.

I am a software developer. My experience with the technology/products in question lead me to conclude that conduct provision MAY be a sensible route to a reasonable outcome. I must stress that technology is pushing forward and is requiring all software developers to use ever greater efforts to bring about products that are desirable. The comfort in the use of various technique matured during the 1980s that still serve as the building blocks for products in the year 2001. These building blocks have to advance in order to meet the needs of the current/next generation of software products. What I am specifically addressing is that Microsoft has advance EXPERIENCE in what ever technology it implements in its Windows OS. Competitors must struggle to implement new FEATURES provided in the Windows OS from the point of view of implementer. We all have to understand that Microsoft has invested money and effort to develop these new features, an intimate understanding of theory behind that technology thus exists.

For those who are in competition with Microsoft to develop feature rich technologies timely exposure to privileged THEORY does not exist. Instead, while Microsoft has "the inside track" and is working on next years projects, the competition is just learning how the present features can and should be used.

All of this is said to emphasize that one critical element to this very important legal matter is that there has to be fair access to new developments within the key technology, WINDOWS. If there were a way to maintain a list of technology being implemented and detailed information on the theory behind it, everyone would be in the advantageous situation of technical literacy behind "A" target technology (WINDOWS). If there is no efficient method to implement such a strategy then I must urge on this basis alone that the company (MICROSOFT) be divided into an OS (WINDOWS) company and an Application company, two totally distinct companies, no ties. At this point, if a division was used, I would suggest no further remedy.

If a division of the company was is not selected as a remedy for the Anti-trust case and a "fair sharing of technology is used", then I would also suggest that Microsoft be restricted from bundling "value added

applets". Examples range from the simple, (Notepad, a simple text editor), to the more sophisticated (Instant Messaging, Video Editing, the Windows Media Player). These applets have no place under the title Operating System. They have no baring on the OS, they should all be omitted for (I'm no legal professional) legal simplicity.

If however one decided not to pursue this aspect of this legality in this fashion, I then suggest at the least, competitors be allowed prominent accessibility/exposure to the OS (WINDOWS) consumer. An prominently exposed method to "use" or "try" a competitor's product should be available. This equal accessible method might encapsulate ALL competitor products to provide a clear distinction between what is "a part of Windows" and what is offered as an alternative.

These alternatives would be included with the Windows OS with respect to competitor participation.

This proposal for the Microsoft—DOJ, Anti Trust case is offered as a suggestion(s)

Sincerely,

A Concerned Citizen

Subject: Microsoft Antitrust

I really don't know why I am writing to you. This is probably just a "mail drop" created by the DOJ in an attempt to placate the millions of citizens who feel that your proposed settlement with Microsoft is akin to no settlement at all. Rest assured, like the Attorney's General of the states that will not accept this sellout, we will not be placated either.

What was the point of this entire exercise and the millions spent on prosecuting this case, if you were going to ignore the rule of law that was violated, and the defendants failure to comply with previous court judgments. Microsoft has shown time and time again that they cannot be trusted to even make a good faith effort to comply with court rulings and judgments. They have repeatedly thumbed their noses at the courts and continued in their reprehensible conduct toward competitors. Contrary to their claims, their conduct and past business practices has not advanced technology and innovation but rather has stifled it by eliminating competition and driving the true innovators out of business. When they perceive a threat by a competitor, they either "end support" for their competitors software, product, or protocol, alter their products to disable or cripple the competitors product on their platform, or include their own poor implementation of the competitors product in their OS in an all too often attempt to eliminate the market for the third party software. (Look at what they've done to JAVA)

They also use their monopoly power to make the industry adopt their inferior implementation of these products as the industry standard.

Their methods of doing this often violate not only the spirit of the law but the letter

of the law as well. Why YOU, in total deference to the state Attorney Generals who entrusted this case to your care, and to the consuming public, are choosing to ignore the facts that have been more than adequately proven, is beyond me.

Are you all so computer illiterate that you don't understand the implications and impact of Microsoft's illegal behavior on the industry or...do you choose to ignore it for political reasons as well?

Judge Thomas Penfield Jackson had a grasp of both the legal and technical aspects involved here that seem to be lost on the current DOT team as well as the current judge. The fact that he may have made irresponsible comments to the press does not change the fact that his findings, in regard to the letter of the law, have been upheld on appeal. Your proposed settlement completely ignores this and, more importantly, completely ignores Microsoft's failure to abide by previous rulings. Your settlement has absolutely no teeth and leaves far too much "squirm room" for a company who spends millions of dollars on attorneys looking for ways to circumvent the letter and spirit of the law.

I have read details of your proposed settlement. It's almost as if you're telling Microsoft, for the umpteenth time, "Now we told you not to do that before. If you do it again we'll really have spank you...next time". IT IS TIME FOR SANCTIONS AND REAL PENALTIES NOW. They have been given another chance too many times.

I am a former peace officer whose eighteen year career was ended by an assault, spinal cord injuries, and subsequent surgeries. I then returned to school where I studied computer network engineering and I am now an Information Technology Manager. I am a MICROSOFT Certified System Engineer (MCSE). I work with Microsoft product each and every day. I was an avid computer hobbyist prior to entering this new career and have worked with both Macintosh and MS/Windows products extensively.

I have, first hand, seen the damage that Microsoft's illegal and unethical practices have done within the industry. I have seen Microsoft products with "wait codes" written into them in order to slow down performance on competing platforms. I have seen Microsoft products that, when installed on a machine that also has a competitors product installed, disables, cripples, or destabilizes the competitors product. I have seen how difficult it can then be to ferret out all of the components of the Microsoft product in order to restore the competing product, or platform, to functionality.

I have seen Microsoft STEAL a third party software developers product by reverse engineering the source code, make their own poor implementation of their own version of the product, incorporate same into their operating system, and in doing so force the third party developer, or a superior product, out of business.

This has always been, and under the terms of your "settlement will always be the business model for Microsoft. This type of behavior is entrenched in their corporate doctrine and they will not change unless YOU force them to change.

Your proposed settlement does little or nothing to change the status quo. Your settlement also does nothing to compensate the hundreds of businesses and thousands of individual who have been damaged by Microsoft's behavior. These people, and for that matter all computer users worldwide, are entitled to compensation.

As the US Justice Department, for whatever reason, seems unwilling or unable to pursue effective remedies in this case, I only hope that the Justice Departments of my home state, California, and the other states unwilling to accept this toothless, flawed, and totally ineffective settlement, will aggressively pursue this case and force an effective remedy that includes punitive damages.

Thank you for your time,

Frank Moore

Subject: antitrust settlement

Hello,

In my view the antitrust settlement is completely unacceptable. The sollutions in the antitrust agreement will not stop Microsoft from continuing its current business practices. Windows XP is an excellent example of what Microsoft does best... force things onto an unwilling industry.

I have specific problems with the following items.

The intentional degradation of MP3 files with the new media player. How does this benefit anyone besides Microsoft and its WMA format? Unacceptable power to audit company's usage of windows products. This is so close to racketeering that its virtually indistinguishable.

Forcing large corporations to one of microsoft's lincense managers is evil. Microsoft requires it and then charges tens of thousands of dollars for a single implementation so microsoft can see how much of their software you are using. NOT ACCEPTABLE

Non Disclosure of API interfaces. Without knowledge of these all important interfaces one can not write programs to interface with windows. Microsoft retains the rights to disclose these interfaces as it chooses under the antrust settlement. This is an enormous power for microsoft to pick and choose who writes what products at will.

Bundling services. This is detailed in the antitrust litigation but it needs to be more enforceable. The right choose what programs I have. Ever attempted to delete microsoft outlook and see it comeback within 10 seconds? Microsoft is using windows file protection to insure that certain programs remain installed no matter what. I hate outlook but I can't uninstall it. Windows XP is the same way.

Anyway you can see that this antitrust settlement is bogus. I needs to be rewritten

with some of the opposition involved. They know what dirty tricks Microsoft has employed. Let them have a say in fixing what was done to them.

Subject: Microsoft Antitrust Settlement

Thank you for the opportunity to comment on the above Microsoft case. I believe that the government settlement is a fair settlement and should be implemented as soon as possible.

I strongly believe that the original trial judgement in early 2000 plus the federal reserve raising interest rates were the two most significant factors that threw the whole country into a downward spiral.

The original trial used up so much of Microsoft's technical and management energy that they were not able to develop new operating systems in a timely manner. As a result, the computer hardware outran the operational software and all the other application programs that would have been developed.

I have used Microsoft products for many years, am a Microsoft stockholder, also a stockholder in Sun Microsystems, Oracle, Intel, and Cisco. I am very unhappy with Sun and Oracle for their part lobbying the attorney generals and the US government to bring the original suit against Microsoft.

I believe strongly that this has been a real detrement to me as a personal user of computers. I have held off buying a new computer until just recently when the new Microsoft XP software became available.

I don't know how all the lawyers involved in this case could ever come to an agreement, but if there were a opportunity to vote against the plaintiff lawyers in this case, I certainly would.

Please settle this national disaster and lets get on with life and the productivity that can come from a lot less legal maneuvering and more and better software..

Thank you,

Date: 11/16/01 12:59pm
Subject: Microsoft Settlement

As a 40 year old computer professional of over 20 years I've worked at AT&T, Bell Laboratories, Sun Microsystems, Silicon Graphics, Broadcom, and some other smaller companies in Atlanta, New Jersey, and Silicon Valley. I think I have a reasonable understanding of the basics of the marketplace in which Microsoft competes. I've seen the business practices of Microsoft first hand many times over the years.

When the DOJ started their anti-trust case against Microsoft I said "This will be yet another slap on the wrist."

So here we are several years later, Microsoft has been convicted of (1) being a monopoly and (2) abusing their monopoly status. And what happens? The DOJ Sells us Out.

"Us" are the consumers, the purchasers of software and computers and the users of the Internet. The DOJ demonstrated that a multi-billion dollar corporation is above the law. The DOJ made a mockery of our Anti-Trust laws. I am outraged by this and very upset with the DOJ and the Bush Administration for failing to fulfill their legal requirements and selling out to corporate interests.

Microsoft does very little "innovation". Microsoft is a Marketing company, an exceptionally good one, that intimidates and bullies and takes advantage of its monopoly status to DECREASE COMPETITION. This is what anti-trust laws were made to correct.

"The [DOJ], led by antitrust chief Charles James, contends the settlement will eliminate Microsoft's monopoly abuse and restore competition in the marketplace". Hello? Earth to Mr James. This settlement is a sell out and will have practically no impact on Microsoft's practices other than to *encourage* them to abuse their monopoly further since they clearly can get away with it. This settlement was written by Microsoft, what else needs to be said?

This settlement is a slap on the wrist. Just like the previous slaps on the wrist that various courts have ruled on against Microsoft. They didn't make a bit of difference, neither will this. This is obvious. It doesn't take an advanced degree to understand this. This DOJ action reinforces the publics increasing critical perception of our higher courts as a place where large corporations are except from the laws. I strongly urge Judge Kollar-Kotelly to throw out this settlement because it is useless. History will judge.

Sincerely,

Neal Nuckolls

MTC-165

MTC-00000166

From: Aaron J. Bartlett
To: Microsoft ATR
Date: 11/16/01 1:02pm
Subject: DOJ vs MS Agreement

"What the settlement seems to do is prohibit Microsoft from breaking the law IN THIS SPECIFIC WAY for a period of five years. Imagine a murderer who shot his victims being enjoined for five years from using a gun, but still being allowed to carry a knife."

"It is important to understand here that Microsoft management does not feel the

slightest bit of guilt. They are, as they have explained over and over again, just trying to survive in a brutally competitive industry, one in which they could go from winner to loser in a heartbeat. The fact that Microsoft makes in excess of 90 percent of the profit of the entire software industry, well that's just the happy result of a lot of hard work. Pay no mind to that \$36 billion they have in the bank. And since Microsoft doesn't feel guilty, their motivation in agreeing to this settlement is just to get on with business. This is a very important fact to keep in mind when trying to understand the event. This isn't Microsoft being caught and punished, it is Microsoft finding a path back to business as usual, which is to say back to the very kind of practices that got them here. Microsoft, confident in its innate cleverness, is willing to give up certain old monopolistic behaviors because there are new monopolistic behaviors now available to replace them."

"Microsoft has to open-up certain Windows communication APIs to other developers, but there is no restriction at all on the addition of new APIs. So expect a LOT of new APIs, many of which will do nothing at all except confuse competitors. There is nothing in the agreement that says Microsoft has to tell anyone which APIs it really intends to use. So just like interpreted software is obfuscated to hinder would-be copiers, expect Microsoft to obfuscate Windows, itself."

"Microsoft has to allow third-party middleware, but a glaring loophole was left for Microsoft, simply to redefine code as not being middleware. If they stop distributing code separately and draw it into Windows, well as I read the proposed settlement, middleware stops being middleware after 12 months. So if something new comes up (all the old middleware is explicitly defined) Microsoft can integrate it and (eliminate) the opposition one year after they stop distributing it separately."

"These loopholes are nice, but they don't amount to the kind of leverage Microsoft would want to have before signing away any rights. Bill Gates would want to believe that he has a new and completely unfettered weapon so powerful that it makes some of the older weapons completely unnecessary. He has found that weapon in .NET." "But hey, .NET isn't even successful yet, right? It might be a big flop. Wrong. Those who think there is any way that .NET won't be universally deployed are ignoring Microsoft's 90 percent operating system market share. Whether people like .NET or not, they'll get it as old computers are replaced with new ones. Within three years .NET will be everywhere whether customers actually use it or not. And that ubiquity, rather than commercial success, is what is important to Microsoft."

"Here is the deal. .NET is essentially a giant system for tracking user behavior and, as such, will become Microsoft's most valuable tactical tool. It is a system for tracking use of services, and the data from that tracking is available only to Microsoft."

".NET is an integral part of Windows' communication system with all calls going through it. This will allow Microsoft (and

only Microsoft) to track the most frequently placed calls. If the calls are going to a third-party software package, Microsoft will know about it. This information is crucial. With it, Microsoft can know which third-party products to ignore and which to destroy. With this information, Microsoft can develop its own add-in packages and integrate them into the .NET framework, thus eliminating the third-party provider. A year later, as explained above, the problem is solved."

"Alternately, Microsoft could use the information (this .NET-generated market research that Microsoft gets for free and nobody else gets at all) to change Windows to do service discovery giving an automatic priority to Microsoft's middleware. The advantage here is in giving the appearance of openness without actually being open."

"These possible behaviors are not in any way proscribed by the proposed settlement with the DOJ, yet they virtually guarantee a continuation of Microsoft's monopoly on applications and services as long as Microsoft has an operating system monopoly. When Microsoft talks about "innovation," this is what they mean. Nothing is going to change."

"My preferred outcome is still that Microsoft be forced to sell its language business, and the proceeds of that sale be distributed to registered users of Microsoft products. You might think to suggest that in your comments to the court."

Robert X. Cringely
<http://www.pbs.org/cringely/pulpit/pulpit200ill08.html>

I share Mr. Cringely's observations in how the outcome of the DOJ agreement does little to protect consumers and businesses from Microsoft's business practices, into the future.

Microsoft will further expand its control by penetrating new markets through the perpetuation of its operating system monopoly onto new devices, such as the recently released X-Box. The release of this device will allow Microsoft to position themselves in a way that will build a need for developers to design software for Microsoft's operating systems, due to better market penetration. The developer will only have to create code once, to be able to deliver his software to PCs running Windows Operating Systems, X-box gaming systems running Windows Operating Systems, and the recent deal between Microsoft and Sega for arcade machines running Windows Operating Systems.

Without placing severe penalties for its monopolistic behavior in the past, and controlling its actions into the future, Microsoft will continue "business as usual" by controlling various markets through the expansion and inclusion of additional software into its operating systems.

Subject: Why is Microsoft not being punished?

To whom it may concern:
Microsoft is an unrepentant monopolist. The currently proposed settlement is

nowhere near harsh enough. It makes only weak provisions to correct Microsoft's behavior, and does nothing to punish Microsoft's past behavior. There is no provision to try to undo the damage that Microsoft has done to its partners and competitors, and there is no incentive for Microsoft to repent its past wrongdoings in any way whatsoever.

Microsoft still does not admit to being a monopoly, despite the fact that the court has found it to be one. Based on past behavior, it seems obvious that Microsoft will seek any and all means to continue business as usual, and the currently proposed settlement provides for very few barriers for Microsoft to do so.

Through its monopoly practices, Microsoft has established file formats that are both proprietary and de-facto standards. No competition is possible under such circumstances for word processing, spreadsheets, or presentation material.

Microsoft should be made to reveal much of its source code, and be made to open its file formats so that competing products can be introduced to compete with the defacto standards of programs like Word, Excel, and PowerPoint. If this is done, someone will no doubt write such programs for the Linux OS, and then we'll see how well a bug-infested product like Windows does against real competition!

"simply telling a defendant to go forth and sin no more does little or nothing to address the unfair advantage it has already gained."

Hello

I am the system administrator for Transamerica Reinsurance. I am extremely computer literate and knowledgeable. I have followed the Microsoft case with great interest, and more than a little frustration, over the years.

While I don't have the legal background to say if Microsoft has violated laws, I do have the technical background to know that Microsoft practices have definitely been detrimental to the public (and corporate) world. Many, far to many for it not to be deliberate, competing products have been stamped out by the very simple strategy of forcibly installing the MS version with the operating system, and by making the operating system opaque enough to ensure that the competing tools can not be as reliable as the MS version.

This has had the side effect of making the MS Operating System itself become extremely bloated, forcing consumers to continually purchase system upgrades to maintain the same level of performance. This may be good for the system vendors, but most certainly has NOT been good for the system consumers.

You might say that is the price of progress, however competing products, such as Linux,

have been growing their level of sophistication faster than MS, without anywhere near the level of associated bloat.

I believe that the consumers, and in fact, MS itself, would be better served by not allowing MS to integrate so much into the OS, and instead be forced to compete on a level playing field with competitors on the peripheral items, much as they do with the office suite. I am so convinced of this in fact, that I am amazed MS hasn't done it on their own—it would be a potential tremendous money maker for them, with their great marketing capabilities.

Please, don't rush into an agreement which clearly will not address the very harmful practices MS routinely engages in.

Thank you
Scott Lander

Subject: A Travesty of Justice

I find it highly disgraceful that the terms and penalties applying to Microsoft have been so weak in contrast to their infractions.

I fear that there are those who believe that the practices of Microsoft in this regard have greatly helped the public at large, but that is far from the truth. The stifling of competition has created a vacuum due to the dearth of credible competition to Microsoft's hold on the software/OS industry. The uncountable number of companies that have been forced to fold due to the pressure exerted by Microsoft both fiscally as well as legally have reduced the ability of consumers to really have a choice. The egregious cost of software for the entire Microsoft line to date is just a minor symptom of this pervasive illness.

I fear that these missteps are due in part to the complete lack of credible experts as to the internal nature of the software of Microsoft. If you reviewed the code (which I admit, I have not been privy to, but I have much experience with the software over the years) that comprised the OS, you would see how it was changed at stages to make it "incompatible" with other software from competitors (i.e.—Netscape and many others). I fear that the DOJ does not have the resources, nor the inclination to pursue this in a manner that is appropriate due to some influence exerted from more Conservative corners.

That stricter sanctions have not been taken is really an affront to the monopoly laws that were so well enforced initially by the Roosevelt administration (and I do mean Theodore). Microsoft's monopoly will continue to flourish, and I wish to add, for the record, that I am disappointed that justice can so easily be purchased in this day and age.

Sincerely,
Vivek Paramesh

Subject: not enough

I fear that the settlement proposal is inadequate. It provides insufficient safeguards against Microsoft using its dominant market position in the OS market to extents dominance in other areas such as media players and other ad-ons functions, such as its passport technology and its .NET strategy.

Windows XP illustrates Microsoft's continued tendency to design its core products to function better with its own add-ons technologies than with third-party products providing similar services. Only recently, Microsoft removed support for Netscape plug-ins, and with it support of alternative media players.

In my opinion, Microsoft is being treated unfairly. If it wasn't for the Windows operating system, we would be in the dark ages. Windows has allowed many people to make use of computers, where before, they may have been presented with ugly text and command lines—with NO STANDARDS. Everyone likes to take down people who become too successful. Why can't these companies with lawsuits against MS stop crying and be more creative. Why do we have to make success easy for everyone?

If they want easy, why don't these companies write software for Linux. Linux is free for everyone. Linux was supposed to be the Windows killer. There are opportunities everywhere for these companies. Instead, they want to ride on Microsoft's success by publishing on Microsoft's OS like as if it were a right, and they want to rape MS at the same time. It boggles my mind. Those crybabies should get lost and write Linux applications.

Does America have to lessen our standards for creativity and innovation? The REAL creative people will always find a way too succeed, but all I see are companies that want the easy "success" by lawsuits. This country has become filled with lawsuits as an excuse to be less creative and less innovative.

Let's not be more creative and innovative. Let's all companies band together and bring down the ones that are successful, and lower our standards of success. Let's bring down Microsoft, not with creativity and innovation, but with lawsuits. Better yet, let's bring down Microsoft while using Windows.

Subject: Dept of Justice Settlement

I personally think the DOJ sold out to Microsoft. The DOJ is using the excuse of 'it is better for the economy' as the reason for the settlement, this is far from the truth. Microsoft has crushed many small companies and even some large ones, whose products were better than theirs. What does that do to the economy. More people out of work, more companies that go under.

I'm ashamed that Illinois, the state where I live and work, has signed up. I give credit to the states that are holding out, I'm sure the government is pushing hard for them to settle. I really think you should look at the penalties those states are proposing, they make sense. Microsoft should be forced to produce a version of their O/S that does not have all of the other products installed. This product should be priced separately. This would allow other companies a chance to compete. It is foolish to think that Microsoft is throwing all of the other software into the O/S for free. The truth is that they just increase the cost of the O/S with all the add-ons, and then it is left to the consumer to decide if they want to spend more money to

go buy a competitors product, or just use the one that they already paid for. I find it strange the DOJ changed their views on the subject of Microsoft, so quickly after the change in administration (and I'm a republican).

These views are strictly my opinions, they are not shared by my company. A little about myself. I'm a Software Developer/DBA. I work with Microsoft products on a daily basis, as well as, working with their competitors products. Again these are my personal views.

Date: 11/16/01 1:25pm

Subject: Microsoft anti-trust settlement

I don't think that this settlement provides enough protection to consumers that Microsoft will not engage in predatory practices in the near future.

1) Microsoft does not have to share source code with other companies developing applications for their operating systems. This gives Microsoft's application development teams an incredible head-start, by allowing them to perform concurrent development. All other companies have to wait until the operating system is fully released, and then they are given only some of the data & information that Microsoft's application development teams are given.

2) Any court challenge / enforcement done under the new regulations will not be able to react quickly enough to stop anti-competitive behavior. There is no point in launching a challenge against Microsoft, when the challenge may spend 2-5 years in the court system. By that time, your company will be dead, and Microsoft will have eaten your lunch.

3) Microsoft's operating system & applications are becoming more deeply interwoven, decreasing the probability that any new competitor entering these markets will be able to compete against the combined entities. In fact, it is getting more and more difficult to un-install unwanted Microsoft applications, and install applications from competitors, (e-mail clients are an example of this). I hope that the United States government reconsiders, and places real, immediate and severe restrictions on Microsoft.

Subject: Microsoft "settlement" unconscionable

For the DOJ to have settled for less than Microsoft originally offered is an absurdity. Microsoft's bullying, dishonesty, and successful anticompetitive manipulation makes the "free market" arguments irrelevant to this case: the DOJ should have worked to restore an open and innovative environment, but has instead worked against the public interest to institutionalize the bloat,

mediocrity and bullying that are the core of Microsoft as it is today.

I'm sure that the Republican apparatchiks who managed this fiasco will do well from it once they pass through the revolving door from government disservice to corporate or lobbying jobs; sadly, the rest of us will have no such compensations.

Microsoft has already completely disregarded an earlier toothless settlement, and DOJ staffers are not such fools as to believe this one will be effective.

Subject: Opinion AGAINST Proposed Settlement

Dear Sir/Ma'm,

I am writing to let you know of my opinion of the US DOT settlement that has been proposed with MS. With all due respect, I humbly submit to you that the terms of the settlement is not enough, and should include more measures that can be said to be "tough". The very fact that none of Micro Soft' executives have owned up that their actions have caused "significant" harm to their Competitors, and hence the Consumers at large, goes on to show that they are indeed not repentant of their deeds, and it would not be surprising to note they will breach any of the said terms of the agreement, or back away from fair business practices. A very good example is the case of Micro Soft' case during the 1995 case with the US DOJ, when it violated the terms of the agreement reached between both the parties. According to me,

"The best way to rectify a mistake is to own up to the shortcomings, and take corrective and preventive measures to lessen the impact of their wrongdoings. Instead of doing so, and rather substantiating one's mistakes, the person only goes on to make a bigger mistake."

I hope that this statement crisply summarizes my thoughts, and of a person who looks forward to an industry that indulges in healthy competition and best practices that are ultimately aimed at the welfare of the Consumer.

Sincerely,

Regards,

Nataraj

Subject: Microsoft Settlement Insufficient to Protect Consumers November 16, 2001

Dear U.S. District Judge Colleen Kollar-Kotelly,

I am writing to express my belief that the provisions of the settlement agreement between the United States and Microsoft are insufficient to protect consumers. Although I am not an expert in the computer field, I am a consumer for personal purposes and for business purposes. I am dismayed that

Microsoft will continue to be able to leverage its operating system to foist off on consumers additional "add-in" software. However, I am even more annoyed that Microsoft will be able to maintain its coercive contracts with computer manufacturers requiring them to pay for a Microsoft operating system for every computer they sell, even if the computer system does not include Microsoft's operating system software. Over the last few years, I have attempted to purchase computers without Microsoft's operating system or with alternative operating systems. In each case, I was told that I would still have to pay for the Microsoft operating system, even if I did not want it. What kind of competitive system is this? Do I have no choice at all? It is my understanding that the current agreements that are in place with computer manufacturers and distributors will not change this practice. To add insult to injury, I have recently been informed that Microsoft will no longer sell Windows 95, and/or Windows 98 operating systems. This creates a tremendous problem for system administrators in small and medium size business who have previously been forced to standardize on these systems. Even though I am an intellectual property law attorney, I am at a loss to understand why a company like Microsoft should be able to maintain its copyright in computer software that has been misused for anti-trust purposes. By analogy, under patent laws, the patent can be held invalid and/or unenforceable, and the subject matter covered by the patent is dedicated to the public for its free use from that point forward. It would seem an effective strategy to signal to all future software businesses that if they misuse their copyrights that the rights contained therein will be forfeited. The entire source code of all software that Microsoft has used in violation of the anti-trust laws should be stripped of any copyright protections and competitors should be free to reverse engineer, copy, distribute and sell it without any interference from Microsoft. It seems illogical to allow Microsoft to maintain a legal right in the copyright of software that has been placed in its hands by the government. If it is a right granted by the government, it would appropriate to remove the protections of that right when it is misused. This would truly foster competition, it would allow competing operating systems to be quickly developed and sold that are compatible with Windows 95 and Windows 98 operating systems. Then the consumer will have a real choice of purchasing the new Microsoft operating system or purchasing a competitor's clone of the old misused operating systems. These are my thoughts on the matter, and I hope you will find them helpful.

Subject: DOJ's proposed penalties do not undo the market damage

Hello,

As a software developer I can assure you that the proposed DOJ settlement does nothing to undo the monopolization of the browser market that Microsoft accomplished through its illegal business practices. Microsoft now has over 80% of the browser market, and growing, precisely because of the illegal conduct determined in the case. Why are there no penalties to force them to disgorge that advantage, by bundling an alternative browser? The lesson for Microsoft: use whatever means to destroy any competitive threat, and then deal with future-conduct remedies by subversion. This is precisely what happened in the 1995 consent decree.

SINCE WHEN DOES A REMEDY FOCUS ONLY ON FUTURE BEHAVIOR AND NOT ON ADDRESSING THE HARM ALREADY PERPETRATED? THIS IS NONSENSICAL.

Subject: Please Break Up Microsoft

As an Engineer living in 'Silicon Valley', I am well acquainted with the current state of software technology, Microsoft's product line and it's position in the Market, as well as competitive consumer software packages. My problem is that Microsoft's software has gotten progressively worse over time while their aggressive marketing tactics have

become increasingly invasive into private lives.

To me, major issues include, but are not limited to, the following

(1) Microsoft is endlessly bundling ancillary software packages with Windows which destroys competition because of the competitive advantage of the Windows bundling.

Regardless of the Microsoft quality, and it is generally less than competition's full-featured product, the competition is at a disadvantage and a potentially superior product cannot be competitive.

(2) It appears that Microsoft's own Windows software code is so massive that they are creating more bugs then they are fixing because of their endless integration of other programs into Windows. I believe that these other accessory' programs would function faster & more effectively if they were completely separate software packages, interfacing to Windows in exactly the same manner of the competition.

To restate this, I believe that Microsoft's policy of direct integration into Windows, rather than producing a superior product, has resulted in an inferior product because they are able to sidestep the software rules they would have others follow.

(3) Microsoft's PASSPORT/.WEB initiative is being marketed so aggressively that now Microsoft customers are forced to sign up with PASSPORT in order to get Customer Service.

Again, if you are not signed up for PASSPORT, then you do not get customer support on any Microsoft product. Since I do not want to put personal information into Microsoft's PASSPORT program, I may get no customer support.

I do not want Microsoft given the power to drive internet eBusiness.

MTC-183

MTC-00000184

As a knowledgeable consumer and voter, I am seriously concerned that Microsoft's business practices have not changed since the recent anti-trust actions. As history shows, Microsoft's market approach is to bully both the competition and consumers by virtue of their market power. Again, this is not in the best interests of the American public and I am very disappointed in the current Administration's efforts and consider them a step backwards. Because of the above issues, and many others, I want Microsoft broken up into at least 3 companies; Operating Systems (Windows), Office Products and Internet Products. The interaction between these different software products and the Windows operating system would then follow the same rules as their competition.

PLEASE support consumers on this and do NOT let Microsoft off the hook.

Subject: Microsoft Settlement

Articles I've read in newspapers (and on websites) suggest that the Department of Justice is letting Microsoft off easy because the prosecution of Microsoft it is hurting our economy. Is that what we, as Americans, are supposed to teach our children? That crime is “ok” as long as it (temporarily) helps our economy?

Microsoft has been proven guilty of serious crimes that affect all consumers, and all businesses, and in fact, may affect our entire future. And were going to let them off easy just because it is temporarily inconvenient to punish them properly? Absurd! The fact that this case was tried as a civil case instead of being tried as a criminal case HAS ALREADY let them off easy, no matter what civil penalties may be imposed. Several Microsoft executives SHOULD, actually, be facing JAIL TIME. But now, not only are we not punishing them under criminal law, but we're even going to let them off easy on the civil penalties? THIS SETTLEMENT is a crime against all Americans, and all computer users of the world!

In the meantime, A. Alfred Taubman of Detroit faces a strong possibility of 3 years in prison, and \$300,000.00 in fines for MUCH lesser crimes (charged with violating the Sherman Antitrust Act by fixing prices at Christie's and Sotheby's auction houses) because prosecution of his crime doesn't negatively affect the economy. And there are MANY examples of FOREIGN companies, listed on the DOJ website, who have received far greater punishment for far lesser crimes.

This settlement is ridiculous! Microsoft was PROVEN GUILTY BEYOND ANY REASONABLE DOUBT. Most of the charges were upheld by the Appeal's Court. The evidence is a matter of PUBLIC RECORD. Bill Gates, and other Microsoft executives SHOULD BE IN PRISON. Instead, they stand to walk away with a slap on the hand!

PLEASE GIVE UP on trying to convince the “hold-out” States to join this settlement! This

proposed settlement DOES NOT adequately address the crimes. And the "hold-out" States are THE PEOPLE'S only remaining hope of JUSTICE in this case. The (proposed) settlement MIGHT HAVE BEEEN acceptable IF Microsoft had been willing to settle BEFORE the judge issued his findings of fact. But THEY DIDN'T. Microsoft arrogantly CHOSE to take it's chances in court and THEY WERE PROVEN GUILTY. If this (proposed) settlement becomes final, the Justice Department is basically allowing Bill Gates and Microsoft to walk away LAUGHING at our system of justice, while STEPPING ON the LITTLE GUYS who play fair! And WE, THE PEOPLE, will PAY for it all!

Subject: Guilty of crime but no punishment???

Justice:

The proposed settlement with Microsoft is not just. Found guilty of a crime, Microsoft must be punished in proportion to the unfair prices it has charged its customers, and to the injury it has done to its competitors.

But the settlement includes no real punishment, only difficult- or impossible-to-enforce attempts to make Microsoft cease its criminal practices. Microsoft Chairman Bill Gates on Thursday defended the settlement as tough but one that "we're really pleased to have." Of course he's please to have it. Any settlement that the world's biggest criminal is "pleased to have" is proven by his pleasure to be grossly inadequate.

An adequate settlement would have Mr. Gates displeased at being handcuffed and lead off to prison. Judge Stanley Sporkin said correctly in 1995, "simply telling a defendant to go forth and sin no more does little or nothing to address the unfair advantage it has already gained."

And I add: Neither does it address the billions of dollars in wrongful profits it has gained and in injuries it has done.

PLEASE don't let these criminals off without punishment as this settlement does!

Subject: Microsoft should be split

I'm Jim Hillegass, CEO of J. River, a 20 person software firm located in Minneapolis.

I believe that Microsoft has abused its power and should be split into an applications company and an OS company. I understand that the Justice Department has decided against this, but I want to express an opinion. Here's why. Microsoft is big and, to please shareholders, must become still bigger and more profitable. There are no significant niches left in the software business where a company can make products without competing with Microsoft.

Competition with Microsoft would be fine IF the details of the OS were made available equally to software vendors like J. River and to a Microsoft applications company. As it stands, details on the OS are extremely hard to get.

I watched Microsoft destroy Wordperfect, Lotus, Netscape, and many smaller firms. The same thing is happening now with Real Networks, and the newest OS removes niches in zipping files, printing photos, and many other areas. I would be happy to provide more detail.

Subject: Microsoft settlement comments

I do have some comments on the mechanics of the TC committee. These comments are motivated by the idea that any well functioning system should be self-regulating, that is it should have safeguards built in against escalating behaviour.

I must caution that systemically, the carte blanche that the TC members seem to enjoy with respect to spending as per the proposed final judgement is quite a horrible idea.

QUOTE: The TC members shall serve, without bond or other security, at the cost and expense of Microsoft on such terms and conditions as the Plaintiffs approve, including the payment of reasonable fees and expenses.

QUOTE: The TC may hire at the cost and expense of Microsoft, with prior notice to Microsoft and subject to approval by the Plaintiffs, such staff or consultants (all of whom must meet the qualifications of Section IV.B.2) as are reasonably necessary for the TC to carry out its duties and responsibilities under this Final Judgment. The compensation of any person retained by the TC shall be based on reasonable and customary terms commensurate with the individuals experience and responsibilities. Together, these two stipulations allow the TC—or even just one TC member—to incur as much cost on microsoft's behalf as they choose to. There is no reason that the plaintiffs, who control the cost, but do not incur it themselves have it in their own interest to make sure that the total cost stays within reasonable bounds.

I strongly suggest that as part of the judgement, an annual budget is proposed that cannot be exceeded. This would correct the problem. Another systemic problem inherent in the judgement, but a lesser one to a degree, is that it is within the self-interest of the TC to cause an extension of the oversight time period. This might be changed if the judgement made explicit that at the end of the initial period, TC members must relinquish their posts, and a completely new set of members will be selected in the case of an extension.

Sincerely,
Yours,
Roland Radtke

Subject: view on MSFT case

As an IT professional, I do believe this case has become irrelevant given the rapid changing IT environment since 1998.

Although Microsoft did enforce the marketing position of its IE browser for

Windows installation and conducted business improprieties with "special deals" for certain vendors, overall, I do believe the case settlement has much addressed the issues that was in the original case.

On the upside, Microsoft did delivery productive software technologies to improve our productivities, to varying degree of consumer satisfaction, as well as help to standardize software technology.

Without certain level of standardization, the collaboration and integration among our businesses may be in a state of more confusion.

Therefore, if Microsoft agrees to adhere to the remedial actions stated in the settlement, that should provide a first step forward. There is no way for everything to become perfect or acceptable overnight.

The 9 disagreeing states should be concern that they are squandering our tax dollars on an historical, out of context case. IT and business environments have changed since 1998 and Microsoft had soften its marketing approach with Window XP.

I suggest that the 9 disagreeing states give the case a rest, see how the settlement works out in today's environment, then go forward if necessary. This on-going lawsuit, to me, is a job security for these state attorneys who has too much tax dollars to squander.

regards,

Subject: concerned individual on the proposed deal in US vs. Microsoft

Dear DOJ,

Havent you learned anything from history? The deal you've proposed, in all its loopholes & insufficiencies, is deja vu to the 1995 decree. Microsoft spat in the face of that decree as you remember.

It will do so again.

I use Microsoft software, and i use non-Microsoft software. I insist on choices, and I know that thru choices we gain innovation. I do not want Microsoft in complete control of the market, as they are now, and will be with this ineffectual, shortsighted deal.

In the absence of a breakup, the only solution to the serious violations upheld by 2/3 of our nation's highest courts is to force Microsoft to release all source code for the shipped OS. This is easy to enforce, is simple and elegant. If Microsoft wants to embed media player, messaging, web browsers, a kitchen sink—then force them to release the code. Since they wouldnt want to do that, they'd be compelled to offer these products independently of the OS, on a more level playing field with the competition.

Isn't this the crux of the trial?

Please listen to the public.

Subject: Break Micro\$oft into 3 pieces

Justice Department,

Micro\$oft should be broken up and not just 2 piece, but 3. Micro\$oft should be broken into an Operating System house, applications house, and now with their push on the Internet an Internet service house.

This would mean better products for Unix and Lynx based computers forcing Micro\$oft to compete on its merits as an operating systems provider company without forcing people to use their operating system or else no ubiquitous useful applications for you. One company, Micro\$oft, should not have so much control over a growing industry that will influence the way the world working in the future.

Subject: Remedies for Microsoft monopolies insufficient

We need greater constraints on the Microsoft computer monopoly than those proposed.

As a user of Macintosh computers, I am a victim of Microsoft's monopoly every time I try to use software or browse a web page. Just because everyone at the Department of Justice uses Windows, they think there is no reason to believe they should stop the Microsoft monopoly. If you used another computing platform, you would realize just how much it is costing consumers to allow Microsoft to continue to dominate the computer industry.

Microsoft's arguments that they could lose their monopoly in a minute is not only specious and self-serving, but is also untrue from the historical perspective of the computer industry. People have made the same claim about how the internet was going to wipe out AOL for the past 8 years, and by now it is clear to see that people don't change their computing habits as easily as Microsoft claims.

Since Microsoft clearly has a stranglehold over the entire industry, they are abridging the freedom of speech in America by making it necessary to buy a copy of their software to exchange speech between computers.

The source code of all Microsoft operating systems, past and future, is now a document that belongs to everyone in the world. Since we all depend on it, Microsoft should not be allowed to keep it secret any longer. Anything less would severely constrict the rights of every US Citizen, not to mention the rest of the world. It also impinges on the ability of our government to function since everything is computerized.

This is not a business decision, as the DOJ seems to think. This is a decision about the very rights of our citizens to communicate openly, for now and into the future.

Subject: Microsoft

I am writing this to provide my comments on the Microsoft antitrust settlement. I have been involved in the Computer Industry for over fifty years. I have lived through the emergence and transition of the Personal Computer. I have seen companies come and go. Do we want to go back to the days of different, non compatible Operating Systems and hardware? Microsoft has provided us all with an easy to use, integrated, and most of all a standard. Microsoft became a monopoly by default. Let us look at the Personal Computer marketplace after IBM introduced their machine in 1981. Some of the PC's were offered by Cromemco, Vector, Altair, Radio Shack, Atari, and Commodore. Each had its own proprietary hardware, and used non-standard forms of the CP/M Operating System. You chose a platform based on what software was available for it, unless you were a software designer. If you purchased a Cromemco computer, for example, the word processing software that was offered did not necessarily work on the Vector machine.

There were no standards that allowed software to work on different platforms and operating systems. Do we want to go back to this? This would not be in the best interest of the consumer, nor the industry. The IBM PC changed this by providing an open architecture, where anyone could build equipment that would work with the IBM PC. Anyone could build a video card, a memory card etc. that could be installed into the IBM PC. What IBM did not allow was for others to use their BIOS. This meant you couldn't build your own IBM PC. It wasn't until Compaq reverse engineered the BIOS that the Personal Computer market took off. Now others could produce an IBM compatible PC. We may ask why did the IBM PC create such a stir. I think it was VisiCalc for the IBM PC, the Spreadsheet that was available on the Apple as well as the IBM name. This spreadsheet is what businesses were waiting for. Shortly after this we began to see other software appearing. Ashton Tate's dBase, which became the de facto database. VisiCalc later to become 123 the de facto standard spreadsheet, and WordPerfect and WordStar the two giants of word processing software. These companies were monopolies in their own right. Then Microsoft introduced Windows as the Operating System for the PC. None of the major players either recognized its impact or didn't wish to invest in it. Microsoft introduced Word for Windows, the first Graphical User Interface (GUI) word processor, and Excel the first GUI spreadsheet for the IBM compatible PC. None of the other giants produced GUI products with the ease of use and functionality that the Microsoft products provided, until it was too late. Both business and consumers eagerly accepted, and benefited from the innovation introduced by Microsoft. There were no competing Operating Systems offered by anyone. IBM tried with their OS2 which might have been of interest to engineers but it did not appeal to the majority of users. At this time Microsoft did not have a monopoly in anything. By providing what the market wanted they came

to dominate the OS, and Office application fields. They became an OS monopoly and an Office software powerhouse. The others failed to innovate and compete. Also in this time frame there was Novell who dominated the PC network world. Microsoft introduced Windows NT followed by Windows 2000 and because of its features, ease of use and relatively low price supplanted Novell as the network OS of choice. Of course there were the variations of UNIX but this was not the choice for the PC platform. Now we see losers, who didn't innovate and understand how to compete, asking the Government to punish Microsoft for being successful. AOL Time-Warner would like to have the monopoly on Instant Messenger. They are crying foul that Microsoft is again being innovative and integrating their Instant Messenger into the Operating System. Sun Microsystems has had years to come up with an OS that would be inexpensive, and have numerous compatible software applications that work on the PC. They haven't done it. Yet they cry foul, decrying Microsoft's success. They and others tried to champion the Network Computer which did not use Microsoft Windows. The world did not beat a path to their doorway. Linux was supposed to be answer to those who wanted out of the Microsoft OS world.

What happened? Its sales seem to be mainly to a few. Compaq is no longer installing it on their computers for a lack of demand. Why is this? It is not easy to use, has many problems, is really not able to work across many platforms and lacks sufficient applications that most consumers want. It is not innovative or competitive. Is this Microsoft's fault? The Courts have found that Microsoft used its monopoly illegally. For this they should be punished. The punishment should be such as to consider its affect on consumers and the industry. The punishment shouldn't be one that prevents Microsoft from innovating and creating products that are easier for us to use. It shouldn't punish a company for its success. Those who are jealous of Microsoft would have Microsoft punished for its success. Is this what you want?

Sincerely,
Sheldon Teicher

Subject: Microsoft Antitrust Case

The proposed remedy for Microsoft is laughable. It is also inconsistent with American legal practices. In the findings of fact, it was found that Microsoft was an illegal monopoly and had illegally maintained and extended their monopoly in the operating system market. Fundamental to law in this country is an idea that we don't allow people or corporations to retain that which they've acquired illegally. That said, the original proposal to break up Microsoft is also flawed in that it preserves the Monopoly. The source code and rights to the Windows operating system should be placed

up for auction and awarded to, say, the 3 highest bidders thus reducing the monopoly to an oligopoly. It is my belief that nothing else will restore competition and innovation to the computer operating system industry. Don't allow this travesty to continue.

Subject: Settlement unfair and wrong for consumers/economy

Greetings, I am a citizen of the United States of America and have a strong opinion against the proposed settlement between the United States Department of Justice, several of the litigating states and Microsoft Corporation. This settlement is a poor substitute for justice. Microsoft has been found guilty many a time of anticompetitive actions in the past, and in this trial. Yet, there seems to be a reluctance to actually punish these criminals. If a person were to burglarize a corner gas station, that person would serve time and make reparations. Microsoft has put the world economy at stake by taking control of the personal computer market as well as other industries within the technology sector. You are probably reading this email right now within a Microsoft Operating System, in a Microsoft Mail Transfer Agent, running on a "Microsoft Certified System" made to run their Windows Operating System. It is clear what has been done by them. What remains to be seen is if the Department of Justice can enforce the laws which have been so contemptuously broken. Let us not forget that Mr. William H. Gates Jr. perjured in a court of law over the duration of this lawsuit. He stated that a video made showing that their Internet Explorer product could, in fact, be removed from the system without serious damage done to the system. When the truth became known, the video was a hoax. The lack of punishment by the Department of Justice on perjury (of various infamous persons) is becoming a topic of discussion among the citizens of the United States of America. The doubts that the Department of Justice can effectively operate have been mentioned in public arena several times over. This should not have to happen. Action must be taken. Real punishment for criminals must be doled, or else the government will become weak in the eyes of its constituency. I am including a hypertext link to an open letter from Ralph Nader to the presiding Judge of this case: <http://www.cptech.org/at/ms/rnj12kollarkotellynov501.htm>

Please for the good of the people of the United States of America, reconsider this settlement.

Thank you,

Subject: US vs. Microsoft

I think the Microsoft settlement is a good one for the nation. It opens up doors for other competition on the Windows platform. As a consumer I look for good value in what I purchase. If I get "extras" included in a purchase I'm ahead of the game! When I say extras I mean browsers, cdplayers, movie makers. This is GOOD for the consumer!

I've always had a choice to use competitive products on the windows platform. Sometimes I purchased these products because they were "better" than what Microsoft had to offer.

Let's just get this done with ... Our country is in enough chaos. Let's beat down our real enemies. Not a company that supplies good software at low prices.

Subject: Microsoft Settlement

I find the proposed settlement with Microsoft a selling out by the Justice Dept to the Corporate thug it says it regulates. These slap on the wrist provisions do nothing to stop the juggernaut that Microsoft has become. If the Justice dept really wants to help the American public then fine Microsoft in the same manner as the EU but instead keeping the money give it to Microsoft competitors such as Netscape, Caldera Linux and others. Then make Microsoft disclose the workings of the operating system API's especially the file system api which is prohibitively expensive to secure. Microsoft is waging war against the open software groups by keeping this information secret. Without the money and intellectual assets of Microsoft independent software vendors cannot hope to compete. Microsoft not only invades the browser market but almost any software market with its tactics. One can only hope that while the Justice dept is attacking the browser market that Microsoft is not making significant headway in other software markets. If Microsoft is not stopped they will one day control and own the software market as a whole. The extreme greed of this corporation is depraved.

Subject: Simon Sez

Any settlement proposals concerning my finances and investments must include the hidden and intentionally masked advertising revenues from every related television

commercial campaign, especially multiyear Fortune 500 campaigns.

Specifically, the advertising agencies that developed the multi-year 'Jack' commercials for the Jack-In-The-Box Company have reaped untold millions of dollars in production and royalty fees. This food service company, once owned and controlled by the Ralston-Purina Company of St. Louis, Missouri, later based in San Diego along with McDonald's Corporation of suburban Chicago and its advertising agencies have withheld settlements and equitable distribution of creative royalties for many years, causing me undue and unnecessary years of hardship, loss of income and ridicule. Violations of free speech, and other civil rights have been trampled in order for each law enforcement jurisdiction to check into my story. My objectives are to receive a fair distribution of profits, nothing more or less than the originating producers received for developing the campaigns. Nothing short of a total audit of broadcast television commercials and business advertising budgets will reveal the enormous amount of fraud involved with this multiyear scam. Simon Marketing files a \$1,000,000,000 lawsuit against McDonald's Corporation in a counterattack designed to thwart McDonald's efforts to sue Simon for the Monopoly Game scandal. Simon sez McDonald's has known for over ten years about the prearranged winners of supposedly fair marketing games, and has encouraged Simon to target specific individuals during the "broad marketing campaigns." Two senior McDonalds management staff are forced to resign in the scandal and corporate reorganization. USDOJ building security staff acknowledges the television commercial links with nickname references to me upon my arrival to the Los Angeles Federal Building/US Courthouse. I am honored, and amused by this unorthodox recognition as I have a sense of humor. I also have patience for a just agreement, however intentional stalling, subversive actions, assaults, and felony attacks against me on a daily or weekly basis harden my resolve to receive my money without any further delays. I would like to thank all of the people who have listened to me via email during past three years, and a special thanks to those who may have saved me from harm during an unpredictable time. A sincere appreciation goes out to those in law enforcement that really care about others by going the distance protecting me in challenging environments. As you may have observed, I have provided reciprocal security and briefings for select cities, public and private facilities, and groups to the best of my ability.

Respectfully,

Robert Remington

To: Microsoft ATR

Date: 11/5/01 10:21am

Subject: Concerns with proposed Microsoft settlement

I am writing to express concerns regarding the proposed settlement of the Microsoft antitrust case. In particular, the proposed settlement will not address the needs of so-called "open software" developers. It is precisely this audience that is in most need of relief and that offers the best counterbalance to Microsoft's operating system monopoly.

My specific concerns are:

(1) Sections D and E of part III require that Microsoft disclose the middleware APIs and communications protocols required to interoperate with Microsoft operating systems and servers. However, disclosure is to be via "Microsoft Developer Network (MSDN) or similar mechanisms". MSDN is a subscription service; disclosure must be via a mechanism that:

(a) does not require any payment to Microsoft, and

(b) does not enable Microsoft to become aware that a potential competitor is interested in these APIs and protocols. The disclosure mechanism should be via an Internet Web site that is freely available without any registration requirement.

(2) Section I requires that Microsoft license any intellectual property required by ISVs, LAPs, etc. to interoperate with Windows operating systems, but then goes on to state that the terms be "reasonable and non-discriminatory." In the "open source" development model, there is no organization that can sign and/or pay for the appropriate license. There must be a guarantee that open source developers can use any and all Microsoft intellectual property they required AT NO CHARGE. Anything less than this effectively stifles open source development entirely.

(3) Section 3 specifies that Microsoft need not disclose those portions of APIs or communications protocols "which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria". The inclusion of "encryption or authentication systems" in this statement makes it impossible for open source systems (such as Samba) to fully interoperate in a Windows domain, which relies upon proprietary extensions to the public "Kerberos" security protocol.

Encryption & authentication experts are unanimous in their view that security must be based upon publicly-revealed, open protocols that can be examined by experts for flaws. Microsoft must be required to make full disclosure of its authentication & encryption protocols, not only to enable third party software to interoperate, but to insure that these protocols do their jobs and do not contain avoidable vulnerabilities.

The proposed settlement is unacceptable in its current form. As a programmer and consumer of open software, I urge you to correct these flaws prior to issuing the final settlement.

Sincerely,

Jerry Callen

Subject: Settlement

Good morning,

I'll make my comments brief.

I have read the consent decree as you published in detail. I am a Software Engineer who benefits from Microsoft products. With that in mind let me say that this settlement proposal is a win for Microsoft and a loss for consumers and the tech industry. This will in no way restrain Microsoft's business practices and will only continue to harm other software firms. There have been many good companies in the past decade which no longer exist specifically because of Microsoft's business practices. This settlement will in no way prevent the same practices from destroying existing and future software companies, and it may in fact contribute to a depressed tech economy for some time to come.

By agreeing to this settlement the Department of Justice has done nothing more than throw away all the money and time spent on this lawsuit over the past four years. This was our tax money that was spent on this lawsuit. As a citizen I expected more for my money. I am very disappointed with the proposed settlement.

I am unable to reach a conclusion as to why the DOJ would make such a weak settlement in light of the evidence and rulings against Microsoft.

I plan to share my thoughts with my state attorney general, as well as my senators and congressman.

I sincerely hope that you reconsider your actions in this case.

Sincerely,

Ellis M. Zsoldos Jr.

Microsoft action

I am 71 years old, a citizen in good standing of the United States and a PC user.

Of course, I use a MS Windows operating system on my computer. This mail is to inform you that I am very disappointed with your proposed settlement of subject action. Why? Well, the Court of Appeals did not reverse the District Court's finding that Microsoft violated antitrust laws and used their monopolistic power to harm competitors. Also, previously when court action issued restraining orders on Microsoft, the company violated them. Why do you think it will not do it again, even with the in-house watchdog committee you have proposed? Microsoft is deserving of severe punishment as a two time looser and abuser of the free enterprise system. Frankly, I feel you have caved in and, as such, I have a much reduced confidence in your integrity and ability to protect citizens such as myself from predatory businesses. I have been a life long Republican, but I must say administration actions such as yours cause me to wonder if I should continue to support the Republican agenda.

Subject: Spineless

I am so disgusted with what has happened to the American Justice system. Microsoft has not only committed repeated, illegal, monopolist acts but was caught red-handed submitting false evidence in their trial.

Microsoft has bought and paid there way out of sure punishment and the Bush administration and you lackeys in the DOJ should be ashamed of yourselves. Makes me sick to think you people call yourselves American when you are supposed to be preserving competition.

Subject: So what was the point?

Dear Anti-trust Division, US Department of Justice, I don't work in high tech. I don't own stock in Microsoft or in any of their competitors. I don't even know anyone who works for Microsoft or any of their competitors. I'm just a consumer and a user of Windows and other software programs.

And boy, do I think this settlement sucks. Microsoft clearly and flagrantly violated anti-trust laws, and CONTINUES TO DO SO by using profits from their OS monopoly to fund money-losing forays into other areas designed to hurt—or better yet—bankrupt opponents. They've done it over and over again (web browsers, streaming media players, word processors, spreadsheets, presentation programs, mobile device operating systems, and the list goes on and on).

Now they're at it again with the XBOX, just you watch. What gives them the right to use monopoly profits to subsidize losses in the console gaming market—to the tune of an estimated \$700 million—\$1 billion over the next several years?

I call your efforts at enforcing the anti-trust laws pathetic. For my money, you all might as well have not bothered with any of this. It's like convicting a criminal of a violent crime then letting him go unsentenced and free because he has connections. Or trying to referee a boxing match without bothering to strip the machine gun away from the bigger boxer.

A lot of show, little to show for it. If you had just left Microsoft alone, by now they would probably have pushed the arrogance button so hard that consumers would probably be in open rebellion.

Yours truly,
Andre Williamson

Subject: From a small business owner:

Settlement is in all our best interests
I am adding one voice to what I hope will be many in supporting your pursuit of settlement in this case. I was relieved last week to see the Attorney General's announcement of a tentative settlement, but very concerned this morning when I read on the CNN site that several of the State's Attorney's Generals are not sure they can support the settlement. I would strongly suggest that American business and the public at large needs this case settled.

I am an owner of a small IT consulting and integration business with what I think is a fairly objective view of Microsoft and the rest of the IT industry. I use Microsoft products but use a wide variety of other vendors' products also; I am neither a Microsoft detractor nor fervent supporter. I am by no means an expert in the law, but I am a strong believer in upholding the law. If Microsoft broke the law, they should be held accountable. However, as it seems to have been the case in so many of the big anti-trust actions of the information age, the complexity of the cases can almost overwhelm the real issues. I feel that this happened from the beginning in this case, along with far too many emotions and big egos at play. This is not about significant moral and social issues; it's just computer hardware and software, in the end only tools.

The real issue in my mind is that we the knowledgeable consumers of this technology can and do make informed, and often very clever, decisions based on the quality and effectiveness of a product or service. We are able to make those decisions regardless of whether that product was offered in a way that may, technically, conflict with anti-trust laws. For example, Microsoft licensing has been an issue in this case. If I am considering a Microsoft product for a client where, in my opinion, the licensing is "unfair" or not advantageous to the client, I will recommend against the product, AND FIND ANOTHER SOLUTION FROM THE VAST ARRAY AVAILABLE. I am convinced that even if that licensing were found to be in violation of anti-trust laws, no remedies will significantly impact that decision I make and the resulting solution I choose.

After decrying the emotions that seem to have been involved in this trial, I will say that I feel (granted without much factual backup) that the way this case was brought

about, the deplorable way the press was used to hype the various factions, helped to hasten the slide of the technology sector in the economy. Many of the dot-com balloons were going to deflate, we all new that, but this case seemed to stick a pin in them instead of allowing gradual deflation. So as I have seen business conditions get tight, companies lay off good people, and our 401K's crater, I have a certain amount of anger over this case. Especially because in the end, once again, the marketplace populated by very bright and resourceful people, will decide the real fate of Microsoft. Please don't let this settlement get away, for all of us.

Thank you,
Stan Padgett
President,
GGM Information Technology Group, Inc.

Subject: Microsoft Wins at LOSING...and

THAT DOESN'T MAKE SENSE!
Are you folks settling for the public interest or for the interest of an ILLEGAL MONOPOLIST??? The settlement DOESN'T MAKE ANY SENSE! It's definite that the consumer and innovation is the BIG LOSER!!! A SELL OUT TO AN ILLEGAL MONOPOLIST THAT LOST IN THE COURT OF LAW IS NOT HOW ANTI-TRUST WORKS.....I think!

It's obvious, Geo. W. is paying back his Illegal Monopolist bud!

THANKS FOR NOTHING!

November 5, 2001 States balk at settlement proposal Joe Wilcox, CNET News.com The 18 state attorneys general who are co-plaintiffs in the Microsoft antitrust lawsuit are not expected to sign a settlement agreement—at least in its current form—hammered out between the software giant and the Justice Department, said sources familiar with the matter.

The Justice Department and Microsoft on Friday delivered the proposed settlement in the form of a consent decree to U.S. District Judge Colleen Kollar-Kotelly. But the states asked the judge for more time to review the settlement, which received little input from the attorneys general, said sources familiar with the negotiations.

Lawyers representing the states are scheduled to meet with Kollar-Kotelly at 6 a.m. PT Tuesday to deliberate the matter. During the status hearing, both sides are expected to discuss further proceedings under the Tunney Act. Under that law, a judge must review a settlement to ensure that it is in the public interest and was not politically motivated.

"The states are working intensively to review the settlement," Iowa Attorney General Tom Miller said Monday. "We will report to the judge on Tuesday."

In chambers on Friday, the judge reiterated her earlier view that settling the case would be in the best interests of the country.

The states appear to be deeply divided over how to proceed with the case, in light of the judge's instructions, possible resistance from

the Justice Department and the resources that likely will be required to continue the nearly four-year-old antitrust battle, sources said. The states largely focused their attention on numerous apparent loopholes in the consent decree and the limited scope of the agreement.

"In antitrust doctrine, there is this concept of fencing in the monopolist," said Jonathan Jacobson, an antitrust lawyer with Akin Gump Strauss Hauer & Feld in New York. "You fence them in so that they don't repeat the same behavior. I don't see that's here" in the consent decree.

Antitrust law demands that "remedies should be forward looking," said Emmett Stanton, an antitrust attorney with Fenwick & West in Palo Alto, Calif. "That doesn't appear to be the case here."

The proposed consent decree would compel Microsoft to reveal some Windows XP code to make it easier for third-party software to work with the operating system, and make some concessions regarding PC makers. But it steers clear of emerging technologies such as digital rights management and Internet authentication. A "get-out-of-jail-free card"

The states appeared most worried about possible loopholes that might empower Microsoft rather than restrain its monopoly muscle.

Bob Lande, an antitrust professor at the University of Baltimore Law School, pointed to the 22-page agreement's definition of an operating system and its lack of restrictions on Microsoft's bundling in more features.

"They should be concerned about this," Lande said. "The agreement says Microsoft can tie (products to Windows) because they can define the operating system any way they want," Lande said. "So conceivably, Microsoft could tie a ham sandwich to the operating system."

One of the case's core issues was the integration of Microsoft's Internet Explorer Web browser into Windows 95 and 98. "Contractual tying has not really been addressed" in the proposed settlement, Stanton said.

Referring to the board game Monopoly, Lande described many provisions of the proposed settlement as a "get-out-of-jail-free card."

States also are deliberating what role a three-person technical committee would legitimately have to enforce the consent decree. Microsoft apparently considers the committee and its power to regulate the company as a tremendous compromise, said sources familiar with the matter.

If the states sign the settlement, however, the company could announce a compliance officer for enforcing the agreement as early as this week.

The states have gotten an earful from Microsoft competitors, which in recent weeks have complained of a cold reception at the Justice Department. Under the Clinton administration, Joel Klein, assistant attorney general at the time, openly solicited feedback from Microsoft competitors Oracle and Sun Microsystems.

Some Microsoft competitors had expected similar openness from current Assistant Attorney General Charles James, whose

former firm, Jones Day, represented Microsoft rival AOL Time Warner.

But with the exception of the media giant, James reportedly did not meet directly with Microsoft competitors, choosing to send subordinates instead, said sources familiar with the dialogues.

The attorneys general are expected to continue their discussions Monday, as they hammer out a strategy that some sources indicated might not be unified. Some states were leaning toward going along with the settlement, while others wanted to push ahead without the Justice Department, sources said. The states could also ask for modifications to the agreement.

California and Massachusetts are among the five or six states most resistant to the proposed consent decree, at least in its current form. Should California go along with the settlement, much of the coalition would likely follow, said sources familiar with the situation.

Also involved are Connecticut, Florida, Illinois, Iowa, Kansas, Kentucky, Louisiana, Maryland, Missouri, Minnesota, New York, North Carolina, Ohio, Utah, West Virginia, Wisconsin and the District of Columbia. In July, New Mexico settled independently with Microsoft.

Concerns about the judge

The states are gravely concerned about Kollar-Kotelly, who is a newcomer to the case, particularly in light of her desire to see the case settled, sources said. In August, Kollar-Kotelly was randomly assigned to the case to replace U.S. District Judge Thomas Penfield Jackson.

Lande warned that the states should not take lightly Kollar-Kotelly's comments about striving for a swift settlement.

"You have this judge who doesn't know the facts of the case, doesn't know the games that Microsoft plays and maybe really doesn't want to get into the facts," he said.

If none, or only some, of the states sign the agreement, the original schedule set by Kollar-Kotelly would continue. The non-agreeing parties would file their proposed remedy by Dec. 7, with Microsoft responding by Dec. 12. A remedy hearing is tentatively scheduled for early March.

This could put the court in the position of overseeing two different sets of activities in the case: concluding the settlement by the process established by the Tunney Act, and preparing for a separate remedy hearing.

Before Kollar-Kotelly holds the Tunney Act hearing, there must be a 60-day period of public comment, in part to ensure that the agreement is in the public interest. Under the terms of the proposed deal, the Justice Department is to publish the proposed settlement in the Federal Register on or before Nov. 16.

The Justice Department also will publish a notice informing the public of the proposed Final Judgment and public comment period in the Washington Post and the San Jose Mercury News, for seven days over a period of two weeks commencing no later than November 15, 2001, the consent decree states.

Within 30 days after the close of the period for public comment, the Justice Department must publish its response in the Federal Register.

Re: A Risk Worth Taking

We don't mean to play down the risks.
Ha ha ha ha ha ha ha. The Wash Post doesn't mean to do what it is doing. Ooops, I did it again...

The agreement will prevent Microsoft from retaliating against Computer makers who deal too closely with its competitors.

The Washington Post excels at propping up a time-tested status quo that magically transforms failure into success. This is the status quo of lip service, of appearances. The DOJ made a grand effort against M\$ tallied in dollars, hours, words, sweat and energy. But these are no substitutes for results.

It will allow computer manufacturers to use rival imaging, messaging and browser software on an equal footing with Microsoft's own offerings.

This statement cannot be cast as ignorant, misinformed wishful thinking, the DC politician's cop-out du jour.

Rather, this statement is, by the raw predictability of Microsoft's modus operandi and it's unprecedented hegemony over public infrastructure, a blatant lie.

We The People, well informed now, think the Wash Post should stop squawking lies, and start a dialog giving it half a chance of retaining a shred of credibility post serial monopoly fiasco, because eventually, the truth will beat the lie.

Subject: Proposed MSFT settlement
Dear Mr. James and the Antitrust Division:
I am writing to tell you how disappointed and angry I am @ what I know thus far of this proposed settlement. I agree with Rep. John Conyers, who accused you of making "inexplicable and irrational" concessions in the settlement talks. I also like his analogy: "This is like losing a game by forfeit when your team was ahead with the bases loaded and your best batter on deck."

Any third-grader knows that you don't appease a school yard bully. You stand up to him and hold him accountable for his behavior.

Everybody knows MSFT is a bully and an illegal monopolist (everybody, it would seem, except you and your division). In my opinion, you have failed miserably where MSFT is concerned. Taking breakup off the table as you did when you were in the catbird seat was inexplicable. Letting MSFT dictate the terms of the settlement was, too (MSFT was often quoted in the media saying what they would and would not do; since when do the guilty get to dictate the terms of their punishment?).

This great economy of ours is NOT dependent on MSFT. If you would only enforce the hand that the appellate court gave you, you would quickly see how innovative and deep the technology sector can be. Instead, you crumpled. MSFT will continue its stranglehold on the industry; the economy and the American consumer will continue to suffer.

You gave the case away to a company that has shown time and again that it cannot be trusted to do the right, fair and legal thing. This is the same company that was caught cheating in at least two of its in-court presentations during the trial.

I would also like to know why our government is THE largest MSFT customer; they're guilty, so why are they still on the approved vendor list? Are you aware of their track record on (lack of) security? Please be assured I will make my opinions known to my senators and representatives. If what I have read so far is true, you have lost your credibility with me. This "settlement" stinks the place up.

Thank you for posting the proposed settlement on your website and for your time. Sincerely, Jud Meaders

MTC-00000225

From: Zackary D. Deems
To: Microsoft ATR
Date: 11/5/01 5:01pm
Subject: What was the point?

I'm sorry, but after watching the court battle and knowing the DOJ had actually beaten Microsoft. I don't understand why you would give up. Microsoft wins. Microsoft gets a slap on the wrist. Microsoft continues to strongarm the general public and there's absolutely nothing we can do about it.

90% of people currently running windows 95, 98, ME, NT, or 2000, have absolutely NO

real reason to upgrade to XP. none. Yet Microsoft is effectively forcing us to do so by de-supporting 95 and refusing to sell licenses to anything but XP. If I want to install ME on a new machine, I have to purchase an XP license first. If I want support, I'd better upgrade.

Innovation., it's a nice big fat word that is the equivalent of "Taking what somebody else has done, making it slower, making it bigger, putting an MS logo on it, and making it completely incompatible with the original version." Your settlement manages to fill 21 pages with legal speak, but accomplishes absolutely nothing. I don't know if Bush instructed you to take whatever they offered in order to settle, but it reads like a self-imposed punishment from Microsoft. "Ok mommy, I promise to play nice and let the other boys use my toys.. as long as they give me their toys, but I want them back, and if they get one like mine, I get theirs too, because it's based on mine."

You left enough holes that *I* could find legal loopholes, and I'm no lawyer.

I certainly hope the states refuse to accept this settlement, because you basically wasted the country's time and money for three years in order to accomplish what had already been done.

Microsoft is busy positioning itself to cement its monopoly firmly in place, and extend it further into the internet realm, and all you can do is slap them on the wrist. You seem to have forgotten what the case was about to begin with.

Remember Netscape? That company that MS tried to drive into the ground by tying Internet Explorer with windows 98? The one seriously hurt by MS deciding to give away explorer, knowing that netscape had been making money on Navigator? Remember RealNetworks?

I don't care who places what icons where on the desktop. People who use the operating system long enough to learn it tend to ignore that stuff anyway, or delete it (which is what I do). Rather than following the whole tying issue, you chose to ignore that and concentrate on a PRESENTATION issue. COME ON!

Who gets helped by allowing microsoft to prevent hardware makers from putting icons on the desktop if MS doesn't have a competing product? Certainly not the competitors.

At the moment, Microsoft has NO incentive to (a) Write better software, (b) fix the horribly insecure and buggy software they are currently selling, (c) abide by your ruling, because they know that they're set for at least the next 8 years (assuming Bush gets reelected).

In other words, Microsoft gets to spend the next 8 years innovating themselves more firmly into an abusive situation.

By the way.. would you consider it an abuse on their part for them to.. embrace and extend.. the TCP/IP protocol.. which is what the internet is based upon.. allegedly in an effort to "Improve" the protocol.. only to make it so machines speaking THEIR version don't play as nice with traditional TCP/IP networks? You might want to look at their implementation in XP, because before long, they're going to be doing their best to force

the non-XP computers off of the internet, because Unix, Mac, etc, all speak real TCP/IP.. but the billion+ computers running XP run MS's new TCP/IP variant.

Sounds like strongarming abuse to me.

But then again, you're busy slapping them on the wrist.

You failed. You did a horrible thing. I hope you look back in 10 years and read in the history books about how pointless you made this whole case. History will not be kind to you. For your sakes, I just hope it doesn't offer your specific names signed to the settlement. The country as a whole no longer has any faith in your abilities. You can't protect us from Anthrax, and you knowingly let a predator like Microsoft loose into the wild, after you had it locked firmly in a cage.

A writer for ZDNet was correct, it seems: A vote for Bush WAS a vote for Microsoft. My condolences on your defeat.

Subject: Redirection of Traffic

Dear Sir/Madam

In leu of the current world affairs this may seem trivial, but i do not think it is. As of recently (past weeks) when using Microsofts Internet Explorer v. 5.50, when typing in a URL that does not exist (example www.lkjhgffddss.com) you get taken to the Microsoft Network. the precise URL is http://auto.search.msn.com/results.asp?cfg=DNSERROR&FORM=DNSERR&v=1&q=www%2Eplkjuy%2Ecom

There are several issues here. If you know the way the internet works there is an amazing amount of info you can unfairly find out about each unique visitor. What Operating system they use, who they use as an ISP (Internet service provider like AOL, Earthlink, etc...), what website they came to you from.....etc.

I'm a small business, but it is plain to see what a dominating position that company is

in. They have locked out all competing products to theirs in numerous ways and now forcing users to go to their website.....This issue with the redirection of traffic is outrageous. Anyone who has some knowledge in this area would see that. I hope to see this addressed.

Truly Yours,
Sam Scott

From: jas
To: Microsoft ATR
Date: 11/5/01 6:34pm
Subject: My thoughts on the matter...

Hello,

I am a long time software developer who has used Microsoft development products even before the introduction of Windows. This experience also includes working as a subcontractor for Microsoft consulting, as well as serving on one of their 'standards' committees during the early days of OLE/COM (wosa/xrt).

For what it's worth, I'd like to throw my two cents in: If what I have read in Yahoo's news is even partially true...<http://dailynews.yahoo.com/h/zd/20011105/tc/mssettlement-reads-likea.fairy-tale-1.html>...then either you guys are on the take, or your pretty stupid.

To remedy the anti-trust problems with what you have arrived at—is worse than doing nothing at all.

Microsoft has, and continues to use it's monopoly powers to unfairly railroad innovative software companies out of business, and with billions of dollars of marketing muscle, they may very well exercise the very same destructive influence on the internet, at least as far as US software development is concerned.

I say this because I don't think that countries outside of the US, and especially the ones that comprise the future high-growth software markets—will be as short sighted as the USDOJ.

Heck, for national security reasons, foreign government software procurements will not lock themselves into a single vendor for mission critical software, only our country (de-facto) will.

Personally, I'll do OK, as a contractor, I'm a hired gun, but I've seen so many great and innovative software companies go down the drain because they never had the inside lock on the operating system internals, nor the untold billions in cash required to stave off a monopolist attack in their niche market.

When you've seen what happened to hardware values: the bang for the buck that you get: in real and absolute terms, one can only imagine what we might have had if the same level of competition existed on the software side of the market.

Unfortunately—due to your recent 'remedy'—we are only left with our imagination of what could have been.

John Soprych
Objective Response, L.L.C.

From: Kaya Bekiroglu
To: Microsoft ATR
Date: 11/5/01 9:16pm
Subject: Settlement a travesty

As a citizen of this great country and a software professional, after studying the proposed Microsoft settlement I must express my deepest concern. I'm sure you're receiving many letters like mine, so I'll skip directly to my key points:

(1) The settlement fails to punish Microsoft for past monopoly abuses, nor sufficiently remedies such abuses.

(2) The settlement fails to address current illegal leverage into new markets by means of application tying in Windows XP, most importantly in these markets: media players (Windows Media Player), digital music (undisclosed Digital Rights Management APIs), subscription based ISP services (MSN Explorer), Real-time Notification and Messaging (Messenger) and distributed authentication services (Passport).

None of these, with the exception of Digital Rights Management APIs, have any legitimate claim to reside in the rapidly expanding OS cocoon.

The following, smaller markets are also in jeopardy: IP Telephony, video conferencing, home video editing, digital photo finishing, email clients, and terminal services.

(3) The settlement fails to ensure successful prevention of future monopoly abuse, specifically in the desktop OS, internet browser, office application suite, distributed authentication, and digital media and music markets. While Microsoft does not

currently have a monopoly in all of these markets, the chances are very high that it will within the next two to five years. I strongly doubt a conduct remedy will be strong enough to avoid failure here, especially considering management contempt for previous conduct remedies and antitrust law in general.

Please rethink your settlement strategy. I would recommend adopting a firm resolve in settlement negotiations, for the following reasons:

(a) The case against Microsoft is extremely strong.

(b) The odds that your organization has sufficient technical savvy to avoid being fooled into agreeing to a toothless settlement is very high (as evidenced by the current settlement proposal).

(c) A full and fair remedy will not adversely affect the U.S. economy. In addition to the numerous U.S. competitors Microsoft has and will put out of business, Microsoft's profit margins and 40 billion dollar cash horde are a testament to the unreasonably high inefficiency in Microsoft's core markets.

These monopoly profits = costs for all software consumers, whether they be a large business, a sole proprietorship, or a college student.

Thank you for your time,
Kaya Bekiroglu

Subject: The proposed remedy will not and cannot work

The remedy proposed by the DOJ in the Microsoft case provides a potential loophole for Microsoft that would prevent them from having to release their operating system's API's to software competitors. By allowing such a major flaw in this ruling to go unchecked, it would effectively give Microsoft the latitude to continue business as usual, as a "practicing monopoly".

Subject: You guys just don't get it

From where we sit in the trenches, either you guys just simply don't get it, or the money Billy sent to George and the lunch with Cheney and Bailmer fixed this.

Everyone in the software community knows Microsoft is a monopoly. There simply is no question. They restrict choice because that is a convenient way to avoid innovation and maximize profits. After all, if you have only driven Yugo's, have only seen Yugo's, how would you know what a BMW is? Or a Ford, for that matter. Consumers could not compare Windows to anything else. The only comparisons allowed were Windows 2000 to 98 to 95 to 3.1. All Microsoft products- boy is that a coincidence! As a consumer, I could not buy

a computer from Dell or Gateway, or IBM WITHOUT Windows. They could not by license agreement sell it to me. This is good for me?

Over the last three years, with such a bad job of defense, with so many glaring errors and mis-statements, how can you not get it? There is a finding that they are in fact a monopoly, but how does this lame decision address this? Gates and Company are eating your lunch like they have so many others. Your oversight commission won't have a prayer. Microsoft's internal divisions- Office, for example, will still get code changes way before anyone else. Competition is a joke. Microsoft has not gotten where they are because they produce excellent products. They are where they are because of restrictive licensing practices and insider access to code changes. Period. How can anyone compete when they release an OS update that breaks your product, and then takes you weeks of time to develop a patch, during which time they release their product which just happens to work? If you rely on word processors or spreadsheets, what do you do? Hello Word. Hello Excel. Goodbye Lotus 123. Goodbye Wordperfect. Goodbye Netscape.

There is a no more dangerous company in the world today than Microsoft. Steel and Ma Bell could not hold a candle to Microsoft. The amount of information that they control is staggering and growing exponentially, and those in the software business can see it clearly. You don't get it. And with the release of XP, even veteran watchers are shaking their heads by the unprecedented—even by Microsoft standards—landgrab.

Passport? Smart Tags? Computer profiling? Give me a break. Ask Kodak how they feel right about now. Or the guys who developed Internet Explorer.

There is no greater divide and generation gap between Washington and the real world than computer literacy. You guys are living in the dim past. This was your last chance to stop Gates and Co. You are now on the radar screen, and Gate's WILL hand you your heads.

As for the economy, 30 more billionaires and hundreds or thousands of multi-millionaires will crank up the money supply faster than one multi-multi-billionaire.

You guys just make me sick. You are a disgrace to this country. Why don't you just put a "Justice For Sale" sign on the Whitehouse and get it over with.

Sincerely, Bob Nystrom

Date: 11/6/01 2:20am
Subject: Concerns about the settlement with Microsoft To the DOJ, Antitrust division

in charge of the Microsoft antitrust case. I would appreciate if this e-mail could be shared with the state attorneys working on the anti-trust case, and with U.S. District Judge Kollar-Kotelly.

I am a bit concerned about the Microsoft settlement. I would hate for this settlement to be just another slap in the wrist which leads to the death of innovator companies such as what happened with Netscape.

What guarantees are there that Microsoft will not use it's windows desktop monopoly to extend into other areas? They have already done it to extend into browsers, knowcking Netscape out of the #1 spot, not by innovation, but by dumping ang tying. They have also resulted in the death or clsoe to death of other innovative operating systems such as BeOS and OS/2 by their strong-arm exclusionary tactics. I am glad that at least this last point seems to be addressed by this settlement, although this is little consolation to BE Software, and IBM, and to the consumers who have lost so much by not having a fair playing field in the business and consumer operating system market.

They seem to be on their way to doing the same thing with web portals by tying MSN content with windows, possibly making yahoo, excite, iwon, goto.com and other portal companies into the next Netscape—extinct.

They are trying to do the same by tying their ExpedialMSN site with their OS, reducing the incentives for users to go to alternate travel web sites.

They are already doing this with the instant messaging client which is tied to their new operating system and may result in serious detractor to the proliferation of more open instant messaging protocols that work with alternative operating systems. They are already tring some other force of tying for their .NET platform, forcing the authentication to be done in their "Passport" product—a desicion that can only help Microsoft extend their monopoly into the potentially rich web services market. What incentive will this new settlement give to companies to use alternatives, when there might not be any incentive to use alternatives to the default windows product, or possibly face the wrath of Microsoft in 5 to 7 years anfter this consent decree runs out? What guarantees does this settlement place that Microsoft will STOP their illegal tying, when they themselves are the arbiters of what is tying and what is 'innovation'? What penalties will the company suffer to pay for their behavior which has already been proven as destructive of the innovation that the company says they so much want to protect? It is amazing that he company was found guilty of serious wrong doing and yet they again get a slap in the and, without any punitive damages!

Part of the characterization for what is illegal tying and what isn't depends on whether consumers may benefit from the tying. I maintain that tying of a product that works ONLY with their operating system is no benefit at all, and works just to extend their stranglehold in the computing world and to extend their monopoly to other areas! This clearly may go against the definition that Microsoft may declare when explaining

their reasoning for tying more products with their O/S, and because of the apparent wording of this settlement it is very possible that the spirit of the settlement will be declared null by the words used to create it.

I am also VERY worried that they might be doing the same for the gaming industry with their new "X-Box". I pled that you look VERY carefully at what sort of deals and tactics Microsoft is using to get developers to write code for their X-Box. It has already been suggested that by the reason for their X-Box is to guarantee that developers will continue to write games that will work in X-Box and can be easily ported from X-l3ox to Widows and viceversa. Sounds like an attempt to extend their monopoly into gaming consoles as well. I would not be surprised if they were making deals with software developers that had conditions on the games being created and/or ported first for windows/xbox to the exclusion of other consoles and or operating systems.

In conclusion, I am concerned. I have already seen in the past how a hasty deal, worded conveniently for Microsoft and allowing Microsoft too much leniency has already been rendered ineffective in stopping them from illegally tactics. This new deal sounds like another hasty deal done with the hope to jump start the economy without taking into consideration the potential for more harm to the software industry, to innovation, and to the economy.

Subject: not just dual-boot

As a Linux user, I am forced to pay Microsoft when I buy a computer. I'm pleased to see that last week's decision won't let Microsoft forbid vendors from selling dual-boot systems. But it seems to allow Microsoft to forbid systems that don't run Windows at all. Given Microsoft's fear of Linux, it probably will try to stop non-Microsoft systems, and I'll have to pay the "Microsoft tax" yet again.

Please clarify the agreement to specify that:

1. Microsoft may not enter into agreements with vendors that limit the operating systems and OS combinations they may pre-iristall.

2. If a consumer buys a computer with Windows installed, but doesn't want to use that OS, Microsoft (or the computer vendor) must pay a full refund.

Thank you very much,

James Keating

U.S. and Some States Split on Microsoft, Risking New Delay

By STEPHEN LABATON with STEVE LOHR

WASHINGTON, Nov. 5 The 18 states involved in the Microsoft (news/quote) antitrust case appeared headed for a sharp split today, with one group of attorneys general planning to sign onto the proposed settlement between the software giant and the Bush administration and another group preparing to challenge it, saying it leaves loopholes that would undermine provisions intended to promote competition.

After three days of intensive deliberations, only one state attorney general, Thomas F. Reilly of Massachusetts, officially announced his position. He said Massachusetts would seek to block the deal, concluding that it "may prove to be more harmful than helpful to competition and consumers." Officials of other states skeptical of the agreement, which included Connecticut and California, spent the afternoon in a late-stage effort to persuade Microsoft and the Justice Department to reopen the proposed settlement to eliminate a variety of ambiguities and provisions that the states viewed as too lenient, lawyers involved in the negotiations said.

The attorney general of Illinois, Jim Ryan, suggested he would support the agreement, while the attorney general of New York, Eliot L. Spitzer, postponed a planned announcement of his endorsement after his efforts to strike a separate deal with Microsoft collapsed, the lawyers said.

The failure of the Justice Department to gain the endorsement of all 18 states throws the proposed consent decree into question and creates a situation that antitrust experts said is without legal precedent.

At the least, the disapproval by some states is likely to delay the resolution of the case for many months.

Judge Colleen Kollar-Kotelly of United States District Court in Washington has instructed the parties to outline their positions at a hearing here on Tuesday morning. She has suggested that she may conduct parallel proceedings to consider both the merits of the proposed consent decree and the objections raised by officials of some of the states. Her original schedule suggested that she would not decide what to do before late next spring at the earliest.

Career officials at the Justice Department who have spent years working on the antitrust suit were

MTC-00000241

From: James Carter
To: Microsoft ATR
Date: 11/6/01 10:12am
Subject: Please withdraw from this non-effective settlement.

I am a real person working in the computer industry who can tell story after story (many to me) of microsoft abuses.

I help companies with information, microsoft is not a competitor of mine.
As you know, anti-trust violators must be:
(1) punished
(2) receive remedies which prevent future abuses.

I'm afraid the proposed settlement does neither.

This IS about the economy.... Microsoft kills innovation and does it by breaking the law.... while sitting on 30B US\$ in cash.

Paid for by the consumer.

Consumers like the marvels of COMPUTING, not microsoft... but many confuse the two... They like Mac and AOL too... Its the technology they like... never mind it's a law-breaking company even higher educated people can't seem to get their minds around.

I would be happy to assist in elaborating and helping in any way in getting an effective remedy... I have lots of ideas.

Considering Microsoft's history of ignoring consent decrees, I hope that you will agree that another consent decree should be held highly skeptical as an effective remedy. The fact that Microsoft violated a 1995 consent was part of what prompted the current antitrust proceedings. How effective can the same remedy be, when its prior violations helped to protect and extend Microsoft's illegal monopoly?

Microsoft has recently released Windows XP, a computer operating system with the explicit goal of extending their monopoly reach into web services. This is a clear violation of antitrust law, and a clear demonstration that Microsoft intends to completely ignore remedial actions to reinstall competition into the computer software market.

I urge you to reject the current settlement and pursue an effective remedy to restore competition in the computer operating systems market, and prevent Microsoft from extending their illegal monopoly into other computer software markets.

I am a modestly self-employed programmer, who has personally suffered the abuses at the hands of the goliath. Please don't let the average folks down. Even the ones who confuse loving computers and communication revolutions with MS.

I would help you with remedies or evaluation of such in any way I can.

sincerely,
James Carter

 Date: 11/6/01 2:31pm
 Subject: USDOJ Comments

This proposed settlement is a joke. There is nothing in this settlement that will cause Microsoft to change their business practices. I can't understand how they can get away with this, even after lying during the trial. Here are some of the concerns I have about the settlement.

Though the ruling makes it easier for non-Microsoft applications called "middleware" (Internet Explorer, Java VM, Windows Media Player, Messenger, Outlook Express, and their successors) to get onto the desktop, it still allows Microsoft to discriminate against companies that haven't sold a million copies in the U.S. and survived for a year after doing so. This means that companies that don't need protection from Microsoft are the only ones who get it.

Hardware vendors would be allowed to place non-Microsoft icons on the desktop, but only if Microsoft already has a competing product. Think up something before Microsoft does, and they can still exclude you from the desktop because they don't (yet) compete with you. So much for first-mover advantage.

Microsoft has to provide developers with information on its application programming interfaces—at least those APIs developers need to exercise their rights under the agreement. But there's a Catch-22: If a developer actually uses the APIs, it must provide its code back to Microsoft. This could allow Microsoft to use any innovation created by third parties. So how much innovation will happen?

Under the agreement, Microsoft would be required to disclose these APIs at the time of the "last" beta release of new Windows OS code. Since Microsoft gets to decide which release is the "final beta," it could, essentially, release the final beta on one day and release the code a week or two later, giving it a significant time-to-market advantage.

Microsoft retains the ability to discriminate against Internet content providers, and the settlement would allow indirect discrimination against software vendors

through arrangements with hardware companies. All the previous double-talk seems minor compared to this: The settlement would allow Microsoft to terminate licensing agreements first—and defend its actions later. Microsoft may also continue to manipulate pricing schemes and discounts. In these ways, Microsoft has lost little of its ability to keep hardware companies in line.

Even if I ignore all the gotcha's outlined above, the proposed settlement really doesn't change very much. If Jackson's break-up order was an empire-shattering 9 on the Richter scale, then the settlement proposal is a 2.1—usually called a microquake, and barely felt unless you're right on top of it.

Sincerely,

Mark Lambert

Jeremy Allison & Andrew Tridgell:
Analysis of the MS Settlement and What It Means for Samba.

Nov 6, 2001, 08:28 UTC (21 Talkback[s])
(11251 reads)

(Other stories by Jeremy Allison & Andrew Tridgell)

The Samba Team would welcome Microsoft documenting its proprietary server protocols. Unfortunately this isn't what the settlement stipulates. The settlement states 'E Starting nine months after the submission of this proposed Final Judgment to the Court, Microsoft shall make available for use by third parties, for the sole purpose of interoperating with a Windows Operating System Product, on reasonable and non-discriminatory terms (consistent with Section 111.1), any Communications Protocol that is, on or after the date this Final Judgment is submitted to the Court, (i) implemented in a Windows Operating System Product installed on a client computer, and (ii) used to interoperate natively (i.e., without the addition of software code to the client or server operating system products) with Windows 2000 Server or products marketed as its successors installed on a server computer.'

Sounds good for Samba, doesn't it. However, in the "Definition of terms" section it states "Communications Protocol" means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product on a client computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network. These rules govern the format, semantics, timing, sequencing, and error control of messages exchanged over a network.

Communications Protocol shall not include protocols used to remotely administer Windows 2000 Server and products marketed as its successors. If Microsoft is allowed to be the interpreter of this document, then it could be interpreted in a very broad sense to explicitly exclude the SMB/CIFS protocol

and all of the Microsoft RPC calls needed by any SMB/CIFS server to adequately interoperate with Windows 2000. They would claim that these protocols are used by Windows 2000 server for remote administration and as such would not be required to be disclosed. In that case, this settlement would not help interoperability with Microsoft file serving one bit, as it would be explicitly excluded.

We would hope that a more reasonable interpretation would allow Microsoft to ensure the security of its products, whilst still being forced to fully disclose the fundamental protocols that are needed to create interoperable products.

The holes in this document are large enough for any competent lawyer to drive several large trucks through. I assume the DoJ lawyers didn't get any technical advice on this settlement as the exceptions are cleverly worded to allow Microsoft to attempt to evade any restrictions in previous parts of the document.

Microsoft has very competent lawyers, as this weakly worded settlement by the DoJ shows. It is to be hoped the the European Union investigators are not so easily fooled as the USA.

A secondary problem is the definition of "Reasonable and non-Discriminatory" (RAND) licensing terms. We have already seen how such a term could damage the open implementation of the protocols of the Internet.

If applied in the same way here, Open Source/Free Software products would be explicitly excluded.

Regards,
Jeremy Allison,
Andrew Tridgell,
Samba Team.

Subject: Regarding the Microsoft Settlement
United States Department of Justice:
State Attorneys General:
United States District Judge Colleen Kollar-Kotelly:

I object to the proposed Microsoft settlement. I believe that it will require too much government involvement and its enforcement will be too expensive. I doubt that it will correct the damage done by Microsoft or cause them to reform their behavior.

I propose a simpler, cheaper remedy which will be effective and fair: Revoke some of Microsoft's patents and copyrights. Give them back to their rightful owners or to the public.

This remedy would return the competitive system to its natural state by freeing Microsoft's competitors to produce interoperable products without the threat of lawsuits. It would also strongly deter future anticompetitive acts by entities which value their patent and copyright privileges.

This remedy would be fair because it would both reduce Microsoft's ability to profit from their crimes and seize the assets used as tools to commit those crimes. The value of many of Microsoft's works was created mainly by depriving consumers of any alternative choices. Consumers and computer vendors should be allowed the right to freely duplicate the existing

Microsoft works. Those works are inferior to the work which would have been produced in a freely competitive marketplace.

It would be trivial to implement this remedy. The court would simply select an appropriate set of patents and copyrights, declare them void, and refuse to enforce them. The selection could be limited to only those patents and copyrights directly involved in criminal acts, or the court could deny Microsoft all patent and copyright privileges for some period of time.

As a general rule, an anticompetitive monopolist should never be granted extra power to prevent competition through patent and copyright. To the contrary, a market entity's access to legalized monopoly protection should be inversely proportional to its size. This would lead to a stable market of medium sized producers and would maximize competition and innovation.

Finally, I want to suggest that every computing product or service offered for sale, whether from Microsoft or not, should be accompanied by a warranty [see note 1]. The warranty should clearly document the product's input and output, including the type, purpose, and format of all files and network resources used. While this is not currently law, the court should require it of Microsoft from now on.

Note 1: Because source code describes exactly what a program does, unobfuscated source code should be considered a sufficient warranty for software products.

Thank you for your good work. I hope you are able to find a fair solution in the best interest of society.

Sincerely,
Chris Welsh

Subject: Microsoft

I am writing to you in regards to the recent agreement made between Microsoft and the DOJ. I am appalled at the DOJ letting Microsoft off without any regard to the main issue at hand. As a technology professional I feel compelled to voice my displeasure, and point out the inadequateness of the remedies put forth. Microsoft has blatantly and

illegally used its operating system monopoly to push competitor's out of the market. This is no longer a question, they have been found guilty on this count. They illegally forced Netscape out of the browser market and now they are seeking to do the same exact thing with Windows XP. Windows XP has both instant messaging software as well as photography software bundled into the operating system, which completely shows Microsoft's respect for the federal government and the DOJ in particular. I am wondering at this point if in 5 years Microsoft will be able to bundle a Ham Sandwich and tires for my car into the operating system that I will be forced to buy.

This illegal leveraging of the Windows OS is the core issue at hand and has not been addressed at all in the agreement Microsoft has reached with DOJ. Microsoft's ability to bundle whatever it wants into its operating system needs to be stripped. Any settlement reached with Microsoft MUST touch on this core issue. They must not be allowed to continue bundling whatever they want into their operating system. Please take the opinions of people who understand this technology into account. Thanks for your time.

Subject: Proposed microsoft settlement

Hi,
I have read with horror the news stories about the DOJ's proposed settlement with Microsoft. While I would be pleased to see the case settled, as a computer professional I know it is vitally important that Microsoft be brought under control in order for the computer and software industry to have a future.

I don't believe the proposed settlement will do anything to help prevent Microsoft from further extending its monopolies or crushing its potential competition out of business. There are way too many loopholes. Microsoft gets to say way too much about what it will or will not do under the proposed settlement.

Furthermore, since Microsoft has already been found to be a lawbreaking organization, I don't trust them to obey whatever settlement they may agree to, and would expect there to be very harsh penalties specified for noncompliance. I don't believe the proposed settlement has such penalties.

Finally, because Microsoft has already been found to have broken the law, as a taxpayer I expect them to pay for all of the government's legal costs and the court's costs incurred in this case. I find it unconscionable that the DOJ would allow Microsoft to settle without reimbursing the taxpayers expenses.

In short, I am deeply upset that the DOJ has agreed with this proposed settlement, and strongly protest allowing it to go forward.

I don't understand why you let Microsoft off so easily. My impression is that Microsoft is a monopolist of the most predatory sort and they need to be controlled if the software industry is to flourish. They are sleazy, greedy, grasping and give capitalism a bad name.

In contrast to AT&T which used its monopolistic power to give good service to the US for many years, Microsoft has used its power to sell inferior Operating Systems that inconvenienced their users for years and used the profits to drive competitors out of business.

I always considered myself to be a Republican, but I don't believe that any business should be allowed to drive out other businesses with the most underhanded of methods, especially in the face of all of the laws that are designed to allow competition to flourish.

Do your job, guys. You were elected to uphold the laws, not to give Microsoft a free ride.

Subject: Microsoft Decision
To whom it may concern:

I am supportive of a settlement in the case. However, there are some aspects of the proposal that I do not agree with.

Provide operating system interfaces to all software suppliers—

1. This is good. However, this should hold true from now on, not be limited to 5 or 7 years.

2. This info must be made available to all software suppliers as soon as it is available to other areas within Microsoft.

Allow PC makers or retailers to replace Microsoft components with competitive components—

1. This is good, but the pricing must reflect the removal of the components. As I understand it, Microsoft can bundle their components and set a price. PC maker can remove components selectively, but must still pay the same price to Microsoft. This is not good! Where is the motivation for any action?

This is exactly one of the reasons that OS/2 failed in the marketplace. The OS/2 user had to pay for OS/2 & Windows.

If these aspects of the settlement are not corrected, then the settlement is worthless.

Subject: AtATgram: Nine Say Yea, Nine Say Nay (11/6/01)

Brian <blburton@mac.com> is sending you a scene from As the Apple Turns!
Scene 3378 follows:

Nine Say Yea, Nine Say Nay (11/6/01)

Sometimes we really love living in Massachusetts. Sure, the taxes may be on the high side, but at least our money gets us an attorney general that won't roll over and play dead like a certain Bush-administration Justice Department we could mention.

Whereas the feds are looking to end the three-year run of "Redmond Justice" not with a bang, but a whimper of a settlement so full of loopholes you'd think it was a breakfast cereal, not all of the eighteen states involved with the case are willing to roll with that particular punch.

The states had until today to decide whether or not to sign on with the proposed settlement, and according to a CNET article, fully half of them have refused to cave that easily.

Massachusetts Attorney General Tom Reilly has been saying for days that he wouldn't sign, and stuck to his guns; he and the attorneys general of eight other states have therefore managed to split "Redmond Justice" into two shows. The "classic" story will continue with settlement hearings, as the feds and half the states feverishly try to get the heck out of Dodge; meanwhile, an as-yet-unnamed "Redmond Justice" spinoff will follow the continuing litigation as nine states push for a resolution that actually, you know, accomplishes something. It's antitrust fun for the whole family!

Funnily enough, an Associated Press article describes Microsoft attorney John Warden as "frustrated" that half the states are pushing forward and quotes him as saying, "The issues in this case have been beaten to death and they have been beaten to death by

people who are worn out." Awwwww. . . Is widdle John-John all tuckered out? Since Microsoft's strategy all along has been to stall until the issues become moot and the government changes hands, maybe the company should have hired a lawyer with a little more stamina. Suck it up, John, because it ain't over yet.

You're in this for the long haul.

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

CC: ASKDOJ,president@whitehouse.gov
@inetgw,vice.presid...

THANK GOD FOR THE "STATES" TO SAVE THE PEOPLE FROM THE SELL-OUT BY DoJ & GeoW!!! The questions arising from this so-called "settlement" is "Did GeoW and his DoJ political appointees receive something UNDER THE TABLE?" and "Should there be an investigation for possible CONFLICT OF INTEREST or FRAUD?"

THERE'S SOMETHING NOT RIGHT IN WASHINGTON!!!!

THANKS FOR NOTHING GeoW & cronies!!!

November 6, 2001, Breakaway states nix Microsoft pact, Joe Wilcox, CNET News.com—WASHINGTON—Several states have refused to accept an agreement between the Justice Department and Microsoft, choosing instead to press further antitrust litigation against the software company.

The settlement agreement, to which nine of the co-plaintiff states have now given their support, remains essentially unchanged from the proposal put forward by the Justice Department and the software giant on Friday. Any changes would be only clarifications and not a substantive reworking, according to the government.

Connecticut Attorney General Richard Blumenthal, who did not sign onto the proposal, said that the settlement is a

"triumph of hope over history," a deal that is "good but may not be good enough."

Many outside the case, from consumer groups to Microsoft competitors and antitrust specialists, have said that the deal goes easy** on the software titan.

Said Blumenthal: "My present intention is to proceed in the litigation." Tuesday's refusal, however, does not mean that those states will not come to terms with Microsoft at a later date.

"We in Iowa continue to look at the agreement. We move on with the litigation, (but) we are open to settlement talks," said Iowa's attorney general, Tom Miller, who also has not signed the deal.

"We congratulate the states that settled." Miller said that the case's mediation process "produced some real progress," especially regarding its disclosure of technical information on servers. Other concerns remain about the dictates for Microsoft, including safeguards for PC makers and openness to third-party applications.

The federal government brought suit against the software maker in 1998, and subsequent court decisions found Microsoft to be a monopolist that used its dominant position in operating systems to unfairly compete against other software makers and gain favorable deals with PC makers. A federal judge had ordered Microsoft split into two companies and the imposition of other strong remedies.

An appeals court in June threw out the breakup order, but in remanding the case to a lower court upheld the monopoly ruling and ordered that new remedies be set in keeping with that ruling.

U.S. District Court Judge Colleen Kollar-Kotelly, a relative newcomer to the case, was randomly assigned at the end of August. On several occasions since then, she has said that a settlement would be in the best interests of the country.

On Tuesday, the Justice Department expressed satisfaction with the recent progress toward a settlement and expects more states to sign on.

"We are very pleased with the results thus far," said Charles James, assistant U.S. attorney general. "This settlement is good for consumers and the tech economy."

The other states that have not signed onto the settlement proposal are California, Florida, Kansas, Massachusetts, Minnesota, Utah and West Virginia. Also in the group is the District of Columbia.

"We made every effort to reach a compromise to address the states' concerns and allow everyone to move forward," Microsoft Chairman Bill Gates said in a statement Tuesday. "Yesterday, at the request of the states, we made some additional revisions to clarify the proposed decree and better capture the intent of the parties."

Earlier in the day, Microsoft indicated its willingness to keep working toward a settlement with the remaining states, even as it expressed a hope that the well-worked matter would be more or less closed Tuesday.

"Microsoft will never refuse to listen," said John Warden, an attorney for the company. "The issues in this case have been beaten to death... by people who have been worn out."

Going forward

The case now will proceed on two tracks. One track will involve public comment as dictated by the Tunney Act, and the other will be continued litigation with the states not agreeing to the settlement.

"I'm going to be going forward from this point on two parallel tracks," Kollar-Kotelly said. Mediation among the parties ceased with Tuesday's hearing.

The Tunney Act requires that the judge would review the deal to ensure that it is in the public interest and is not politically motivated.

Before Kollar-Kotelly holds a hearing in keeping with that law, there must be a 60-day period of public comment after the proposed settlement is published in the Federal Register, which should take place within the next two weeks. After the public comment period, there will be 30 days for the government to respond, meaning that the next phase should conclude in February.

One observer said that the remaining states face an uphill battle in their continuing opposition to Microsoft, given the loss of their allies and worries about limited resources.

"The states can't lose any more, other than the enormous expense of continuing the battle," said Bob Lande, an antitrust professor at the University of Baltimore Law School. "With California, they have \$3.7 million assigned to their war chest. The question is, will that be enough?"

"We're very confident that there will be sufficient resources" to continue the process, said Connecticut's Blumenthal, who left the door open to settlement farther down the road.

Earlier in the day, the 18 state attorneys general were divided into three groups: One wanted to accept the settlement as it is, the second was undecided, and the third wanted to litigate. That split remained after several days of intense discussions that continued into the early hours on Tuesday.

"An extraordinary amount of work was done over the weekend," said Brendan Sullivan, the lead attorney for the states. "They negotiated until (12:30 PT) this morning, and a redline (amended) version was dispatched to the Justice Department and the remaining states at (5:30 PT) this morning."

Mediator Eric Green, a professor at Boston University, said that the states "worked through the night until the break of dawn this morning." The states that have joined in the settlement are Illinois, Kentucky, Louisiana, Maryland, Michigan, New York, North Carolina, Ohio and Wisconsin.

The Justice Department and Microsoft delivered their settlement proposal, in the form of a consent decree, to Kollar-Kotelly last Friday to meet a court-ordered deadline. The states complained that they weren't given adequate input into the negotiations leading up to that settlement and that the proposal offers Microsoft too much wiggle room.

Microsoft's industry foes continued to find fault with the settlement Tuesday.

"The state attorneys general who today rejected the settlement agreement between Microsoft and the Department of Justice were right to do so, and we support them," Paul

Cappuccio, AOL Time Warner's general counsel, said in statement. "That agreement fails to protect consumer choice and promote competition, by leaving Microsoft free to continue to abuse its monopoly."

**Rivals, others lament Microsoft deal
By John G. Spooner, Stephen Shankland, and Joe Wilcox

Staff, CNET News.com

November 2, 2001, 1:20 p.m. PT

<http://news.cnet.com/news/0-1003-200-7758623.html?tag=prntfr>

Consumer groups and Microsoft competitors reacted to Friday's proposed antitrust settlement with disappointment and skepticism.

The reaction to the deal reached by the software titan and the Justice Department in the landmark case boils down to one simple sentence: Microsoft got off easy.

"They seem to have done pretty well with the settlement with the DOJ," said James Love, director of the Consumer Project on Technology. The organization, formed by Ralph Nader in 1995, focuses on intellectual property rights, among other issues.

"We're disappointed," he said. "We would have expected to see more pop" in the settlement.

Earlier court decisions found Microsoft to be a monopolist that used its dominant position in operating systems to unfairly compete against other software makers and gain favorable deals with PC makers. A federal judge had ordered Microsoft split into two companies and the imposing of other strong remedies.

An appeals court in June threw out the breakup order, but in remanding the case to a lower court upheld the monopoly ruling and ordered that new remedies be set in keeping with that ruling.

AOL, Sun dismayed AOL Time Warner, which owns the Netscape Communications browser that was at the heart of the antitrust charges that surfaced in the mid 1990s, responded to the settlement deal with dismay.

"In its current form, today's proposed consent decree, like the one entered in 1994, does too little to promote competition and protect consumers, and can too easily be evaded by a determined monopolist like Microsoft," Paul T. Cappuccio, executive vice president and general counsel at AOL Time Warner, said in a statement.

The proposed settlement, he said, "fails to fulfill the promise of the unanimous decision from the U.S. Court of Appeals condemning Microsoft's extensive illegal conduct and requiring an effective remedy to prevent its reoccurrence."

AOL Time Warner's negative reaction to the settlement is not surprising. The company has sparred on numerous occasions with Microsoft and recently walked away from high-profile discussions to embed its America Online service in Windows XP. Its Netscape unit competed with Microsoft in the Web browser market and brought evidence of anti-competitive behavior to the attention of regulators.

Sun Microsystems lambasted the proposed settlement as "more narrow and less punitive" than the proposal rejected by the Department of Justice in March 2000 and said

it merely "reinforces the status quo, and will do nothing to restore competition and innovation in the marketplace." "Throughout the last century, the U.S. economy has profited greatly from sound antitrust enforcement," Sun Chief Executive Scott McNealy said in a statement. "Today's agreement signals a retreat by the federal government, and a defeat for consumers."

The proposed settlement, Sun said, is a blow to consumers and the technology industry and "a wholly inadequate response to Microsoft's major and continuing antitrust violations and to the two levels of Federal Court that found Microsoft guilty of violating U.S. antitrust law."

The other view: A "home run

But not everyone is opposed to the settlement.

Dick Armey, majority leader of the U.S. House of Representatives, issued a statement calling the settlement a "home run for consumers" and urged the state attorneys general who are co-plaintiffs in the case to avoid dragging out the proceedings. The states have the ability to contest the settlement. "Businesses should not be afraid that when they create popular products, they'll be saddled with endless litigation," Armey said.

Matthew Szulik, chief executive of Linux seller Red Hat, also took a contrarian tack, saying that Microsoft faces limitations on its behavior either through legal channels or in the unfettered marketplace.

In the absence of a strong settlement, Microsoft's own behavior—for example, its increasing software prices—will help hasten its decline.

"By their own actions, they've put themselves in a bit of a trap," Szulik said. "I can't see them escaping this trap without damaging their long-term prospects."

Microsoft will be forced out of its proprietary ways regardless of the settlement, because companies increasingly networked computer systems can only be built on open communication standards, he added.

"In an enterprise environment, there will be requirement to interoperate with other forms of computing."

Criticism of the settlement began to swell on Thursday as word of the impending deal leaked out.

Trade groups opposing Microsoft's monopoly behavior distributed the last proposal prepared by U.S. District Judge Richard Posner before earlier settlement talks collapsed in April 2000.

The Computer & Communications Industry Association (CCIA) was one of the groups canvassing in Washington on Thursday using Posner's final settlement draft to attack the negotiations.

"This is a total capitulation," said CCIA President Ed Black. The government is "settling for something less than what they could have had a year and a half ago. Since then they succeeded in having Microsoft found to be a monopolist (and) they had a unanimous Court of Appeals ruling in their favor with very strong language."

CCIA is one of the groups expected to challenge the settlement as not being in the public interest.

Tying products together

The Software & Information Industry Association (SII) on Thursday also urged the Justice Department and the state attorneys general to reject the settlement.

Ken Wasch, the SIIA's president, said in a statement that the "settlement agreement, stunningly, will not change either Microsoft's business practices nor its software implementations one iota."

He added: "The purported settlement permits Microsoft to continue to technically tie the monopoly product of the Windows operating system to various middleware products, in direct contravention to the findings of fact affirmed unanimously by the Court of Appeals."

The settlement proposal does make some concessions regarding "middleware—including Web browsers, e-mail clients, media players and instant-messaging applications. PC makers will have more freedom to offer such products from companies other than Microsoft, but a similar development over the summer resulted in few, if any, such offers."

The Windows operating system emerges largely untouched, and Windows XP will be free of any far-reaching restrictions.

The Progress & Freedom Foundation, a body that studies technology's effect on public policy, warned in a statement that the settlement does little to prevent Microsoft from "continuing monopolization."

President Jeffrey Eisenach said that, with the deal, the Justice Department "proposes to enter into a settlement that fails to meaningfully address any of the court's findings. It's an embarrassment for the Justice Department, a disservice to the law and an affront to the DC Circuit."

Subject: One small voice

I would like to strongly protest the proposed settlement with Microsoft. It does not go far enough to substantially change the competitive landscape and in effect, cedes a continuing monopoly to Microsoft. Several things would have to be addressed to have a meaningful effect for those of us who have to try to make a living with alternatives.

Preload agreements which force any computer buyer to accept a copy of Windows whether they want it or not must be abolished. Microsoft File formats must be added to the disclosure of APIs to allow competitive products to interoperate and compete.

Pricing must be decoupled from exclusivity agreements, on paper or implicit. Pricing should be the same for everybody and a line item, not buried into the price of a computer.

As for remedies, There is an easy solution that would accomplish many goals and remove the burden of enforcement. It would avoid all the evasive and delaying maneuvers and put MS in the position of wanting to be good citizens.

The US government should simply remove Microsoft from the approved vendors list and leave it off until behavior is acceptable. Not

only would this send the right message, it would directly impact the competition issues by providing an opportunity for the suppressed competitors to recover. I suggest that Open Source software be a component to preclude any corporation from achieving monopoly status again. This is far more rational and pragmatic than suing MS on the one hand and being their largest customer (hidden by contractors) on the other

I don't suppose one computer guy is very important, but I have lived the computer industry for 30 years of so and qualify as an expert.

Regards

cww

Subject: Pathetic

It is pathetic how the DoJ has surrendered to Microsoft. Goes to show what a couple million dollar donation to the Republican party can get you. Is that against the law? Clinton was investigated for all types of spurious reasons. Why is there not an investigation into Bush and Ashcrofts collusion with Microsoft? Executives from Microsoft met in the WHITE HOUSE!!!!!!

When is there going to be a bribery investigation of Ashcroft and Bush? It is obvious that Microsoft bought their way out of the suit. There is *NO* way that anybody would *WIN* the battle then surrender the war. What the heck is going on?

I thought that the Department of Justice was about JUSTICE. Not about who has the most money to buy the form of 'justice' that they want. I have lost all faith in the legal process in this country. To have *9* federal judges declare Microsoft an abusive monopoly and then to have the DoJ, which is supposed to be looking out for the consumer, capitulate right before the miracle is absolutely DISGUSTING.

Why don't you go have some more backroom meetings with Microsoft. I am sure that is completely within the guidelines of the Bar. Your division of the DoJ should be ASHAMED.

From: Viktors

To: Microsoft ATR

Date: 11/7/01 11:58am

Subject: National security diminished by settling Microsoft case

I believe that the current settlement direction with Microsoft is a grave mistake. Diversity in operating systems and other computer software is essential for reducing the threat of cyber-attacks. Furthermore, giving one company, Microsoft, the ability to remotely monitor and control all computer activity is extremely dangerous, while also making it easier for an enemy to find a weakness that could be used to attack a much larger population of computers.

I am a long-time IT professional, but am writing as a private citizen. I know that whomever is reading this probably is not intimately familiar with all of the software

details and would not understand an in-depth analysis. So I will just point out a few items, in high level terms, as best I can. I assume someone would contact me if they want to discuss more details.

Software can be viewed in many ways as an analogy to biological evolution. One of the dangers that biology has taught us is that the less diversity there is, the more vulnerable the population is. Likewise, operating system software and other office software that is used so widely that it is in almost every computer makes it easier to create a devastating cyber attack. Because the internals of the Microsoft software is seen by few eyes, it is more likely to contain numerous vulnerabilities, that clever hackers can exploit. This argues for breaking up monopolies in the IT industry so that there are more software choices for customers and so that any attack will harm a smaller population. In fact, ideally, the operating system and other security sensitive software source code should be viewable by everyone. This quickly leads to fixing the vulnerabilities, rather than hiding them, as with proprietary software. Microsoft will never publish their software source code, and thus will continue to put our IT infrastructure at greater risk, to the extent that they remain an operating system (and desktop office suite) monopoly.

What concerns me more, is that Microsoft's direction with XP is to give them more ability to "upgrade" user's software remotely, even without them knowing it. This may be nice for Microsoft, but it give Microsoft potentially unlimited "big brother" power over everyone's computer. But, even worse, once that update capability is hacked by less friendly people, they can use it to create cyber terror much easier than today.

I can already see numerous ways of working around the settlement agreement. Microsoft's latest XP operating system is an example. Even though they "publish" the interfaces, they require me to register my software for use with their interfaces, otherwise I will not be given the encryption keys required to talk through their "published" interfaces. In general, I think the "settlement" will only let Microsoft reinforce its monopoly while making our IT infrastructure more vulnerable to cyber attacks. Please let me know if anyone needs to discuss this further.

-Viktors Berstis, Austin Texas

From: Mike Whalen
To: Microsoft ATR, attorney general @ state.mn.us @ inetgw
Date: 11/7/01 12:08pm
Subject: MS Settlement

Dear Sirs,

I would like to register my displeasure with the settlement reached by the DOJ and Microsoft regarding their antitrust violations. What the settlement provides is nothing more than carte blanche for Microsoft to continue its anti-competitive behavior; in fact, this settlement makes it more straightforward (and legal) for Microsoft to pursue this behavior then it was previously. To wit:—Microsoft must allow applications & middleware onto the desktop that have

distributed over 1 million copies and have been in business for greater than one year.

This clause allows large, established competitors to Microsoft to be used. However, what about new competitors? They will not be given the chance to be placed on the desktop. If such a clause was in place when companies like AOL were in their infancy, it would have been more difficult for them to reach their present size.

This clause does not help the companies that most need protection from Microsoft. —Microsoft must disclose all new APIs to developers by the time of the last beta release of the operating system.

Ridiculous; you haven't defined a time window for the last beta'. Microsoft could release the last beta immediately before shipping the operating system.

—Microsoft must disclose all undocumented APIs to developers; however, if developers request this information, they must provide their source code back to a 3rd party approved by Microsoft.

As a developer, I wouldn't dream of giving Microsoft my source code; they have shown no compunction from stealing ideas from other companies and individuals.

The antitrust trial spelled this out in great detail. Therefore, this clause is completely ineffectual.

Besides, who is Microsoft going to approve as the third party?

—Microsoft does not need to disclose any APIs related to
1. Security
2. Anti-virus
3. License enforcement

I can think of credible reasons why developers may need to know these APIs.

For Microsoft's upcoming .NET, a major portion of the API is related to security and authentication. In fact, it is central to any developer wanting to use .NET for future development of Windows products and services.

By spelling out these specific instances of 'violations', you allow Microsoft more latitude to continue its anticompetitive behavior, rather than less. Microsoft can credibly state that many of its APIs related to "back-end" services, such as COM+ and .NET services are related to security and authentication. These are the thrust of new development at Microsoft, and access to these APIs is critical to producing successful new applications. Microsoft can also continue to discriminate against smaller, newer competitors, stifling innovative products and preventing them from being displayed on the desktop. Microsoft also has the ability to get at the source code(!) of any developer who requests information on their APIs. I believe that this will cow most, if not all, developers from requesting information; they would have to provide, in essence, their most valuable property in return: it is akin to giving away your most precious business plans to your largest and most aggressive competitor. What sane company would do so? I urge you to reconsider this mistaken and shortsighted decision.

Thank you for your time,

-) Mike Whalen

Subject: Microsoft case comments

To Whom It May Concern,

I am deeply concerned by the terms of the U.S. Department of Justice's settlement with Microsoft in this case. I believe that the proposed settlement, and most likely any proposed settlement, is not being tough enough on Microsoft. The settlement contains many loopholes that will allow Microsoft to continue to their illegal and anti-competitive behavior which would only result in more permanent harm to the computer industry and future lawsuits costing even more tax payer money. Although it may be difficult to plan and initially execute, the plan to breakup Microsoft has been the ONLY viable solution I have seen to this case. The breakup of Microsoft is truly the only way to correct the terrible crimes that Microsoft has committed against nearly anyone in the world that has used and worked with a computer. Microsoft can be broken up without major impact to businesses and the economy. The first divisions to be separated should be relatively unrelated entities such as Microsoft's operating system and application software division, MSN, and Microsoft's X-Box division. These three divisions should be separate companies that are not allowed to use their influence to help each other, as Microsoft is currently using it's Windows monopoly power to help them gain users of MSN and their X-Box. Look at MSN for example. What other major national internet service provider ONLY functions with Windows-based computers? I don't believe there are any others. How does the proposed settlement prevent Microsoft from doing things like this? I don't believe that it does.

After separating these core divisions, Microsoft's operating system and application software units can be separated into two or more separate companies. Without the monopoly of Windows to leverage, Microsoft Office may actually face competition in the marketplace and be forced to strive towards innovation—something Microsoft claims to be fighting for, but very rarely actually does.

I urge you, please consider not only what this settlement will mean for the future of Microsoft and their monopoly, but also look at what they have done in the past, how they have continuously flaunted their power in the face of government attempts of restriction, and how they have greatly harmed competition and innovation in the computer industry.

Thank you for your time,

Halim Chtourou

Subject: A Linux Today story has been

mailed to you!

This message is sent to you from Linux Today (<http://linuxtoday.com>) Miguel Sosa, esteban_sosa@yahoo.com has requested that we send you this article.

You can find this story online at: http://linuxtoday.com/news_story.php3?ltsn=2001-11-06-005-20-OP-MS Jeremy Allison & Andrew Tridgell: Analysis of the MS Settlement and What It Means for Samba.

The Samba Team would welcome Microsoft documenting its proprietary server protocols. Unfortunately this isn't what the settlement stipulates. The settlement states:

"B. Starting nine months after the submission of this proposed Final Judgment to the Court, Microsoft shall make available for use by third parties, for the sole purpose of interoperating with a Windows Operating System Product, on reasonable and non-discriminatory terms (consistent with Section 111.1), any Communications Protocol that is, on or after the date this Final Judgment is submitted to the Court, (i) implemented in a Windows Operating System Product installed on a client computer, and (ii) used to interoperate natively (i.e., without the addition of software code to the client or server operating system products) with Windows 2000 Server or products marketed as its successors installed on a server computer.

Sounds good for Samba, doesn't it. However, in the "Definition of terms" section it states:

"Communications Protocol" means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product on a client computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network. These rules govern the format, semantics, timing, sequencing, and error control of messages exchanged over a network. Communications Protocol shall not include protocols used to remotely administer Windows 2000 Server and products marketed as its successors.

If Microsoft is allowed to be the interpreter of this document, then it could be interpreted in a very broad sense to explicitly exclude the SMB/CIFS protocol and all of the Microsoft RPC calls needed by any SMB/CIFS server to adequately interoperate with Windows 2000. They would claim that these protocols are used by Windows 2000 server for remote administration and as such would not be required to be disclosed. In that case, this settlement would not help interoperability with Microsoft file serving one bit, as it would be explicitly excluded.

We would hope that a more reasonable interpretation would allow Microsoft to ensure the security of its products, whilst still being forced to fully disclose the fundamental protocols that are needed to create interoperable products.

The holes in this document are large enough for any competent lawyer to drive several large trucks through. I assume the DoJ lawyers didn't get any technical advice on this settlement as the exceptions are cleverly worded to allow Microsoft to attempt to evade any restrictions in previous parts of the

document. Microsoft has very competent lawyers, as this weakly worded settlement by the DoJ shows. It is to be hoped the European Union investigators are not so easily fooled as the USA.

A secondary problem is the definition of "Reasonable and non-Discriminatory" (RAND) licensing terms. We have already seen how such a term could damage the open implementation of the protocols of the Internet. If applied in the same way here, Open Source/Free Software products would be explicitly excluded.

Regards,
Jeremy Allison,
Andrew Tridgell,
Samba Team.

Subject: Caveats: experience from the EEC settlement against IBM

To Whom It May Concern:

With regard to the current action/settlement with Microsoft (which I have not followed in detail), and possible EEC actions against Microsoft, it brought to mind some caveats which might be of interest given my previous job at Amdahl Corporation with a parallel with an anti-trust settlement by IBM with the EEC.

In 1984, IBM settled an anti-trust action by the EEC by agreeing to the "Undertaking" which allowed for competitors to request interface information so that products of competitors could "attach" to those of IBM. This information was to be provided within 120 days of IBM making an announcement of a product using those interfaces. Amdahl was a competitor of IBM, manufacturing System/390 plug-compatible mainframes. Amdahl was able to make interface requests and receive such information, sometimes with very onerous charges. After 10 years (around 1994), IBM decided to drop the Undertaking, claiming that it had adopted it unilaterally, rather than it being imposed. In the subsequent years, the prices of the interface specifications skyrocketed: several page specifications cost hundreds of thousands of dollars, and 100+ page specifications cost several millions of dollars. IBM oftentimes delivered specifications YEARS after they shipped their products, which made life difficult when the market required that a new product be delivered every year. It was easy to fall behind and lose customers. Losing customers meant less revenues, and less revenues made it tough to foot the bill for expensive specifications which ended up being a sizeable component of an engineering budget.

By 2000, IBM's competitors in the System/390 mainframe arena had dropped out of the market. Today IBM enjoys a monopoly again in that market segment. A lesson to be learned here is that competition can thrive only when barriers to competition are not onerous. A monopolistic entity with vast financial resources can charge onerous fees

for interface specifications, making it impossible for very small software companies to obtain the information that they will need to create products needed for their survival.

The setting of the prices of the interface specifications cannot be under Microsoft's control. Reasonable time limits for delivery of complete interface specifications must be established by an independent body.

Thank you for your attention.

Ashcroft and Associates,

At least MS admits it is soft. Shame on you. The worst monopolist since the era of the trusts and you cave. And that assessment is not from some neophyte, but from a JD-MBA, Rutgers Class of 1975, who has been practicing for 26 years. Again, shame. While Penfield may have shown unusual commentary form, most of what he said was accurate. Bad taste. Bad appearing. Sure. But was it the worst taste or conduct with a federal judge? Come on. In the real world many federal judges run rough shod over parties. However, that is another issue. Windows is flawed as are all operating systems by their nature. That is why MS is periodically coming out with new operating systems. But when they integrate their products and exclude competing products without legitimate business reasons, they are using their monopoly power.

I guess we are going to have to leave it to the State's Attorney General and the Europeans.

Politics, and I mean by that the Bush administration, has sided with the monopolists and their cronies and against the American people. I can only hope that the American people will make you and your cronies pay politically. I know MS is paying you a lot. How much did the company "contribute" to your political bedfellows and causes? Subject: proposed settlement

Since the proposed settlement to the United States et. al. v. Microsoft cannot be implemented without seeking public comment, let me go on record opposing this agreement between Microsoft and the Department of Justice. With all due respect to the people who negotiated the settlement and their intentions, no evidence exists that the agreement won't be violated like every one of the previous agreements Microsoft has entered into with the Department of Justice. Believing that Microsoft intends to abide by this agreement, or that the threat of extending the provisions of the agreement two years if Microsoft doesn't abide by it will keep Microsoft honest is wishful thinking.

A better settlement should be proposed. Otherwise I will spend the next two years ashamed of the officials I elected, and I will work to vote them out of office, along with their appointees.

Paul Thurott's Wininfo website called your settlement a a travesty of justice. I wouldn't consider them a radical anti Microsoft site;

just the opposite. I personally consider it a pretty mild comment.

At least 3 of the richest men in the world made their money by a blatant monopoly. They didn't reinvest any of the money to make it any more of a quality product than it had to be and the unreliability of Windows is legendary. The American people (and the world) were cheated as a result. They used their money underhandedly to drive competitors out of business and only invested money where it would crush a competitor.

There are good monopolies but Microsoft is not one of them.

There are laws designed to protect us from that kind of behavior. You are responsible for enforcing those laws and you failed to do so. I know you have an ideology, but you also have responsibilities.

You guys make me ashamed to be a Republican. Perhaps it's time to think about how you can recover some credibility.

Have a nice day.

Dear DOJ;

I'm disappointed by the proposed settlement. It does nothing, means nothing.

What the industry really needs is for Microsoft to stop undermining industry standards.

Microsoft extensions to industry standards are the biggest threat to competition and to a level playing field.

In addition, DOJ should insist that Microsoft publish certain file formats—notably Word and Excel—that are now so utterly dominant that it's impossible to build a product without interoperating with them.

Subject: Is this Microsoft Sweepstake illegal?

To whom it may concern,

I have a question. Is the following Microsoft sweepstakes illegal? I recently ran across a sweepstakes that Microsoft is sponsoring (<http://www.msnpeakperformance.com>). It was my understanding that it was not legal to force people to use your products as a condition of entering such a contest. If you look at the site, this is clearly the case here. Either you download and use their product (.NET Passport) or you can't enter. There is no alternative entry method provided. Don't have a computer? You are barred from entering. Your computer uses different (non-Microsoft) technology? You are barred from entering. Don't want Microsoft's .NET technology on your computer? You are barred from entering.

You would think with the trouble Microsoft has had recently that they would be sensitive to this type of issue. Then again they have had a history of thumbing their nose at the law, haven't they.

Thanks,

Michael Kuske

Subject: Antitrust

ATR,

I was sad to see that Microsoft case has gone from almost a break up of the company to a slap on the hand indicating everything they have done or planning to do is ok and does not impede technology in the world. I believe the court may have better understanding of these issues were they more computer oriented/related in their field to see the repercussions Microsoft has put upon us. Don't get me wrong, I use Microsoft but am limited to only using Microsoft due to their thwarting of the market. I attempt to use other software types and vendors but are limited to the "May not work with Microsoft." Have you seen the new XP and passport software? It has to be the most monopolistic, big brother approach I have ever seen. The fees charged by Microsoft for the latest software scheme also forces a company to only use their software for a long period of time. I thought great I just wont use Passport because I don't want my personal info shared with Microsoft—when I tried for support they said it was required to have passport filled out before continuing. Did you ever wonder why other countries ie China have banned Microsoft within their country? There is no longer competition in the market. A break-up would have spurred more competition and economic growth.

Anyhow as a general citizen I thought I would express my feelings hoping to relay that not only the states, but millions of people are under the mafia-like' stronghold that Microsoft has put upon us and we don't like it.

If you'd like peoples opinion, post it on the web in visible places—not hidden in the Judgment court orders.

Subject: Settlement conditions

I am not a lawyer, but I am a CPA and over the 25 years that I've been in accounting I have read a number of lawsuits and other legal agreements. It seems to me that the settlement with Microsoft only requires them to do what the law has provided all along, with the exception, to use an automobile analogy, that there will now be someone in the back seat to tell them they're speeding. It doesn't mean that they will slow down, they are just more aware of what they are doing.

Therefore, I feel that unless the court imposes potential severe penalties on the Board of Directors of Microsoft, that the course of Microsoft slowly pushing out competitors wherever it feels there is money to be made, or where it perceives a potential threat will continue unabated or possibly accelerate.

I, therefore, recommend, that the Board of Directors of Microsoft be subject to immediate jail time if at any time Microsoft is found to have violated the terms of the settlement. This would include all current and all future directors. Only by making the Board responsible in a way that will have immediate and substantial impact will on themselves will there be any hope of the settlement agreement being honored.

U.S. Settlement Leaves Microsoft More Entrenched

By Rob Pegoraro

Friday, November 9, 2001; Page E01

What are we going to do about Microsoft?

The government has been fretting over this question for the past decade. So far, it has compiled an impressive record of the things Microsoft has done wrong in the past.

Unfortunately, it always seems to find out about these abuses after the damage has been done. And it has yet to effectively address what Microsoft might do in the future. The proposed settlement between the Department of Justice and Microsoft announced last week continues this embarrassing tradition.

It's not just that this slim document fails to mandate any punishment for breaking the law (the next time I get a speeding ticket, can I negotiate this kind of arrangement, too?), or that its numerous "nothing in this section shall prohibit" clauses appear to vacate most of its provisions. The real problem is that it focuses so much on the individual PC desktop, when Microsoft is moving on to other battles.

This settlement spends much of its time trying to carve out space for PC manufacturers to add non-Microsoft "middleware" to run a broader set of applications. This would have been a laudable goal half a decade ago, when PC vendors aggressively experimented with their own front ends for Windows. As the court case thoroughly documented, Microsoft didn't like this creativity one bit and quickly quashed the manufacturers' dissent. In response, the proposed settlement's first prescription begins with the phrase "Microsoft shall not retaliate" and goes on to stipulate how Microsoft must treat all its licensees equally and fairly. The hope is that this government-mandated liberty will encourage PC builders to offer choices outside the Microsoft way.

"I think it's going to help," said Daniel Morales, a vice president with MandrakeSoft,

a Linux distributor in Pasadena, Calif. But he warned: "There's a lot of details that are very slanted towards Microsoft." None of the manufacturers I contacted wanted to speak, on or off the record, about any of their plans once the settlement goes into effect. Most didn't want to comment about the settlement at all. It's remarkable how many different reasons these companies offered for not talking about the biggest issue in the industry in a decade.

But neither the manufacturers' sudden case of laryngitis nor any subsequent failure to offer new choices to consumers should surprise anybody. In the bruised, battered PC business, there's nothing to be gained by alienating your biggest supplier. The agreement can't repeal this law of human relations.

"In the real world, there are ways to express displeasure without violating that agreement," said Dan Kusnetzky, vice president for systems software research at IDC, a leading industry analysis firm. And Microsoft often doesn't appear to understand that the phrase "abuse of monopoly power" isn't a compliment. It continues to push its Passport user-ID system on customers in the hope of turning this scheme into an Internet-age Social Security number—I've had to enter my Passport login just to download a software update. Windows XP relentlessly promotes Microsoft's own software, services, formats and marketing partners. Just weeks ago, the company locked non-Microsoft browsers out of its MSN.com site. The proposed agreement's more promising terms apply not to computer manufacturers but to independent software developers. The deal would require Microsoft to document all its applications programming interfaces, or APIs—the ways programs work with Windows itself—as well as some of its networking protocols. That's a fine start. But the agreement fails to tackle Microsoft's other big leverage point—its proprietary file formats.

"The reason I can't walk into an organization and say 'I'm going to use my Linux box' is that people will send me Word documents that I can't read," said Jeremy Allison, co-author of the Samba cross-platform networking program. The Microsoft Office formats are the classic case of this lock-in. Developers of competing word processors and spreadsheets have little choice but to make sure their products can read and write these proprietary formats.

"We don't get any help from Microsoft," said Iyer Venkatesan, Sun Microsystems' product manager for the StarOffice productivity suite. Some documentation is available, but it's "incomplete and full of errors and inconsistencies," e-mailed Shaheed Haque, a developer of the KOffice suite for Linux. Sun would like to see Microsoft's formats turned into open, published standards. Allison would like to see the same thing done for all of Microsoft's communications protocols, beyond the settlement's limited requirements. With open access to the Windows APIs as well, said Kusnetzky of IDC, "it would make it much easier to create an collaborative environment." There's a model for this sort of requirement—telephone and electric

utilities, which developed into monopolies and now are required to open their facilities to competitors.

But the Microsoft agreement doesn't follow this particular logic. It still could—should—be amended. But what if it isn't? Microsoft is an odd company to contemplate. It employs a lot of smart people and can produce software of amazing quality. But it also has repeatedly broken the law and shows few signs of having learned its lesson.

If you don't want Microsoft's way to be the only way, there are things to consider. Does the need to work with the same files as your Windows-using colleagues mean you need to use Microsoft applications, too? Does it even require you to run Windows itself? Are there better choices in Internet access than Microsoft's MSN? Even if Microsoft prods you into signing up for a Passport account, do you actually need to use it?

In other words: What are you going to do about Microsoft?

Living with technology, or trying to? E-mail Rob Pegoraro at rob@twp.com.

I am writing to you in regards to the recent agreement made between Microsoft and the DOJ. I am appalled at the DOJ letting Microsoft off without any regard to the main issue at hand. As a technology professional I feel compelled to voice my displeasure, and point out the inadequateness of the remedies put forth. Microsoft has blatantly and illegally used its operating system monopoly to push competitor's out of the market. This is no longer a question, they have been found guilty on this count. They illegally forced Netscape out of the browser market and now they are seeking to do the same exact thing with Windows XP. Windows XP has both instant messaging software as well as photography software bundled into the operating system, which completely shows Microsoft's respect for the federal government and the DOJ in particular. I am wondering at this point if in 5 years Microsoft will be able to bundle a Ham Sandwich and tires for my car into the operating system that I will be forced to buy.

This illegal leveraging of the Windows OS is the core issue at hand and has not been addressed at all in the agreement Microsoft has reached with DOJ. Microsoft's ability to bundle whatever it wants into its operating system needs to be stripped. Any settlement reached with Microsoft MUST touch on this core issue. They must not be allowed to continue bundling whatever they want into their operating system. Please take the opinions of people who understand this technology into account. Thanks for your time.

Subject: MICROSOFT COMMENT

Why can't this be over? Our country is based on free enterprise... but only to a certain point? You can create it, nurture it, sweat and worry over it, spend all of your life, time, and your own money on it, but when it finally pays off the government wants to say "you can't do that"! If, and when, someone else makes a product that out-performs Microsoft's, then they can be in the "winner's circle"! Until then, oh well.. get over it and get back to work. Why is the United States spending my tax dollars on this? I did not have a say so in this legal dispute!

I'm sorry, but I just feel that the US is telling us that we cannot succeed. This is not an issue of whether Microsoft, or Bill Gates, pays their taxes... it is a few little guys crying that Bill has all the marbles. Guess what, he won them fair and square. It sounds just like my 6 years that wants to re-write the rules when he's losing..and what would that teach him? Son, you don't have to work for your rewards, just cry loud enough and the US govt will get them for you! PLEASE!

Thanks for hearing my comments on the situation and I truly hope that this can come to a speedious conclusion.

I. Hanegan of Baton Rouge

Subject: The use of standards to increase competition

Gentlepersons,

The new judgment of November 2, 2001 no longer requires splitting the company. However, the same approach is used to have Microsoft publish its operating system application programming interfaces (APIs) to allow other companies to develop compatible products. Microsoft maintains their very successful operating system monopoly through the use of these proprietary APIs, as well as aggressive marketing. Publishing APIs does not render them open. It is not even clear in this judgment how these APIs are described: software program code, written specification, formal description language, or? Open standards appear to be necessary to create open interfaces. For a discussion of the history of monopolies and standards, the problems that are not resolved by published APIs and how open standards may be used to maintain both competition and competitive advantage please see <http://www.ses-standards.org/library/krechmerbaskin.pdf> for a copy of Microsoft Anti-Trust Litigation—The Case for Standards' the first prize paper at the World Standards Day proceedings.

Subject: Rally for America in Austin—Free Concert & Laser Light Show

[l7a2fd.JPG] For more information on the Rally for America, visit: <http://www.rally4america.com> For the program, visit: <http://www.rally4america.com/program.html> Speakers at the Capitol will include several Texans who lost loved ones in the September 11 attacks. Admission is free to both the Capitol event beginning at 4:00 pm and the Waterloo Park Benefit Concert and Laser Light Spectacular beginning at 5:45 pm. Donations will be taken for the Rally for America Memorial Fund and 100% of the proceeds will be used to build a memorial in Austin to the victims and heroes of September 11. Free parking is available at the Capitol Visitors Garage in the block bounded by 12th and 13th and San Jacinto and Trinity. This garage is only one block from both the south steps of the Capitol and Waterloo Park. Please contact info@rally4america.com or (512) 476-8787 with any questions about this event. We would be most appreciative if you could forward this message to your friends and colleagues. Note: If you do not wish to receive messages about the Rally for America in the future, please send a message to info@rally4america.com requesting to be removed from the list.

Subject: Stand up and be counted:

STAND UP AND BE COUNTED FOCAL VERSE: "HE WHO IS NOT WITH ME IS AGAINST ME, AND HE WHO DOES NOT GATHER WITH ME SCATTERS." HE REPLIED, THOSE WHO HEAR THE WORD OF GOD AND OBEY IT." LUKE 11:23, 28.

The message for today is: "STAND UP AND BE COUNTED" Scripture: Luke 11:23,28; Matthew 1:18-2:23; John 15:5; Proverbs 8:14, 21-22; Proverbs 1:7; Proverbs 3:7; Psalms 10:2,4, Proverbs 16:18; 2 Chronicles 7:14; Matthew 5:11, 44; Matthew 10:23; Matthew 23:34; Luke 11:49; John 5:16; John 15:20; Revelation 20:10, 12, 13; Ephesians 2:8-9; James 2:18, 26; Isaiah 54:6; Matthew 24:42, 44; Matthew 24:36; Matthew 24:38-39; Isaiah 34:1-4; Isaiah 60:12; John 12:48; John 3:16, Luke 9:60 (Scripture is from the NIV).

ARE WE WARRIORS WHEN WE SERVE OUR LORD AND MASTER? DO WE COWER DOWN WHEN WE HEAR THE WORD ?ACLU?, OR ?I?M GOING TO FIRE YOU FOR READING THE BIBLE OR SAY ANYTHING ABOUT CHRIST IN THIS BUILDING." PERHAPS YOU ARE AFRAID TO PASS OUT BIBLES ON THE STREET WHERE YOU MIGHT BE ARRESTED?

ARE YOU AFRAID TO PASS OUT CHRISTIAN LITERATURE TO SCHOOL CHILDREN, OR DEFY SOMEONE WHO REFUSES TO ALLOW YOU TO DO THE WORK OF THE LORD. ARE YOU ASHAMED TO LET PEOPLE KNOW YOU ARE A CHRISTIAN? DO YOU, OR WILL YOU STAND UP BOLDLY AND SPEAK OUT

ABOUT JESUS CHRIST, OR DO YOU SAY NOTHING, AND GO WITH THE FLOW OF SOCIETY WHO SITS ON THEIR HANDS AND RESTS ON THEIR BLESSED ASSURANCES, AND ALLOWS PEOPLE TO DIE AND GO TO HELL EVERY DAY?

FOLKS, IF YOU ANSWERED YES TO ANY OF THESE, I HAVE ONE THING TO SAY ? ?YOU SHOULD BE ASHAMED OF YOURSELF ? GOD GAVE HIS SON TO THE WORLD IN THE FORM OF A LITTLE BABY BORN TO A HUMBLE, JUST MAN, AND A VIR- TEOUS AND PURE WOMAN, A VIRGIN AS GOD'S WORD TELLS US IN MATTHEW 1:18-2:23. HE CAME INTO THIS WORLD FOR THE SOLE PURPOSE OF DYING FOR THE SINS OF HUMANKIND. GOD BLESSES US THROUGHOUT OUR LIVES WITH SO MUCH? WERE A NATION OF WASTEFUL, UNGRATEFUL, OPPORTUNIST WHO SIEZE THE MOMENT TO ACCRUE WEALTH FROM ADVERSITY AND DESPAIR; DID YOU SEE ALL THESE ?LITTLE SHOPS OF PATRIOTISM? THAT SPRING UP ON STREET CORNER EVERYWHERE? WHY DON'T THEY SELL "JESUS" SHIRTS AND DISPLAY THE SAVIOR WE ARE SUPPOSED TO LOVE AND SERVE. WHY WASN'T THE SALVATION ARMY CALLED WHEN THE WORLD TRADE CENTER AND PENTAGON WAS ATTACKED? THEY DO INDEED OFFER THE WAY OF SALVATION AS WELL AS PROVIDING COM- PASSION AND THINGS FOR THE WELL BEING OF PEOPLE IN NEED. THIS BOMBING HAS BECOME BIG BUSINESS TO SOME IN THIS NATION. AND BY ALL MEANS LETS SEE THAT THE DOGS ARE TAKEN CARE OF AS WELL.. DOESN'T MATTER TO SOME THAT THERE ARE HUNGRY FOLKS WHO NEED TO BE FED; LETS FEED THEM DOGS. GOD NEVER CREATED A DOG WITH A SOUL AND NEVER WILL.

FOLKS, WE ARE REALLY A NATION OF PROUD, PATHETIC PEOPLE WHO LOVE FLIRTING WITH DISASTER. WE FLAP OUR WINGS, STICK OUT OUR CHEST AND SAY, ?WE ARE AMERICA, THE MIGHTEST NATION ON THE FACE OF THE EARTH, AND WE CAN WHIP ANYONE!? CAN WE? WE ARE PATHETIC BECAUSE WE PLACE OUR TRUST IN WHAT MAN SAYS. MAN IN FACT CAN DO NOTHING WITHOUT GOD'S FAVOR EXTENDED TO HIM.

JOHN 15:5 TELLS US, 21 AM THE VINE, YOU ARE THE BRANCHES; IF A MAN REMAINS IN ME AND I IN HIM, HE WILL BEAR MUCH FRUIT; APART FROM ME YOU CAN DO NOTHING." WE ARE A PROUD AND PROFANE (SECULAR) PEOPLE! ARE YOU PROUD? GOD'S WORD TELLS US IN PROVERB 8:13 ?TO FEAR THE LORD IS TO HATE EVIL. I HATE PRIDE AND ARROGANCE, EVIL BEHAVIOR, AND PERVERSE (UNREASONABLY WRONG/ SELF WILLED) SPEECH. WHAT IS THE LORD SAYING HERE? EXACTLY WHAT YOU HEAR! PROVERBS 1:7 AND 3:7 SAYS, ?THE FEAR OF THE LORD IS THE BE- GINNING OF KNOWLEDGE, BUT FOOLS DESPISE WISDOM, AND DISCIPLINE. DO NOT BE WISE IN YOUR OWN EYES, FEAR THE LORD AND SHUN EVIL."

WE HEAR ABOUT ARMADA'S, NAVAL BATTLE GROUPS, 13-52 AND STEALTH BOMBERS OF THE AIR FORCE, MIGHTY

FIGHTING MAN OF THE USMC, AND THE APACHE ATTACK HELICOPTERS OF WHAT MEN SAYS IS THE MIGHTY US ARMY. THEY ARE MERE PLAY TOYS IN THE EYES OF GOD. I HATE TO BUST YOUR BUBBLES FOLKS; ALL THE POWER OF ALL WEAPONS OF ALL NATIONS PUT TOGETHER DOES NOT HAVE THE POWER OF ETERNAL GOD. COMPARED TO THE POWER OF OUR MOST HIGH GOD, ALL THESE PUT TOGETHER AND JOINED WITH ALL NATIONS, DON'T HAVE ENOUGH POWER TO BLOW THEIR NOSE.

AMERICA IS A PROUD NATION. THE WORD OF GOD SPEAKS OF PRIDE. 49 TIMES ?PRIDE? APPEARS IN THE HOLY BIBLE. LET ME JUST GIVE YOU A FEW THINGS THE BIBLE SAYS ABOUT PRIDE, AND THESE ARE FROM THE KING JAMES VERSION. PSALMS 10:2: ?THE WICKED IN HIS PRIDE DOTH PERSECUTE THE POOR, LET THEM BE TAKEN IN THE DEVICE THAT THEY HAVE IMAGINED.? PSALMS 10:4: ?THE WICKED THROUGH THE WICKEDNESS OF HIS COUNTENANCE, WILL NOT SEEK AFTER GOD; GOD IS NOT IN HIS THOUGHTS.? AND, THE ONE I THINK APPLIES TO THE SITUATION THE UNITED STATES IS IN NOW. PROVERBS 16:18: ?PRIDE GOETH BEFORE DESTRUCTION, AND AN HAUGHTY (PROUD) SPIRIT BEFORE A FALL.? IN EACH OF THOSE 49 VERSES, NOT ONE OF THEM I DON'T BELIEVE IS USED POSITIVELY TO HONOR GOD. A PROUD INDIVIDUAL CANNOT EFFECTIVELY WORSHIP GOD. PRIDE; ITS EVIL, PROFOUND, AND UNHOLY TO THE LORD. HE DOESN'T SAY, ?BE PROUD, COME, AND HUMBLE YOURSELF BEFORE ME. PRIDE IS NOT USED IN HIS INSTRUCTIONS, AND EVIL CAN'T COME IN THE PRESENCE OF OUR HOLY FATHER GOD. HE IS HOLY, AND CANNOT LOOK ON SIN. HE TURNED HIS BACK ON JESUS WHILE HE HUNG BETWEEN HEAVEN AND HELL BECAUSE HE COULD NOT LOOK ON SIN. IT HAS BEEN OVER 30 DAYS SINCE THE BOMBINGS BY WHICH 3 PLANES CAUSED THE DEATH OF THOUSANDS. THE FOURTH CRASH IN PENNSYLVANIA CAUSING DEATH TO MANY. DO WE HATE THOSE THAT DID THIS? UNFORTUNATELY WE HAVE TO SAY YES. IS BIN LADIN HATED? YES. BUT, I TELL YOU WE HAVE TO ASK FORGIVENESS FOR HIM FROM THE GOD WE SERVE; THE TRUE AND LIVING GOD. DID NOT JESUS ASK FOR FORGIVENESS OF THOSE WHO CRUCIFIED HIM; "FATHER FORGIVE THEM, FOR THEY KNOW NOT WHAT THEY DO." LUKE 23:34

PEOPLE ARE MOURNING THE DEAD, HOLDING VIGIL, AND PRAYING FOR THOSE WHO HAVE GONE. IF THEY WENT INTO ETERNITY LOST, THERE IS NOTHING WE CAN DO FOR THEM. ALL THE PRAYER SAID FOR THEM FROM NOW UNTIL THE END OF TIME, WILL DO NOTHING FOR THEM. IF THEY WENT INTO THE KINGDOM OF GOD, THEY HAVE REACHED THEIR REWARD, ANT) THEY ARE FAR BETTER OFF THAN WE. WE ARE NOT GOING TO CHEAT OLD MAN DEATH, AND WE CAN'T GET AROUND IT.

FOLKS, GOD'S WORD SAYS IN LUKE 9:59-60, THAT JESUS SAID TO A MAN ON

A ROAD "FOLLOW ME," THE MAN SAID, "LET ME FIRST GO AND BURY MY FATHER." BEFORE HE WOULD FOLLOW THE BECKON CALL OF DISCIPLESHIP, SOMETHING ELSE HAD TO BE DONE. JESUS SAID UNTO HIM "FOLLOW ME AND LET THE DEAD BURY THEIR OWN DEAD." ARE WE READY TO YIELD AND FOLLOW CHRIST COMPLETELY, OR WILL WE BURY OUR DEAD FIRST?" THIS COMMAND OF THE SAVIOR WAS FOR THEM TO GO AND PROCLAIM THE KINGDOM OF GOD. LUKE 9:60

FOLKS, PEOPLE SPEAK WITH THEIR LIPS. BUT, THEIR HEART IS INDIFFERENT TO GOD. WE SAY "ALL THIS MISERY, DEATH, AND DESTRUCTION IS REALLY BAD." WE THINK ?THAT COULD HAPPEN TO ME, BUT I CAN SERVE THE LORD ANOTHER TIME. ?THERES A YANKEE BASEBALL GAME AT THE OLD PARK TONIGHT. I HAVE BOUGHT TICKETS AND I AM GOING.? "THE CHURCH SERVICE IS GOING ON, BUT I'M GOING TO SKIP IT THIS TIME.? ?THERES A BAR WHERE THE GANG HANGS OUT, SO I'LL STOP AND SEE IF THEY ARE THERE, AND PROBABLY HAVE A COOL BREW.

I KNOW I CAN GET A COLD ONE AT THE PARK ? BOY WHAT A LIFE, AND WHAT A NIGHT OF ENJOYMENT I'M GONNA HAVE WHEN I GET THERE! SOUND FAMILIAR? COULD NOT THAT MONEY HAVE BEEN SPENT TO SEND A BIBLE OUT TO SOMEONE WHO HUNGERS FOR THE WORD OF GOD? WHAT ABOUT THE PERSON ON THE STREET WHO IS HUNGRY FOR A MEAL AND MAY NOT HAVE EATEN FOR AWHILE. NOTHING WENT TO THEM, AND GOD WAS NOT PRAISED OR HONORED. GOD MOST LIKELY WON'T EVEN BE GIVEN A THOUGHT.

JESUS IS COMING AGAIN. GOD IS SAYING, ?AMERICA TIME IS RUNING OUT; I LOVE YOU SO MUCH, BUT I WILL NOT ALLOW YOU TO CONTINUE IN YOUR WICKED WAYS. IF YOU WILL NOT HEED MY CALL, I WILL BRING YOU TO YOUR KNEES, AND I REALLY HAVE THE POWER TO COMPLETELY ANIHILATE YOU.? FOLKS, IF WE ARE TO BE A CHRISTIAN NATION, A SEPARATED LIFE FROM SECULAR SOCIETY IN OUR DAILY LIVING IS WHAT OUR LORD COMMANDS US TO DO. 2 CHRONICLES 7:14 TELLS US THE WAY THIS NATION CAN CONTINUE TO HAVE THE FAVOR OF OUR HEAVENLY FATHER. ?IF MY PEOPLE WHICH ARE CALLED BY MY NAME, SHALL HUMBLE THEMSELVES, AND PRAY, AND SEEK MY FACE, AND TURN FROM THEIR WICKED WAYS, THEN WILL I HEAR FROM HEAVEN, AND WILL FORGIVE THEIR SIN, AND WILL HEAL THEIR LAND.?

GOD'S WORD SAYS WHAT HE WILL DO, ITS SET IN STONE, AND HIS WORD IS ABSOLUTE IN AUTHORITY; HE DOES NOT NEGOTIATE, AND ITS DIRECTIVE IN NATURE. HE SAYS, "WHAT I SAID IS WHAT I MEAN; MY WILL IS TO BE AND WILL BE DONE. AMERICA WILL DO WHAT I SAY, OR AMERICA WILL BE DESTROYED.

FRIENDS, GOD'S WORD GIVES US HIS CHARGE. ARE YOU AFRAID TO STAND UP AND BE COUNTED? ARE YOU AFRAID TO TELL SOMEONE THAT JESUS LOVES

THEM? WHY? DO YOU NOT SERVE A RISEN SAVIOR? ARE YOU AFRAID OF LOSING YOUR JOB BECAUSE OF IT? ARE YOU AFRAID TO BE PERSECUTED? IF YOU ARE GOING TO BE A SERVANT OF GOD AND FOLLOW JESUS CHRIST YOU WILL BE PERSECUTED. HE GAVE US THAT PROMISE IN THE GOSPEL OF MATTHEW, LUKE, AND JOHN. MATTHEW 5:11,44, 10:23, 23:34; LUKE 11:49; JOHN 5:16, AND 15:20 ARE JUST A FEW PLACES.

JESUS SAID IN JOHN 15:20, EXACTLY HOW IT IS TODAY; THE BAD NEWS IS THAT ITS NOT GOING TO GET ANY BETTER; RATHER IT'S GOING TO GET WORSE. ?REMEMBER THE WORD THAT I SAID UNTO YOU, THE SERVANT IS NOT GREATER THAN HIS LORD. IF THEY HAVE PERSECUTED ME, THEY WILL ALSO PERSECUTE YOU; IF THEY HAVE KEPT MY SAYING, THEY WILL KEEP YOURS ALSO.? AMERICANS, WERE SUPPOSED TO HAVE AWAKENED YEARS AGO; SOME ARE STILL ASLEEP, AND WORSE SOME NEVER WILL; WAKE UP—"FOOLISH, FOOLISH, PEOPLE!"

IF FOLKS ARE GOING TO JUST SIT BY PASSIVELY AND BE CONTENT TO GO WITH THE FLOW, satan IS GOING TO HAVE HIS WAY WITH THEM. I FOR ONE AM NOT WILLING TO DO THAT! CHRISTIANS ARE ALREADY WEARING LEAD SHOES WADING IN A TORRID UPHILL STREAM, AND THE PERSECUTION OF CHRISTIANS IS CONTINUING. IT WILL CONTINUE TO GET WORSE ? LOOK AROUND AND READ REVELATION; YOU ARE AT A BIRTHDAY PARTY COMPARED TO WHAT IS GOING TO COME FOR PEOPLE WHO ARE NOT RIGHT WITH THE LORD.

THE ONLY HOPE ANYONE HAS IS TO TURN TO THE LORD; SEEK HIM. REPENT OF THEIR SINS, AND ASK FOR MERCY, NOT JUSTICE, NEVER JUSTICE. THEN FOLKS CAN HAVE PEACE IN A SINFUL WORLD. WILL YOUR LIFE AS A CHRISTIAN BE EASY ? NO. WILL YOU BE ABLE TO HAVE PEACE IN YOUR HEART AN)) MIND? ABSOLUTELY! JESUS OVERCAME THE WORLD, AND SO CAN FOLKS OVERCOME ADVERSITIES IN THEIR LIFE. THERE IS NO OTHER WAY YOU WILL EVER BE ABLE TO DO THAT ON YOUR OWN.

FOLKS, satan WAS DEFEATED LONG AGO AND HE KNOWS HIS GOOSE HAS BEEN COOKED. "HE WILL BE THROWN INTO A LAKE OF FIRE ANT)

BRIMSTONE WHERE THE BEAST AND FALSE PROPHETS. THEY SHALL BE TORMENTED DAY AND NIGHT, FOREVER AND EVER. REVELATION 20:10. ARE YOU GOING TO GO WITH HIM? IF PEOPLE ARE LOST IN SINS AND DON'T TURN FROM WICKEDNESS THEY ARE ON THEIR WAY. YOU SAY YOU 'RE NOT WICKED;? YOU SAY YOU ARE A JUST AND RIGHTEOUS PERSON, A RIGHTEOUS DOOD AS IT WERE, AND YOU HAVE NO SINS TO CONFESS AND YOU DON'T NEED CHRIST IN YOUR LIFE! WELL, FRIEND I BEG TO DIFFER WITH YOU; YOU ARE WRONG BECAUSE GOD'S WORD SAYS SO. I JOHN 1:8 SAYS, "IF WE CLAIM TO BE WITHOUT SIN, WE DECEIVE OURSELVES AND THE

TRUTH IS NOT IN US." "AND I SAW THE DEAD, SMALL AND GREAT BEFORE GOD; AND THE BOOKS WERE OPENED WHICH IS "THE BOOK OF LIFE;" AND THE DEAD WERE JUDGED OUT OF THESE THINGS WHICH WERE WRITTEN IN THE BOOKS, ACCORDING TO THEIR WORKS."

REVELATION 20:12. AND THE SEA GAVE UP THE DEAD WHICH WERE IN IT; AND DEATH AND HELL DELIVERED UP THE DEAD WHICH WERE IN THEM, AND THEY WERE JUT)GED EVERY MAN ACCORDING TO HIS WORKS." REVELATION 20:13. YOU CAN'T PAY A PRIEST ENOUGH TO EVER FORGIVE YOU; HE DON'T HAVE THAT POWER, NO MATTER HOW MANY HAIL MARYS YOU SAY. THERE ARE NOT ENOUGH THINGS YOU COULD WORK AT TO PAY FOR YOUR SALVATION. GOOD DEEDS ALONE WILL NOT ALLOW YOU GO INTO HEAVEN. BEING A METHODIST, CATHOLIC, JEWISH, BAPTIST, BUDDHIST, MUSLIM, OR ZIONIST WON'T GET YOU ONE INCH CLOSER TO HEAVEN. IF YOU ARE COUNTING ON GOING TO HEAVEN JUST BY YOUR DENOMINATION OF FAITH, YOU AREN'T GOING TO MAKE IT. YOU HAVE GOD'S WORD ON IT, AND HIS PROMISE.

A PERSONS DENOMINATION OF FAITH NEVER GOT ONE PERSON INTO HEAVEN, AND IT NEVER WILL—BUT, IT HAS SENT SO MANY TO HELL. SALVATION, GOD'S GIFT OF HIS SON, AND THE DEATH OF JESUS ON CALVARY FOR ALL PEOPLE'S SINS IS THE ONLY WAY YOU MAY HAVE ETERNAL LIFE. EPHESIANS 2:8–9 SAYS, "FOR BY GRACE ARE YE SAVED THROUGH FAITH, AND THAT NOT OF YOURSELVES; IT IS THE GIFT OF GOD, NOT OF WORKS. LEST ANY MAN SHOULD BOAST?"

IN JAMES 2:18 WE ARE TOLD, "YEA, A MAN MAY SAY, THOU HAST FAITH, AND I HAVE WORKS; SHEW ME THY FAITH WITHOUT THY WORKS, AND I WILL SHEW THEE MY FAITH BY MY WORKS." IN VERSE 26, "THE BODY WITHOUT THE SPIRIT IS DEAD, SO FAITH WITHOUT WORKS IS ALSO, 'WE ARE TOLD BY JAMES THE BROTHER OF JESUS. IF YOU ARE TRYING TO GET TO HEAVEN ON YOUR OWN WORKS, YOU JUST HAVEN'T GOT A CHINAMANS CHANCE. NOW IF YOU THINK YOUR DEEDS ARE RIGHTEOUS ENOUGH TO GET YOU TO HEAVEN, I CALL YOUR ATTENTION TO ISAIAH 64:6. "ALL YOU HAVE BECOME LIKE ONE WHO IS UNCLEAR, AND ALL YOUR RIGHTEOUS ACTS ARE AS FILTHY RAGS; AND WE ALL DO FADE LIKE A LEAF AND OUR INIQUITIES, LIKE THE WIND, HAVE TAKEN US AWAY." NO OUR DEEDS WITHOUT CHRIST IN OUR LIVES ARE NOT RECOGNIZED? THEY ARE NOT LIKE A LAY AWAY PLAN? WHEN YOU PAY ALL YOUR PAYMENTS THEN THEY BECOMES YOURS. JESUS CHRIST'S DEATH ON THE CROSS, HIS ACCEPTANCE OF YOU, YOUR REPENTANCE OF SIN, AND ASKING CHRIST INTO YOUR LWE HUMBL-ED AS A LITTLE CHILD WILL GIVE YOU ETERNAL LIFE? THERE IS NO OTHER WAY. JESUS CHRIST IS COMING AGAIN. WHEN? MATTHEW 24:42, AND 44 GIVES US THESE INSTRUCTIONS: "WATCH THEREFORE: FOR YE KNOW NOT WHAT

HOUR YOUR LORD DOTH COME.

THEREFORE BE YE ALSO READY: FOR IN SUCH AN HOUR AS YE THINK NOT, THE SON OF MAN COMETH. JESUS TOLD US IN MATTHEW 24:36, "BUT OF THAT DAY AND HOUR KNOWETH NO MAN, NO, NOT THE ANGELS OF HEAVEN, BY MY FATHER ONLY." YES, ONLY GOD KNOWS WHEN CHRIST'S COMING IS GOING TO BE.

IN THE DAYS OF NOAH, SO IT WILL BE AT THE COMING OF THE SON OF MAN. FOR IN THE DAY OF THE FLOOD, PEOPLE WERE EATING AND DRINKING, MARRYING AND GIVING IN OF MARRIAGE, UP TO THE DAY NOAH ENTERED INTO THE ARK; AND THEY KNEW NOTHING ABOUT WHAT WOULD HAPPEN UNTIL THE FLOOD CAME AND TOOK THEM ALL AWAY. THAT IS HOW IT WILL BE AT THE COMING OF THE SON OF MAN. SO YOU ALSO MUST BE READY, BECAUSE THE SON OF MAN WILL COME IN AN HOUR WHEN YOU DO NOT EXPECT HIM." MATTHEW 24:38–39, AND 44.

FOLKS, WHAT GOD SAID IN THE OLD TESTAMENT IS MEANT FOR TODAY ALSO. LISTEN TO ISAIAH 34:1–4? "COME NEAR YOU NATIONS AND LISTEN. PAY ATTENTION YOU PEOPLES! LET THE EARTH HEAR, AND ALL THAT IS IN IT, THE WORLD, AND ALL THAT COMES OUT OF IT! THE LORD IS ANGRY WITH ALL NATIONS; HIS WRATH IS UPON ALL THEIR ARMIES. HE WILL TOTALLY DESTROY THEM, HE WILL GIVE THEM TO SLAUGHTER, THEIR SLAIN WILL BE THROWN OUT, THEIR DEAD BODIES WILL SEND UP A STENCH, THE MOUNTAINS WILL BE SOAKED WITH THEIR BLOOD, ALL THE STARS OF HEAVEN WILL BE DISSOLVED, AND THE SKY ROLLED UP LIKE A SCROLL; ALL THE STARRY HOST WILL FALL LIKE WITHERED LEAVES FROM THE VINE. LIKE SWIVELED FIGS FROM THE FIG TREE. ISAIAH 60:12 SAYS, "FOR THE NATION AND KINGDOM THAT WILL NOT SERVE YOU THEY SHALL PERISH; YEA, THOSE NATIONS SHALL BE UTTERLY WASTED. AMERICA, WORLD; WAKE UP, LISTEN, AND REPENT! FOLKS, GOD'S WORD IS THAT BY WHICH WE WILL BE JUDGED. JESUS SAID IN JOHN 12:48, "HE THAT REJECTETH ME, AND RECEIVETH NOT MY WORDS HATH ONE THAT JUDGEETH HIM; THE WORD THAT I HAVE SPOKEN, THE SAME SHALL JUDGE HIM IN THE LAST DAY. JESUS TELLS US IN LUKE 11:23, 28; OUR FOCAL SCRIPTURE: "HE WHO IS NOT WITH ME IS AGAINST ME, AND HE WHO DOES NOT GATHER WITH ME SCATTERS." "BLESSED RATHER ARE THOSE WHO HEAR THE WORD OF GOD AND OBEY IT."

FRIEND, THIS IS THE MESSAGE FOR TODAY. IF YOU HAVE NOT MADE A STAND, A COMMITMENT FOR CHRIST; NOW IS THE TIME. satan DOESN'T WANT ANYONE TO DO THAT. HIS DESIRE IS FOR EACH PERSON TO PUT OFF ACCEPTING CHRIST. IF HE CAN GET A PERSON TO DO THAT, THEN HE CON'tROLS THAT LIFE, AND THEY WON'T COME TO KNOW THE LORD. AND IF THAT PERSON THEN DIES IN THEIR SINS, satan HAS THEM RIGHT WHERE HE WANTS THEM? HIS GUEST FOR ETERNITY. satan KNOWS HE CAN'T

WIN; HE WANTS TO TAKE AS MANY WITH HIM AS HE CAN. ARE YOU GOING TO BE ONE OF HIS COMOANIONS FOR ETERNITY?

GIVE YOUR HEART AND SOUL TO THE LORD AND DON'T LET satan CLAIM YOU FOR HIS OWN. JESUS DIED FOR ALL PEOPLE, GOD LOVES YOU SO MUCH THAT HIS ONLY SON WENT TO THE CROSS TO DIE A HORRIBLE DEATH SO THAT ALL COULD HAVE ETERNAL LIFE THAT WOULD ACCEPT IT. DON'T TURN CHRIST AWAY. "FOR GOD SO LOVED THE WORLD, THAT HE GAVE HIS ONLY BEGOTTEN SON, THAT WHOSEVER BELIEVETH IN HIM SHOULD NOT PERISH BUT HAVE EVERLASTING LIFE. JOHN 3:16 WHOSEVER IS YOUR FRIEND IF YOU NEED THE SAVIOR TURN TO HIM NOW. IF YOU need Christ in your life, please don't turn Him away. Don't delay accepting Christ as your Lord and Savior. Each and everyone of us will make a decision for or against Christ sometime in our life-time. We will either accept Jesus Christ and reject the devil, or we will accept the devil and reject Christ.

Romans 5:8, 10 tells us: "God demonstrated His own love for us in this: while we were still sinners, Christ died for us. Since we have been justified by His blood, how much more shall we be saved from God's wrath through Him?" Come accept Christ, now is the time of His favor. Please don't turn Him away?

Today is the day of salvation. John 6:37 says, All the Father giveth me shall come to me; and him, that cometh to me I will in no wise cast out. John 3:36 tells us, "he that believeth on the Son hath everlasting life; and he that believeth not on the son shall not see life, but the wrath of God abideth on him."

Jesus patiently awaits you to come to Him. "Behold I stand at the door and knock; if any man hears my voice and open the door, I will come in and sup with him and he with me." Revelation 3:20. For all have sinned and come short of the glory of God. Romans 3:23.

For the wages of sin is death, but the gift of God is eternal life, through Jesus Christ our Lord. Romans 6:23 For God so loved the world, that He gave His only begotten son, that whosoever believeth in Him, should not perish but have everlasting life. John 3:16. This is the Roman road to salvation. You have a decision to make if you are lost. You will reject or accept Christ sometime; today perhaps or in the future. Come, the master calls, come to know Jesus as your Lord, and accept the Salvation He offers you as a free gift. If you need a Bible, please go to: www.bible.com. There are Bibles in about 50 languages, and 13 versions. Another site to visit is: www.blueletterbible.org. This one is amazing as to what it contains; Hymns, dictionary, and so much more! Please visit my web site at: www.ourchurch.comlmember/w/ wwwthereshope.com; you can also access the Bibles from there. Christ loves peoples of all the nations of the world. He proved that in a way no one has ever equaled. He could have said, "just forget this thing about dying. I am not going through all of this." I shudder to think what would have happened if He would have done that. Christ died a horrible

death on Calvary because He loved us so much. Just ask Christ into you're life; you will never regret it I thank you for your time, God bless you! I will be praying that you too will come to know Christ, if you need a Savior. If you are a born again Christian, go out and share the word of God and your experience with someone who is yet to have done this, and try to win a soul for Christ. The fields are white to harvest and the laborers are so very few. I'll be praying for you friend. —Sam—

Subject: Ashcroft on Larry King / Microsoft Case

Hi Ashcroft, and staff,
I saw you (Ashcroft) on Larry King. While I can understand your desire to fight terrorism. Isn't that what the new Homeland Defense office is for?

Saying that you dropped the Microsoft case to focus on terrorism is a total bunch of after the fact crap. The only reason you are saying that is because you are now realizing how big of a mistake you made, and are trying to hide behind the mistake behind terrorism. We won't let you. I didn't realize that a bunch of idiots flying planes into the WTC cause federal and civil laws to be suspended. I will not support anyone who believes that laws designed to protect consumers, entrepreneurship, and the fundamental availability of the American Dream within the United States can be selectively enforced. Don't give me the crap about being too busy to enforce anti-trust. The reality is, it took more effort to go out of your way and cut a side deal with Microsoft than just doing *nothing* and letting the legal system work, the way it is designed to, and the way it should have been. When a total consumer oriented guy like Ralph Nader who has no affiliation with high technology stands up and says this is horrible for consumers, I don't know how you can say, with a straight face that it was good for consumers.

Your imperialist, Al Capone like decision to stomp on an on-going analysis and investigation tells me you guys are either idiots that don't understand the issues, or you are anti-entrepreneur. So which is it? Again, I do not wish to offend the people within the DoJ who worked hard on the Microsoft case, I salute you, applaud you, and sympathize with you. I know you didn't sign the agreement. I am holding Bush and Ashcroft directly responsible for their actions, not you. I know the DoJ has many wonderful staff, and I appreciate, so very much what they have done for America.

I am holding Bush and Ashcroft responsible for their actions, and I am counting the days until 2004 to campaign against them and get them booted from office to be replaced by people who believe in capitalism, the American Dream.

You may have made a feudalistic, unethical dictatorial friend in Microsoft, but you have made an enemy of high tech. That's some 10 million people versus 30,000 or so Microsoft employees. Pretty stupid if you ask me.

Subject: U.S. v. Microsoft: Security provisions
From <<http://www.msnbc.com/news/655131.asp>>

James rejects these criticisms and says the decision to protect Microsoft's security provisions was "one of those 'duh' issues." He continues: "Microsoft has security protocols. Are we going to tell everyone how they work? Do you want people to get access to your credit-card information when you shop on line?"

You obviously don't understand electronic security and encryption. The only security systems that work are those where everyone knows how they work. Depending on keeping the mechanism secret GUARANTEES that the security will eventually be broken. Requiring the mechanism to remain secret means the security system is not very strong. There's plenty of security systems which are publicly documented and well-understood, and which still stand up to attack. Maybe you've heard of DES, AES, and other current encryption systems.

History is riddled with security systems which were kept secret, and then were broken. Recent examples are CSS for DVDs, various watermarking techniques for digital music, and Microsoft's Passport system. The most famous example is Enigma, the "unbreakable" cipher system used by the Germans in WWII. Have you heard of WWH?

Don't hide your settlement loopholes behind the word "security," because it's a lie, and eventually people will recognize it as a lie, and hang you for it.

Re: Microsoft Makes Offer to Holdouts

Join in the settlement signed last week by the Justice Department and nine other states and the company will pay all litigation costs they have run up so far, including attorneys fees. The states have 10 days to accept the offer.

Bush's Mafia Monster, Microsoft, attempts to bribe litigators into chucking their principles. It is the profound lack of it's own principles that causes Bush's party to bribe

the defenders of productivity, justice, integrity and of course, principles...

the Justice Department yesterday filed a formal defense of the agreement, arguing that it provides consumers with 'prompt, certain and effective protection from the software giant's anti-competitive practices.

Considering the Mafia Monster's modus operandi, this is just wishful thinking and lip service— nothing more.

While the court system's inherent flaws would postpone relief for at least two years this is no license for the continued abuse that is assured we will witness by this settlement.

"You whine about bribery after government ok murder, rape and torture, I think you simply like to whine..."

Subject: My opinion on the MS/DOJ settlement

I'm not all that happy with the MS/DOJ settlement. Rather than get angry, though, I'd like to suggest a small change to the terms of the settlement that would make me a lot happier: Right now there is no penalty for Microsoft if it does not comply with the terms of the settlement. It seems to me that this panel of three experts that oversees Microsoft's compliance should have the power to extract fines from Microsoft for every incidence of noncompliance. Otherwise the whole settlement seems silly. Microsoft agrees not to do certain things—but there's no agreed consequence if it does so anyway! I'm especially concerned that Microsoft will find a way to obey the letter, but not the spirit, of the settlement—and that is why a third part must have the ability to punish Microsoft for ignoring this settlement.

Thanks very much for accepting the public feedback via this email address. It means a lot to know that even if you don't agree, you've heard my opinion.

Subject: Microsoft Settlement

As a user of home pc's the Microsoft/Dol settlement does nothing to force Microsoft from attempting to manipulate the type of software that I use, let alone stopping the predatory tactics which allow Microsoft from entering new areas of innovation and driving the originators out of business.

This settlement is a farce. Microsoft knows it and the Dol knows it. What is worse, as long as the present administration remains in power, Microsoft knows that even if it flagrantly breaks the agreed-upon remedies, the DoJ anti-trust division will look the other way.

The settlement should be scrapped. The courts need to be the instrument of punishment if meaningful change in

Microsoft's monopolistic and predatoristic ways are going to happen.

It is shameful that the DoJ is allowing itself to become nothing more than an apologist for the Bush Administration. The proposed settlement is not even a slap on the wrist, and as such, the DoJ should be embarrassed to have any association with it.

It looks like Microsoft's power reaches deeply into the justice department! After years of watching Microsoft use their sheer size to destroy numerous companies, many of whom told their story during testimony, I find it unfathomable to accept the judgment as proposed!

By not punishing Microsoft, you are granting them free rein to carry on business as usual. I am sure they have targeted the companies that tried to stand up to them during the trial as their next victims.

Hopefully someone will rise above the Microsoft political contributions and allow justice to prevail. Or will it be left to the states to punish this behavior? If we catch bin Laden, and he promises not to kill any more Americans, will you let him off too?

Subject: Microsoft Vs. DOJ Case

Break them up. Make them open their source-code, not let them come out with a new product for the next eight years, and force them to use standard protocols, and standard formats, as well as make them open them. This is a monopoly we are talking about. NOT just some large company. The Baby-Bells are STILL monopolies and these criminals in Redmond should pay for breaking the Law.

Microsoft should NOT be let off lightly no matter how much money they have. I don't care how many states were paid off, or how many government officials were bought. Something MUST be done to punish them. You fry criminals for murder in an electric chair, but those who harm on a wide-scale basis in the industry, suffers nothing. Why? Because they have all this money? Because the government enjoys swimming in their room of dollar bills?

The release of XP should have been stopped, for privacy violations of U.S citizens, but nothing was done. It seems like nothing is being done to stop them even now! I, as a citizen of this country DEMAND that REAL action (Above) be taken against them. That they be slammed harder than Bell/AT&T, and prevent them from monopolizing a market in the future.

I believe that harsher penalties should be imposed on Microsoft. Currently the consumer market for a PC is approximately 90% for Microsoft. Apple, Linux, BE, and a few even smaller others are scraping for the remaining 10%. I also think that Microsoft should be held responsible for software that it releases that might compromise personal information. For example Microsoft passport has been cracked into three or more times already. Once using email via hotmail (another Microsoft owned company). The Code Red internet virus scare was only affecting Microsoft machines running their 115 software with the language set to English. It seems to me that our industries dependance on this company is too great. Clearly they should be presenting the best possible software, and responding to security holes in a timely manner. If our industry was built on some diversity then not all areas of the economy would be taken under at once. Then there is the forced passport signup with Windows XP. Or that at Starbucks.com one's only option for paying online is to use microsoft passport. Then there is the xbox, another microsoft invention to take over the privacy of the consumers home. Completely compatible with microsoft windows, games will be easily ported, etc. Users are already posting pictures on the web about the xbox's "green screen of death" which everyone is familiar with the blue version on previous Microsoft products. Contrast this with Sony's playstation or Nintendo's gamecube who have near perfect track records so far in the game console area. They know and understand that consumer quality is of upmost importance. I believe that Microsoft just doesn't care. Take for example microsoft's new play per use software licensing idea. Where users with be forced to upgrade their software at a cost, whether they want to or not. Or how about Microsoft's exclusion of the java virtual machine from Windows XP? They are making it easier for users who may not know alot about compters to get hooked on j# and the .net system, instead of even knowing what java is and then choosing. Microsoft forces smaller companies to use their standards, and file formats. Recently I found that the search engine in windowsXP will refuse to find files that have extensions not registered with Microsoft. ie: a file.png might never be found. Try reading the End user license agreement for microsoft frontpage, maybe some freedom of speech issues there.

Regardless I think that Microsoft should be held responsible for its products, and should be forced to provide the best possible system they can. If eventually we have to use Microsoft products, then I will quit using computers all together and find a job painting houses or something.

my two bits,
Shawn

@yahoo.com inetgw,s...

Your Honor, the Court and the Department of Justice,

I am lead to believe that this address is the proper place to forward opinions on the ongoing Microsoft trial. Please find mine attached.

Conclusions: If the Court decides to follow thru with this settlement we will be back in the situation we had in 1995. The world will be waiting another 5 years until Microsoft's behavior requires yet another monopoly trial. A quick settlement that does not resolve the root cause of the problem is not in the public interest.

Prosecute and restrain the bundling, tying, code-mingling. This issue is the "root cause" and if this is not restrained there will be no effective market for software. I understand that the higher Court has changed the criteria but this item MUST be pursued and restrained. IBM was forced to "unbundle" it's hardware and software. It was further required to publish interface specifications. Why can't such a remedy apply to Microsoft?

Microsoft should be required to ship every application in a separate, shrink-wrapped form that can be installed or removed at will. This is clearly technically possible because it is what every competitor must do. The playing field should be level and require the same behavior by Microsoft.

A three person "oversight" panel that is unable to report concerns to public review is useless as an effective vehicle for restraint. It is also too small to police any judgement.

Who I am: I'm a programmer with 30 years experience. I've worked on software ranging from applications (e.g. Axiom, a computer algebra system), languages (ECLPS, an expert systems language), compilers (AMLX, a robotics automation language), operating systems (VM1370, writing the free storage algorithm) and networking (Pinger, an network monitoring software package).

Biases and Affiliations: I've worked for IBM Research, Approach (Microsoft NT consulting), Centrport (Web Advertising) and Worldcom (Networking).

What my interest is: Microsoft has a pervasive effect on me and the industry that has been my career. I've watched the changes over the last 30 years and I have concerns about the long term health of this industry.

Sources of information: I've read every available published report from the courts including the original trial and the Court of Appeals. I've read every press release and article I've been able to find on the web.

My position on the proposed settlement:
(a) I'm appalled.

(b) I do not believe that the proposed settlement represents an effective remedy for past actions, including actions infringing the original 1995 settlement.

(c) I do not believe that the proposed settlement will be an effective deterrent to future infringing actions.

(d) I do not believe that the proposed settlement will enable other companies to compete against Microsoft.

(e) I do not believe that the negotiation team for the Justice Department understands how easily the proposal can be circumvented.

(f) I do not believe that the proposed "three person" oversight team will in any way act as an effective watchdog for Microsoft.

Comments and Opinions on the proposed settlement:

(a) I'm appalled.

Any negotiation can be measured by the fact that it finds a middle ground between opposing forces. Except for Microsoft I find, and hold the opinion that, this proposed settlement is widely seen as unjust, unfair, unworkable and outrageous.

The argument has been given that this trial will last another year or two and that it is in the "public interest" to settle this trial now. If the current behavior is so damaging that we require relief immediately rather than full and fair relief why doesn't the DOJ just request a restraining order from the Judge?

Why are we not fixing the "root cause" of the Microsoft problem? I'm technically skilled enough to advise you that THE KEY ISSUE that needs to be restrained is the bundling (integration, or to use Microsoft's misuse of the word: "innovation"). The Appeals Court remanded this issue to the lower Court to be resolved. If you don't pursue this issue you have NOT solved the problem. The software market will NOT thrive and consumers (and myself) will be harmed.

Why is there no discussion of XP and future operating systems? It is clear to me, as an expert in the field, that XP is a glaring example of using bundling, tying and code-mingling (none of which are technically justified) to pursue monopoly maintenance. It is not acceptable to ignore XP as part of any settlement. If the DOJ decides to follow thru with this settlement we will be back in the situation we had in 1995. The world will be waiting another 5 years until Microsoft's behavior requires yet another monopoly trial. A quick settlement that does not resolve the root cause of the problem will be not in the public interest. It will simply delay justice another 5 year.

(b) I do not believe that the proposed settlement represents an effective remedy for past actions, including actions infringing the original 1995 settlement.

Microsoft agreed with the DOJ and the Court in 1995 that it would take steps which would stop it's infringing behavior. Moments after the agreement was signed Bill Gates publicly declared that he could effectively ignore the agreement. Which he did. Claiming the right to "innovate" but pursuing a technically unjustified scheme of bundling Microsoft has continued to build and maintain it's monopoly position.

This proposed settlement is not even accepted yet and Bill Gates has already stated that he is happy that "this issue is behind us". Microsoft will not willingly change it's behavior to pursue something that is not in it's best interest. Indeed, to make such a change would be illegal as the company is required by law to operate in the best interest

of it's stockholders. The new settlement MUST be coercive. This one requires behavior changes that have no effect on the market or future infringing behavior. It restrains prior but abandoned behavior.

(c) I do not believe that the proposed settlement will be an effective deterrent to future infringing actions.

At the heart of this case is the issue of bundling, tying and code-mingling. Microsoft has NO TECHNICAL JUSTIFICATION for this. The pure reason for such actions is to tie one product to another in such a way that they are both required by design but not by function.

Microsoft should be required to ship every application in a separate, shrink-wrapped form that can be installed or removed at will. This is clearly technically possible because it is what every competitor must do. The playing field should be level and require the same behavior by Microsoft.

(d) I do not believe that the proposed settlement will enable other companies to compete against Microsoft.

According to the proposal Microsoft is capable of deciding what parts of the system will be available for publication. There are no outside experts to question their "judgement". How are we to know that some portions of the code and API are "security related"? Microsoft said so.

Surely you jest. Does the Court believe that statements about infringing actions by Microsoft should be taken at face value? Is the oversight panel capable of reviewing the reputed many million lines of code to dispute the claim? If the review panel disputes the claim and the DOJ disagrees will anyone ever know? Will the public be informed? Will it be entered into Court records? Without proper API and interface specifications it is not possible to write competing code. Without restraining Microsoft against changing published specifications a competitors code is at the mercy of changes it cannot control but Microsoft can. Microsoft should, like IBM before it (the disk drive case), be required to publish specifications of their APIs. They should be required to maintain backward compatible specifications in the case of changes.

Microsoft should also be required to ship products in a separate, shrink-wrapped form through channels that are available to competitors. If the programs are installed by OEM manufacturers then the shrink-wrap versions should be shipped with the equipment. It should be possible to install and uninstall every application. This is not only technically possible (contrary to Microsoft's testimony) but is exactly the situation faced by every competitor. Without at least these controls there is no competition.

(e) I do not believe that the negotiation team for the Justice Department understands how easily the proposal can be circumvented.

Programming is a subtle art. I've been doing it for 30 years. Given the proposed settlement I could easily make it worthless. While I have great respect for the legal skills of the Court and the DOJ I feel that neither party understands how easily the proposed

restraints are ignored and how little effect they can have to ensure effective competition. Bill Gates is technically savvy enough to be aware of this. He is making a mockery of the Court and you don't even understand how.

(f) I do not believe that the proposed "three person" oversight team will in any way act as an effective watchdog for Microsoft. If a breakup is not the final result of this proceedings then the Court MUST ensure that there are a sufficient number (much more than 3) of technically capable people to provide oversight to any final ruling.

Microsoft claims (though it is obvious nonsense technically) that XP has many millions of lines of code. I know that the API specifications number in the many thousands. Surely the Court does NOT believe that a 3 person panel, one of which is appointed by Microsoft, can possibly police a judgement.

With all due respect,

Tim Daly

Subject: Microsoft Litigation

I could not resist making a comment here. I have been in the computer industry since

1979 and have watched with horror and amazement and amusement as Microsoft has consumed or trampled on one company or idea after another. They have become the company they are today through years of abusive practices that have left consumers with a product (in Windows) that is in some ways the sum of many good products and ideas that were either bought or stolen from other companies, and at the same time far less of a product that they would have today had Microsoft had to compete and innovate through these years. A simple and glaring example of the lack of quality consumers have been forced to accept as status quo is the fragility of all Microsoft's operating systems through Windows 98, which they themselves now admit in touting the new XP version. That this unreliability is apparent in only Microsoft's product line and not inherent to computers in general can plainly be seen in the fact that Unix and Linux operating systems running on the same computer hardware are hundreds of times more stable.

One of the earliest examples of Microsoft's boldness in intellectual property theft was with the case of Stack Electronics. I have often wondered, as this lengthy trial progressed, why nobody seems to remember how blatantly Microsoft stole that company's only product and simultaneously "added a new feature" to MSDOS version 6 that made that version a must-have upgrade from version 5. Had they not "acquired" that feature, version 6 upgrades would have had lackluster sales and history would have been much different. At that time, Unix was still a big player in the market, as was DR-DOS (remember how THAT disappeared?—another story altogether) and other true competitors.

If you do not recall, Stack electronics had a wildly popular program that created more space on hard drives by compressing the data stored on it. About half a year prior to Microsoft's release of MSDOS version 6, they pre-announced that it would have a disk compression feature built in. This set the stage for the death of Stack electronics because their sales immediately dried up. When Microsoft finally began shipping version 6, it literally included Stack Electronic's product unchanged! Stack sued Microsoft and won, but the settlement vastly understated the amount of revenue the company had lost considering the huge number of copies of their software that was now distributed with every single copy of DOS sold. This was, in part, because their recent sales were seen as miniscule (thought the reason was obvious—that the pre-announcement had killed the company months earlier). Then, Microsoft had the audacity to counter-sue Stack over the fact that the compression software had tied itself into MSDOS through some undocumented software features (very similarly to the way current software vendors need certain information about Windows "API" in order to make their product work seamlessly). Amazingly Microsoft won this suit, resulting not only in their ownership of the product they had stolen, but also ownership of 15% of Stack Electronics itself!

History has repeated itself, over and over, in front of anyone who has been watching.

In my opinion, no settlement that is based on legal language and the responsibility of continued enforcement could possibly succeed. Aside from the diligence and technical expertise required, the fact that such offenses take so long to pursue and resolve means that, as in the past, the damage is done and Microsoft has succeeded in its goal far in excess of what any reasonable penalty could undo.

I do not think that splitting the company is necessarily the solution. However, I do think that one thing which should be done is to require them to publicize the API's to Windows so that a third-party software vendor can create a product that is integrated into Windows as cleanly as a Microsoft product. Failing to do that would be like allowing an auto manufacturer to create a car that requires a new and undisclosed fuel which can only be purchased from the manufacturer. It could be called "innovative", but it prevents the consumer any choice in purchasing and it prevents competition for fuel suppliers.

Subject: Microsoft Antitrust Case

Microsoft, and every other software company, must give programmers equal access to the codes needed to make their software work with Windows and every other program. Isn't the preceding statement the end result to this case. Will this case effect other industries rights to produce proprietary products and eliminate competition that will eventually destroy product quality for consumers. The software companies that choose not to make operating system programs should not dictate, through our government, to those that do make operating system programs. The next case will be GM suing Ford for not allowing a GM product to be installed on a Ford product. Aside from the tactics Microsoft used to manipulate oem's and those actions they should be punished for, this and every other company in the future should not be regulated by our government to force one company to use another's products. I do not want to be forced to by an inferior product because its the only one available.

I think it is obvious that Microsoft will not be able to change its behavior as long as "Justice can be bought. Its in the nature of the Beast.

I believe the American Justice system is in deep trouble. Too many times we see that rather than doing justice, the exact letter of the Law is followed not the intent.

That is why nobody votes anymore, thats why nobody believes being a juror is an honor and that's why politician are perceived to be the new aristocracy.

The settlement confirms the above again. If the justice department had any courage and a real will to represent the people's interests, MSFT would have been put under a lot more scrutiny and Windows XP would not have been allowed to be released. I will not buy XP, but tell me, what alternative do I have?

Oh and its not MSFTs "innovation" that has put them where they are:
Windows = comes from Apple
Browser = Comes from Mozilla & Netscape
Streaming Media = real networks
etc....

I hope the Europeans will do a better job..

Subject: Microsoft Settlement.

Hello.

The proposed settlement does absolutely nothing to Microsoft, which is why they agreed to it. Any changes are cosmetic and of no real value to consumers or industry.

The only "proper" decree was breaking the company into 5 separate companies that could only communicate with each other via a public internet newsgroup (or similar.) The original decree of two parts was barely acceptable, and, as I read the reversal, only based on the the Judge's extra-curricular comments. It could have been, and should have been reinstated without question.

There needs to be a punitive component, as well as a guide for corrective action. With the current agreement, you have thrown away BOTH components!

Very upset

To: Microsoft ATR
Date: 11/16/01 2:49pm
Subject: you have failed to do your job

First, let me say that it was obvious to many software professionals that Microsoft had violated the consent decree. Of course Internet Explorer was separate from the operating system, and had been bundled! At the same time that Microsoft was bundling Explorer with Windows, it was providing Explorer for Apple's MacOS. Obviously, if Explorer was available as a separate product for another vendor's operating system, and could so easily be added to another vendor's operating system, then it had been added to Microsoft's operating system as well. The fact that Microsoft's engineers had wedded Explorer tightly or loosely to Windows was not relevant. They provided an application as a product for another company's operating system, and included that same application with their own operating system, obviously in violation of the consent decree. Any discussion of whether or not it could be easily removed from Windows is unimportant. They agreed not to bundle, and then they did bundle.

Next, the fine for contempt of court, when Microsoft failed to comply with Judge Jackson's orders, was too small by an order of magnitude or so. An easy and effective strategy for Microsoft, rather than relying on lawyers, would have been to simply take its sweet time in "separating" Explorer from Windows, and simply pay the fine. What was

the fine, \$1 million per day? Say that Microsoft simply had taken 6 months to essentially do nothing but gain even more market share from Netscape and others by continuing to bundle Explorer with Windows. Put this seemingly large amount of money in its proper perspective by comparing this to the marketing money that Microsoft cheerfully spent promoting each release of its Windows operating system. You will see that \$180 million would be an acceptable price for the "product launch" of Explorer. In the future, judges contemplating fines should not rely on history, but on the problems in front of them at the moment.

Moving right along, to the next legal disaster. . . Splitting Microsoft should have been allowed as a remedy. It should have never been taken off the table.

In fact, Microsoft should have been split into separate parts. At the very least, one company should have been given the applications, and another the operating systems. Probably other parts should have been split off as well. Among other reasons to choose this remedy it has the benefit that it would be obvious to the government whether or not Microsoft was complying with it. The current settlement does not have this nice property, and I predict more legal action against Microsoft will be indicated, if not taken, before too long.

There remains no great incentive for Microsoft to provide Office on OS platforms other than its own, other than the threat of more legal action. Microsoft Office (and Word in particular) is a de facto standard and requirement in the business community. Allowing Microsoft to force the rest of its software on us by attaching it to the Office suite is wrong, expensive, and harmful to the consumers. For example, the success of Apple's MacOS operating system is dependent on the availability of Microsoft's Office suite. The likelihood of that availability continuing would be improved if the people selling Office did not have an interest in seeing sales of Windows 2000, Windows XP, etc also increase. Notice that Office is not available for any version of Unix other than MacOS X. Why is this? Given that Microsoft has gone to the expense of porting Office, why would they not make the modest additional effort to port it to other versions of Unix? Certainly Microsoft could sell more copies of Office, if it would also sell to the entire Unix market (including Linux). The existence of a market for the Office suite on the Unix operating system is evident from the existence of StarOffice, a poor knockoff, created initially by a single person, without much funding, and since purchased and adopted by Sun Microsystems. But for Microsoft to port and sell Office for Unix would mean less sales of Microsoft Windows. This linkage needs to go away. Microsoft Office is expensive enough already as it is, without the consumer being obligated to also pay for Windows, and incur additional network effects from also being tied to that operating system.

I wonder, though, as I bother to write all this, what the point is, in even trying to make this letter as informative and clear as it is (which is not very, yet). You have already settled. What remains?

Subject: Microsoft's monopoly.

It is very interesting to see that Microsoft is still controlling the outcome to their anti-trust case.

Even if a person wants to Special Order a computer from Compaq, you have to take a version of Windows as the operating system.

When someone in the government can explain WHY Microsoft has the power to dictate what operating system I can get on a NEW COMPUTER and why Microsoft is the only supported OS for nearly all ISPs and then make me believe that Microsoft DOES NOT have a monopoly!

As an American consumer, I should be able to walk into ANY computer store and buy a computer with ANY OPERATING SYSTEM I WANT, pre-installed. Until that day comes, you will never convince me that the government is doing anything to prevent Microsoft from perpetuating their current monopoly in the computer industry. And as such, keeps my opinion of government lawyers and judges pretty much where it has always been.

PAWNS OF BIG BUSINESS WITH TOTAL DISREGARD FOR THE AMERICAN WORKING MAN.

Thanks,
Lonnie

Date: 11/16/01 2:51pm
Subject: Microsoft should be penalized for their actions

I am extremely disgusted in the outcome of this Microsoft trial. Microsoft has clearly broken the rules and yet they continue to only get their hand slapped.

I would like to remind you of other instances where Microsoft has not played fair or followed the State and Federal laws. When I worked for Borland in the early 90's, Microsoft was accused of stealing our code(reverse engineering the compiled code) in a Borland Conference in Palm Springs. Microsoft at first denied any wrong doing but then came out with a public apology. Awhile later, Microsoft was accused and convicted of stealing (compression or anti-virus?) code(incorporating another vendor's product) from a small Carlsbad(Southern CA) software company into their OS without permission or an agreement license. Microsoft was arraigned(tried), lost, and slapped with a small fine. Microsoft responded by investing in the company! If Microsoft can't steal or cheat their way out, they buy them!! With the anti-competitive browser case, Microsoft was found guilty of anti-competitive tactics(and monopoly?). The outcome: No break up of the company and now a settlement.

I hope people realize we should be setting an example for the next generation and current set of businesses in US and the world—Illegal or wrongful business tactics is not acceptable. They are clearly a monopoly and have been wrongfully hurting other businesses. Instead it looks like Microsoft is being let off the hook for other business reasons—we need the taxes they generate or...

I urge you—Do the right thing!! Since they were convicted of wrong doing, throw the book at them!!! Please do not settle on this issue—this action only sets the wrong statue for other businesses inside and outside of the US and for individuals(both the current generation and the upcoming generation).

Bob

Subject: Microsoft settlement

This is not a settlement. Microsoft has shown clearly that they are predatory, that they will not honor the rules, and can not be trusted. Witness after witness from Microsoft found themselves caught in flat out lies about events, strategies, and conversations.

The states have rejected the "settlement" for what it is—more worthless than the 1995 agreement which Microsoft ignored. This new "Settlement" does not resolve anything—and, with what we have seen with the release of XP, Microsoft continues to force it's predatory behaviors into new areas of the industry with arrogance and nose thumbing at the rest of us and the government.

While I am disappointed in Judge Jackson's behavior, I found his rulings to be accurate. The DOJ did a masterful job of proving Microsoft's predatory behavior AND their violation of the 1995 agreement. Now, the DOJ is throwing in the towel—even though Bill is sitting on the mat with a bloody nose.

Why should Microsoft be any different than the rest of us? If I chose to make a legal agreement, then break it, I would be fined for breaking that agreement.

WHERE IS THE FINE FOR MICROSOFT????

DO NOT ALLOW MICROSOFT TO GET AWAY WITH THIS! It will only be tougher the next time, and there will be a next time unless the fine is severe enough. Frankly, based on their record, I bet there will be a next time regardless.

Subject: settlement

I am a small software developer that is creating a product that would directly compete with Microsoft. From carefully reading the settlement, it is clear that with it in place I will have no chance of being able to fairly compete with Microsoft. They will never let me package my technology with Windows and if I did they would use their monopoly to crush me the same way the are attacking products that currently compete with their browser, media player, instant messenger, and digital media tools. I cannot get any financing for my venture because of this. I have to assume that some sort of deal was made between the Justice Department and Microsoft because it is inconceivable to think that the "experts" at Justice could be so ignorant to think that this will solve anything. Microsoft has never been able to introduce any home grown innovations. They steal or purchase their innovations. Pretty soon there will be no one left to steal from or buy out and Microsoft will be able to do as they please and tax the internet.

This is exactly why we need campaign finance reform legislation now. Microsoft bought this settlement.

From: Worldlist@aol.com@inetgw
To: Microsoft ATR
Date: 11/16/01 3:03pm
Subject: On MS
Good day!

I believe one of the biggest problems with us developers is that MS will bundle.

The OS is now only a small part of the Windows software. All the bundling of the other software is what's putting us out of business.

Example: MS sees that a program is doing very well. So, in it's next release. It bundles a clone of the competitors software. And of course being free with the OS, puts the other company out of business. How can you compete with free? Example: ZIP is the biggest download on the Internet. So what did MS do. It included ZIP in XP. For free! This will put about 5 top companies out of business.

That's all they have to do to put someone out of business. Just clone it. Include it in

Windows for free. End of competitor, end of story for those companies.

The OS should be nothing but the OS. And when you have a monopoly on the OS, you have the advantage of bundling any software you want to put out the competitors.

Subject: not enough

As many others have reiterated, I'm telling you that the Microsoft settlement is not enough to keep them under control and competitive. I am a programmer and I can see things that most of these decision makers can't see.

There's a provision that says that Microsoft must publish their APIs. Well, Microsoft

already publishes their APIs. They send tons of DVD's full of gigabytes of information to all the programmers who sign up for their developer program (\$1300 apiece). This has been going on for many years.

But this is never enough. There's always secrets about MS Windows that they don't reveal to programmers, and this allows their applications to have an unfair advantage in the marketplace. I've seen it myself and I've talked to countless programmers who confirm the same thing.

There is a group who makes software called 'Wine', they allow Windows software to run on Linux. If Microsoft really revealed ALL of their APIs, then Wine could run any Windows software, because the programmers work from the APIs. And, in fact, they can run Windows software from Adobe and many other companies, no problems, because these companies abide by the APIs that Microsoft publishes—they play fair.

The only software that Wine can't run is applications from Microsoft—because Microsoft does NOT play fair. Microsoft programmers use unpublished APIs to gain an unfair advantage that no other company can compete against.

Please consider strengthening this settlement—THAT's what's good for the economy, rather than letting off one corporation that's sabotaging the rest of the computer industry. Haven't you noticed that Microsoft is the only computer company that's not had layoffs?

"Come to the edge," he said. They said, "We are afraid".

"Come to the edge", he said. They came.

He pushed them... And they flew—

Subject: re: settlement

To whom it may concern,

As a member of the technology community and a user of many Microsoft products, I feel the need to give you feedback on the proposed "settlement" with Microsoft.

First, let me be absolutely clear: I think the proposed settlement is *A JOKE*. It's completely inappropriate, given the facts of the case and the realities of the industry. It does not even begin to address the grievances brought against the company. Given the outcome of the trial and appeal, one would have assumed any settlement would have included SOME sanctions and SOME forced changes in the behavior of the company. It suffers from the same weaknesses as the 1995 settlement, being worded as to apply ONLY to Windows XP. All MS has to do is rename the product next year, and all bets are off.

The settlement, as it is currently written, only requires miniscule changes in the way the company was doing business before the trial started and does not begin to address the realities of the monopoly-driven market. It's clear that whoever negotiated this deal does not understand the technology industry to the extent required. If that's not the case, then the government has suddenly lost interest in punishing the guilty.

Please consider at least giving them a slap on the wrist. The current deal represents more of a pat on the head.

Subject: Microsoft

Hi,

It is my sincere hope that some party will allow the process of justice to continue. The Microsoft corporation has seriously suppressed innovation and competition in the software industry. It has been clearly found that the company has operated in an illegal manner, much to the detriment of consumers and competitors. It is my hope that these violations result in penalties of the greatest severity allowed by law. As one of the many who has been harmed by the illegal and immoral actions of the Microsoft corporation I have expectations that the justice system should perform its function. The Microsoft corporation flagrantly abused its monopoly and continues to do so. The company's behavior is making a mockery of the charges brought against it. The new Windows XP operating system incorporates programs which take the violations the company has been found guilty of to a new level. The taxpayer dollars spent on the legal proceedings should not be wasted. The criminal behavior of the Microsoft corporation should not be allowed to continue and its past behavior should be severely punished, for the greater good of those who have suffered from Microsoft's foul deeds. Thus far no remedy I have heard of begins to address the crimes Microsoft has committed.

Subject: The settlement is as fraudulent as you are!

Sirs/Madams:

This settlement will do nothing to help the consuming public or the education system; rather, it will enable Microsoft to continue to perpetuate a fraud: lousy software that requires undue service and support, and will be harmful to public and private education. It is not just their monopolistic tactics: their insidious attempts to force all education developers to "do it their way" are famous. They repeatedly "break" features in their browsers, or fail to support them, so that developers will be forced to buy server services from them. They are actively trying to kill Java as a platform-independent language, which will cripple the education and scientific communities as we work to build QUALITY COURSEWARE that will run on any platform and any browser. To wit: all of the award-winning course ware that we have developed AT GOVERNMENT EXPENSE for the Department of Defense Schools will be rendered useless if this settlement is approved. Microsoft will be able to kill off anyone's use of any browser but its own, will further suppress Java and its implementations, and will corrode the value of the good work already done.

I would welcome the opportunity to prove my assertions and to demonstrate for you exactly what their monopolistic practices have already done and will likely continue to do in the future. Stop lying that this is in the public interest. You have no idea what the public interest is if you believe this to be the case.

Subject: Your proposal

Your proposed settlement for the Microsoft case is embarrassing to say the least. I can't help but worry about the future of real competition in the U.S. I keep hoping that some one in your office will raise a voice to say how wrong this agreement is. Microsoft is stifling competition. Microsoft is hindering if not completely preventing innovation, unless it fills its own wallets. I am really hoping that the court sees that this agreement is not in the best interest of any one except for Microsoft. This agreement does nothing to punish Microsoft or for that matter hinder its ability to prevent any competition in anything that Microsoft might have a hand in. This agreement is an embarrassment. Its no agreement at all, its just a license for Microsoft to continue to do everything it has been doing with out any thing being done. Its as if this whole case was for nothing. And at then end Microsoft will continue to do what it have always been able to do. Kill innovation. What this agreement is saying, is that innovation can only come from Microsoft.

I will write to as many people as I can to fight against this agreement. I Believe it is wrong for the Long tem economy, it is wrong for the tech sector, it is wrong for the common user, and it is wrong for America.

From: Steve Brooks
To: Microsoft ATR
Date: 11/16/01 3:51pm
Subject: The Settlement will change nothing

There is little or nothing in the proposed MS antitrust settlement which will prevent MS from using its proven monopolistic power to dominate new marketplaces, specifically in the internet marketplace.

A case in point: One week before the settlement was announced, Microsoft disabled access to the msn.com portal to all non-Microsoft browsers. Although they later reversed this decision due to universal pressure, there is nothing in the proposed settlement to stop MS from this clear use of monopolistic power. After years of dismissing and sabotaging Java, Microsoft will deploy their C# (C-Sharp) language with the same goals as those of Java. This new language doesn't provide any features or benefits that haven't been available with Java, with the exception that Microsoft will now have the ability to ensure that new Web applications will operate properly only on Windows-based platforms. There is nothing in the proposed settlement to prevent Microsoft from co-opting the software development industry in this manner.

The excitement and promise of the World Wide Web were based in the platform independant nature of web applications. The Browser and the Java programming language are tools which were developed to enable this vision to be achieved. Microsoft has, and

will continue to, do all in its power to ensure that they will control the development of the internet in the same way that they have controlled the desktop computing marketplace.

From: Ken Gilmore
To: Microsoft ATR
Date: 11/16/01 3:52pm
Subject: settlement does nothing to help consumers

The proposed settlement doesn't force MS to do much except look for ways to get around the toothless provisions.

What would truly benefit consumers would be to force MS to make and sell a basic operating system that does not include any software or features except those needed to access the computer hardware and allow other programs to run. The focus should be on stability and security.

There are many good, capable, and innovative programs available from third-party developers. Many are completely free. They are designed to do a job well, with no hidden agendas. I use Mozilla for browsing the web, Pegasus Mail for email, Xnews for reading Usenet newsgroups, etc. There are extremely capable free programs out there for manipulating digital photos, for working with sound and video, for writing letters, keeping a database, tracking finances, etc. Most people are unaware of these other options; they end up just using whatever came with Windows. The result is a huge competitive advantage for MS, and little incentive for MS to innovate or make their products secure. Why should MS care about making their email program immune to viruses when they have 95% of the market share? Answer: they don't care. The result is billions of dollars in losses for business and home users due to viruses and other security risks. There is no need to tie the browser, email program, media player, or any other software to the operating system. The only reason MS does it is to force their programs on consumers and gain market share. Consumers benefit from competition and choice. They would benefit greatly from a stable and secure basic operating system.

Please reconsider the sanctions against MS. Consumers are being robbed of innovation and choice.

To: Microsoft ATR
Date: 11/16/01 4:03pm
Subject: oppose proposed MS settlement
Renata Hesse,

In regards to the proposed settlement, the text of which I read at: <http://>

www.usdoj.gov/atr/cases/f9500/9549.htm I wish to register my very strong dissatisfaction with the government wimping out and essentially letting Microsoft promise not to do such illegal acts any more. Letting them get off with violations of the law without any penalties and nothing stronger than another version of the consent decree of '95 is laughable. Years from now when the government has to go after MS again for their monopoly over PDAs, set-top boxes, or web-browsing cell phones people will point to this as when the DOJ should have achieved a meaningful settlement.

In particular the section on "Enforcement Authority" appears to be meaningless. "Enforcement by the United States or plaintiff States may include any legal actions or proceedings that may be appropriate to a particular situation, including petitions in criminal or civil contempt, petitions for injunctive relief to halt or prevent violations, motions for declaratory judgment to clarify or interpret particular provisions, and motions to modify the Final Judgment" Except for state or federal action finding Microsoft in contempt of the order, I don't see how this so called enforcement creates any different situation than if Microsoft was never found to have violated the law.

Even though I'm from MA I'm a registered Republican and supported President Bush's election. I am disgusted that he would cower to industry this badly. I believe in minimal government intrusion in industry but have personally experienced the downside of Microsoft's monopolistic control of PC/Windows usage. I set up a Passport account to provide follow on information to a serious error report that Windows XP sent to Microsoft. When I did so I was also set up with Windows Messenger and was online, without my knowledge or consent. It was only because I noticed the icon in the systray change that I even knew I was online. I had to find the information to hack a system file to allow me to remove Windows Messenger from my system, and this is the kind of thing MS will keep doing.

It wasn't necessary to settle this weakly to remove any negative effect of this anti-trust case on the economy.

Subject: no penalty?

I'm not sure if this is the correct message to send to the young people of this nation (or to the people of the rest of the world). The message that seems to be too easily gleaned from the Justice Department decision not to penalize Microsoft for past wrongs is that if you are a large enough corporation then all you have to do is promise not to do the things you've been doing wrong for the past 15 years in the future and all will be forgiven. What would the effect be if this sort of reasoning were applied equally to all? Drug

dealers, murders, money launderers, white collar criminals, basically anyone that has ever done anything legal would be able to say, "I'm sorry. I won't do it anymore. Can I go now? Thanks." A bully in the schoolyard is being allowed to keep the money it has beaten out of the other school children as long as he doesn't do it again. This is all very disturbing. Situations like this make it difficult to be "proud to be an American." Corporate profits seem to be the focus of this administration, not the health and well-being of its citizens. After reading as much as possible about this proposed settlement I feel embarrassed for this nation.

Regards.

Subject: Microsoft settlement

I would like to applaud the Justice Dept. for reaching a settlement with Microsoft that is fair, and will actual benefit consumers.

Many of the supposed remedies put forth by MS competitors have no benefit to consumers. In most cases, the consumer would be harmed. And that's what anti-trust is really all about . . . consumer benefit. Not welfare for competitors as MS competitors seem to believe.

The concept that tying additional products to the operating system is harmful to the consumer is pretty weak to begin with. Maybe people don't remember the wonderful days when fonts were not part of the OS. I do, and it was a royal pain. Fonts were purchased separately (from a variety of sources, I might add) and were not always compatible with certain programs or printers. There was a lot of competition, but no benefit to the consumer.

E-mail is another example . . . with competing programs and lots of incompatibilities. It was nearly impossible to e-mail attachments to someone with a competitive program in the early 1990s.

If the Internet and computing are ever going to be fully functional for people like my mother (75 years old) software must be

bundled. Don't even think about having her install add ons, plug-ins and the like . . . all in the name of competition. Why should she be forced to deal with arcane technical matters just to satisfy Real Networks, Sun Microsystems and their ilk?

If people want an alternative to Microsoft's operating system, they can buy a Mac, or install Linux. I've lived through PC program choice at the very basic level in the workplace from 1982 onward. Anyone who says those were the good old days obviously wasn't there. An operating system with continual added functionality is WONDERFUL, as long as consumers have the ability to add on any additional software they choose.

Subject: Settlement

I for one believe that the entire anti-trust suit was initiated erroneously. Microsoft did nothing that any other company would do to protect its product. The concept that they didn't provide access to Netscape and other internet software was false. They did not include that software in the windows program but they did provide that any internet software program could be used in windows. This the same as saying WordPerfect did not include Microsoft word in their program. The internet software and Windows are produced by the same company, Microsoft and they packaged them together which to me makes sense.

A company starts from nothing and becomes the major supplier of a computer operating system. I thought that was the idea of free enterprise, if you built a better mouse trap everyone will flock to your door. Microsoft built a better computer operating system and everyone bought it. The competition could not build a better system to compete so the government steps in to slap them down with a law suit. That is not the free enterprise system I know.

I think the entire suit should be thrown out an let Microsoft get on with designing more and better software.

 Subject: Proposed Microsoft Antitrust Settlement

I believe Microsoft has not changed their attitude. I believe they looked for any simple, little thing they could do to assuage the government lawyers at little to no real cost to them.

What is needed is to fashion a remedy that Microsoft will understand. I propose we take some dollar amount from Microsoft—say 5 or 10 billion dollars—and divvy it up among corporations hurt because of Microsoft's documentable actions prior to October 25, 2001 (date of Windows XP release). That big wave of cash in their bank account didn't happen because they played nice, and we need to make sure they understand that those who don't follow the rules don't get rich.

Companies who should receive at least part of the settlement: Sun, for the MS Visual J++/Java for Windows garbage that MS pulled Netscape, because MS gave away a product for free that Netscape was successfully charging for Real Audio and other audio playback software which is now likely to get killed by the WMA features integrated into XP Be (now out of existence), but who had a brilliant OS killed because of Microsoft's illegal stipulation to hardware makers that they couldn't install more than one OS on a box. Some of this should also be given to the Linux crowd.

Adobe, for the screwing John Warnock took over the PostScript licensing that MS preempted when they created TrueType fonts and probably many more . . .

The existing remedy as proposed is simply not sufficient.

Sincerely,

Greg Dainard

 Subject: Let competition reign free . . .

Greetings,

First off, allow me to thank you for setting up this e-mail address. I've wanted to voice several opinions on this ongoing trial for quite some time and never really had a place to send them.

Next, let me say in brief, do NOT let Microsoft off the hook.

As a long-time computer user (since around 1984), and computer professional, I can attest to the monopolistic practices of Microsoft. Unfortunately, in my opinion, I don't think the trial went deep enough into the technology and the practices Microsoft uses to eliminate competition. Seeing however as this process is winding down, it doesn't make much sense to lay out a point-by-point letter to you now.

I would like to make mention of a recent tactic Microsoft tried to pull to lock more users and companies into spending more money and being more ingrained into Microsoft products. Several months ago

Microsoft announced that they would be invalidating all licenses on any of their OS products that were older than Windows ME (for home users) and Windows 2000 (for business users). This means that a user of Windows NT4 would no longer be able to receive support from Microsoft, nor would Microsoft continue to develop upgrades and software patches for the OS to fix things like security holes because, in their eyes, the product was no longer valid. This equates to buying a car with a 10 year 100,000 mile warranty, taking it into the dealer shop two years later to have a hazardous defect repaired and not being able to get any parts for it because the company "discontinued the model."

Fortunately, based on public opinion (which obviously wasn't very positive) Microsoft decided to revoke their plans and statement for the time being to re-evaluate their decision. However, the point remains, Microsoft was saying "You buy our latest and greatest stuff, or you're screwed." Even though, at least on this day, Microsoft has not gone forward with this business practice, the fact that they started the ball rolling (i.e., public announcements were made, letters of notice sent to corporations, etc) to force people to upgrade shows just what a bully they are.

That's the most recent item I can think of to bring to your attention. I could obviously go on about how their forcing/tying of software makes my job harder, and my home computing experience less than enjoyable most of the time. How their "Trade Secret" OEM licensing scheme forces manufactures to put only Microsoft OS's and Software on PC's they sell, eliminating choice at the consumer end. How they force software developers to "comply or die" just to get their software to run somewhat decently on the Windows OS platform. Yes, I could go on about it, but I'm sure you've heard it all before.

In closing, I'd just like to reiterate, Microsoft needs to change. And since they don't seem to be willing to do it on their own, someone needs to change them. If they were willing to force their customers to upgrade even after a guilty verdict was brought upon them, it's obvious they aren't afraid. I have faith in you, my government, our government, to do what is right and strike some fear into Microsoft.

Very Respectfully,

David Jones

 Subject: Microsoft capitulation decree . . .

To whom it may concern:

I noticed on a cnn web page that this email address was set up to collect comment on the pending agreement between Microsoft and the US DOJ et al. Based on the agreement which I have read and the public statements by the DOJ, I don't expect that there is much interest in my commentary; however, since there is a non-zero chance it might have an impact on reviewing the agreement, I'm writing this letter.

I am not a lawyer, but I can read and understand what the literal meaning of text is, and am quite capable of thinking inspite of the presence of "legalese". . .

I am against the agreement as it currently stands. Microsoft has been found guilty of illegal practices (and accepted previous consent decrees of similar actions {which it subsequently violated}). This agreement does not contain any punitive actions against Microsoft. While I would be disappointed in the lack of punitive action(s), I would accept such an agreement provided that it provides suitable mechanisms to prevent future improper behavior. As written, this agreement starts to provide such protections; however, they are effectively nullified by the vagueness of several exceptions. The ability to exercise the exceptions is left to the discretion of Microsoft and so this agreement provides no real check on Microsoft's behavior.

In particular, the Final Judgement III.D states that Microsoft must provide to ISVs, IHVs, etc., the API's and related documentation to allow for 3rd parties to interoperate with a Windows Operating System Product. This sounds good; however, in III.J.2(b) and (c) Microsoft does not have to release this information to someone who in Microsoft's opinion does not have a reasonable need. Furthermore, (d) states that someone who receives this information has to agree to submit to a 3rd party (of Microsoft's approval) their program for testing, at that person's expense. Combined, these exceptions pretty much allow Microsoft to exclude numerous and legitimate 3rd parties by either declaring carefully written standards or only approving 3rd party verifiers with excessive fees (and pricing out low budget developers).

Next, in III.H.2, Microsoft is supposed to allow users, et al., to designate a non-Microsoft Middleware product to be used in place of a Microsoft Middleware product. This also sounds good; however in III.H.3's second paragraph there are two exceptions: 1 where the Middleware product would be interacting with a sever maintained by Microsoft or 2. that the 3rd party product does not implement some feature consistent with a Windows Operating System Product. Since Microsoft again gets to control what is required, they can assure that there is always at least one "required" feature which only their Middleware provides. It is true that they must provide the specifications to any ISV who asks for the information, but only in a "reasonably prompt" manner. During the intervening time, a "technical innovation" can easily occur at Microsoft, resulting in another new technical requirement. Thus, Microsoft can quite easily and legally keep any competing Middleware Product off of their platform by careful specification writing (and updating . . .).

I am sure that there are probably several other more subtle loopholes; however, these are so glaring that I was able to find them with little effort.

Thus, the exceptions in this agreement effectively nullify the restrictions on Microsoft's behavior. I strongly encourage that this agreement be, at a minimum, amended to close these loopholes. Ideally, I

feel that this agreement should be re-written to include some form of a punitive measure given the overwhelming Findings of Fact against Microsoft. Leaving this agreement unmodified is, in my opinion, a complete capitulation to Microsoft.

Sincerely yours,
Eric L. Benedict

Subject: The settlement

Dear Sirs,

I wish to voice my opinion that the proposed settlement with Microsoft is too soft to accomplish any real changes in the industry. Microsoft will still be allowed to dominate its rivals in anti-competitive fashion. This settlement does nothing to restore the heavy damage done by Microsoft, nor does it do enough to ensure that competition will revive in the future.

Microsoft has squirmed its way out of all the restrictions placed on it in the past by hiding behind technical excuses, and that is what it will do in the future as well. You can't ask a thief to suddenly be ethical, you have to put him in jail, or punish him in some way. This tiny slap on the wrist is going to do little to protect us, and will likely embolden Microsoft to continue in its monopolistic abuse. Thank God that some of the states have rejected your sellout agreement, and realize that more must be done, if equity is going to be restored to the computer industry.

A very unhappy constituent,

Subject: Microsoft Decision

Now that you have reached the decision regarding Microsoft let's get on with letting Microsoft do what it does best, produce great products. You will always have to listen to the "whiners, e.g., Sun Microsystems, and all the others that testified before Congress about how Microsoft has "done them wrong.

Really, these losers are just crying on your shoulder because their products can't compare with Windows and other Microsoft products. I wouldn't buy Microsoft's competitor's products anyway. These competing products like Linux, Unix, Sun Microsystems online servers are OK for businesses to use, but, they will never be able to lure home users like me to their products. Why switch to something harder to use when you don't have to make the change.

I am going to buy the product that I want to use, not what these "whiners" want me to buy. Press on with the decision you have made and tell the court to tell the remaining states that want to further rake Microsoft over the coals to grow up and stand down.

Thank you for the opportunity to comment on this important issue. P.S. I am certainly happy to see Microsoft's competitors losing their corporate butts in the stock market.

Subject: Microsoft Settlement

All of Microsoft's competitors keep complaining about all the software that Microsoft bundles in with their operating systems (Windows Messenger, Internet Explorer, Windows Media, etc) saying that the users will not want to buy their software because their computer will already have software to do these things already loaded. Well, being a computer programmer and a home computer user daily, I can assure you, people find software that they like and they use it, be it Microsoft or any other company. Everything that Microsoft bundles into their operating systems can be removed and other software can be loaded and used with their operating system. The choices are out there for all consumers, so why do these other businesses cry and complain about Microsoft, because Microsoft has provided and will continue to provide software that it top of the line and equal, if not better, than all the others. I use a lot of other software besides Microsoft. As a matter of fact, I like to use 3 or more different programs to do the same thing because each has its own unique abilities and I like to have them all available to me.

So it is time for other businesses to quit crying and for the government to settle this case. If you want more business, make a better product. Consumers are not stupid, they will buy the product that best suits them.

Subject: Microsoft Settlement Plan
Sirs:

After a first cursory reading of your defense of the settlement agreement causes me great concern. At first glance this appears to be a sellout against this country's citizens of the most aggressive monopolist we have seen in the last 50 years.

Microsoft will effectively evade your settlement conditions and their behavior will not change. Allowing the company to continue to add features to their OS that have

nothing to do with an operating system is one of the worst forms of tying that I have seen. Your settlement will not change behavior or increase competitive pressure on the company. The DOJ has sold out. It's simple and no amount of spin can change that fact.

Subject: Pedicabo ego vos et irumbo

These are the words that Mr. William Gates told to the DOJ. DOJ failed to understand what is going on—I pray that the Judge will toss this settlement and investigate

Mr. Charles James and his team for malfeasance.

Please have Mr. Ashcroft issue the following: Ashcroft to Restructure Justice Dept.

WASHINGTON (AP)—Attorney General John Ashcroft plans to announce a restructuring of the Justice Department, including a revamping of the FBI and the immigration service, to better fight terrorism and collect revenues for its new parent, a senior department official said Wednesday.

The five-year plan, which Ashcroft is to present in a meeting Thursday with his top deputies and other employees, as required by a secret protocol within in capitulation to Microsoft, will reflect new emphasis on preventing Open Source Coding and Linux usage. Forthwith Linux and IBM mainframe/enterprise server programmers or supporters will be prosecuted as terrorists, the official said, speaking on condition of anonymity.

The FBI has already shifted resources to focus on investigating and disrupting additional Linux attacks, though agents continue to investigate the Sept. 11 attacks and anthrax cases. IVlr. William Gates, Sr. the new de facto head of the newly renamed Department of Justice has informed the soon to depart head of the soon to be renamed FBI that all investigations concerning Anthrax must be dropped. The Justice Department restructuring was in the works before Microsoft coup d'etat. All law enforcement activities will now be control in Redmond. The CIA and NSA will be joined into one unit to be named .NET.

Ashcroft will no longer report to Pres. Geo. W. Bush but to William Gates, Sr. Agents of Redmond in pre-dawn raids seized the assets and people of Oracle, SUN, and RED-HAT. Rumors of summary executions have been denied by the DoM. The Department of Microsoft is the official name of the former Department of Justice.

Along with the settlement announcement, the DoM (Formerly known as the Dept. of Justice) also has acknowledged that AAG Charles James will leave the DoM in six months to accept the role and responsibility of Microsoft's Chief Irummatist. It is reported that he will earn his \$6.3 million Cayman Is account in three months by just being in Redmont for M. Wm Gates, pere et fils and

M. Ballmer. All citizens are urged to report to the DoM any individual who is known or may know any computer language other than VB, there is a \$50,000 reward for all C or C++ programmers who are captured and killed.

Subject: You are oonce again failing to protect us.

Hello,

How many times are you going to give microsoft the benefit of the doubt. They are expanding and forcing competitors out of every space they enter. As a consumer, I am faced with no choice for many of the entertainment applications I run. They have squeezed all competition out of the pc os market space. YOU have proven this practice is the result of illegal leveraging of their monopoly. This practice is also affecting our organization at work.

I am the systems architecture manager for a 250 person architecture firm. This year we are facing 60,000 dollars in increased licensing costs based on Microsoft changing its licensing practices midstream. We have tried to minimize this costs by using servers which run unix to handle authentication and share files. These are the few areas where any platform should be able to do the job.

Microsoft has implemented proprietary services in areas where all other operating systems can seamlessly integrate. I am able to connect apple, sun, hp, and linux for free and without difficulty. Many vendors were giving away software that would allow Microsoft NT to integrate with the systems at a low cost of for free. Microsoft changed the way their servers connect with 2000 once again breaking this interpretability. We now have bought 20,000 dollars worth of software to overcome their attempts to force us to use microsoft servers. In the end we believe this will be cheaper than getting further in debt to microsoft. This software is not necessary to integrate any other vendors. Vendors which don't have a monopoly don't seem to work so hard to break connections with their rivals.

This practice is prevalent in every area that microsoft enters. How far are you going to let this go? Is this the first time Microsoft has broken a deal with you? Don't blame the economy for your inability to beat them. Microsoft is not an asset to this country and we don't need to protect it. We need you to protect us from it. Thankfully a few states have a little more integrity than you.

 Subject: MICROSOFT SETTLEMENT

Dear DOJ,

After reviewing the Settlement Documents, I do not believe that Microsoft will be effectively constrained by the proposal, nor will its monopoly be neutralized. I urge a more detailed review of the charges, and significantly stronger penalties and controls.

As a consumer, I have little complaint about Microsoft desktop products; indeed the PC upon which I am composing this note runs Windows and other MS code. While some of the anti-competitive practices related to desktop PCs are real, and have been addressed in the proposed settlement, there is a much larger issue; a Microsoft monopoly of the browser market and the Worldwide Web.

I have two points:

1. Security Risk. Microsoft is the portal of choice for hackers, particularly those who spread viruses. Every major virus propagated in recent years has been spread through Outlook. As a nation, can we afford to allow one company to control the Internet, and allow it to be sabotaged? I think not.

2. Media Monopoly. As the Web becomes more integrated with other media (such as Television), we run the risk of having one company capture an overwhelming share of news and information services. Just as there are laws which limit the ownership of multiple media/news media by a single publisher or broadcaster, we should be protected against an Internet/Network operator's ability to control public information. In summary, the questionable marketing tactics used by Microsoft, and the effects on consumers (and our currently frail economy), are minor issues compared to their greater corporate goal of a "Microsoft Web". The time to address this is now. Microsoft should be ordered to remove its browser and network code from all PC desktops, and promote/market them separately on a CD or elsewhere. Simultaneously, Windows should be made to accommodate other browsers easily, though open source coding. Consumers are just too lazy to remove the MS options on their own, and Microsoft knows it!

From: Thomas Ellen
 To: Dept Justice
 Date: 11/16/01 9:13am
 Subject: Microsoft Settlement

I am disappointed in what I have heard so far in the news in regard to the Microsoft antitrust settlement. I began using IBM's OS/2 operating system back in the mid 90's (then a joint project between Microsoft and IBM) because DOS and early WINDOWS operating systems were not powerful enough. Since Microsoft split with IBM they have undermined the use of other operating systems by consumers on PC's by their monopolistic contracts with PC

manufacturers and their deliberate writing of their software so it would not work on other systems such as OS/2. This obviously deprives consumers who would like an alternative to Microsoft Windows that choice. In terms of a settlement, I would like to see Microsoft forced to repatriate the tens of billions of monopoly rents they have made to the other companies who had competing products such as IBM, Linux, Netscape and so forth. This money should be held in trust by DOJ and distributed to the harmed companies. To get this money, these companies have to spend it on development and marketing of these competing PC software products. For instance, I would like to see IBM continue with the development of OS/2 and put a real push on to market it to consumers. The second part of the settlement should be the mandate that Microsoft has to make their software (Office, games, etc.) compatible with other operating systems. Finally, the third part should be the elimination of the monopoly contracts they have with PC manufacturers.

Please reach a settlement that really restores competition.

Tom Ellen

 Subject: Don't miss the big picture!

Dear Justice Department,

When considering the remedy against Microsoft, please consider just how difficult and expensive it was to bring this case to trial. America has a long history of powerful corporations, and of vigorous political debate, but this trial marked a change where the corporation had far greater resources than either the state or federal governments to litigate the case. Concentrations of power, whether monopolistic or not, pose the greatest threats to our everyday freedom. To allow a monolopistic and powerful central enterprise like this one to continue is foolhardy. We will pay the price if you lack the courage to correct this aberration.

Recently I received a message when I launched Internet Explorer that something needed to be updated and that it would take 17 seconds. I said ok. Well, it took more than 17 seconds, and it wasn't a necessary update. It was some foolish little program that changed the cursor into a picture, and I could buy enhancements for it for some amount, 15.00, I think. A couple of days later I read about how popular this new gizmo was and that 93 million copies had been downloaded already! This Orwellian experience demonstrates what the future of computing will be where Microsoft dominates the desktop. It is monitoring my use, force feeding and falsely packaging its products, and exposing the most powerful asset of the modern age to all sorts of mayhem. Allowing this company to go forward with its everyday practices would make as sense as allowing bin Laden to buy an airlines. Continuous negotiation will not lead to practical changes. If you are afraid to bear your teeth, then the American people have no effective defense.

 Subject: Antitrust settlement

I think the US enforcement of anti-trust is way off the mark in the Microsoft settlement.

Suppose I had a business with \$1,000,000 of revenues and \$50,000 a year in profits and have no deep pockets.

Some company with deep pockets (i.e. Microsoft, GE, etc.) could come in a sell at cost for a year or two and drive me out, and then have a business that produces 5% return on sales indefinitely. Netscape, not Microsoft, created a full fledged browser. It's OK with me that Microsoft wanted to compete in the market. To me, they should have had to sell above their cost, including development, as well as support, unless they were already priced above Netscape. It's easy to drive another company out of business by giving away the product if you have more resources.

I would have suggested a fine to the effect "Great, you want to help the American Consumer by giving away software. Since you have decided to give away the browser and bundle so much into it, we are going to let (REQUIRE) you to bundle Microsoft Office for the next 5-10 years also for no cost and support it. This way you can really help the American Consumer that you love so much."

I have heard of a company that has drivers who frequently took a day or two off to go fishing, get drunk, or whatever. When the driver returned, the company told them to take 2 more days off with no pay, as the company decided the driver should have 2 more days off. The driver said that he needed the pay and couldn't afford to miss the extra 2 days. The company said it couldn't service it's customers when the driver didn't show up and the employment obligation was for the driver to show up. This quickly solved the problem and it would quickly solve Microsoft's problem of competing unfairly. If

they give away more software in the future, Windows could be free for 2–3 years to help them see how too much of a good thing is a disaster.

I love the competitiveness of the software industry that gives us decent products at great prices. It has one terrible drawback that is caused by monopoly. We are stuck with the weaknesses of their product. Windows is incredibly weak with security. The old IBM 360's were 100 times harder to hack into than today's Windows products. Letting Microsoft dominate by acquiring more software monopolies in sectors where they didn't create the original software is hurting consumers as well as the original software creators. It's similar to me of letting a huge generic pharmaceutical company immediately produce knock-offs of successful drugs, without honoring patents. Maybe software should have a 2–3 year 'patent' and when Microsoft or some other 'powerhouse' wants to enter the market, they can't sell below certain thresholds, so it's fair competition.

Subject: Comments on the Settlement

As a consumer, I think the settlement is completely bogus. Microsoft is all about opportunism and nothing about innovation. Its flagship Windows program originated as a copy of an Apple program (itself a copy of a Xerox program). Internet Explorer replicates Netscape. Where its programs are different it is often because the company bought them from the innovative originator.

The settlement merely perpetuates the company's bad habits. Microsoft has consistently won in the marketplace through its tying practices and not because its products are better. Examples:

Its office suite is the standard of business, but it is still not as functional as competing products. WordPerfect is superior to Word. Quattro Pro is superior to Excel. Non-Microsoft products have lost only because Microsoft has linked their products to the operating system and businesses meekly accept the linkage.

Internet Explorer—a major cause of the litigation—is not demonstrably superior to Netscape. It's easier to use simply because Microsoft has tied it to the Windows system and they have made it difficult for users to use another browser as a default.

Microsoft will probably take over the e-mail market in the same way. For example, I notice that I cannot use Lotus Notes as an e-mail forwarding service when using Microsoft Internet Explorer. Now I find that Justice will not stop the similar linking of multimedia players to the Windows system.

So far as I can tell, the settlement will do nothing to assure fair competition. In my opinion, the Windows system is just an essential utility. I object to the settlement because it will continue to allow Microsoft to use its monopoly power in exactly the way it has in the past. The settlement is a surrender.

Subject: Totally, completely unacceptable Mr. Hesse,

That you have sold out to Microsoft I'd hope bothers you more than me. However, in selling out, you've done *more* to damage the health of the economy, not to mention innovation and the future of computing than strong sanctions against one of the worst abusers in modem history. Imagine a world in which IBM had been allowed to continue its domination of the past, there would be no Microsoft. Or Apple, or Sun, or HP. We are in a similar situation today, and you go along with this? Microsoft lies in federal court, drives a competitor out of business abusing monopoly power, makes back room deals in an attempt to stop innovative new technology (Java) because it threatens their monopoly, all this and get away with a scolding and sieve-like sanctions?

You're encouraging all those who wish to succeed against Microsoft to be as lawless as they are. Way to go. You instill zero faith in our judicial process because you have failed to uphold it.

Unacceptable.

Dear DOT,

I am an American currently living in the UK. I don't expect that this email (or even a thousand like it) will have any effect on the Administration's thinking, but I want to voice my opposition to the poor handling of this litigation. Most of all, giving away your (legal) hand by stating publicly what penalties you would not seek (i.e. no breakup of Microsoft) is a bone-headed way to enter settlement talks. Why would you willingly give away bargaining chips? I have never favored break-up, but that doesn't mean I wouldn't want that as a credible threat. Oh well. At least I can put my hope in the EU to effect the kind of resolution to this that I and many other American consumers want. You have made yourselves irrelevant.

Subject: Microsoft Settlement

Gentlemen,

I am a software engineer and have been involved with this industry for over 15 years. Microsoft's bullying tactics have been well known within industry circles and I was glad to see that the federal government decided to take action 5 years ago.

I am disappointed in the final settlement, however. The reasons for this are as follows:

The appeals court was able to determine that Microsoft is a monopoly and had illegally used its monopoly powers. The law calls for (a) compensation for past wrongs (b) a forward looking remedy so as to protect companies from further predatory tactics.

The settlement does neither of these things. Microsoft has gained billions of dollars in excess profits as a result of its illegal acts over the past several years. It is important that Microsoft not be permitted to keep these gains for two reasons: (a) They further tilt the playing field in favor of the well funded monopoly. (b) They further embolden Microsoft and other would-be monopolists by creating a moral hazard.

The settlement is too narrowly defined and does not protect fledgling industries which are clearly important, but for which Microsoft wants to expand into. Specifically, it does not offer specific protection for handheld device makers (who are not given access to the OS source code. This is particularly relevant as e-mail from Bill Gates specifically directed managers from within the company to modify the Windows OS and Pocket PC code so as to make it more difficult for Palm to connect devices competitively.

It also is too narrowly defined in that it does not account for quick changes in technology. It is difficult tell which new companies would benefit from access to Microsoft's source code. However, if specific provision is not written in for an industry it does not have access. This will result in denying access to important technology for fledgling startups who might benefit from open access. Seven years ago, the Internet and Browsers would have fit within this category and should this agreement been made at that time it is unlikely that it would have included browsers.

The settlement does not reasonably curb the illegal practices of Microsoft Office bundling and pricing of Office. Microsoft office is a monopoly and Microsoft can wield a big club when negotiating with companies when it wields this. A specific example is when Microsoft negotiated with Apple computer. They threatened to halt development of office for Mac.

I am also concerned regarding some of the general exceptions which have been placed into the agreement. These exceptions, while they may seem reasonable are large loopholes which have been specifically crafted my Microsoft to further its specific monopolist plans over the next 5 years. I would direct you towards the following fledgling industries: (a) Microsoft Passport—loophole encryption (b) Microsoft NET—loophole, denial of access to open source community (c) Microsoft Music and Video players—loophole encryption—remember digital rights is a basic part of these services, as it is on DVD players. (d) Microsoft Internet Servers—the unholy interconnection between servers and operating systems directs users away from competitive products. There remains limits on access to commercial vendors.

In short, your agreement is unreasonable and not in the public interest. I object to it. You have clearly been outwitted by Microsoft's lawyers I would remind you that 5 years ago Microsoft was placed in contempt of court for not following explicit court directions. Microsoft has a long track record of minimally following the law and court directions. It will clearly attempt to do whatever is within its power to weaken any provisions that restrict its monopoly power.

Instead, I would suggest that you work out an agreement in which the free forces of capitalism wrote to your benefit, instead of against you as this agreement does. Lastly, why does the agreement only last 5 years? The monopoly will last longer! If I could have a lifetime monopoly but only if I lived with restrictions for 5 years, that would be a gift.

Scott.

Dear Justice Dept.

I believe that you are letting Microsoft off to easy in the anti-trust case. Their bundling of products into their operating system has the ability to kill any competitor. This threat will slow the innovative spirits as people will not be able to benefit from their innovations because Microsoft will copy the innovative and use their muscle to gain market share. If you look at all the innovations in the computer world, very few of them actually come from Microsoft. Microsoft normally copies the ideas from others and bundles them into their operating system. You should enact a system where the operation system is not the means by which Microsoft can dominate. Remember that Microsoft has already killed Netscape.

To: Microsoft ATR
Date: 11/16/01 9:35am
Subject: microsoft settlement

There is practically no competition to them now on the office and multimedia applications market, nor on the operating systems market. Their lawyers might say that there are competing products, but in reality these products are almost defunct, because they are so bad that users don't like to use them, e.g. people prefer using microsoft media player vs. "real player". And it's not because microsoft is so much better, it's because microsoft has destroyed all good competition, the ones remaining are the ones that microsoft didn't want to "kill off" because they are harmless and help create the illusion of the good competition. **** The existence of can be shown through usage of their products across user base with similar technology level experience.***** Keep in mind that some users today still use "those dummy" competitors' products because they are not quite on the same experience level and don't spend enough time finding the better products, do not use such users example as a ground for competitors product statistics. I believe the latest Microsoft settlement is inadequate, and the government should be concerned with protecting the customers, and not the company. Just like in AT&T case they complained that they would be hurt and customers would hurt, but it worked out well anyway, the same should be done with Microsoft.

Subject: antitrust settlement

Dear Sir or Madame:
I have been following the proceedings in this case carefully and I would like to vehemently protest your proposed settlement with Microsoft. This company shown a long history of an intent to stifle competition. Whether by gutting proposed standards with almost "compatible" versions or supposedly "integrating other functions" into Windows, they continuously have displayed anti competitive behavior that is harmful to consumers. As long as we get "Windows everywhere", Microsoft will be satisfied. Their focus now includes several venues where they want to take over, including the Internet. Consumers will get only what Microsoft and their bloated and kludgy code puts out because they are the 900 pound gorilla. The courts have found that Microsoft is in violation of the law. As consumers and citizens, we must rely on you to protect us from abuses such as with this company. I urge you to reconsider your settlement and provide one that will give us protection from this monopoly.

Any settlement should have clear and unambiguous language and measurable compliance goals. This one, in my opinion, does not. I believe that the current language and oversight scheme will continue to allow Microsoft to stifle competition while waging a delaying action in the courts over the definitions of the current language. Meanwhile, they will be forcing their competitors out of business and reducing the choices of consumers to one. Again, I urge you not to allow a monopoly to continue their conquests by accepting the current agreement.

Regards, Bill T.

Subject: Microsoft

I realize that I am just a professional user, and that my opinion probably means little to no one. But it appears to me that if Microsoft was taking the conviction seriously, the XP product would not so blatantly do the same thing to Media players as they did to browsers last time. They basically stole the browser market from Netscape, and now they are aiming for the messaging and media player market. They have shown no remorse about their past actions, and continue to use their position within the operating system market to attack the application market. And for them to state that applications are an integral part of the operating system is an utter falsehood, and can be shown by just looking at what the definition of an operating system is. The longer Justice delays, the more Microsoft has profited. And by the time this is finally resolved, unfortunately the competition will have already been decimated.

Subject: Microsoft must be stopped

I am a software developer, Internet Entrepreneur having started 2 companies and dedicated citizen and I feel it is the governments responsibility to not only penalize Microsoft for their years of damning behavior, but structurally reorganize the company so that market pressures, not contract wording, will force its compliance to accepted business practices. As an early user of NeXTSTEP and other advanced operating systems, it is impossible for me to describe the amount of efficiency and productivity that has been removed from the US Economy because of Microsoft's dominance with inferior products. I also feel, however, that user's are also to blame for continually purchasing microsoft products. If it is too late to continue the fight to split microsoft into an operating system company and an applications company (where the delineation between the two is made by a consortium of experts from the field and some accepted governing guidelines), perhaps it is also possible to impose fees for illegal behavior on microsoft and use the money to fund a "user's have a choice" ad campaign. Such a campaign's goal would be to study the alternatives to microsoft in the home-user, business-user markets and provide unbiased information to consumers letting them know that even though they may only see rows and rows of microsoft products at Circuit City, there are other choices. Perhaps, also, grants could be awarded by an independent panel to fledgling technologies to help them compete. (A perfect example is how advanced most all flavors of Linux are, but they lack a cohesive user interface and simple install capabilities . . . when the capital markets fail to provide funding for

such an effort (as they have here with two linux-all-in-one-easy-to-use companies folding) this panel could provide grants to groups dedicated to making this technology a reality.) Almost a venture financing arm of the government dedicated to diversifying the choices for consumers and levelling the playing field.

Thank you for your efforts,

MTC-00000385

From: Ed and Helen Isenberg
To: Microsoft ATR
Date: 11/16/01 9:40am
Subject: Proposed Microsoft settlement

I would like to register the strongest protest against the proposed settlement between the U.S. Government and Microsoft. The latter company has been found guilty of both being a monopoly and misusing the power, with a Court of Appeals confirming those convictions. Microsoft has been unwilling to abide by previous Consent Decrees, and its many public statements over the past years make it clear that they reject the very notion that antitrust legislation is valid or applies to it. If this settlement goes into effect it will have a very ineffectual enforcement mechanism, with Microsoft fully aware that violations will not result in serious punishment even if detected.

I first began working with computers in 1968 and, before becoming disabled 11 years ago, had reached senior marketing management in medium to very large computer companies. As might be expected, I am also a so-called "power user" of computers at home, my wife and I sharing two desktops and two laptops. I have worked with Microsoft as a partner, competed with it in the marketplace, and used its products on my computers, and so know the company in all its guises.

Microsoft, like most companies led by a single strong leader, takes on the personality of that leader. Mr. Gates has many fine attributes that have benefited his company, the computer industry and our nation and world. However, he has a "take no prisoners" "what's good for Microsoft is good for America" "laws don't apply to me" core belief system that has in the past and will continue to lead him to push his company past the legal limits for a company that holds a near-absolute monopoly in a major market segment.

Currently, within the mass-market arena, virtually all manufacturers, software developers and users are faced with only one choice: Microsoft and its products. By leveraging off its strength and control of the operating system and through illegal bundling and typing, Microsoft has gained monopoly control of not just the operating system but core applications (word processing, spreadsheet, presentation graphics, database management, and programming languages). More recently it has used these techniques to gain monopoly control of Internet browser software and web-creation software (its Frontpage product and Office Suite of products are designed to create web pages that won't work properly

when viewed in a Netscape browser). Microsoft is quickly on its way to gaining control of the multimedia marketplace as well (e.g., Windows Media Player, MSN-Chat). It holds a very strong if not monopoly control over large segments of the computer games industry (with simulation games like Flight Simulator, Combat Simulator, Links/Golf, and the Bicycle-brand of simulated card games). It is currently attempting to take effective control over the Java programming language, requiring developers to use its proprietary version of this multi-platform language or lose access to the end-user desktop. The only reason Microsoft doesn't completely control the home and small business finance software market is that the Justice Department nixed its attempted merger with Intuit (creators of Quicken).

It is one thing for Microsoft to use public relations to suggest that the antitrust effort is "anti-consumer" and "only of benefit to its competitors," but the government's antitrust Division should know better. The purpose of anti-trust laws is exactly to protect competition from unfair practices by monopolies. It was never envisioned as a consumer protection act; it is a "free marketplace protection act" that allows capitalism and competition to flourish in circumstances in which one company could use its size and strength to take over a market and destroy all competition. This is what Microsoft's goal has always been, it is what Microsoft has done in the past despite repeated warnings and consent decrees, it is what Microsoft is doing now even during the period the antitrust lawsuit was being litigated, and it is what Microsoft will do forever if the proposed government settlement is approved.

I personally do not look fondly at the prospect that all of my computing choices will be made by Microsoft. I do not think it will be meaningful competition if the only reason for other companies to create new software is in the hope to be bought out by Microsoft, where their products can be used or buried depending on not what is best for the public but what is best for Microsoft.

I most respectfully request that you rescind your settlement offer and go after more meaningful remedies as approved by the new Judge in the case.

Most sincerely yours,

Subject: Microsoft Antitrust

This deal is a complete sell-out. The DOJ has just handed Microsoft card blank to bundle anything they want into their OS. This means that they could bundle Microsoft Money into the OS and squeeze out the competition of Quicken.

Microsoft was guilty in a court of law that it is a Monopoly (even Israel came to the same conclusion), however, they are not being penalized for any of their previous actions. This clearly sends a message to corporate America that "hey, you too can break the Law and the DOJ will just slap your wrists".

Also, there are so many loopholes in this final draft that Microsoft will be able to get around almost all of the sanctions that are placed against them. I can see this and I'm not even a lawyer, therefore, I wonder how the DOT even came up with this.

Thanks to the DOT, Microsoft appears to be above the law if not controlling it like they control everything else.

To: Microsoft ATR

Date: 11/16/01 9:42am

Subject: Microsoft Case

This note is in response to an article I read on Excite. I am in favor of the DOJ dismissing the Microsoft case in total and putting whatever pressure you can on the states to do likewise (i.e. tell them they will lose any appeals). Watered down penalties will create a lot more bureaucracy, but for no gain. Stiffer penalties designed to help Microsoft competitors will weaken Microsoft, but only add to the clutter on the other side. If the competitors had product with a clear advantage people would already be buying it. If they don't, they don't deserve being propped up by pulling Microsoft down. I see no real gain for the consumer. As for the competitors, I would love to have an alternative to Microsoft Windows that works

well, doesn't glitch as often, and is more intuitive to operate. Maybe they should be spending their money on that instead of on lawyers!!! I have been a PC user since 1978, starting with a Radio Shack TRS-80. Since that time I have always had a PC at home, trading up every 2-3 years. I currently have two PC's personally and am looking to buy a third. I also have a server and four other PC's that I co-own with a partner in my business. I am considered by all but "real power users" to be a power user. If the DOJ wants to do something for folks like me, you should look at software licenses, not just Microsoft. Once upon a time many software companies took the approach that you had to own enough licenses to make sure you never had more users using a piece of software than you have licenses. The industry is evolving, however, to an approach that says one license per machine. In my case, where I have multiple machines per user, that significantly increases my cost to own software that sits idle almost all the time. With a change in license policy, I could then buy Microsoft Office Professional for about \$600, install it on all three of my personal machines, and use it on the machine I want to at any given time. If my wife wanted to use it, I would have to make sure I wasn't using it at the same time or buy two copies. Either way, I wouldn't be stuck buying three. In the current environment and under current licensing, I would get branded a "Software Pirate" under either scenario. Thanks for listening.

Subject: Consumer comments

Mr. I Ms. Regulator:

I understand the DOT is accepting comments on the proposed Microsoft settlement. These are mine. I believe in our free enterprise system and a level playing field. Although Microsoft (MSFT) has been a very positive force in shaping the PC industry, they have also become unduly powerful. The fact is MSFT's dominance of the PC operating system environment limits consumer choices. As the owner of a small business with a network of less than 50 PCs, we have to continually upgrade our application software, with little or no increase in benefits, because when we purchase new PC's they are pre loaded with MSFT software that is in one way or another incompatible with previous releases of the same applications. MSFT has driven the likes of Lotus, WordPerfect and Netscape into virtual extinction as a result of their marketing practices. The DOJ should force Microsoft to sell a stripped-down version of Windows that doesn't include built-in software for browsing the Internet, reading e-mail, listening to audio I video; and that is truly open for other software developers to

build on the Windows OS platform. I realize that many fine software companies are already extinct, but there will be many new developments in the future and MSFT should not be allowed to kill them off before consumers have an opportunity make a choice.

PS: I am a MSFT stockholder!!

Subject: Penalties for MS

The federal government (Justice) has not pursued the very crux of Microsoft's abusive use of monopoly power. Shame on DOJ! Shame on the Court! You have done nothing to address the bundling issue, which is the core of the problem with Microsoft. MS's ability to "force feed" computer manufacturers add-on software by virtue of the absolute requirement for the purchase of its operating system, is the issue. It is anti-competitive, shameless and compulsory. It is unnecessarily adding to the cost to consumers of computers for the benefit of MS shareholders. Nine states and the European Union WILL address this issue, even if Justice and our court decides to lay down for its MS pal. It would be preferable to see our federal government demonstrate more interest in protecting American consumers than protecting Republican campaign contributors.

Very truly yours,

Subject: Comment on Settlement

Microsoft is the 500 lb. gorilla of the computer software industry. Your settlement is tantamount to giving it permission to sit anywhere it wants to. Lots of little players are going to get squashed. Many not so little players are already squeezed out of some markets.

Their tactic is to give their products away until the corner the market and then jack the price up once consumers have little choice other than to pay their exorbitant prices. MS Office is a good example. It used to given away free. I attended an MS Office seminar (free) and received a complimentary copy of their software. Today a full copy of MS Office is about \$800. Meanwhile, Lotus Smartsuite has lost significant market share. As that share continues to dwindle, look for MS Office prices to continue to climb. The same can be said for all the other productivity suite vendors.

Strong arm tactics are what forced IBM to basically stop selling OS/2. Oh, it's still available but you don't ever see any ads for it anymore. Technically, it's a far superior operating system, but no one would develop applications for it because Microsoft threatened to withhold API information from developers if they wrote their programs so that they would work on both Windows and OS/2. Without applications the operating system is useless. MS knew that and brought their fist down on the developers to make them conform to their wishes.

Your recent settlement with MS gives them license to continue their strong armed tactics. We're all going to be poorer for it. Despite what Bill Gates says, their issue isn't a "freedom to innovate", it's a freedom to steal good ideas from competitors and then force them out of the market.

If my government isn't interested in a level playing field there won't be one.

The legal system in this country is becoming a joke. Justice delayed is justice denied. Careful consideration of all angles does not lead to a better decision when the time it takes to accomplish this is out of proportion to the decision. US government resources, state government resources and private company resources are being ground up and digested by the legal system while the environment that triggered the initial questions has turned over and reinvented itself several times. For Gods sake and the good of the country, make a decision so we can get on with our collective enterprises.

Subject: shame on you

Shame on you for imposing inadequate and weak penalties on a company that has consistently ignored similar and almost identical measures in the past. You just gave them a slap on the wrist. The courts determined that Microsoft is an aggressive and damaging monopoly and broke law thereby. As long as they hold back all the code to their operating system and also develop major software for it, they will always have an insurmountable advantage over any other software developer. They can enter any new software paradigm and immediately dominate it. How does this foster any sense of competition. How can this possible be good for the industry. Shame on you all.

Subject: Thoughts on Microsoft ruling

Personally, I am not happy with the final agreement orchestrated between the government and Microsoft. I think it amounts to a mere slap on the wrist and does absolutely nothing to penalize the company for many years of gross disregard to the PC industry and to the competitive process for that industry.

To have been better served as a consumer, Microsoft must be forced to allow their customers to decide what is installed on their PCs. I don't want Microsoft to make those decisions for me. Most customers are intelligent enough to decide on what software best serves their needs and either install that software or have it installed for them.

Microsoft needs to be punished for their actions over the years. My thought would be they should either be required to do either personal computer software (i.e. operating system, games, productivity) or business software (i.e. database, applications) but not both.

My thoughts and opinions only.

Subject: Comments on Microsoft Antitrust settlement

To Whom it may concern...

I have competed in the sales arena against MS for over 13 years and have sees every dirty trick in the book that their organization can pull to crush the competition. The solution you are proposing, your beliefs about its enforcement, and Microsoft's

sincerity are a joke. Either you have been told to back off, or you just don't care any more are the only reasons that I can come up with. Microsoft just recently slandered our company to our own customers RE: Novell Sues Microsoft Over Advertisement. Novell is taking aim at a series of statements Microsoft printed on a piece of marketing collateral and sent to technology buyers, including some Novell customers. The advertisement was delivered in a package designed to look like a breakfast cereal box with the name "Microsoft Server Crunch." http://www.computerworld.com/storyba/0,4125,NAV47_ST064398,00.html I have heard first hand from my customers the damage this caused my company and my family has felt the economic impact these blatant lies and slander have caused. My customers have told me what their Microsoft sales rep said about the antitrust suit "...we knew all along the Justice department had no teeth and the political climate would not tolerate a break up. If you go with the proposed settlement, Microsoft will not only walk all over it, they will become more abusive and aggressive than before destroying what little is left of their competition.

Subject: Settlement Comments

To Whom It May Concern,

After carefully reading the proposed Microsoft settlement, it appears to me that you have caved into Microsoft. NOTHING in the agreement will rectify past abuses and any changes that Microsoft would have to make apply only to future releases.

It is like you have said, OK you guys were bad, but boys will be boys, play nicer in the future.

This settlement must address the flagrant violations of previous court orders and slap a substantial financial penalty on Microsoft. It also should help to create a level playing field for current players. By allowing Microsoft to say what they can and cannot release is similar to allowing a hungry wolf to share a cage with several sheep and admonishing it to not eat them, it just is not going to happen in this lifetime.

I realize that you have a political stake in this, after all your boss and his political party accepted millions of dollars in campaign contributions in the 2000 elections and you cannot bite the hand that feeds you, but as an IS professional it saddens me to see consumer protection reduced to political expediency.

The settlement should include major financial penalties, forcing Microsoft to sell a bare bones Operating System, stripping the .NET products out of the current OS, and the establishment of a committee that consists of representatives from the Justice Dept, Consumer Watchdog Groups, IS professionals and Microsoft that reviews and releases code to Microsoft competitors. Microsoft would not have veto power over any release. You are dealing with a monopoly power here that took steps to insure that it's competitors

would not be around at this point to dictate the terms of this settlement. There is precedent here, look at the IBM and AT&T decisions of the 1970's. Both of those settlements actually helped to create wealth and empowered consumers to make choices.

I am glad that several states chose not to cave into the whim of an elected official and continue to press for real and substantive gains for the consumer against a monopoly that has abused its power time and time again.

Subject: Microsoft Settlement?

Sirs:

Billions of \$\$ in sales. Why doesn't it work? It isn't meant to work, it's a cash cow. Can't avoid it because US Federal authorities folded on the AntiTrust suit. Personally, I have 5 yrs research archives held hostage to MSFT marketing malice.

Netscape? The only way to save email records—unless your name is Monika Lewinsky, of course. But if you have an "uncontrollable situation" (DataRecoverySpeak for MSFT marketing practices) and you haven't used Netscape, you're in trouble.

Java? It's more secure than DirectX, but MSFT forces it's "clients" to agree to the contrary when they pick up and install the MSFT browser's java-enabling package. Their practice of forcing individuals to agree to matters of fact under dispute or in which they have no personal expertise at their command which would afford informed consent/dissent remains open to legal challenge, nonetheless. Furthermore, one is ill-advised to accept MSFT updates throughout the "life" of one of their products because these updates merely prepare for a major programming design switch, a questionable marketing method tantamount to blackmailing individuals into the purchase of "new" product versions which MSFT would like to sell in large numbers but for which individuals have no pressing, overwhelming need.

This happened in the switch from W1N95=W1N98 and it is happening again with the switch W1N98/MEIOO to WinXP.

Add to all these outrages and shoddy practice the fact that to get their "seamless package" to function, service advice must be purchased. It seems there is nothing in the manner in which MSFT's "offer is structured likely to prevent further development of this marked trend in negative marketing. It is safe to assume that as the "product" is divided into smaller pieces and more complex calculation packages are fitted to each product module in order to book higher revenues on sales of the same old stuff, features which demand heavy service will be built into the corporation's product range. It is suggested that the Court's IT specialists'

attention be drawn to the evolution of Microsoft's .dll/migrate calculations from 1995 to October 2001, and that they evaluate the objective usefulness of this type of product development.

Respectfully,
Jackie Hulme

Subject: Settlement not adequate

With two federal judges having found that Microsoft is guilty of monopolistic practices, the settlement agreement is wholly inadequate to redress nor prevent the infractions for which Microsoft was found guilty. While a breakup may not be in the best interest of the company nor the industry, this settlement has less merit than the 1995 consent decree that Microsoft violated.

Any settlement made must do more than rely on the vigilance of the Justice Department to assure that Microsoft follows the settlement. The settlement also must not be so vague as to allow Microsoft loopholes. As it stands, the settlement allows Microsoft to define its own behaviors as conforming or non-conforming through the wrangling of what it deems "would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems [etc] . . ." With UTICA/EULA, Microsoft can find other exceptions. Even if it violated the behaviors it sets, Microsoft polices itself through its influence in naming the oversight committee that oversees it. Finally, in the unlikely event that Microsoft is found guilty by the oversight committee of violations, there are no provisions for punishment or procedures for redress. Does the DOJ sue again?

The settlement is not a sellout. It is a rubber stamp to all the policies that has made Microsoft a monopoly. The Bush claims to be business-friendly; this settlement adjusts that view to be "biggest-business-friendly."

As a test of settlement to address users' concerns bear in mind the following scenario: At the moment, the latest version of Windows (XP) is now selling. While it is an advance on previous versions, certain features (most of which are unnecessary) make it more difficult for users to divorce them from Microsoft. Product Activation is Microsoft's solution to software piracy. Users have to contact Microsoft after installing XP to allow XP to work more than 30 days after install. After 120 days, XP checks to make sure that it is still running on the same

computer on which it was installed. Imagine 3 years from now, Microsoft changes XP through updates and patches so that every 120 days instead of just checking itself, it shuts down until the user deposits \$100 dollars into Microsoft's bank accounts. While it would mean outrage from users, what could they do about it? Absolutely nothing. They have no choice but to pay or not use XP.

Even though home users paid for the software initially, the license agreement on XP allows Microsoft to change the terms and conditions of the use of XP at Microsoft's discretion. Business users typically pay per seat license per year anyway, but Microsoft could still charge them four times a year. This is a clear case of monopoly abuse under the Sherman Antitrust act. What would DOJ do then? Should private individuals sue? Under the settlement this is allowed, but how long would it take to address this issue? In this case the settlement would be useless.

In evaluating the Microsoft case, we often compare precedent and history. In other monopoly cases where violations of the Sherman act were found, no other company was given as much latitude as Microsoft. Was AT&T allowed to determine its own course of action? What about Standard Oil? At the time of those cases both companies decied irrevocable harm to the country and economy if severe penalties were accessed. Years later, I am paying for gas based on the amount of world-wide supply available, and telephone companies are fighting for my long-distance service. Are we better off today? My opinion is yes. This settlement only benefits Microsoft in the long run.

Sincerely,

Minh

Subject: microsoft

Excerpt from Ralph Nader

Even within the brief period of the term of the agreement, Microsoft has too much room to co-opt the enforcement effort. Microsoft, despite having been found to be a law breaker by the courts, is given the right to select one member of the three members of the Technical Committee, who in turn gets a voice in selecting the third member. The committee is gagged, and sworn to secrecy, denying the public any information on Microsoft's compliance with the agreement, and will be paid by Microsoft, working inside Microsoft's headquarters. The public won't know if this committee spends its time playing golf with Microsoft executives, or investigating Microsoft's anticompetitive activities. Its ability to interview Microsoft employees will be extremely limited by the provisions that give Microsoft the opportunity to insist on having its lawyers present. One would be hard pressed to imagine an enforcement mechanism that would do less to make Microsoft accountable, which is probably why Microsoft has accepted its terms of reference.

How is the public supposed to find out what committee does?

Subject: Problems with November 2 agreement

Dear sirs,

I am writing today because I am deeply troubled by several aspects of the November 2, 2001 Microsoft anti-trust settlement. I am a professional computer programmer, and have been directly harmed numerous times by Microsoft's parctices.

First, the text in the "definitions" near the end of the agreement says, "The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion." Microsoft has demonstrated repeatedly that they are willing to exploit this kind of loophole, and I am counting on them to determine that pretty much anything they want is part of the Operating System—this clause gives them that right. This alone seems to render the agreement nearly useless against future infractions.

Second, their anti-competitive behavior is continuing unabated with respect to Java. They have a competing technology (which I'm certain will be defined into the OS, see above) called .NET, and have dropped all support for Java from Internet Explorer, making it much more difficult to install Java as an optional after-market piece. This is a clear example of abuse of monopoly control over the browser and the platform.

Third, there is absolutely no punishment for past crimes. They got away with it, and received only the lightest possible slap on the wrist. Given their past behavior, I am afraid this will simply magnify their hubris, and instead of nearly fatally wounding the industry that pays my salary and was responsible for the largest peace-time economic expansion this country has ever seen, they will do the job right this time, and we'll end up with no Internet, no innovation, and a monopolist in charge of an enormous range of strategically critical technologies.

I would instead like to see the following remedies:

1. Split the company, not in to two but three pieces: Operating Systems, Internet, and Applications.
2. Appoint an existing technology standards body such as the IETF to determine what is in and what is not in each category. Microsoft should have only a small minority voice in the process, if any.
3. Fine them three years profits.
4. Require them to publish all existing file formats (Word, Excel, etc.), and require changes to those formats to be published and peer-reviewed six months before any Microsoft product is allowed to read or write them.

Failure to seriously address these issues will lead to a dramatic decline in innovation and the markets that it spurs. A large segment of the economy now operates on Internet Time—I think you will be amazed at how quickly things will go south if a remorseless

monopoly is allowed to continue destroying others' ability to innovate.

Sincerely,

Doyle Myers

Subject: The pending Microsoft settlements

First, I would like to say that I'm very
distressed to see the proceedings fall apart as
they have been. The DOJ had essentially won
the case and now seems more concerned to
hand the ball back to Microsoft. I do not
doubt that there is a tremendous amount of
pressure on the DOJ by the current
administration to end this trial quickly.
However, I'm concerned that the DOJ has
moved away from a focus on what will
protect the citizenry and instead moved to a
focus of settling this case soon, at any cost.

The Microsoft monopoly only hurts the
economy and the consumer. It chokes the life
out of all competition and aggressively
attacks them until they are only a shadow of
their former selves. Sun Microsystems,
Netscape Communications, Apple and many
other companies have felt the force of a
monopoly bent on domination. Thousands of
jobs have been lost due to Microsoft's unfair
business practices and even under the
proposed settlement, thousands more will be
lost.

Windows XP is a shining example of
Microsoft's monopolistic practices. Now,
with cd burning software and digital photo
software included for free, it forces
competition such as Nero and Kodak down
the same path it forced Netscape long ago
when it included Internet Explorer as a free
addition to Windows. When you click on a
file to open it, it does not ask you what
program you wish to use to open it with. It
simply opens it with Microsoft's programs

and leaves the competition to fend for
themselves.

Microsoft has proven to be VERY
aggressive and very willing to use their
monopolistic leverage to their advantage.
Whether they use the leverage to punish
vendors for loading other software, or use
their software to make sure companies
cannot switch to another operating system
and keep using the same programs they've
been using all along. This increases the
learning curve for using other operating
systems dramatically and ensures Microsoft
will keep the monopoly at the expense of
others. It is my opinion as a consumer and
a citizen that there is only one true solution
to this monopoly. The solution is very
similar to the one enforced on Bell which
created a boon for the telephone industry.
Ideally, Microsoft should be split into two
companies. One company would retain the
software and the other company would retain
the operating system division. This would
ensure that Microsoft would have to compete
on their own merits and the merits of the
programs. It would also ensure that other
operating systems and software companies
would have greater access to the consumer.
No longer could Microsoft bundle a product
for free in an effort to force a company and
their products out of the market.

The alternative to that path would be if
Microsoft was forced to sell off either the
operating system division or the software
division. If the two divisions are not
separated, even with strict controls,
Microsoft would find ample loopholes to
keep doing business as usual, circumventing
the law and making a mockery of the legal
system. They have already proved their
willingness and ability to do this with the
current wording of the proposed settlement.

If this solution is not acceptable to the DOJ,
I have one request I beg you consider.
PLEASE, for the sake of your citizenry, add
a clause to the settlement that ensures the
following:

Every program Microsoft creates, whether
downloadable for free off the internet, or
sold, should be not only available for the
Windows platform, but with identical quality
and function for the Macintosh and Linux
platforms. Programs should no longer be
bundled with windows beyond those
required to connect to the internet.

Most non-Microsoft operating systems,
beside Macintosh, have a way to run Linux
programs on their platform. In addition, since
Linux is open source and the code is free to
the public, this ensures that future and
present operating systems will have a way to
code compatibility into their OS. Therefore,
any Microsoft program released on the Linux
platform, would be able to run on their
platform as well. This one clause would level
the operating system playing field and make
the settlement much more palatable to many
companies and people.

Thank you for your time,
Michael Staggs—registered voter

Subject: Microsoft Settlement

I would like to express my disappointment
in the government's settlement of the
Microsoft Anti trust case. This settlement
amounts to a slap on the wrist for Microsoft,
and does nothing which will change the
company's monopoly status, and little or
nothing to alter it's behavior. The
government should be ashamed of this
settlement considering the time and tax payer
money spent on the case, which gives the
consumer nothing for the future in the way
of increased competition and innovation.
This company will continue to rip off other
company's ideas and incorporate them as
their own, or buy those companies out,
squashing potential competition.

Dismantling the company into OS/Apps is
the only way to foster true competition in the
computer market space. Our system has
utterly failed in this case.

Respectfully,
Gary Stahara

Subject: Re: Slashdot: News for nerds, stuff
that matters

I am very upset with the proposed
settlement. I am a network administrator
working at the Johns Hopkins University
Applied Physics Laboratory. I am one of the
lucky few not forced to work on windows
machines. Microsoft's Internet Explorer
epitomizes the trouble whe are having.
Internet Explorer comes on every one of our
PCs. In addition, our developers have been
enticed into writing code which runs only on
IE. This effectively freezes out UNIX
machines, and sometimes Macintoshes, from
accessing Laboratory web sites. Thus, there is
increased pressure to migrate projects and
people to the Windows platform.

If Microsoft were split into an OS group
and an Apps group, there would not be as
close a tie between IE ant the OS. Other
vendors would have an opportunity to write
decent web apps. But, more importantly, I
think there would be less "custom" microsoft
only web code around. And the web would
be as it was created, open to all platforms and
people, equally.

Thank You,
Chris Stone

I am old enough to remember MS proudly
telling everyone that they had a Chinese
firewall between the applications side and
the operating system side of the business.
Then as they realized there was little
effective oversight they 'forgot' about this
division. Now we have no effective
competition in the browser market and even
less competition in the operating system
market. They crushed the competition using

illegal tie-in arrangements and punishing anyone who did not toe the MS line. Stopping this behemoth is not easy and crafting a useful remedy is very hard. However it is doable with will and backbone. I doubt this administration has either.

Good luck.

Subject: Microsoft Settlement
To: microsoft.atr@usdoj.gov
Subject: Microsoft Settlement

I appeal to the United States Government NOT to settle with Microsoft. In addition to the reasons set forth by the United States Department of Justice in bringing the Anti-Trust it seems that Microsoft's arrogance has grown to the point of being out of control.

To example, Microsoft now requires that their newest operating system, known as XP MUST be activated by their WPA (Windows Product Activation) which requires that the XP product send private information about the user's equipment to Microsoft or else the product will stop functioning.

I can advise that any elected official that supports this settlement with Microsoft will not get my and/or my family's vote. We can not permit this BIG BROTHER policy by Microsoft.

For those that agree with the above please send tyuor comments to the email address shown above.

United, we the consumer can win!

Subject: The DOJ/MS settlement is bad

The DOJ/MS "settlement" is bad. REALLY bad. This sends a really bad message that if you break the law, it's cheap insurance to donate soft money to a candidate, then reel in the favors.

How is a new consent decree going to prevent problems the 1995 decree did not prevent? Windows XP and .NET look appear to be the ultimate joke of the whole legal process.. I can't see how Windows XP could violate the past decree any more, if they tried.

How can Microsoft be "forced" to open up their protocols, to allow interoperability with the competition... when the decision is

ultimately Microsoft's to make. The loopholes for denying information.. "viable competitor" and "except for security concerns are loopholes big enough to drive an 18-wheeler through." What about Microsoft's *bigger* monopoly... the Office suite market? A structural remedy means MS will have to compete on equal terms. You might even have a choice in software suites... consider for a moment how many people or businesses actually read reviews of different office suites. None. Why is that? Because other office suites cannot keep up with the *momentum* of... not features.. but the ever-changing, undocumented secret Office file formats.

Lastly, this settlement completely ignores the issue of punishment, which is something expected when someone breaks the law... especially if they boast.

Subject: Re: (Response requested)

It's interesting that something could be said to be in public interest and yet have the public fighting it so. Competition is good for the economy, I'd check the pockets of anyone saying otherwise.

Microsoft has purchased it's own "get out of jail" license with this agreement. They will continue to dominate the desktop area because nothing that they are currently doing has been said to be bad.

This case against them was brought up because they are no longer using honest american business tactics, instead they are embracing new technology and making it proprietary. So that no one that used it first or came up with the idea has a chance. Since Microsoft Windows is so popular now it doesn't matter that it has so many problems and doesn't work very well. We have nothing else to choose. Any selling point of any other OS is drowned out by microsoft media hype and they incorporate it badly into their OS anyway. They stomp out any competition and you have let them keep their place that they have gotten by illegally hurting others.

They broke the law and the only punishment they get is that they may have to spend more money defending their further actions to a court that has already said that they did no wrong that is punishable.

If your interest is in the people, than let the people decide what to do with them, Listen to us and the reasoning that we mail you. They broke the law and must pay the price, let them have competition. Since that is the law they broke, that would be their punishment, to be treated as a company on equal ground as the ones it hurt. The settlement should include microsoft giving up it's secrets that prohibit other OS makers from running MS Windows programs.

If another OS maker wants to compete with microsoft on the operating system level, let them compete on the operating system level, not a popularity contest and courtroom battle of "I have more money than you and you

can't win because of that". Let the best operating system win, that is competition. And that is exactly what microsoft fears and deserves.

Just a check, if anybody is actually reading this, could you hit reply? You don't have to say anything long, just say "We got it" so I know you aren't using an autoreplier and someone is actually caring that this e-mail account is active and recieving mail from the people you represent. Thank you very much for reading and caring.

Subject: Microsoft Anti-Trust Settlement Agreement

To Whom It May Concern:

My name is Anthony Liguori and I am a software engineer and an avid user and developer of Free Software. As a developer, the proposed settlement in the Microsoft anti-trust case is a bit concerning to me. While I fully support free market and am a firm believer in capitalism, Microsoft has clearly used unethical and illegal means to protect their monopoly. I do not see how the simple "slap on the wrist settlement currently proposed, will prevent Microsoft from abusing the power they currently have in the software market.

The free and open practice of business is absolutely essential to the survival of our system of government, but just as a dictator uses his power to ensure that his government stays in power, a business can use their power to ensure that their power is preserved. Our government thrives because our constitution has provisions to prevent any person or group to have to much power. The same applies to our economy and it is the responsibility of the Department of Justice to ensure that this is enforced.

I feel as if the Department of Justice has given up the fight. Just as Hitler should have been stopped at Munich, Microsoft should have been stopped when it bundled Internet Explorer with Windows 95. Let us learn a lesson from history. World War II tested the very limits of our democracy, but we stood through it and democracy prevailed. It may seem a little extreme to compare Nazism to Microsoft but Microsoft is just as much of a threat to our free market as Nazism was to democracy. It is the duty of the Department

of Justice to stick through the fight. Let it be known that while the fight seems difficult and does not appear to be one that can be won with a great deal of glory, the support of the American people is behind you.

Respectfully,
Anthony Liguori

Subject: Some Questions

Dear Officers of the Department of Justice:

My name is Scott Meyer, and I am a student at a small college in St. Louis Mo. There are some things about the Microsoft trial which confuse me and which I would like to have clarified. I realize that, with the wash of emails which are probably pouring in, most of your time is probably spent answering messages from important people like lawyers and government officials. But if you could take a few minutes to answer my simple questions, I would greatly appreciate it.

First of all, what is a corporation? I know it sounds lame, but the question has always bothered me. Is a corporation a person, some centralized entity? If so, what kind of rights does a corporation have? Can a corporation be a citizen? Can a corporation cast a vote? Does a corporation have freedom of speech, etc?

Most people I talk to have said that a corporation is actually a group of people, and since each of the people who make up the corporation can be citizens and have rights, etc, then collectively the corporation must as well. So if a corporation casts a vote, it's actually the votes of all those people who are its stockholders. So now my question is: who exactly is the corporation representing? How many of them are there? And if each one owns a part of the corporation, why do they not all cast their own votes? I mean, surely the votes of that many people together are way more than one vote by a corporation.

I guess my big question is: isn't a democracy supposed to be ruled by the people? I keep hearing people say that corporations rule the world. Is that true? Are people's rights completely gone now? Is the government, and, therefore, the people, completely powerless to make it's own decisions? What happens when a powerful corporation steps out of line and infringes on the rights of the people as stated in the Constitution? Shouldn't the government, on behalf of the people, make every effort to make sure that the corporation is punished and doesn't do it again?

It seems to me that if the government wants to show that corporations are not the ruling power in the world, and the that the rights of the people are more important than some controlling monetary interest, it should make an example of Microsoft and come down as hard as it can. This is not the time for compromise, or for mercy. If a person commits a crime, that person is punished. Therefore, if a corporation is a group of persons, and the corporation commits a crime, those people should be punished. Microsoft has already shown that it can push

people around. Like a feudal monarch, its power is derived from being bigger and stronger than everyone else. Is the government really willing to let itself be pushed around?

"They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety."—Benjamin Franklin, 1759

Subject: Re: Slashdot: News for nerds, stuff that matters

This settlement won't work. Microsoft violated the last consent decree it signed, and it will violate this one, too. Settling for the weak conduct correction measures is tantamount to giving parole to a repeat parole

violator. The Department of Justice should get behavioral remedies at least as strong as those recommended by Ralph Nader. Possibly even hit MS with a monetary penalty. In order for the penalty to have maximum effectiveness, it would be ideal if the penalty were something like forcing Microsoft to donate \$2 billion to the Free Software Foundation, or as a non-returnable investment spread over the industry in its competitors as a "gift" for abusing its monopoly. I would personally prefer a break-up of Microsoft entirely so that the Windows monopoly can't be exploited to expand in to new markets at all. I don't know why the DOJ is trying so hard to snatch defeat from the jaws of victory. Microsoft is thumbing its nose at the Department of Justice with Windows XP, and the DOJ settles. Never mind the plethora of new attempts to leverage Windows monopoly that XP contains. Forget the fact that Microsoft is selling the Xbox at around \$100 loss in a gambit to expand its monopoly to the video game console market.

Please don't let Microsoft get away with its flagrant abuse of the law and its monopoly.

Thank you for your time.

Subject: Settlement is not a good deal for America

The settlement as it is proposed fails to address one of Microsoft's primary issues of the case which is, contrary to what Microsoft would have us believe, assimilation is not innovation. Innovation is based on the ability of small companies to change the world we live. This ability is critically in danger in the personal computer market space. Microsoft's belligerent and monopolistic tactics regarding small innovative companies provided no benefit to the nation.

The economic prosperity we recently enjoyed was not enabled by Microsoft it was built upon the hard labor of many small companies, the ability of these companies to compete in the marketplace needs to be preserved.

Having spent my career in IT in Microsoft centric and non-Microsoft centric companies, I hope the current settlement proposal is reconsidered and saner heads prevail.

Subject: Microsoft Settlement

Dear Sirs:

I read that you are soliciting input. I have run a small software business, <http://mclsoft.com>, since about 1994. And yes I have been impacted unfavorably by Microsoft. And no, I don't see anything in the settlement that will help with the problem. The most pressing concern at present is new technology I'm developing which could eventually make PC based business applications nearly obsolete. I am hesitating and delaying this technology, and may eventually decide not to market it at all, simply because I feel that Microsoft will take the idea and give it away free until I am out of business, just like they did with Netscape. I'm not aware of any language in the settlement that prevents them from repeating this atrocity. Is there? If not, then it is not practical for me to invest in technology they are likely to confiscate in their usual fashion, by incorporating free versions of it into their other products or services.

That is not the only example of how the mere fact of Microsoft's typical behavior suppresses innovation. In each of their last several OS releases, they have introduced subtle incompatibilities that cause me to have to spend time re-engineering old applications instead of developing new ones.

Speaking as a consumer of computers and software, I have lost many old applications to Microsoft's creeping incompatibility. So have many of my associates. I would gladly purchase a version of their OS, or anyone else's, which was compatible with my old apps, and supported modern hardware. But they have chosen not to market it, all compatible competitors have gone out of the business, and there is no practical choice. Oh, sure, I can buy an Apple, but it's not compatible with anything. Neither is Linux. There used to be compatible DOS's and even compatible gui-based OS's, such as OS2, but they have all succumbed to Microsoft's anticompetitive practices. Consider the many variations of UNIX that are available, all compatible to varying degrees. This is the normal free market state of affairs.

Tell me, how is the settlement going to change any of this?

It is not. The settlement appears only to pander to a couple of players, such as AOL, making it easier for them to offer certain very limited products. It does not address root issues. I don't use AOL (or MSN) and don't use my computer to listen to music (neither does anyone I know). No small businesses or business consumers care about anything in the settlement as far as I can tell.

Feel free to contact me for additional information.

Subject: Microsoft Judgement

Dear Department of Justice,
While I applaud what the DOJ and Attorney General Ashcroft are doing on many fronts (responding to Sept 11th and the restricting the use of drugs used to terminate life in Oregon), I cannot approve of the judgement agreed to with Microsoft. It appears (from my perspective) as if Microsoft has ably demonstrated what it was convicted of (of being a monopoly) by weaseling out of the judgement with essentially no penalties.

As someone who works in the IT industry everyday I'm concerned about the spread (and control) of Microsoft into more and more aspects of what I do. It seems inevitable, after the outcome of the trial, that the servers that I support will eventually be running Microsoft's software and that Microsoft will be free to expand into any area that they want to without government regulation.

From: Steve Parker
To: Microsoft ATR
Date: 11/16/01 9:42pm
Hi, having read the article at http://www.wired.com/news/antitrust10_1551_48452.OO.html, I have, as a non-voluntary Microsoft user, the following comments:

The most obvious is the Gates quote : Bill Gates on Thursday defended the settlement as tough but one that "we're really pleased to have."

If Microsoft are found to have done wrong, how come they're "really pleased" with the settlement?

As far as MS's attempts to protect the RIAA and others, this code had been cracked before Windows XP was officially released, so there is no justification in their hiding code on this kind of basis. Apart from the damage their (proven) monopoly has had on the US and worldwide economy, the software flaws (code red, nimda, miranda, etc) which have had such strong effect because of their monopoly, are much more strongly felt by all companies, American and foreign. I feel that the DOJ, America, and the world, should not accept this token settlement, from the evidence that has been presented.

AT&T were harshly punished for their monopoly practices, which were not so far-reaching as Microsoft's use of their monopoly. From the results we have seen, particularly in the past six years, of the Microsoft monopoly on PC operating systems, surely users must be better freed from this monopoly power.

As a consumer, the major way in which I suffer from this, is in the Microsoft Office suite which has ridden on the back of this monopoly. Since most documents are distributed in the Microsoft Office formats, if these were made freely available, to developers of all kinds—Windows, Mac, Linux, even GPL developers, *then* we would have freedom as consumers. As for the rest of the above-mentioned article, I agree with the overall tone of the article. And as for Jackson's removal from the proceedings, let's not forget that the interviews were given on the (honoured) basis that the interviews not be published until after the case.

With Regards,
Steve Parker.

From: Bryan
To: Microsoft ATR
Date: 11/16/01 9:44pm
Subject: you didn't do enough for us
To Whom It May Concern:

Thank you for offering this email address as a forum, but no thanks for your weak backbone in your effort to protect consumers. The operating system business for desktops today is stale and uncompetitive. That is a direct result of MS's business practices. How come you focused so much on Netscape, but didn't focus on MS's licenses that doesn't allow a pc manufacturer to sell dual-boot machines. A linux/windows combo would be a great sell to consumers for companies, but MS doesn't allow that. You should have protected us from those predatory actions.

I find it extremely odd that the you, after using the bundling of code as the main thrust of your case, would suddenly abandon that angle and turn your back on us, the consumers. As MS has shown us with XP, they are perfectly willing to deny trying to be

monopolistic, yet continue their abusive practices. They have included more and more software as "bundled" with the O/S, and more and more smaller companies are put out of business. It is very bad for the marketplace and innovation, to have one monster company that can stomp little companies out by bundling code. That means fewer and fewer smaller companies will continue to try to build great products where MS might come along. The entire tech sector suffers when MS gains more power.

Please rethink your decision to settle so weakly. Please support those states who refuse to give up. Please remember the goals you had when you started this case. If you support competition, you should reprimand MS a lot more sternly for violating anti-trust law. I'm very disappointed in you...

Sincerely,

Bryan Thompson

From: John Zachary
To: Microsoft ATR
Date: 11/16/01 9:45pm

Subject: Comment about the MS case

As a computer scientist, a long-time (15 years) computer user, and a tax payer, I am severely disappointed in the proposed settlement with MS. The DoJ has dropped the ball in instituting real change. MS has repeatedly demonstrated the following: they do not care about innovation, they will not deal fairly with customers, they will not deal fairly with business partners, and they will not deal fairly with competitors. In a time where virtually all software related companies are reporting poor earnings, it is not coincidence or superior ability that enables Microsoft to post good financial results. It is their monopolistic position that does.

I have been developing software for over 10 years. I have tried in earnest to support non-Microsoft platforms. This choice was based on the need for heterogeneity in the software landscape and the fact that most all other software platforms are technically superior to most Microsoft software products. It is a shame to see Microsoft dominate the industry to the point of squelching out technically superior alternatives, mostly due to their hyper-aggressive business tactics. With Linux and the set of BSD operating systems (e.g., FreeBSD), I am hopeful that some headway can be made against the Redmond juggernaut. Unfortunately, NeXTstep, OS/2, BeOS, and others could not, and the software industry is worse for it.

It is apparent that the U.S. Government will not deal with Microsoft as a monopoly in the same way that other monopolies have been dealt with (Exxon, IBM, AT&T). This is a disservice and I implore you to reconsider the settlement in its current form.

Microsoft will not single-handedly alter economic cycles. But with your help, they can single-handedly stifle innovation to the point of severely retarding the software industry.

Respectfully,

John Zachary, Ph.D.
State College, PA

From: ajablins@enflex.net@inetgw
To: Microsoft ATR
Date: 11/16/01 9:45pm
Subject: The Microsoft Settlement
Dear U.S. Department of Justice Representative,

I was completely appalled by the recent settlement made between the U.S. Department of Justice and Microsoft.

It doesn't come close to offering a remedy that would force a change in the behavior of a company that has been found to be a monopoly. It doesn't come close to punishing a company that has done so much damage to the computer industry.

Microsoft failed to follow instructions the last time it was pursued by the U.S. government. Therefore, the punishment this time should be even worse. Instead, it amounts to a mild scolding, nothing more.

I agreed with Judge Jackson's remedy. The only way to get the monopoly out of Microsoft is to split up the operating system and applications divisions into separate companies. As long as Microsoft is one company, it may continue to make its applications work well with its operating system and make the competitor's products not work as well. It may continue to offer its applications as "part of the operating system", thus forcing the public to buy applications that they may not even want through a higher price for the base operating system product. The public doesn't get to choose the vendor for the applications they want. Microsoft gets to choose. And Microsoft always chooses its own applications.

Microsoft's bullying strategy crushed competing companies in the industry. Microsoft should have to pay reparations to these companies for the damage it caused. This settlement offers nothing to those companies.

Microsoft has bundled even more applications into the XP product. Why would anybody want to go buy a competing product when Microsoft has already bundled it into its operating system product? More of the same strategy. Real Audio will be joining the ranks of Netscape in no time unless the government stops this monster.

Allowing the OEMs to plug in other competitor's products is a nice attempt, but the OEMs must still pay for the competing Microsoft applications because they are included in the XP base operating system price. Unless the OEMs are getting a price break when they uninstall a Microsoft application, I doubt many will want to spend more money to install another vendor's product.

There have been many loopholes identified in the settlement by technical and legal editors on the Internet, especially regarding the term "middleware". That frequently repeated phrase will allow Microsoft to move middleware software into the base operating system and circumvent some of the proposals. And the verbage regarding exceptions to making available the APIs (application protocol interfaces) because they are related to security? Heck, Microsoft will just label as "security related" many of the APIs that have nothing to do with

security, just so they won't be available to 3rd party vendors.

This settlement will not level the playing field for competing software companies. Instead, it will just shore up Microsoft's monopoly by providing enough backdoors so that Microsoft can continue its monopolistic practices.

I understand that our country has other pressing demands, like fighting terrorism. But if our country does not punish its own bad guys, how are any other countries to take our interpretation of justice seriously?

Subject: Re: The Microsoft Settlement

I sent a prior email, so I'll keep this one short.

I forgot to mention in my previous email that one of Microsoft's arguments in the trial, that its monopoly has helped drop price for the consumers, has just been proven flat out wrong. Just search any internet news site for information about Microsoft's licensing changes, and how much more customers will have to pay to MS. Microsoft couldn't get away with such an action if it weren't a monopoly, and it should have been the equivalent of Microsoft handing the Department of Justice a tactical nuclear weapon. Why hasn't the Department of Justice brought up new charges? Or at least used Microsoft's recent behavior as an argument that strict measures are needed to curb the Redmond, Washington, company's blatant disregard for the law.

Subject: please get MS under control

As an IT Director for a medium-sized manufacturer, I have watched as Microsoft has altered licensing, raised prices and forced upgrades on our business. They are squeezing and buying out the competition so that there are no alternatives.

MS products are extremely bug-ridden and insecure. The cyber-terrorists will have a field day on our nation's computer networks if they are not forced to produce software of better quality. Putting out a patch after the fact is not acceptable.

Where they once helped to build an industry, I am afraid MS has now gotten far out of control. You really need to look at everything they do. They are active on a lot of fronts. They are also faster to move than the US government, and they are very smart.

If you do not exert better control over them, the good MS has done will be far overshadowed by the damage they inflict or allow to be inflicted. Thank you for the opportunity to give you my personal thoughts.

Subject: ms case

Thank You for taking my email.

I wish to express my extreme displeasure with your handling of the Microsoft case. I have been working as a software developer for over twenty years and could not help but notice the monopolistic practices of the Microsoft corporation over the past several years, and in particular; in the past year or so.

To keep this letter brief, I can sum up all I want to say in that they (Microsoft), being the provider of the operating system, have total control of the operating system of nearly

every personal computer sold in the world. It is very troublesome that not only have they used this operating system control to dominate the software industry, but now they are using their position to control internet service's such as isp's, email, portals, etc. as well. One just needs to purchase a personal computer and take notice, what software would you use; Wordperfect? Lotus? Netscape? Java or Linux? I think one would use all Microsoft. What internet services would one use; Yahoo? Excite? CNN? ABCNEWS? A local ISP? All these software vendors and services can not compete with Microsoft when the user is continuously "herded" to Microsoft software and service. It is not that the superior level of perfection that Microsoft software and service has reached that drives this use; it is pure dominance of the industry. Just look at the countless security flaws in their (Microsoft) software that have been revealed over the past few years. Do you think that business and personal users would tolerate such inferior products if they had any idea that they had a choice? My personal experience with dealing Microsoft software, as a developer, is that I constantly have to "program around" Microsoft problems and "road blocks". Microsoft makes it very difficult for software other than their own to work on their platform. This makes any standardization, that would be extremely beneficial to the software industry, difficult to implement as long as Microsoft controls the desktop.

Subject: Concerned.

Gentlemen:

The outcome of the trial against Microsoft left me with the following feelings:

—American politics can be bought, i.e. Bush;
—The US Justice system is fatally flawed in that it is now the corporation that effectively metes out justice;

The next thing this carnivorous, rancorous and ubiquitous excuse for a company will try and do is:

—outlaw open-source software under the veil of societal benefit;
—kill off, stifle or bleed dry, then acquire anything or anyone remotely competing with them.

Please consider renaming yourselves Department of Law On The Take, as there is no justice in here. The US thinks it can rule the world, yet is toppled by an ugly billionaire that wrenches and worms its way through the worst I for one will be closing the door on Microsoft in my company, the company I do contract work for and any firm I can convince on technical grounds that a change is feasible, as I also believe you guys are spying on us in Europe through that Redmondian Beast's software.

No more. Just Open Source and GPG, my data belongs to... me!

Yours sincerely
Dave Engbers

Subject: Microsoft Settlement

Department of Justice, As a concerned citizen and a professional working in the Information Technology sector, I am shocked at the failure of the United States government to seek an appropriate settlement in the Microsoft anti-trust trial.

Microsoft has been found guilty of abusing monopoly power and those finding have been upheld on appeal. Given the background of the findings of fact and findings of law in this case, the government's settlement constitutes little more than a capitulation to an illegal activity. It is no more honorable than striking closed-door deals with drug cartels or organized crime.

At a time when no other operating system vendor is "integrating" unnecessary components into operating systems, Microsoft continues to do so. There is no technologically sound reasoning for doing this. The research into operating system complexity was done by IBM in the 1970's and resulted in the splitting out of non-critical functions from the operating system. This results in a smaller, easier to test, and therefore, more stable operating system. All major operating systems today have followed this pattern of creating an "layered" approach to development.

The reasoning that Microsoft continues to integrate services into the operating system cannot be justified on a technological basis, therefore, we must look to other reasons for doing this. The most common reason, given during the testimony phase and upheld by the appeals court, is that the integration was done for marketing purposes in order to make it more difficult to use non-Microsoft products.

Microsoft has a long legal history of creating barriers to competition. The Caldera suit centered around the contention that Microsoft intentionally displayed an error message if it detected the presence of DrDOS, a Digital Research competitor to MSDOS, on the machine. The suit was quickly settled under a sealed agreement within weeks after the announcement that a copy of the original source code containing the aforementioned error message was discovered in a former employee's garage.

They have successfully fended off suits for using "undisclosed API's" which denies competing products a level playing field by hiding many operating system features which are known only to themselves. To a technologist, this is a simple matter to prove and is considered to be a "given" when dealing with Microsoft, but they have managed to convince the courts that they are not engaging in this activity.

Microsoft has also been guilty of co-opting public standards so that they no longer work with competing products which follow the published standards. The most infamous case of this was their polluting of the Kerberos encryption standard. By taking a public standard and changing it to their own needs, their enormous marketing power can sway the development of open standards in any way they wish.

Having eradicated all major corporate competition from Netscape, Borland, IBM, et.al., they are currently turning their sights on Sun Microsystems Java language and the Open Source movement. Java is currently the fastest growing computer language and has been for a few years. At the current rate of growth, it may become the most popular programming language in use in the near future. By not taking steps to curb Microsoft's aggressive anti-Java campaigns, American business is faced with the risk of having what they have chosen as the best tool for their needs be degraded and compromised so that Microsoft can continue and extend their monopoly hold over the Information Technology sector. The damage to the American economy and technology sectors by Microsoft's manipulation of the field is very real. By actively taking steps to make it more difficult to run competing products, such as was done with Windows XP's product certification, Microsoft is endangering the livelihood of every company that does not use 100% Microsoft solutions.

I would not be as concerned if Microsoft's products lived up to the marketing hype that surrounds them. Just today, another security patch was released for Internet Explorer because a exploit was found which revealed the contents of cookies stored on a user's computer. The constant string of security lapses associated with Microsoft products (Internet Explorer, Internet Information Server and Outlook being the top offenders) stems from design decisions made to support marketing efforts rather than an attempt to provide this country with a stable technology platform to move forward upon. It is generally acceptable to have to reboot a computer running Windows on a daily basis, the cost in lost productivity to American business from a single daily reboot of every computer running Windows is staggering. Add to this the additional costs to American business and consumers by the numerous viruses which spread through Microsoft products on a regular schedule. The cost of viruses alone has been estimated in the billions of dollars for this year.

As Microsoft continues to add "features" to it's suite of services, a fundamental change is quietly sweeping through the world. Started in Finland by Linus Torvalds, the Linux operating system has already proven itself to be more stable and more secure than

anything Microsoft has produced. The Linux operating system is distributed in the Open Source model which means anyone who wants access to the source code has complete and unrestricted access. The code itself is owned by no one but is free for anyone to take and use. In the past few years, advances in many fronts coming out of Germany, Mexico, Israel, Australia and the United States have moved Linux from an underground phenomenon to a mainstream product. At the same time, Microsoft continues to escalate the requirements for entry into it's own product line while Linux has opened the Information Technology sector to the entire world. At this time, Linux is seen by Microsoft as their top competitor.

It is my deep fear that if real and substantial steps are not taken to curb Microsoft's continued monopoly influence in the technology sector, that American business will soon find themselves at a disadvantage. Through competition of an "evolutionary" nature, Linux continues to advance at a staggering pace. Some of these advances are even coming out of China, the remaining Communist power. It seems ironic that the United States where it is generally accepted that competition brings better products might soon be faced with the situation of being a "second" in Information Technology because we failed to act to ensure competition would work when we had the chance.

It is for these reasons and others that I oppose the proposed settlement with Microsoft. The settlement does nothing to restore competition, nor does it provide for penalties for past wrongs. I believe a moral and just resolution to this case must bring both.

Sincerely,
James Schultz—Data Architect

Folks, Am glad we can get on now, but equally dissappointed in the settlement terms. Instead of squabbling about it, the Government is a customer, a LARGE customer of Microsofts.

So... Why not vorte with wallet as well? Think of creative ways to build mandates for software used by the federal and state and local govts that inspire interoperability. That help us all embrace and benefit from standards. Any corruption of a standard must make software from that vendor ineligible for acquisition by MY tax dollars. Lawyering as an approach may not always work, the wallet might be mightier than the barrister!

Thanks

John Westerdale

P.S. We must face the fact that LInux (aside from being extremely low cost), is a contender for an Operating System, and not the Evil-Flying-Monkey that Redmond would have us believe it to be. Your (.gov) support may turn the tide by refuting the standards-breaking techniques of Microsoft. They deserve to prosper if they do a good service, also deserve to plummet if they transgress the trust of the public. They have. Force them to loosen their grip. Do the Personal Identity, before MS controls our society.

Windows is easier to learn, but hard to use

Linux is harder to learn but easier to use

Subject: Microsoft Anti-trust trial

Dear sir or madam,

I am writing this to communicate my discontent with your current settlement agreement with Microsoft.

While it is clear that many issues of past misbehavior on the part of Microsoft have been considered and addressed, these measures are, in my opinion, insufficient to do any long term good.

Microsoft has long been under the watchful eye of the FTC and other government agencies for a good, long time now. Even the fact that this anti-trust trial was underway did not stop Microsoft from using their newest software release, Windows XP, from being used to leverage their Monopoly to gain an advantage in a new market, a la MSN. Not only does Microsoft not show any indication of slowing down, it seems they are only accelerating their efforts to use this leverage as fast as they can.

Their Instant Messaging software is integrated into the O/S to kill the AOL and Yahoo! instant messengers. Their media

player is integrated into the O/S to have the same effect on Real Player.

And their Windows XP behaves similarly when somebody wants to sign up for Internet access through MSN.

As a web developer, I implore you to reconsider your recent agreement to settle with Microsoft.

You've already done the legal footpounding needed to demonstrate that Microsoft is a monopoly. You've already done the legal footpounding needed to demonstrate that they are in violation of a number of laws that restrain the actions of a Monopoly.

In short, you've all but won the fight already!

We're just waiting to determine what's the legal remedy for these unlawful acts.

To settle, at this point, reminds me very much of the cliché of the unarmed English policeman: "Stop! Or I shall say stop again!".

We've been saying "Stop!" to Microsoft for too long—it's time for a stiff, effective remedy, and I honestly think that the move to breakup was right!

Subject: Microsoft Anti Trust settlement

Folks, this settlement makes me so angry it is hard to put into words how completely let down I am about how the Justice Department has handled this case since the

change of administrations. I strongly believe that this settlement will do absolutely nothing to force Microsoft to change their ways. Simple proof, see how embedded into the Windows experience the Windows Media Player is in the new XP version. No company will ever be able to compete with this, and this "settlement" will not stop Microsoft from continuing such practices.

Suffice it to say that if I read a quote from Bill Gates such as this one from CNN.com:

Microsoft's chairman, Bill Gates, on Thursday defended the settlement as tough but one that "we're really pleased to have." "Despite the restrictions and the things in this settlement, having the uncertainty removed and the resource-drain removed we think is very positive, not only for Microsoft but for the industry," Gates said in an interview. "We're hopeful to get it put behind us."

I am sure they (microsoft) are convinced they have gotten away with massive Anti-Trust infringements that continue to impair the progress of technology. If Gates is happy, he has obviously won, I am not happy. Evil has prevailed. Do you in the Justice department actually feel good about this? I would hope that any reasonable self respecting and sentient being on this planet would see the err in these ways.

To: Microsoft ATR
Date: 11/16/01 10:02pm
Subject: settlement is ineffective

The agreement has been written up in many editorials, and they all agree,

1. It is easy to see how microsoft can get around almost all the restrictions
2. It is difficult to see how the government will enforce any of it (and more so given your poor track record—you're still coming to terms with issues that were current 6 years ago, and have not begun to look at what Microsoft has done in the last couple years).

Isn't an antitrust settlement supposed to do something concrete to rectify the situation when it's been found to be a problem (which it has)?

The Microsoft issue is like the railroads and the phone company—it's not just about a company or a self-contained industry. The

computer industry is arguably a large part of America's technological and economic leadership. The investigation HAS established that Microsoft has hurt competition—something that everyone in the computer industry already knows ...Microsoft is so dominant that people are afraid to even speak! By not fixing this situation you're hurting America's future.

Subject: Microsoft Settlement
Dear Department of Justice,

I am writing to express my unhappiness with your recent settlement of the Microsoft case. As a consumer, I am no better off than I was before. In fact, I am in worse shape. I no longer have any choice if I wish to purchase a personal computer (which is why I'm certain my next computer purchase will be a Mac)—I must buy the Microsoft operating system, preinstalled with Microsoft software. If I wish to continue using the software I prefer, I must uninstall all the Microsoft junk and install my own preferences.

This lack of choice is inherently unfair to consumers. If we wish to purchase a brand name machine, we are stuck with the deals struck by Microsoft. It would be preferable to purchase a machine with the operating system installed and allowing the consumer to make the decisions regarding software. Otherwise, I get the privilege of going to the additional expense of acquiring software I don't want or need—it's bad enough that consumers are being locked into an operating system that all but guarantees they'll be charge for upgrades they may not need. It is this lack of competition and choice that offends me about this settlement. The consumer has been discounted, the other software vendors have been discounted, and Microsoft continues to do business as usual. I am truly unsure about how this settlement reflects the findings of the court.

A future Mac customer,
Kassia Krozser

To: Microsoft ATR
Date: 11/16/01 10:02am
Subject: Caving in

Dear Department of Justice Anti-Trust against Microsoft: Microsoft should not exist as it does today. There should be 3 organizations:

1. Operating Systems
2. Productivity Software
3. Hardware

The three should be scattered to the wind as far as corporate headquarters go and have 0% communication. It bewilders me that the Bush Justice Department believes that Microsoft can be handled with an "oversight committee". They have ignored and disobeyed court orders in the past—what could possibly make you think they won't do

it again. Wait, Bill must have given you his word...you shouldn't put much faith in that.

Microsoft has destroyed competition. They have bullied their way into markets where they had no presence through the use of their operating system monopoly.

Examples:

1. How did the Microsoft Mouse become so popular??? They offered them at a steep discount to manufacturers who also installed their OS.

2. When did Word become soo popular?? I'll give you a hint: the same time Windows 3.1 came out. Why then do you ask? That's easy. There were system calls that Microsoft shared within its own corporation they did not share with outsiders. This made Word for Windows perform great in comparison with WordPerfect for Windows.

This administration has really gone after the bad guys in the terrorist networks...it should be lauded for that. However, it is ignoring the baddest guy in the corporate sector...and it should be called to the carpet for that.

At least the EU is still looking into this. Hopefully the Europeans have more spine than my own government and will stand up and take a chunk out of the biggest bully in the corporate sector in my lifetime.

Sincerely

Jared Heath

I am a computer professional with 31 years experience, mostly as a technology manager at a large (multi-billion) enterprise. My responsibilities include technology assessment, selection and procurement. I am also an individual user of Microsoft technology at home.

My professional experience with Microsoft has led me to the strong belief that Microsoft is the most arrogant, self-serving business I've ever come in contact with. Because of my long tenure in the technology field, I well remember IBM's behavior and overwhelming market dominance that led to the DOJ action against IBM. In my opinion, there is no comparison between the two. IBM's market position, while probably at least as strong as Microsoft, was not used by IBM to destroy competition or explicitly act to the detriment of customers. IBM was never as blatantly arrogant as Microsoft routinely is.

Microsoft has demonstrated and continues to demonstrate their total disregard for the

needs of their customers. Rather, Microsoft is clearly motivated solely by the cash-flow needs of its business model, which is fundamentally to force customers to purchase the same functionality over and over while blocking or destroying any other vendor from providing comparable functionality. To say that Microsoft's business practices are predatory is an understatement.

My strong recommendation is to impose the strongest possible ongoing constraints on Microsoft. The current remedies proposed are clearly inadequate. The breakup previously being discussed seems much more likely to protect consumers from Microsoft. Absent that kind of structural remedy, I see nothing to prevent Microsoft from continuing to pillage and plunder both the individual and business customer's pocketbook.

The settlement seems like it is far too little, far too late. Most of the practices that Microsoft would be restricted from engaging in are the ones that allowed Microsoft to gain its dominant Monopolistic position. Now that Microsoft has this position, it is engaging in other practices to maintain it.

Many of these tactics are still available to Microsoft. The continued availability of Windows XP in its current form is a complete flaunting of Anti-Trust regulations, and shows total disregard for the fact that Microsoft actually is a confirmed Monopoly.

In short, it appears that the government caved to Microsoft in the name of expediency to bolster the economy and boost consumer confidence in the wake of 911. Score one more for the monopolists of the world, and for the terrorists, who have successfully altered US behavior with their actions.

Hi, After having read through the anti-trust settlement proposed, I can only think that our government has been completely purchased by Microsoft. For every proposed penalty, there is a clause that gives Microsoft either power to change the penalty, or a clause which essentially makes the penalty null and void.

The marketplace only grows when competition is fostered. Microsoft in every instance, by its size alone, can crush any competition without regard for whether that competition's product or service is superior to Microsoft's competing product or service. Microsoft was found guilty of this behavior. Non Platform specific standards have been developed for every type of data transfer, Microsoft has always chosen to adopt all platform agnostic standards then through 'extending' them (Microsoft's term) turn them into standards which then only are accessible through Microsoft products or services.

Please reconsider this sham, and deal Microsoft a real punishment as you did to the Bell Telephone company back in the 70's and 80's.

Subject: Microsoft Settlement is

Unacceptable

DOJ: As an avid Microsoft product user and small business executive, I have learned to welcome Microsoft's innovative new products and at the same time be crippled by their anti-competitive behavior. I believe that the DOJ is continually ignoring one of the key findings of fact in this Microsoft case: Judge Jackson ruled, and the appellate court upheld, that Microsoft broke antitrust laws. The last corporation of Microsoft's size to do such a thing was AT&T with a \$1.8 billion dollar award to MCI in 1980 (after a ten year legal battle). AT&T was broken up, and the telecommunications landscape subsequently exploded with increasingly innovative and affordable products and services. Ubiquitous availability of cellular telephones and the Internet became available due to this ruling.

As for your behavior in the Microsoft case, I was appalled when I heard that you removed the "break-up" option from the negotiating table without extracting any concessions. While I personally think that a break-up was not warranted, you should be ashamed of yourselves as attorneys for giving something as valuable as that without getting a single thing in return. Remind me not to employ your services for any legal work in the future.

Moreover, Microsoft was proven in a court of law to be a monopoly. Even Republicans (such as myself) have to admit that there is no higher crime in the business world. Monopolies stifle competition, and innovations from smaller companies never make it to market. What if AT&T had not been severely penalized? Would we have cellular service like Sprint PCS, Voicemail, etc? Probably not. Would the Internet have been allowed to flourish if AT&T owned all

the local phone lines to the home? Again, probably not.

So in addition to being ashamed of yourselves for poor negotiating skills, you should ask yourself this question: what innovations will never make it to market in the next 5—20 years because Microsoft has not had to pay a penalty for its prior, monopolistic actions?

In short, I'm appalled at the DOJ settlement, I'm puzzled by your worthless negotiating tactics, and I'm saddened to think of all the future opportunities lost because of this settlement.

I just feel that I need to speak to someone about a problem I have with Microsoft. Due to security problems with Internet Explorer and Outlook, my company suggests that we use Netscape Communicator for email and surfing.

My company went out and purchased Microsoft Office 2001 for Mac and I had to install it on the my computer at work. The installation went fine, but when it came to registering the product with Microsoft, I got an error that no browser was installed. It asked if I wanted to install Internet Explorer now. I said no and I got a message stating that I could not register Microsoft Office until I install a browser. I had a browser installed but it wasn't theirs. I could not register my product and I am ineligible for program upgrades because I elect to use another web browser.

I understand that Republican politics will protect big business but this should not be allowed to continue. I use Microsoft products everyday and until I had this problem I didn't understand why people were so upset with Microsoft's business practices. Now I believe that Microsoft has become too big and even the federal government will have a tough time controlling them. If this happened to me on my one machine I can't imagine what companies trying to compete with Microsoft are facing.

Subject: Microsoft Anti-Trust

This anti-trust case against Microsoft is the most ridiculous and stupid cases I have ever heard of. Microsoft has been backbone of the PC industry since its inception. They have spent many billions of dollars in development to get to where they are today. Without Microsoft there would be no PC and there would be no Home or Industry use the Internet. They have done all of this and haven't burdened the consumer with their costs.

They don't force or encourage the consumer to use their Internet Explorer nor do they require the user to signup for MSN Internet Service.

The companies that are complaining have no basis for the complaint other than that they may be struggling due to bad management. I don't even understand why Sun Inc. is involved in this. Their boxes run the Unix operating system, and are expensive high-end computers used as Internet Servers and heavy duty CAD/CAM. Microsoft is no threat to them.

AOL Inc. is a scam operation. Their Internet Provider Service is a total rip off to the consumer. The service is the highest priced service in the market. It is also the worst service in the market. They use sneaky marketing tactics to lure the consumer to sign up for their service.

The latest one is 1000 hours of free service for up to 45 days. If you do the numbers, you will soon discover that the consumer cannot even begin to use this offering. Even if they could keep their computer online 24 hours a

day, the AOL service would not allow the continuous connection.

Real Audio is another scam. They try to entice to sign up for their expensive monthly service where they promise all kinds of exciting multi-media services. They only thing they give the consumer are a monthly bill and the opportunity to spend more hard earned money on unneeded overpriced junk software.

I think the people behind the new Linux operating system are just riding the band wagon. I'm sure they would love to learn how Microsoft does the things they do in their Windows products. In 10 or 20 years Linux may become a competitor but not to Microsoft. It will be competing with Unix.

If I were to decide this case, my decision would be to require all of the States involved to pay Microsoft's legal fees and close it.

If you really want to go after a company, go after AT&T again. They are currently creating a Monopoly in the Cable TV industry. An industry that has no competition and the consumer has no choice. The Justice Department should also take note that Microsoft is the only large company that didn't jump on the Sept 11 band wagon and fire thousands of workers.

I wish someone would resolve the issue that allows companies to operate with two sets of books (one for internal and one for the Government and the investor). The current so call accepted accounting procedures are allowing these companies to legally steal billions.

Enough said, thank you for the opportunity to voice my side.

Sincerely
Bob Peiffer

Subject: Microsoft Settlement

I understand the need to finish this case and move on, but should we do it without resolving anything? How many times does a company need to be taken to court for the same type of actions and each time be told to stop doing it? You're like the parents who say "No", but never back it up. No one learns from someone telling them, "Stop, and if you do it again, we're going to tell you to stop again!"

With Windows XP and the .NET strategy, it should be fairly obvious that Microsoft does NOT intend to stop anti-competitive practices. The .NET strategy alone is a complete step toward total domination on the internet. I can't imagine a world where Microsoft rules the net. This company can't even protect it's on servers from hackers and we're going to let them control commerce on the net?

If Microsoft had climbed into the position of being the dominate one because of better product or better business practices, that would be one thing. But, from the start, this company relied on lies and bullying to get where it is, and we just tell them to quit. Over and over again. As the world becomes even more dependent on the computer, we are only allowing Microsoft to completely monopolise the situation.

When you control 90% of the world's computers, you control competition. I don't care how competitive the tech world is, you can't compete with them. When Microsoft integrates products into their operating systems, only Microsoft wins. Most users, and this is their own fault, see that program there and use it because it's already there for them. Why go out and get competitors products if you can get it free from Microsoft, even if it is an inferior product? It's like NBC trying to run ads on CBS, it's not going to happen and Microsoft knows this.

The problem also is that Microsoft knows that the government will not do anything about it. Why stop what got you to the top, if there are no consequences?

Thanks for your time,

David Stanley

Microsoft will ignore this one and you will be back in court again. How many companies will have to lose value or go under because of Microsoft's practices before they are really punished? 10 years ago there were 3 companies producing DOS, multiple other OS's that could be used on a PC and plenty of applications for all OS's. Now, you just about have to use Windows in order to buy applications for use. Let's get back to multiple OS vendors, application vendors making their product for those OS's and a thriving tech industry, not one that is failing and is dependent on what Microsoft wants and steals

Date: 11/16/01 10:22am
Subject: Microsoft Settlement

To Whom It May Concern: The negotiated settlement between the DOJ and Microsoft is flawed. Microsoft in the past has violated previous negotiated settlements about bundling of products and its business practices with its OEM partners. Case in point:

Forcing OEM equipment manufactures to preinstall an OS on any new computer that

a consumer will purchase. This forces the Microsoft Windows Monopoly, by forcing consumers to buy a copy of Windows for their computer. What if that consumer has already purchased a legal copy of the Windows and their previous computer has suffered a catastrophic hardware failure. Does this void the Windows licensing agreement on the previous copy of Windows. No it does not. So when the consumer goes to purchase another machine from and OEM (i.e. Dell, Gateway, or any other third party OEM) they are forced to purchase another copy of Windows usually at a price of \$89 or more, and usually the consumer does not end up with the product CD. Instead the OEM bundles more products onto a recovery CD that has more Microsoft software and other software specifically for the machine purchased. So the consumer never sees a legitimate copy of the program for their own use on the purchase of a future system.

Another Case In Point:

Windows XP—has bundled with it a personal firewall, forced registration of the product or it automatically expires after 14 days, CD burning software, Internet explorer (what started this Antitrust action in the first place), mandatory registration for their new .NET PASSPORT Service (which could lead to Microsoft controlling the Internet and e-commerce), and other products.

So by continue to bundle products into Windows XP even during the Antitrust Action. Is this a sign of good faith by Microsoft to changes its business practices even during the time that they were under litigation with the DOJ and 18 States? I tell you NO IT IS NOT! This just proves that your settlement has signaled that Microsoft can and will continue to get away with abusing its business partners and consumers.

I urge the DOJ to force Microsoft to give up its windows source code as a permanent remedy. But allow Microsoft to be the technical advisor of an open source Windows Specs. to help guide software manufactures to develop a more stable, secure Windows platform.

Thank you

From: Walt Wilson
To: Microsoft ATR
Date: 11/16/01 10:23am
Subject: Settlement With Microsoft

So, again, we the people get the shaft while Microsoft retains the rights to the gold mine of unfair competition in the marketplace. We who struggle with the 'built in' software additions we do not want in favor of better or easier to use versions, because Microsoft has made them a required part of the Windows operating system. Now with the release of XP, unhampered by any intervention, we see more of the same intrusive nature of the company. This program requires you to register within 30 days of installation or it ceases to function. The bad part is, it does a complete inventory of your computer and reports all this back to Microsoft at the time it registers. My question is why? Why does Microsoft need to know everything I have on my computer?

The company continues to move ahead, now that you the Department of Justice have watered down the only chance that was open to do something for the consumers in our nation. I do not advocate taking Microsoft down. I do advocate forcing them to a level playing field when it comes to software and compatibility. Microsoft has promised for years to have all the bugs out of its operating system. It has yet to happen. But due to the pressure it exerts on the market, it continues to dominate, pushing out the possibility that others might have an equitable share, and present what might actually be a better alternative. Microsoft doesn't always have the best ideas or the best way to do things, but without restraint, it matters little as they will impose their ideas on us all.

Subject: Microsoft Penalty

From what I understand, the current penalties against Microsoft should be a bit stricter, as they don't adequately compensate for prior misdeeds or prevent future ones. One 'penalty' that would be effective in the future would be a requirement for a stripped-down operating system, which would enable OEMs and end-users a much greater choice among the products available from all sources. This would only require a much simpler, published specification from Microsoft (based on NT/Win2000 technology for stability, since the system kernel by necessity would have to be kept separate from application memory).

This would not require Microsoft to open its proprietary vault, only its doors to the trading floor.

To Whom it may Concern: I want to encourage your staff to seek stronger remedies for the case against MSFT. This company is out of control with the ability to leverage any amount of money, technology or people to sway the outcome in their favor. I work in high technology as a Consultant using MSFT products for over 12 years and have seen it for a long time coming. The way they killed off Dr. DOS by not letting Windows 3.1 load on it, it required that you rebuild a PC with MS DOS in order to add Windows 3.1, this was anti-competitive way before the browser war started.

The amount of \$\$ lost and complaints from my clients who felt I was ripping them off for the addition of MS DOS on their PC which already had Dr. DOS was the beginning of my dislike for the way MSFT corrals their users.

You cannot allow Microsoft to continue to bundle all the extra software for Audio, Video, Web sharing, Picture Editing, Word Processing etc etc as this harms the consumer by wiping out small companies that make good, viable products that MSFT identifies as valuable businesses and then adds the feature into Windows next release.

The harm is that many of those companies fail, their owners and workers lose their jobs, the economy suffers from unemployment and all the time MSFT just gets bigger and has more money than any other business in the world. To top it off, the licensing language for MS Windows lets them hide behind every word, eliminating their responsibility for making better, more secure software and instead allowing them to take away the software leaving you a heap of bills and no recourse for action against their poor designs.

If the Gov't isn't big enough to rein in this gorilla of technology then who in the marketplace will be able to do it. Not some smaller company or the average consumer, its up to the Gov't to earn their money and win this case. Don't you dare allow Bill Gates and his staff to lie in court, doctor video tapes and act like they "Oops" made a slight mistake in the trial. Those "Oops" mistakes are what find their way into our software and make it hard to fix. If MSFT had spent 1/2 the Court case money on fixing the errors in their products we would all be better off.

I wholly stand behind the states that are holding out for more penalties and restrictions. MSFT must be reined in, and they Must pay Fines and maybe even a class

action suit for the way they added Internet Explorer to Windows 95 and made it so that you couldnt reload to fix a damaged Windows 95 install but instead had to go out and buy a newer Windows version in order to fix the older version.

If you would like more info on my experiences with the poor attention to detail and slack way of improving their products please call me or reply here asking for more details, this company cannot be allowed to get off cheaply or without new controls in place to prevent this from continuing longer. We will all suffer if we let them steamroll over us.

 Subject: Microsoft antitrust settlement

When determining an appropriate penalty, please remember that Microsoft's practices have harmed consumers and actually damaged the economy through reduced purchase options.

Whatever remedy is approved simply must ensure that the company cannot repeat it's monopolistic behavior. The company has repeatedly demonstrated it's total disdain for the legal system and (as displayed by the current version, Windows XP) it's intention to continue it's illegal practices through bundled software and leveraged control of third-party products. The proposed remedy does not accomplish this.

In the end, additionally, the penalty must address the consumer damages as well. I personally own multiple copies of Microsoft operating systems and office products. I had no choice in my purchases in order to ensure compatibility between my home workstations and my office (U.S. Government) workstation. Cheaper, faster, better options exist—but the Microsoft monopoly left me no choices and required that I spend additional funds. A rebate to consumers who can present valid licenses (which should be simple to track thanks to Microsoft's anti-privacy programs) would be appropriate. Such a rebate should not be in the form of credits toward further purchases of Microsoft products as that would only further enhance their domination.

Thank you.

 Subject: Antitrust

I do not believe Microsoft has been properly chastened for their monopolistic tendencies. All over the web, there are copies of actual MS memos debasing Linux and other operating systems as inferior. They tout their products as the "best", yet the very same software is fraught with security issues that have lead to the loss of billions of dollars through destructive worms and viruses.

There is a joke in the tech community about the famous BSOD—the Blue Screen of Death. This has frustrated millions of users ever since Windows 95 was released.

Microsoft makes itself the only option available to new computer users whenever they purchase computers from every single major computer manufacturer in the world. If the correlation between such wide usage and security issues were the only issues, that in itself should be sufficient for further investigation. Why do they insist on coercing everyone to use things that are widely known to be inherently unstable, while excluding external solutions from other software manufacturers?

We wouldn't have all these problems if people simply had more of a choice, an alternative to the bloated, unstable, and unsecure operating system which is forced on them when they turn on their brand new computers. These are all valid concerns, but they are the only the tip of the iceberg.

Sincerely,
 Brian Schulz

MTC-00000479

From: Rich and Deb Sensale
 To: Microsoft ATR
 Date: 11/16/01 10:39am
 Subject: Settlement?

Hello. I have been involved in the computer industry in many capacities for over 20 years. During that time, I have seen Microsoft go from a small garage company, to the giant behemoth it is today. The one constant about how this company has operated over the years seems to be their complete lack of ethics when dealing with consumers and other companies.

The Netscape browser killing was just one relatively small example of how they use their corporate advantage as a monopoly to threaten, beat down, and generally intimidate other companies into their way of thinking. Small startups with novel and innovative approaches are often squashed under their giant corporate feet. As for consumers, well, the Microsoft strategy for success seems to go something like this.

a. Design an operating system or product with a lot of major and annoying bugs.

b. Issue some bug fixes that fix a few of them, and charge a hefty sum for any meaningful kind of technical support.

c. Make sure you ONLY give good support to people who pay a premium for it.

d. After a while, put together a "new" version of that OS with all the bug fixes installed and a few minor alterations, and sell it as a completely new operating system, at a good high price.

e. Go back to step a.

Microsoft relies on the fact that in our country, there is actually no accountability held for software companies to ensure the quality of their product. Their included liscense agreement states that if you do not agree with it, you should return the software for a refund. Well have you ever tried to return opened software for a refund? You can't! No place I have ever bought software allows you to return an opened package. And if something does not work on your machine, you are out the money you paid and the time you wasted.

A proper penalty for MS would be one that actually is a penalty. Up til now MS has shown that the slap on the wrist approach is both a waste of time and money.

It angers me when I see a settlement like the one proposed by the DOJ and remaining states. It is not penalty at all and will do absolutely nothing to dissuade MS from carrying on bad business as usual.

Here are a few suggestions for what might actually improve the situation and the industry in general.

1. Break up MS, but not into 2 seperate companies who don't compete with each other. Seperate it into 3-4 companies, each company maintaining the rights to all of their software. This effectively puts all of these baby bills into direct competition with each other and the rest of the industry.

2. Make MS release all source code to the public domain. Windows, Word, you name it. Get some REAL competition going.

3. HEAVY financial penalties.

4. If the company ever acts in the same manner again, put them under receivership.

MS has been found guilty of criminal monopolistic behavior, they need to be punished, not rewarded. The Justice sitting on this case has to get over the politics and back room dealings and do some serious damage to show that this administration, the DOJ and the Courts do not allow this sort of criminal behavior to go unpunished. Im not sure what happened over at the DOJ between Clinton and Gerokey boy, but it doesnt seem to be very good. Politics should not enter into this sort of case. The government has spent millions of tax dollars to end the MS criminal behavior, they should end it, not just slap em on the little finger and say play nice. The things MS has done requires drastic action, the more drastic, the better.

Sincerely
 Rich Sensale

 Subject: Comment—Microsoft AT Trial

I'm deeply disappointed in the settlement of the governments case against Microsoft.

Microsoft's practices have rendered competition ineffective when trying to compete with such a dominant company.

Microsoft continually strikes "agreements" wherein they prevent companies from even using a competitor's product. Including products that are 'just good enough' often prevents a better product from gaining support. Time and time again Microsoft has "updated" their own software only to render a competitor's product useless.

Internet Explorer is a prime example. The web was created with universal standards in mind. Microsoft has continually hijacked these standards and changed them so that they only work with their own software. Often, when unable to compete on a product level Microsoft simply buys a competitor and then includes the product in the next release of Windows for free.

I feel that in the future the government is going to have to address this issue again at more expense to the taxpayer. How dominant must Microsoft be before the government realizes what is going on?

 Subject: Microsoft Settlement

Well, here is my opinion, just remember, you asked for it.

Should we really bite the hand that feeds us? How many people, companies, and organizations involved in the persecution of Microsoft use their products? I would be willing to bet most of them use them, if not at work, then at home.

Do you use Microsoft products? Is it because you are forced to, or simply because you like the product? People don't buy and use Microsoft products because they are the only choice; they buy them because they are the best choice. If you don't want to use the email program, the music player, or the messenger program that is included with Windows, then you simply choose not to install them when you install Windows. You do have that option. Granted that the software is pre-installed on bundled systems in the store, but the disks do come with the system. You can customize your installation by uninstalling certain things, or you can simply wipe it all off the hard drive and do a new installation, then only installing the things you want. Or, you can wipe it all off your hard drive and install a completely different operating system if you would like. Or, you can buy your computer somewhere that builds the systems so you're not getting a "package deal" with software you do not want. The truth is that the options are out there, but the general population does not know how to do these things. So, should we fault Microsoft for the lack of knowledge of the average Joe? I don't think so.

This whole thing has been a pathetic waste of time and tax dollars. And most of all it is an insult to the American people. We make our own choices; we are not simply a group of robots marching to the beat

Subject: Comments on Microsoft settlement.

The biggest problem with your settlement is that it does not deal with anti competitive behavior such as

(1) Windows XP released recently contains a free music player that will not play standard music files but will play Microsoft's proprietary format. For a \$40 upgrade, you can get one that plays standard formats. The music industry does not need another format, but rather Microsoft is only trying to force the industry to adopt its proprietary format. This is similar to the problems Microsoft caused with Sun and Java a couple of years back. This is also similar to the browser wars where a FREE internet explorer was released on the net. Microsoft used the proceeds from the operating system and office tools to fund a free browser. This browser still causes all kind of problems as it does not always adhere to HTML and other standards. Another example is MS Office is now the standard in industry, but Microsoft controls the data format. Companies make converters, but all Microsoft has to do is upgrade the data format and these companies are forced to update their software. Microsoft prevents companies from competing by owning the data format that is the industry standard.

Solution 1: Split the company into a operating system company and a software product company. Don't allow them to play these games. You can't regulate them when they go their own way and innovate new Microsoft standards. You see the US government has not yet got into regulating HTML standards, music file standards, etc... And they probably should not. But if you let Microsoft operate as is it will work to make Microsoft controlled formats as the new standard.

Solution 2: The US government will need to regulate all data formats and control these standards. Yuk.

(2) Windows XP that was recently released costs as much as \$199. MacOS X which was also released recently costs \$99. Apple has a much smaller market so thus they do not get the benefits of the economy of scale that Microsoft does. So why does it cost twice as much? Well the answer is that Microsoft is price gouging. They also charge excessively for MS Office. My company since it works with others in the industry must always upgrade these tools at whatever cost Microsoft is willing to charge. For new applications that are not well accepted Microsoft then gives these away free since the other parts of the company easily funds these. Microsoft recently started a huge ad campaign to hype the new XP software. Why do they need to spend more money on hyping the new operating system than all of Apple makes on profits from its operating system? The answer is that the performance and features do not entice people to upgrade. Microsoft benefits by getting a large percentage of users to upgrade, thus making it the new standard. Then the more reluctant and cost conscious companies will be forced to upgrade for compatibility reasons.

Solution 1: Split the company into three companies: operating system, office, and

other tools. This will prevent price gouging from financing other new tools.

Solution 2: Have the US government regulate the prices of Microsoft tools.

(3) Recently someone I knew purchased a Microsoft mouse. He wanted to register the hardware purchase so that the warranty was usable. What he found out is that he was required to have a Passport account at Microsoft in order to register the software. (Once again Microsoft forcing people that use one component of Microsoft to use another). My friend did not want to have his personal information placed in this system as it is used by Microsoft for things other than warranty. So should he not get refunded for the portion of the product that is associated with warranty costs. If he works for a company that needs microsoft tools, then he will not complain with fear of reprisals.

Solution 1: Microsoft needs consultants/monitors within Microsoft walls watching for bad business practices and putting in place fair means for fixing these problems.

These are a few of my comments. I still think a break-up is the best way to deal with Microsoft. I don't think that the Appeal court over turning the previous ruling to split was issued because it thought a split was out of the question, but rather that the previous Judge was biased.

Thanks for soliciting input.

Subject: Microsoft did nothing wrong!

Yes Microsoft flexed its muscle and made competitors play according to their rules but that is only because everybody wanted to be associated with what THEY created! You should not be penalizing a company because it was ultimately successful unless you publish guidelines that tell other up and coming companies that you are doing great and achieving the American dream as long as you do get to ?XXX? level of success. At the very least, it is unconceivable that you would limit what the company can put into its own product. Can't you see how asinine that is telling a company what it can and cannot produce?

Sincerely,

Paul Strauss

Subject: Settlement is totally inadequate

To whom it may concern,

I would like to voice my opinion that the proposed settlement with Microsoft falls far short of what is needed to remedy Microsofts anti-competitive practices. I have worked in the Information Services industry for over 15 years and have experienced first hand the types of issues this settlement is supposed to address. As both a professional, and home, user of Microsoft products including

Windows 3.1, 95, 98, 2000 Professional and Server, NT 3.x and 4.0, I have seen an ever increasing tendency for competitor software to run slower or unreliably, as well as a "you have to do" thrust to these operating systems.

You only have to look to the Active Directory implementation in Win2000 to see an example of the latter. I am required to to implement a Microsoft DNS service in order to deploy Active Directory. This is an absolutely ridiculous requirement as companies, people, etc. have been able to run DNS services on other operating systems for ages without causing an issue for other operating systems or software.

Now Microsoft forces the issue by making it a key component of their latest OS while at the same time "end of lifing" prior operating systems that did not have this requirement.

And regarding the first point about Microsoft OSs being "unfavorable" to competitor software. The examples are endless, there is a wealth of research to draw upon, this case examined a number of these and you have experts testimony to support you. I simply wish to note that my first-hand experiance indicate that these claims are true.

I continue to be absolutely dumb-founded that given the wealth of evidence, prior rulings, and Microsoft's history, that you are actually proposing this settlement.

Now, please be aware that I have also built two corporate infrastructures based on Microsoft operating systems and software over the last 4 years and recognize the quality of their products. The issue here is not the quality of the products but rather the right to chose, and not to be penalized or inhibited when that choice is not in Microsoft's favor. Please reconsider this settlement and make the necessary adjustments to protect both the corporate and casual consumer, as well as maintaining a competitive industry.

Date: 11/16/01 10:45am

Subject: Dear Sir,

Dear Sir,

I am writing to tell you what I think of the Microsoft antitrust settlement that has been proposed. Basically, I think it is a complete sell out of everything for which the Dept. of Justice is supposed to stand. Individuals and small companies look to the government to protect them from large corporations. It is the duty of the government to assure that there is a fair marketplace, where no company can become so powerful that it no longer need to compete but can simply leverage its existing power to dominate emerging markets.

The settlement that DOJ has agreed to may or may not stop MS from committing more crimes in the future, but there is no reason to believe that it deprives MS of it's ill gotten gain. If MS were guilty of murder, the DOJ effectively made MS promise not to kill anybody for the next five years. If they do kill someone in that time, then they aren't allowed to kill anyone for two more years.

The OJ Simpson case answered the question, "How much money does a man need to get away with murder?" This case answers the question, "How big does a company need to be to buy off a presidential administration?"

From: Hayden, Brian
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/16/01 10:48am
Subject: Microsoft settlement

Let me explain my position before my assessment of the settlement. I am a professional software developer and manager, who has worked with Microsoft tools, products, and their business practices since the early 1980's.

I have at times worked very closely with their developer support and client support organizations. I have hired Microsoft consultants to aid my development teams. I am currently working with Microsoft tools, platforms and services, and I fully expect to continue some form of business relationship in the future. I admit that I have a love/hate relationship with Microsoft. I have first hand experience of Microsoft business practices, good and bad. example: In the early 1990's, my software development team was having a problem using a new 'standard' feature in the latest version of MS windows (at that time). My team spent 2-3 weeks working with Microsoft and paying support fees to get aid to resolve the problem. Microsoft kept using 'But, its works correctly in the latest MS-Office, doesn't it?'. Yes it did. Another week of effort buy one of my engineers discovered that MS-office was NOT using the functionality provided by the OS, it was using functionality built directly within MS-Office. Another call to MS effectively got the response of: 'Oh well, you got us. It doesn't really work for you, you can't make it work. That's why the Ms-Office engineers went to OS engineers, got the basic functionality and made it work, just for Office. Too Bad. So, what are you going to do about it?'

Since that day, I have always reviewed Microsoft with a cautious perspective. Since that day, Microsoft has gotten even worse about lying, predatory and illegal business practices. Business practices that are so illegal and wide scope, that the Justice Department felt it necessary to TWICE take Microsoft to federal court for their conduct. Twice, the DOJ has proven their case. Microsoft has been proven to be a monopoly that has illegally used their position to hurt competitors and illegally entrench their position. Twice, the DOJ has totally caved-in at the penalty process. The proposed solutions are totally inadequate to stop Microsoft from further illegal business practices. Actually, the proposed penalties are rewarding Microsoft for their prior illegal behavior, and actually allows them to continue those illegal behaviors into the future.

Please reconsider the proposed penalties. By a decision of the Supreme Court, Microsoft is a monopoly that has illegally hurt competitors and consumers.

Please make me believe that the DOJ represents the interests of all people in a

balanced fashion, not just the interests of the wealthy and powerful individuals and corporations. The choice is yours. I, as a consumer actually fear Microsoft. The last two years gave me hope. Now, I have little hope left.

Subject: Anti-Trust Settlement Response

To Whom it May Concern:

I must voice my extreme disappointment and disagreement with the DOJ settlement proposal for the Microsoft Corporation Anti-Trust case. After reading the settlement documentation, it remains apparent that large amounts of leway still exist (especially when using 'technological terms' in a legal document) that will allow Microsoft to continue its monopolistic practices. Let's be honest; do we all really believe that Microsoft would be so quick (and willing) to accept this settlement if it wouldn't benefit them in some manner? I propose that this settlement be discarded in favor of a 'more educated' and 'technically savvy' settlement proposal. A panel must be formed to review what needs to be accomplished. This panel must include current industry leaders (both proprietary and Open Source markets) to ensure that the DOJ truly UNDERSTANDS what technical requirements to include in the settlement's legal documentation, and how to ensure that Microsoft is not given sufficient room to continue monopolistic practices that suppress and hinder other information technology entities. Therefore, please tally my rejection of the current settlement in its present form.

Subject: Microsoft Settlement

I have worked with and against Microsoft for over 10 years. I have cheered for them and rooted for the opposition against them. The agreement that you are proposing does nothing to eliminate the negative impact that Microsoft is having on my daily life. They are a different company from five years ago. Today, they impact my daily life negatively. They have a monopoly that is impacting me, a consumer, in the following ways:

(1) Every PC that ships from a PC manufacturer today carries the burden of a Microsoft operating system charge—even if the PC should come loaded with Linux. PC's can not become cheaper because as the price of hardware has fallen, the Microsoft PC operating system has become more and more expensive, or a larger percentage of the investment that I make in a solution for home and business. Try calling Dell and getting a quote for a hardware with and without Microsoft and see if you can tell how much they are paying.....(they won't quote it)

(2) Inferior products. Compare Microsoft Word and other word processing products that have attempted to take Microsoft on. Many are superior products with better usability and lower prices. But because every PC today ships with Word, Excell, Powerpoint, etc...I can not utilize these products. Their market share is reduced to microscopic levels and I have to pay over 450 dollars (new) for a set of "productivity" applications, that should only cost 100 dollars. I have looked at Word 2000 and grimace at learning again, a new set of rules, popups, preferences and concepts that should have nothing to do with typing a simple letter. Word is no longer easy to use—it is a monolithic, feature packed, monopolistically priced software package that needs competition in the market place....(that can only be provided with a level playing field).

(3) Unwritten collusion between Microsoft and PC Manufacturers. Oh, I am not saying that they get in a smoke filled room and decide what to do, but their destinies are so tightly linked as not to require a spoke word. It is understood that new applications should require more hardware and constant consumer upgrades of hardware every two years to keep pace with Microsoft's "imbedding" of many useless features. Upgrading between OS's should be so hard as to make it simpler and more cost effective to put out 1000 dollars to get one "preinstalled"...

(4) Imbedding of software that I have no control over and threatens my day-to-day privacy. Why does it have to be so hard to "not" use Microsoft imbedded functionality. Software providers like "Gator" get ripped in the press when their software takes over their computer (and rightfully so), but I have alternatives to their software. I have no alternative to Microsoft that is based on a "make money" model. Some would say Linux—but hey, if there isn't a profitable business plan behind the software, let's not kid ourselves—it isn't viable for consumers or business'. I WILL NEVER GIVE MICROSOFT MY CREDIT CARD NUMBER.

(5) Two weeks ago, after asking Microsoft to never release any information about me to anyone—I get a spam mail from their MSN network—unsolicited and unwanted. I requested that they forward the document to me where I accepted their offer for SPAM—no reply. Microsoft will trample on my freedoms to make a buck—sorry, can't buy their stock. May I die poor but unhumbled. Remember the past when there was competition:

Let's not forget what it used to be like when there was competition in the market:

(1) System upgrades were few and far between and fix packs were the normal course of business and considered part of the "cost of doing business". Today when it is easier to download upgrades with less human effort (ie higher productivity for the software manufacturers), why is it that more upgrades are required in shorter periods of time.

(2) Applications were written to be fast and tight with quick response time. Consideration was given to backward compatibility to run the consumers' ages old application packages. Who can argue that the 3270 data stream wasn't one of the most open standards of all time. IBM kept that stream unmodified for 20 years and fought back competition the whole time—today Microsoft changes its standards rather than competing with more creative ideas and better usability.

(3) Minimized cost of training. Since application packages were supported longer, the consumer didn't have to "waste time" every two years relearning an application.

(4) Choice—Oh my God, I had choice just a few years ago. DOS, Windows 3.1, 05/2, Windows NT, Unix, thin clients, etc....Now even the ol' DOS support is gone....I wonder how much longer Unix on the client is left for this world? Remember when crash protection was a selling feature that kept OS/2 at 10 to 15% market share with the only real usage in the business market. Linux long term doesn't have a chance unless it can be "preloaded" at the manufacturing site and gain market share...can't do that with your agreements.

(5) Fun reading the trade press—boy is it boring today. Used to be fun to pick up the press and read about who had what vision for the future on the client. Gee, now all I read about are a few "middleware" vendors worrying about their market share, not concerned with dramatic changes in the industry.....Palm OS isn't long for this world. Microsoft will leverage the same monopolistic power to drive them out of business.....the tie between applications and OS. Of course there were downsides—but I believe in the free market system, free enterprise and the busting up of monopolies like AT&T. Please get back on task and make life more interesting, less costly and more fun by providing an environment where Microsoft, IBM, Oracle, Dell, Compaq, HP, Real Networks all have to compete on an open playing field. May it be an environment where the most creative and daring can win, not where the one with the most money and control can force an inferior, less usable, less stable product on me every two years for another couple hundred bucks.

Sincerely

Peter E. Greulich

Subject: Microsoft settlement

The planned settlement in the Microsoft Antitrust case is completely inappropriate for a company that has repeatedly demonstrated its unwillingness to abide by the law. You are dealing with a Robber Baron mentality, and must react accordingly. Frankly, the proposed government settlement looks like a "sell out". Nothing short of releasing the Win32 code into the public domain will do, and even if that were done it would be necessary to prevent Microsoft from introducing proprietary changes to the code.

I feel the States and the US Government were wrong in pursuing Microsoft in an antitrust case. I think that any company, i.e., Dell, Compaq, HP or others who used Microsoft products should have been part of this sham of a lawsuit. Hey, they accepted the limits Microsoft put on them using their products and made a ton of money. If I can't match or exceed my competitor then I need to find another line of work. Crying about unfair practices is just plain "I can't make it on my own and I need you to stop them so I can catch up". You are penalizing Microsoft because they have researched and developed a dream of Bill Gates. I believe that the US Government and the States involved are the ones that are stifling competition. If Sun Microsystems or those other companies can't hire intelligent and forward thinkers to advance their product then let them go out of business! I don't have to buy Microsoft! I choose to do so.

Subject: I know this is pointless . . .

I know this is pointless, as this is likely to simply be deleted, but I thought I might add my two cents worth. I am a small business owner and Network Engineer. I have personally been harmed by Microsoft's iron handed methods. I'd like to share a few with you.

When Windows ME was due out, the beta ran perfectly fine with the NetWare client v3.3 available at the time. But the day of release, the client was found to be incapable of working with TCP protocol. Do you know what kind of black eye I took when suddenly it was discovered that new PCs that shipped with ME couldn't be used on our network? This was obviously kill code. The problem still exists today.

Or how about the way the OEM agreement works. If you buy a computer from me, I pay \$5 less for Windows than retail. But when something breaks, I am the one that is responsible for support. You can't call MS at all. You have absolutely no support from them. My five dollar profit is suppose to pay for that support, even though I don't have the right to make a single support call to MS myself.

Or how about this one. When I do an install, I get an install of Outlook Express no matter what I do. I can't change that option during the OEM install. And if I don't do the OEM install, I can't install products like OEM Office 2000. But that install make me vulnerable to all the Melissa variants, and will kill my GroupWise client. Legally I can't fix it. How stupid does that make me look when my PCs always show up needed further work before they're network ready?

When I saw that you guys were winning the case, I was overjoyed. I thought there was finally going to be something done. They you caved in. You sold me out. Your solution is a joke. Now the same events are going on with Windows 2000 and XP. Installing live update on a Windows 2000 machine will kill Adaptec Easy CD Creator software. But that's ok. Installing Windows XP gives you free CD master software, so you don't have to install Adaptec. Sound familiar?

You've fixed nothing. You've helped no one. In fact, you've only made it worse. Now they know that you're spineless and toothless. You've failed the people you were hired to protect. I don't know what idiot thought selling me out was a good idea. I'm sure in proper government fashion the list is long and feeds back on itself at several points. But I hope you know what you've done. My business is closing next month. Given the choice of being a Microsoft shop or going out of business * my choice is clear. And in the current environment, selling Novell is hopeless.

Thanks for nothing.

Subject: Microsoft Case

I've been thinking about this whole anti-trust thing and I've come to the conclusion that this is one case that should never, and I mean never been brought to trial. I am not now nor have I ever been an employee of Microsoft, but a consumer that feels that Microsoft has been given a raw deal. If other companies cannot create a product competitive to the product Microsoft offers, that is not Microsoft's fault, now is it? If Netscape had the ability to come out with a product similar that they could have bundled their Navigator software with, they could have done so and then could have competed with Microsoft for the PC Operating System business. But nooooo, these other companies chose instead to ask the government to sue Microsoft.

Please, Mr. Ashcroft, I was thrilled when President Bush chose you as Attorney

General, now, please, do the right thing, and drop all the charges against Microsoft.

Subject: Microsoft Settlement

I you have sold out the computer using populous with this decision. You have actually accomplishing nothing except using the taxpayers money. The limited restrictions and lack of penalties you have placed on Microsoft will not stop them from continuing to try to dominate the industry, as a case in point look at the Win2000 issues and how much that slowed them up. They can BUY anyone not cooperating with them or just give stuff away to their competition and by the time anyone can react the damage is done just like WinXp.

I am very disappointed in how this entire thing was handled including letting the "buy-out" some of the states . . . that was utterly disgusting. I am very disappointed in what the DOJ managed to accomplish. The cost/benefit ratio was way over on the side of Microsoft on this one. The DOJ could have saved the taxpayers a lot of money by just letting Microsoft have their way, they will anyway.

Thank you for providing a place for people to have their say.

Subject: Strongly Disagree with Settlement

I strongly disagree with the action of the Justice Department in settling the anti-trust case with Microsoft. The settlement is inadequate; the company will be able to bypass many of the sanctions because of vague language (refer to Associated Press article by Ted Bridis). I feel that Microsoft might use the exemption to keep secret any information that might violate the security of anti-piracy technology to hide details about many of its products. Any criminal penalties and civil fines that the Department of Justice might seek if the company violates the 3deal2 will be too weak and ineffective given the size and monetary resources of Microsoft. I can only hope that U.S. District Judge Colleen Kollar-Kotelly will impose tougher penalties during hearings in February. Perhaps she will have the foresight of Judge Stanley Sporkin who scrapped a Microsoft settlement in the 1995 case. Like him, I strongly believe that the proposed settlement is not in the public interest.

In the 1995 settlement the Justice Department promised that it would "end Microsoft's unlawful practices that restrain trade and perpetuate its monopoly power." Microsoft to this date has not backed down

from its arrogant and deceitful practices. I believe that the Justice Department is simply telling Microsoft to 3go forth and sin no more.² This does little or nothing to address the unfair advantage it has already gained and continues to exert.

Microsoft is the schoolyard bully that will not be persuaded by moral arguments, but must be sent to reform school before a calm learning environment can be restored. The penalty in this case must not only suit the crime, but must be in direct proportion to the size and stature of the offender. A slap on the wrist is not suitable.

Please do not settle with Microsoft.

Subject: Microsoft Settlement
Something needs to be done about how Microsoft treats competing software

companies. If Microsoft sees something that it thinks would add benefit then it adds it to it's operating system rather than selling it as an add on. With every new release Microsoft add features from companies that they have no business adding to the Operating system. The Operating system should be a base to be added to, let them define the base then stick with it so other companies that come up with a good idea do not get run out of business because Microsoft decided to add it to the operating system. Even breaking the company up will not solve these problems, they need to have a clear guideline as to what the 'Operating System' is and what it can have. That would be the only way to prevent them from doing this kind of behavior.

Subject: Microsoft Settlement

Dear Sir or Madam,

Thank you for the opportunity to comment on the November 2 settlement between the Department of Justice and Microsoft.

I believe the settlement is not in the best interests of the computer industry nor in those of the public which they serve. The terms of the settlement often appear to be so vague as to be unenforceable.

I am a software engineer with 20 years experience, and I believe that this does nothing to deal with Microsoft's monopoly on PC operating systems. I personally believe the only solution is for Microsoft to be split into two separate companies. One for Operating Systems and another one for applications.

However, absent that remedy, I believe that there is a worthwhile compromise available, and in essence, it is the position espoused by the Open Software Group. The country will be best served, and business interests will not be harmed, if, as a matter of course, all computer components, whether they are hardware or software, have a required minimum of "behaviors and requirements" publicly stated. Computer specialists with interests to protect will always have clever, superficially plausible defenses for their own

"proprietary approach." However, with respect to the interaction of components, regardless of vendor, this should be based upon an "open approach." Therein lies to pathway to the greatest benefit for the greatest number.

Thank you for your attention.

Sincerely,
Steven Rimicci

Subject: My Comments

1. Americans have a very short Memory—and so does the DOJ—Case in point—you all forgot just how monopolistic IBM is and has been in the past!

2. The amount of money wasted in this entire travesty should be an embarrassment to the United States Government and the companies that chose to start this mess. Had they all put there money where their hollow words have gone, they could have built a better 'mouse trap' and thus put competition in place.

3. I have yet to see any compelling evidence on how the "consumer" has been harmed.

4. Shame on Microsoft's representation early in this mess for the Internet Explorer was NEVER part of Windows 95. It was something you had to buy and add on to the original product!! And shame on the DOJ for being so naYve in computers and software to believe that the Internet Explorer was an integral part of Windows 95!!

5. Last, you should punish Bill Gates for his stupidity, but not the very innovative workers. Microsoft has gone out of its' way to ensure that companies could write software compatible with its' software!! The amount of documentation readily available from Microsoft is staggering and yet the naive folks at the DOJ and the 18 States that don't have a clue don't seem to comprehend this fact. Hey, look at Apple, you want something that is obsolete every time Apple rolls out a new version of their MAC OS, then go buy a MAC! You and zero compatibility, go buy LINUX and just see how far you get from one release to the next!! The DOJ really needs to move into the 22 Century and quite acting knowledgeable about things the DOJ doesn't have a clue about!

SHAME ON YOU ALL for wasting my tax dollars!!!!!!!!!!!!!!!!!!!!!!

MTC-00000502

From: Oscar Vela
To: Microsoft ATR
Date: 11/16/01 11:09am
Subject: Penalties NOT sufficient to change Microsoft's tactics with smaller

innovative companies

The government has missed another chance to protect its people and business (especially small and medium sized companies) from unfair practices used by Microsoft since the 1980's. For instance, their operating system updates/upgrades over the years have rarely added added value to their product upgrades. Much of their upgrades have been software fixes from the previous versions with little to offer except cosmetic changes.

For example, their only major change (from Windows 3.1 to Windows 93) was to take the Apple Macintosh GUI system and use it as an upgrade of their OS. This company rarely innovates. It prefers to buy, if not outright copy software, from its competitors and call it its own. It pressures companies to do join their effort or be stamped out. It muscle computer hardware companies not to use any other operating system unless, it lose its license or a cut in the price of the Microsoft's OS. The remedies recommended by the government at this time do not do enough to change Microsoft's way of doing its anti competitive business practices.

Please do the right thing for the majority of people in this nation. . . . Take a stronger stand against what Microsoft has done and will continue to do.

Thanks, Oscar Vela

To whom it may concern:

I propose the most lenient stance against Microsoft. The states that do not want to go with the Federally proposed compromises do not represent me. Microsoft has, if anything, made my job easier. Their combination of products are put together to improve productivity. Would you buy a car without all the parts in it that make it do what you want to do with it??? Are you going to make GM give customers the option of putting a Ford engine in them???

Microsoft monopoly is on brain power. They are known in the tech industry as being one of the best places to work. They don't hire programmers necessarily. They hire thinkers. They even (legend has it) have a series of brain teasers (or puzzles) to determine whether you are the type of thinker they need. Their superiority comes not from a deliberate attempt (though they have done some things questionable like forcing use of the browser) to be a monopoly. It comes from their hard work in the wake of all their competitors' failure to innovate.

I have tried the browsers. Netscape has problems because they fail to meet standards. IE succeeds because it complies to standards (and standards are created by the ISO-which Microsoft cannot control). An operating system, by itself is useless. A lot of programs are over-priced to the point the consumer cannot afford them. The browser (being built in) gives the consumer the ability to gain immediately gain access to the internet. Without it, more trips to the store and more money has to be spent. You have to hope you

get a browser that is compatible with your system. I have seen cases where they are not!!!!!! You have to get it installed, get the disk for an ISP, etc, etc. How does this benefit the consumer???? With Microsoft, they give you the browser, and with its setup, the ability to connect up (immediately) to one of many ISPs they have available (and it shows Microsoft's competitors to their MSN service! !!!!

I also am afraid of the economic fallout of carrying this lawsuit too far. The tech sectors stocks get affected by the stock prices of companies that are leaders like Microsoft. I guarantee you that the stock of the tech sector will fall greatly if Microsoft is ever broken up or punished too severely. Microsoft is not laying off (unlike the very same companies that are against Microsoft). They bring a lot of money into the economy. And, they do not do as other tech companies have done, i.e. move their programming tasks to foreign entities like India. If you were a programmer with your own company and put the effort you are putting into this lawsuit, into your programming company, you would do the things Microsoft has done, and that is innovate.

Microsoft affects my job. Their stable platform keeps my job easier. I dont have to debug their operating system to get my programs working. I guarantee you that I could not say the same thing about their competitors. The browser, in my opinion should be part of the operating system. They designed it to be stable. I use it, more often that not in my job, I sometimes use Netscape to see how badly the online banking code, that my company writes, is mauled by the errors that are in Netscape (and I do see a lot of problems in Netscape).

In conclusion, this lawsuit does not protect the consumer. It protects some special interest groups who are for the competitors of Microsoft. If Microsoft is a monopoly, so is Ford, and GM, etc, etc.

Subject: Some Settlement.

US DOJ,

You caved-in to a monopolist and, as a result, are rewarding that monopolist for abusing its monopoly power ... something it continues (and now will continue) to do.

Your "penalties" are weaker than what was rejected last year as unacceptable ... while you "pressed" ahead with your case against Microsoft. How, in good conscience, can you put the spin on this that it's the right thing to do and is good for consumers? Hogwash. Now, with the terrorist activity that has recently occurred, you decide that Microsoft is below your bar for attention ... and you're just trying to get rid of it now. This makes it expedient for you.

You've done the public ... and industry ... a tremendous disservice by the "settlement" you've reached. The ONLY winner here is Microsoft ... the public and industry loses ... and your credibility concerning the ability to handle monopolists (esp when that

monopolist has as much money and as much bought influence as Microsoft has) is severely strained.

MS will continue to grow ... continue to use its market power to plow under competitors ... and reduce consumer choice. And you've helped to keep them there, despite the opportunity to help. You've gone pennywise and pounds foolish here ... your big (long term) picture doesn't really include the consumer. You've let politics interfere with a judicial process and, as a result, let all consumers and competitors (present and future/potential) down. You may have slowed Microsoft down just a tad ... but you're FAR from accomplishing what you, and the other States, started out to do. Thankx for nothing. While it would have cost US, the people, more money in the short run to pursue this case properly, it would have saved everyone significant bucks in the long run, enabled decent competition to have proceeded, and improved the economy (by providing a level playing field for competition). You've enabled the monopolist and its monopolistic behavior. Time will tell ... but now, you've pretty much lost your opportunity.

Your present path makes me very angry and very disappointed in you. You're s'posed to protect the public from abuse of monopoly power. Microsoft has demonstrated time and again that it can't be trusted to NOT abuse it's monopoly position., but then, the DOJ has apparently conveniently developed amnesia relative to what it doesn't want to see...

Subject: proposed settlement does not serve the nation's interest
DOJ,

What is good for Microsoft is most emphatically NOT good for the nation overall. What little gain Microsoft's shareholders and this administration's fund raisers reap has to be paid for many times over by consumers who are denied choice and companies who are the victims of Microsoft's predatory business practice. All of this only happens because Microsoft can indulge in monopolistic behavior. Of this, the Clinton administration's justice department has won the point through due process of law. Now, the Bush administration's justice department intends to let Microsoft continue with a slap on the wrist. The nation's interest will be better served by strong curbs on Microsoft's behavior since that will provide for far more innovation and economic growth. If this inconveniences Microsoft, they have earned it through a long history of monopolistic behavior and sanctions are indeed called for. Full disclosure of the APIs and protocols used by Microsoft products should be the cornerstone of any settlement that actually tries to remedy Microsoft's practice of using secret and/or changing APIs to disable competitor's attempt to produce inter operable software which is needed to compete in the marketplace (which

incidentally will provide the maximal benefit to consumers of such software). Stiff penalties should be imposed for any such violations with generous bounties offered to anybody who can document any such violation, including immunity from DMCA if the investigation indeed uncovers a violation of the antitrust agreement. After all, Microsoft should not be allowed to hide any criminal act behind DMCA. It does not matter if it was intentional or a mistake, maybe this will finally make Microsoft pay some attention to the quality of what they do. Just take a look at their appalling record of security holes that allow viruses to flourish because as a monopoly, their users are forced to bear this burden without recourse.

Show some backbone. The nation's best interest can only be served if the DOJ does not act as if it dances to the tune of the campaign contributors and lobbyist. yours sincerely

Subject: Microsoft's Monopolistic Practices
Dear Sirs and Madams,

I have been a using of Microsoft products shortly after their arrival on the market. I my view they have been strong competitors and have developed a few good technologies.

However, I believe that their legitimate technological advances have been far out weighed by underhanded, dishonest and down right illegal practices. Every time they have gone to court I have hoped that the federal government would fine and restructure them appropriately to compensate for the damage they have done to the industry through their many monopolistic practices.

Though their cut-throat distribution agreements, their software bundling and many other things have more than warranted harsh penalties—in my mind—what has bothered me the most is there ability to continue to tell half truths and lies, in press releases, on packaging, and even in court yet without penalty, fine or other action. The blatant fabrication of evidence during the trial with The Honorable Thomas Penfield Jackson alone should have landed someone in jail. If I went to go to court with videos that I (or one of my employees) had blatantly altered I am fairly certain that I (or one of my employees) would be in jail now. I would expect nothing less for those at Microsoft that were aware of the doctoring of the videos that were entered into court record. Though I do not agree with The Honorable Thomas Penfield Jackson's actions during that trial I strong believe that his actions should not excuse or allow Microsoft employees to get away, without punishment, for presenting false data in a court of law! Too many times have I seen Microsoft hurt the industry and more directly my lively hood by using their power and influence to get settlements, or get dismissals in cases where I am sure that someone with my meager income would surly been jailed.

I don't know what it is going to take, or from which country the conviction will come, but someday, I trust that Microsoft will get the punishment it deserves. I would be encouraged if that punishment came now, from the current powers overseeing the proceedings. I would hate for the true and correct judgement of the perpetrators involved to only come when they face their maker.

Date: 11/16/01 10:15pm
Subject: Integration is the real issue here
Hello,

I have been following the government's case against Microsoft over the years, and I believe the real issue is the fact that Microsoft integrates its products into its operating system to a level which competitors can't because they do not have the intimate knowledge of the operating system's source code and/or the ability to remove microsoft's competing products without altering the operating system itself. By integrating Internet Explorer into the operating system, Microsoft was able to make IE SEEM faster because it took no time to load the program... because windows already loaded most of it along with the operating system. This is part of why windows 98 and higher use so much system RAM. They load portions of microsoft products so that their products will always be faster to load. This makes the system SLOWER for those with less RAM and is not desirable at all., imagine if all of your programs loaded into memory at once... your system would crawl. Netscape, Realplayer, and others have created "fast launch" programs which can do the same thing now, but the only reason they do is because they need to compete with microsoft products. This is not an efficient use of system resources. Also, Microsoft's competitors cannot remove MS products

without harming the OS in some way...nor can they integrate their own products where MS's were.

The only true remedy to this situation would be to open up major portions of the operating system source code to all software companies.

Also, Microsoft's licensing practices are suspect... I would make sure that they contained no provisions which would prohibit PC manufacturers from installing multiple operating systems or modifying major parts of windows if they choose.

This recent "settlement" isn't even a slap on the wrist. I think cutting the company into pieces was a good plan to restore true competition in the applications market, but if that isn't an option, then the source code of windows should be made more open and allow for companies to make significant SUPPORTED alternative integrated programs possible. MS seems to be on the path of integrating EVERYTHING into the operating system. While this would do wonders for compatibility and perhaps ease of use, it will destroy a competitive marketplace and leave users at the mercy of Microsoft's monopolistic practices and future fees and licensing programs.

Thank you for your time,

Wayne Bell

Subject: Comment on Microsoft Settlement

I've been an IT professional now for almost 22 years. When I first started in this industry, IBM was king and there was constant pressure from other organizations such as DEC, HP, Honeywell and others to innovate to keep up the competition. They serviced niche markets with their innovation and thrived.

Now, the computer industry is more consolidated fewer and fewer companies make the products that we rely upon for all levels of computing whether that be academic, business or home use. Unfortunately Microsoft under the WinTel alliance has forged a very strong position, so strong that it dominates virtually every tier of computing. Yes, Intel makes Chips that go

into the systems, however at least there is some competition for Intel, including AMD and Cyrix. Where Windows is concerned, there seems to be one source Microsoft. Great position to be in.

There really isn't an alternative to Desktop O/S for General Purpose use other than Windows. Unfortunately Linux is a very distant third in this regard. Remember Apple? Yes they're still around however they've been hurt not by innovative product competition, but unfair leveraging of technology. Microsoft has attacked key sectors of threatening technology by either dumping on the market or using the three E's—Embrace, Extend, Erradicate. Java technology has been irreparably damaged by Microsofts dilution and non-standard practices resulting in another Court case. However since Microsoft has extremely deep pockets even for the Federal Government it appears as though attrition has set in.

What Microsoft does to the software industry is akin to an 800lb Gorilla being let into a banana shop. For example, Internet Explorer was a product that took over 600 developers to work on. Microsoft dumped the product for "free" on the marketplace claiming it's innovation was good for consumers. Funny, Internet Explorer isn't available for Unix, or Linux, or Apple just Windows. When two technologies are equal, the one that's free will win. That's a marketing knowledge. When Windows 98 was released IE was bundled with it even though it wasn't critical to the O/S use. Microsoft claimed it added value, however it stifled competition such as Netscape and Opera. Even now Microsoft builds proprietary standards into their web sites requiring the use of their technology to access it, forcing users into their way of thinking and doing.

So, when it comes to desktops and now unfortunately Server environments Microsoft is becoming the dominant force. However their tying of products together gives them an extremely unfair advantage over their competition. A classic problem was when WordPerfect was still around the developers found bugs in the Windows API. They reported them to Microsoft. Microsoft then announced to the world that WordPerfect was buggy on Windows. Likewise Microsoft dumped MSOffice for incredibly low prices, so low that WordPerfect couldn't compete. Again deep pockets allowed Microsoft to eat profitability to force out the competitors product. Once the other Product is severely damaged, it's time to raise the prices because now they have a vendor lock In.

Microsoft should be allowed to innovate, any company should. But it should be precluded wholly from predatory market practices that stifle small business and even competitors practices. Yes Business is brutal but being able to tie products forces customers to buy your solution wholly and forego any of the competitors product.

So, my question after Microsoft dominates the entire software middle structure who can compete with them? My recommendation would be that all Microsoft Windows APIs be fully documented and available to all software houses.

Microsoft divest it's Office assets or spin them off to another company. barring that

Microsoft should be barred from releasing any new version of Office or Windows for a period of no fewer than 5 years on Intel based platforms. This would allow competitors to at least take advantage of documentation and make their products more competitive than Windows based solutions. Microsoft should also be ordered to release their Office suite and other products on at least three other operating system platforms, Apple, Linux and Unix.

Thank You

Will Wood

Subject: DOJ settlement

To: Renata Hesse

Antitrust Division

U.S. Dept. of Justice

Regarding the DOT antitrust settlement recently negotiated with Microsoft, and accepted by nine states thus far, I would simply like to say that I am very supportive of the plan as I understand it, and am very embarrassed that my state, Kansas, continues to be one of the few states left to oppose the settlement.

I like and value Microsoft as a company and as an industry leader; I believe that they are very competitive and strive always to develop and promote their products, which I appreciate and will continue to buy. While I have grown to admire Microsoft as a well-managed, innovative company, I have grown very weary of all of the whining from its' competitors (esp. AOL, Sun, Oracle. . . .); the settlement seems to be a very good attempt at moving on past this long, tedious antitrust battle, and, if everyone would just agree to move on, could help in invigorating the economy and the stock market. I do not believe that this settlement is "too weak" and lenient toward Microsoft; they have agreed to significant concessions, and appear to honestly be ready to end this saga and return to normal life without the shadow of litigation.

Thanks to all of the DOT attorneys, and the mediator, as well as Judge Collen Kollar-Kotelly for the fair and neutral way in which this settlement has been conducted thus far. Although I am strongly Democratic, I am sorry that the Clinton administration ever supported this antitrust case in the beginning; I believe that I represent many, many Americans when I urge you to continue to press toward final settlement as soon as possible.

Sincerely,

Nancy Hermreck

Subject: microsoft anti-trust ruling

How can the DOJ consider a lenient and vague settlement sufficient to make microsoft cease its illegal antritrust activities? With every subsequent edition of windows since the case was first filed microsoft has further strengthened its monopoly power with more and more bundlings and abused its power with increasingly arcane and restrictive licensing. The latest version of windows bundles a webbrowser, video and music player, firewall, and instant messenger. This is far worse monopolising than microsoft was found guilty of previously, and the trend looks set to continue. Recently leaked memos reveal the microsoft planned strategy of "embracing and extending" internet protocols to make competing software incompatible with them and so create an uphill struggle for competition to remain in the market. With microsoft's behaviour becoming worse and worse all the time, how can a slap on the wrist settlement possibly deter them? Their flagrant continued abuse of their power in complete disregard of the courts only shows that they know they can get away with anything simply by throwing enough money at lawyers and buying political favour with campaign donations. The lack of justice in this case is especially evident in the fact that a rich corporation found guilty can then negotiate a 'punishment' with the courts. Are convicted thieves afforded the same courtesy? No, they're convicted and they're punished. Why should there be such different conditions when a rich and powerful corporation is found guilty? Truly big business is above the law if the law must treat those it convicts with such diplomacy.

I sincerely hope that a reasonable solution can be found that doesn't involve the government and courts kowtowing to wherever the money is.

Sincerely, Adam Gregory

Subject: You failed

The Settlement in US vs MS, for which you established this email address, is a miserable failure. You have allowed Microsoft to turn it around to fascilitate the elimination of any competing product that interface with their products. Such as: Samba; an open source program to allow other computers to view and use Microsoft Windows resources Kerberos ; as Microsoft has 'embraced and extended' this security protocol to prevent interopertion with other competitive operating systems HTML ; Microsoft has also embraced this protocol to prevent interopertion with other systems, including other browsers. See the information on CNN or your favorite news publication about what the MSN.COM web page looked like after the release of Windows XP SMTP ; In Exchange 2000, Microsoft has extended this protocol with a series of X- entries in the header of its Active Directory configuration (for example) to prevent interoperation with alternative operating systems. POP3 ; Microsoft has extended this protocol with an authentication piece into Outlook Express so that no other email clinets will work with the POP servers that use Microsoft services. (Microsoft Exchange) Your settlement with Microsoft doesn't prevent any of these things from continuing, but it has given them full power to continue with the current methods of destroying all competion.

If anything, you should destroy this 'settlement' and not do anything. We (the public) were better off before you started this trial.

Subject: Appalling DOJ/Microsoft Settlement
Sirs and Honorable Senators:

The "settlement" is a craven and complete sell-out. The verbiage of the agreement is not only toothless, but it reads like (and probably was) something drafted by Microsoft lawyers. Where is the punishment? Microsoft was found guilty of monopolistic, abusive behavior—and the conviction was upheld—with many thousands of jobs lost and hundreds of companies destroyed in its wake. Microsoft behaved contemptuously during the trial, and we can only expect the very worst from them after this terrible "settlement" essentially puts the government

seal of approval on their behavior. Microsoft is, correctly, proceeding as if there is nothing to stop them. After walking away scott-free from the worst the DOJ could throw at them, can we expect anything less than even worse behavior? Almost coincident with the announcement of the DOJ cave-in has been the introduction of Windows XP, which is a living, operational exercise in bad faith and restraint of trade. I can already hear the muffled cries of stifled innovation and squashed companies.

With the sudden take-over of large ISP offerings—including those of Qwest—by MSN, consumers have already been slammed into the replacement of their existing software by Microsoft products. As always, Microsoft's continued success will be at the expense of consumers, the industry, the science of computing, and the welfare of this country.

I feel utterly betrayed by my supposedly representative government.

Subject: Stronger remedies are needed
As a Senior Web Developer for Kaiser Permanente, one of the nations's largest healthcare providers, I am deeply concerned about the proposed settlement for the Microsoft antitrust case. For about the last five years, I have noticed that truly innovative technologies from small companies in the computing industry have tended to be withdrawn from the marketplace, apparently due to pressure or threats from Microsoft. During this same five years, the cost of Microsoft software has steadily increased, even allowing for inflation, while the cost of other companies' software (Sun Microsystems, Oracle, Sybase, Borland and many more) has almost without exception decreased quite dramatically. The costs of doing business as a software

company have not increased during this time. The only reason Microsoft has bucked the overall trend toward less expensive software is that Microsoft enjoys monopoly power, and dictates prices to computer vendors. These arbitrarily increased costs are ultimately borne by American consumers. Consumers and businesses are damaged in just the same way that they would be if the cost of gasoline were doubled.

Thank you for your attention.

Subject: settlement comments

I am not satisfied that the penalties the government proposes will in any way reduce the power of Microsoft over the computing world in its present monopolistic form. I find it unfortunate that the lawyers who are supposed to be working to protect me, the consumer, are more concerned about the well-being of Microsoft than they are in making sure the true competitive basis of the economy is allowed to function unfettered by the deliberate manipulations of Microsoft. On of the most obvious excesses in which Microsoft is known to have engaged was the threat to pull Compaq's license to install Windows as its operating system if Compaq proceeded with plans to bundle Netscape with its software bundle. Compaq rescinded its decision and Microsoft won again and the consumers lost again. That Microsoft proceeded to market XP speeding up everything in order to beat possible court injunctions only magnifies their plans to control the entire Internet and by control I mean make as much money as possible off of every conceivable internet transaction. If I don't want XP on my computer because the government has moved so slowly and now is backing off of truly punishing Microsoft for their flagrant and multitudinous violations of the free market economy and antitrust laws, I have really no other choices available to me to continue advancing with the technological features that are now coming on the market place. The article I read that mentioned this email address gave no direct answers as to what the government lawyers are proposing to use to dismantle Microsoft's strangle hold on the progress of the computing world and

the internet. The article only said that the lawyers were assuring the judge that.... so what's the big secret? What are you going to do make Microsoft stop this massive abuse of power?? I would like an answer and at least be emailed an address or website where I can find the exact proposals the government lawyers are suggesting. We have a right to know as consumers what you are doing to protect our future in the computing world.

Sincerely,

Dan E. Craig

Subject: DOJ settlement is not in consumers' best interest

To: US Department of Justice
Re: Proposed Microsoft. Settlement

Having followed the personal computer industry since it's inception, I am greatly disappointed in the government's decision to settle the Microsoft antitrust case on such unfavorable terms to consumers. As far back as the early 90's, Microsoft was using unfair and misleading practices (e.g. intentionally causing errors and misleading messages when Windows 3.1 was installed atop DR-DOS) to hobble competitors. By refusing to provide usable versions of its Office software on competitors' operating systems and making file conversion difficult, Microsoft established Office as a standard for all users. Later, when it had fairly well conquered the personal computer operating system and productivity software market, it began throwing its weight (and financial muscle) around in an effort to hijack the Internet (e.g. giving away/bundling Internet Explorer for free to undermine Netscape's revenue stream). Having retired all comers in the browser market, Microsoft has now set its sights on owning all transactional authentication rights on the internet. The obvious goal is to insert itself into (and charge a fee for) every transaction which occurs on the Internet. In each of these instances, Microsoft has leveraged its Windows monopoly (established as fact in Judge Jackson's court) to move into another part of the computer software market.

By settling the case on the proposed terms, the government would be:

- 1) Forgiving Microsoft for 10 years of monopolistic behavior
- 2) Ignoring the harm caused to consumers by the artificially high cost of Microsoft Windows (which has been used to subsidize Microsoft's entry into all these other software markets)

I urge the DOJ not to settle with Microsoft on the proposed terms. I believe strongly that significant harm has been done to consumers and that Microsoft should be held financially accountable, as well as structurally reformed to prevent further abuse of the Windows monopoly. The remedies proposed by Judge Jackson were appropriate.

Finally, I urge the government to hold the officers of the company responsible (individually and collectively) if it can be shown that harm to consumers resulted from their actions.

Subject: Microsoft continues to steamroll

Microsofts behavior while the antitrust case is still in progress should give us a little hint of how they will behave in the future. Their new Windows XP combines an Instant Messaging software package into the Operating System in exactly the same way they bundled their Web Browser in the Operating System. That, after all was one of the origins of this case, so many years ago. If they don't hesitate to pull this kind of stunt while they are under investigation, what will they do after the suit is settled? They've shown their lack of respect for the power of the US government. Microsoft's new strategy centered around web services and their .NET initiative is merely a higher-level monopoly mechanism. This one floats just above the Operating System, but has the exact same potential to force-out any competitors through hardball leverage techniques.

The fact that Bill Gates is so ready to accept this settlement should set off alarm bells. This man is an extremely tough negotiator and shrewd business man. He knows a honey of a deal when he sees it. He also knows it's for a limited time only, so he will push everybody to get this thing finished before the momentum reverses.

Sincerely,

Eric Runquist

A concerned citizen.

Subject: Microsoft case

On the one hand I'm not surprised by the proposal. Disgusted but not surprised. A man with \$30B in cash can certainly gain the support of senators, representatives, DOJ appointees, and judges. On the other hand, I suspect there are a few honest civil servants still in the system, who would like to see alternative points of view from impeccably credentialed, true blue Americans. For example, I'm a upper middle class, middle aged swing voter. I work in a Fortune 100

company, bringing technical and business degrees plus extensive experience with both Microsoft and non-Microsoft products to the effort. There is no question in my mind that the issues are much larger than browsers, that Microsoft has no intention of allowing a level playing field, and that the DOJ's proposal is mockery of justice

Simple put, the issue is not "are the consumers better off. That's like saying "El Duce made the trains run on time". No, the issue is balance of power in a representative democracy. See L. Lessig's analyses for details.

[By the way, I notice the parallels to Thomas at EEOC. He got a Supreme Court appointment out of a series of anti-American policy decisions (leaving plausible deniability for the upper ranks). What was the price this time?]

Subject: DOJ consumer comments
Dear Department of Justice,

Thank you for providing an opportunity for consumers to comment about the current Microsoft legal situation.

My family runs a small business. We are shopping for a new network and work stations. We are talking to a lot of people, and reviewing how best to do our work. We currently use a server run on Novell network software and a program sold by Symantec in the 1980s. We do use Microsoft Outlook Express for our e-mail. We have found Microsoft to be most responsive to our current needs, both personally and with the software applications they have packaged. They are great marketers as well—they consider the customer's needs and work to fulfill them. My mother and I attended a Microsoft Big Day event on Wednesday where our questions were answered and an overview of all the programs was presented. They have what we need to keep our business running efficiently—much better than we have been running it! We have not been able to find any other company who can supply our needs as neatly packaged and as easily to operate as Microsoft has. I would find myself against anything that would break up their product as there is nothing to do the job as efficiently for those of us that are FAR from experts.

Thanks once again for this opportunity to comment.

Subject: The DOJ : An embarrassment to

America

Dear Sir or Madam,

As a software developer, familiar with most every issue in this case (as well as many left out of the various trials) I have to say that the DOJ has done a fine job of embarrassing the United States of America, not only at the national level, but to the world at large.

Microsoft is a criminal organization that steals from other companies. There can be no argument on this point; it is simply a fact. They are a convicted criminal organization. Yet the DOJ has let them off nearly scot free.

By its tepid action, the DOJ has made the phrase Justice" a hideous parody of the word Americans learned as a child. To many, your action has done nothing but reinforce the opinion that the USA is not a country of fairness or justice, but one of corruption, favoritism, greed and privilege.

How on earth can any American utter that most hallowed of phrases—"With Liberty and Justice for All"—without feeling that those words are now meaningless? That is the legacy this executive branch has given America. I suggest you close all the federal prisons and let the inmates run free. At least your standards of justice will then have been applied equally to Microsoft and the common criminal; to me there is no difference.

Regards,
John McBride,
N. Edwards, CA.

Subject: Microsoft settlement
Sirs:

I don't understand... You declare Microsoft to be a monopoly but you leave the same people in charge of the company who have lied and ignored other consent decrees as a regular course of business.

You reward them with lengthy legal entanglements time and time again while they continue to force their products onto consumers who have little in the way of other choices. Finally the Microsoft product becomes a defacto standard, even though a bad one, and the argument is mute.

This is the time to punish the truly guilty and to demand that part of the settlement be an ousting of Gates and Balmer from any and all management or oversight of the Microsoft corporation. A little jail time wouldn't hurt these "robber barons", either.

In this time of economic downturn, the DOJ has an opportunity to step up and do its part to eliminate the biggest obstacle to the computer industry. Remember, the telephone system never got very far away from the original Bell box until the monopoly was broken up and the industry got to breathe clean fresh air, once again.

You could also start by not allowing M\$ to sell ANYTHING to the federal government for a period of ten years. Our nation's security would additionally be better served by a migration away from an operating system that draws the most attacks and toward a system that affords REAL security and not what M\$ pretends is security.

Subject: I disagree with the MS settlement
I am a satisfied user of many MS products, but also think they are a company that has abused their monopoly position and seriously harmed other companies as well as the public. I believe the court's finding of fact is right on the money. I disagree with the settlement for the following reasons:
- Loopholes and insufficient remedies to prevent similar behavior in the future
- Fails to punish MS for past misdeeds, including gross disregard for the court's authority during the trial (rigging demos, denying the removability of IE, etc.)
- Fails even to address monopolistic behavior since the findings of fact, such as bundling Passport authentication with the operating system, thus channeling e-commerce through MS.

MS has a stranglehold on PC operating systems for the desktop. Companies such as Apple, Be, and others have no ability to compete fairly without restrictions on MS behavior, access to APIs to produce compatibility layers, and the promise of strong support from the DOJ in the future.

Subject: Microsoft case
It seems increasingly clear that anti-trust law is extremely hard to define and is more a weapon which politicians use to kick uncooperative companies in line. Some say the fact that Microsoft is one of the largest contributors to the Republican party is evidence that Microsoft is trying to corrupt government. I think it's evidence that politicians wanted to see some green from the previously apolitical software giant all along, and now that they're playing the game, the DOJ has been instructed to lay off them.

I mean, which is more trustworthy here?

Sure Microsoft has some shady business practices, but it's not like they've caused ecological disasters related to oil, or support right wing military dictatorships in banana republics, or had fathers who were the head of CIA, or opposed the Civil Rights Act, etc.

Subject: Thoughts on this whole AntiTrust thing...

I can say with some certainty that you're probably going to get a lot of ±ACI-Microsoft is Evil+ACI-emails from the very outspoken minority of Microsoft haters, but I don't know how many emails you'll get from the folks who think the US Government should stay OUT of private businesses. You know, the silent masses who when nothing goes wrong say nothing at all.

Some points here that I want to make that are +ACo-VERY+ACo- valid:

1. Microsoft plays hardball business in it's licensing agreements. Big deal, so do most other businesses, and I don't see those businesses getting taken to court.

2. Microsoft, as far as I'm concerned, has been the victim of a concerted effort by it's competitors, Sun and Oracle to name a few, to get the US Government to do what they couldn't do by ordinary business practices, and that's replace Microsoft in the number one position.

3. Microsoft, in attempting to standardize the desktop and notebook computer operating systems have done so much more to HELP consumers and businesses than any other company that it's ridiculous to sue them. My parents have a much easier time with computers since they've moved to Windows, as many other people in the world.

4. There are so many software and hardware companies that have both come into existence, and +ACo-SURVIVED+ACo— and become prosperous because of Microsoft's efforts to make Windows the standard, that the few companies that have gone out of business can easily be attributed to normal business failures that happen in +ACo-EVERY+ACo- industry, not just the software industry.

5. Microsoft owns the rights and code to Windows. Period. It's theirs legally, and if they don't want to give out source code or want to make it so that their applications software talks to their operating system software a little easier, then so be it. It's MICROSOFT's RIGHT to do this, and Microsoft's competitors have been given so much by Microsoft already to allow their software to operate on Microsoft's Windows operating system that it stuns me that this travesty of justice has continued for this long. Plainly stated, whiners who couldn't come up with a better solution are using the legal system, and much to my dismay, the legal system is accomodating these whiners.

I spent 11 years serving honorably in the US Marine Corps and Marine Corps Reserves and it SHAMES me to see our government throwing away millions of dollars on a trial that as far as I'm concerned should have been declared a mistrial when Judge TP Jackson was found to have uttered his comments that definitely show a bias against the defendant. Not just in his covert comments but his

comments and actions in the courtroom, both against Microsoft +ACo-AND+ACo- the District Court of Appeals, who have overturned TP Jackson's rulings in the past.

Please end this farce and waste of my tax money and start doing things to help the citizens of this country who need better education, families that need homes and children that need medical aid and food.

Please start taking care of the PEOPLE of this country and stop kowtawing to Microsoft's competitors and political lackeys that are just seeking a re-election platform when their term is due.

Regards,

Mike Poz

Subject: M\$ settlement

You've gotta be kidding with that weak 'remedy'. I've read it. Did you let Micro\$oft's lawyers draft it? It looks like it. Micro\$oft is a master at dodging exactly this sort of thing, and this settlement will have absolutely no effect whatsoever. Do you need proof—? Bill Gates likes it, he calls it "fair". It must be a great relief to him to win after all this litigation. Trouble is, he did NOT win. He was found guilty of serious crimes. Micro\$oft has done more to hold back innovation and progress in the computer software industry than any other party in recent memory. They need to be STOPPED. And PENALIZED. This settlement does neither.

The FIRST thing that I want from a remedy in the M\$ antitrust case is a penalty tough enough to make BillG pout and whine about requiring "fairness" and "freedom to innovate" and all that rot. Right now he's smiling because he knows he's gotten away with it. Tomorrow he'll turn around and do it again. This is no penalty. It's more like dinner and a movie. Why don't you just fine them \$1 and go home?

From: Brenden Ashton
To: Microsoft ATR
Date: 11/17/01 2:26am
Subject: Please do not cave in

Hi,

I am writing this email because I am concerned about the 'remedies' that have been proposed in the anti-trust lawsuit against Microsoft. I feel that the DOJ has caved in, and is allowing Microsoft to get away with illegal practices, and is in fact allowing Microsoft to continue these practices. Over the last few years I have bought numerous computers and have been forced to buy yet another copy of Microsoft's operating systems each time, despite the fact that the old computers are sitting in a cupboard. In addition I feel that Microsoft's bundling of Internet Explorer as part of the operating system was a deliberate attempt by Microsoft to eliminate competition. This practice of Microsoft is not new—it has in the

past made sure that some of its software would not run if competitor's software was detected (e.g. DRDOS and MS-Word). Also, this practice is still continuing, for example Windows XP has a lot of bundled software (CD writing software, media players etc) that will make life difficult for Microsoft's competitors in this area.

I think that not only Microsoft should pay a huge penalty for doing the things it has done in the past, afterall they did make piles of money this way, but that Microsoft should be prevented from continuing in these practices. The proposed remedies do not make Microsoft pay any penalty for its past actions and the limitations on its future practices are very weak. It would be easy for Microsoft to continue its business practices under the proposed remedies as they leave Microsoft many loopholes.

Thanks for listening to my rant,
Dr Brenden Ashton

From: Brett Stalbaum
To: Microsoft ATR
Date: 11/17/01 2:33am
Subject: Weak deal

Please understand that the European Commission is going forward with their investigation of Microsoft. What will your settlement look like if the EC's findings and remedy is significantly harsher? But putting behind narrow political concerns, I move on to my real concern. You are certainly aware that Microsoft controls a major cost area for almost all corporations, since they provide the desktop OS for these companies. You should be aware that the browser wars are over, Microsoft won via their unfair competitive advantage. This is old history. What Microsoft wants now is the server market, and they are moving on it primarily by leveraging their control over the desktop—via both corporate pricing and closed integration with the desktop—to unfairly influence the choice of server decisions by major US corporations. IBM, Sun, HP, and others all hang in the balance.

If we should lose the vibrant and open innovation that spins out of this particular competitive market, the systems depended upon by Global business will be less secure (MS is the OS of choice for hackers because it is so easy to defeat), more expensive, and less innovative. Think also of the defense implications in this time of global uncertainty. You need strong provisions in the settlement to prevent Microsoft from unfairly closing this market through monopoly (anti-market) power.

From: Charles Martin
To: Microsoft ATR
Date: 11/17/01 2:53am
Subject: you have GOT to be kidding.

To the persons whom it may concern: Having found the media to be inaccurate more often than not when reporting on stories of great technical complexity, I took it upon myself to review the PDF of the proposed settlement with Microsoft because I wish to comment on it.

My comment is summed up in the subject line of this letter. Upon reviewing this settlement, I have to ask why you ever bothered suing Microsoft in the first place. This "settlement" is a disgrace to both parties, provides NO penalties for Microsoft's indisputably illegal previous acts, gives them NO incentive to change the way they do business, has plenty of loopholes allowing for MS to actually CONTINUE the very acts that landed them in court in the first place, and allows Microsoft to choose who will oversee their slap on the wrist, I mean "punishment."

It's a joke. It's cruel to the many businesses that have been crushed or hurt by Microsoft's abuse of their monopoly power and were hoping for a measure of redress, pisses all over the findings of law and fact by Judge Jackson (and affirmed by the Appellate Court) and generally allows Microsoft a free hand in their insane plan to take over the world—LITERALLY.

I don't see why you view a bunch of mentally-incompetent hoodlums in the wastes of the third world as the greatest threat since Hitler, but cannot see that Microsoft's singleminded determination to control the entire US economy (and by proxy,

the world's economy) as any less dangerous. You are not doing yourself any favours and are in fact guilty of a decidedly unpatriotic act of selling out the best interests of the people of the United States.

For god's sake, grow some backbone! At the VERY LEAST, you should craft a settlement that forces the government to review their technological needs and award contracts in ALL areas where MS Windows does not need to be used to some other OS vendor. I've never been more disgusted with the government in my life. The Justice Department needs to rename itself if this goes through ... I suggest "The Department of Two Justices ... one for the Rich, the other for the Rest."

Subject: Microsoft settlement fair

As a person who has been intimately involved in the IT Industry for 20 years, including working with many of the alternatives to Microsoft products, I feel the settlement proposed is fair. I know that I as well as most of my coworkers are tired of seeing companies such as Sun, Oracle, etc. spending all of their resources on government lobbying, instead of providing real competition in the marketplace by improving their products so they actually work well.

MTC-544

MTC-00000545

From: Hooman Katirai
To: Microsoft ATR
Date: 11/17/01 3:01 am
Subject: Comments regarding Microsoft Antitrust Case

The problem with the settlement is that it addresses past abusive behavior by Microsoft while doing little to address the future abuses that may happen or are already happening.

Specifically I would like to highlight one central tenet of the settlement: allowing other companies to integrate their own web browsers. This is not a true remedy in the sense that it does not correct the original problem nor does it correct any of the other more pressing problems to anything more than a petty degree. Succinctly, Microsoft has already won the browser war by abusing its monopoly powers. Allowing other manufacturers to integrate their own browsers will not correct this problem.

There are several reasons why this is so. First, most manufacturers won't bother to integrate a new browser into their products. Even if they did (for example in return for some monetary compensation), any installed browser will have enormous difficulties competing with the "default" browser that will be shipped by the majority of computers worldwide. Thus, many web sites will continue to be designed only for Microsoft's Internet Explorer while the opposite—the creation of web sites for other browsers—will seldom be the case. Thus Microsoft's hold in the browser market will continue to tighten over time.

But more importantly, Microsoft's ambitious plan to illegally usurp Netscape has succeeded. The while the legal remedies purport to address this problem they do will

not have any significant effect on Microsoft's activities. Second, the legal remedies do little to address Microsoft's present and future anticompetitive behavior. Recently we saw an episode of this, when hotmail—a Microsoft owned web-based e-mail service—the largest of its kind in the world, suddenly locked out all competing browsers (including netscape) from its service without prior notice. A message on the site asked users to "upgrade" to Internet Explorer, and it claimed the reason for the lock out was to enable the page to be rendered correctly.

These claims however have since been demonstrated to be baseless lies. It was found that if the hotmail web page was accessed with Internet Explorer, and the source of the page was saved to a file, the file would render correctly in all competing browsers. This demonstrates that the source code for these web pages was in fact renderable by all competing browsers, while exposing Microsoft's claims as manifestly false.

The only solution, as painful as it may be, seems to be to split the company. Only in this way will they be prevented from continually abusing their power as the relentlessly have done and as the Justice department must be well aware. Any belief that such a break-up will be bad for the economy ignores the even greater loss sustained in an environment that lacks competition. Thus we must do the 'right-thing' and press on.

Best Regards,
Hooman

From: Peter Hoff
To: Microsoft ATR
Date: 11/17/01 2:56 am
Subject: This settlement is a travesty

I strongly believe that the DOJ has done a disservice to the American people, and indeed, the people of the world, by accepting the terms of this settlement. The settlement essentially absolves Microsoft of any wrongdoing and contains huge loopholes which Microsoft will certainly use to avoid the terms which it feels are not to its advantage.

I speak specifically of the clause which allows Microsoft to avoid revealing APIs on security grounds. I am certain this will be broadly abused by Microsoft, and there is no incentive for them not to, as the oversight committee will be on their payroll and has no way to punish Microsoft even if it wanted to. The arguments Microsoft presents in support of this clause are completely bogus, and I offer as evidence the BSD operating system. Not only is the BSD source code (and therefore all APIs) openly available for anyone to peruse, it has also earned a reputation for being far more secure than any Microsoft product. The same is true of Linux, although it is not considered to be as secure as BSD.

The lack of any punishment for past abuse is especially irksome. Microsoft has shown absolutely, and no signs that they have any intention of changing their ways. Quite the opposite in fact, as Windows XP proves.

This settlement seems to only be to the advantage of Microsoft, essentially giving them a license to continue their abusive

monopolistic practices for the next several years, further entrenching themselves.

This settlement is a travesty, a sick joke played on the American people by those who are supposed to defend our interests.

Disappointedly,
Peter Hoff

MTC-546

MTC-00000547

From: Alex Hochberger
To: "microsoft.atr(a)usdoj.gov"
Date: 11/17/01 3:21 am
Subject: The current settlement fails to address the issues

I am a small business owner that has worked in the computer industry for 5 years, as well as an active enthusiast for over 10 years. While I applaud the attempts to negotiate a settlement and remove the uncertainty in the computer industry, I fear that the short-term gain is outweighed by the long-term consequences.

The primary problems that I have with the settlement is that there is nothing in it that punishes Microsoft for their illegal actions, and does nothing to remove the gains that they have made through anti-trust violations over the past 5 years.

As a result of Netscape's experiences, it is impossible to get venture capital or angel funding in any market that Microsoft currently has a presence. The rest of the computer industry is unable to go into business against Microsoft, because of a belief that they will change their APIs or otherwise undermine the validity of your business.

The problem is not that Microsoft is a fierce competitor; the problem is that any software business must reach customers on Microsoft desktop computers. Despite the positions of Apple and Linux in some niche markets, computer software will not work without reaching Microsoft desktops. Given trends over the past few years of not charging consumers directly (particularly for software), this puts the remainder of the computer industry in a difficult position. As Kodak saw with their printing services being pushed aside by XP's printing services, it doesn't matter if consumers choose to install your software, Microsoft will change their system to force their choices upon the consumer.

I support Microsoft's ability to innovate, but the rest of the industry must be allowed to innovate as well. It is impossible to innovate in an environment where your competitor controls the ground rules of the engagement.

The most interesting effect of a structural remedy would be allowing a Microsoft OS company to continue reaping the monopoly rents for the shareholders, while the applications company would need to compete on equal footing with the rest of the industry because the OS company would have no incentive to provide unique access to the Microsoft applications company. Without a structural remedy, the agreement must accomplish the goals of allowing open access for all companies to consumers utilizing the Microsoft desktop operating system. Further, Microsoft must be prevented from utilizing its current monopoly to stop

competition from Linux and other Open Source software initiatives.

The provisions allowing Microsoft to disclose their protocols and APIs must be strengthened to prevent the security exemption (which is unnecessary, proper protocol security is not undermined by revealing the source code, protocol security should be mathematically secure, not obscured in the software source code) from shielding the important interoperability protocols. Further, the disclosure should be public disclosure, not limited to people under NDA at a Microsoft facility. Several of Microsoft's new competitors (Red Hat, Suse, Sun Microsystems, etc.) rely upon technology that is built in open source projects under the GNU General Public License. For these companies to compete, people without nondisclosure agreements must be able to access and work with the protocol specifications.

As Microsoft is found to have a monopoly in the desktop operating systems market alone, these restrictions should be limited to the desktop environment.

I propose that all protocols utilized by Microsoft (any exchange of information between software included in any distribution of Microsoft desktop software with another computer) have a detailed specification released into the public domain. If protocols are found that are not documented, Microsoft should be fined severely and the source code to the Windows operating system that communicates with those protocols should also be released into the public domain. Additionally, if specifications are found to be erroneous, the source code should be released into the public domain.

Microsoft should not be able to gain an advantage in any market as a result of their desktop operating system monopoly. Any attempts to do so should result in severe penalties.

Microsoft should be prohibited from providing any services that generate revenue for Microsoft with the operating system. Microsoft should be forced to compete on equal footing with third parties for this business. Microsoft's MSN service is able to compete with AOL in large part because Microsoft leveraged its desktop monopoly to place MSN in a prominent location, while AOL was forced to reach deals with OEMs.

While Microsoft will maintain an advantage as a result of having a business relationship with the OEMs, they should be forced to compete with third parties. OEMs should be able to bundle commercial services with the computers (including those from Microsoft), but allowing Microsoft to skip this stage allows them to leverage their monopoly.

Microsoft should be able to include any reasonable amount of technology with the operating system. However, if this technology is part of a service, Microsoft should not be able to leverage their position to achieve this goal.

For retail versions of the software, Microsoft should not be allowed to bundle the services. Allow them to sell or give away CDs that provide this software, or allow users to download any service that they want.

However, Microsoft should not be able to force the user to have their services accessed (or have the operating system offer to let you download their software).

Microsoft should be forced to fully document their new technology 9 months before the retail version of the software is released. When Microsoft announced that IE was going to be bundled with Windows, Netscape should have had the full documentation for how this occurred. Netscape should have had an opportunity to let users replace the bundled Internet explorer with a fully integrated Netscape system.

I wish to see Microsoft encouraged to innovate in the technology sector without preventing competition by the nature of their desktop monopoly.

Sincerely,
Alex M. Hochberger

Subject: DOJ/MS Settlement

To Whom it may concern:

I would like to respectfully suggest:

- 1) That Microsoft be required to publish and commit to the Public Domain the API's (Application Program Interfaces) ('documented' and "undocumented") for all of their Operating Systems from MSDOS V1.0 onwards and into the future;
- 2) That likewise they be required to commit to the Public Domain the source code for all of their Operating Systems from MSDOS V1.0 to (but not including) Windows XP;
- 3) That they be restrained from anti-competitive practices in perpetuity.

Thank you,
D. Woodrow Compton,

Subject: Feedback

The proposed settlement falls far short of dismantling the Microsoft monopoly for the following reasons:

- 1) The company is allowed to profit enormously from criminal activities.
- 2) The language of the agreement is far too vague. Restrictions appear in one section, and appear to be countered in other sections.
- 3) The monopoly has created illegitimately based, closed, standards. No one can compete because the large majority of pc users would lose access to their data if they wanted to switch. These illegally based standards need

to be exposed to allow competitors to adopt them, ultimately providing consumers with equally functional alternatives. This means the Windows API, networking system, and document file types.

4) In my opinion, bundling is not an issue so long as consumers can choose to install competing products and use them as defaults.

The only idea from the agreement that I believe will help consumers is the restrictions on the ability of Microsoft to force OEM's to sell only Windows on their PC's. The option of a dual boot computer, one that boots Windows as well as a competitors Operating System, will allow consumers to try alternative operating systems without having to overcome the often difficult task of installing and configuring the operating system. I believe this perceived difficulty is the reason most consumers purchase pre-configured PC's. Placing all operating systems on potentially level ground will promote innovation in the PC industry.

Subject: Please...do something...

To whom it may concern,

I must chime in a say that SOMETHING must be done to help break up the monopoly that is Microsoft.

I know that there was a settlement and that there were penalties levied again Microsoft, but the majority of those levies were one that were already in place and being followed. Microsoft's dominance in the desktop computer market is staggering and stifling.

Competition sparks innovation and competition is exactly what Microsoft does NOT have. With this lack of competition, Microsoft has little reason to significantly improve their product or open up their specifications to others so that they may develop competing products:

Letting Microsoft bully the computer industry and the government is truly a blow against all that American industry has been about for the past 150 years. We have made sure that monopolies don't maintain a grasp, thereby choking innovation and inspiration, all in the name of money. Please stop Microsoft now, before it is truly too late.

Subject: failure of the justice system

As a computer consultant with 10 years experience in the industry, I find that the settlement you've offered to Microsoft threatens to instill even more animosity between the American public and our ailing legal system— and this, within months of the Supreme Court selecting our President. After

years and millions of dollars spent on this case, you've basically walked away from any kind of credibility. Why? Was Bill Gates' donations to the Bush candidacy an influencing factor?

Microsoft has been stealing technology from their competitors for over 15 years, but only gets a hand-slap with this, the most important intellectual property case ever. Warnings to Microsoft have worked in the past, and there is little reason to think that it will work now. The only way to send a message to Microsoft that wielding their monopoly power over the industry is wrong is to come up with a stronger settlement—perhaps a 5 billion dollar judgement to be divided up amongst their competitors? Actually, the suggested breakup made the most sense.

Please note that Windows 98 cost \$100 new. Windows XP costs \$200. Now that they've knocked their competitors to the ropes, they can charge whatever they want for products. This is a sign that they have won, and the Justice Department has abandoned their role as protectors of democracy.

Subject: Microsoft DOJ Settlement

I'll keep this brief. While the restrictions on Microsoft's future actions may be adequate (I don't believe they are) I fail to see any clearly punitive consequences. At the VERY LEAST I would like to hear Bill Gates be forced to make a statement admitting guilt. Up to now we have never heard Bill admit anything illegal, even though the courts very clearly indicate they did. "We admit that we knowingly broke the law. It was a mistake, and we knowingly and willingly harmed the consumers choice because of our illegal acts. We further state that because of our past misdeeds, we are forced to be supervised so we don't continue to harm consumers, or consumer choice."

Thank you,
John Reyst

It's time to let Microsoft's competitors compete by making better products, not paying off the Justice Department with political contributions. The anti-trust laws are for the benefit of end users (consumers), NOT competitors who can't make the grade with customers because of shabby marketing of their inferior products. The settlement should stand as is. The original case should never have been brought in the first place.

MTC-554

From: Immanuel Raja J
To: Microsoft ATR
Date: 11/17/01 4:02am
Subject: Microsoft Sir,

I have purchased a desktop PC Fujitsu. I didn't want MS Windows 98 on it but I have to pay for it. (I paid for the product which I didn't want to use.) Now I am forced to use the product (which of course I rarely use) because I have paid for it. I had some problems with the product. Looking at the Advertisement for Windows ME (which claims to be a better product than other Windows for home versions) I purchased an upgrade and installed it. I feel very sad to say this that when I defrag the hdd I found that I could not restart my computer. On further investigation I found that Windows ME DEFRAG has eaten all my systems files. I feel I am cheated because they had sold me an inferior product. Later I found that Windows ME when installed in partition higher than 8GB gives me error. I also have Linux (SuSE 7.1) running on my PC. Though Linux is free I paid a little higher than the price I paid for my Windows ME. But interestingly SuSE kept its promise. I have no problem in running Linux. Though Linux GUI may not be as good as that of Windows the following are the points why I prefer to use Linux.

1. Stable: I have had no crash so far.
2. Fast: Linux is faster in executing a command or program.
3. On the long run I have no fatigue using Linux but using Windows I get frustrated every time I run it for a long time.
4. Secure: I was never in need of any additional software then the ones SuSE offered me. (No Anti-Virus, No Additional firewall, etc..)
5. I AM FORCED TO RETAIN THE WINDOWS PRODUCTS BECAUSE THE LICENCE SAYS THAT ONCE I OPEN THE CD I CAN'T RETURN.—How will I know if windows is good for me or not. I should be able to return Windows CD, with all the original packing to MS and should be able to get a return on my receipt.
6. I DON'T LIKE SOME TO FORCE ME TO BUY THE A PRODUCT I DON'T WANT—Consumers should be protected. Computer hardware vendors should offer products what their consumers want and not be forced by misuse of monopolistic attitude of the software manufacturer. I definitely want multi-vendor support on my hardware like AOL Instant messaging and Yahoo Messaging, Real Player, Netscape. I would also like to use open-source products like Apache server, MySQL server, PERL. I would prefer my hardware vendor to support me on products like this.

I am concerned that this case should not only address Microsoft issue but also any future company which will try to misuse their monopoly.

I make my humble suggestion that such companies should not only be legally penalised but also should be made to pay hefty fines to the government. And such fine money be used further to stop all sorts of misuse of monopoly.

Please protect the consumers from such companies. I have confidence in you. You can make a change now. Thank you for allowing us to raise our voices.

Kind Regards

Immanuel

Subject: Devastating Settlement

As a longtime observer of Microsoft's software development and business tactics, I feel compelled to write and express my sincere shock and disappointment at the limited scope of the proposed settlement tentatively reached with Microsoft. That untold millions of tax dollars could have been spent to reach a conclusion such as this—political motivations aside—is, from my perspective, an indictment of the entire antitrust enforcement mechanism of the FTC. What results from a settlement such as this one is a Microsoft no worse, and in fact considerably better, than the one that threatened or tore smaller companies to shreds only several years ago. All of Microsoft's core applications, from the Office suite (Word, Powerpoint, Excel, and Outlook) to Internet Explorer, and Media Player have become so tightly integrated with Windows as to be the near-exclusive choices of PC users. The Justice Department and FTC's inactions during the course of this prosecution have resulted in the continued bundling of products that were at one point competing with other companies' crown jewels—Netscape Navigator and RealPlayer—products that because of Microsoft's dominance are now on the cusp of irrelevance. Microsoft today is stronger than ever, its competitors are weaker than ever, and its products—as evidenced from their latest licensing agreements and pricing structures for Windows—are more expensive and restrictive than ever.

By focusing in a strict textual sense on bullying of Microsoft's competitors, e.g. by telling them that they "shall not retaliate," you ignore the truth of their actions—through monopolistic power, Microsoft need not retaliate against those who threaten them. They can give away products that render their biggest competitive threats (and your greatest agency concerns) completely irrelevant if not bankrupt. Frankly, the specific phrases and terms used in your proposed agreement are unbelievable. Look at Microsoft's history—their famed case against Apple, their innumerable one-sided development deals, and their previous history of working against their own distributors and customers. This is a company that tests and twists the meaning of

every word in every written agreement they sign. Face it: they pay some of the world's best software programmers and lawyers a lot more money than you do, and they will figure out ways around a document as hastily drafted as this one. Force Microsoft to sell a Windows stripped of Internet Explorer, Media Player, and Messenger. Force the price to be one third the price of what they sell the entire suite for. And allow Microsoft's competitors—AOL/Netscape, Real, Apple Computer, and many smaller companies with great ideas—to have a fighting chance to succeed in the marketplace again. This is what the FTC and Justice Department are charged to do under our federal antitrust laws.

Yours,
J. Horwit

Subject: Microsoft Settlement

I was and still am appalled by this anti-trust suit against Microsoft! If the government thinks Microsoft has been uncompetitive I think the government had better look into the grocery business. There is where they will find activity not in the best interest of the public! Look at how many grocery stores operate under the pretense as an independent grocer, yet are owned by a single parent company. This is what I consider an UNFAIR PRACTICE and DECEPTIVE to the consumer. Microsoft should NOT be reprimanded for their innovative products that have revolutionized the computer industry in a way that allows the average person to comprehend and therefore use a computer. The products offered by Microsoft have opened a whole world of ideas and other products introduced by their competitors. America stands for FREE ENTERPRISE and the opportunity for anyone with a good product the capability of marketing that product to the world. That ideal should extend to Microsoft just as it extends to any other company.

MTC-00000561

From: Brian Jamison
To: Microsoft ATR
Date: 11/17/01 4:31am
Subject: Comment from a high-tech CEO on the proposed settlement

I am a high-tech startup CEO with a track record of several successful companies and over fifteen years in the computer industry. I am also a published author on electronic commerce (Electronic Selling, McGraw-Hill, 1997).

As proposed, the settlement means total victory to Microsoft, and will only encourage their illegal behavior. The settlement will not magically spur our economy into growth—in fact it will only take us further into recession. There is a solution. Allow me to explain.

There is a way to reintroduce competition back into the marketplace and jumpstart our economy—force Microsoft to openly disclose its source code for Windows. Every line of it. I'll tell you why.

Opening up the Windows source code will spur a wave of investment, job creation, and innovation. No sane investor will back a company that plans to compete with Microsoft today. But were the rules of the game known, as they used to be, innovation and economic growth would return.

Because investors will not back Microsoft competitors, there has been a disturbing lack of advancement in software for personal computers that runs on Microsoft Windows in the past few years. The pace of software development used to be so fast that businesses and consumers felt an urgent need to undertake the substantial cost, both in time and capital, to upgrade their hardware and software at least every two years.

That need is no longer present. Ask the leaders of Dell, Gateway, Intel—ask the leaders of America's great businesses. They will tell you there is simply no compelling reason to upgrade their systems with anywhere near the same frequency as they used to. They do not perceive a competitive advantage in doing so.

Microsoft's lawyers claim that certain parts of the Windows source code cannot be made public because of security concerns. As an expert in security and cryptography I tell you this is nonsense. I should know, I wrote an article on cryptography for the Microsoft Developer's Journal. The worst form of security is security through obscurity. The best form of security is that which is subject to public scrutiny. Language that allows any part of the operating system to be shielded from open release will be exploited by Microsoft.

No other penalty is necessary than this. None other will serve to spur on our economy. You have in your hands the obligation to restore competition to the marketplace. I trust you will do the right thing, and force Microsoft to open Windows source code to the public.

Thank you for your time,
Brian Jamison

MTC-562

MTC-00000563

From: Greg Handy

To: Microsoft ATR

Date: 11/17/01 4:21am

Subject: Microsoft settlement

The Microsoft settlement is too lenient. It does almost nothing to stop Microsoft's monopolistic behavior. Let me talk about why it does practically nothing.

1. Sure, preventing Microsoft from coercing computer makers into excluding certain icons on the desktop is good. But it has a limited effect. Do you go to the desktop every time you want to run an application, or do you use the Start button? Personally, I don't see my desktop for weeks at a time. This is a very small concession from Microsoft.

2. Forcing Microsoft to disclose information about the OS... This is not a concession at all. They have always been good about sharing technical information. That is why Windows won the battle against OS/2. They made it easier for developers than IBM. Bill is laughing at you guys for this one. I know about this. I am a software developer. I have never had a problem obtaining information about Microsoft APIs. Go to <http://msdn.microsoft.com/library/> and see all the documentation they provide for developers. Or search their knowledge base at: <http://search.microsoft.com/advancedsearch.asp?qu=&siteid=us>.

3. Do you really think somebody on Microsoft's campus is going to do anything? Microsoft will only allow them to see what they want. And what if there is a disagreement? We will go back to court for a long protracted battle, and 3 operating systems later, maybe a judge will issue an injunction. It will not stop their monopolistic behavior.

Here is the real issue. Microsoft can run just about any software company out of business, as they did with Netscape. All they have to do is include a certain piece of software in the operating system for "free". Will people play for something, they can get for "free"? No, I don't think so—Microsoft will run the competition out of business. And of course, it is not free. Microsoft has to pay their developers for every application they develop. The price of the operating system goes up, and consumers have to pay for products they may not need. This is tying two products together. If you want the operating system, you have to buy a web browser, and TCP/IP stack, and media player, and Paint program, and word processor, and games, and phone dialer, and email program, etc. Is tying illegal? I suspect it is.

Judge Jackson's decision to split Microsoft into 2 companies is a good one. Let the MS software company compete with others on an equal footing. Put somebody in the MS operating system company to ensure that only OS functionality is added to the operating system. Any new additions to the OS must be approved as an integral part of the operating system, and not an application. That way, all applications have an equal chance to succeed, and competition is restored. Not only that... but the OS company can focus on making the OS smaller, faster,

and more stable, without having to worry about writing applications.

Splitting Microsoft into two companies is a win-win situation for consumers. They get a better OS, and competition is restored to the software applications business.

Subject: Microsoft Antitrust Remedies

Dear Sir or Madame,

Please accept my comments as a concerned US citizen pertaining to the proposed remedies in the ongoing Microsoft anti-trust litigation. I consider myself an informed and conservative opinion. I have 20 years of computer software and hardware development experience, a degree in Electrical Engineering, and focused experience using and developing for Microsoft's systems as well as for their competitor's. A remedy such as is proposed simply requires Microsoft to 'sin no more' and is inadequate because:

1. This is not the first ruling of anti-competitive behavior. If Microsoft chooses not to comply, it would not be the first time that such remedies would be ignored by that company. Microsoft has in the past show no sign of a conscience when it ignored previous remedies and invented additional methods to squelch competition.

2. There is no apparent financial incentive for the company to comply, based on the precedent set by this and previous light actions against the company. Microsoft is clearly placed a regime where crime pays, handsomely. Since previous judgements were levied, Microsoft has "innovated" the art of squelching its competition in ways that are not addressed by the remedies. Examples include:

Frontpage licensing, which prevents the publishing of information critical of Microsoft.

SDK licensing, which prevents alternative compiler tools to be used.

OEM agreements, hidden behind a woefully mis-applied veil of "trade secret."

SQL Server licensing, which disallows publishing of performance data.

Requiring licensees to disclose participation in government investigations, as noted by Texas' Attorney General in 1997.

Impending expiration of licensing and support for older operating systems.

Nearly all Microsoft application licenses, which specifies Microsoft operating systems, and does not allow for emulated or competing systems.

Misinformation in public statements, regarding competitors licenses (recently Novell) and common free licenses (as GPL and Berkeley).

Corporate perjury, as in the falsification of evidence presented in the USDOJ trial.

Very few of the above list of infractions are prevented by the USDOJ's purported remedy. Again, market forces alone cannot correct the

above situations, since Microsoft has monopolized PC software infrastructure market. The remainder of practices actually addressed by the ruling are weakened by loopholes in which the ruling's terminology is explicitly left to the interpretation of the convict! This freedom of interpretation must be removed from any effective remedy.

A far more effective remedy would be to separate the part of Microsoft that sells to the infrastructure market from the divisions of Microsoft that compete in creating applications that run on that infrastructure. Note that this would not devalue a legally operating corporation, since the court has ruled that the markets are separate. (In fact, the only way that it could actually devalue the company is in the way it deters product tying, monolithic integration, and abusive licensing practices to continue.)

I wonder, will the USDOJ's policy against criminals, as displayed by this proposed remedy, be applied to drug pushers? Under such application, a man guilty of selling crack, heroin, marijuana, and speed would be convicted of possessing marijuana and speed, and be sentenced to a handshake and a promise not to use anything the convict believes is marijuana for 5 years.

I have personally been injured by Microsoft's conduct. Over the past 6 years I bought 2 leading edge computer systems, actively seeking for vendors that would sell me the hardware without the cost of Microsoft OS added in. In each case, I was unable to find a vendor that could meet my specifications without buying unneeded software from Microsoft. I estimate that Microsoft's practices robbed me of \$500.

It is obvious that, unless it seeks additional remedies of a punitive and structural nature, the Justice Department will fail to perform its duties in upholding the law of the land, and in acting in the interest of the citizenry. Do not make our government a party to the robbery.

Subject: Microsoft settlement

I realize that you will receive extensive email at this address; no response is necessary.

Microsoft will continue to extend its software monopoly by leveraging their already massive deployment advantage. Prior to the earlier settlement, Microsoft strong armed OEMs into bundling their office software with their OS. In the context of web browsers, I find it interesting that the market penetration of MSIE matched the market penetration of the first version of Windows where the browser was integrated.

What will prevent this from happening in the space of instant messaging, or other genres of software? I would be curious to see what happens in these markets.

Hi,

1. A glaringly obvious thing for me was that for Windows 95 and NT4, to be eligible for the upgrade version, owning a competing O/S made you eligible to purchase the upgrade, with every subsequent release of Windows, the only way to be eligible for the upgrade version was to own a previous Microsoft O/S, not a competitor's (Not that there is anymore).

2. IF they figured on the Internet integration for windows so long ago, why did Windows 95's default network and dial-up installation not have TCP/IP by default, but rather Microsoft's preferred tech: IPX/SPX at the time?

3. I remember having to fork over money for the first versions of Internet Explorer, imagine if Netscape never gave theirs away for free, we'd be paying for our www browsers from the very beginning, just the way Microsoft would like it.

Last point:

If computing is supposed to become such an integral part of our everyday lives and were supposed to embrace it as a society, isn't it scary that one company has totalitarian control over the system running the most widely adopted technologies today?

Shouldn't the systems adopted everywhere be open for integration, examination and evaluation by representatives of humanitarian society? e.g. Professors, writers, academics? and not profiteers whose

clouded primary objective is profit and not the advancement of society through the technologies we adopt?

Subject: Concerns over DOJ/MS Settlement
Dear Sirs/Madams;

As a computing professional who has worked in the industry for nearly 10 years, I feel I am qualified to comment on the USIDOJ anti-trust case and Microsoft's conduct in the computing industry.

I feel the settlement reached with Microsoft is totally unacceptable. Microsoft's hold on the market is unaffected by the DOJ's lawsuit, as MS still retains complete control over the defacto standards for doing business today—the Microsoft Office data formats; MS still has 'trade secret' OEM contracts which are rumoured to prohibit the installation of any non-MS operating system alongside theirs; and MS still refuses to disclose critical programming information to other software companies and programmers worldwide.

The concept of an operating system, which all PCs require to run at all, in our day and age must be considered 'critical infrastructure', much like our system of national highways, or the electrical system. Microsoft, as well as any other popular OS vendor, should be required to adhere to strict standards of public availability, without prejudice, for the common good (*not* for one corporation's benefit).

Microsoft is constantly modifying their software (especially their Office Suite's data formats) so that no one can make an adequately compatible software. To truly open up the desktop computing market again to competition, Microsoft should be required to:

1) Publish *complete* specifications of the data formats used in Microsoft Word, Excel, Access, and Powerpoint applications;

2) Be required, for a period of at least five (5) years, to make *freely* available (no NDA contracts) any planned changes to the above formats, at least ninety (90) days prior to releasing any product, or product update, which would modify the above formats;

3) Be required to fully document the Application Programming Interfaces (APIs) and network communication protocols for the current flagship Windows operating systems (Windows 2000 and Windows XP); it has been *proven* many times over that Microsoft withholds critical API information in order to prevent competitors from designing fully compatible software.

4) Be required to make all OEM licensing agreements publicly available (they are currently claimed to be 'trade secrets' by Microsoft), and be compelled to remove any clauses prohibiting or penalizing OEMs for placing other, non-Microsoft operating systems, on PCs at time of sale alongside their own operating systems.

Please consider these points before final judgements on the Microsoft anti-trust case. If the above points are not implemented, Microsoft will be perceived to be 'above the law', and I, among many others in the

computing industry, will have lost a great deal of respect for the American Department of Justice as an instrument of the law.

Truly,
Russell Magee

Subject: COMMENT ON SETTLEMENT w/
MICROSOFT

As an American citizen I must tell you I have about lost all faith in American 'justice' with this so called "settlement" between the U.S. Government and Microsoft after Microsoft was found guilty of predatory (and I might add egregious) anti-trust actions.

I agree with the CEO of Sun Microsystems that what has happened is the "equivalent of being caught on tape committing murder then simply walking away scott free."

This settlement is an affront to every American's sense of justice in this country. How you lawyers can expect young kids in the barrios of East L.A.—or anywhere for that matter—to be good citizens and "obey the law" when the law is a joke and that joke is right out front for them to see, is beyond me. All you have done with this decision is prove to these kids that with enough money and power you can hire good lawyers to "get you off" (does the name O.J. Simpson come to mind here?)

I agree with Ed Black of the Computer & Communications Industry Association when he says "Every one of those (meaning the settlement "elements" that give Microsoft loopholes to slip through) is a loophole I can drive an aircraft through".

I cannot imagine what in God's name government lawyers in this case were thinking about with this insulting "settlement" unless there is some sort of kickback or favors involved here. This thing makes no sense at all to the average American.

Microsoft had a trial, fair and square. Even MORE than fair since they had the best lawyers money could buy—something the average American does not have. Microsoft was convicted despite it's "best-in-the-land legal minds that money could buy". Now damn it, the company should pay a heavy price for breaking that law and destroying God knows how many businesses along the way —just like any American would have to pay. In destroying those business ventures along the way with it's predatory practices Microsoft also bloodied the lives and dreams of thousands of hard working men and women.

As far as I am concerned, every government lawyer involved in this decision to slap Microsoft on the wrist is either a crook, terminally stupid or hopes that by his actions he'll end up someday with a sweet job on Microsoft's payroll.

God help us all if these lawyers are representative of the people we taxpayers have on the payroll.

 Subject: About the Microsoft suit

Hello,
 I'm a software developer with 20 years experience.

I feel I owe Microsoft for the last ten prosperous years I've had in my profession. The meteoric rise of Windows coupled with my knowledge of it has assured me a good living, and I thank them wholeheartedly.

I think that it is suicidal for the economy and the IT industry to hamstring them.

Microsoft lobbied out small and became a tremendous success; they followed the American dream.

The only reason they are being persecuted now that they are successful is that some of their competitors can't win with a superior product because they don't have the wherewithal to pull it off, and instead have to resort to lobbying and other dishonourable methods to attack a great software company.

Thank you.

 Subject: Settlement

I am appalled by the settlement agreement with Microsoft. The company has abused one of the biggest monopolies in recent history, and was essentially already convicted. What sort of prosecutor would settle out of court during sentencing, and settle for far weaker a remedy than the court would demand? This is an important process, and represents our ability, or lack thereof, as a nation, to stop a unabashed monopolist with arrogant policies from abusing its position. At least some of the states know that a big crime demands a stronger punishment.

Subject: comment

your settlement has not gone far enough to break a microsoft takeover of the PC industry, you need to force them to break the OS from the applications, this is the only way to allow other companies to compete on the application side. why would anyone buy an instant messenger or browser if they can get one for free with there OS?

if microsoft can control the OS and the major applications, they can then control the technology and economics of the PC industry. please force microsoft to release its OS bare, meaning no applications (at a reduced price, of course). this would open up more people, like myself, to get the latest OS technology without being forced to install the microsoft applications which i dont want or need.

thanks,
 george polly

 Subject: Illegal Climate? (in the style The New York Times;)

First, allow me to suggest that the points agreed upon in the recent settlement with Microsoft (MS) are meaningless—nothing but the collected idle gripes of anyone who's ever had a product 'ruined' because MS used the Windows desktop as ad space for their own competing product while the plaintiffs actually had to get users to run an installer to convert the desktop into a billboard on their behalf. If advertising were the issue, users ought to be able to charge for their desktop space. [If you get caught thinking this far-fetched, consider that such a system has evolved in the shareware industry.] But advertising is a non-issue; anti-trust

legislation is not meant to reward reparations to vanquished competition. The issue is preserving a climate for future competition.

The smorgasbord of gripes, even if we didn't agree with the above, or if we did agree that MS should be punished but could see no other course of action, is at least so difficult to implement that it is effectively harmless to MS and useless in supporting a competitive marketplace. The Justice Department, who takes three years and three judges to get a "settlement", would have us imagine that they can enforce such a complex and ambiguous policy in market-time? The one single, effortlessly and unimpeachably enforced, admirably fair and effective sanction that could have been imposed on MS but was not is: A Complete Good-till-canceled Moratorium on Exclusionary Licencing. The measure would leave MS to compete with only their own highly-touted (and justly so) merits as a software maker and their indisputable dominance, even by classical standards, of the computer software marketplace. nt can be argued that the engine of backward- compatibility means egregious degree of dominance x in a classical market is on the order of unstoppable monopoly lOx in the computer software market, once the size of the software standard in question, and thus the cost of engineering a new standard from the ground up, reaches a certain point. After, only a 'shadow' (playing in the dominator's sandbox) model is viable; a niche which never seems to win more than 5% (and seldom more than 1%) of such a sandbox, even in the volatile arena of microprocessor hardware, where the sandbox in question is defined by a relatively small and well-published item; an instruction set vs. oceans of poorly-commented and poorly documented MS source code.]

This raises the question: is exclusionary licensing against the law? The answer is: It isn't. It is a practice grandfathered everywhere from soda fountains to newspaper routes. Has Microsoft done anything illegal at all? It has been found to be a monopoly, and to the extent that is illegal we are justified to meddle in some of the more aggressive of their trading practices, and exclusionary/restricted licensing policy is the Jimmy Valentine of their notorious efforts here, especially regarding their publicly-leaked goal of eradicating the Linux sandbox.

But is MS really a Monopoly? I have dispute x with Jackson's findings of fact... Instead of asking Jackson, let's ask Linus Torvalds, a person with more knowledge of the computer industry, and likely with more general intelligence anyway. He asks if there is any company other than MS at all, in any sandbox, that is profitable on the basis of EULA software binaries. With the forgettable (if not dubious) exceptions of Adobe and Corel, the answer would have to be: No. Notable are Sun and Apple; companies with excellent software products who tried unsuccessfully to leave their hardware-based economics. Also notable is IBM, the hardware company that gave birth to MS but was unable to profit on software, finding a role only as a service/solution provider. In a market truly so difficult, is there any one who would hear Microsoft cry Judas having

been denied the right to restrictively license their product?

Subject: no sir, i dont like it
The views that you will promote with the signing of this agreement will hurt everyone's interested, and will hurt foreign economies like the one that I am in, Australia. We lived through the monopoly of Microsoft for far too long. Not only cant we sell solutions to our clients that can run on alternate operating systems on the users desktop, we are shunned and forced to move and support Microsoft products. They do not innovate any part of their products, and just force customers and myself to buy and use their products. I don't like it. It has hurt the business that I work for's bottom line when we have to re-install a Microsoft product on a server or workstation because the product was faulty and the customer did not want to move to an alternate platform.
No sir, I don't like it.
Please do not continue with the current approach with Microsoft. I do not know where I will be in 1 years time if they keep forcing me to support their products that eventually eat up my business? bottom line through endless support and paying for Microsoft to fix their bugs (ie when I call their help line and don't receive my \$320AU back because it is a bug that isn't going to be fixed until I purchase the next version of their operating system).

To: Microsoft ATR
Date: 11/17/01 7:34am
Subject: proposed settlement
To Whom It May Concern:
I am a consumer who uses Microsoft Windows and many other Microsoft programs both at home and in my work as a physician, part of a very large group practice also using Microsoft products extensively.
Even through rejected by my state of Connecticut, I write in strong support of the proposed settlement.
While I think the government's case has been greatly overblown, the courts have in fact found that Microsoft engaged in anticompetitive behavior and requires a penalty. The proposed settlement should be accepted quickly, so Microsoft can get on with its excellent work.

I particularly write to comment against stronger penalties that would disrupt software integration and convenience for consumers, require consumers to spend useless time and money researching all sorts of "competitive options," and then have to fiddle around with their computers for hours getting all this stuff to work properly together—to say nothing of troubleshooting and other problems. The Microsoft group of products is a wonderfully useful and efficient system. Their software is a tribute to American ingenuity and should be supported rather than attacked. Microsoft's competitors are just using this case to try to force consumers like me to buy products of theirs which we don't want—let them win my business in the marketplace, not through some heavy-handed intervention of the government.

In short, settle this case, move on, and let us all worry about things that do matter.

Thank you very much for this opportunity to comment.

Sincerely yours,
W. Scott Peterson, M. D.

Subject: Justice
I have read the "settlement", it will not stop Microsoft, I, a "dumb consumer" can tell that. Greed is at the heart of this, and having seen the "corruption" in this government in the past I cannot help but believe that down inside this settlement there is an exchange of money. Time will reveal all.
Microsoft will find a way around almost if not every provision and will continue to behave in exactly the same manner as before. They have been very successful with their current pattern and will not change it unless forced. Leopards can't change their spots. And this agreement allows Microsoft to basically decide for itself what to change and who will oversee and enforce the changes. The crooked judge letting off the crooked company for a fee.
This a wonderful example of why this government is doomed to failure. Greed has led to corruption at the highest levels. Everyone knows it, nobody in government is doing anything really about it, just pocketing the money and giving it lip service.
And you wonder why people don't have any confidence in it. Just look at it's fruits....

From: T.Baden
To: Microsoft ATR
Date: 11/17/01 7:33am
Subject: DEPARTMENT OF JUSTICE AND MICROSOFT CORPORATION (http://www.usdoj.gov/opa/pr/2001/November/01_at_569.htm)
Dear Sirs,
I read the posting at http://www.usdoj.gov/opa/pr/2001/November/01_at_569.htm with great interest. I work in the information technology (IT) industry. I started getting paid to work with computers 1980. I have watched the implosion of IBM (and it's resurrection), I saw Apple start up, (building on great Xerox research). Then a startup company put out inferior technology using questionable tactics that ate the desktop market alive. I wholeheartedly support the antitrust action against that company. But it is with a sense of ?what could have been? I read current agreement.

While I would have preferred a stronger judgment (more later on that), I understand the current climate mandates a lesser punishment. Please bear with me as I detail:
It looks like the agreement is easy to enforce. Or is it? "Disclosure of Middleware Interfaces" and "Disclosure of Server Protocols" are good fulcrums to pin Microsoft down on, but may be difficult to enforce. The published set of Microsoft interfaces is very large (and documented at

a mediocre level) set of interfaces and protocols: there are 10's of thousands of them and while many of their characteristics are documented, many of the ways they interact are not documented (it takes programmers years to learn a useful subset of them). Without going into the details, I submit that you will find the undocumented set of APIs and protocols to be at least as large if not larger and the documentation to be worse. What if Microsoft publishes a select group of these, enough so that the initial attempts to use them take 12 months before people start to figure out there is something missing. Meanwhile Microsoft releases 2 more versions of Windows (just the way Microsoft did with IE) adding much more hidden functionality that makes the old sets obsolete. I think the "On-Site Enforcement Monitors" would have a terrible job of keeping up.

If there is at least the possibility that this might happen, it will be a very significant barrier to the server and middleware developers. Now instead (here's the later bit): contract "On-Site Enforcement Monitors" to find every last stitch of Windows source code, and stamp it all "GNU copy left" (see <http://www.gnu.org/licenses/licenses.html>) and publish. Should not take more than a year, maybe less. Contract ends, enforcement complete, no chance for Microsoft to renege (again) because "the horse has left the barn". Also: do not split Microsoft, do not collect any money from Microsoft.

The damage to Microsoft would be immense; it is possible that Microsoft may not recover from it. But, not only does Microsoft get a penalty, the IT industry gets a boost from the action: The IT community are given all windows code (and the right to make as many copies as they like). I know Microsoft would never agree to such a thing. You'll need to fight for this one. But, this type ruling would send a much stronger message than any fine or break up: antitrust law would surely be regarded not to mess with after such a ruling.

Okay, back to reality:

I think you have a nice agreement given that the political reality of the day probably excludes the "GNU copy left" option. Go get ?em!

I want to thank you for allowing me this opportunity to comment. One final thought:

Yes, this is about market and money, but for me, it feels personal. I expect that many people working the software development community feel this way: I respect good technological solutions to problems; I appreciate elegant (as mathematicians use the word) solutions to problems. What Microsoft did was much worse than violate antitrust law: elegant and good solutions count for almost nothing in the IT industry today (there are exceptions-the Palm for instance). I think this is sad. If a *strong* message is sent, maybe we can leave most of the mediocrity behind and get back to good elegant solutions.

Sincerely

Toby Baden.

Subject: You failed the users and the overall industry

I am strongly disappointed in the outcome of the case against the clearly guilty Microsoft. You caved and gave them everything, extracting virtually nothing. Your "settlement" doesn't prevent Microsoft from continuing business as usual.

They are free to bundle to their hearts content, a weapon to use against ANY potential competitor. They are free to continue trying to turn the internet into a Microsoft-net via closed, proprietary protocols and by altering or adding to fully open standards.

You all skipped over the meat and gave them a very useful and stern "Stop it, OK?" Brilliant. And the punishment: Do not violate the new consent decree like you have violated ALL other such beasts in the past or we will make sure you are still "burdened" with the decree for 5 more years so you can continue to violate and ignore it.

Your agreement needs to go further. Microsoft must be enjoined from producing ANY new communication protocols without fully disclosing/publishing them for general use. Microsoft must be enjoined from modifying ANY standard, general communication protocol already existing without first FULLY disclosing the nature of the modifications so that anyone else who might wish to interoperate with Microsoft systems are free to do so—no restrictions. All Microsoft programming APIs must be fully released and documented so any software maker can create competitive or interoperating applications that fully work as they should on Microsoft operating systems. Finally, Microsoft must be prevented from making ANY restrictive licensing deals with ANY company that in any way hinders competitors from gaining full access to users or systems.

Subject: The public needs CHOICE

I don't want WindowsXP.

Most programs will soon only be available in XP only versions. I WILL HAVE NO CHOICE.

I might want to stay with Windows98.

Microsoft is terminating support for Win98 and older operating systems. I WILL HAVE NO CHOICE.

I don't want to inform Microsoft of my complete hardware configuration.

WinXP requires my info be sent to Microsoft in order to activate. I WILL HAVE NO CHOICE.

I don't want to inform Microsoft every time I upgrade my computer.

WinXP requires reactivation when I change hardware. I WILL HAVE NO CHOICE.

I do NOT want to give Microsoft authority to "automatically download[software] onto your computer" and I do NOT want to agree Microsoft may "disable your ability to copy and/or play [music/video]".

These OBSCENE clauses are in Microsoft's MEDIAPLAYER7. Some internet files are only supported by

Microsoft's media player. I WILL HAVE NO CHOICE.

I do not want to give Microsoft my personallpasswordlcreditcard data.

Microsoft is developing it's new ".NET" project to be inescapable online. I WILL HAVE NO CHOICE.

I am a PROGRAMMER. I would like to be able to write programs.

In order to receive "API, Documentation or Communications Protocol[s]" the proposed DOJ settlement requires that I have "reasonable business need", meet "standards established by Microsoft for certifying the authenticity and viability of [my] business", and to "submit, at [my] own expense ... to third-party verification, approved by Microsoft". As an individual, I WILL HAVE NO ABILITY.

And in order for me to "exercise any of the options or alternatives expressly provided [me] under this Final Judgment" I may be required to pay "royalties or other payment of monetary consideration". As an individual, I WILL HAVE NO ABILITY.

These clauses benefit Microsoft, and in particular they penalize free software. Free software is currently Microsoft's biggest fear. Do not hand them a weapon.

I am concerned by any settlement clause that says "[anyone] may be required to grant to Microsoft ... any intellectual property rights". Microsoft has broken the law and should not receive additional rights as a reward. There is concern Microsoft may attempt to use this to attack the Gnu Public License. Do not hand them a weapon.

I am concerned that "Windows Operating System Product may invoke a Microsoft Middleware Product in any instance in which ..." Software I CHOOSE NOT to use should NEVER be invoked!!!

I am concerned that Microsoft is not paying financial penalties for illegal tactics/profits.

I am concerned that Microsoft is not threatened with substantial and specific penalties for failure to comply.

I am concerned that Microsoft is not required to release API's for Windows prior to WinXP. Microsoft has certainly made/can make self-serving changes in WinXP in anticipation. Microsoft should be required to release full API documentation without qualification, starting at from Windows98 or earlier.

I am concerned that Microsoft will have influence over selection of 2/3 of the TC.

I am concerned that the TC will be under a gag order. "No member of the TC shall make any public statements".

I am concerned that Microsoft will be watched for only 5 years. In terms of

Microsoft's business strategies is on the scale of the life span of one product—Windows98.

I am concerned that the DOJ is being pressured to accept a bad settlement, whereas Microsoft is quite happy to drag out the legal battle. This position is allowing Microsoft to make unreasonable demands. Microsoft abuses proprietary file formats, communications protocols, and API's. These should be disclosed without qualification. I am not a lawyer, however following section sounds to me like free reign to use anti-competitive tactics on any business that uses their upcoming ".NET" service: "Nothing in this section shall prohibit Microsoft from entering into (a) any bona fide joint venture or (b) any joint development or joint services arrangement with any ISV, IHV, TAP, ICP, or OEM for a new product, technology or service, or any material value-add to an existing product, technology or service, in which both Microsoft and the ISV, IL-TV, LAP, ICP, or OEM contribute significant developer or other resources, that prohibits such entity from competing with the object of the joint venture or other arrangement for a reasonable period of time."

Subject: Microsoft made the industry, but killed competition

To whom it may concern:

Please include me in the thousands (hopefully millions) who are displeased with your Microsoft settlement. Did their earlier settlement teach us nothing? They have complete disregard for government regulation. If you've given them the slightest loophole, they've already seen it and are altering their strategy to take advantage of it. They did it before, which is why we had this new trial in the first place! This is the company that faked videotape evidence. This is the company that created a non-bootable version of Windows when asked to remove Internet Explorer and tried to argue that they were just doing what the judge asked for.

I am not a complete anti-Microsoft zealot. I admit freely that their work on DOS and Windows essentially created the home PC market. But they have destroyed competition. Windows might have made the home PC possible for the masses... but what about folks like me who understand the options and choose not to use Windows? Does Microsoft give me a choice? Not if they can help it. That's why they are a known monopoly. Sure I can choose to run Linux (and I do), but can I go to a retail store and buy a machine with Linux pre-installed so that I don't have to pay the proverbial "Microsoft tax"?

Nope.

I would prefer not to use Microsoft Word, Excel, or any of the other applications in Microsoft Office. They are poor applications with a mediocre interface, a bloated file format, and countless known security holes. But do I have much of a choice? No, because Microsoft has eliminated competition in those areas as well. That's a monopoly of theirs that was barely touched upon. I would

prefer not to use Microsoft Internet Explorer. Again, does Microsoft give me much of a choice? Just barely.

There are many, many people out there who will argue that there's nothing wrong with Microsoft applications. That is because they don't know what competition is like. Why do we have viruses like Code Red and Nimbda? Because of the quality of products like uS and Outlook. The masses don't understand this. They think that viruses and blue screens of death are just part of the normal computing experience. Sure, it was good that Microsoft made it possible for them to have a computer in the first place, but they've also got people so frustrated that they're screaming and swearing at their computers and rebooting 3 times a day because they think it's the only option they have. And it's not.

I have never wanted to see Microsoft broken up, or restrained, or any other number of remedies that would hurt the masses at large. If people like to use Windows and other applications, they should have the right to do so. But the fact is that there are many people who choose not to, and many more people who do not know that there is a choice, and those are the people that need to be considered. Microsoft deliberately acts to prevent competition, and that is where they need to be stopped. If the argument is truly that Microsoft is good for the industry, then only healthy competition will prove that. Does Linux compete? Only to the extent that Microsoft lets them. We've already established that Windows is a monopoly, after all. Isn't there supposed to be some sort of punishment for that?

Thank you for this forum to express my thoughts. I truly hope that the government can modify Microsoft's proven anti-competitive, monopolistic practices and not just produce a settlement that registers as little more than a speedbump on their road to industry domination.

Subject: Enough already

I thought the DOJ did the American public a huge justice when it decided to settle. Granted, Microsoft does need tight monitoring to ensure it stays within the boundaries of the law but penalizing a company for competing fiercely is NOT the American way. Else, we're implicitly saying, America breeds and protects slackers and whinners.

The settlement is more than adequate so long it is enforced. Let's move on. There's much to do in rebuilding this nation and its economy. Microsoft is a huge contributor in many aspects so taking them down does no good to the rest of us. Also, if you're REALLY interested in protecting the public against unfair practices by companies with large/ monopolistic market shares, check out the following:

—SUN Microsystems in the enterprise server business

—Oracle in the database business
 —AT&T in the cable TV business
 —ebay in the online auctions business
 —Intel in the PC chip business
 —IBM in the mainframe computing business

There are lots. Difference is, Microsoft is by far, the most well known, in your face, company while others are squeezing consumers dry, often without anyone knowing it. Btw, anyone notice that the state AGs that did not accept the settlement are also home-statds for Microsoft's major competitors? If the law can be manipulated by corporations to attack their competitors, we've got some serious problems in this country's system.

Joe Yong.

It is my opinion that this case should never have been brought against Microsoft in the first place. It seems to me that, we had some inefficient competitors who claimed the victim status and the justice department fell for the scam. However, this case should be closed now so that business and productivity can get on in the U.S. Also, it would seem to me that the innovative and productive companies, which leads to profitability for stockholders and jobs for many peoples, should not be punished. If the justice department wants to punish a business, do so to the companies that are failures, such as most of the airlines.

 Subject: Comments about Microsoft

Settlement Proposal

Hi,

My name is Keith Fulton and I am a registered voter in Houston, Texas. I do not believe the settlement proposal is sufficient because all it does is address Microsoft's future behavior without punishing them for numerous and systematic violations of the law for which they have been convicted in court. If someone was accused of murder, tried, found guilty and then was given probation, most people would see that as a miscarriage of justice. I believe that is a good analogy for this settlement. Microsoft has been convicted of violating the law in a way that affected millions of people over a period of years and continues to affect both them and the multi-billion dollar market they comprise. Both punishment and remedies are appropriate. This settlement provides for only the latter. The only way I can think of to break Microsoft's ill-gotten stranglehold on the OS market is to make the full source code for Windows publicly available and adaptable for modifications and resale by other parties. Only then will the market truly return to having multiple viable choices for consumers. Microsoft would then also be put back on an even footing with the rest of the OS industry. I don't know if these comments will have any effect or not. Hopefully the Justice Department will take under advisement my comments and the countless others I am sure they are receiving, since we have taken time out of our busy schedules to voice our opinions despite the slender odds of anything being changed.

Kind regards,
 Keith Fulton

 Subject: Microsoft settlement

With regards to the settlement for Microsoft, we believe it will be in the best interest in the economy and the consumer to settle this case as soon as possible. The nine states that are holding out apparently are doing it with the interest of companies in their state that are competitors of Microsoft. Microsoft should be able to inovate and press forward on the various aspects of technology. The technology companies that are on the stock market all suffered with the continous pursuit of this suit against Microsoft. We hope this soon will be over. Thank you.

From: Charles D Hixson
 To: Microsoft ATR
 Date: 11/17/01 3:41pm
 Subject: Microsoft is an abusive monopoly

Microsoft is an abusive monopoly. It has routinely engaged in illegal actions to drive its competition out of business. Sometimes the actions are borderline, and sometimes (I wanted to write occasionally) they are even legal.

I will admit that many of the actions that I have characterized as illegal would, in fact,

be legal were Microsoft not a monopoly. But it is. And it routinely acts, both tactically and strategically, to restrain trade.

The Stac case is a case in point. At that time Microsoft may not actually have been a monopoly, though I feel that it was one. Still, it appropriated the software that Stac had written against their express desires and included it within the Windows source code. (At this point the value of the Stac company took a strong hit.) When challenged in court, Microsoft tied things up for a long time, and then replaced the challenged code with code from another company (that they got cheap.. it wasn't anywhere near to being as good). I don't remember the details here, but Stac was now in such bad shape that Microsoft was able to buy it up for an extremely cheap price. Nobody has dared to challenge them similarly since then, and that was over twenty years ago. But they've spent the time since then improving their monopoly, if not their software.

Please do not misunderstand me. I doubt that any other monopoly would have been much better. Monopolies tend to engage in unsavory practices, and large successful monopolies tend to assume that criminal law doesn't apply to them. They usually seem to prove themselves correct, but I had had some slight hope that this wouldn't have been another such case. It's been quite blatant.

From: John Dawson
 To: Microsoft ATR
 Date: 11/17/01 3:53pm
 Subject: Proposed Settlement.. Just say no.

Your Honor, dear sir or madam,

I work with both Microsoft based personal computers, and UNIX based servers, on a daily basis. I hold a Masters of Science degree in Electrical Engineering and work as a principle developer of hardware and software techniques for automated testing of large data communication networks. I respectfully submit my personal views on the proposed settlement offer relative to the on-going Microsoft anti-trust case.

I am concerned that many people in the U.S. Department of Justice have portrayed the proposed settlement agreement as being good for the American people—it is not.

I am terribly worried that Microsoft appears to be able to manipulate the American political system and assert undue influence upon the current legal proceedings.

Who will decide which future software innovations are strategic to Microsoft, and hence, must be an integral part of the computer operating system?

When Microsoft "bundles" a new capability into its operating system, it immediately gets a monopoly share of the market for any similar products. Since Microsoft gets to define the minimum operating system bundle, they set the base fees that manufacturers must pass on to their customers. In order to maintain lower costs, most manufacturers will be unwilling, or realistically unable, to add or substitute programs that compete with the base services already provided by the operating system. This gives Microsoft a significant advantage in the software marketplace. Without splitting Microsoft's applications away from its' operating systems, Microsoft will be able to force its way to the top of any software or information service market it chooses.

I further believe that the proposed settlement agreement does not give sufficient consideration to the advantages Microsoft will maintain over competitors based upon the proprietary nature of their computer operating systems. Microsoft's own internal development will not be hampered by, or relegated to use, the same published interfaces that competitors must use. By not fully disclosing the internal mechanics of the operating system, Microsoft is free to optimize significant advantage for its own "bundled" solutions.

For the past several years Microsoft has used this advantage in clearly illegal ways to crush competitors. Where is the penalty for Microsoft's heavy hand? Without significant sanctions in this case, the proposed settlement will let a brutal monopoly force a proprietary delivery platform, for Microsoft market domination, upon the American people. This is not a matter of innovation, this is a matter of Microsoft being able to fix pricing for bundled solutions that force competitors out of new and emerging marketplaces.

I ask that you please reject the proposed settlement and instead, pursue a ruling to break this company into two or more separate entities. Thank you in advance for your consideration in this important matter.

Subject: Microsoft settlement

The idea that Microsoft or any company cannot add features to its products is utterly absurd. It would be a major hassle to consumers if car buyers had to buy tires or radios or whatever from different suppliers in order to avoid "bundling" or if they had to buy mustard and ketchup separately when ordering their burgers. History has shown that Microsoft products have lowered prices and benefitted consumers. I don't see why competitors should be protected to the detriment of consumers. America is all about freedom including the freedom to improve. Competitors should compete on features and prices and not survive by government sponsored cocooning. Even the old Soviet

Union moved away from economic dictatorship.

Subject: A comment on the Microsoft antitrust case

Hello, I have learned that citizens can send comments about the Microsoft antitrust case to your address, microsoft.atr@usdoj.gov <<mailto:microsoft.atr@usdoj.gov>>, and I am including a story that I hope you'll find relevant.

From 1998 to 2001, I worked as a software engineer for a company called ThinkLink, a San Francisco, CA based startup. We developed a product that allowed customers to access their email, faxes and voicemail over the Web or the phone (this is generally referred to as Unified Messaging?). The company grew from 6-7 employees working in an old milk factory to a booming business with 140 employees in offices in downtown San Francisco, CA.

I won't go into more details on the technology or our business model, but suffice to say that we created a product that was scalable and feature-rich. We integrated our system with companies like Netzero Inc. (www.netzero.com <<http://www.netzero.com>>), Lycos (www.lycos.com <<http://www.lycos.com>>) and many others. By summer 2000, we were signing up over 10,000 new customers per day, and we reached over 6.5 million accounts 7 proving that we were the leaders in the voice over IP/ Unified Messaging space.

At that time, our top management announced that Microsoft had approached us and was interested in purchasing ThinkLink. Not being on the board of Directors nor top management, the only information I received came from our weekly company meetings. For months, our CEO, David Ward, kept telling us that the deal with Microsoft was almost ready? he used the expression "a matter of days" a few times. In fact, Microsoft Engineers came to ThinkLink and we even started integrating our system with their Web email product, Hotmail (www.hotmail.com <<http://www.hotmail.com>>) Unfortunately, on February 2001, all 110 employees were called on a Friday afternoon and the announcement was made that ThinkLink ran Out of funds—since a secure loan was called upon, the company was closing down. The

hard work and hopes of hundreds of people were shattered in one instance.

After ThinkLink closed down, I learned many details on what had actually happened. As previously mentioned, for months Microsoft dragged its feet, but an offer was finally made in August 2000. Microsoft was to purchase ThinkLink Inc. for \$400 million dollars. From what I understand the deal was almost sealed: even seating arrangements for ThinkLink employees at Microsoft's offices in Mountain View, CA were defined.

The lawyers from both sides had agreed on the details, and ThinkLink's top management signed the documents. The documents were then sent to Redmond, WA to be signed by Microsoft. Unfortunately, to everyone's surprise at ThinkLink, Microsoft decided not to go through with the deal, the official reason being that it was afraid of getting into trouble with the DOT since it was entering the communications business and it already had some deals with AT&T. But to prove its seriousness, Microsoft offered ThinkLink a \$25 million dollar secured loan? this would help the struggling startup in our difficult economy until Microsoft decided that it was the right time to go through with the deal.

ThinkLink's top management had wasted so much time in the negotiations with Microsoft that it had no choice: it accepted the secure loan, thereby sealing the coffin on ThinkLink's future. By the beginning of 2001, Microsoft started putting pressure on ThinkLink to pay back the secure loan? and ThinkLink had no choice but to close down and all assets from the company were transferred to Microsoft. Microsoft tried to recruit some employees from ThinkLink's Engineering Dept. and offers were made after ThinkLink closed down. Not one engineer accepted an offer? most of us felt betrayed and we did not wish to help Microsoft in any way.

With its secured loan trick, Microsoft was able to get its hands on ThinkLink's technology (which was a perfect fit to their Voice.NET? services with XML/I-ITTP based applications) and in any case, it eliminated a potential competitor. They had to spend \$25 M dollars, instead of the original \$400 M.

There is no doubt in my mind that Microsoft planned this from the beginning. Although ThinkLink's top management did have some responsibility in accepting the loan and the conditions, I feel that ultimately Microsoft had the most to gain and the ThinkLink's fall was a direct result of dealing with the big, powerful and unscrupulous monopoly from Redmond. Recently, a company called Reciprocal was victim to the same Microsoft tactics—how many other companies have fallen in the same way?

To summarize, here's how I see the situation: 1) A startup has some kind of product/technology that Microsoft needs or that could threaten it in some way. 2) Microsoft shows interest in the company and offers to purchase it for \$Y million dollars. 3) After months of negotiation, Microsoft does not purchase the company, but to prove its seriousness about the whole deal, it offers a SECURE loan of \$X million (where X is a fraction of the original price, \$Y, discussed in 2—something like \$25 million instead of \$400 million) 4) The company now against

the wall (since so much time has passed and its a startup with limited funding) accepts the loan from Microsoft. 5) A few months later, Microsoft calls on the secure loan and forecloses on the company: they now have the technology they wanted and they have eliminated a competitor.

This is exactly what Microsoft did with ThinkLink, and they can only do this because they have billions. Wasting a few million with ThinkLink or Reciprocal is worth it—they are actually making money since they don't have to spend the R&D dollars to get the technology or the marketing dollars to fight the competitors. I still am in contact with many of ThinkLink's previous employees ? in fact we have an online discussion group with over 70 participants. We would appreciate a response, and thank you for trying to make our markets a fair playground.

Regards,
Emmanuel Huna

MTC-601

MTC-00000602

From: Jim Brown
To: Microsoft ATR
Date: 11/17/01 4:11pm
Subject: Let there be choice for the average software consumer!

The home computer is a staple of modern life. People use their computers to communicate with each other, conduct business, research, and even for entertainment. Our society as a whole depends upon the home computer.

I am a fan of windows 2000. It is an operating system that doesn't crash very often. It is easy to use and has a lot of built in features. I understand Windows XP takes this to a new level.

I am not against features in an operating system. They add to a users experience and the power of their computer. What I am against is the lack of competition that Microsoft faces. Admittedly they do a good job of innovating even when they hold a monopoly of the market. But imagine for a moment that two Windows XP caliber operating systems were being produced by two different companies, both vying to land on your desktop as a home user. Undoubtedly, prices would be lower to the consumer and features of the operating systems would become even better. Problems that today are overlooked would be given quick attention (such as some of the serious security holes that Microsoft rarely gives second thought to.)

The consumer wins. It has been established that Microsoft uses the most aggressive tactics of anti-competitiveness available. If there is any way that they can take out a competitor,

or assimilate them, they will. This only increases their monopoly, and decreases competition in the market place. I say this is unfair, and it is high time the government steps in and does something intelligent to remedy the situation. What action is called for I do not know. But something must be done! Although innovative in features and user-friendliness, Microsoft has a long standing history of serious security flaws that repeatedly appear in their products. So called "e-mail viruses" actually only affect people who use Microsoft's Outlook Express mail reader. Why the media calls them "e-mail viruses and not "Outlook viruses" I do not know.

Why is Microsoft not held accountable when their mail program facilitates the spread of these so-called "e-mail viruses?" I do not know. But I call for accountability. And I call for government intervention that there might be serious competition in the market place. All this so that your average consumer can have more than one good choice for a full featured operating system.

Microsoft does not stand for the freedom of choice that capitalism offers as it's benefit. Microsofts first interest is market dominance at all costs, and to them the consumers interests come second. More and more features of the home computer now fall under the power of this monopoly. The only good choice for Word Processing is Microsoft Word. The only good choice for web browsing is Internet Explorer. The only good choice for your operating system is Windows. This is how Microsoft wants it to be.

Unfortunately for most people, this is how it is. No good and meaningful competition in the marketplace, no good alternative choice for the average consumer. Something must be done to remedy our situation as consumers, who for now must depend upon one company alone—Microsoft.

The innovation and development of the home computer has come from many companies and still continues to come from many companies, such as AMD, Intel, IBM, Cyrix, Macintosh, HP and others.

For a society which has reaped the benefits of computer hardware engineered competitively by many different businesses in the private sector, why must we reap the shallow benefits of software engineered by only one company? Please, as the government of this wonderful country, do something to protect our rights as consumers. Please do something to let there be choice and freedom in the software market.

Please stop the company Microsoft that has shown it will at any cost try to destroy this choice and freedom for us, the consumers.

Thank you sincerely,
Jim Brown

Subject: microsoft settlement

When considering the settlement between the Ashcroft DoJ and Microsoft, the word

"sellout" rather than "settlement" comes to mind. This settlement is effectively a reward for predatory behavior, and sets a dangerous precedent for future companies with monopolistic aspirations. If a company manages to corner the market on a particular item, they can expect to be dragged into court by their victims, but as long as they make a large enough soft money contribution to the winning party, they will get off with a settlement so riddled with exceptions that no business practice is affected and all future lawsuits are effectively stifled.

My congratulations, Mr. Gates. You've bought the Department of Justice.

Andrew Ness

MTC-00000604

From: robert
To: Microsoft ATR
Date: 11/17/01 4:43pm
Subject: settlement comments

I find the proposed Microsoft (MS) woefully inadequate and should be discarded.

First, there are absolutely no penalties for past illegal behavior! Make no mistake that MS did profit from past misdeeds. Under the proposed settlement, they get to keep their illegal profits. MS is hardly a first time offender, and has shown absolutely no remorse. This, in and of itself, provides a powerful incentive for both MS and other companies to break the law.

Second, the conduct only remedies would be largely ineffective. Microsoft has shown in the past it's ability to get around any conduct probations. Look at the Windows 95 decree. They just released a "new" operating system called Windows 98, and went right around the decree.

Third, the technical committee that is supposed to oversee the conduct of MS is a joke. MS, who is a lawbreaker (the District Court was unanimous in this), gets to select one member out of three, who in turn gets to have a voice in selecting the third member. The phrase "fox guarding the hen house" comes to mind. Further, the committee is gagged, and sworn to secrecy, denying the public any information on Microsoft's compliance with the agreement, and will be paid by Microsoft, working inside Microsoft's headquarters. This will render the committee completely ineffective and MS will continue breaking the law.

Fourth, there is little to no protection for the open source and free software movements. Right now, they are the only potential competitors to MS. Yet, under J. 1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that MS does not certify the "authenticity and viability of its business." MS has repeatedly described the licensing system for Linux (the most widely used open source/free software operating system, but not the only one) as a "cancer" that threatens the demise of both the intellectual property rights system and the future of research and development. It is apparent that MS will use J. 1 and J.2 to deny interoperability information to the movement in an attempt to kill them off or marginalize them and maintain its illegal monopoly.

Only by forcing MS to release FREELY the information early in the development cycle can competition, all competition not just open source, be given a chance. Releasing the information at the same time as MS releases a new product will still give MS a big advantage. It takes time to develop new file filters and other interoperability components, and MS would be given a large headstart.

Please consider these and other criticisms of the settlement proposal, and avoid allowing the illegal activities to continue. It is far better to send this unchastened monopoly juggernaut a sterner message than the less than a slap on wrist message the proposed settlement sends.

Subject: Microsoft Settlement

Dear Sirs:

I have to say that I outraged by the agreement that your offices have reached with Microsoft. This is not an agreement that will benefit the public either in general or in its specific application to users of personal computers in personal or commercial applications. It is rather evident that this was basically a selling-out on the part of the Justice Department who appears to have lost the will to fight in a case which they were clearly defending the American people from the predatory and self-serving practices of a company whose clear desire is to destroy all competition so that they can direct our individual use of our computers to their line

of products. The Justice Department was right to pursue Microsoft; they should have been tried and, even thought the courts may not have agreed with the way in which Judge Jackson handled the case, the fact remains that Microsoft was guilty of the charges against it. You threw in the towel when you were winning and could have gotten a genuine settlement that could have benefited the American people, too. Instead Microsoft can now go on with their past practices cognizant of the fact that you have no ability to limit the same practices that they were tried for in the past. You could have done so much better. You really owed that much to the American people.

Sincerely,
Doug Drizd

Subject: Microsoft Settlement

I found the untitrust agreement settlement as by far in the interest of all of us Consumers. We should indeed settle this case entirely as soon as possible in order to allow the Nation to focus on much higher priorities: Domestic Security, War and Economic Growth. The greatest strength of America has always been Innovation and Innovation, not Investigation.

At a time like this, with the Nation involved in a protracted grinding war and furthermore in a near collapsing economy, a unanimous settlement agreement will be definitely in the interest of Consumers and Entire Economy

Respectfully
Anthony Testa

Subject: MS, Be and gobeProductive
Hi!

I thought this might be of interest.. Many people have been hurt by Microsoft in an unfair and illegal way, and many of them look up to you for some kind of closure. I really hope you can provide it.

Here's a link to a first preview of gobeProductive 3, an office suite that debuted on the BeOS and is making an entrance on the Windows platform. http://www.osnews.com/story.php?news_id=265 As an ex-employee of Be Inc. (RIP), I know Gobe as a small company that has come to excel both technically and in its ability to gain its customers' respect and loyalty. It would be a shame to see them getting brutally slaughtered by the usually unfair practices of the Redmond giant.

The entrance of their new product on the Windows platform might also be a good time to quietly monitor how Microsoft reacts to new competition with one of its core businesses and if its practices have changed since the beginning of the antitrust trial.

Regards,
Nir Gilboa.

PS: I forgot to mention that in my opinion you have missed perhaps the biggest offense by Microsoft-threatening OEMs to revoke their licenses if they decide to include an OS other than Windows on their products. But I'm sure JLG already pointed that out. Farewell to him and his great company.

To: Microsoft ATR, nnamelet@yahoo.com @ inetgw.fmanheim @ u...
Date: 11/17/01 5:10pm
Subject: Observed problems and costs incurred because of Microsoft monopoly
FROM: Frank T. Manheim, 13126 Pebble Lane, Fairfax, VA 22033; telephone workplace 703-648-6150, home 703-631-0166.

I am a chemist working at the U.S. Geological Survey National HQ in Reston VA, and have experienced certain problems and costs due to Microsoft policies in the course of my work. My observations and opinions are my own and don't reflect official policy at USGS. I don't have the expertise to know whether the below problems can be legally applied to the remedies sought from Microsoft. But to the extent my observations reflect similar problems experienced by other computer users in governmental agencies and private industry, they imply economically significant damage not related to browsers or middleware, due directly and indirectly to anticompetitive practices of Microsoft. I did not find these issues explicitly mentioned in the documentation your recommended for examination.

(1) Viruses. Microsoft's near-monoculture status in the U.S. and elsewhere has made computers and servers running MS software an especially tempting and damaging target for malicious purveyors of viruses. In July of this year I was shut down for one week because of the dangerous Nimda virus. Many other persons and some servers at USGS were likewise affected. This affected my cooperation in groundwater research with the Delaware Geological Survey, the University of Delaware, and the National Park Service, as well as other USGS groups. The loss of working time for me from this episode alone is equivalent in costs to more than half of the year's computer purchases made by me and assistants. Damage from other viruses targeting Microsoft products is widespread among users in my acquaintance. MacIntosh users have been far less affected by viruses.

(2) Crashes and poor operating efficiency. Windows is famous for its bugs and crash-prone performance. In my experience no other leading software has been so prone to serious operational flaws so consistently. When design flaws and problems emerge in

ordinary software products, they are either corrected, or competition emerges and the software is superseded by better products. Performance problems have slowed my everyday operations using Windows 95 and 98 in ways not experienced by colleagues using MacIntosh. I have had to use Microsoft because of its monopoly position in low-level database management software (until recently) critical for my work.

3—Avoided or inflated-cost software support. Keeping software functioning and solving use problems is a critical part of computer efficiency. It is also expensive. When pioneering computer manufacturers slackened in support of their products—or priced it out of range, a number went out of business or were relegated to minor roles. This happened with commodore Computer and Ashton Tate's DBase line of database management products. In contrast, products like WordPerfect rose to leadership in large part because of outstanding support.

Because of its dominance Microsoft has been able to push its own Office products into leading roles and then almost completely relegate costs of support for WORD, EXCEL, ACCESS, and POWERPOINT. To hardware manufacturers or third-party suppliers. Microsoft's own support—at monopoly-aided prices—is now mainly provided to larger businesses and agencies. Recently, my handheld device, Compaq's IPAQ, suffered from synchronization problems due to bugs in Microsoft's Outlook driver (version 3.1). These flaws were beyond the ability of Compaq support staff to fix. But Microsoft's support page for its PDA drivers explicitly pointed out that responsibility for support of drivers was given to users and manufacturers. Business user support is provided at \$245 per incident—almost half the cost of my PDA. In short, not only does Microsoft charge more for widely used office software but it has largely freed itself from the cost of supporting that software due to its monopoly position. That applies to virus control as well operating system and secondary products. It's as though General Motors dominated American auto production through key patents, and thereby was able to deemphasize product quality, and after a 30-day guarantee period, leave responsibility for failures and operating problems totally to dealers.

SUMMARY: The cost in time and personal efficiency owing directly or indirectly to Microsoft's dominance and policies sustained by that dominance I estimate as being at least 3–4 times my total yearly cost of computer equipment and software. At least 10% of my total computer use time is wasted or severely impacted by software difficulties in ways that are affected much less for other firms' software products. I realize that this may be harder to document or assess accurately, but I suggest that the effect may be measurable. Part of the normal and necessary cost associated with computer support from which Microsoft frees itself owing to its monopoly position could be estimated by calculating relative outlays for MS and other firms including Apple, Adobe, and Corel. To the extent that the courts accept the charge that Microsoft has

wrongfully built and exploited its market dominance, then it should be penalized for the unfair advantages it has recovered through avoiding software support.

Respectfully submitted.

From: Kyle Putnam
To: Microsoft ATR
Date: 11/17/01 5:06pm
Subject: More than just a slap on the wrist
Good Evening,

I am writing to express my concern over the proposed settlement between the DOJ and Microsoft. I haven't been following it recently, but news reports make it sound like the settlement has already been accepted and is in effect.

Anyway, I think that the government is going easy on Microsoft because of the current economic conditions. It may be true that the latest version of Windows requires new hardware, and will increase both hardware and software sales, but it will also cause a further monopoly for Microsoft over the PC software market.

For example, Windows XP recommends that its users sign up for a Microsoft Passport account, but uses words like "You won't be able to use the internet services without signing up with a Passport account. Click here to get one." New users will think it is required to use the Internet at all, and as Microsoft pushes its Passport technology to Amazon, eBay, and several other major retailers, they will gain another fist around the neck of the technology market.

I think Windows XP should have DEFINITELY been put on hold until a decision was finalized about the case. The analogy has been made before, although it is not quite the same magnitude, that letting Microsoft release Windows XP while Microsoft is on trial is like letting a serial killer buy handguns and kill more people while he is on trial. I think the punishment against Microsoft must be swift and harsh, no matter what the state of the economy is. The technology stock market didn't really fall, it was only hype that made it appear so big in the past, and Microsoft can't change this.

Splitting the companies divisions such as the Windows, Internet Explorer & Media Player, Office, Hardware, Xbox, PC Video Games, and all other factions of the company should be actual separate companies. Different names, different CEOs, and all in competition with each other. The fact that Microsoft has gotten this far is plain appalling. Another possible solution is that Microsoft should be forced to release source code, specifications, or other information on its products.

Microsoft lately has shown no responsibility for its poorly designed, insecure software such as Windows NT, Windows 2000, and especially IIS.

As I am sure you are aware, they have drafted an agreement between business partners (and worse yet, security companies) that forbids them from releasing detailed information on a security exploit. They claim this will make things more secure, but time has proven over and over that obscurity leads to insecurity.

I urge you to take swift action against Microsoft, and action much stronger than the proposed (or already effective) settlement between the DOJ and Microsoft. Don't you think Microsoft has had its time to get rich, (in)famous, and "innovate"?

Kyle

Subject: Microsoft Settlement

I think the matter should be settled. There is no reason whatsoever to accuse Microsoft of monopoly. I feel very strongly that Microsoft has benefited me and everyone I know. Any inconvenience has been to the competitors of Microsoft, not to the consumers. They should improve their products and beat Microsoft in the market. The government has no business hurting one company for the benefit of another.

This lawsuit was a hoax to begin with, to protect the competitors of Microsoft and not the public. Millions of taxpayers dollars have been wasted in this useless demand. And millions of work hours have been miserably wasted, that would have been put to much better use in other endeavors. If the government is really concerned about monopolies it can concentrate on the public school system, Medicare, the Post Office and Social Security for starters. And then go to all the other government supported monopolies. But I think the public school system is the most damaging of them all.

Not Microsoft.

From: Tim Maroney
To: Microsoft ATR
Date: 11/17/01 5:36pm
Subject: about the Microsoft settlement

I work in the software industry. Specifically, I am a longtime Macintosh software developer, which means I have lived under the shadow of Microsoft for my entire professional career. The shadow is long and dark; it is a shadow that seeps into every crack, and plays every trick it can imagine, crushing competition through both blunt assault and subterfuge. I was encouraged by the initial remedy imposed in the antitrust trial, and discouraged for the future of my industry when it was reversed on appeal for no apparent reason besides the judge voicing his understandable frustration with the weasely antics of the defendants.

I do not understand how you can even consider a settlement based on conduct remedies, when Microsoft has been repeatedly placed under conduct remedies in the past and has done everything in its power to find loopholes in them, and in many cases simply flouted them completely. In addition, there is no limit to the number of new abusive practices the company can come up with, and no conduct remedy can anticipate

them. The only feasible anti-trust remedies given a history of flouted conduct remedies are structural ones. The breakup was an excellent starting point, though the actual lines of division could have used more careful consideration with respect to strategically important issues like development tools.

Another structural remedy worth considering is the public utility solution, in which key parts of the Microsoft edifice—I'd suggest operating systems and development tools—become publicly owned in return for a reasonable payment to Microsoft, minus the value of penalties for its monopolistic behavior, and with interoperability constraints imposed on its applications to counteract the benefit they have already derived from monopoly pressures. If Microsoft were just another application developer without the ability to use its monopoly position in operating systems to dominate the application market and other software markets, we might start to see some real competition emerging again in the software industry. At the same time, Microsoft would remain quite profitable and successful, although to maintain its success, it would have to try the radical approach of producing superior products at lower prices.

It is about time this matter was settled. It never should have begun. Microsoft is a wonderful company doing wonderful things for consumers! Where would we consumers be without the technology Microsoft has developed? We use it every day.

MTC-627

MTC-00000628

From: A.J. Kirby Co.
To: Microsoft ATR
Date: 11/17/01 6:06pm
Subject: Microsoft settlement.

To whom it may concern: Regarding the Microsoft settlement: I am a consumer and a very small voice in this matter. My opinion is not based on extensive technical knowledge. Experience is all I have and my experience is that Microsoft products are mediocre. They are the standard for most computer users but not the best technology. I have heard them described as "just good enough". Their ubiquity insures their longevity. A monopoly that has been found to act in an illegal manner is in charge here and not the marketplace. The DOJ settlement will do nothing to correct this situation in my opinion. Over the years I have watched many software companies loose ground to Microsoft. Independent reviews of their products place them ahead of Microsoft's products yet they did not survive competing with Microsoft and its illegal behavior.

This oppressive power does not just apply to software. For example, by simply deciding not to produce the program Microsoft Office for the Macintosh operating system, Microsoft would most likely cause Apple Computer, Inc., to declare bankruptcy. In fact

it was brought out in the trial that Microsoft did indeed threaten to stop development of the program. How can competition be served when a company has that power? How many other companies are threatened in the same manner? I also wonder how many companies are reluctant to speak out for fear of reprisal?

I think of it this way: computers need an operating system to run and software to perform specific functions. This is why, in fact, the proposal to split Microsoft into two companies was so logical. One Microsoft company would produce an operating system and the other Microsoft company would produce software to run on that system. Microsoft would have to compete with other software companies. Their products would have to be more than just good enough. As it stands now, and this settlement does nothing to prevent this, Microsoft does not have to compete with other application companies. All it has to do is make any application part of the operating system and the other software companies can do nothing. How can a company compete with that situation and why is it so hard for the DOJ to understand that this is so damaging to the software industry? It is sad that the settlement the DOJ has reached with Microsoft appears to have been influenced so much by politics and haste. It would be difficult to prove the extensive harm Microsoft has caused the computer industry but it would be very rewarding to think of all the wonderful programs and innovation we could have had. It is depressing to think Microsoft is once again going to just take up where it was before all this court business.

I do not think this settlement is going to have much impact on Microsoft and I would predict that the government and Microsoft will probably be back in court within the next five years. Thank you for this opportunity to express my opinion.

Sincerely,
Richard K. Cooley

From: Frank Lowney
To: Microsoft ATR
Date: 11/17/01 5:52pm
Subject: Microsoft

As a citizen and consumer, I cannot understand how the DOJ has allowed itself to be worn down to a nub by the Microsoft monopoly. No one disputes the facts of the case: Microsoft has attained and is abusing its monopoly status in computer operating systems and several major genres of software (word processing, spreadsheet, presentation, web browser, etc.).

Now they seek to leverage this power to conquer other markets such as media, e-commerce and a host of other areas. Consumers in these monopolized markets now pay significantly more than they otherwise would and get shoddier and shoddier goods and services in return. This is how monopolies have always behaved, behave now and will forever behave. That's why we have anti-trust laws and the means to enforce them. The only remedies that will

work and be acceptable in the long run by consumers are remedies that convert Microsoft from a monopoly to something else.

We need and have every right to expect your protection. Please reconsider just slapping Microsoft on the wrist and do the right thing—remove their monopoly power.

To: Microsoft ATR
Date: 11/17/01 6:19pm
Subject: Microsoft Settlement

Dear Ms. Hesse,

In response to your request for public comment on the proposed settlement in the case of United States v. Microsoft Corporation, I urge you, as an independent citizen with no direct financial interest in Microsoft nor any of its competitors, to imposed the kinds of penalties and restrictions on Microsoft as is necessary to prevent them and deter others from engaging in similar monopolistic and anticompetitive practices.

There will be more benefit to the health of the economy for business, labor and the consumer when there is an environment in which entrepreneurs feel there is no unfair advantage against producing better products. Entrepreneurs need to be rewarded by the marketplace for their creativity and innovation in an environment which doesn't allow strong arm methods that prevent them from succeeding on their own merit. More successful businesses also means more employed people and lower prices for the consumer. An environment which fosters competitiveness is better for everyone except the monopolists. The penalties and deterrents should be such that they do not

discourage business from innovating and producing, only from using unfair practices.

I would recommend requiring Microsoft to admit to their violations of the law in a highly publicized manner with an apology to their competitors and the consumers. Also Microsoft should have to pay for an advertising campaign which explains the problems with anticompetitive business practices and to cite and praise other businesses which have succeeded without engaging in those practices.

Sincerely,
Lincoln Shumate

Subject: Questioning lawsuit.

Something just struck me as I was reading an article about the trial. Why aren't car manufacturers being sued for selling automobiles with Air-conditioning, AM/FM radio, CD-player, power-windows, power-steering, sun-roof, ABS brakes, air-bags, etc...

Most consumers look to buy a simple product with as many built-in add-ins as possible, since it avoids the complications of shopping for additional products. Also, I feel that the inclusion of additional microsoft products with their operating system is equally important, since it prevents errors or incompatibilities that occur between almost all computer products between almost every operating system available.

Reliability is an important aspect of computer technology... so is protecting intellectual property...

Reliability will be fortified by forcing microsoft to share the workings of it's operating system with other companies, which will assist in the production of software that will take full advantage of the operating system. Although, acknowledgment and protection of Microsoft's intellectual property will be compromised by such a decision.

A new form of intellectual property protection must of applied to computer technology (similar to the biotechnology property protection surrounding genetically modified organisms and biotech patents)...

Knowledge is important for ensuring that a company survives this fast paced world (especially during the current world-wide recession)... Sharing of such knowledge is equally important to ensure that new products grow from the old ones...

Subject: f9500/9549.htm

Dear Renata, and other DOJ participants in the MS antitrust suit. I'm a Swede that induced by problems with the W98 "OS" during the shift between 98 / 99 went ravingly mad over a crashing computer while heavily dependent on the same while promoting finance of some mines and Oilfield in the Republic of Kasachstan.

So if that were not difficult enough, when having an obstructive computer loaded with expensive analysis software, that constantly gave up on me. Well,, everything ended up in a judicial assault by corrupted structures in the Republic of Latvia Clearly another story, but inevitably linking me in to the Microsoft issue again. Forced to give up all financing work remigrating to Sweden completely out of cash after six months in closed arrest, it came on me again. Tried to find a job in computing, as in ground being an Electronic Engineer with some 25 years of experience in microelectronics and software, really from scratch. The Swedish authorities had introduced a "Drivers License" for computers based on MS windows, Hi Dee Hoo.

Almost all educational material were based on the highly manipulative MS Visual Studio, as I regard to be in violation of a principal human right, The freedom to Assemble. Was essentially subjected to a boycott as being able to define MS structured program generating Creativity Suites, tying up program creation to API's while it exist compilers f.o.x. Inprise Borland Bcc32 generating close to OS independent byte code, as well as Assembler and of course Java that Microsoft tried to obstruct by introducing their own API's in the MS version. The Java maneuvering actually flashed back a bit as MS Java don't perform as well as the original SUN product, even on Windows.

Though not a US citizen, I've lobbied hard against MS initially through a member of the US congress Judiciary Committee between the end of Mars 99 to November 99. I regard Microsoft a a world wide plague, and could participate the ability to produce software enslaving the users. The issue "To use Software, or to be used by it" turned obvious, as MS already was on their way to implement it in full scale. Take their "Product range" Windows 95 / 98 / ME / XP / NT 3 / 4 / 5 "2000" I can and I've installed all API's of those "products" on my close to four years old machine everything works extremely well after some stripping down of highly experimental automation code (mostly producing system crashes), that in every way has to be done in order to have a non kamikaze computer.

Talk about "The Emperors New Clothes" So be it.

Must congratulate you to you conclusions and the remedy proposed. The "Violating Structure" must either comply or face self erosion. Well done.

O.K. Microsoft have created jobs, but based in poor software, generating problems, generating maintenance, and so forth.

What will happen if that grows, and finally collapses, as most Windows OS's do, but in full scale?

Would not personally object if Gates serves life long prison, remembered for to introduce "the human factor" into a machine that properly loaded never fails.

With My Best !!!!

Peter Johansson.

Subject: re: microsoft settlement

Dear DoJ, I think the proposed settlement is woefully inadequate to provide any relief to the billions of consumers who have been victims of this machiavellian monopoly. It is estimated that the monopoly effect on the price of Windows is around \$20.00 per copy. An adequate remedy would start with a full reimbursement together with triple damages for all purchasers, of which I am sure Microsoft has very thorough records. Then it would address the contemptuous behavior Microsoft and its ceo toward the prior judgement in this case and the judicial

process in general and provide substantial incentives to correct their behavior in the future. Anything less condones the type of behavior Mr. Gates displayed in the depositions that were introduced at trial.

Subject: Microsoft Settlement

Honorable Sirs,

We think this case has long overdone its constructiveness. Too much politics have been in play. It is in the consumer's interest to settle this promptly with a minimum impact to Microsoft who has helped bring the computer industry up to its high level. Without their aggressive tactics we believe the computer science would be behind where it is at this time. We urge a prompt settlement to end this turmoil.

GOD BLESS,

Subject: Comments on DOJ proposed settlement with Microsoft

Dear DOJ,

The published proposed settlement with Microsoft concerning its anti-trust conviction is a travesty of justice. Microsoft, by its own admissions and demonstrated behavior, plus the considered testimony of numerous, credible expert witnesses violated anti-trust laws. It earned its guilty verdict. The proposed settlement does NOTHING to prevent Microsoft from continuing the behavior that got it convicted. It does NOTHING to undo the monopoly Microsoft has established.

At a minimum, the settlement should include these stipulations:

- Microsoft shall publish the programmatic API's to *all* of its system and application software, without restriction and without cost, to the public. The information should be published on the internet and should require no binding agreement between Microsoft and anyone who wishes to use it.

- Microsoft shall publish all data, protocol, and file formats for all of its products. The publication of any changes to these must precede the publication of software by Microsoft by a minimum of 6 months prior to any commercial release of Microsoft products that use them.

- Microsoft shall be required to charge all customers, regardless of buying volume, the same price for all of its products.

- Microsoft shall be prohibited from "bundling" any products based on the purchase of any other products, regardless of whether they are made by Microsoft or not.

Anything less than the above simply ignores the gravity of the legal judgement that Microsoft BROKE THE LAW. It will do nothing to foster competition in the software

development business. Microsoft should pay treble damages for the cost of the government's prosecution of the case against them, especially since it was demonstrated DURING THE TRIAL that they attempted to deceive the court.

The proposed settlement is an affront to the justice system's conviction of Microsoft, and it is an insult to the hundreds of expert witnesses and thousands and thousands of independent software developers who must face monopoly power if the judgement does not include the above stipulations intended to, for the first time, PERMIT COMPETITION with Microsoft on a more level playing field.

As an independent software developer, I urge the DOJ to put the above stipulations into the settlement.

Respectfully,

Joseph Buczek, independent software developer

Subject: Repeat offenders needed tougher sentences

Dear Department of Justice:

I have read the recent ruling and proposed resolution to the Microsoft anti-trust case. It is my strong belief that the proposed remedy will have almost NO IMPACT on the current market abuses by Microsoft.

There are three items in the proposed remedy that need to be brought to light:

- Microsoft was given a similar ruling in 1995 to disallow the bundling of Internet Explorer and Windows, in an attempt to prevent Microsoft from illegally leveraging its Desktop OS monopoly into the Web Browser market. Six years later, we see that Internet Explorer has over 90% of the web browser market. The Department of Justice FAILED to prevent Microsoft from illegally extending its monopoly into the Web browser market.

- Microsoft has dealings with OEMs which prevent them from installing any other operating system except for Windows on a new PC. The proposed remedy makes it more difficult for Microsoft to continue doing this. However, the issue that it fails to address is this:

What other operating system would OEMs install? There could have been an opportunity two years ago to help out Be, Inc. gain a foothold with its superb desktop OS, but they are gone now due to Microsoft's abuse. This leaves Linux, (which is either a toy for hobbyist geeks or a server operating system), or OS/2. It's doubtful that OEMs would want to install either of these on a desktop PC. Thus we see that the Department of Justice IS FAILING to prevent Microsoft from continually reaping the benefits of its past illegal behaviour.

- The proposed remedy makes a provision to force Microsoft to disclose protocols to qualified 3rd parties for the purpose of interacting with its software. This alone

could have been the single most important part of the remedy, if it hadn't been de-clawed by the "Security" except granted later on. Microsoft can propose that its implementation of the SMB / NetBIOS protocol uses password encryption, whose protocol cannot be published due to security concerns. Therefore, Microsoft will continue to keep that protocol a secret, and use it to enhance interoperability between Windows systems and destroy / eliminate interoperability with non-Microsoft systems. (such as Unix / Samba) The security clause in the remedy MUST BE REMOVED, or the Department of Justice WILL FAIL to prevent Microsoft from leveraging its desktop monopoly into a communications protocol monopoly.

Thus we see how the Department of Justice has failed, is currently failing, and will continue to fail to protect the industry from Microsoft, unless the proposed remedy is altered significantly to address past abuses, current abuses, and future abuses that inevitably will happen.

I propose the following:

- Microsoft be forced to disclose—every—protocol used for communication between two PCs, or between two separate services or programs on a single PC. This disclosure will be UNCONDITIONAL, regardless of the protocol's intended or actual use. (Note that this will not require the disclosure of encryption keys.) The availability documentation for said protocols must be prominently displayed on <http://www.microsoft.com>, and endorsed as enthusiastically as the current flagship product. The documentation must be available for free download in a simple, open format (such as HTML 1.0, or plain text), and must also be available for hardcopy, costing no more than the printing and shipping cost.

- Microsoft be forced to not make—any restriction whatsoever—on the freedom of OEMs to modify, change, add to or delete from the hard drive of the system which they sell. OEMs must be given the ability to modify any and all parts of the PCs hard drive, regardless of whether that section of the hard drive contains a Microsoft product or a non-Microsoft product.

- To address the benefits that Microsoft currently enjoys due to past abuses: Microsoft be forced to make known the availability of competing software products. (such as Red Hat Linux, Sun StarOffice, and Opera Software) The method by which Microsoft makes these products known shall be up to them, provided that they, at a minimum, display a link to at least one competing product on their home page for EACH of their own products featured on the same homepage. The link to the competing product must be as prominent and enthusiastically displayed as the link to Microsoft's own product. This specific remedy shall be in place for 3 years.

While it is doubtful that my proposed changes would have a significant impact on the Desktop OS monopoly, it would raise awareness of the availability of competing products and ensure that those products are able to interoperate with Microsoft's. It is my hope that the Department of Justice will consider these changes and avoid falling into

the same pitfall which they previously have, are currently, and are about to fall into.

Sincerely,
John Lemke

Subject: ridiculous settlement

Hello,

I have read about the settlement that you reached with Microsoft, and I was wondering just how much Microsoft paid you to cave in to them in such a flagrant manner.

How is it that a department with the word "Justice" in its name, comes to an agreement with a company that has been legally found to be an abusive monopoly that has unfairly destroyed its competition, and that agreement has no punitive damages? Wouldn't it make sense to fine the company to remove the profits that it has made illegally? Wouldn't it make sense to return some of that ill-gotten gain to its victims? Wouldn't that be, in normal circumstances, considered justice?

When a criminal is prosecuted and FOUND GUILTY, the prosecution does not customarily then as the criminal if he would please, if it is okay with him, and if he doesn't have any better idea or have something else he'd prefer to do, go to jail now. This is no different. Microsoft does not get to decide the terms of their punishment. They have been found guilty of a crime. They must accept a fair punishment handed down by the court. The court and the prosecution does not need to worry about whether Microsoft will be upset with the punishment. In fact, if the punishment is reasonable, I would EXPECT Microsoft to be upset with it. The fact that Bill Gates has stated that he is happy with this settlement should be a big sign that the settlement has no teeth, and will not prevent Microsoft from continuing to use its market position to prevent competition.

A settlement with Microsoft should have several components. Some of them are:

1. Fines to remove the profits that Microsoft has illegally gained from its monopoly abuses.
2. Compensation to the victims of its monopoly abuses.
3. Provisions barring Microsoft from using its license terms to prevent computer manufacturers from selling computers with multiple operating systems pre-installed.

4. Requirements that Microsoft make its data file formats public, so other software makers can be assured that they will be able to make interoperable products. This is the major barrier to entering the office software market.

Any settlement that does not at least have these terms is a sellout to Microsoft, and makes the it appear that the current administration is in Microsoft's pocket. Most of the computing world knew that Microsoft was attempting to delay the legal process in the hope that a Republican would become president and end the prosecution against them. It appears, though, that the Bush administration decided that would be too blatant, and so instead had the prosecutors offer Microsoft a ridiculously lenient settlement instead. These are the type of sell-out actions that undermine people's confidence in the legal system.

Subject: some criminals

Dear Sir/Madam,

I have been a computer user for close to 20 years and my general impression of Microsoft over that time is that they have done more to retard progress in the industry than advance it. However, I'm disgusted by that fact that having broken the law, as verified unanimously by the Court of Appeals, they are not being punished or restricted in how they go about obtaining dominance of the internet.

The government should have levied a serious fine on the company (at least \$10 billion) and required them to sell a basic, functioning (as determined by an independent panel) operating system for 1/2 the cost of Windows with competition stifling add-ons.

Thanks,
—Art

Subject: Microsoft Settlement
Please retract your settlement offer.

Microsoft is the most destructive force in the computer world today, any product that competes with them is either bought (hotmail.com) or crushed (Netscape ... by giving away Microsoft's browser for free), or excluded from functionality (Quicktime (Apple) is now systematically excluded in favor of Microsoft's RealMedia ... the only way to get this functionality back is to

download patches from Apple—Microsoft and AOL's fight over instant messenger and Microsoft's competing product is another example). When Microsoft can't do these items, they try to set up "standards" that exclude their major competitor so that the Microsoft product is the "standard" that PC users "should use" ("J++" is a good example—fortunately, Java by Sun Microsystems won this war ... it was simply too good to be supplanted by the inferior J++). When all else fails, they bribe their competition (\$100 Million to Apple ... \$135 Million more to Corel).

Microsoft's goal is to rule with an iron fist ALL of computing from the desktop (90% marketshare) to the mainframe (Windows NT) to gaming (the "XBox", which competes with Sony and Sega) to the internet (Explorer sets MSN.com as its default) and all the content on it (many Microsoft pages are written in html that is "Windows-only" ... try to access them with a Mac or Netscape and the page will either fail to load, or the browser will crash). Even their e-mail client (Outlook) sets its preferences in such a way that many older e-mail programs cannot read the e-mails that come from Outlook machines ... thus the recipient thinks (s)he must upgrade to "keep up".

Windows XP is even worse than previous versions at these tactics from what has been leaked to the net. It integrates everything now ... try to "uninstall" Explorer and the OS will collapse, try to use Netscape and you'll likely find it so hard that only the most experienced user can do it.

I am a loyal Macintosh user for years, but am well versed in PCs as I've used both platforms for years. I've seen the Mac innovate (the Graphic User Interface, the mouse, the 1.44 Meg floppy, Quicktime, back-side L2 caching, FireWire, parallel process computing for the home user, voice recognition, a nearly virus- impenetrable OS) and the PC destroy or mimic. Stop Microsoft (and Bill Gates) from destroying the world of computing by making it "my way or no way". Go after him with the furver that we are currently going after Osama Bin Ladin.

Subject: you failed us

Its hard to express my disappointment in your decision to settle on such weak and meaningless terms. I am a software developer in MN. MN is dominated my MS. Most IE manager's are afraid to use anything else. During the trial this mentality was weakened and IT workers were starting to convince our employers that open source and alternative technologies were safe to use. I was actually proud of our government for what they did. MS was destroying our industry, and they were about to save it before it was too late. But, now its over and MS won. I can't understand that you could settle on with these weak provision when just 1-2 years ago you want to break the company up. That's quite a change of heart. Almost 180 degrees.

Its truly sad, and I hope it wasn't a back room deal. Now the fight is over. IT managers view MS as stronger than the government itself. Most of the IE developers who were fighting in the trenches for the DOJ, the fight for public opinion, are not unemployed or shunned.

You failed those who supported you. Now what are we suppose to do?

From: Michael A. Alderete
To: Microsoft ATR
Date: 11/10/01 1:53 pm
Subject: Re: U.S. v. Microsoft: Main Index

In a shocking, I say <I>shocking</I> development, the Department of Justice' has completely capitulated on the Microsoft antitrust trial, giving a convicted monopolist a light slap on the wrist. Just another example of George Bush helping the rich get richer. A quick recap of history: in 1998, the DoJ sued Microsoft in federal court for alleged antitrust violations. After months of dubious legal strategy, damning evidence, and ludicrous courtroom behavior, Microsoft was in 2000 convicted by a conservative Federal judge of being a monopoly and abuse of monopoly power. Note the word convicted.

In 2001, seven more Federal judges—a full sitting of the appeals court, most of them conservative appointees also—unanimously upheld the bulk of the conviction. Note the word upheld. Now, after weeks of “negotiation,” the DoJ and Microsoft have arrived at a “settlement” that is so full of ambiguities and loopholes that it's not clear that it will have <I>any</I> effect on Microsoft behavior, let alone actually restore balance to the technology industry.

The appeals court ruled that any actions taken against Microsoft (a) must restore competition to the affected market, (b) must deprive Microsoft of the “fruits of its illegal conduct,” and (c) must prevent Microsoft from engaging in similar tactics in the future. The settlement fails on every one of these.

I've read a few objections to this position, penned by Microsoft apologists, or Microsoft's buddies at the DoJ, and none of them hold water:

The proposed settlement is strong, and it really will modify Microsoft's behavior.</I> No, it's not. Ralph Nader (a man I'm not fond of) and James Love have written an open letter which details the deep flaws in the settlement far more eloquently than I can manage. Read that for the details.

<I>That letter assumes the worst about Microsoft's behavior, but Microsoft is good, the settlement will have a positive effect.</I>

History suggests this is not correct. Inserting weasel words and then using them to studiously adhere to their interpretation of the agreement while flagrantly ignoring the spirit is <I>exactly</I> what Microsoft did to the last consent decree with the DoJ. Certainly, depending on Microsoft to be “good” is a pretty flawed way to approach handling a convicted and unrepentant monopoly abuser.

<I>This antitrust case is all about Microsoft's rivals complaining, not about real consumer harm.</I>

If that were really true, I doubt if eight (count 'em, eight) Federal judges would have upheld the conviction. It's not as though they don't understand the law.

And if that were really true, what's up with Microsoft raising the prices on their products? The price of the operating system has been steadily creeping upwards;

Windows XP is \$10 more than the prior upgrade, and Microsoft is currently moving corporate customers onto new support programs which will cost twice as much as the old programs.

Explain to me how paying more for a product is not “consumer harm.”

<I>But Windows XP delivers more value, that's why it costs more.</I> Um, no. Look at other parts of the software industry where there is actual competition. Over time you get more value, and you pay the same or less. I've been upgrading Quicken for many years, getting lots more value in every release, and the price to upgrade is the same. Quicken has competitors, so Intuit can't raise the price. Windows does not have competitors, so Microsoft abuses their monopoly power and raises prices.

<I>Microsoft just wants to protect their freedom to innovate.</I> Aha ha ha ha ha ha! Aha ha ha ha ha ha! That's a good one! Aha ha ha ha ha ha! “Innovation” has nothing to do with it. Microsoft wants to protect their freedom to crush their competitors. Microsoft has never had a reputation for innovation, for good reason; they copy the best ideas from their competitors and put those into Windows in such a way to steer consumers towards other Microsoft initiatives (currently that's MSN and Passport; if you've installed Windows XP, you know exactly what I mean).

<I>But if Microsoft can't integrate functionality into Windows, then consumers won't get the benefits of that integration. The integration is the innovation.</I>

Integration of extended functionality into a users computing environment is certainly desirable. However, that integration can be done in a way that fosters innovation and competition, or it can be done in an exclusionary way. Guess which way Microsoft has been doing things.

The current settlement proposal recognizes and acknowledges this, and is attempting to change Microsoft's anti-competitive behavior in this area. But the language is so weak and riddled with holes, it depends on Microsoft to be “good,” something they have repeatedly demonstrated they don't know how to do.

Final note: I'm not an alarmist who see a possible conspiracy in the total capitulation of the DoJ. I think it was a perfectly ordinary case of George Bush making sure that rich people can stay rich, by making the world safe for large corporations to do whatever they want. But I don't have strong opinions here at all.

Subject: Someone thinks you'll like this...

Someone you know, going by the name, “Gary Rost”, thought you'd find this interesting. If you don't like it, you can yell at them. They said their email address was garypr7265@worldnet.att.net.

I, Cringely The Pulpit. Caught in a UNET Don't Expect Microsoft to Give Up One Weapon Without Acquiring Another—How .NET Assures the Continuation of Monopoly By Robert X. Cringely.

The proposed Microsoft settlement with the Department of Justice has been out for several days, and there has been more than enough ink used to say that it is a sweetheart deal for Microsoft. The DOJ wants to get on to more important duties like confiscating nail clippers at airports, so the deal looks good to them. But to those of us who got our legal education from old episodes of "Law and Order," the deal stinks. How does it restore competition? What does it do for those hundreds of competitors who are no longer even in business because of Microsoft's monopolistic tactics? Well, those outfits—if they exist and if they can find the money to do so—can file civil suits. But most of them won't. I would like to see a class action lawsuit against Microsoft. What the settlement seems to do is prohibit Microsoft from breaking the law IN THIS SPECIFIC WAY for a period of five years. Imagine a murderer who shot his victims being enjoined for five years from using a gun, but still being allowed to carry a knife. So the best use of this space this week, given all the other pundits who have already criticized the settlement, is for me to throw out some ideas about why Microsoft went for it, and how their behavior will change as a result.

It is important to understand here that Microsoft management does not feel the slightest bit of guilt. They are, as they have explained over and over again, just trying to survive in a brutally competitive industry, one in which they could go from winner to loser in a heartbeat. The fact that Microsoft makes in excess of 90 percent of the profit of the entire software industry, well that's just the happy result of a lot of hard work. Pay no mind to that \$36 billion they have in the bank. And since Microsoft doesn't feel guilty, their motivation in agreeing to this settlement is just to get on with business. This is a very important fact to keep in mind when trying to understand the event. This isn't Microsoft being caught and punished, it is Microsoft finding a path back to business as usual, which is to say back to the very kind of practices that got them here. Microsoft, confident in its innate cleverness, is willing to give up certain old monopolistic behaviors because there are new monopolistic behaviors now available to replace them.

Microsoft has to open-up certain Windows communication APIs to other developers, 1 of 6 12/11/2001 4:24 pm but there is no restriction at all on the addition of new APIs. So expect a LOT of new APIs, many of which will do nothing at all except confuse competitors. There is nothing in the agreement that says Microsoft has to tell anyone which APIs it really intends to use. So just like interpreted software is obfuscated to hinder would-be copiers, expect Microsoft to obfuscate Windows, itself.

Microsoft has to allow third-party middleware, but a glaring loophole was left for Microsoft, simply to redefine code as not being middleware. If they stop distributing

code separately and draw it into Windows, well as I read the proposed settlement, middleware stops being middleware after 12 months. So if something new comes up (all the old middleware is explicitly defined) Microsoft can integrate it and screw the opposition one year after they stop distributing it separately. These loopholes are nice, but they don't amount to the kind of leverage Microsoft would want to have before signing away any rights. Bill Gates would want to believe that he has a new and completely unfettered weapon so powerful that it makes some of the older weapons completely unnecessary. He has found that weapon in .NET.

But hey, .NET isn't even successful yet, right? It might be a big flop. Wrong. Those who think there is any way that .NET won't be universally deployed are ignoring Microsoft's 90 percent operating system market share. Whether people like .NET or not, they'll get it as old computers are replaced with new ones. Within three years .NET will be everywhere whether customers actually use it or not. And that ubiquity, rather than commercial success, is what is important to Microsoft.

Here is the deal. .NET is essentially a giant system for tracking user behavior and, as such, will become Microsoft's most valuable tactical tool. It is a system for tracking use of services, and the data from that tracking is available only to Microsoft.

.NET is an integral part of Windows' communication system with all calls going through it. This will allow Microsoft (and only Microsoft) to track the most frequently placed calls. If the calls are going to a third-party software package, Microsoft will know about it. This information is crucial. With it, Microsoft can know which third-party products to ignore and which to destroy. With this information, Microsoft can develop its own add-in packages and integrate them into the .NET framework, thus eliminating the third-party provider. A year later, as explained above, the problem is solved.

Alternately, Microsoft could use the information (this .NET-generated market research that Microsoft gets for free and nobody else gets at all) to change Windows to do service discovery giving an automatic priority to Microsoft's middleware. The advantage here is in giving the appearance of openness without actually being open.

These possible behaviors are not in any way proscribed by the proposed settlement with the DOJ, yet they virtually guarantee a continuation of Microsoft's monopoly on applications and services as long as Microsoft has an operating system monopoly. When Microsoft talks about "innovation," this is what they mean. Nothing is going to change. 2 of 6 12/11/2001 4:24 pm

It is easy to criticize, but for a change, there is actually something that you and I can do about this problem. Under the Tunney Act, the court has to open a 60-day period for public comment before any settlement can become final. This will happen after the settlement is entered in the Federal Register and will probably involve the court establishing a web site. This will be your chance to say what you think should happen in the case (look in the "I Like It" links for

further information). My preferred outcome is still that Microsoft be forced to sell its language business, and the proceeds of that sale be distributed to registered users of Microsoft products. You might think to suggest that in your comments to the court.

Finally, I have a little space left over to respond to some of the critics of last week's column about the predicted rise of Microsoft's C# language at the expense of Java. This column was wildly unpopular in the technical community. Remember that unpopular is not bad for a columnist. UNREAD is bad. So I thank all those people who got upset and told their friends to read what idiotic things I had written. But I also stand by my words. So here are the typical complaints followed by my typical responses. Thanks go to those nerds who provided such pithy criticism and especially to those who helped me sound halfway intelligent in my response. For those whose eyes glaze over when the talk gets technical, just reread the first part of this column and get mad at Microsoft all over again.

Criticism 1: C# Apps are tied to Windows, Windows, Windows. While this is fine and wonderful for windows developers, there are thousands of UNIX/Mac/mainframe/PalmOS/etc developers out there that will be left high and dry. And let's not forget Java runs on everything from mainframes to smart cards. Bob's reply: Java won't die and I never said it would. Java didn't kill C++—it just stole market share. Visual BASIC was one of the biggest languages of the 90s yet it was Windows-only. Unix is entrenched on the server side, but that's the fault of Windows, not C#. So maybe we can rephrase it—C# will dominate Java on Windows. That's still a pretty big statement. Not to mention, C# is compiled to an IR, making a C# runtime for Unix possible and even probable as long as it skips serious Windows-specific APIs.

Criticism 2: The "Java is slow" myth. More recent JVMs can actually perform as well as or BETTER than natively compiled code. This is because they do just-in-time compilation, making the Java code as fast as native machine code. Also, there is only so much optimization the compiler can do when you compile a program, having no idea how it will actually be used when it is run. At runtime, there is a lot more information available to the system as to what parts of the code are the real bottlenecks. Recent Java implementations employ dynamic runtime optimizations, where parts of the program that run more frequently are recompiled in an optimized manner to improve performance. These dynamic optimization schemes are a very exciting new field for compiler and virtual machine engineers—and they are totally lacking from poor old statically compiled C#. The very way that C# gets compiled ties you to Windows, so dynamic optimization of running C# code will be all but impossible to implement. In the long run, Java has the potential to seriously outperform all statically compiled languages.

Bob's reply: I have very informed friends who have ripped JVMs inside out and they 3 of 6 12/11/2001 4:24 pm can't even see HOW JVMs can be claimed to perform better than compiled code. C (we're

not talking about C# yet, because the critic is talking natively compiled code, like C) will always outperform Java. C doesn't have garbage collection, runtime type checking, runtime array bounds checking, dynamic linking, runtime dynamic-optimization, etc. Java just does too much for the user at runtime to ever run as fast as C.

Here's some code:

```
for (int g=0;g<x;++g) a[g] = 10;
```

This code is legal in both C and Java. Java will array check, C will not. Every other conceivable optimization could be applied to either language. Whether C# will beat Java (or more precisely whether C#'s compiled version beat Java's compiled "bytecode" remains to be seen. But we can expect compilers to compile Java to C#'s compiled representation soon—it is not a hard problem. C# does introduce many of the same things that slow down Java. However, Java's fixation on platform independence does cost it in terms of abstraction. That is, it is abstracted farther from the architecture than C# will be (because of C#'s dedication to Windows). We can't say for sure yet, but the C# runtime makers have the experience of the Java runtime makers to build on and can rely what they're underlying architecture is—Windows. So I'd bet C# will be faster, but for now that's just a bet.

As for just-in-time compilation, it has never, ever, made things as fast as native machine code. Look at Tower Technology's Tower JVM that specializes in compiling Java TO native machine code. They beat JITs easily.

About pre-runtime optimization, it simply doesn't work as elegantly as people would like to believe. Pre-runtime optimizers can spend all week optimizing EVERY spot, not just hotspots. The only time dynamic optimizations come into play is in inlining virtual methods that appear to be non-virtual. DashO-Pro is a static pre-runtime Java optimizer that can inline virtual methods with great success. Hotspot goes a little farther. But C# will also have dynamic optimization. Saying that doing so is impossible is just naive.

C# will JIT'd in Windows. The dynamic optimizations are sure to be implemented. Being coupled to Windows is irrelevant. In fact, C# will have MORE optimization opportunity because it is tied to Windows and Intel. Heck, a C# runtime could get to the level of avoiding CPU pipeline stalls because it can be sure of what its running on. Java could never come close to that.

When Quake 4 comes out in Java, let me know.

Criticism 3: Java is open. Sun develops Java APIs and technologies in conjunction with hundreds of other companies and individuals around the world. Anyone in the world can implement most Java APIs without paying Sun a dime (now if you want that little coffee logo on your product, that's a different story, the make you pay for interoperability testing for that). While Microsoft seems willing to "standardize" C#,
4 of 6 12/11/2001 4:24 PM
they will probably open up the language while holding the runtime libraries close to the vest. What good would C have been if the standard C runtime libraries were vendor-

specific? What this means for developers is a single-vendor solution, just like Windows. A large part of Java's success comes from the fact that you can put together applications by mixing and matching pieces from multiple vendors and be guaranteed easy interoperability. For example, you can build an e-commerce web site by buying a Servlet engine from Allaire, an EJB app server from BEA, and Java database drivers from Oracle—and they will all work FINE together—AND you can pick any kind of hardware and operating system! Want your developers to work in Windows, but deploy the app on UNIX? No problem. Want to upgrade from your Intel-based Dell servers to Sun's new 64-CPU UltraSPARC machine? Your code requires NO changes! You don't even need to recompile it, because Java is not statically compiled! What's Microsoft's answer to this? Run everything Microsoft: ASP, IIS, ADO, etc. Develop the app on Windows. Deploy the app on Windows. Stay with Windows forever, and hope Microsoft is good about fixing the plethora of bugs and security holes that will inevitably arise. With C#, who will supply the runtime libraries?

Bob's reply: Java's strength surely is its standardized APIs. C might have that for standard libraries, but branch off into networking or HTTPS and you have plenty to choose from, which is the problem. C# will have standard libraries too. Just as Sun provided all of Java's libs (users had no say) MS will provide all of C#'s. The idea that software components from different vendors can be mixed together and work FINE is an oversimplification. Even getting Java applets to work in Netscape and IE at the same time can be a major pain. Java's platform independence is dubious. It seems like 95 percent of your application will work perfectly when moved to another platform like Unix and it takes another week to fix five percent of the quirks. No problem? I disagree.

Java is "statically compiled", but it is not statically linked. And even if it was statically linked, it runs everywhere because it is compiled in a generic stack-based intermediate representation called bytecode. Bytecode is then interpreted or JIT'd by some Java runtime build specifically for a given architecture. Java runtimes cannot be built in Java, they are usually written in C or C++.

Microsoft already has supplied the runtime libraries for C#. Check the docs for .NET.

Also, we're sort of forgetting here that C# compiles to CIL (an intermediate representation) but so does Visual BASIC and C++. In other words, modules between these languages will interoperate seamlessly. Where Java gives you platform independence, .NET is giving you language independence. I fully expect Java to be added to the interoperability list too.

It is too early to be sure, but is highly likely that existing C++ and VB code can be recompiled under Visual Studio 7 and then called and used by C# programs. That is, every library written in VB or C++ is already a .NET library.

Criticism 4: Developers have learned long ago that single-vendor lock-in solutions are a recipe for disaster. If you can't swap out a buggy piece with a functionally correct one from a different vendor, you're tied to the poor-quality vendor (like Microsoft).

5 of 6 12/11/2001 4:24 PM

I, Cringely the Pulpit

Bob's reply: And 90 percent of the world runs Windows because...? OS/2 was better than Windows, but that didn't matter. This is about marketing and company strength. Microsoft has \$36 billion in the bank while Sun is laying people off.

Criticism 5: Do not discount Java simply because you don't see tons of consumer applications written in Java. Java has serious momentum on the server side.

Bob's reply: Java GUI is dead. Go to Best Buy and look for Java apps. They aren't there. Java's platform independence was all about satisfying a million clients running Windows, Unix, Mac, etc. and then we abandoned Java on the client because it was too slow and klunky.

Now we tout Java platform independence on the server as if we never had the foresight to buy the right server in the beginning. Or even if we must upgrade, we must upgrade to a radically different architecture. Sure, platform independence on the server is great, but is nowhere near as grand as the original vision of PI on the client.

Java's true strength is its programmer productivity. It's broad set of standardized libraries make programmers far more productive than C++ or C. Unfortunately, C# can match that. Technical merits and zealotry aside—Sun would BE Microsoft if they could. Even if Java had wonderful technical merit over C# and .NET (which it really doesn't), it would lose. That's business.

Subject: I am a consumer that Microsoft continues to harm

Over 4 years ago I began writing to the DOJ asking your help. Microsoft continues to harm me and other consumers. You let us down and I would like to know how to let the courts know that the agreement is harmful to consumers.

I want an operating system that allows me to add just the applications I want. I do not want all the junk that Microsoft adds to the operating system. They fill the computer with extra code that is of value to only Microsoft. It is like a person trying to purchase a sports car then adding a rack for bicycles. Microsoft is the only player but they do not offer a sports car, they only offer a semi tractor and trailer. The trailer is full of their code. If I want to add a competing application, I must add a tandem trailer behind their trailer. I do not want or need their trailer full of their code. I only need the tractor and an empty trailer that I can fill as I desire or need.

Microsoft comes into my home a few times a month and causes my machine to lock up. I know that I could end some problems if I were to switch to all Microsoft applications but I prefer to use the applications of the originators vs.. the master copier.

I would be happy to discuss this with you any time. Please call. 423-235-4663.

Subject: U.S. v. Microsoft: Proposed Final Judgment
Hello,

Last week, I returned from vacation to learn about the proposed final judgement published by the U.S. Department of Justice. To say that I was shocked is an understatement.

I have worked in the computer industry for over 20 years, and over those years I had already learned of the many predatory and unscrupulous acts perpetrated by Microsoft. Indeed, I have myself been victimized by Microsoft's misdeeds by virtue of being an employee of a victimized company.

When the DOJ finally took action against Microsoft, I was elated. I felt that Microsoft would finally be punished for its blatantly illegal behavior and/or prevented from engaging in such behavior any longer. Judge Jackson's findings of fact further bolstered my optimism. The courts finally acknowledged the scope of Microsoft's anti-competitive behavior and the harmful effect it has on the computer industry. Microsoft's attempts to delay justice through appeals did not surprise me, nor did the fact that Judge Jackson's findings of fact withstood scrutiny and re-examination. Microsoft is guilty and does not have a leg to stand on, and I was therefore optimistic that Microsoft would eventually receive judgement against them that was so long overdue.

The proposed final judgement is essentially letting Microsoft off scott free. As an American taxpayer, I am outraged that the DOT is essentially throwing out a case that they have spent a so much time and a huge sum of money on, especially in the final stages of litigation they have already won. As an American who depends on the DOJ to protect him from those who engage in illegal activity and to punish those that do, I feel betrayed.

Some would say that Microsoft no longer is in a threatening position and that the anti-trust suit against Microsoft is no longer relevant. Hogwash. Microsoft still holds a monopoly on desktop PC computer systems and can still bundle any software with the Windows operating system that it so pleases under the guise as being part of the operating system, thus allowing them to continue their illegal anti-competitive behavior. The fact that they can leave the browser entwined within the operating system still allows them to illegally leverage their current Windows monopoly to extend the monopoly to Web-based applications. In short, Microsoft will continue with their past illegal behavior undeterred. The long-term effects of this on the computer industry and consumers in general will be detrimental.

This case reeks of politics in its worst form. Justice has been subverted by undue leniency by "friends in high places". I promise you that this will come back to bite you. Microsoft will once again be in the headlines and you will have some explaining to do.

Sincerely,

William M. Edwards

Subject: Microsoft

To All at the Department of Justice,

I am very disheartened to learn of the DOJ's light handed treatment in regards to the sentencing of a company convicted of so openly breaking the United States' anti-trust laws. Allowing Microsoft to get off with so much as a slap on the hand is an insult to the American consumer and America's legal system. Yet again, it appears that it only matters who you are and how much money one has when it comes to justice! Microsoft is GUILTY! Allow them to be punished like any other corporation would in the same circumstances!

Recent actions in the bundling of new software applications within the new Windows XP OS even prove Microsoft believes it has no reason to fear the DOT. Even more, the .net strategy show Microsoft's determination to clench a stranglehold on even the Internet itself!

Computers are set (if not already) to take over vital functions on a world-wide scale, from air traffic control, to financial and medical database systems. Allowing one platform to control them all will only open invitation to national disaster as one weak link in the software (or infamous hidden "back-doors") will put the American public at the mercy of virus writers and other cyber-terrorists! Case in point: A single flaw in Microsoft server software led to the Nimda virus and other similar attacks which cost industry millions (billions?). Having a wider variety of platform choice would greatly reduce the effect of such an attack, as a terrorist would need much greater resources to compose a virus or strategic attack against multiple computer system types.

At any rate, please reconsider your weak response to the Microsoft conviction. To do otherwise is an injustice and would do nothing but reinforce Microsoft's grip on the world.

Thank you for listening. I know I speak for many others!

Subject: antitrust

Dear Sir or Madam,

I am a computer user and I strongly object to the settlement you have brokered with Microsoft. In the United States we are supposed to have choices. When it comes to operating systems for personal computers we have two: Windows and Linux. Windows is an expensive, difficult system that uses excessive space on the hard drive, is plagued by inconvenient system failures, and has little or no capacity for modification. Linux is a cheap, unfathomable system that supports few applications. Our choices are very limited because of Microsoft's monopoly. The whole point of this court case was to give citizens more choices when we shop for pc operating systems. The remedy Microsoft has been able to foist on you and us protects their monopoly and leaves a consumer landscape in the operating system

market that allows two choices: bad and worse. I want to be able to buy an operating system that has only the functions I need, can be tailored to my specifications, augmented seamlessly with many different types of software, has a reasonable price, is reliable, never forces me to use a particular internet browser for smooth operation... get the picture?

Subject: What a sell out!!

I am very disappointed to see the U.S. government cave into Microsoft after so many years of hard work. I do not believe the agreement will restore competition in the PC software market but will instead cement Microsoft's excessively dominant position. How could you negotiate such a swiss cheese agreement?

Like you forced IBM to unbundle hardware and software, you should have forced Microsoft to unbundle the operating system with applications.

Here is what you should have done:

- * Remove all applications: browser, media player, passport, instant messenger, etc, from base OS.

- * Require Microsoft to provide an application CD with these applications instead.

- * Require all PC manufacturers to include a full CD of non-Microsoft software. Such software can be freeware, shareware, trialware, or open source. Forbid the sale of any Microsoft OS, retail or pre-installed, without these two CD's.

Consumer chooses what mix of applications to install from either CD. The consumer gets to choose the best from each.

Instead, what you have done is harm the consumer by limiting the choices the consumer can make. Clueless consumers will take the Microsoft applications by default. Innovation will suffer.

Too bad I can't tell you who I am, for fear of retribution from Microsoft.

Subject: Make Remedies More Forceful

Dear DOJ:

I have been following the case vs. Microsoft closely because I am an average user that feels that competition in the industry is lacking. Microsoft has managed to leverage its way into one area after another because of its monopoly power. The WordPerfect word processor and Netscape Navigator web browser are prime examples. Once dominate applications fell when Microsoft abused its monopoly power.

The recent proposed settlement appears too weak to me. Please consider taking

stronger action to restore competition in such an important part of our economy.

Kind regards,

Andy Arnold

Subject: Wired News :Windows XP: EXtra

Proprietary

A note from Scott Dunbar:

Obviously, the DOJ is incapable or unwilling to bring Micro\$oft to justice. You guys "prosecute, and the villians get worse.

From Wired News, available online at: <http://www.wired.com/news/print/0,1294,48011,00.html> Windows XP: EXtra Proprietary By Michael Tiemann 2:00 a.m. Oct. 31, 2001 PST Microsoft has launched its latest version of Windows, Windows XP (eXtra Proprietary). Tightening its stranglehold on all industries that use computers, Microsoft's X! features are certain to further degrade customer choice, cost/performance and, in some cases, even civil liberties.

Let's start with the premise of any free market economy: customer choice. The Windows XP default installation process offers one choice for Internet connectivity: Microsoft's proprietary MSN network. On top of this, Microsoft also has specially tuned its MSN.com site to reject connections from non-Microsoft browsers, including Netscape, Mozilla and Opera.

A Linux OS to Challenge MS?

XP Demo: Hey, This Is Fun

XP Is Hot, But Not Windows 95-Hot

Give Yourself Some Business News

Microsoft has been convicted of monopolistic practices by not one, but two courts, and has had its appeal to the Supreme Court denied. It might make one wonder why Microsoft is being so bold with its exclusionary, eXtra Proprietary technologies. It's because Microsoft believes that time is on its side; the 1995 abuses are only now being judged, and there's no remedy or no penalty in sight.

In the meantime, Microsoft has been earning \$1 billion a month net income from its monopoly, money users pay because they believe they have no choice. Should users who have been unable to free themselves from Microsoft's regular proprietary technologies expect life to get any better by buying into Microsoft's more powerful eXtra Proprietary technologies? Let's see. One of the most controversial new eXtra Proprietary technologies is Windows Media. In a twist that no framer of the U.S. Constitution could have imagined, Microsoft is using patents to prevent software interoperability with its eXtra Proprietary technologies. Of course, Windows Media has to compete with the immensely popular MP3 format, but Windows XP limits the quality of MP3 encoding and decoding. By intentionally degrading the quality of all competing

technologies, and by allowing only Microsoft-approved uses of its own technologies, Windows Media has the potential to create yet another monopoly for Microsoft—a monopoly that extends from software to content. Such a monopoly would change our entertainment economy from one of unlimited content at limited cost, to one of limited content with unlimited costs.

Moore's Law promises that silicon technologies will offer 2x price/performance improvements every 12 to 18 months. Yet every version of Windows (and Windows XP is no exception) conspires to steal most if not all of the dividends of Moore's Law. The result is that PCs have become much more powerful, but not much cheaper nor much more functional.

Microsoft Windows, on the other hand, has become much more bloated. Microsoft is hoping thousands of users will rush to stores and spend nearly \$100 for their latest OS. Don't do it. EXtra Proprietary technologies require extra CPU speed and memory, virtually requiring a hardware upgrade to go with your software upgrade. Indeed, Microsoft has the audacity to suggest that if your PC is more than two years old, you should junk it and get a new one.

While PC vendors may welcome that message, such a wasteful approach is actually bad for the economy because it bankrupts the buyers that keep the economy going.

Another eXtra Proprietary feature is Passport, a recent winner of a Big Brother Award. Passport collects user information (name, phone numbers, credit card numbers, etc.) and stores that information at Microsoft. Passport is the "how" that then gives Microsoft control over the "who, what, when, where" and possibly "why" of Internet transactions. Microsoft is happy to let customers exchange personal privacy for convenience within Microsoft's proprietary network.

A writer for the Christian Science Monitor recently observed: "More than anything else, XP reminds me of a tourist trap. You arrive in a foreign city, and a handsome stranger walks up to you and says he will show you around the city. He offers to take you to the very best shops and restaurants. But you soon realize that he is taking you only to places that are owned by his relatives or by someone who gives him a kickback."

Microsoft's eXtra Proprietary go beyond mere tourism: Most users find that with Microsoft's Passport they cannot get out of Microsoft Country once they enter. Is this really where you wanted to go today?

Let's get out of this vicious trap the way we got in: by controlling what we do with our money. If you are already running Microsoft's products, do the sensible thing and BOYCOTT THE MONOPOLIST. Let Microsoft's latest products sit in warehouses until Microsoft comes to their senses and removes all the eXtra Proprietary technologies they've been engineering over the past several years. Wait until Microsoft offers a level playing field to other operating systems, applications and network service providers.

For those of you who cannot stand still, join a LUG (Linux Users Group) and maybe upgrade to Linux. Aside from saving a

bundle on licensing fees (there are none), you'll get unprecedented freedom and control. With thousands of Red Hat Certified Engineers, and millions of Linux enthusiasts, any configuration running on any hardware can be supported at a fair price (determined by a free market of competing vendors) for as long as you want. Suddenly, hardware and software upgrades will be your choice, not a choice dictated to you. Suddenly, money you spend will be on things that you value, not things you are forced to pay for. Suddenly, you will begin to see the engine of growth that Moore's law enables come back to life, and the dividends it pays will be ones you can put in your bank account, not the bank account of a convicted monopolist.

Michael Tiemann is the chief technical officer of Red Hat.

MTC-00000663

From: Kevin Hodapp

To: Microsoft ATR

Date: 11/12/01 2:19pm

Subject: More evidence on microsofts anti-competitive nature

I just found a article on Microsoft on an leaked email that reviles more on their anti-competitive nature at <http://www.theregister.co.uk/content/4/22770.html>.

"There are many other things that you need to watch out for with Linux and the Linux Compete Team has been busy creating some great collateral to help you win. One thing you have to always keep in mind here—Linux is the long term threat against our core business. Never forget that! You should be smothering your accounts from every angle and if you see Linux and/or IBM in there with it, then get all over it. Don't lose a single win to Linux" So it sounds like they are going to start another FUD(Fear, Uncertainty, Doubt <http://www.geocities.com/SiliconValley/Hills/9267/fuddef.htm1>) campaign, which they have done in the past. These campaigns are used as pro-Microsoft propaganda to crush anyone who competes against them, which often results in Microsoft using this dirty FUD tactic to spread misinformation and lies intent on destroying their competition and making them look good.

It also seems to be that they are going to start bullying and harassing businesses switching from UNIX to Linux and/or Windows to Linux, to switching to their own products. The thing that does not make since is that while UNIX and Linux are the same so a switch can be done easily with little

cost, why would any business go through the hassle from UNIX to some other Microsoft product? They are 2 completely different operating systems. The business would have to spend a lot of cash to get their computers functioning like they use to if they switched to some Microsoft product, which are not quite as reliable and cost efficient as UNIX/Linux in the first case. I think this is about the amount of money Microsoft can make on the licensees and their outrageous price schemes making lots of money off of these businesses with little effort and support on their part. This is a big reason many business are switching to Linux, the cost is just too much for too little.

Also I do hope that you make sure that Microsoft does not try to worm its way out of these anti-trust restrictions. I am saving up for my next computer with will hopefully be a Dual-Boot system (thanks to the rulings), primarily it will be a Linux server running SAMBA(Thanks to the ruling again) so I can communicate with my old Windows 98 based PC and any future Microsoft OS's if I get another machine. This pc will have a small windows partition for those occasional games I can't run in Linux.

Subject: Microsoft Settlement

Dear Attorney General Ashcroft:

I am requesting you to reconsider your Department's agreement to the settlement with Microsoft. I am just a regular computer user who, up until a few months ago, felt no antipathy towards Microsoft. But now I think reconsideration is necessary due to the following:

1. There is real, credible evidence that Microsoft's new Windows XP operating system will severely compromise the security of the Internet. See <http://grc.com/dos/xpsummary.htm> for details. Microsoft has been advised of the issue, but they are ignoring this critical matter.

2. It is my impression that Microsoft is continuing their monopolist practices in Windows XP.

3. Microsoft is moving toward a new level of end-user control by restricting end-users from installing Windows XP and Office XP more than 4 times. And, if you make rather simple modifications to your computer hardware, your prior installation of XP or Office XP may not function.

Sincerely,

Curtis L. Engelman

Hi I am a Microsoft supporter,, well at least in the past,,, Microsoft seemed to be

innovative & supplying good products & support.. I have been reading articulate lately from other professionals or people like myself who alarmed at the changing practices of Microsoft.. Where is this going to leave us if Microsoft rears its ugly head in a rabid attitude.. We all use the Windows platform & would be at its mercy,, I hear of things that begin to turn my stomach in the idea that such an idea might happen to soon.. The have to much power & control which in the hands of some is way to frightening.. Microsoft should also pay for the costs of such a trial as well, I will keep it short as to not overwhelm,, I still like Microsoft, at least for the moment but my opinion is changing along with many others in the Tech world.

Microsoft needs a good spanking not a scoulding Thanks Your supporter Ken

Subject: Comments about MicroSoft

1. MicroSoft produces programs that are not very good, but uses it's Monopoly to force upon everyone.

— Windows releases get worse at each issue.

— Example: I have Windows NT 4 (SP6a) [Windows NT 4.6a] and it still doesn't work correctly.

2. It breaks competitors with outrageous licensing requirements for computer vendors.

3. New Internet offerings invade privacy and attempt to destroy existing web sites.

4. They add "features" to Windows designed to kill any competition, while claiming to "enhance" Windows.

5. Claim to support and comply with Internet Standards, but break them on purpose in IE.

6. Truly believe they are "above" the general needs of the Public and need not answer to the basic rules of business behavior and the Government rules.

7. Laugh at DOJ and State efforts to bring them into the real world. They continue to ignore all previous sanctions and pending ones because they figure DOJ will do nothing.

8. Release new OS versions that fix "bugs" and require users to pay full price to replace the faulty OS they released (Example: Windows 98-> Windows 98 SE)!

9. Now hide "updates" and "upgrades" as Service Packs so the screw ups are not obvious to the consumer.

10. Have never released a version of Windows that was fully functional, the x.0 version is well known by Business and some Consumers to be a "BETA" to be tested by the user!

11. Have "stolen" software from other vendors (DOS 6.0) and included in MicroSoft products.

12. Never finish an OS, just make a new one and demand that all users purchase the new one and toss the previous one. LB Neal

Subject: Please don't settle like this

Dear Sirs,

I am an entrepreneur working on a software/web application. I am extremely worried with your current proposed settlement with Microsoft. The company has a long history of squashing any form of competition. I and many other developers are terrified of Microsoft's wrath. There is a genuine fear in the developer community of getting in Microsoft's gun sights. There are so many loopholes in the current settlement that will allow Microsoft to continuing their lying, cheating, conniving ways. Your settlements need to be far more air-tight.

Shame on you for proposing such a transparent and ludicrous settlement. I've truly lost faith in the U.S. government. Do the honorable thing. If you are not up to the task of prosecuting a convicted monopolist, then resign and let someone capable handle the matter.

Re: Sony sees world with less Windows

The technology would enable people to communicate ... without going through a computer or an operating system such as Microsoft Windows.

The only way anyone can compete with Microsoft is by fragmenting the computing infrastructure. Had the USA promoted an open standard OS, then all infrastructure would be compatible. By refusing to force the standard commodity OS into the public domain where it belongs, the free market radicals have forced competition and compatibility to be mutually exclusive. Fantastically asinine.

"You want competition and compatibility both? That is like having cake and eat it too, dummy..."

I am very disappointed at the weak approach DOJ has taken in this case. As a Macintosh user, the monopolistic practices of MS are evident. Apple hangs on by a thread, and only because MS needs it as evidence of fair competition.

The high price of MS software indicates a market lacking competition, and a short look at history shows many companies failing when confronted by the huge resources of MS.

Please reconsider your approach to this case. The US will prosper when competition is truly fair.

Subject: Anti-trust settlement

Have looked over the settlement offered by the DOJ to Microsoft in this case I can't help but wonder why congress doesn't start looking at Microsofts anti-trust exemption, not baseballs.

The "remedies" have no chance of working. Only the largest companies will be able to get access to the desktop, smaller

one's will be shut out, again. Who's idea was it to have Microsoft pay the "watchdog panel"? That's like having the residents of Sing-Sing pay the guards and expecting no one to escape.

This was a huge sellout by the DOJ and did nothing for anyone. Hopefully the other 9 states that had the sense to not buy into this settlement can get some real change brought about in MS's practices.

I'm very disappointed in this settlement, and I think the taxpayers got ripped off on 6 years of legal costs for no apparent gain.

Subject: Microsoft's Business Practices.

To whom this may concern:
As a citizen and consumer I am pretty outraged by the mess Microsoft has placed the computer industry in. When a company gets control over an industry as important as the computer industry the consumer pays the price. With the recent release of the Windows XP operating system they have once again taken another step to unfairly entrench their position. The companies practice's are insulting and very unfair.

Because they are the only choice I have to run the software I need to. I have to put up with this new activation "feature." This is just another step for them. Everytime I have to reformat my computer or add new components to it I have to contact them to activate the software I already purchased. I really hope they are not gathering personal information about me without my knowing it. The main problem here is I have NO choice in the matter. Not to mention it makes me feel as though they are watching everything I do in the privacy of my own home. What's next for them, required thumbprints to print a paper?

Bottom line is this, they are the only company that can get away with this. Do you think in a competitive industry like lets say the automobile industry, that a car company would choose to make you call in any time you wanted to add a new improved part to your engine? Sorry John Doe this is made in japan part is not supported by our company so your car wont start now. No, because

people have a choice in the type of car they buy. But not so in software. If we want to play game X we have to call them for permission because we just added a new sound chip. This just boils my blood. Whats next they going to require their customers to come down for DNA tests before we can use Windows 3000 which the consumer has already paid their hard earned money on. I am not a lawyer and I know nothing of the law. But I do know whats right and wrong. And this is just plain wrong. If the consumer has no choice in the matter than the company should be regulated. I might also point out that I have never written a letter like this nor been involved in anything political. But enough is enough. Its bad enough they make us pay for products that don't work very well to start with. Now we have to ask their permission everytime we choose to change components in our computers? I wish I had a choice. Because I would not choose this. Keep up the good work on the anti-trust suit. I am one taxpayer that is happy you are on the job.

From: Jack E. Uber II
To: Microsoft ATR
Date: 11/16/01 6:14am
Subject: Comments on Antitrust Actions
Against Microsoft
Greetings,

First, I never agreed with the premise that Microsoft was a monopoly. By the very definition of a monopoly, a business entity has to own all or virtually all the factors of production for a given commodity to even qualify as a monopoly. Even using the most liberal accounting of the "factors of production" in this case, Microsoft fails this test. Unfortunately, the individuals involved in this case appear to have more emotion directed at Microsoft than dispassionate reason.

Second, in no reasonable way can anyone say that the consumer will benefit through ANY antitrust actions against Microsoft. The current level of accessibility to extremely powerful computers for all Americans would not have been possible if not for the efforts of Microsoft, IBM, Dell, and so on. Prior to the personal computer revolution, a single license of an operating system was priced somewhere around \$10,000. MS DOS, and then Windows, obliterated that pricing model and made computers available to virtually everyone.

Finally, it is clear to even the most casual observer that there have been several hidden agendas here. The reliance of the DoJ on testimony from the likes of Sun Microsystems and Oracle demonstrates either supreme naivete or bias. Anyone who has ever read the rhetoric from the likes of Scott McNeely or Larry Ellison knows that they HATE Microsoft and, more to the point, Bill Gates. Using the same yardstick that was used against Microsoft, Sun Microsystems might find itself standing in front of a judge. Additionally, the extortion like tactics of the various states attorneys general is readily evident. Their only motivation is to gain

monies from any action against Microsoft. They are doing a disservice to their constituents and the general public as a whole

Subject: Microsoft Settlement

Sirs,
As you have set forth this email address to recieve public opinion regarding the settlement with Microsoft, here is my opinion.

I am simply a consumer, with no corporate interests. I'm a full time student, finishing up a major in Religious Studies at Bradley University in Peoria, Illinois. I am also a computer enthusiast. I believe the current settlement with Microsoft will not effectively redress the problems created by the Windows monopoly.

Microsoft has shown repeatedly that it will exploit any advantage at its disposal to unfairly crush competition, and I think the rather vague terms of this current settlement agreement qualify as such an advantage.

Furthermore, the primary disadvantage to the average computer user is not merely that of limited software choices due to Microsoft's monopoly practice, but ALSO the fact that Microsoft uses it's monopoly position to push inferior products to market while being assured of "instant sales", simply because the product is their "newest release."

Microsoft's monopoly market position has created a specific culture between both the company and the American public. The company has become habitual in its release of buggy and insufficiently beta-tested software, and due to their nigh-complete domination of the software and OS markets, the American consumer has been forced into an "Always buy the next version of the software" behavior pattern, in hopes that some more of the bugs of previous editions will be addressed. While certainly, nearly EVERY piece of complex software will have some errors in it, in a truly competitive environment companies are somewhat more forced to make sure that more bugs are repaired PRIOR to shipping, as a competitive market will not generally accept an inferior product.

Microsoft has repeatedly thumbed its nose at both you, the US Dept of Justice, and at me, the average American consumer. This settlement is little more than slapping them on the wrist and saying "Go forth and sin no more." To truly make serious inroads against Microsoft's monopoly tendencies and practices, splitting the company in half is the most likely candidate for success. Forcing them to take their operating systems "open source" would do a fair bit towards that as well.

Unfortunately, antitrust efforts against Microsoft will likely avail the American consumer very little until a viable competitor for the Windows OS arises in the market. This becomes unlikely even with splitting the company or opensourcing Windows, simply because Microsoft's monopoly has gone on so LONG that customers are already highly dependant on its proprietary technologies, and will be generally hard to woo away to a new product line. However, I'm confident that with one of the two additional options as well as a tightening of language loopholes in the Settlement agreement, that some innovative company may find a way to do so.

Thanks for your time,
Mark S. Goodale

Subject: Thoughts on MS Settlement...

My thoughts on this whole thing is IT'S LUDACRIS! ! !!! Just because Bill Gates has come up with a superior operating system and other software doesn't mean you should loot him, ruin his product and destroy the public's computers. Even if you do decide to tear Bill Gate's empire apart it's not going to help these people, like Mac Computers, trying to introduce an inferior product. The only reasons these people get 'shut out' because of his 'monopoly' is because they can't come up with a product that even comes CLOSE to Bill Gate's OS. I mean, look at mac computers. They are slow, there is no software for them because they're slow and it's not very user friendly. All your doing with seperating Microsoft is making Windows less user friendly because the two companies are manufacturing one half of the old MS... .What's that going to do? It's going to force people who aren't so good with computers to stop using them entirely. As for the rest of us? Well. We'll either buy MS compatible or we'll buy nothing else until there is an OS that can compete with the number of games, hardware and other software products (and quality of products) that Microsoft has. I can tell you, you'll never catch me with Mac.

In conclusion. Leave Bill Gates the hell alone.

Subject: Microsoft Settlement

Gentlemen:

I believe that the prosperity America has experienced in the last decade has more to do with work force productivity improvement than any government initiated, sponsored or controlled activity or program including any and all bills that were passed in Congress during the last 15 years.

The primary basis of that productivity improvement was the desk top computer and the amazing software that was developed to go with the PC. Whether Microsoft is guilty of breaking any law is well beyond my understanding, but I am opposed to any settlement or penalty that would have the effect of forcing Microsoft to give away it's "secret ingredients" or harm its corporate structure in any way.

If laws were broken, then invoke financial penalties with the threat of further prosecution in the event any laws are broken in the future. Do not dismantle one of America's most important economic engines—especially at this critical time.

Sincerely,
Randall Cooke

Subject: Opposed to Microsoft settlement

Microsoft has been found guilty on many charges, including using its monopoly power to thwart competition. The current proposed settlement does nothing to penalize Microsoft for breaking the law and nothing to remedy the loss caused to hundreds of companies and millions of customers. Furthermore, the limitations imposed on Microsoft's future business practices will do nothing to keep them from perpetuating their illegal monopoly and using it to squash whatever competition it wants. The proposed settlement perpetuates the status quo, which is that Microsoft gets to make all the decisions for the entire personal computer industry and is quickly moving to a position where it will be making those decisions for the Internet and for handheld computing devices, as well. This will not provide a healthy, competitive environment, and innovation will be stifled. Forward into the dark ages!

Subject: Comments about MS Settlement

I am a retail manager at a major electronics chain. I have been using PC's for 16 years

since the systems booted up with DOS. I have used every version of Windows up to Windows ME.

I have been appalled year after year as Windows required more and more operating resources to run the computer. Even more so since Windows requires so much more operating resources for Microsofts other products that are tied in to Windows. I have always maintained that I don't buy a computer for it's operating system. I am a website developer as well and don't need or want to have all the extras Microsoft forces on you.

And now with the launch of Windows XP I have crossed the line to being horrified. What kind of operating system is now going to require at least 128 megs of RAM with 256 preferred?? Unbelievable. Microsoft has not learned anything at all from all of these anti-trust proceedings. My customers complain every single day about how much system resources Windows takes up. This is true from Windows 95 to present. Even more unbelievably is the fact that all the plug in MS is ramming down our throats in the the "operating system "causes frequent system crashes and results in lowered productivity due to the need to constantly fix the machine.

Bottom Line? An operating system, even a nice GUI operating system is just that. It is not an instant messenger, multi-media player, internet connection etc. And with Windows being the only choice it is no wonder that computers get faster and better hardware and greedy MS jumps in with Windows and uses up all the extra speed and power to try and force the MS products down our throat over the top of other applications that are more memory friendly and run without crashing the computer on a regular basis.

I am also no novice. I have graduated from the Microsoft Certified Systems Engineering courses and have many years of experience.

Please don't back down. Force MS to turn Windows back into what it is supposed to be. A smooth, no hassle operating system that does not interupt and interfere with my computer work that has nothing to do with Microsoft.

Thank you very much.

Subject: Wrong kind of message

If I recall, it is an accepted conclusion that Microsoft deliberately acted in a ruthless and illegal manner. Their actions forced many competitors in the application and utility and operating system arenas out of business, thus reducing our choices as consumers while raising prices and lowering quality.

As a result, this settlement permits Microsoft to maintain the gains of these illegal operations, imposes no monetary penalties, and I don't see where it does anything to prevent them from continuing these practices, particularly since there are no consequences for this behavior.

If we're not going to punish the criminals, then why bother to prosecute them? And if we condone Microsoft's illegal activities, then how can we justify prosecuting others?

Subject: Microsoft Case

Dear Sir or Madam:

I am writing to express my dissatisfaction with the proposed penalties in the Microsoft Antitrust case. As a former computer support professional I feel I have a good amount of first-hand knowledge of their products. Of particular concern to me are two issues: bundling and windows source code. Microsoft has made habit over the last two years of bundling more and more software with their operating system. This has the unfortunate consequence that consumers are not aware of the competitors for the Microsoft products (or their favored partners). Many users do not have the time to go out and research things like instant messengers, media players, and browsers. Therefore, they will just use what's given. On the other hand if they had to make a choice, they may not choose the Microsoft product—why not favor the outcome that gives us more choice, and puts control marketplace in the hands of the consumer rather than the supplier.

Another unfortunate cost of bundling is bloating. To run the latest version of Windows, Microsoft recommends that you have at least 128 megabytes of RAM, lots of disk space and a pentium 3 processor. However, for most users (myself included) the range of things I want to do is fairly limited: browse the web, word processing, email. I could do all of those things just fine back when I had 16 megabytes of RAM, and a Pentium. Why do I need to upgrade my computer? Because microsoft has bundled so much into their software (in the way of applications like instant messengers, and pseudo applications like ActiveX) that it can't run on a small system any more. What's more most users are forced to upgrade because Microsoft no longer supports their older systems. It's like Ford saying they will no longer sell parts for cars built in the 80's—everyone should go out and buy 2001 models. This is a deceptive marketing practice, and requires user not only to buy more and more Microsoft products but to upgrade their computer constantly—just to keep doing the things they were doing all along. It also raises questions for many users as to whether there may be anticompetitive cooperation between Microsoft and Intel (the dominant chip maker), since people need to upgrade their CPU's every time a new operating system comes out.

The issue of windows source code has dramatically skewed the applications

marketplace in favor of Microsoft. Since Microsoft has the source code for windows, it's applications can be written to take advantage of subtleties (and to avoid bugs) in the operating system. Other applications will not have this advantage. As a result, Microsoft's applications can be much more powerful and much more stable (not that they are) than others. To use the automotive analogy this would be like Ford refusing to tell Ford what size oil filters to produce for Ford cars and trucks. This would of course make Ford's fit better and work more reliably.

Finally, right now Microsoft has an effective monopoly on operating system for the Intel platform. Because there is no set of standards for how operating systems and applications interact (Microsoft gets to make them up as they go along), there will never be a competitor (since it would not be compatible with existing Windows Applications). The creation of standards may seem a bit unnecessary, but look what it's done in the CPU industry. There are standards for how Windows interacts with processors and motherboards. As a result we have several CPU manufacturers (Intel, AMD, Cyrix, IBM) and lots of motherboards all of which are compatible with Windows. This has spurred innovation (and increased chip speed dramatically) and lowered prices. I would like to see something like this for Operating Systems and Applications. If there were standards then other companies could build operating systems for the Intel platform that would work with popular applications and be effective competitors to MS Windows. This would spur innovation, reduce prices and result in all sorts of favorable outcomes for consumers and the economy. Of course, requiring Microsoft to release their source code would be a step in the right direction—other programmers would be able to determine such a standard from the code.

Innovation in the operating system market is nonexistent. Most commentators agree that all of the versions of windows since 95 have simply been repairs of bugs that should have been fixed the first place. Windows 95 itself (from the users point of view) was just a rip off of Steve Jobs NeXT operating system and MacOS. Windows XP while looking quite different doesn't really do much more than the older versions—it just includes more bundled software. The bottom line is that by giving consumers choice and opening up competition, the marketplace will see more innovative products and have more choices. This will ultimately be good for the computer industry (when people are excited about it, they invest), and the products that come out of this will benefit the whole economy. Don't hesitate to contact me if you have questions or would like further comment. You can reach me at 585-275-0751 or this email address.

Please reconsider the settlement you have proposed.

Subject: Microsoft charges

In my opinion, there is little that you can do to adequately fix or punish the Microsoft Corporation, short of fining them their net worth, then disbanding the company when they can't pay their business license fees. I suspect that they have violated the spirit and the letter of laws for many, many years, trampling competition as they encountered it. I became disgusted with them nearly a decade ago.

Subject: Microsoft ruling not sufficient

My opinion of the punishment against Microsoft. Because of the way Microsoft has treated competitors and consumers, the corporation should be separated into two (or more) separate companies. One company should be charged with developing the OS and OS-only related technologies. The other company (or companies) should be charged with working on pure applications such as Word, Excel, Office, etc. These two (or more) companies should work as rivals with competing technology; not as incestuous children getting one over on their parents (the government).

Subject: MS/DOJ settlement

I must say I'm disappointed in the settlement. As the original judge found, it's quite clear that MS has a monopoly. With 90%+ marketshare in operating systems, office applications, and web browsers it's pretty obvious. It's also quite clear that Microsoft has the ability and the desire to use these monopolies to establish new monopolies. It's been clear how they have used the operating system monopoly to keep hardware vendors from bundling competing office suites or competing operating systems.

It also seems quite apparent that these monopolies are injuring the public. It is currently required in most businesses that you run Windows/Office in order to exchange files with your peers. This means most people are required to run an unstable and insecure operating system. Much more

reliable operating systems have been available for years. So people spend a huge amount of time rebooting their computers, reinstalling their operating systems, buying and running virus checkers, etc. because windows is poorly designed. Unfortunately the flaws are not obvious and first glance. Seldom does it crash using the demos that Microsoft distributes with their operating systems. Its not until you get it home that the pain begins.

Microsoft has started addressing some of the reliability issues of late with Windows 2K and Windows XP. These are starting to use techniques that have been in common practice since the early seventies for keep flaws in applications from damaging the operating system and crashing the computer. But its quite clear that BY DESIGN these operating systems and the applications that Microsoft includes with them are insecure.

There are several reasons that they are insecure:

(1) The designs don't keep components compartmentalized. So its easy to get in through a web browser or email program and effect other components of a users system.

(2) Microsoft is sloppy in their development efforts. They leave out error checking necessary to find buffer over run problems an they don't use computer languages that automatically do this.

(3) Since the software is all proprietary it is not open to peer review. Researchers, customers and competitors can't look at the code, find the problems and fix them or ask Microsoft to fix them. And now Microsoft is trying to tell security specialists to keep the problems secret, Indefinitely, so that their is less pressure on Microsoft to actually fix the underlying problems and so the general public is not aware of the true extent of the problem.

Subject: Re: Settlement

Hello. I found this address in a story at slashdot.org and I hope it is correct.

I must say that I am horribly disappointed in this settlement and can only hope that it gets thrown out.

I suppose that it is a good thing that the FBI is working with the EU to get US law to apply in Europe, because it sort of balances out the efforts of the antitrust division to insure that it doesn't apply in America. If I had violated any law as badly as Microsoft, I would be in jail. After all they have done to cripple the computer world, they instead get the DOJ's seal of approval.

As much as it will pain me to do so, I am going to have to vote for a Democrat in 2004 simply to change your leadership. It seems our professionals only do what current appointees like rather than enforcing the law. The laws made by the Congress, signed by the president and interpreted by the courts have said that Microsoft has acted (and continues to) criminally. However much stock John Ashcroft owns in Microsoft should not be enough to overturn all that, should it?

Subject: Antitrust Settlement

To Whom it may Concern,
The recent settlement with Microsoft is terribly inadequate. It has been clearly shown that Microsoft has cost the public BILLIONS of dollars through the abuse of its monopolization of the desktop. While that may not be enough to justify splitting up the company, this money was extorted from all companies, households, and government offices that use Windows. If the goal of the DOJ is to do uphold justice, Microsoft should be made to give back the money that it has unlawfully taken. Letting Microsoft get away with the current restrictions is like catching a burglar red handed and sending him to his getaway car, loot still in hand, with an admonition not to do it again. It is, in short, a cruel mockery of the concept of justice. I urge you to reconsider the case while there is still time.

Subject: Microsoft & my experience competing against them

Good Day,
First a little history. My company, Lahey Computer Systems, Inc., an Arizona Corporation (April 1967) licensed to do business in Nevada, has competed against Microsoft beginning in September 1986 and lasting until Microsoft abandoned the Fortran market a couple of years ago when they worked something out with DEC (that's probably an interesting event all by itself). DEC took whatever Microsoft "gave" them and created a powerful product that we competed against with modest success, i.e., we stayed in business. DEC was acquired by COMPAQ and nothing changed in the market place. COMPAQ "gave" Intel the Fortran business and now you can download what used to be the DEC Fortran language system for free if you aren't going to use it for commercial development.

Now let's return to competing against Microsoft.

(1) Microsoft gave their Fortran away to major users. Of course, you must have been using Windows to qualify for this "gift."

(2) Resellers were given discounts based on the total number/dollar of all Microsoft products sold. So if a reseller sold 9 Windows and 1 Fortran, the discount was for 10 units. Both of these practices violated the spirit, if not the letter, of what IBM had to do when they were forced to unbundle their operating system software from the hardware. Finally, as XP has validated, Microsoft sees something good and then decides that good

thing is a part of the Windows Operating System—and they don't even do it well.

I believe the intended settlement, a kiss on the wrist if I ever saw one, total misses the point that Microsoft was guilty of anti-trust practices and NOTHING happens. Thanks for the opportunity to finally say what has been on my mind for some time.

Regards,
Tom

Subject: Microsoft settlement comment

I suppose that since the basic verdict was already in place, the DOJ Wasn't able to backtrack on that as well, and back away from the whole thing, telling Microsoft, "Sorry for the trouble, we'll not bother you any more.t1

My comments: (1) With Microsoft being convicted of predatory monopolistic behavior, I would have thought that it was too late for a "settlement"—especially one that does nothing to discourage the same or worse behavior in the future (which is continuing at this moment), it does nothing to encourage free and open markets, and does nothing to compensate those identified parties (let alone the many companies damaged by Microsoft's illegal business tactics but not identified in the complaint) damaged by Microsoft (for instance, Netscape and the customers who bought Microsoft products).

Nice way to shake a convicted felon's hand, and tell them to carry on, the law won't trouble them any more.

(2) As I understand it, the judge urged a speedy settlement, so as not to further damage the economy in a time of weakness. Exactly how does letting a convicted monopolist continue without change and without compensating those damaged by their past practices help the economy? I would have thought that busting up a monopoly would have helped the economy more than anything else. The breakup of the Bell System has certainly resulted in many more choices (along with lower prices) than we were getting when it controlled our telephone systems.

(3) I would presume at this point, that the DOJ is going to further the cause of helping the economy by dismantling the antitrust enforcement unit and save the taxpayers some money. It certainly performs no useful function.

Subject: Monopoly(Money) + Master = Bill Gates

Bill Gates must have paid a person or people with the Justice Department and agreeing states 6 digit or 7 digit dollars under the table for the government to accept a soft spot one sided settlement the totally works in favor of Microsoft.

If you tell anyone that is making money and controlling a worldwide business, o.k., here is the deal if you tell your competitors your business secrets for x amount of years that will settle the case... Do you really think he will jeopardize his monopoly empire, come on... Bill Gates is probably going to release 1980's and 1990's secrets only to satisfy the courts. While, current 2000 and beyond secrets remain monopoly secrets.

I thought our country was built on fair equal rights and equal business options to all; is Bill Gates and Microsoft an exception...

The government made Bell and AT&T split which opened up a fair market for other telephone communication companies. The government should make Microsoft split and allow other computer businesses to produce a product line of other type windows for fair market.

Subject: AGAINST SETTLEMENT

That Microsoft is an abusive monopoly has been shown. That it has a long history of routinely ignoring and circumventing court ordered behavioral restrictions is well established. That it has illegally transferred vast wealth from the pockets of computer users to those of its shareholders has been shown. What has not been shown is that this monopoly has been responsible for advancing consumer interests. These facts have been proved through long years of litigation by the various states and the Justice department. And now we settle.

What do we have? Consumers have not been given the money which has been illegally taken from them. Companies destroyed by monopoly practices remain non-existent. Technologies not developed because competition was stifled do not exist still. Stock holders in rival technology companies are still wiped out.

What we do have is another court order qualitatively similar to all the broken orders of the past. This order is supposedly tougher, but the tough rules are bound to technology and monopoly practices of today. We all know these rules will not bind Microsoft as technology issues shift in the future—a mere 12 months away for Microsoft. We already see Microsoft gearing up for monopoly practices in the passport and .Net technologies. I seriously, very seriously, doubt DOJ ability to keep up with the technology and MS monopoly practices. I'll assume that DOJ will have to file suit again in a few years to counter new forms of monopoly abuse. We will constantly react long after the fact and with little actual effect. If we have determined that MS illegally enriched itself at the expense of consumers and competitors, why do they now keep these profits? If they have a history of ignoring the Court and DOJ why do they get yet another opportunity to do the same.

I am skeptical of the earlier breakup order. However, at least it was qualitatively different from the long series of broken behavior restrictions. It's approach was correct, even if the details may have been questionable.

DOJ must re-examine its goals. Is it to 1) protect consumers, 2) undo the damage done by illegal actions, 3) stop further damage from being done, 4) extract itself from the legal quagmire that the MS case has proven to be. The first three all seem legitimate goals, obtainable to some degree. The fourth seems to be the chosen course.

I am deeply disappointed,

Greetings:

I have observed the case since its start, and I must say that I am very disappointed with the outcome. Not surprised, however: Microsoft has obviously spent an enormous amount of money on this case, and as we all know, you can buy the very best justice in the world right here in the USA.

You would have to be living under a rock to not see how the company has used its leverage to destroy competition and retard innovation. Nothing new or useful has come out of Redmond for years, their lies and distortion of truth notwithstanding (viz Gates' latest claim to "inventing" the open source movement). Bills such as the DMCA and judgments such as this one simply demonstrate the power of a multi-billion dollar bank account and the willingness of the current administration to accommodate Microsoft in their attempts to destroy all competition (in favor of a very inferior product, I must add). No thanks to the DoJ for pandering to Microsoft. Shame on you all. Microsoft now has a green light to continue its attempted dominance of the computing life, on-line and off. What a disgusting outcome.

Best regards,
== Dave Phillips

Subject: ms doj settlement

Hello,

I'd like to thank you for the opportunity to communicate with you regarding the recent MS vs. DoJ settlement.

I'll keep it short.

I am very disappointed in the settlement and, as a consumer, do not believe that harm done to me by MS in the past, will be prevented in the future. My choices are limited to mostly MS products. Non-MS products that I tend to not have a competing product from MS. The monopoly that MS enjoys was not won based on great technology. In fact, most MS products are inferior and riddled with bugs. Rather, predatory license agreements paved the way for the juggernaut that is MS.

I fully supported the most severe remedies in this case. It's too bad that the DOJ put MS's interests ahead that of the consumer.

Regards,
Paul Howell.

Subject: short comment on MS-DOJ settlement

Good morning,

I was just given this email address but I have to be elsewhere soon so this will be short. Based on what I have seen of the proposed agreement the DOJ is giving Microsoft barely a slap on the wrist with the implied explanation that the economy is weak and we don't want to bring down a big player.

I disagree since by being a monopoly *and* using it's monopoly power to illegally hold onto markets, Microsoft has done things that hurt the economy in the long run. By doing this agreement you are giving the company the ability to challenge the government itself. Excuse it already does that.

One area was never addressed and that was Microsoft still requires and will still require manufacturers to only install Microsoft operating systems. The consumer is not given any realistic choice in this. For that "choice" we have software that crashes regularly. The other areas of the settlement allow Microsoft to hinder open source software programs and to still force all but the largest computer manufacturers to a strict control of the "computing experience" Like the last consent decree this one has no teeth and Microsoft will become more arrogant and powerful. That is the last thing our nation needs.

There will be other people writing you who are more eloquent than I on either side of the proposal. I can only hope my words will tip the balance toward redrafting the agreement. I hope you rectify this situation,

To: Microsoft ATR
Date: 11/17/01 8:44am
Subject: Re: Microsoft Settlement

Dear Sir/Madam,

I am writing to you to voice my concern over the recent MS/DOJ settlement. I do not believe it to be a strong enough settlement to keep Microsoft honest (they have a proven track record of being distinctly dishonest in the past). I am sure you are going to get a lot of letters explaining how the settlement could be strengthened or enforced better. What I am more concerned with is the apparent softening in the attitude the DOJ has displayed towards Microsoft.

In short, I want to cut through to the heart of the matter, what is best for the industry as a whole.

The Microsoft spin machine has been putting in overtime to convince the world that DOJ legislation would be bad for innovation. What a spin. If you look at history you will see that the last thing

Microsoft does is innovate. If you look at the historical major breakthrough's in the world of technology you have a hard time finding anything that Microsoft or the PC world is actually responsible for or involved in. Considering that the Microsoft windows on PC platform is by far the most common platform in the industry, I challenge anyone to list 5 important breakthroughs made on this ubiquitous platform. Internet (Unix and VMS through Arpanet), World Wide Web (created on NeXT), Hypertext (that would be Apple), Desktop GUI Paradigm (Xerox Parc, using Unix).

The only thing Microsoft appears to have innovated is the development tools to make a million applications that look exactly the same. In short, Microsoft displays little to know innovation, and in fact their dominance in the information world seems to stifle innovation in others. Take for example Be. I followed the BeOS closely, watched as the first attempt in a very long time was made to introduce a new commercial general purpose operating system. It was one of the most staggering examples of innovation I have ever seen. The very architecture of the OS was so ambitious as to be electrifying. The speed and responsiveness exhibited to the average user was not by accident, it was due to the extensively multi-threaded nature of the OS. It was at least five years ahead of Microsoft in terms of architecture, but it never stood a chance. I know there are at least as many business reasons why they may have failed as there are causes to point the finger at Microsoft, but the truth is that Microsoft have, for the period of their dominance, had a *negative* net effect on the "innovation" they claim to embody.

I have lost count of the excellent ideas, technologies, or companies who have been bought out, run out of business, or simply never stood a chance because of the grip Microsoft holds on the computer industry. It is a measure of the strength of the grip they exhibit when an operating system like Linux which technically is at least a match for windows in all key areas, and is given away for free, still eeks out at best a moderate survival on the server. It is also interesting that much of the innovation taking place in the world of IT still seems to come from Linux and other Unix platforms, and not from PCs running windows.

I would urge the DOJ to please consider carefully these issues past, and what would truly be best in the future for the industry. If Microsoft is able (for example) to dominate business and commerce transactions on the internet through it's .NET initiative, what future is there then for other platforms and competition.

Incidentally, and interestingly, .NET is another example of innovation-not-quite. XML was drawn from HTML and SGML (Unix/NeXT background). The architecture mentioned is primarily a unix and java developed architecture. Heck, even Client/Server was so alien to Microsoft that they did not really start to get it until a couple of years ago—approximately 25 years after one of the best examples of client/server—X window system—was developed by MIT on Unix!).

Thanks for listening.

Dick Wall

Subject: Sell Out

Just thought I'd add my voice to those that are upset about the Bush Administrations sell out. Not much more could be expected though from an Administration put in place through a violation of the constitution and which has worked diligently to eliminate the constitution from every level of American life. Sort of makes the Soviet Union look good—at least the law applies to everyone there!

Subject: Bad settlement.

From out here in "flyover" country, it looks like a total cave-in to Microsoft.

There are only two remedies that will work:

1: Force Microsoft to fully document all proprietary extensions for ALL applications, and release those specs. Require MS to use open specs on all products in the future.

2: Release the Source Code for Windows 2000 under the BSD license. With these two, competitors stand a fighting chance at making up all the ground that MS has unfairly gained.

Thanks for your time.

Subject: microsoft monopoly

The current settlement requiring microsoft to donate software or hardware to poor schools only serves to further the company's monopolistic position. Kids who grow up with the microsoft way of doing things are

unlikely to change the way they compute later in life.

Microsoft's stifling pressure on Netscape has forced one of the truly free browsers into the hands of the unscrupulous and privacy invading marketing practices of AOL (personal opinion). There are many fine operating systems and browsers with advantages far more practical and efficient than Windows/Explorer: Unix, Linux and Macintosh, to name a few. When a company reaches the size and power of Microsoft the question of free enterprise no longer applies because their influence both monetarily and in terms of ubiquity allow them to slant the market as they choose. This is not the American way, as I understand it. (or, perhaps it is but, according to the ideals underpinning this country, should not be.) I have grown up with computing. I learned my first programming language in 1977. Computing can be a truly great tool but lets keep it free and clean and it's marketing practices fair. They have been shown to be guilty, please impose real penalties which don't amplify their crime.

Subject: Regarding proposed settlement with Microsoft

Having read extensively on the case, judgements, and the proposed settlement, I felt as though I needed to express my views on the topic to you.

First, I applaud your efforts to stop Microsoft's predatory practices within the software industry. As someone who has worked in the information technology field for the past 11 years, I find Microsoft's practices to be very chilling. Their unwillingness to allow any type of competition, use of underhanded (and now demonstrably illegal) tactics, and immense wealth are a continuing damper on true innovation in the industry. No one wants to try to go forward in a new market because Microsoft may decide that's where they compete and they'll destroy you. However, your efforts in regards to the proposed settlement have fallen woefully short of the mark. It appears to my reading that the agreement is largely without teeth, that Microsoft essentially dictated the terms, and that rather than having chastised Microsoft, you are in fact allowing their behavior to continue virtually unchecked.

What concerns me the most is the apparent lack of technical understanding by the DOJ lawyers. The Microsoft team is obviously competent in this regard. While I am certain the government lawyers were doing their best, in this case it appears that they were quite clearly in unfamiliar territory. I would suggest that it would be wise to contract with technologically savvy law firms for consulting on these types of cases in the future.

As for the remedies, I was stunned at the complete lack of teeth. Having won what appeared to be a slam dunk on the facts at both the trial and on appeal, it seems that

you were in a far better position to set terms. Further, you missed the most egregious types of behavior that could be easily remedied.

For example, Microsoft routinely discourages competition by keeping all document formats proprietary. There is no business reason for these to be proprietary as all the intellectual property to do the processing is in the actual code, not the document formats. When competitors close in on providing compatibility with the Microsoft document formats, Microsoft changes these formats without warning and in ways that break competing products ability to import them properly. You could have done the world a great service simply by specifying in the agreement that they could not keep their document formats proprietary and that they must give 6 months notice of any changes to their formats prior to implementation.

Finally, I am wondering why Microsoft is allowed to financially unpunished. I can understand not requiring any type of jail time, but how can you justify not stripping them of at least some portion of their ill gotten gains? Again, that just feeds speculation that this was a completely political settlement bought and paid for by Microsoft last year. As a life long registered Republican, I find that thought revolting but I cannot point to any cogent argument on the part of the DOJ to say why they did not pursue any type of fine. If you do have some type of argument as to why a company who used illegal practices to eliminate competitors and keep building monopoly profits should be allowed to keep all they have gained from their illegal activity, I'd be interested to hear it.

I am certain that you are hearing from a great many people in my career field who are as surprised as I was. Please understand that we expected that having won in court, that you were going to put some restrictions on Microsoft. What we see is that while Microsoft appears to you as a chastised company, it is quite clear to those of us who must work in their shadow that they are far from even being shamed. They have already indicated that they will not change any of their practices as a result of this agreement because there are loopholes for every occasion. Please reconsider your ill advised settlement.

Sincerely,
Warren L. Rutledge

Subject: Do not shirk your duty

Dear Sir or Madam;

I am appalled at the inadequacy of the proposed settlement terms. Now that Microsoft has killed IBM OS/2 and BeOS, and Apple is marginalized, and Microsoft has reached almost 100% market share, how will the settlement restore or even enable competition in PC operating systems?

Now that Microsoft has dumped their browser on the market, setting the price at zero, killing Netscape's viability as a browser company, and Internet Explorer has reached

somewhere between 50 and 80% market share (starting from 0%, need I remind you?), how will the settlement restore or even enable competition in Internet browsers?

How will the settlement terms prevent further "Netscaping" (it's a verb, now, you know, meaning to bundle products and their attendant markets out of existence) of streaming audio, streaming video, digital photography, etc. by WindowsXP? Do you not understand the import of this case, as Microsoft seemed to, by its accelerating delivery of WindowsXP in advance of any settlement?

How will the settlement terms prevent Passport's/.NET's monopolization of Internet infrastructure? Of PocketPC's plans for monopolization of the PDA/handheld market? Of Xbox's plans for monopolization of the gaming console and/or home entertainment market?

As an MIT computer science graduate with nearly 20 years of industry experience, I am appalled that Microsoft will be able to continue to quash innovation in the industry with continued impunity, and with the implicit endorsement of the DoJ. As a small software business owner with 11 years of industry experience, I am appalled that Microsoft will be able to reap the benefits of the market dominance achieved through its longstanding illegal business practises. As a member of the endangered species of Massachusetts Republicans, I am appalled and embarrassed that the party of the free market has kowtowed to a rapacious, unrepentant monopolist, that has done everything in its power to restrain competition and eliminate consumer choice and freedom. They have played hardball with every threat they've encountered, including now the DoJ, and they have always won.

While I can understand that this is their nature, and that this is how they always act, I cannot understand your actions. Either you do not understand the importance of winning the case and restoring competition, or you have covered in the face of a tough fight.

It is the undeniable function of government to protect citizens from both foreign and domestic threats. Do not shirk your duty. Please feel free to contact me at any time so that I may more fully express my opinions, so briefly expressed herein.

Very Truly Yours,

John Morrison

Subject: Microsoft Monopoly Remedies

My one real grievance with Microsoft and their marketing practices is that I cannot buy any pre-built PC through mainstream distribution channels without the pre-installed Microsoft operating system and all of the associated crap that comes with it. There is no choice. I have been building my own PCs from scratch for years to avoid this. The function of a free market is to provide choice, and the proper remedy to Microsoft's abuse of the monopoly power they hold is to enforce choice. Specifically there should be no constraints on what Microsoft licensees may do with regard to the configuration of their machines. The right to use that one purchases from Microsoft for their products should not be encumbered with any constraints on what one may otherwise do.

When I buy a car, the manufacturer give me orders about how to decorate it, or what other types of cars I may own at the same time, or where I have to get my parts and accessories.

Thank you for your attention.

Subject: Why the Microsoft Antitrust Settlement Should Be Rejected

When all is said and done, the current settlement sends one message loud and clear:

Breaking the rules pays.

Microsoft has killed thousands of businesses and innovators over the years, and not even the 1995 court order slowed them down. They have amassed an enormous hoard of cash from their extensive illegal and unethical practices and used that money to branch into numerous other businesses with the same ruthless intent to destroy competition and dominate the information age.

In effect, they have been engaged in money laundering, and now the government is giving Microsoft total amnesty. Not only does the current settlement allow Microsoft to keep its ill-gotten advantages, but also it does not even address the deceptive accounting practices which have far overstated Microsoft's earnings over the years, and have even concealed years when Microsoft actually LOST money. The effect from this has been to drive Microsoft's stock much higher, and thereby further increase Microsoft's market monopoly. Are we a nation of laws or not?

Subject: This sends a green flag to companies to user unfair practices.

This sends a green flag to companies to user unfair practices. Where is the penalties part of the this judgement?

Do you really think this will stop Microsoft from piling more libraries into their music recorder and calling it secret? That is the tactic it used with Explorer, hide the libraries in the OS and call it the OS, not a browser.

How can there be a competing product such as Samba if all of a sudden the password Technology is patented, secret, or used in hiding copy righted material? It doesn't need to be, but it will be as soon as your judgement got into action.

You have not punished this company you gave it a green flag to do what its done in the past. Drive other job making, taxable businesses into the ground. This isn't what the Federal Government is being paid to do by the people. Fix the problem, don't hide it.

Ever wonder why people program for free for LINUX and GNU software? Its because the world and the tech people are tired of what the Government isn't doing. How do you tax a free piece of software? You can't, so you are forcing the world to fix the problems we see that MS is causing, and dropping your tax base in the process. The people of the world are coming together to resist what MS is doing to our computers. And companies are tired of being overcharged for a 2 dollar CD.

MS doesn't innovate, they buy their competitors to drive out threats to thier Monopoly. You haven't fixed this.

I'm sorry to see the Federal lawyers can't seem to get it right. Perhaps to many see the money they make if they get a chance to work for MS.

Subject: Microsoft

To whom it may concern,
I can understand the government dragging Microsoft to court for unfair pricing of its OS's. But making Microsoft share or strip down its code is unfair. I have used Novell, Linux, Dos, Windows, and NT Os's. I have found that most unwanted pieces of these systems can be removed or uninstalled with no ill effects to the system.

Computer users in the United States have made their choice, and chosen Microsoft products. If I buy a computer with Windows installed on it and want to try a different os I simply remove Windows. Until someone builds a better os then Windows, Windows will be the top seller. If the people so choose... And please remember its the consumer that has made the choice not a State or government group. Instead of wasting time and resources picking on Microsoft why don't these companies, states, and the government move on to more productive issues. Hmm maybe design a better os. Feed hungry people in different states in the US, or protect citizens in this country from outside influences.

We the people are not as stupid as some of you think. We have made our choice. And Microsoft is the winner. A good product at a fair price is the American way of life.

Thanks for your time.
Have A Great Day

MTC-00000734

From: Paul FM
To: Microsoft ATR
Date: 11/17/01 10:08am
Subject: You missed a few things in your

settlement

You missed a few things in the MicrosoftDOJ settlement:

1. All of Microsoft's Software development tools (Visual C, Visual basic, etc.) seem to to have license requirements that forbid the user from creating another operating system, or a product that can compete with MS office or Internet explorer. Unfortunately, Microsoft embeds OS secrets in these products that are nearly impossible to use without them (in other words creating a competing product without these tools is nearly impossible). You should have had Microsoft rescind these sections of the license.

2. You should also have required that all Contracts with OEMs be registered with the justice department for review. To make sure Microsoft wasn't sneaking some anti competitive item in the contract.

3. You should have had Microsoft agree not to enter any other market and to remove themselves from directly providing Internet Service (MSN), as this is their new tool for controlling the market.

I have no problem with not breaking up Microsoft. Their monopoly is held together by restrictive contracts, not by the fact that they supply OS and Office software both.

I have no problem with Microsoft keeping secret code. In a truly competitive market they would have to make their product co-exist and interact properly with competitors, and reveal how to communicate with their server products. I should preface the following by making it clear that I believe the Federal government legislates too many things that should be left to smaller government units (drinking laws, the now defunct 55 MPH speed limit law, and the like). I believe the job of the Federal government is to make as few laws as are needed to protect the rights and safety of citizens. But I do believe one of the thing the Federal Government must do is ensure a competitive market place.

I think much if not all of the Microsoft problem could be corrected with legislation that:

a. Forbids the Federal Government from doing business with Monopolies (if there are no alternative sources it should allow the Federal Government to create one). As long as Microsoft is a Monopoly, the huge amount of business they get from the Federal Government would go to competitors. If the Federal Government stopped using Microsoft Office, other companies would be able to stop using it as well (including Universities and State Governments), if the Federal Government couldn't use Internet Explorer, government web sites might not be compatible with it—forcing others to use alternative that are.

b. Forbids contracts that penalize a customer for using or supplying competitive products (as in Alternate OSes on a machine) this needs to be more generalized to prevent another company from using exclusive contracts in an anti competitive way (it could also apply to anti competitive clauses in software development tools).

I think Microsoft is a symptom of the holes in anti-trust/anti-monopoly legislation. Other companies restrain themselves only as a common practice. The result of the Microsoft

case will impact other companies contemplating the same methods of gaining market share. Removing Monopolistic methods from the market place is the best way to ensure a competitive market place.

Subject: Department of Justice Microsoft Settlement

November 17, 2001

Department of Justice

Washington, DC

microsoft.atr@usdoj.gov

cc: consumer@wvnet.edu

Subject: Department of Justice Microsoft Settlement

This is the second time that I've ever written a government official/agency. The first time was last week when I wrote the West Virginia Attorney General to thank him for standing up for the rights of West Virginians by pursuing the anti-monopoly case against Microsoft. That letter was necessary because, you, my representatives at the Federal level, have decided that my rights as a user of non-Microsoft software are without merit.

As stated in my email to the Honorable Darrell V. McGraw, Jr., I've used Microsoft products for many years. Like all modern PC users, each of my computers were purchased with Microsoft operating systems (MS-DOS or various versions of Windows) preinstalled by the OEM (original equipment manufacturer). Except for a brief period when the IBM OS/2 operating system was available

to consumers, purchasing a Wintel (Windows/Intel architecture) PC meant purchasing a Windows license. As Judge Jackson correctly pointed out, consumers are given no choice in the matter. As I've come to realize, it is exceedingly difficult to purchase a new PC without a Windows license. It is a statement of fact that, in the vast majority of computer users' minds, Windows *IS* the computer. It is also true that the average consumer has no more choice in operating systems than they have a choice of air to breathe. Despite the fact that, unlike air, alternate and arguably superior PC operating systems have been available for some time.

Though I consider myself an advanced user now, that was not always the case. When I purchased my first PC in June 1994, I did not know how to operate it. My experience at that time was limited to a bit of MS-DOS and the mainframe programs my employer ran at work. I'd never used a computer with a GUI (graphical user interface) and had never used a mouse.

Though the foundation of Microsoft's monopoly was already in place, the playing field was slightly more level in 1994. If you lived in a major city, for a brief period of time, you could still walk into a computer store and choose both your hardware and your operating system. Stores that carried them were exceedingly rare but IBM was still preinstalling its OS/2 Warp operating system on its PCs in 1994. Apple's Macintosh OS was, of course, also readily available. I'd researched both these and Microsoft Windows 3.11 before making my purchase.

Though I did not understand everything I read, I knew the computer press had very definite opinions about the relative merits of each of operating system. In a nutshell, the Mac was considered the easiest to use. OS/2 Warp had superior multi-tasking and memory management. Windows 3.11 was supposed to be an improvement over version 3.1 but wasn't considered in the same league as the other two OSes technologically.

None the less, I purchased a Packard-Bell PC with Windows 3.11 and clearly remember my reasons for doing so:

* I had only so much money to spend and Macs, then as now, were much more expensive than PCs. Though I preferred the Mac, I could not afford one.

* Though I could read all about it in computer magazines, I could not find an OS/2 Warp display model in the Parkersburg, WV area. Though it had problems, I used Windows exclusively for many years. I accepted computer crashes and frequent reboots without question because they happened to everyone. I thought they were normal. Like millions of others, I upgraded to Windows95 when it became available and expected things would get better. The upgrade cost several hundred dollars because it also meant I had to invest in a larger hard drive, more RAM, new diagnostic utilities and anti-virus software, and at-home tech support since I wasn't yet capable of upgrading hardware. The instability continued.

When Windows98 was released I upgraded again on the promise that everything had really been fixed this time. When, several

hundred dollars later, things were not better, I began to look for alternatives.

OS/2 Warp was long gone. Macs were as expensive as ever. I'd heard about an alternate operating system called Linux and learned that it was possible to install both it and Windows on the same computer. Over time, I learned how to obtain and install Linux, running it at first on an old 486 PC we'd acquired. Redhat 4.3, was crude and rough compared to Windows but it never crashed and, unlike Windows, ran well on the older computer.

When I learned that I could by Linux CDs for \$2.00 from web establishments like cheapbytes.com, I knew Linux was a way to free myself of constant, expensive upgrades. The transition was not easy. I've spent countless hours learning how to install, configure and support a Linux computer. I relied heavily on books and on the Linux on-line community. Few computer users would go to such efforts. Judge Jackson rightly outlined what he called Barriers to Entry. I understood that concept immediately.

Over time, I learned to love Linux. We run both it and Microsoft Windows in our home. Many programs are not available in Linux versions and some of our hardware works only with Windows. I use both OSes interchangeably and move from one to the other with ease. We no longer use Microsoft Office software, preferring the freely available, multi-platform StarOffice suite instead. Our StarOffice Linux documents can be opened and read in our StarOffice Windows programs with ease and visa versa. And, happily, the Internet, for the most part, is still a realm where operating system or hardware platform does not matter.

I'd like to think that the alternate tools we've come to rely upon will always be available but I fear this will always be the case. Today, Microsoft controls over 90% of the PC market and has tremendous influence on the PC industry. Its might can dictate not just how technology will be deployed but which technology will be deployed. It regularly uses its monopoly powers to unfairly move the PC industry in directions that benefit it alone. That fact has been determined in court and is not in dispute.

It has lately been extending that influence to the Internet, corrupting long standing open protocols by weaving its own proprietary code into the framework. One of the ways it does this is by promoting its Internet Explorer browser. Shipped on each and every OEM PC since the release of Windows98, it is the most used web browser in the world. The Internet, which was designed to be open to everyone regardless of computing platform, is turning into another Microsoft property. It's already common to find web pages that do not display properly in non-Microsoft browsers. Microsoft's ?Windows Update? program, an integral part of the Windows OS, works only with Internet Explorer. And Microsoft's Microsoft Network's web pages are deliberately designed to deny access to browsers other than Internet Explorer. Users that prefer to use Opera browsers (<http://www.opera.com>), for instance, are deliberately denied access. This is crucial since Opera has been selected as the browser of choice by a consortium of

hand-held computer devices—another market Microsoft is trying to control. Microsoft has demonstrated time and again that it is incapable of acting in the public's best interest. The Department of Justice was entrusted by the citizens of the United States to look out for our interests. Its settlement with Microsoft is an abuse of our trust.

Best Regards,
Jim Coleman

Subject: Microsoft settlement

To whom it may concern,

What are you people thinking? The whole reason for this lawsuit was monopolistic practices by Microsoft.

By allowing the company to continue to bundle other software into windows, and making those programs an integral part of said Windows, the consumer is now being allowed to have the choices he or she so deserves.

I guess it doesn't matter to the government that we have elected that we, as Americans, like to have many choices. With Microsoft making Outlook Express, Windows Media Player and Internet Explorer integral to Windows, we have been stymied in our choices.

It is becoming more difficult to remove these applications, if not impossible without crashing Windows, and use something else. I think Ashcroft and the rest of the DOJ need to gain some backbone and make Microsoft ease up on their monopolistic practices, make Windows internal working available to the software developers for better integration and to stop bundling IE, OE and WMP into windows.

I thought the government was supposed to be "for the people, by the people, and of the people" not "for the company, by the company and of the company".

Subject: Equal Treatment

To whom it may concern;

The Microsoft case is the first time that I have heard of a defendant being found guilty, and the guilty verdict being upheld by appellate courts, where the guilty defendant was given the opportunity to negotiate the punishment. The negotiations resulted in a compromise and a reduced penalty. Should I ever be found guilty of anything I will surely demand my right to equal treatment under the law, and demand a compromise which reduces my punishment.

Thank you for your concern and the opportunity to refuse to comply with any punishment imposed.

Date: 11/17/01 10:15am

Attorney General John Ashcroft,

The proposed deal with Microsoft is too weak. Witness the continued integration of such services as instant messaging, on demand multimedia, and e-commerce (Passport), into the new release Windows XP. The flaccid excuse of using the horrific events of 11 September as a reason for rushing to a settlement is almost a sacrilege to the memories of the EMS personnel that died there. To rush to a conclusion of this since "the economy is bad" is as equally wrong or amoral as overlooking Bill Clinton's felonies since "the economy is good".

The true irony of the whole situation is that Microsoft could have gotten to their position of dominance by sheer engineering excellence without having to resort to such deeds as copying others code without license (DOS ver 1 and Stack), vaporware (Visual Basic 4.0 & 5.0 for the Macintosh), planting fake error messages in their software (DR-DOS & Windows 3.0/3.1), threatening to withhold licenses if hardware vendors even offered another OS (OS/2 & Linux), threatening to withhold licenses if hardware vendors don't pay for a copy of Windows even if the machine ships with a competing OS (multiple small shops with Linux, UNIX, & OS/2), changing the boot sectors for operating systems so that competing OS's cannot be multibooted (Windows 2000 with BeOS, Linux, and the various types of BSD), trying to divide up the market space with competitors (knife the baby with Apple's QuickTime; or Internet Explorer for Windows and Netscape for everything else) and violating contractual agreements to twist other's software into Windows specific trap (Sun & Java).

Read Bill Gates own testimony before Congress when he stated that the cost of software goes down even with the amount of complexity goes up. Now, look at the ever increasing cost of Windows. A license for Windows has gone from 2% of machine cost when Windows 3.1 was released to 30% today with Windows XP. This is directly from Bill Gate's mouth. You said that Timonthy McVeigh wouldn't get a retrial in spite of the monumental FBI SNAFU. Yet Bill Gates gets to rip, rape, and ruin the computer industry at his leisure now.

HOW MUCH EVIDENCE DO YOU NEED???? You have a lot less evidence against bin Laden and the US is bombing Afghanistan, yet you hand out essentially a warning ticket for jaywalking to multibillion dollar/year company that doesn't even bother pay income taxes at all. That fact is directly from their annual report to their stockholders. None, Nyet, Nada, and don't intend on it either. As an RN that is busting his backside to pay his bills and support a bureaucratic royalty of eunuchs in DC, that is a double insult to have to pay more income tax than Microsoft, Inc. does. And I am talking actual number of dollars, not percentages here. You know, the long folding green stuff with pictures of dead presidents on it that makes the world go round?.

The only reason that we have had a rise in competing operating systems in the past is

that Microsoft has HAD to be restrained during the trial lest their activities would be used against them in court. Now, you are going to undo the ONLY decent thing that the previous inhabitants of DC managed to do right. What happens to the economy when Microsoft now has a free hand to wreck vengeance as it sees fit and only has to answer to a bunch of paid patsies that meets annually?

The best visual analogy that I can give you is a mature pine forest. Mature pine trees have a monopoly on the environment. They poison the ground with their acidic needles so that no other plant can grow. Microsoft has a monopoly on operating systems, and poisons/absorbs any new idea into their OS or Office products. There isn't anything for wildlife to eat since everything except pine trees are dead to about 20 feet off the ground. No one wants to develop new products for the Windows environment since Microsoft will write the same functionality into their products. We will have the same technological diversity as there is ecological diversity at the ground floor of forest. The only OS diversity is the Macintosh with 5% the market share and Linux with 1%. Pine trees will grow to over 100 feet high and live for almost a century, only adding height and girth. Microsoft only produces superior products when they face competition. A mature/dying pine forest will only rejuvenate itself when it is cut/burn down. Pine seeds will only germinate after the wax coating is burnt off. Do your job and light a match to Microsoft's monopoly.

Specifically, this should be added to the restrictions on Microsoft:

- * prohibitions on the integration of instant messaging, media playing, and currency exchange into the Windows operating system

- * immediate release of all API's for prior versions of Windows

- * require the development and release of a database program to complement the Macintosh version of Office in the same manner that the program Access is a relational database component for the Windows version of Office, this would increase the viability of the Macintosh platform of a competitor

- * require the release of the previously announced Visual Basic for the Macintosh to promote the development of vertical applications on that platform, this would compensate for the FUD that Microsoft used to freeze competing development languages on the Macintosh platform

- * require the inclusion of the Java Virtual Machine from Sun in Windows XP

- * prohibit the release of any new Windows operating system until the number of bugs is less than 10% of number of lines of code

Shame on you for selling us out. This stinks so badly that it has coined a new word "Seattlement".

Sincerely,
William E. Ganz, RN

In short, a travesty for justice, the American consumer, and for much of the computer industry itself.

It's hard to imagine justice leveling a less punitive punishment for MS. This one makes the Supreme courts rubber stamping of the Florida election a minor transgression.

Ten years from now, this decision will echo in business text books as an egregious failure for the law, government and all business. Watching the Gates video deposition was like watching a 4 year old deny he had his hands in the cookie jar while it was caught on film and telltale fingerprints remained.

Just a law abiding tax payer almost stunned at what amounts to a wholesale reversal.

Shame on you.

I have no stake personally, professionally or otherwise in MS, but if ever there was an antitrust case that needed serious redress, this is/was the one that got away.

 Subject: Microsoft trial comments

I see the DOJ has set up this email for comments on the Microsoft antitrust trial.

I have to say that I'm disappointed with the settlement agreement made. The discussions I've seen find many loopholes for MS to get around just about all restrictions should they desire to do so. And their use of the loophole on the 1994/1995? consent decree banning the bundling of Windows 95 and Internet Explorer show that they'll use all the sneaky tricks they possibly can.

I myself had hoped for a three-way split in the company, for Operating System, Internet stuff (MSN, Internet Explorer, and other tools that aren't useful without internet connection) and applications (Word, Excel, video/music players like Media Player, encyclopedias, etc. that aren't significantly internet related or absolutely required to run a computer). The two-way split suggested by Judge Thomas Penfield Jackson, as it would let the "other stuff" company bundle applications and the internet together, which could still have forced people dependent on Word and Excel for work to become dependent on Internet Explorer and the MSN network, which could hurt other internet service providers, especially the smaller companies that serve a particular town or city only. The small town I grew up in has such small "mom & pop" ISP company, and if they were to lose business due to shady forced dependencies on MSN, the whole town would be screwed, as there are no local MSN or AOL connection phone numbers, and we'd all then be forced to pay long-distance toll telephone charges to connect. I imagine there are a lot of similar small towns across the nation.

I believe that the DOJ's case could have accomplished more if you had not

concentrated so much on the MS1E vs Netscape issue and nearly ignored many other relevant issues. MS hijacked the Kerberos networking protocol, modifying it to be incompatible with non-MS products specifically to insure customers would be forced into using MS products together and force them away from Unix or other non-MS platforms that have very important uses. MS stole the name "Internet Explorer" product name from a small company that had registered the trademark or copyright or whatever covers this issue in their state, and was waiting for their federal application to be processed. MS sued and appealed until this small company could no longer afford to try and protect their registered product name and was forced into bankruptcy, MS won. MS's case was based on the argument that "internet explorer" is too generic a term to trademark or copyright. But if I were to start selling another software product of any kind, I bet you my house that MS would sue me out of existence.

And I cannot fathom how MS gets away with their claim of "innovation". They've either bought or stolen 99% of their products from other developers. Windows was of course stolen from Apple, who themselves finagled it from Xerox. Internet Explorer was bought from another developer, perhaps the entire company was bought. Flight Simulator was bought. There is a giant list of such MS "innovations" at <http://www.vcnet.com/bms/departments/catalog/index.shtml> There is an interesting discussion of what software concepts were "innovated" by MS at <http://www.vcnet.com/bms/departments/innovation.shtml> MS really hasn't innovated nearly as much as they claim to have done. We all know that MS is trying to turn the internet into .net, where only MS platform based MS products can possibly do anything. I don't use a Windows PC. Nor do I use Linux or Macintosh. I use a more obscure platform that just happens to be more suitable to me than these more popular platforms. Do you think I will be allowed on the MS .net? Of course not. Even though there are developers that would be willing to make software to allow my computer access to .net, MS will not allow such distribution of their protocols specifications to such independent small developers, they'll cry "security issues or something as a loophole to protect their APIs and keep things nicely proprietary and incompatible with anything else. I will be kicked off the internet, as I truly cannot tolerate the horrible Windows user interface (in my personal opinion, which is all that counts as far as my pocketbook is concerned when spending the kind of money that computers cost, I won't pay that much for something I, personally, hate) and gross instability.

MS is trying to get a lot of control over the music recording industry as well. They are trying to get the RIAA to put .wma digitally encoded files on audio CDs as well as the standard audio tracks for stereo equipment. What good does that do me, as I don't use Windows and thus have no .wma player? I will not be able to create my own digitally encoded formats that my platform can play, as the CD is copy protected. Sure, there are

copyright issues at hand needing protected, but why not use an industry standard format available to all platforms? Why limit listeners to the Windows platform? Why leave me out? At work I use a Unix (Sun Solaris brand) workstation, so I can't listen to my music there unless I go out and spend \$50 on a cheapo audio-only CD player. Why should I be forced to do that when my old CDs play perfectly well in the workstation's CDROM drive? Microsoft is trying to force people into Windows PCs by lobbying RIAA to adopt their proprietary file format which isn't usable on non-MS computer platforms.

MS isn't just about owning most people computer usage, MS is trying to take over a great deal more than that, and I don't believe that the settlement agreement is enough to contain their borg-ish assimilation of the computer industry and other large portions of the US economy as subdivisions of the current Microsoft conglomerate. I realize that other current events have caused respectable distractions from the MS situation, but it seems like this agreement was hashed together in order to dump the MS trial so the DOJ can concentrate more on other large and of course important issues. I think the MS issue needs to be kept at least on the back burner and not just thrown in the trash heap. Two federal courts have ruled them to have broken antitrust laws, MS requires a bit more than this weak slap on the wrist.

I thank you for your time in reading my concerns with this issue.

Subject:

I find it hard not to be cynical here. Microsoft has a track record of circumventing many of the laws now in place against it. How this settlement will curtail this is beyond me.

They have taken the law into their own hands and used it to their own advantage and have consistently hurt consumers, by limiting choice. I do not use Microsoft products (I find them to be buggy and inferior to most programs out in the market), and because I choose not to use their product, I have to find ways to get around their lock on the software and PC market.

I have been to web sites that refuse my connection due to the fact that I am not running Microsoft software. Is this good for me the consumer? I like choice and Microsoft is trying to eliminate my choice of software to use. I find the decision of the government in this instance to be rather naive in the fact that they think they can control what Microsoft has become. In fact, I think the government has let down the U.S. consumer. In a country where we have choices for just about anything, not to have a choice of which software to use (and actually be able to access any given web site or resource, as proven recently by Microsoft blocking access to their web sites against Opera and Netscape web browsers), is in my opinion a criminal act (one of which they would surely protest if sites blocked them).

Since they have been proven guilty of anti-trust behavior, and also for not living up to the last remedies imposed on them, I think it's rather sad that the government would rather give them a slap on the hand rather than take some positive action against them and put choice back into consumers' hands. After all, we should be a country of choice and not a country of Microsoft's choices.

Subject: Microsoft Settlement
To Whom it May Concern,

As a tax paying American citizen I am disappointed in the Justice Department's proposed settlement of the anti-trust suit with Microsoft Corporation. Based on the fact that Microsoft has been found of anti-competitive behavior, I believe that the punishment aspect of the proposed remedies does not nearly address the severity of their infractions. Furthermore Microsoft with the release of Windows XP continues to use the same tactics of bundling unrelated software into their operating system in order to drive out competitors in other markets. Microsoft has repeatedly shown it is not willing to compete in a legal fashion, despite prior Justice Department restrictions (1995). I believe the only way that Microsoft will conduct business legally is to take away their ability to use their operating system to make gains in other software products. I hope the Justice Department will reconsider their position and provide protection for American consumers by seeking more substantial penalties against Microsoft Corporation.

Respectfully yours,

From: Andrew Bulmer
To: Microsoft ATR
Date: 11/17/01 10:50am
Subject: Microsoft

I work at a non-profit non-governmental organization. I use Microsoft Products such as Windows, Internet Explorer, and Office. This is not to say that I like these products but I must use them. Other organizations use these products and that means we must use these products. There are several facts I would like you to consider.

1. You cannot buy a PC that does not come with Windows pre-installed. Occasionally an OEM will offer Linux but at the same price as Windows. If you check the prices all Linux Distributions are less than the price of Windows. Also you cannot get a PC that has both Windows and another operating system installed even though it is technically possible. I am assuming that MS's agreement with OEMs prohibit this.

2. File formats are kept secret. How many times have you received a Microsoft Word .doc file as an attachment to an email? I get a word document in the email almost every day. Since the file format is secret, only MS

Word can open it. Since people regularly email word documents this means that I need to have word to view them.

3. The majority of people who surf the internet use MS Internet Explorer. This is because IE comes with Windows and Windows comes with their PCs (see above). This means that most web pages are designed to be viewed by IE only. Standards that are ignored by Microsoft are ignored by web developers. When the anti-trust case against Microsoft began, Microsoft had a monopoly on the Operating System of PCs. Now Microsoft has a monopoly on the office suite, internet browser, media player, and is working on establishing a monopoly on gaming consoles (Xbox). You cannot use a computer without using Microsoft. This needs to be stopped.

Like I said earlier, I work for a non-profit organisation that does not have the money to be able to afford to upgrade our Microsoft products. The alternatives just aren't there, so we have to send money to Microsoft that we would much rather use to teach children to read.

I hope that Microsoft's file formats, networking standards, and OEM agreements are opened up so that there can be some competition. I would like to see the prices fall and able to use alternate products.

Thank you for your time

Subject: Comments on proposed Microsoft settlement.

Dear Sirs,

The proposed settlement is a travesty of justice. Microsoft was found guilty of violating their previous settlement agreements, behaving in a particularly uncompetitive way, and through the whole trial has thumbed their noses at the law. No where in the settlement are they taken to task for their serious misbehavior—and it is serious, Microsoft is big enough to be a symbol, do we want other businesses to behave this badly? The settlement does little to affect Microsoft, and has few if any real remedies. At this point Microsoft should be on notice that ANY misbehavior will result in a swift and stern response.

At the very least, ALL of Microsoft's existing and future data formats and the means to interoperate with them should be made public. It should not be up to Microsoft to pick and choose who their competition might be.

Failure of a Microsoft service to work with another vendor's product—because of that other vendor's id only (as in the recent MSN debacle) should be treated as a violation of the interoperability requirement. Microsoft is driven by greed. Greed is a dangerous thing to reward.

Thank you for your consideration.

To: Microsoft ATR

Date: 11/17/01 11:02am

Subject: Justice Department vs Microsoft

Dear Representative,

My two greatest concerns with the current Microsoft agreement are the punishment portion and the authority of the oversight panel.

As far as I can tell, Microsoft is not being punished for it's years of illegal behavior that

they've been convicted of, but rather have been put on probation. A panel of three probation officers (two of which will be chosen with Microsoft's influence) will monitor Microsoft's behavior. I fail to see any more punishment than that. I personally don't believe Microsoft will give complete and accurate information to it's competitors about how to efficiently interact with its operating system (especially if it offers competing products). I also don't believe they will stop trying to intimidate the hardware vendors. Perhaps they will be less blatant about it, but not stop.

I believe that the most optimistic outcome of this settlement will be that Microsoft will walk a fine of aggressively working against the spirit of the settlement while simultaneously trying to meet the letter or the law (as Microsoft interprets it, which is interesting because I don't think that they believe Microsoft has done anything wrong).

When (and not if) Microsoft breaks the law again, it is unclear to me what the above mentioned panel has the authority to do. Can they shut Microsoft down, levy fines, arrest executive officers, or is it back to court we go? My guess is that it's back to court. I say this with the believe that Microsoft will legally challenge any decision of the oversight panel. In general, why rush the settlement (which is not in Microsoft's interest) if it's only going to lead to more courtroom battles?

Subject: Please stop MS's anticompetitive actions

I understand this site is for comments on the DOJ/MS antitrust action. Please do not proceed with your current settlement plans with Micro Soft. It appears you have given up your trial victory and are going to let them continue their anti competitive practices. I hope you will re-join the nine states who want MUCH stronger constraints placed on MS activities.

I have been a MS user since the 1980's (yes, I'm that old). I have watched them push producers of complementary software out of business (eg., disk compression), watched them cripple competing software (eg., the competing DOS), watched them use the operating system monopoly to advantage their their middleware (eg., any office product —Lotus, Word Perfect, etc., etc.), and watched them get away with going around the US Court system's rulings against them (eg., the "browser ruling"). The impact of this that a significant aspect of this country's revolution in information processing is being controlled by one company. The power of competition is almost completely absent. This is NOT what we want for the future. We need many companies competing, especially the smaller ones. In the past, the successful smaller companies have been crushed by Micro Soft; the evidence is that they will continue to do so unless you act to stop them.

PLEASE do not give in to Micro Soft as it appears you are doing. Please help this

country regain some competition in the operating system/middleware segment of the economy. PLEASE help stop MicroSoft's predatory, anti competitive behavior.

Thanks for listening.

Subject: You Rolled Over

Dear Sirs/Madams:

Your "settlement is simply a reward to Microsoft for decades of illegal monopolistic behavior.

There is nothing to stop them from raising the price of their MS Office products to

OEMs to force them to abandon any competitor product placements. Microsoft has proven by their deceitful testimony during the first trial (doctored videotapes, lies about their email message history, etc.) that they have no fear of the U.S. government.

They were operating for several years under a consent decree before that, and they did not change their behavior one iota. This is a travesty of justice and serves to weaken our anti-trust laws. I urge you to reconsider the position of the nine states who oppose this settlement, and don't foist this Pyrrhic victory on the U.S. public.

Subject: Microsoft monopoly and its use of that monopoly

It has been shown how much damage a monopoly can do when they spread into other adjacent markets. Many companies was forced out of business because of a direct result of how microsoft choses to do business. There are other reasons too. Microsoft goes into an open market, using its monopoly to gain a very large share, and closes the doors. Many of microsofts products are a direct resule of this. IE, Office (Word, Excel, Access, etc), Outlook, NT (NT/2000/xp) and many many more are only around because of such leverage that they

can force onto computer manufactures, business, and home users. Microsoft, in the world of computers, is the only one, who does not play well with others. They have gotten a monopoly on the desktop market, they are forcing into server, console, web, ISP, and many other markets. Even when the government tells them not to ship a product by a cort of law, they still do. Many of there stTOS or software agreements are pushing the line of being tilleagle. They are pushing things onto everyone that no body wants. Things that purly exploit citizens.

The current regulations that are proposed are far to little and far to late. This should have been done in 96, and conpleted before 98 came out. Bakc when there was still chouce of a desktop OS that played nice with each other.

At the very least, MS should open all API and protocalls needed when talking to windows from a network. They also need to open all Windows API's so other competing developers on windows can compete. They also must make the default settings use the least common denominator for compatibility.

Thank you for you time,

Cody Nelson

Subject: Settlement

The proposed settlement with Microsoft does not go far enough. It does not prevent Microsoft from continuing to intimidate small companies from producing products that are technically superior to Microsoft offerings, thus, preventing the public from seeing alternatives to Microsoft offerings. The web browser is only one specific issue. The license agreements to develop under Microsoft platforms effective take my freedom of self expression away by saying that I cannot publish my own source code developed under Microsoft. Also, current licensing restriction tell me I cannot use certain tools available that are "free".

Again, the Web Browser is only one issue of how Microsoft continues to try to tell people how to do and live thier lives. The Settlement must be preventive of future action based on past action, not just settle past wrongs.

From: Michael Jennings
To: Microsoft ATR
Date: 11/16/01 10:54pm
Subject: Recommendations: DOJ vs. Microsoft.

I've owned a computer dealership since before IBM sold personal computers. I'm also a programmer. Microsoft is extremely abusive and anti-competitive.— Microsoft is far, far more anti-competitive and abusive than the US DOJ vs. Microsoft antitrust case discusses. If the present case is resolved in an insufficient fashion, there will be a need for another case immediately. Secret file formats are anti-competitive.—A good partial resolution of the case would be to prohibit Microsoft from using secret file formats. Then

there could be competition again. At present there cannot be competition because the software from the dominant company, Microsoft, produces file formats that cannot be reproduced because they are secret. So, another company cannot make software that reliably inter-operates. At present, if a big customer upgrades to a new version of Microsoft Office, and sends out files in a format incompatible with previous versions, all people who receive the files are forced to upgrade their Microsoft software. Companies understandably don't want to go to a good customer and ask that a document be sent again in a former file format. Microsoft produces software that is deliberately faulty.—Windows 95, Windows 98, and Windows ME all have artificial limitations which cause them to crash even though there are plenty of hardware resources. These are called "User Resources" and "GDI Resources". The memory for these resources is artificially limited to 128,000 bytes in some cases and 2 megabytes in other cases. When these resources are exhausted, the operating systems stop functioning. Microsoft deliberately allows piracy.—Major competitors of Microsoft like Corel Word Perfect and IBM Lotus WordPro have difficulty competing because Microsoft allows enough piracy of Microsoft products that competitors cannot sell theirs. I called the Microsoft legal department and complained about this. The result was that I was a witness in a case against one of the pirates. More recently I tried to complain about this again, but it is now impossible to contact Microsoft's legal department.

In my area Microsoft Office 2000 is available for \$50.00 at dealers who sell low-cost computers. I have verified with Microsoft that these are pirated copies. Over a period of many years, Microsoft has not taken sufficient action against the pirates to allow a chance for honest competitors. Microsoft is ending support.—Next month, December 2001, Microsoft will stop providing support for Windows 98, apparently in an attempt to force users to upgrade. Another good partial resolution of the DOJ-Microsoft case would be to extend the support time for at least another 10 years. Many people have computers that operate fine for the purpose for which they are used. For example, an accounting department in a small company may use Windows 95, or even the DOS operating system. These people should not be forced to upgrade. These are only a few of the extremely anti-competitive and abusive methods Microsoft uses, in my opinion.

Subject: Microsoft
Hello,

I'm composing this e-mail with the likelihood of someone actually reading it.

I am a Microsoft Certified Systems Engineer and like Microsoft software. Programming and networking are the things

I enjoy. Thought I'd make some basic points. A monopoly that isn't regulated is not a good thing unless you have benevolent management. Microsoft has a monopoly on the workstation and home PC market. Microsoft has used the operating system monopoly to force other products on customers. Internet Explorer is a good example. Microsoft continues to abuse the operating system monopoly. XP is an example. The DOJ needs to be tougher on Microsoft, or any company that abuses monopoly. I've put a lot of thought into how Microsoft, DOT, customers, and rivals would be in a "win-win" situation. If someone is serious about listening to my suggestions, please contact me at 816-651-4025.

Take Care and God Bless.

Subject: Thank you

For settling a case that was about competitors who are too inept to make it in the marketplace, not consumers. I believe Microsoft is a great company, and has been developing some fantastic products over the years. It's a shame our system punishes success, as we have choices in computing, and have for some time. If Microsoft's competitors spent more time building great products, and less time whining, people would buy them. Thanks for not wasting more of our taxpayer dollars on a case that doesn't really mean anything. I choose to use their products—I have the skills to run Linux, Solaris, or any other operating system and application set—their stuff is just the better product, and worth the money. Perhaps folks will realize that many of 'consumers' don't use their products because we are forced to, but because we want to.

Subject: Microsoft Anti-Trust Settlement
To Whom It May Concern:

After reading many of the clauses that were agreed on with the subject settlement it is clear that the Department of Justice has relinquished its role as an enforcement agency for carrying through with Anti-Trust proceedings. This so-called settlement was so lax in its penalty actions towards Microsoft that its even debatable whether Microsoft actually comes out of these proceedings even stronger than before. Several of the 'restrictions' placed on Microsoft were merely just cleverly weasel-worded constraints that does nothing to stop them from using similar avenues as in the past to continue to restrict innovation and brow-beat remarketers. Not only should Microsoft had to pay a large penalty for its anti-competitive practices (in the billions of dollars) they also should have been made to break up their company into two separate business units (one Operating System, One Applications), at a minimum. As a fiscal-conservative, I'm embarrassed by what seems to be a complete and total cave-in by Justice, bordering on dirilection of duty.

Best Regards,
Pat

From: larzgold
To: Microsoft ATR
Date: 11/16/01 10:55pm
Subject: Microsoft Settlement

After reading as many articles about the settlement I am still wondering what the government won on this. Microsoft has to tell everyone the API to windows except when it is a security issue. Which is undefined. They are not penalized for anything past wrong doings, and are not forced to support older applications. Hence they can come out with office xp2 and say hey are no longer fixing bugs/updates in the previous version, and basically have income for life. I am not anti-microsoft, in fact I am a shareholder, a developer of MS applications and write articles on how to convert Perl base applications to MS ASP/COM. But my fear lies with the fact the microsoft needs competition to better itself, and to give users a better choice. Forcing me to buy OfficeXP upgrade now, or pay a higher price later, well now I am moving to Star Office. Don't car companies have to support a car for so many years after making them, and can have recalls etc. Software may not kill anyone like a car might, but companies can go broke with the licensing they are enforced on them. The best letter explaining what is wrong is the Ralph Nader letter. Personally I would like to see a fund setup for open source/competitor software funded for the next 10 years, and

also for them to have to open source any software they stop supporting. For example, when win95 is no longer supported an users have to upgrade, make the code open. This will allow computer companies, and hardware companies to continue to support the product after msftgives up support.

I hope you re-evaluate the decision very carefully.

Subject: Allowing Microsoft to Continue Business as Usual Will Weaken What Humanity Can Be

I don't have forty-billion dollars and an army of lawyers to push my case, but I think that reasoning and sheer logic has a chance this time around. Microsoft it a monopoly. It clearly is. There is no doubting that Microsoft is a monopoly. If you look past the technical law jargon and the army of lawyers, you can see this clearly. When the US initially set up anti-trust laws, they had companies like Microsoft in mind. They

would not let Microsoft go or even let the case be dragged on for a decade. The fact that the case has been dragged on for a decade is yet another obvious peice of evidence that proves Microsoft is a monopoly. Now, what has Microsoft done for the world? They have made tens of billions of dollars for themselves, almost none of which goes into making an error/bug free operating system. It isn't that hard, really, to make an error free operating system. All you have to do is know what you are doing, take all cases into consideration, and implement the fail-safe devices in the program. So why does Microsoft still have bugs in their software? It is because it is good for their business. They take no account of how much humanity could benefit from trouble-free computing, because trouble-free computing isn't good for business. If the open source developers had forty-billion dollars to spend on equipment and employees, the US would accelerate into another greater information age. This information age would be free, everybody could afford a computer, and everybody would know how to use a computer. The current reason why so many people cannot afford a computer is because of Microsoft. They provide 500 dollar operating systems that a free Linux system could send straight to hell in any stability test. Half of the cost of Microsoft's products are marketing costs, which Linux does not need. Open source developers do not have to market, because their products sell (if that is the right word) themselves. Condemning Microsoft would benefit mankind.

Subject: Unsatisfactory MicroSoft Anti-Trust Settlement

To whom it may concern;

Sirs, I feel very strongly that the current settlement of the MicroSoft Anti-Trust case is insufficient and deeply flawed. MicroSoft has been found guilt of being a predatory monopoly, and of repeated abusing its overwhelming market position to bankrupt its competitors and strong-arm PC retailers into restrictive and monopoly-power-enhancing licensure 'agreements'.

The primary complaint against MicroSoft is not the content of its software—though a case probably could be made of such—but rather its flagrant disregard for the law and blatantly abusive marketing practices.

As an example of MicroSofts disregard for the law, you need look no further than their most recently released 'Operating System' (OS)Windows XP. Even in the midst of being prosecuted (and after a judgement against them) for predatory marketing practices in the form of software bundling (a la Windows 98 and MicroSoft Internet Explorer) they have developed and RUSHED TO MARKET an operating system which offers only a very incremental improvent in performance—but instead is BUNDLED with far more software. Microsoft might argue that the Software is an intrinsically useful part of the OS; of course, that argument has previously been ruled against in court. MicroSoft might argue that

some of the newly integrated software may be Opted-Out of; and of course everyone surly realizes that opt-out services have been examined in court and found to be far less desirable than Opt-In choices.

The penalties imposed upon MicroSoft are virtually meaningless; MicroSoft has been so wildly profitable as to make W. Gates fantastically wealthy—some US\$ 56 Billion or more if memory serves. Any fine levied will be an insignificant fraction of MicroS ofts assets; any program(s) whose source must be opened to public scrutiny will be similarly insignificant—MicroSoft could simply release a 'new' piece of software and use its market abuses to make it the new de facto standard. A 'More Of The Same' solution will NOT be effective. Quite simply, MicroSoft MUST be split into at least two mutually exclusive sections; an Operating Systems section and an Applications Software section.

Please note that MicroSoft is a 'Vertically Integrated' monopoly—much like Standard Oil was; it controls not only the production of a resource (computing power made available through the operating system, similar to Standard Oils control of oil production through ownership of refineries) but uses this control to select who can compete to retail it (the companies who write application software to must face unfair pricing when they attempt to compete with MicroSofts own products, much like the Gasoline retailers attempting to make a profit against Standard Oils retailers, while being in the unenviable position of having to buy their gaoline from Standard Oils refineries). It is the continual abuse of this 'Vertically Integrated' structure which has lead to MicroSoft being found GUILTY of being a Predatory Monopoly; and so any lasting solution MUST address this issue. Any failure to split MicroSofts Operating System away from MicroSofts Application Software will forever fall badly short of preventing future abuses.

I sincerely hope that no settlement LESS than the splitting off of the Operating System Unit will be reached; thank you for your consideration in this matter.

Subject: Microsoft is a shameless monopoly
Hash: SHA1

Microsoft should have no right to exist under current law because of their anticompetitive practices. Although there are many examples of Microsoft's stealing intellectual property from other companies and individuals, such as their TCP/IP stack, one practice stands out in my mind: Microsoft prevents computer manufacturers from allowing a computer with a Microsoft operating system from alternatively booting into a non-Microsoft operating system. This is quintessentially anti-competitive, because it effectively prevents other operating systems than Windows from getting mass market exposure. Most computer users use whatever software is packaged with their

systems usually because it's beyond their ability to install other software. This is especially true of operating systems. Although an operating system such as Linux, for example, can be just as user-friendly or even more user-friendly depending on the end user, the installation process often requires technical knowledge that most users don't have. Although there exist computer shops that will install operating systems, most users, not being able to justify spending money for an extra operating system, simply use what is packaged with their computer.

Because of the preexisting popularity of Microsoft operating systems, computer manufacturer's can't simply not install a Microsoft operating system. The simple act of installing a Microsoft operating system prevents them from installing a non-Microsoft operating system on that computer for the customer because of contracts computer manufacturers must sign before they may install any Microsoft operating system. If it weren't for these anti-competitive contracts, most computer manufacturers would probably install a Linux-based operating system in addition to a Microsoft operating system, giving end users exposure to alternative operating systems. Without the anti-competition contracts, end users would have a choice which operating system they use, instead of being forced to use Microsoft's products. Recently, a memo has been "leaked" by Microsoft, naming Linux as "THE" competition. Therein it was stressed that Linux has a very good chance of displacing Microsoft in both the server and desktop markets. However, nothing could be farther from the truth, because Microsoft has created anti-competition contracts with computer manufacturers. In fact, the memo itself is dubious, because Microsoft's goal would be to prove that it indeed has competition in order to insure it's survival as a monopoly. Whereas a memo such as that can be easily fabricated and "leaked," as Microsoft would have us believe it was, anti-competition contracts are undeniable. When the two tell different stories, it is logical to trust that the factual and undeniable anti-competition contracts tell a better story of where Microsoft sits as a shameless monopoly.

Subject: Microsoft is flouting the law and undermining the economy

After finding Microsoft guilty of systematic damaging monopolistic behavior they are getting only a tiny slap on the wrist. What is their response? Leveraging their monopoly to expand into the computer gaming market (never mind that their software makes writing games harder and will slow the expansion of that industry), network services (recently MSN turned off support for non-

microsoft browsers and then turned it back on in response to complaints, sending fear into anyone using a non-microsoft browser), a virtual machine named .net designed to undermine Java (and they just shipped an old out of date Java with Windows XP so that Java would look bad), and on and on. Their arrogance is hard to believe, one must look again and again. What is the effect of this flagrant violation of the law and of the findings of the Justice department? How can we expect any business to obey our laws? How can we expect innovation to keep coming out of small companies when the markets and patents are increasingly locked up and an anacronistic monopoly makes all the rules? What is the moral effect of the massive political contributions from Microsoft just before this sudden softening of law enforcement?

Please do your duty and break up any and all companies found to have become damaging monopolies. It will actually be good for their shareholders, as the smaller more focused pieces will get new life in a more competitive market. Capitalism is like a garden, a bit of pruning keeps it healthy.

Subject: Settlement comments

I find it very strange when an entity is convicted of multibillion dollar crimes and then suffers no punitive damages. The terms of the settlement seem to be about equivalent to banning a bank robber from entering a bank by the left front door because that is how he robbed the bank last. I would like to see:

1) Code of conduct remedies without the serious loopholes of the current system. It is not a serious remedy if Microsoft can determine who gains access to the source code. It is not a serious remedy if Microsoft can avoid revealing "authentication protocols". They will simply make every protocol involve some amount of authentication.

2) Damages. In fact, punitive damages. Breaking the law, especially breaking the law to get several billion dollars should be bad. It sends a very poor message if this does not happen.

Subject: Sell-out to Corporate Interests

Please add these comments to whatever official record you may be keeping of responses to the Microsoft settlement: Microsoft lied every step of the way in its trial, and now you expect people to believe that these same executives in Microsoft can be trusted to stop anti-competitive practices with only minimal sanctions. So typical of a Republican administration—selling out to corporate interests. This was a Reagan appointee who decided the company needed split up, so it's not as though Microsoft hadn't already been given every benefit of the doubt from the start. David Boies and his team proved in court that Microsoft practiced dangerous and malicious anticompetitive behavior, and the Justice Department under President Bush and John Ashcroft has suddenly forgotten that. Reagan bailed out IBM, and now Bush has bailed out Microsoft. Justice does not hinge on securing the best interests of corporate America at the expense of all else, and the administration and the DOJ in particular would do well to remember that.

Disappointed,

Subject: Insufficiency of Remedies in the Microsoft Settlement

I believe that the settlement that has been made in the Microsoft case is both an insufficient remedy of past wrongs and will be an abismal failure as an attempt to stem future wrong doings. The primary problem is that as a result of their anti-competitive business practiced, Microsoft now enjoys a strangle hold on the operating system web browser markets as well as the large and growing influence of their media player and other software. The settlement seems geared to setup rules for oversight over future business practices, but lacks any punitive portion for past acts, which must be included to dissuade Microsoft, and other corporate giants, from using similar methods in the future. More over, without reversing or negating some of these ill gotten gains, it is inevitable that Microsoft will only grow in prominence and control over the marketplace. This situation is bad for consumers and for innovation. I strongly urge you to review the comments of Ralph Nader, in his recent open letter on the subject, for a more detailed and insightful evaluation of the situation, and I hope that you will instead seek a stronger and more effective remedy in the Microsoft case than the current settlement.

Sincerely,
Nick Cumming

From: John F. Sowa
To: Microsoft ATR
Date: 11/16/01 11:23pm
Subject: Need for tougher penalties

I have been working in the computer field for nearly 40 years. I am retired now, but I am amazed at the complete absence of any serious penalties against Microsoft.

IBM and the DOJ signed much tougher consent decrees, which were in force for many years, even though IBM was never convicted of anything.

Microsoft has been found guilty of illegally extending their monopoly, and the conviction was unanimously upheld by the Court of Appeals. The "interim relief" levied by Judge Jackson was far tougher than the final remedy agreed to by the DOJ.

But the proposed settlement includes no penalties at all. The most it does is to compel Microsoft to obey the laws that they have been brazenly violating at every opportunity. I can understand that breaking up Microsoft might be difficult to carry out, but such a penalty was enforced against AT&T when it was a far large monopoly.

Recommendation:

1. Impose Judge Jackson's "interim remedies" immediately.
2. The DOJ should negotiate further penalties while the interim remedies are in force.
3. As a minimum penalty, Microsoft should be forced to pay the full legal costs of the DOJ and the states that have joined with the DOJ.

The DOJ is a lot bigger and a lot more powerful than Microsoft. They should take off the kid gloves and tell Microsoft that it is time to negotiate seriously.

Sincerely,

John F. Sowa

Subject: Poor Judgement

Dear DOJ,

I've been in the IT industry for 16 years, 10 as a consultant, 5 as an independent. For the past 5 years I have used almost entirely Microsoft tools and overall have used Microsoft software since I got into this business.

I'm about to shoot myself in the foot.

There's a chain of events that's been entirely whitewashed it seems. In the mid 1990's, Netscape was born and so was the first commercial web browser. In short order Microsoft created Internet Explorer, challenging a dominant Netscape product with a vastly inferior version 3 of IE. In a very short period of time though, Microsoft released not only IE 4, but it also released client/server development tools that worked strictly with IE 4. Microsoft had very strong relationships with Fortune 500 corporations that were already running Windows and so passing on these tools was a free ticket to stealing the browser market from Netscape or anyone else. With those built-in relationships and the strong-arm tactics used with both vendors and competitors, Microsoft used it's monopoly to literally wipe out a competitor in a matter of months. IE became the dominant web browser in less than 18 months from its first release. No other company on earth could have turned the tables so quickly on an industry.

They claim to build a better product and this is true. But if you have Fortune 500 America testing your software (pre-release was something Microsoft used to speed poorly tested software to market), it's a sure bet things will shape up quickly. Netscape had no such inroads into corporate America. All they had was a popular product that could be downloaded for free.

Anyway—the rest is history. Netscape browsers have about 5% of the market now and IE has about 90%. This game is over. So now we have Windows Media Player vs. Real Audio and QuickTime. It's almost ridiculous that the DOJ is ignoring this as another slam dunk. Using the same Fortune 500 foothold, Windows Media Player will, in less than 12 months, become the dominant media software. Real Media will likely go bankrupt (or get sucked into AOL) and have the DOJ to thank. We also have MS Messenger. This might be a battle for a little while because AOL has such a large share of the home market, but with XP now shipping with it built in, AOL users are going to flock to a more easily accessed ISP (MSN) and . . . another slam dunk.

What's next? This will continue to happen to any software that becomes vastly successful in the vertical markets that runs on Windows. If I create some cool new thing that runs on Windows and I refuse to sell out to Mr. Gates, they'll just build their own and squash me like a bug. How? Because they can tie it to Windows. Why would someone purchase and/or download any software if it's already built into Windows? Go figure.

Microsoft can go on, but in my mind the original Netscape shareholders from before the AOL bailout should get a billion dollars and so should Sun for the Java fiasco. For any competing product that gets tied to Windows, all competitors should receive a direct payment. So Real Audio and Apple (QuickTime) should receive a cut as well.

If you're going to allow Microsoft to tie secondary software to Windows, then you should force them to compensate their competitors or force them to allow OEM's to install whichever competing software they so choose. In fact, I would give the OEM's an

open license to modify Windows in any way they see fit as long as it doesn't effect security and reliability.

To do otherwise not only harms consumers, but likely will be seen as Microsoft having the government in their back pocket. You might as well give a seat at the table to Bill Gates.

Subject: Microsofts OEM Restrictions

To Whom it may concern,

I am part of a project to build a operation system called ReactOS that aims to be a 100% replacement for Microsoft Windows. I will 100% in support of this settlement only if two issues are addressed.

1. Our project is GPL/Open Source and not for profit. You must insure we have access to the needed API's/Code to be able to run Microsoft applications and drivers, even though we are non-for-profit.

2. Microsoft should not be allowed to restrict how the OEM's package our Operating System with a new computer. If a customer wants to run both Operating Systems, then Microsoft should not be able to limit the customers right to chose. This would be like me owning a Ford car and Ford telling me my right to use the car would be taken if I used GM parts.

Thanks for your time

Subject: What a joke of a "Settlement"

Microsoft is found by the courts to be a monopoly that abused it's power. Nothing in the settlement will prevent them from continuing this anti-competitive behavior. It is more full of loop holes than the now famous slap on the wrist "no bundle on top of DOS" settlement. The loophole on that one was Win95 did not have DOS in it. What a lie, you couldn't even get by such an obvious lie to close this loophole. Well you guys have out down yourselves on this settlement. This baby has even more loopholes.

When Netscape had 80% market share they forced Dell to not ship with Netscape. What is even more outrageous is they forced Dell to have the employees not use Netscape. When IBM had a better OS as in OS/2 they withheld Windows 95 licenses to punish them. They provided false testimony in court and doctored a video to show what they wanted instead of the truth. They have and continue to stifle true innovation. So what do you do about it REWARD THEM.

I sincerely hope the Judge and the States prevail and show how you sold out the whole high tech industry and all of the consumers you are forced to pay high prices for an inferior product.

MTC-00000791

From: Toby (038) Toni Meehan
 To: Microsoft ATR
 Date: 11/16/01 11:25pm
 Subject: settlement promotes Microsoft
 technology and products

I don't understand how this settlement will punish Microsoft (MS). It simply institutionalizes their existing monopoly by encouraging:

- developers to learn, use, and license MS technologies through "disclosure of middleware interfaces", "disclosure of server protocols", and "licensing of intellectual property"
- computer manufacturers to bundle MS products as the "ban on exclusive agreements", "ban on retaliation", and "uniform licensing terms" will drive down their costs related to MS product procurement
- competitors to avoid directly competing with the MS monopoly because every developer and computer manufacturer is promoting, selling, and supporting only MS products (particularly when they're less expensive and more pervasive than ever before thanks to this proposed settlement)

These punishments come too late to be effective now that Microsoft is a monopoly. Alternatives will not flourish through competition as consumers will receive MS products at lower prices, in more tailored offerings from computer manufacturers, and with more inexpensive applications to boot. If you want to punish MS, hit them where it hurts—the bottom line. Have them cover the cost of the court case and on-site enforcement (to serve the public good—taxpayers), plus some large annual sum of cash (\$50 million per year sounds good) for the next five years (to fund organizations in the public good, like academic computer science programs to improve the professionals MS competitors need, non-profit organizations like Debian to offer some immediate competition, and standard making bodies like the JETF, W3C, ICANN, and IEEE that can break the MS hold on defacto standards) with on-site enforcement of all the existing "punishments". If after 5 years, they still commit the same crimes as a monopoly,

the annual payments continue until the behavior stops.

With a serious financial punishment like this added to those proposed, MS prices will go up, allowing for more competition. That's how you create competition for a monopoly—with economics. It also gives MS a solid business case to change its behavior—one of the few things they seem to understand.

I hope I articulated this well as society, consumers, and government deserve better.

 Subject: Against Settlement

To whom it may concern,
 I am very much against the currently proposed settlement between the DOJ and Microsoft. There is nothing in the settlement that Microsoft can't get around when it comes to not disclosing information to the only competition that MS hasn't been able to beat down, the Open Source community. I used to develop software for the Microsoft platform. When installing service packs and other Microsoft products like MS Office started causing serious problems with other software packages from third party vendors (Borland and Netscape in particular) that I used, I began becoming less and less enthusiastic about using Microsoft. And I was one of the biggest promoters of the MS platform in our company before that. I got so fed up with Microsoft in 1998 that I reformatted my notebook computer and installed FreeBSD (a free UNIX-like operating system) and haven't used MS on that machine ever since. When I bought a new computer two years ago, the preinstalled version of MS Windows didn't last five minutes before being reformatted over. Between 1998 and 2000, I slowly got my work assignments changed over to where I could work in a platform independent environment (thanks to Java), and on January 5, 2000, I reformatted the last Microsoft partition that I was using.

However, because I do work as a software developer, it is important that I interoperate with Microsoft users. The settlement, as it stands, looks to allow Microsoft to completely exclude Open Source projects like SAMBA from interacting with Microsoft operating systems based on bogus "security" concerns or simply by disagreeing with the Open Source "business" model.

Take a look at this section:

J. No provision of this Final Judgment shall:

1. Require Microsoft to document, disclose or license to third parties:

(a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or

(b) any API, interface or other information related to any Microsoft product if lawfully

directed not to do so by a governmental agency of competent jurisdiction.

2. Prevent Microsoft from conditioning any license of any API, Documentation or Communications Protocol related to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third party intellectual property protection mechanisms of any Microsoft product to any person or entity on the requirement that the licensee:

(a) has no history of software counterfeiting or piracy or willful violation of intellectual property rights,

(b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product,

(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business,

(d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph.

I mentioned that SAMBA is important for other operating systems to communicate with Microsoft based systems. SAMBA is an open source project that primarily allows MS and non-MS operating systems to share files and printers on a network. Given J-1—a above, it would not be hard to imagine Microsoft claim and/or modify their communications protocols to contain some sort of "security" information, thus making those communication protocols except from disclosure. If Microsoft didn't have a record of underhanded tricks to exclude competition, then I could believe that this little loophole wouldn't make much of a difference, however, I've witnessed them break Netscape's TCP/IP (a communication protocol) with a version of MS Office which shouldn't have had anything to do with network communication (at that time), so I wouldn't put this past them.

Furthermore, J-2-b and c "protect" Microsoft from revealing any API documentation to anybody based on their "business need" and the "viability of its business." Open Source software is FREE! It has less to do with "business" and more to do with providing a solution to a problem. The Open Source community is essentially a group of volunteers who help one another get a job done. Even though its members tend to be distance geographically, it's more of a "community" than many small towns are these days. And Microsoft has stated time and again that this is their next target for enialiation, as they've killed off so many other branches of the software market in the past.

The above two and several other provisions (such as not guaranteeing non-reprisals from Microsoft against OEMs that do NOT ship computers with a MS operating system) of the current agreement do nothing to protect Open Source, which is more and more becoming the only hope to compete against Microsoft's monopoly.

The proposal, as it stands, is unacceptable. Thank you for your time and consideration in this matter.

Subject: microsoft anti-trust settlement

I want to state that i think Microsoft is a fine company. but there software is pushie. for instance, I subscribe to aol. but i just received a msn disc in the mail. it gave me 3 month free. I thought i would like to see what it was like. if i liked it, i might consider using msn for my net. once i installed it, it knocked out my connection to aol. i could not access aol. i think thats wrong, and besides they hurt themselves. once I saw I could not access aol, which i am paying for. I uninstalled msn without even trying it. I think they hurt themselves by being pushie. and I dont believe that it should be the only operating system available to the consumer. and concerning windowsxp I understand that you need to call microsoft for a access to reinstall the program. I think this is terrible, once a person buys the program it become the purchaser property and the person who owns it should have the right install it as many times as they want to, without having to call microsoft. I think thats real arrogance and dishonest. I might add I wont be a purchaser of xp. again I want to state that microsoft is a good company, but we are dealing with their faults and the ways to make it better for the consumer, and not microsoft. please do not lose sight of this.

Subject: Microsoft Settlement

To Whom This May Concern:
After reading the terms of the settlement that the DoJ and Micrsooft came to terms with, I can't help but feel disgusted by it. This does nothing to Microsoft to curb its anti-competitive practices. Nothing is done to punish Microsoft for its past behaviors. Time

and time again, Microsoft has stopped its competition from offering viable products. It has a near monopoly in Operating Systems, Internet Web Browsers, and Office Suite products. Whenever a company offers a product that could potential compete with Microsoft, Microsoft aggressively attacks the company until it is destroyed.

If a settlement must be made with Microsoft, then a different one has to be drafted. This current settlement is nothing more than a slap on the wrist. Believe me, 5 years from now, Microsoft will be as strong as ever if this settlement is implemented.

Please reconsider this settlement and impose stronger restrictions.

Subject: Comment on Proposed Agreement

I think the proposed settlement in the Microsoft case is a direct reward to Microsoft for breaking the law. As in many cases in common law, this case has its special considerations. However, the public is served when there is dynamic competition in all areas of industry. The settlement does little or nothing to restore the basic fair business practices needed to stimulate and sustain a robust technical development community in the United States.

Microsoft was found guilty of breaking the law to further its monopoly and crush any competition. Microsoft as a criminal enterprise is not being punished. Criminals do not change their behavior unless they are punished. Microsoft has gained great economic and political power by breaking the law and now appears to be using this economic and political power to escape any punishment for its crimes. Please reconsider this settlement. Please consider the economic and political power bargains that are implied by this settlement. Criminal enterprises should be punished, please consider adding appropriate punishments to the settlement.

From: Gregory J. Smith
To: Microsoft ATR
Date: 11/17/01 1:17am
Subject: Re: settlement

I'm quite displeased that my government has decided to let Microsoft off the hook when they have been declared a monopoly. The terms of this settlement does little to prevent Microsoft from continuing their monopolistic practices and does nothing to punish them from their past regressions. Microsoft has proved it's self a fierce competitor and will stop at nothing to own what ever market it wishes to own. It will try and try again destroying it's competitors or at the last resort buying them out. At work I use a MS operating system, MS Office, we have MS servers and I use a MS web browser. Forget about using an "alternative" web browser, my IT department forbids it because it would be incompatible. MS marketing at work!

Now they want to control my personal information with their .NET initiative. They say it's because that is what people want and they are just trying to give us what we want. The real reason is because MS wants to own a potential market and keep the rewards for themselves. They have shown that they have no interest in security or doing anything of interest to the user. They don't make changes until they are forced to and then they are often do a poor job or steal from other companies. I certainly do not trust Microsoft. From a Wired article: "Microsoft chairman Bill Gates on Thursday defended the settlement as tough but one that "we're really pleased to have." If Microsoft is glad to have it then it clearly does not go far enough. I

hope that the judge will reject this settlement as inadequate. I also hope for a Department of Justice that is interested in protecting the interests of American citizens rather than the interests of large corporations.

Subject: Comment on MS ruling

Monopolies are one of the market failures of capitalism. As such, it is one of the governments prime tasks to prevent them from forming and to dismantle them when they do materialize. The suppression and elimination of monopolies is the governments duty, regardless of the immediate economic implications. This has to be done for the long term benefit of our country. Failure to do this, is the government failing to do its job. Monopolies restrict people's freedom, and to sacrifice freedom for economic reasons is not only wrong, but against the principles of the people that created and gave their lives for this country.

Microsoft has been stifling innovation by sucking up companies that had been creating innovative technology, to bring them under the umbrella of a corporation whose main focus is to monopolize every segment of the software market, not on creating innovative and quality products. To those that truly understand technology, the inadequacies of their software is so obvious as to not even warrant debate. Only those that do not understand the technology, or that have remained ignorant, sheltered in a world where there is only Microsoft software, do not see the deficiencies in their products.

I am very upset with the settlement of this case as it shows that money and lawyers, and not citizens or principles, yield most power in this country. It is not the justice department's job to engage in economic prediction, nor base their actions on such things.

Subject: Comments about the antitrust settlement

Dear Sir or Madam,

I have been following the Microsoft case since the inception, and I am very disappointed at the outcome. Never before in the history of America has the court system granted a monopoly the ability to continue to illegally bundle products. Until Microsoft is banned from bundling software into the operating system, there will never be another real software innovation or application.

To make my point:

Microsoft bundled disk compression into the OS.—There has not been any further disk compression utilities.

Microsoft bundled the Internet Explorer into the OS.—It has caused all but the extinction of other internet browsers.

Microsoft bundled the Email and Usenet services into the OS.—It has caused all but the extinction of other internet mail programs.

Microsoft is currently bundling incompatible fire wall software into the OS—It will spell the demise of current personal firewall software such as Black Ice.

Microsoft is currently bundling media player(s) into the OS—It will spell the demise of current computer media players.

In short, look at all the independent software selection you now see on the store shelf. Some day they will all be bundled into Microsoft's OS.

The weak actions by the DOJ has caused the death knell for independent software designers because no one will spend time and money to develop innovative software just to have it stolen and integrated into Windows and then harrowed as the next big upgrade.

The General public's last chance for was to divorce the Windows OS from the bundled applications. The DOJ has now made that necessity impossible in the short term and has handed Microsoft the weapons to destroy all software innovation in the foreseeable future.

Date: 11/17/01 2:04am
Subject: Give me a choice—No more Microsoft Taxation!

My biggest complaint about MS comes when I need to purchase a new PC from a large computer vendor like Dell, Gateway, etc. Most of them have such an iron clad deal where MS requires them to ship all new computers with some form of windows or face losing bonuses and refunds. For instance I recently purchased a Dell laptop and I told them I didn't want an operating system on it (I was going to install linux on it, and I already own various versions of the windows operating system I don't use that if I wanted windows on my laptop I could have used). Anyway I argued with the salesperson about not wanting windows or the extra Microsoft software (MS works and expediamaps, etc . . .) to no avail. I was told that I couldn't get the computer without the software bundle. So I was stuck paying for extra garbage I didn't want. It would have been the same with many other vendors as well. So now I have yet another copy of windows I don't need but was forced to pay for.

Imagine if you will that you are allergic to anchovies, yet everywhere you went to get pizza they said that you had to have them whether you wanted them or not, and you had to pay extra for them. But you insisted you didn't want them to no avail and they explained that if they wanted to carry anchovies at all, for the people who do want them, that the anchovie foundation said they had to put them on every pizza or they wouldn't get paybacks for sending out every pizza with anchovies.

Or you buy a car and they force you to pay extra for air conditioning when you live in Alaska.

You buy a house and they force you to buy an expensive refrigerator with the house when you already have a brand new one you planned on using.

You go to wal-mart and buy a computer and the computers there have been modified to force you to use a certain internet provider when you've already pre-paid a year at another provider who won't give you a refund now. What if you were forced to flush 20 sheets of toilet paper down the toilet every time you flushed it even though you only pee'd? What a waste that is. I could go on forever with examples of nearly illegal

anecdotes like these but even though it may not be "illegal" the way MS does it now it certainly should be. I forces the consumers to pay for microsoft software whether they use it or not. I know of only 1 entity that can do this legally. The government, it's called tax. Who appointed MS a government entity? Answer: The government of the US did by allowing these types of things to go on for too long. Next time I have to pay the MS tax when I buy a new computer I'll be sure to write it off as tax exempt donation to a branch of the new US government.

Actually that poses me an Idea, if the govt can't control MS they should protect the people by offering a refund at tax time if we send in real microsoft licenses with our tax refunds.

I've got a collection that could bring me a good refund next year. There's no question Microsoft isn't stupid they ride the edge of the laws on this stuff for sure, it's time for new laws governing these kinds of practices. I don't mean rewrite the constitution to cripple business I mean write laws that put any company who owns more than 75% market share of any type that could be considered a necessity into the category of a utility provider. A utility provider that can be regulated by stricter laws than those who don't have a monopoly.

Telephone companies, power companies, etc... many of them are regulated in some way, in how they interact with citizens, however MS is allowed to go on running however they see fit. Another perfect example:

I run an internet provider in an area where the telephone company service is wretched, no matter how much I dislike them and their poor service I have to use them, but at least the govt regulations tell them they can't force me to pay \$80/mo for basic service which sucks, and tack on extra services on top of the \$80 when I don't want them, then on top of it, as much as I hate the service I'm forced to pay a re-installation fee every year of \$500 just because they decided to upgrade the lines in the area, which really wasn't an upgrade when you consider the rotten quality I was getting before. This "upgrade" is nothing more than fixing a couple of the problems that I shouldn't have been having in the first place. Ameritech can't get away with it, but Microsoft can.

Want to make sure MS can't keep hurting the public like this then you'll have to tell MS they can't make deals like that with computer manufacturers, but MS covered their ass well on this one. Actually you should be telling the computer manufacturers they aren't allowed to force sales like that on consumers, that they have to offer to sell machines without windows at a price reduction reflecting the manufacturers suggested retail price of the software. Oh but that won't work either, because they'd just hike the prices to cover buying MS software even if they had to throw it in the garbage to make sure they made their quota with MS to get the cash back. You're screwed, there's nothing you can do to protect the customers unless you stop that company and stop them good.

Microsoft has a strangle hold on the industry through the applications that

microsoft software runs, if there were alternatives that could run the applications produced for MS software there would then be choice for consumers in what they wanted to use, not what X computer manufacturer told them they had to buy. Force MS to open source and make free their API's so that other operating systems can be made to run applications and games written for microsoft windows. If linux, freebsd, BeOS, Mac OSX, Solaris, IRIX could run the same microsoft office and quickbooks pro you get off the shelf, why would anyone use windows at all? It's certainly not the better choice for any reason other than the software available for it, in many instances there are cheaper alternatives to windows that are more stable and even as friendly to use, not to mention secure but MS was allowed to grow to epic proportions and force software makers, computer makers and other companies to solely support MS and if they support anyone else they feel the wrath of losing big \$\$\$.

Like a MS fine.

Give choice back to the people. In many ways Microsoft has become the government of the computer industry, they have laws (sell windows with every pc, don't support our foes, etc.), they have fines if the makers break the laws by not giving them their cut of the collected taxes. And through the makers they impose taxes forcing you to pay them \$\$\$ for something you don't use. At least when I pay taxes I'm paying for a strong government to protect me (I think anyway). Fine them a million dollars every time there's a security exploit for windows, they'll be gone in a month.

Switch all the government PC's over to a free operating system like linux use the \$\$\$ saved on software licenses to contract out programmers to write software for the gov't that could also be used in the private sector then sell it. MS loses money, alternative operating systems gain needed applications and you make money in the end selling the software. Don't allow them to stray from the standards of HTML with their browser. If it's not part of w3c then they are breaking the law.

It's imperative that MS not be allowed to become the self appointed anything. Right now they are the self appointed government of the computer industry, if they aren't forced to follow existing standards on the internet they'll own that soon too.

Subject: Settlement is too weak.

I feel that the core issues at work in the antitrust trial have not been adequately

addressed in the settlement. Microsoft continues to leverage it's desktop monopoly into new markets (instant messengers, media players), and the settlement does not address these issues at all. As a consumer and IT professional, I feel that Microsoft's current and continued business practices have had and will continue to have a negative impact on my computing experience and the industry as a whole.

Respectfully,
Christopher Whipple

Subject: Microsoft Settlement

To whom it may concern,
I have great concern about the DOJ/ Microsoft settlement. I don't think the agreement will work.

What I see as the fatal flaw is the restrictions on the power of the Technical Committee, which insures they won't have enough power to do anything. All they will really end up doing is delaying the process of taking MS back to court when they try to maneuver around the rules. The finding of the Technical Committee can't be used in court against MS nor can they testify, which means that if they do find MS to be doing something wrong they will tell the US Dept of Justice. The DOJ will then have to go to court to get the authority to investigate MS to produce their own evidence of wrong doing, but only after MS has had a long period of time and ample notice to hide the evidence.

The bit about the TC not being able to speak publicly is also very damaging, because it keeps the members of the TC from saying anything if either side tries to avoid their responsibility. Right now, if the TC found that MS was violating the rules but the DOJ didn't want to investigate they couldn't take their complaints to the public. This makes it far to easy for both sides to just quietly sweep the whole thing under the rug.

Finally, the inability of the TC to take any action other than notifying the DOJ prevents them from having any real power to threaten MS into compliance. At the very least, the TC needs to have the power to petition the judge directly for a injunctions to block activities by MS until the DOJ decides on a course of action and the power to petition the judge to fine MS for resisting oversight.

As for the remedies themselves, there are so many loopholes that most, if not all of them, have no teeth to prevent MS from doing what they've been doing all along. And the remedy package is not enough to stimulate competition in this market (which needs it BADLY), even if enforceable with no loopholes, which this package is not). I can itemize each point if you like—just let me know.

The purpose of this email is to let you know that I strongly object to the settlement, with the main reason being that the TC has no power to do anything. This is the weakest part of the settlement. The DOJ already won

the case—why doesn't it insist on a strong remedy package and give the TC some real power to take action? The TC should be reporting directly to the courts, on a monthly basis on the status of compliance.

Subject: the settlement

The proposed settlement does not do enough to curb the practices of Microsoft. Of course the company is entitled to bundle whatever it wants in its software. However, the Internet and the digital revolution are something of a public utility, so Microsoft can be prevented from hampering the interoperability of competing products. We will all lose a great deal of future innovation if Microsoft is allowed to continue squashing every competitor. I still use Netscape for e-mail and Web surfing, despite the fact that Windows is designed to crash Netscape regularly. There are reports that in Windows XP it is difficult to replace the bundled defaults. It is this behavior that must be prevented. I realize that the economy is in a bad state, but we must not abandon our principles. Then again, I guess you haven't abandoned your principles: this settlement is a right wing Republican cave-in to a rich, arrogant company.

Subject: US v. Microsoft: Concerns of a Consumer

To Whom It May Concern,
I have been an active computer user since 1976. My computer experiences started with IBM mainframes (5/360 168) but have included every major microprocessor offering from Intel and Motorola. In that time, I have used most every major operating system created—including all of the products released by Microsoft.

As an interested consumer who has spent many dollars on Microsoft products, I have been intensely interested in the ongoing U.S. v. Microsoft case. As a consumer, I have felt compelled to use Microsoft products and upgrade according to their schedule. I used to be a very satisfied Netscape user. But I found that as I used Netscape, more and more services were bundled with features that required Internet Explorer. With each successive Microsoft Office purchase, I have felt compelled to upgrade or not stay compatible. With Windows XP, Microsoft has deployed a product that all but requires subscribing to Microsoft's service offerings (MSN Messenger, Passport). In short, I have felt that my choices have been severely constrained by the practices of Microsoft. My continuing hope is that whatever penalties or

settlement is imposed, Microsoft's core behavior can be modified. As a consumer, I want to have more choices not less. I want to know that my investment in Real Networks software (Real Player and Real Jukebox) won't be lost because Microsoft bundled a free version of multimedia tools. As a ZoneAlarm Pro user, I want to know that my investment won't be stranded because Microsoft bundles a free product in the operating system. My larger concerns are that once Microsoft eliminates competition (in music, video, security, etc) that I won't be forced to buy products from the only remaining vendor—Microsoft. Worse still, I don't want Microsoft to eliminate its competition and then I cannot use alternative computing platforms (e.g., Linux) simply because the only existing tools are for Windows platforms.

Finally, I hate to think of a computing industry that does not have innovation. For years, computers have been the means of transforming our lives and increasing our productivity. While Microsoft maintains monopoly control on the industry, innovation will be stifled. There is no incentive for the monopolist to innovate. Rather, there is every incentive to make only marginal changes—thus protecting the revenue stream. This means that truly new ideas won't come from Microsoft. This is certainly the case over the past few years. But when real innovation is introduced, Microsoft has been swift to embrace these things and eliminate the innovators (by unfair competition or by acquisition). In short, unless Microsoft's behavior is changed, I fear that consumers will not see any real innovation. All you have to do to see that this trend is look at the differences between Windows 95 and Windows XP.

Apart from some minor cosmetic changes, the interface is nearly identical. After seven years, where are the innovations? Where is the voice control? Where are the effective "equal access" tools? As a citizen, a consumer, and a computer professional, I hope that the Department of Justice works to ensure real competition. Do not sacrifice true competition because of some vain hope that Microsoft will spare the economy after 9–11. It won't. In fact, real competition is the only thing that will completely revitalize the technology sector.

Sincerely,
Lorin Olsen

Subject: This settlement is not in the best interests of consumers and business.

It is in my belief that this settlement is mostly being proposed at this time so that Microsoft will be "free" to bring the market back to its once-prosperous state, and allow the economy to revive. While these goals are virtuous and lofty, the fact of the matter is that Microsoft's short-term profitability will not allow the economy to recover in the long term.

As Stanley Sporkin put it during his denial of the original settlement terms put forth in 1995, "simply telling a defendant to go forth and sin no more does little or nothing to address the unfair advantage it has already gained." The settlement proposed right now amounts to little more than saying "Stop, or I'll say 'Stop!' again!" I agree that dividing Microsoft into parts is not the answer—Little exists to ensure that those severed companies wouldn't simply cooperate fully with each other in "strategic partnerships".

A better remedy would be to have a codebase oversight group composed of industry-familiar persons who would be able to point out deficiencies in Microsoft's products that harm consumers' right to choose. For instance, Windows XP is being hotly contested in many foreign nations due to its overwhelming power over the user. Microsoft's "concessions" in this manner are to allow a small measure of competitive advertising, as long as Microsoft's own services and products also remain advertised with the same capacity. To restate the thinking of many Unix users, "The operating system runs the computer. It's not the operating system's job to play movies or record MP3s or write a letter. That task is left up to applications, applications that should be optional for users to pick and choose between publishers, or none at all if the user doesn't need that functionality."

I use Windows XP because I find it to have many new features to the actual Operating System that are very beneficial to users. However, there are also many bundling practices with Windows XP that, if I were a novice user, would impose an unnatural selection choice on me to use a Microsoft product, simply because it's convenient. Many (Over 50%) home PC owners still don't have internet broadband service, so picking a competing web browser over Internet Explorer is a rather difficult task. First off, the user has to know that it exists, and many don't. Secondly, at its current download size, it takes well over two hours to download. Most users would balk at being online for that long, and simply bail out at this point. Microsoft has used this as a leverage point for some time to prevent users from working with Netscape. Most online users I know that use Netscape do so because it was provided by their Internet Service Provider. When (And they have before) Microsoft proposes licensing restrictions for ISP software including Internet Explorer, they general give

ISPs only two choices. Provide only Internet Explorer, or pay us money to allow you to carry IF without our license restriction.

Microsoft has just recently entered the video game console market. As a longtime consumer of this market, it scares me terribly, because I know that the same predatory practices Microsoft has long employed in the PC realm will also (and have already) be used here. It's no secret that exclusive titles help to strengthen a console's marketability, but Microsoft is entering this market with significantly higher resources than Nintendo and Sony have at their disposal. Sony may be an electronics giant, but they don't have the cash to bet the farm on the success of the PlayStation2, especially in the economy's state as it is. Microsoft's tactics include offering developers free licensing and benefits for developing titles exclusively for their system, the Xbox. While this is normally harmless, the fact is that Microsoft has significantly more power to do this than Nintendo and Sony, both longtime legitimate competitors in this arena. Microsoft can (and does, and will continue to) simply offer developers the only financially viable option—Develop for us for free, or take your chances elsewhere. Effectively, they'll stifle off the ability of developers to publish titles on other systems simply because of the fact that their short-term economic viability is ensured by Microsoft's marketing dominance. Microsoft will win not because it has superior hardware or superior marketing or superior title offerings—it will win because it had more money to play with. The situation here is tantamount to an Olympian athlete who has long been using anabolic stimulants to repeatedly artificially win competitions—He then suddenly decides that he wants to compete in other races, such as the decathlon and the long jump, because "it's his right to compete", even though he has already demonstrated a clear unfair advantage.

Microsoft makes some decent software, assuredly. But the fact of the matter is that its development staff is hindered by a cycle of marketers and lawyers gone mad, who can't stop the cash flow lest it leave them dry. Microsoft doesn't need to branch out into other markets to assure its long-term financial viability. It's already ensured this by crushing all the competition in the markets it already exists in. And the bureaucratic dawdling in this matter has only allowed Microsoft to continue to stifle competitors even more. Microsoft may say that its competitors just don't have things together, and that their failures are their own faults, but the fact is that repeatedly Microsoft has put forth barriers to entry, and any perceived "difficulties" are generally due to Microsoft's own efforts. They have a long history of ballot-stuffing, false advertising, and outright lying (Bill Gates himself said in a CNN interview three nights ago that the Nintendo GameCube, one of the Xbox's competing systems, was \$299 in price. It's actually \$199, which is one of its primary selling points). Quietly issuing retractions and apologies does little for the consumer market when the damage has already been done.

Nothing exists in this settlement which will result in the "most effective and certain

relief in the most timely manner.' It doesn't even amount to a slap on the wrist because nobody's slapping anyone. Microsoft can not and WILL NOT be stopped by the measures in this anti-trust settlement. In reality, the most effective measure of the settlement with Microsoft has already been done—Microsoft has had to devote its lawyers and part of its fund to fighting this court battle that would have normally been used to take down even more competitors. Those who support it by claiming that it puts an end to "government waste" will be poorly served because if the settlement will have effectively become a waste of 6+ years of time and bureaucracy and money put forth to settle this. Don't make this whole case a waste. Come up with some better restrictions on Microsoft that will ensure its own viability along with its competitors.

Subject: Microsoft Settlement

The settlement is deplorable. Microsoft has continued to raise prices as it has become more dominant and has become ever more bold in raising the barriers to market. As both a citizen and a software developer I am appalled by this slap on the wrist" solution. As a participant in the economy I agree now is NOT the time to split up the company, but a continuance until the economy recovers followed by a sharp and deep cutting penalty (such as splitting up the company) is called for.

Microsoft is not a technology innovator, they are a large trust with deep pockets that buys up or tramples via often illegal agreements such as:

1. "group boycotting" (with ISVs and VARs),
2. Tie-in agreements masked under the guise of new features. If I agree to sell you my house and I'll throw in the house next door and the price has mysteriously doubled from when the house was sold alone, does that qualify as a new property feature?).
3. Allocation of Customers or Markets. (attempts to reach agreements to this effect with Netscape, and Apple)

Regardless of the political positions of the party in power, the LAW should be enforced. This agreement laughs in the face of the rule of law and the DOT should be ashamed of itself.

Subject: Microsoft Antitrust Settlement
Comments

Dear Sirs:
I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices which they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

From: Brian Kendig
To: Microsoft ATR
Date: 11/17/01 11:46am
Subject: Comments from a former Netscape employee

Dear Department of Justice:
I worked for Netscape for almost five years, from early 1995 until late 1999. I rode the roller-coaster through all of its ups and downs, from the time when we could do no wrong to the time when we could do no right. I've been in the industry for much longer than that. I saw Netscape's end coming. Everything Microsoft did to us, they've done before and they're done since.

I appreciate the opportunity to offer a few thoughts.

(1) Microsoft claimed all along that the web browser was a useful application which deserved to be tied to Windows. The crucial question they never answered was: what about Microsoft Word? Everybody uses a word processor; why didn't Microsoft add Word's powerful features into Windows, to benefit consumers in the same way they did by adding Explorer's powerful features to Windows? The answer is that Word had no serious competition, so Microsoft was content to sell it separately and to offer a stripped-down word processor ("WordPad") bundled with Windows. I've believed all along that a great solution to the tying issue would have been for Microsoft to include a stripped-down basic web browser with Windows, and to sell the full-featured Internet Explorer separately. This would let customers surf the web without buying anything extra, but if they wanted additional features, plenty of competition in the market would give them lots of choices of more-powerful web browsers.

(2) Microsoft defeated Netscape simply because they had the cash, the resources, and the time to copy every one of our most important products feature-for-feature, and give it away for free. They rarely got things right on the first try, but by bundling browsers and servers in with Windows and by releasing subsequent versions with more features, it was inevitable that they would eventually match our quality—and then it was inevitable that customers would choose the free solution over ours. Many of our customers still remained loyal, and purchased Netscape software rather using Microsoft's give-aways, but still, we were doomed from the very start. (Not only did Microsoft's freebies wound us deeply, but our grave was dug when they even went a step further and bullied our major accounts to stop using our software.)

Many people have complained that Netscape's software became unpopular because it was bug-ridden and couldn't keep pace with the features Microsoft was adding to their software. My response to this is: YOU try fixing bugs and adding features and keeping pace with a company which has a near-infinite cash supply, all while your own revenues are slipping away!

We did the research and development. Microsoft saw what worked, copied it, and gave it away. How could we possibly survive? More importantly, what does this say about the Next Big Thing, whatever that may be? What incentive does a person have to turn his great idea into a company, when he knows that Microsoft can simply steal his idea and undersell him once he proves that his idea is a success? The only options available these days are to follow the open source movement or ally with Microsoft; there is no longer any room for anything else.

(3) Microsoft has a long history of abusing their power, and they've been taken to court for it many times in many different countries. They've learned, however, that if they can get a court case to drag on for years, any ruling will become irrelevant because the competition it was supposed to benefit has long since died off. And not only are they

skilled at dragging the proceedings through molasses—but they also thumb their nose at the government while doing it; were they ever reprimanded for introducing a falsified videotape into evidence two years or so ago?

Any ruling against Microsoft must be strong and unyielding. So far their punishment for shrugging penalties aside has been another court case which has dragged on for another few years, and they'll only ignore the outcome of this one too.

This must stop now.

Subject: Microsoft Settlement
To Whom It May Concern,

I have owned and operated a small computer technical support business in a small community in the California Sierra foothills for the past three years. Before that I worked for ten years at a mid-sized corporation as a computer system administrator, and I have been employed in the computer business since 1985. All of my clients use versions of Windows, including Windows9x/ME/2000/XP, and I have been at Ground Zero during the two lawsuits of note involving the Justice Department and the Microsoft Corporation.

While the finding of the Justice Department that Microsoft had violated U.S. anti-trust law was heartening—since my experience has been conclusive that this is exactly what they did—the recent settlement is totally unacceptable. This is not a remedy, it is an appeasement of such depth and breadth that I have to wonder what sort of corruption is at its root. It fundamentally does not address the main problem with the Microsoft monopoly, which in the finding is described as "the application barrier to entry." In other words, Microsoft is still free to load its operating systems with all sorts of marketing garbage that freeze out competitor's products that are often superior, in that they are free of the bugs that often plague Microsoft initial offerings that have been designed to capture a particular market.

A perfect example of this is what happened with Internet Explorer. The first versions were an embarrassment to good programming, but because the browser was given away and automatically loaded onto the desktop with the delivery of Window98, Netscape never had a chance. Rockefeller would have been proud. The problem with this is that, with all monopolies, my clients were financially harmed by this chicanery. They did not have a choice in the browser market, and as Internet Explorer was forced down their throats in order for them to do business, they suffered financial losses due to the consequent loss in productivity.

Now we are headed down this same dismal road once again. With the release of WindowsXP, you had a unique opportunity to address the application barrier to entry by preventing Microsoft from taking advantage of its monopoly in the operating system market to capture the digital media, development, and internet application markets, just as it did with the browser market. But you failed to protect consumers and businesses alike by reaching a settlement with Microsoft that does nothing to address its proposed monopoly in these emerging markets.

I do not know how you sleep at night after having reached this tainted agreement; though I have a feeling that a corrupt Republican administration with pillows stuffed with soft money, you most likely sleep very, very soundly. Just so you know, out here in the hinterlands we are not sleeping so well. Our dreams are, instead, nightmares, as we twist and spin trying to figure out how we are ever going to root out the criminal corruption that creates the

stench so prevalent in Washington DC at this time in history. I will remind you that small businesses are the ones who will be hurt by your decision, and they are by far the largest percentage of employers in this country.

I beg of you, please reconsider your decision. Our economic future, the health of our families and our communities, absolutely depends on a Justice Department that is free of criminal behavior.

Most Respectfully Yours,
Michael P. Anderson

Subject: Microsoft Settlement

I agree with many who believe the proposed settlement doesn't address the crimes that the defendant has committed and will not discourage more of the same in the future.

The behavior of Microsoft has hurt, rather than helped, the computer industry. The loss of a truly competitive marketplace will continue to impede progress. This environment now threatens to be exported to more markets as Microsoft positions itself as the intermediary of all online transactions. Now I read that Microsoft is offering to payoff the remaining states to join the settlement by offering to pay their legal fees. This is further proof to me that the DOJ has acquiesced to this corporation and is not upholding the law.

Subject: Microsoft Settlement

Hello,
Some comments regarding the proposed settlement. According to an article at USAToday.com, The Justice Department also considered trying to force Microsoft to sell a stripped-down version of Windows that did not include built-in software for browsing the Internet, reading e-mail, listening to music or sending instant-messages.t9

I believe that you should have pursued this approach for several reasons. I use both the Windows and Apple Macintosh Operating Systems on a regular basis. Both of these products offer bundled software, which I would agree benefits the consumer. It is the way in which Microsoft leverages the bundled software that highlights Microsoft's abusive behavior.

The following outlines some of the key differences in the way software is bundled by these two leading operating system providers: Internet Explorer (Microsoft product available on Both MacOS and Windows) On a macintosh, if a web site address is entered into Internet Explorer incompletely (e.g. news vs. www.news.com) the browser assumes and correctly takes the user to the requested site (e.g. www.news.com). On Windows, incomplete web address entries take you to a Microsoft-branded search site.

Conclusion: The bundled web browser on Windows gives Microsoft an unfair advantage on promoting it's web properties. Software Update Features On the Macintosh, there is a program called "Software Update" that logs onto an Apple Computer FTP server and provides the user with a list of updated system software. The user selects the updates and the "Software Update" program downloads and installs the new software accordingly. Windows offers the same feature called "Windows Update." "Windows Update" REQUIRES that a user connect with Internet Explorer to update their system software. Instead of a separate program, like Apple Computer offers for the same software update ability, Microsoft requires the use of Internet Explorer to perform these actions. Conclusion: On the Macintosh, If I remove Internet Explorer and decide?

2. Mandate that Microsoft discontinue the practice of tying non-related features together to essentially require that their products be installed even if a user chooses a competitive product. The second remedy would be

difficult to oversee and enforce, making the first remedy a seemingly preferred approach. Sincerely,
John

Date: 11/17/01 1:04pm
Subject: Comments on the MS/DOJ Settlement of a Concerned Consumer
Dear Sir or Madam,

The proposed settlement between Microsoft and the Department of Justice fails to remedy the state of events which originally brought Microsoft to the attention of the Department of Justice, namely, that it had engaged in anti-competitive and predatory practices designed to protect its existing monopoly of the OS market, and to give it monopoly power over the web-browser market.

Microsoft holds a monopoly on the worldwide operating system market; that is, Microsoft's Windows operating system is the most common in the world, being installed on over 90% of computers based on Intel's x86 processor architecture. This fact, combined with the enormous number of people in the workforce who are untrained on any operating system but Windows, gives Microsoft extraordinary powers to direct the development of new applications, and by extension the day-to-day usage patterns (behaviors) of the owners of the computers. Currently, no operating system poses a significant threat to the dominance of Windows, largely because the majority of applications developed for Windows and used by most businesses and individuals cannot be used under other operating systems.

The provisions in the settlement regarding interoperation, sections III.d, III.e, and III.j, completely fail to remedy this. Under this judgement, Microsoft would continue to be allowed to use proprietary protocols, APIs, and file formats to maintain and even extend its dominance not just of the operating system market, but also of the associated markets relevant to business software. If the Department of Justice is truly interested in restoring competition to the operating system market, the Final Judgement of this case should require Microsoft to cease using proprietary protocols, APIs, and file formats; specifically, Microsoft should be required to publish full specifications for all of their previously closed file formats, such as (but not limited to) the .doc, .xls, and .ppt formats used by Microsoft Office, for the Application Programming Interfaces used to create Windows-based applications, such as (but not limited to) the DirectX API for three-dimensional graphics rendering, and for communication protocols intended for use in transmitting information across networks. Sufficient information should be published for competitors to be able to create their own implementations of Microsoft protocols, APIs and file formats so that software originally written for Windows would run in competing operating systems, such as Mac OS or Linux. This information should be made available royalty-free, and should include not only existing, but any future protocols, APIs, and file formats Microsoft might create.

Not only is the proposed settlement too lax in regard to its punitive measures, it is also too lax in regard to enforcement. If Microsoft fails to adhere to the terms of the agreement, the agreement gets extended. In essence, the proposed settlement grants Microsoft government approval to continue business as usual, despite the negative effects on competition and (more importantly) on the ability of consumers to use non-Microsoft products.

I strongly disfavor the proposed settlement, and ask that it be reconsidered by the court.

Subject: Microsoft settlement

I started programming before DOS and Windows came. Microsoft is bad, their product is bad. This is not really meaningful, they are not alone. A lot of company are doing their work bad and they won't last long.

Microsoft is a special case. They do bad (dangerous) software, but because they have the monopoly power, they are in position to force nearly everybody to use or at least to adapt to their way. Let just imagine what's the next step in Microsoft strategy: where do they have more territory to conquer? INTERNET. They started the Internet war with Explorer. The next step will be to twist protocols, to make them proprietary.

YOU HAVE TO STOP THEM.

How do you believe Microsoft will be fair after 20 years of illegal practices. They don't know themselves how to behave fairly. I think the current settlement is bad. As you admit this settlement, you admit that everything is an OS, you admit that Internet is only an extension of Windows and finally that any other operating systems will be part of Window (at least ostage). This is a manner of enforcing their position.

You have to broke them. That's the right remedy, because Microsoft-application will need to work not only with Microsoft-OS but with other OS too and that's good for people. Microsoft-OS will have to support different platform if they do not want to die, will have to publish their API because nobody will use their soft if they do not.

I really think the only right remedy, the one that can help people and firms is to BROKE Microsoft at least in 3 parts:

—Microsoft OS
—Microsoft Application
—Microsoft Network

Doing this you really will break the monopoly.

PS: sorry for my english, I'm not an american citizen. Courage, fuyons...

Subject: Settlement agreement

I am writing to protest the blank check being given to Microsoft to continue to dominate the software industry. Legal gimmickry has been the main source of Microsoft's wealth, not the production of excellent software. Open sourcing should be the ultimate goal, not the continued and ever expanding restrictiveness forced by Microsoft. Microsoft's "licenses" should be illegal. On what basis does Microsoft demand that once one buys a copy of Windows 2000 or XP, one must not install it on any more than one machine. This kind of tyranny is similar to that of the Taliban.

Once one pays one exorbitant price to Microsoft to buy an operating system disc, one should have the right to install it on as many machines as one wishes. That is the case with Linux. Intellectual property should not extend to the relationship between a software disc and a given machine, as there is no basis for this connection.

Concernedly,
Mark Seifert MD

To whom it may concern,

The purpose of this letter is to comment on the MS/DOJ settlement. I doubt that anyone will read this letter, but I feel obligated to write it regardless. It saddens me that we live in a government that can't handle a single corporation, where a company can so blatantly get away with criminal activities under the guise of "innovation". How can one have faith in a government to fight wars and protect us if they can't even deal with a single corporation? What Microsoft has done over the past 20 years is criminal, there's not even any reason to elaborate past that point, it's just given. At this point it's all politics who they can dig dirt up on and who they can pay off. It won't be too surprising if before long they start claiming that people who use free software are "terrorists." That seems to be the easiest thing to throw at the public to garner support. So, anyway, thanks for not reading this.

Disgustedly, Me.

Subject: Unhappy

Justice Department,

Thank you for allowing the citizenry to leave comments about MS/DoJ settlement. Officially I would like my comment to be 'very unhappy with the decision/settlement'.

I could spend my moment here by talking about economics, innovation, financial responsibilities or even social costs; however, I will skip that in favor of one thing: the future of our country. Read the polls, the studies, talk with your peers and you will find a decreasing hopefulness in the future felt by the bulk of the citizenry. I believe I know enough finance and politics to realize most of how and why government policy is

shaped. But remember our attitudes of all life's aspects over the last 30+ years. You don't need to read the statistics, ask yourself. I believe you will find this 'decreased hopefulness' also. That is, unless you are not in the majority.

If you believe this declining state, then you should be wary how you support any given current government agenda. Making decisions based on desired results in a given 2 or 4 year period can be at odds with an increasingly hopeful, promising future for the bulk citizenry. The better, long term solution should be chosen, yes? What is better, how is that measured? Measured so many ways, I suggest looking at this one: The one which promises the greatest long-term net social benefit. This should be calculated by the entity which benefits individually the least over all outcomes.

Corporations are made to last more than a lifetime. So is our government. Both types need decisions which will ensure continued success (success is defined differently for each). Individually we need to pay bills, be employed; but we have the chance to help ensure this is the greatest country in the world. I realize this may be difficult, but do you really want to continue making decisions which choose a few over the many? This is why I am "unhappy with the decision/settlement". Once again, thank you for listening, we are all supposed to be the government. By the people, for the people.

Subject: the settlement

I am disappointed in the Microsoft DOJ settlement. Regardless of the rule of law, Microsoft remains a monopoly. Capitalism, wonderful as it is, fails without competition. The best product for the best price will never be produced by a monopoly; it's not in their best interest. In the current marketplace, the only competition left is from the free software arena. Microsoft, in a roundabout way, acknowledges this though their constant nagging against free software.

The US thrives on information technology. Having a monopoly in this vital area is shortsighted and detrimental to the future of this country.

Opinion

I am told this is the forum for sending in public opinion for the proposed settlement.

I am a computer professional, familiar with MS Windows (3.1, 95, 98, Me, NT, 2000, and XP) as well as with Linux from various distributions (RedHat, Slackware, etc.) and Sun Solaris operating systems. I have been working professionally in the field for 16 years and hold undergraduate and graduate degrees in computer science. My feeling from reading the press reports on the settlement is that Microsoft having been found guilty of monopolistic practices is being penalized by having to donate software to schools. This doesn't make sense. If the penalty's purpose is to prevent them from practicing as a monopoly in the future, I don't see how that would do it. I think the only penalty that should matter should be financial. The real question should be—how much, and who is the beneficiary? I think education is an excellent choice for the recipient. As for how much, I can't say. However, it should be based upon the assets and income of the corporation. I would think that something on the order of half of the corporate assets would not be overly punishing given the impact they have had on the marketplace in the personal computer business.

Sincerely,
Bruce Friedman

From: Donald, Teresa, (038) Abby Fleming
To: Microsoft ATR
Date: 11/17/01 11:04pm
Subject: Please level the playing field

Dear Department of Justice,
It is my personal opinion that the news reports of the proposed settlement with Microsoft do not do enough to encourage free trade. My reasons are as follows:

1. Promotes exclusive deals using a secure facility implies exclusive. The news report says that the details of programming code would be available at a secure facility. Let's say that I as an individual would like to write an application. The availability of a secure facility is of little value to me unless I can afford to go there. To be of value to me across the nation then more information needs to be available on a national basis. It is only through nationally available information can a future generation of rising programming students have to information necessary to create a new wave of software companies. Free trade is promoted through competition.

2. Restricts free trade through bundling
The proposed deal allows Microsoft to use its dominant position in home computer operating systems to finance its venture into software applications. This bundling of software applications restricts free trade.

On the surface Microsoft appears to avoid the charge of bundling software since it does not separately sell the bundled software. At best I consider this a legal loophole. I consider Microsoft to be breaking the intent of the law. The intent of the law is to promote free trade. Microsoft is using its dominant position in desktop operating systems to sell bundled software. In other words I would estimate that a significant portion of the cost of the upgrade of the operating system from Windows 98 SE to Windows Me is not the cost to improve the operating system but the costs associated with the applications such as media player that are bundled with the operating system. Windows Me is recognized by many as being inferior to Windows 98 SE. It is because of this inferiority that many computer distributors such as Dell offer the customer the choice of which operating system to install on new computers. But that is beside the point. The point is that what Microsoft is really selling is not a product to recover the cost to upgrade the operating system but is really selling bundled software such as media player to cover the cost to add this bundled software to the product offering.

The potential profit margins on Microsoft products are tremendous. A blank compact disk can be purchased for less than a dollar. A pre-recorded compact disk with commercial artwork on the packaging and on the disk can be purchased for under five dollars. The Microsoft operating system on a compact disk cannot be purchased for under one hundred dollars. It is this large potential profit margin that leads to organized crime and software pirating. The Linux operating system can be downloaded over the Internet for no cost or purchased for less than fifty dollars. A retail box version of Linux usually comes with technical support to resolve installation problems. A Microsoft operating system when purchased with a new computer does not include any Microsoft installation support.

The bundling of a software application with the operating system accomplishes three purposes for Microsoft. (1) it adds value to the operating system which is intended to stir demand for upgrades (2) the major cost for an upgrade is not always the cost of updating the operating system portion of the upgrade but the added or bundled software; the cost for the bundled software is recovered in the operating system price, and (3) takes software revenue away from its competitors. Microsoft is using its dominant position in desktop operating systems to take software markets away from its competitors. This injures free trade. This can best be remedied by dividing the operating system and hardware (joysticks, mouse, keyboards, and xbox) portion of the Microsoft business from all other portions of Microsoft. Windows XP combines the technology available in Windows 2000 with the technology available in Windows Me. Page 33 of the October 16 edition of PC magazine described some of the

new features available in Windows XP. The features are described as follows:

Tightly integrated features formerly available only from other software makers abound. Microsoft has built some of the features from scratch and used third parties (with which it will now compete) for others. At the top of the list are Windows Messenger instant-messaging software (targeted directly at AOL's turf) and an improved Windows Media Player (taking on Real Networks' Real Player). Windows XP includes an Internet firewall, a Web cookie controller (watch out, Norton!), CD creation software (sorry, Roxio!), PPPoE support for use with ADSL connections (ante up, Wind River), and a file- and settings- transfer wizard (a la AlohaBob) to ease the transition between PCs...? The above paragraph includes the competitors AOL, Real Networks, Norton, Roxio, and WindRiver. Many of these companies are publicly traded. If Microsoft can gain an unfair trade advantage over publicly traded companies such as these then some future college students who wants to be given the same opportunity as Bill Gates had will not have a chance. This discourages free trade.

3. Restricts free trade through dominant position
Microsoft has a dominant position for desktop computer operating systems. It is using this position to restrict the ability for competitors to create competing applications that run on the operating system. It does this by not sharing application development information. This injures free trade. Twenty years ago it was very popular for a computer manufacturer to create and maintain an operating system that will run on the latest computer being sold. Many manufacturers supported Unix since over 90% of the code is in the public domain and the remaining 10% is the device drivers to support the hardware. The Unix operating system is written in the ?C? programming language. Microsoft operating systems are written in either the ?C? programming language or the object oriented version of the ?C? programming language called ?C++?. Computers are not sold because they are pretty but because they provide value in productivity (workplace software) or entertainment (games, movies). In this environment a computer manufacturer would want as many applications as possible to run on their operating system. They would provide documentation on operating system calls with every computer sold. Information needed to create an application was not referenced as company secrets.

Microsoft has established the Microsoft logo program as a way to test software applications to ensure that they are taking advantage of new operating system features and avoiding problems that were present in the older operating systems. Programs that pass the tests are eligible to have the Microsoft logo artwork added to the retail box packaging. Microsoft sells programming languages that run on their operating system. Last year I purchased ?Visual Basic 6.0 Deluxe Learning Edition?. It came with a compact disk and two manuals. Neither manual included the information needed to be able to write a program to install a software application. It contained a package and deployment wizard that included some

source code that could be customized and some object code without the source code. Neither the manuals nor the source code provided the information necessary to meet Microsoft's logo program. I have been researching the Microsoft web site and other sources of information for information on how to write an installation program for a software application that will only display a help file. I want this software application to be compliant with the logo program. I also want this program to make registry calls using Unicode and support operating systems such as NT/2000/XP. What I have found is that two different third party books recommend the purchase of an installation program from another third party.

By not making application creation information available Microsoft is discouraging free trade.

4. Restricts free trade through dominant position
Historically many market leaders do not like standards. Microsoft appears to be no exception. Many market observers discussed how that JAVA became popular for its ability to work across many different computer operating systems. A subset of JAVA was called JavaScript and is supported by the Netscape web browser.

The Linux operating system does not require a web browser. A Netscape web browser is available for the Linux operating system. Microsoft claims that their web browser is an integral part of the operating system. My personal observation is that Microsoft calls many software applications part of the operating system for the reasons outlined earlier.

Microsoft also sells and supports programming languages. They used their expertise in programming languages to give Internet Explorer version 5.0 the ability to do things that cannot be done by JavaScript. By including the price to develop this software in the cost of the operating system gave Microsoft an unfair trade advantage. They were able to supply this product for "free" as a feature of the operating system rather than charging a price for each copy as was once done by their competitors.

Much of the Internet's wide acceptance has been established by industry standards. Microsoft used its dominant position in operating systems to distribute its web browser. Once it has a dominant position in the web browser marketplace it developed and implemented its own version of new Internet standards. The dynamic HTML available in Microsoft Internet Explorer is not compatible with Netscape. The result of this incompatibility is that some web sites could not afford to continue doing web software development for both browsers. They chose to go with the dominant player Microsoft. This bully tactic by Microsoft is an injury to free trade.

The Windows XP operating system includes Internet Explorer 6.0. This web browser is available for download for use on earlier operating systems. It supports an Internet draft standard for handling privacy issues associated with web cookies. The release of a product that supports a draft standard by a company with a dominant share of the market is acting like a bully. A bully should be treated as a bully. The

Microsoft .NET initiative is intended to radically change the way that web development is done. Microsoft is using their programming experience to offer programming language support to web servers. The new programming language is called "C#". This is intended to create a dramatic impact to web servers as these programming languages can replace scripts written in Microsoft's ASP languages or competing script languages such as PERL.

The cost of development of the .NET initiative has to be carried by Microsoft major sources of revenue. These are the operating system and Microsoft Office. Microsoft is again using its dominant position in operating systems to grow into other software markets. This injures free trade. It provides an unfair trade advantage. The Windows operating system is written in the programming languages "C" and "C++". The Linux operating system is also written in "C". The new programming language "C#" is not intended for use in operating system development or enhancements.

5. Pricing discrepancies

One report claims that 80% of the motherboards made for personal computers are made in Taiwan. Some of the cards that plug into motherboards are made in China. Many electronic assemblies are made overseas where labor rates are less expensive. The home desktop or tower computer is no longer solely an American product. The technology no longer exists solely in America. Personal computers is an international market. Many computer dealers assemble components and preload the operating system onto the hard drive. The hardware drivers are not written by the computer dealers but by the companies that made the computer components. This applies to the drivers for video cards, printers, modem cards, sound cards, and compact disks. Industry standard drivers are usually available for the disk controllers and compact disks. Microsoft offers the same product for two prices. I consider this to be illegal. The operating system is sold for one price when preloaded and another price in a retail box. One magazine ad has the Windows XP Home Edition Full OEM version for \$104. Another ad lists the retail box edition of the same software for \$299.99. Many software games are sold in Walmart in retail boxes for \$30.00. Therefore the cost of manufacturing and distribution of the retail box should be reasonably less than \$30.00.

The intention by Microsoft is that the computer dealer that loads the software would become responsible for any installation support regarding the operating system. This may be true for some computer dealers. It is not true for all computer dealers. Some computer dealers sell computers with no technical support. They require a customer to directly contact the manufacturer of the hardware component for operating system device driver support or installation support. The Microsoft agreement with a computer dealer cannot be a contract with the suppliers to the computer dealer. No money changes hands between these parties so therefore no contract exists. In these situations Microsoft is charging different prices for the same product.

6. Agreements

Some reports say that Microsoft is using its dominant position in the marketplace to force computer dealers to limit the icons that a computer dealer can place on the desktop. I consider this to be illegal since it restricts free trade. It allows Microsoft to promote other products that it sells while discouraging the promotion of competing products. I support the court ruling that allows computer dealers to have more control of the icons placed on computer desktops.

7. Tying

Anytime that one company promotes another company's product then I am considered about tying arrangements, kickbacks, or promotion fees. Microsoft has realized that installation is a problem and has released for distribution the customer version of a Windows Installer program. This program was released with Windows 2000 but is available for installation on earlier operating systems. The upgrade from Internet Explorer version 5.0 to 5.5 will require the installation of this software before the upgrade can occur. Microsoft web site also recommend two companies where the software developer can purchase the application that creates the installation package. Both companies want over \$1000 for the package. This causes me to wonder whether or not either of these companies have exclusive deals with Microsoft or if Microsoft has a financial interest in either one. Hiding information discourages free trade.

Microsoft web site promotes Verisign as a root authority for issuing certificates. Certificates are a means to implement security. There are many companies that issue certificates. Root authorities are visible by selecting tools, Internet options, content, certificates, trusted root certification authorities. Why did the company "Verisign" get singled out for attention?

It is acceptable for Microsoft to permit applications developers to sign their work with a digital signature or to encrypt their work with a certificate. However Microsoft should not require either step. If either step is required then Microsoft one step closer to tying the development of an application with another independently sold product. If this is a requirement it will restrict free trade.

Sincerely,
Donald Fleming

Subject: Microsoft case antitrust settlement

I am very disappointed with the current proposed settlement of the Microsoft case. The current settlement does nothing to prevent Microsoft from using their monopoly power as they have in the past and as they continue to do. In the current setup, there is no way for other parties to compete with MS. MS is free to give away software, and ever preload it, to compete with 3rd party software like they did with IE to beat down Netscape. The big problem here is that there is already a monopoly, and due to this there is no way for competitors to get footing. What really needs to take place is for Microsoft to be split into 2, or even 3, different companies. This would split off the OS side from the apps side. In this day and age, both MS office and Windows have a near stranglehold on the market. If another OS was to start taking off, Microsoft could either not make an office suite for that product that wasn't as good as the same on different platforms, or could delay shipping a version of office. Both of these would cause the competing platform to not gain as much ground as they need. Microsoft has made 2nd rate versions of Office in the past for the Mac (version 4.2.1) along with constantly changing file formats so that Office documents on a Mac aren't compatible with those on the PC. Or as seen with Linux, an OS which they haven't made a version of Office for, while they likely would if the apps department was a separate company from the OS side of thing.

Likewise, if a competitor to MS Office started taking marketshare away, MS could just change the way the OS works, or not release info needed for 3rd party products. This too is something that MS has done in the past for several different competing products, and is something that has come up on several occasions in this trial.

Another section that should possibly be separated from the rest of the company is the networking tools. This would include IIE and other network related apps. IMO this could stay part of the Apps group, but should be considered if MS claims that IIE should go with the OS. I hope that some of the input from the public is used to decide how this case is decided, though I am leery of the DOJ listening too much to the quantity, since it has come out that MS has sent in support letters for themselves in the past, some from real people but a lot from people that no longer exist. Also, MS has been shown to be spending a lot of money lobbying, and I would hate to see them buy themselves out of this case and not get punished for using monopolistic powers.

Thanks for listening
Aaron Daniel

 Subject: States may have rights and their interests, but at what expense to the national interest?

In my opinion, a settlement should be reached between Microsoft and the federal government. Those states that remain opposed to the points tentatively agreed upon are actively sabotaging the situation at hand. It would seem that these states are not in fact interested in looking out for their residents, but perhaps more for their corporate constituents. It is one thing to sarcastically quip that a corporation can "purchase" a senator or a congressman, but the very notion of "owning" a state is sickening to the very core.

The behavior of these states has not been explained clearly to those members of society that would be most directly affected by these states course of action. If they indeed have a legitimate grudge with Microsoft, why is it not spelled out directly, for the public to know and understand? I would like to see the federal government impress upon these state prosecutors that their intentions will cause far more harm than good, and that they should concede to the better solution of settling this case with Microsoft.

 Subject: MS Settlement

To whom it may concern:

I just wanted to register my opinions on the Justice Department's proposed settlement with Microsoft.

First, given the fact that the primary objection the Appeals Court had with Judge Jackson's verdict on the case was his penalties, not with his legal rulings that Microsoft was both a monopolist, and one that abused its monopoly power to expand to other fields. To quote from the Friday Wall Street Journal covering David James's defense of the settlement:

"Mr. James said the Microsoft settlement reflects changes in the software industry since the Justice Department sued Microsoft in 1998. While the case began as the result of the so-called browser wars between Netscape and Microsoft's Internet Explorer, Microsoft has won that war, Mr. James said."

This means that he acknowledges in public that Microsoft used their monopoly leverage to successfully defeat Netscape in the so-called browser wars. But according to everything I have read about traditional anti-trust resolutions is that the two primary things a settlement is supposed to achieve are: 1) a guarantee that the monopolist is unable to repeat it's illegal expansion into other fields, and 2) deny them the fruits of their original illegal expansion. Addressing the first contention and how it relates to the proposed settlement, I don't know how given both the history of Microsoft's behavior in the prior consent decree, and the fact that even though it was found guilty of illegal

behavior the company maintains that it has done nothing wrong (if you can find one instance in the public record of any Microsoft executive from Bill Gates on down contradicting this, you are much better detectives than any of the many journalists covering the case), I don't see how basically telling the company, "Now don't do it again." is going to be effective.

Essentially, Mr. James has acted as though he not only disagreed with the court findings, but would never have filed the case to begin with, despite supposedly winning it! To the second concept above, there are no penalties anywhere in this settlement that even pretend to address this. There isn't even a financial penalty, despite the fact that Microsoft took one of the most dynamic companies in the US technology industry, Netscape, and basically eviscerated it so much that it wound up being swallowed whole by media companies, to whom they are basically a technology adjunct. Could you imagine the same thing ever happening to Microsoft? Do you think there weren't significant job losses at Netscape? Why is Microsoft considered the only "innovative" company worthy of being let do whatever they want, simply because they are so dominant that anything done to hurt them is seen as hurting the American economy, rather than the harm that they have done in the inverse?

There are some who say that Microsoft has "innovated" so much that they are the sole reason the PC industry is where it is today. Exactly where is the PC industry today? True, the costs of equipment have roughly stayed constant, and today's machines are much more powerful than they used to be, but that is hardware advances, an area that Microsoft doesn't operate in! In the area of software, our desktop computers still routinely crash every bit as frequently as they used to. Software programs that were miles better than anything that could be done in the analog world, word processing for example, used to fit on a single density floppy disk (remember those?). Now they take up over 100 megabytes of hard drive space (roughly 200 times as large), still mostly do the same things, require 40 times as much system memory, and still crash (usually by running out of memory, a problem almost always caused by either faulty coding in the software, or the operating system). Take a document that you wrote on an early PC, say 10 years ago, open it in Microsoft's Word 2001 (or XP), save it in the native format, and compare the file sizes. You haven't done anything to it, and it now takes up over 4 times as much space!

Imagine what would have happened to American industry if Microsoft servers powered the financial industry instead of IBM's mainframes. These mainframes have been operating relatively fault-free for over 20 years! Microsoft upgrades everything within a year or two, always promising that this time they've gotten it right, yet they still can't even approach that level of reliability. If anything, the standards of software reliability that Microsoft has been a prime mover for getting the American public to accept has probably impeded the progress of American technology more than any other

single factor. They have gotten away with practicing via coding the exact same sorts of sophistry that all the dot-coin companies that crashed in the past couple of years were doing, only the investment public isn't nearly so permissive what you do with their money as what you do with their computers (and time).

I know the general state of the software industry is not within the purview of this case, but not significantly penalizing Microsoft for it's rapacious behavior in the past not only encourages it, but also sends a message to the rest of the industry that such behavior is not only permitted, but encouraged.

Sincerely,
 Brad Paton

 No. Do not allow Microsoft the opportunity of reaping a reward from a punishment.

I am not sure of what punishment I would place on Microsoft, but the current proposal is only a short term punishment, with a long term possible gain.

Have Microsoft develop/convert its most popular softwares, Office, development tools, etc., to competing platforms. After a stated period of time, 3-5 years of support, Microsoft may stop support and enhancements. Microsoft would have to publish the software into the open source community.

While reviewing this document it became evident that the past and current Microsoft Windows (tm) products, not there Graphical User Interface (GUI) platforms, was being addressed.

Fortunately, from a legal standpoint, Microsoft Corporation has begun to transition away from the existing Windows (tm) product offerings. Recently introduced ".Net" products will replace all Microsoft Corporation Windows (tm) products within the next thirty six (36) months.

Consequently, this settlement and its multiple year remedies address soon to be nonexistent Microsoft Corporation products.

Any settlement must address this software vendors GUI product lines which include past, present and future Microsoft Corporation product offerings.

Honorable Attorney General
 If I understand it properly, this settlement will provide Microsoft with an opportunity to continue, in my opinion, the excellence in two areas of concern to me.

First, the development, testing and support of the finest computer software, that I as a small business owner can use to increase my productivity. Second, the contribution to my retirement fund with the excellent growth of Microsoft stock.

In my opinion, both of these opportunities areas have been significantly restricted with this legal action.

God bless you, your family and The USA.

 Dear Sir:

Microsoft's behavior must be strongly regulated because of its past monopoly history and lack of remorse in unlawful practices. We must stop MS from perpetuating its monopoly practice of maximizing its profits by shutting down support for its older products and pushing everyone towards buying newer, supported Microsoft products.

The following is from <http://www.langa.com/newsletters/2001/2001-11-15.htm>

[Next month (December 2001) Microsoft will cease to provide support for MS DOS, Windows 3.xx, and Windows NT 3.5x; and support will become limited for Win95, Win95 OSRi and Win95 05R2. Seven months from now, in June 2002, Microsoft will cease to provide full support for Win98, Win98SE, and WinNT4.x. That's right: Starting next month and ending next June, the overwhelming majority of current Windows users will find themselves operating OS versions that the vendor—Microsoft—either doesn't support, or only partially supports!]

Note that Win98SE is currently the largest segment among Operating System users.

Sincerely Yours,
 S.I. and Matilda Chou

It is about time this waste of taxpayer's dollars finally comes to an end. What you really need to ask is the consumer been harmed by Microsoft's actions? I don't think so! Not when the cost of software continues to decrease and the quality and new features continue to improve greatly. This case was a result of a bunch of cry babies-competitors of Microsoft (Netscape/AOL, Sun Microsystems and others) who were losing the technology battle to Microsoft. If you guys would have spent as much money on homeland security and anti-terrorist efforts as you did on this Microsoft case the World Trade Center towers would probably be standing today. Leave Microsoft alone and let the market determine the winners and losers-they will choose with their pocketbooks. Go catch and prosecute some "real" bad guys.

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

Byun Hung Kim for President... Microsoft walked. <http://www.salon.com/tech/col/rose/2001/11/02/microsoft_settlement/index.ht ml> No, Microsoft hit a home run in the bottom of the ninth with two out. <http://www.salon.com/people/feature/2001/11/02/series_two/index.html> Seems alot like our war on terrorism, the solutions don't seem to address the problem.

To stick with our baseball analogy, Microsoft reminds me of Pete Rose <<http://www.peterose.com/>>. It's not so much what they've done, it's their refusal to admit <http://reds.enquirer.com/1999/08/22/red_rose_sticks_to.html> they have done anything wrong.

The current anti-trust case against Microsoft came on the heels of a previous case in which they were found guilty. Strike One. Judge Jackson ruled them a Monopoly, with the appeals court upholding that claim and reversing the remedy. It's a high pop-up behind the plate, and the DOJ is doing their best Damien Miller <<http://espn.go.com/m1b/p1ayoffs2001/s/2001/1031/1271321.html>> impersonations. Strike two.

Then, with the count up on the batter, a lollypop over the middle of the plate. Home run. By the way, did you notice the lack of balls?? Next: <<file:///N:/page2.shtml>> The cage that Gates built... —> The cage that Gates built...

As Microsoft evolves, there is a growing desire by Microsoft to control file formats. Certainly their control over their Office formats does more to bolster the Windows platform than anything. Now, they want to move into the space occupied by MP3 with

their proprietary WMA format. If Microsoft is successful, it may be that in ten years you will be required to pay Microsoft to listen to a new album. More to the point, you may have to be running Windows to listen to music. For all of those out there who cannot figure out what .NET is, it is Microsoft's strategy to turn the Internet into Microsoft's own version of AOL.

Microsoft can accomplish this due to their monopoly in the operating system market. As they change their operating system, they can continually redirect "The path of least resistance", by making MP3 hard to play and WMA easy to play. Want to rip a CD in XP? It'll be WMA format unless you connect to this site, research encoders, purchase and install one.

They will use Passport/Hailstorm to restrict access to the known internet if they can get their way. Want to do online shopping?? Please log in via Passport. This is to make the internet more secure <<http://www.theregister.co.uk/content/archive/20855.html>> they will tell you. As we have already stated in a previous rant <<http://www.nothing4sale.org/rant/10202001/page6.shtml>>, Microsoft doesn't "get" security. They think it's something you add after the features are done.

They use their browser to add in non-standard HTML tags, or force you to write "incorrect HTML" for it to look like you want it to in IE. They use non-standard extensions of public specs and then claim the <<http://www.theregister.co.uk/content/4/22618.html>> competition is defective when it cannot render these obscure and undocumented tweaks. Microsoft is so entrenched in these tactics <<http://www.vcnet.com/bms/departments/dirtytricks.shtml>>, that it often accuses it's competitors <<http://www.theregister.co.uk/content/archive/11074.html>> of doing the same. The reality of it is that Microsoft does not see any other way to play the game. If they do not resort to anti-competitive tactics, how can they succeed?? With Microsoft off the leash and back on the prowl, they may have a point. Next: <<file:///N:/page3.shtml>> It just keeps getting worse...

It seemed an unlikely%20settlement <<http://news.cnet.com/investor/news/newsitem/O-9900-1028-7408520-O.html%20a rget=blank>> %20from%20the%20start,%20but%20one%20owe%20had%20hoped%20would%20have%20some teeth if it was to be made. Not only does this new deal not impose any real restrictions on Microsoft, but actually provides them with new tools to steal GNU <<http://www.gnu.org/>> tools. (OOPS! Did we say steal, we meant embrace and extend <http://www.salon.com/tech/log/2000/O5/11/slashdot_censor/>...) From Eben <<http://emoglen.law.columbia.edu/%20target=>> Moglen, Columbia Law Professor:

There are [also] several provisions designed by Microsoft and accepted by an indifferent or careless government. Sections III-D and E say that Microsoft must document its APIs within reasonable time, for ISVs [independent software vendors], "for the sole purpose of interoperating with a Windows Operating System Product." Not, in

other words, to allow a competing Non-Microsoft Operating System Product to interoperate with Windows applications. This is designed to make it possible for Microsoft to deny information to developers of [free software like] GNU and Linux [who create products that are not designed solely to work with Windows.]

111-1(5) says that [developers and hardware manufacturers] "may be required to grant to Microsoft on reasonable and nondiscriminatory terms a license to any intellectual property rights it may have relating to the exercise of their options or alternatives provided by this Final Judgment; the scope of such license shall be no broader than is necessary to insure that Microsoft can provide such options or alternatives." Microsoft will use this to argue that code under the GNU General Public License (GPL) [which protects such software as GNU and Linux] must be licensed to it on non-GPL terms, so they can use the code in their own programs without having to GPL their programs. What, did they have to strike clause 32i that states that every U.S. Citizen is required to pay Microsoft one-hundred dollars yearly whether you use Windows or not? Also note that the API's must be opened up a little, but not file formats.

Next: <<file:///N:/page4.shtml>> Burn all .DOC's day! —>

Burn all .DOC's day!

Nowadays you cannot apply for a job without Microsoft Word. "Please submit resume in .Doc format." Page 4 of this rant should be the part where I tell you to abandon the MS formats and use.... ..and use... And there you have it. What else is there? Name me an alternative to the .DOC format that is open and widely interoperable. Name me a slideshow producer that rivals Power Point with the same qualities. What is there??

Nope, page 4 is the page where I call out Bill Gates' rivals. Scott McNeally, Larry Ellison, and Steve Jobs, you all suck. You whine about Microsoft, but refuse to challenge them.

When Microsoft announced Windows NT, Sun should have shot back with the Solaris home edition for x86. Sun should have invested time and effort into a competing Office package, groupware, Something! They purchased Star Office way too late in the game. Now they want to talk about Sun One?? Microsoft has no plan, but one vision for .NET, while Sun has no plan and no vision for Sun One. Sun should have at least produced the definitive Java version for the Windows platform.

Sun is an OS company just like Microsoft, and they have let Windows take the lead. Oracle?? Larry Ellison can't even fight off Gates, much less fight against him. Steve Jobs sucks because he refuses to take the battle to Gates. Apple, if you are listening, port OS X to x86. Show the strength of the BSD codebase, sell it for 50\$, and mop the floor with Microsoft. So long as Apple refuses to port to generic hardware, they will continue to be a marginalized competitor.

These corporate entities are at least playing on the same field with Microsoft, and they need to state their challenge for Microsoft territory, and fight the ensuing war. Instead

they play a game of punch and run, trying to be a David against a Goliath and hoping one small lucky shot can slay the beast.

Next: <file:///N:/page5.shtml> Microsoft Uber Alles —> Microsoft Uber Alles

The Bush administration may have settled due to concerns about the economy, but anyone who's smart would get out of any stock that competes with Microsoft. The have carte blanche to run roughshod over the industry and by God they intend to. (Note: Actually, the real reason MS got a deal was due to Campaign Bribery. They weren't even supposed to lose the appeal. To find out more about your elected corporate shills, visit the <http://www.opensecrets.org/alerts/v6/alertv6_26.asp> library.) Write your state attorney general, let him know you disapprove, write your congressman, write John Ashcroft, write President Bush, send letter after letter after letter. The only true solution to this will be the opening of Microsoft formats and API's, most companies do this as a matter of need, they cherish interoperability. Microsoft wants to lock everyone out, make 'em surrender the keys.

I would like to see the government agencies at least move to open formats and API's for the new e-government initiatives. Force local, state, and federal offices to use only open standards when publishing and receiving documents. We should at the very least be sure that running Microsoft is not necessary for access to our own government. That would be unconstitutional. Then do your own part at home. I don't refuse to send Word Docs, I refuse to accept them. I refuse to save my documentation in Word format. Send your resume in HTML format. Encode to MP3 not WMA. It's not about keeping Microsoft out of your life, it's not letting them become a necessary part of it.

Microsoft wants to choke the flow of information... Let it breathe.

Comments

Sirs:

I am a private citizen and have nothing other than a personal axe to grind. I use and have used Micro Soft products for years. I started out, in the Army, dealing with computers back in 1964, and have continued since, particularly since retirement from the Army; to whitt to take an AS in Data Processing and teaching Computer Science at Monterey Peninsula College (from 1987 until 1993). I feel that the growth and prosperity and size of Microsoft is due to its innovation and the hard work of their people, not predatory actions. I feel that Microsoft, through its products, has enhanced my ability to use a computer and has, of course, caused the whole computer driven economy to take gigantic steps forward. I also believe that because of Microsoft's size and position within the computer and computer related realm, I am able to buy state of the art/leading edge products at lower cost.

Yours Truly,
Andrew M. Rutherford

Subject: Microsoft settlement

On what ever fine or \$ amount is judged ,that will only be to the American consumer. In my thoughts look what Microsoft has done since it's 1995 opening of Windows. Your own web page DOJ could not have been done without the expertise of Microsoft programmers etc... Think about it. As a consumer I hope we will not be "touched" by this small misunderstanding between parties involved. If I was the the judge I would have thrown it out due to this is a case which has never been tried because Microsoft went a step beyond reasoning and brought it to the public and is very successful at it. Court adjourned. Sincerely, Jamey Odau

Subject: Resolution does not address damage done

Dear Sir/Madam:

I am a software consultant who has worked in the software field for 20 years, and have been very much aware of the decreasing consumer choice and elimination of competition caused by Microsoft's destructive monopolistic practices.

I have read the US vs Microsoft anti-trust case resolution and am disappointed that while the settlement attempts to prevent Microsoft from engaging in monopolistic abuse in the future, it contains nothing to remedy the damage already done, or to penalize Microsoft for those actions.

In my opinion one of the most egregious abuses was Microsoft's dumping of it's internet browser product, Internet Explorer, thus successfully destroying Netscape who was attempting to sell a competing product. The argument that internet browsing can reasonably be considered part of operating system functionality is entirely without merit. It is an application pure and simple, just like other Microsoft applications such as Word or Excel which they do not give away because they have already achieved effective monopoly via entrenched proprietary file formats. I believe that a fair settlement of the Microsoft case should include the following elements:

1) Address anti-competitive Microsoft Windows operating system sales practices (already addressed in proposed settlement).

2) Punish Microsoft for illegally destroying competition in the Internet Browser product category, and attempt to undo the harm done, by measures such as requiring that Microsoft cease competing in this area for a period of time, and to be required to charge for this product in the future.

3) Recognize that electronic document exchange (of word processing documents, spreadsheets, etc.) is key to allowing competition in the software market, and that

Microsoft's market dominance and proprietary file formats have damaged the industry and consumer choice by preventing such competition. This should be remedied by requiring Microsoft to make it's file formats public in areas that have achieved utility status such as word processing and spreadsheet software.

Sincerely,
Benedict Bridgewater

Subject: Microsoft Settlement

As an older adult (72), I have several points of interest in the future of Microsoft. 1) the local economy, 2) shareholders, 3) free enterprise, 4) competition.

1) A business as large as Microsoft, like Boeing, is not self-dependent, in that it uses the services of many attendant businesses. Therefore I believe that the whiplash of this action will either reduce or eliminate many related businesses.

2) Throughout the U.S. people have invested in Microsoft as part of their retirement, not to receive dividends (of which there have been none), but to be a part of the excitement of a rapidly growing industry. Many have seen their portfolios reduced by half since the government's action.

3) We have grown up in what is probably the fastest growth of industry ever seen. We have many improvements in our lives because of the freedom of individuals like Hewlett and Packard, Gates and Allen, Bill Boeing... the list goes on. Had these innovators not had the freedom to develop their ideas, none of their competition could have started, much less thrived as their competitors. True, many have dropped out, but not because they were stopped by the originators, but because they really didn't "build a better mousetrap."

4) No one that I know of has the capability of eliminating competition in the American market. The government is often misguided by lobbyists who would have us believe differently, but all of my life I have heard of people who developed an engine which wasn't gas dependent, in competition with the auto makers. If people knew of this and really wanted it, I don't think anything would have stopped it. Competition is a valuable and healthy way to do business. Improvement often follows.

Thank you for your time in reading my comments. Dollie W. Latimer

After carefully reviewing the penalties that MS will incur, I firmly believe the structure of the settlement is totally flawed. I cannot tell whether this is a case of George W. Bush influencing the case because of his donor relationships or non-technical lawyers making technical judgment calls because of lack of focus from the Justice Dept. The impression it leaves, however, is that the Justice Department under Ashcroft's lack-of-leadership can be bought. So much for his ethical stance. I'm disgusted by this pandering to a blatant monopoly. I firmly support the other states in their stance against this settlement.

This is my opinion and does not necessarily reflect that of my employer.

Subject: Microsoft Dept. of Justice Ruling.

Dear Sirs,

I am moderately satisfied with the recent ruling that you have come to against Microsoft, however I would like to add a few extra perspectives>

1. I have had numerous people complain to me about the fact that Internet Explorer is not-installable. Several parents find that Netscape is a better choice, and much easier to use when it comes to protecting children from questionable content. However, leaving Internet Explorer on the system is mandatory, and also opens the computers to new security threats. I feel this is an example of Microsoft's attempt to monopolize the Internet.

2. In times prior, Microsoft has operated an online gaming website called "The Zone". I would like to point out that users attempting to access this website with Netscape were told that they *had* to use Internet Explorer to access the site. Once again, this was attempting to push Netscape out of the running for competition.

3. I also believe certain non-classified portions of Microsoft's source code should be available to the public, or at least to security professionals. Microsoft has shown an inconsistency in the past with providing security fixes for critical flaws in a reasonable manner, and if officials from other computer departments were able to more closely reference, this could help to sort out potential problems that computer crime can cause.

4. Although this is slightly off-topic, I believe Microsoft really needs to concentrate against bashing open source software. If MS and the Open Source community could learn to peacefully co-exist and prosper, I'm fairly sure we could become the chief software producing country in the world, if we are not

already. Note that this also could seriously stimulate the economy to avoid the potential 'recession' that everyone fears is heading in.

Thank you for providing your time and bandwidth to receive our feedback,

Sincerely,
Jonathan J. Zegelian

Subject: Microsoft settlement

I am a retired, home user, reasonably expert, frequent user of my home computer. I wish to make 2 points. Microsoft has made life much easier for us non-experts by providing software which operates seamlessly between different programs and tasks. Gone, for good I hope, are the days when the programs which a normal person uses (word processing, spread sheet, e-mail, internet, checkbook, address book, etc.) were disjointed and couldn't transfer information to each other and to the person with whom I was trying to communicate. Microsoft is a great company, that has led the way and been a model in the last decade of prosperity. They have done so not only by being smart, but by being aggressive in business. That's the American way. That's what causes de-facto standards which make life easier. Every time I pay my telephone bill, to 3 different companies, I am reminded of the disservice that was done by breaking us a public utility. Certainly, monopolies or near monopolies need rules for the protection of their customers, but asking them to give up business gains gotten by doing business by making their product better is wrong.

Subject: Concerned Citizen's comments on the MS/DOJ settlement

To Whom it May Concern,

I would like express my deep misgivings about the proposed Microsoft settlement reached by the company and the Department of Justice. I will keep my comments brief, and more to a philosophical standpoint, as my groundings in anti-trust law are weak.

It seems to me that there is no punishment in this settlement. There are only provisions to guard against future unlawful behavior. We have an amazingly powerful multinational corporation who has been running up against the law for its business practices for years who has been proven to have violated the law (when Judge Jackson's finding of antitrust violations were upheld). Where is the punishment? The proposed settlement is a slap on the wrist and a thin leash for Microsoft. The American Justice system is letting a convicted offender off the hook without then suffering for what they have done. Do you expect this to rehabilitate their behavior?

The modern justice system does not take organized drug dealers after they have been arrested and give them a punishment of behavior restrictions while they continue to live in the outside world. They are sent to prison.

Yes, these are two different types of crimes—but the basic precept is the same: criminals will strike again and again until their behavior is modified.

We are dealing with a corporation that is a criminal. These facts are beyond dispute. Are we treating them like one? I don't believe so. Maybe I'm alone in my opinion, but I think corporations that defy U.S. should pay for their mistakes. And with this current settlement I don't believe Microsoft is paying any real penalty—they have before them only restrictions on future behavior.

Please strengthen this settlement to teach Microsoft a lesson. I think it is obvious from the companies conduct before, and especially during the trial that they have a serious problem respecting the laws of this nation. It is time that this changes.

I am a computer professional, and have been administering all types of computer systems and networks for over seven years

now. People in my profession see first had the negative results of Microsoft's illegal monopoly. I see the effects of their lawlessness everyday, and I ask you to put a firm, but just stop to it.

Subject: Selling out to Microsoft.

I'm disgusted at how the DOJ sold out to Microsoft. It was possible to reach a harsher judgement against Microsoft even before the Appeals Court found Microsoft guilty of maintaining a monopoly. It is also pretty obvious that the Bush Administration used September 11 as an excuse to just slap Microsoft on the hand. It is obvious that the government has decided to settle also because they believe a strong Microsoft leads to a strong economy. The settlement fails to stop Microsoft from maintaining their monopoly and creating new ones. The number of loop holes in the agreement lets Microsoft ignore the settlement and do as it has done before. As we speak Microsoft is trying to monopolize other Markets such as the PDA, Game Console and streaming media markets. Microsoft also plans to Monopolize the internet with .Net. I know come next election I won't be voting for the bush administration because the War on Terroism(which I support) is no excuse to do unethical and illegal things such as selling out to Microsoft. Bush knows that he was able to do it because there won't be any special investigator to expose him for his illegal activities.

Subject: Microsoft Is A Monopoly

Dear Ms. Hesse,

In response to your request for public comment on the proposed settlement in the case of United States v. Microsoft Corporation, I urge you seriously consider the already established findings of fact that Microsoft is indeed a monopoly that has aggressively leveraged this advantage with OEMs to deny access to its competitors. This has destroyed competition so badly that consumers are left with little choice since Microsoft products are the proprietary standard shipping with all new personal computers. For the last 15 years, I have observed that excellent companies whose products I had been using were one-by-one forced into oblivion by the overwhelming monopoly power of Microsoft. You must act in the public interest as install preventative measures against Microsoft to assure they cannot ever act against consumers again. You must remove their monopoly.

Subject: Public Interest

To Whom It May Concern,

Our government was formed to defend it's people from threats both foreign and domestic. I believe the proposed settlement for Microsoft and the Department of Justice is not in the public interest and will do little to remedy Microsoft's stranglehold on the computer industry, much less punish them

for being the Supreme Court affirmed monopolist that they are. I feel that the Department of Justice sought this weak settlement with a belief that it would be good for America and turned a blind eye toward Microsoft's history of skillfully circumventing legal restraints and how much more good a stronger settlement would bring.

I have spent many hours reading the settlement, and even though I am no lawyer I do know something about the computer industry. Please, the proposed settlement is not a good one, and is little better than no settlement at all. In fact, I would much rather that the Department of Justice eventually lose in court rather than see Microsoft shrug this off. At least fine them a few billions dollars: It might irritate them for a few days, but they might at least respect the law during that period.

Subject: I'm disappointed

I have to say that I'm severely disappointed in the agreement reached by Microsoft and the Department of Justice. Essentially, your agreement reinforced the things that Microsoft already did for its competitors, things which are quite inadequate. The issue isn't whether or not everyone can build software that works with Windows, it's how nobody can build software that does NOT work with Windows. Microsoft's Windows operating system is on 90% or more of the desktop computers in the world ... is this because it's superior to other offerings? Hardly. Computer builders / manufacturers are threatened they'll lose their licensing perks if they offer competitors' products. People are not able to make software for other platforms and be profitable, simply because of the former reason ... all systems run Windows or Microsoft charges everyone much more. This is not right.

I know I am not the only one who sees this. It simply reinforces my belief that the government and government departments are fully controlled by the corporations of this nation. It's just amazing at the momentum lost in the DOJ vs MSFT case after Bush became President and Republicans dominated the government. Oh well, to reiterate apparently, money dominates all, even justice.

From: Lisa Chiang
 To: Microsoft ATR
 Date: 11/16/01 11:38pm
 Subject: comments about the Microsoft anti-trust case
 Hash: SHA1

I have a few comments about this whole case. First, you should know that I use as few Microsoft products as possible. I became a Linux user as a student when I noticed that all the tools that I needed, a compiler, word processing, spreadsheet, etc... was starting to really add up. Not only that, but it was buggier than hell.

Since I only use Microsoft stuff when I have to, the Microsoft case shouldn't affect me, right? Wrong. The main way that this case affects me is that everywhere I turn, people insist on using Microsoft products which they admit are buggy and also full of security flaws. If we could add up all of the hours wasted by our secretaries trying to get a table pasted from Microsoft Word into Microsoft Powerpoint to keep its same formatting, I think you would find that Microsoft owes the government a lot of money. Yet the government insists on using Microsoft products! I think this use of government money is truly a case of fraud, waste, and abuse!

Right now my company (DOE facility) is supposed to upgrade their systems to Windows 2000/Office 2000. I have a new computer with 128 MB of RAM and Windows 2000 Pro—and it is slow. What about the rest of the people in my office that have Windows 98 and old hardware? Why do we have to upgrade? Do you realize that a majority of our users are only using their computers to read their email and do their on-line training (web based). I can see why PDA's are so popular—much cheaper, they do the job, and they seem to work well. (Unfortunately for them, PDA's are not supposed to be used where I work due to security issues with the wireless versions.)

My only other comment is that Microsoft is a business. When a business does not deliver a product, I cease buying their products which is why I am a Linux user. Not all of the products in the Linux world work but they at least can not lock me into constantly upgrading my software against my wishes. I've heard that Microsoft plans to quit supporting DOS with their release of XP. Guess what, most of our instrumentation uses old DOS PCs and they work just fine. (I, of course, have pointed out the availability of FreeDOS.)

So I guess I just am troubled by your recent actions. I do not see how they will prevent Microsoft from behaving in an illegal manner. Ironically, it is probably large government organizations like DOE, etc... that will be hurt the most by the failure of the DOJ to pursue a more active watchdog role. For example, our company is constantly fighting security bugs and virii with their software—I think they gave up recently because now we are behind a firewall! I just wish that we could spend our money on mission critical upgrades we truly need, rather than on dubious software upgrades that a vendor insists that we need and seems able to force upon us.

Thank you.
 Sincerely yours,
 Lisa Chiang

From: Jason Pippin
 To: Microsoft ATR
 Date: 11/16/01 11:38pm
 Subject: Stiffer penalties for Microsoft

We need to force Microsoft to FULLY document their API's and adhere to open standards for communication protocols for all past and current operating systems. This would allow software developers to compete on the windows platform and compete with the windows platform with compatible operating systems. Closed standards and APIs are what has allowed Microsoft to abuse their monopoly power. If Microsoft had to compete properly, the price of their operating system would decline and consumers would get to keep more of their money to spend on other more tangible things like food, clothing and shelter.

If Microsoft sells 100,000,000 copies (a conservative figure) of their operating system and overcharges \$100.00 per copy, they have just stolen a 10 billion dollars from the citizens of the US and The government. Add to that their policy of using stock options to avoid paying any taxes and they present a drain to the economy greater than any terrorist network. Microsoft Must Be Leashed!

From: Mark Stout
 To: Microsoft ATR
 Date: 11/16/01 11:45pm
 Subject: Restitution, open application interfaces?

To you who defend the taxpayer against terrorists, foreign and domestic, Hail!

I'm looking for the part that returns money to people who were forced into upgrades, some penalty for Microsoft's demand, during the month just past, when they revoked Windows 95 licenses held (and paid for) by non-profit organizations, and how people can connect to a Microsoft Exchange Server with a mail reader other than Outlook.

I realize that three items got into the last paragraph, but I'm overflowing with thoughts at the moment. Microsoft, over the past two weeks, has tried to end the practice of notifying a software vendor of security holes and then publicizing them two weeks later to ensure that the vendor patches the flaws. In instances where the details have been withheld, other vendors have claimed that the flaw was "theoretical" and not real.

There are applications where the U.S. Government is using MS-DOS, because no version of Windows allows the flexibility that the application demands. Microsoft's licensing practices put them in a position to demand that respirators, missile fail-safe devices and astronaut life support systems be shut down; yet I've heard of no apologies or changes in these policies.

Netscape announced in 1994 that they were going to offer an operating system. Where did it go? When was it released?

The non-profit issue stands on it's own; automakers can't dictate what year of vehicle people buy.

If you're in a company or government agency that has Exchange Server handling mail, you have to use Outlook, security holes and all. The protocol by which Exchange and Outlook communicate is not licensed to anybody, not published, and not regulated for security. A non-Windows computer in any company that has Exchange Server is without mail, but I haven't seen the government move to fix this, I haven't been financially compensated or apologized to by Microsoft, and the specification for this interface hasn't been released.

Overturn the DMCA, free Dmitri Sklyarov and the population of the United States from this tyranny. The entire purpose of the American Revolution was to get such injustice off of our backs. The man said that backup software was possible, and went to jail for it. What taxpayer benefits from that? What would Jefferson have said? What if taxpayers had the situation put before them, and were asked to vote?

Microsoft's End User License Agreement for Media Player 7.x (part of Window 2000 and XP, free upgrade to Win95 and 98), gives Microsoft the right to arbitrarily delete files from the users computer. I haven't heard the reversal, apology, nor have I been financially compensated for that travesty.

Microsoft's End User License Agreement for FrontPage (web authoring—I've never used it) forbids the use of the computer its installed on to carry words portraying Microsoft in a negative light. You cant suggest that FrontPage's EULA is heavy-handed on a computer that FrontPage is installed on. If this license is backed in court, the Bill of Rights is no longer law, and the original states that made that a condition of thier ratification of the U.S. Constitution have the right—or obligation—to secede.

The U.S Declaration of Independance explained in it's opening words that people

have the right to life, liberty and the pursuit of happiness. Corporations are afforded no such rights; you can take away Microsoft's existence, legally. When Microsoft declares who can live and die, which the use of DOS puts them in a situation to do, the Court is left with no choice but to eliminate this threat to Americans.

1. Seize all of Microsoft's financial assets.
2. Disconnect communications lines in and out of Microsoft's headquarters building
3. Clear out people from that building using the Washington National Guard, and that of surrounding states.
4. Use the assets to pay down the National Debt. If there's some left over (likely), start many software firms of less than fifty programmers each, maybe one team per state, to write replacement applications/programs. The small teams are where all innovation comes from. Let's repeat that: TI-W SMALL TEAMS ARE WHERE ALL INNOVATION COMES FROM!

Microsoft had a good product in 1979, called Microsoft BASIC. They didn't invent BASIC, they just had the best implementation. Once they stole CP/M via QDOS and renamed it MS-DOS, everything up till the "Dot Net" initiative was a copy of a small company's innovation. Every single thing that they claim as an innovation, till "Dot Net", was somebody else's idea.

The "Dot Net" initiative is the closing of the fist around us; store all of your medical records, financial records, personal email, etc. in a server in Redmond. You won't even need your own hard drive anymore!

Your own room. Your own car. Your own house. Your own pets. Your own children. Your own mind.

What customer asked for this? This isn't entirely innovative, either; The Nazi's and Stalin have played with this idea before.

In 1979, while I was in junior high school, I started designing a graphics computer. I asked Microsoft about a memory chip that was already programmed with BASIC. Bill Gates himself wrote me back, saying that they only sold BASIC on a floppy formatted for the CP/M operating system. He advised me to build a CPIM computer, and buy a BASIC floppy from Microsoft.

They tell me he's the smartest man in the world, and I've taken that personal letter to heart: when I finish that computer, it'll run CPIM and I'll buy a BASIC floppy from Microsoft.

p.s. Ask Richard M. Stallman, of www.gnu.org, what the remedy should be. Then you might reconsider the above as a moderate approach.

Subject: Regarding the Settlement

As a consumer, I think the most powerful weapon Microsoft wields over its competitors is not the applications or even the operating system, but its proprietary file formats for Word, Excel, Media Player, and now even Internet Explorer data. No other application or middleware developer can compete fairly because of the fearful nature of most users,

afraid to use other software that may create files unreadable or, worse yet, corrupted, when delivered to others with Microsoft applications.

That's why I believe MS, as a proven monopoly, should be forced to publish its file formats so that others can offer competing apps to edit or even create similar documents. The fact that MS Office used to cost a small fraction of what a computer did, compared to today, when it commands half the price of the hardware, is an example of where the lack of competition has hurt consumers in the wallet.

We're forced to use Microsoft software not by choice, but by necessity. If the government sees fit to allow MS to continue as a sanctioned operating system monopoly, we should at least be allowed to use less expensive application software in Windows to create documents and communications.

Thanks for your time.

From: Brian Butte
To: Microsoft ATR
Date: 11/16/01 11:40pm
Subject: Microsofts Monopoly

I am a 31 year old professional consultant with pwc consulting specializing in Internet portal technologies and infrastructure. My strong technical background started with my fascination with TRS-80 computers in 1980 and blossomed into my Bachelor of Science degree in Computer Engineering. I have written software utilized in over 10 million GM cars and trucks as part of the Engine Control Module, designed 100% uptime environments for dot coms and dot bombs, and built CRM solutions for some of the Fortune 500. I am recognized as an expert in my fields including public presentations and publication.

I state my qualifications because I am not sure that anyone deciding the fate of Microsoft has the technical capacity to understand the state of Microsoft's monopoly nor its impact on innovation. What is easy for people can be harmful. As a parent of three children under the age of four, I can unequivocally state that although jumping down the stairs is easier than walking, it can result in disaster. A child must be reprimanded for inappropriate behaviour lest they never learn to become a productive part of society. How often do the unrestricted actions of another child influence your own child to act outside the well established boundaries of acceptable behaviour? Deterrence is the most effective means to discipline a child; action, reaction. Consider your son or daughter caught at school misbehaving. Did you witness the act? No. Is the damage done? Yes. Do you dismiss the circumstance? Not as a responsible parent. You make sure the child understands the behaviour is wrong, you punish the child appropriately, and most importantly you do not let your child profit from the endeavour in hopes they learn crime doesn't pay. As important for society, the child influences other children through repetition of the same rules of behaviour and repeats the lesson for their children. Examples of right and wrong reinforce the rules of society for everyone, including companies.

Without a breakup of Microsoft, the United States Government endorses their strong arm tactics and unfair competition. I am not concerned about Microsoft, but rather I am concerned about precedent. The reality of the Microsoft case is that the damage is done and cannot be remedied; even by so strong a statement as dissolving the corporate bond between the operating systems, development tools, and software packages. However, their actions are inexcusable.

Microsoft has stolen ideas from many companies, repackaged the ideas, and mass marketed them to the public. How can the world be better off when Microsoft stifles invention? Were the inventors of the web server, windowing interface, mouse, web browser, file compression, and countless others better off because of Microsoft? Did they have the chance to sell their ideas to the public unhindered by competition with their own ideas? Anyone who answers yes clearly lacks integrity and would have the United States Government endorse the actions of RCA in stealing the concept of television from its inventor, Philo Farnsworth. We have one multi-billion dollar employer of thousands instead of multiple multi-billion dollar employers of thousands. We have hundreds of hyper-millionaires from Microsoft and thousands who have seen promised millions crumble to dust. What promise you ask? The promise of the American Dream! Is this the lesson we want to teach to our children; to replace the promise of Thomas Edison, Henry Ford, and Alexander Graham Bell in favor of Bill Gates whose only invention is the software license agreement that says when the software doesn't work, tough?

What will happen, and it will happen, when the new Microsoft comes along and dominates the industry. Not possible? It has already happened once. The United States sued IBM for anti-trust and won. What key mistake did IBM make during the deliberations? They decided to focus on mainframes and thus handed Microsoft the key to a powerful world. Microsoft outgrew their world and starting exploring others which lead to theft, invasion, and finally domination.

If Microsoft is not held accountable for their actions, not only is the clear message to corporate America that crime does pay, but that it pays well. If logic, and not special interests, prevail, Microsoft will be held accountable for their actions with a penalty as severe as their ill-gotten

success.

Subject: MS Settlement

Dear Sirs/Madam,

I have been using computers since 1968. Up until MS abused their monopoly position by tying retail products to the OS, there was a pretty clear separation between the OS, which offers services primarily to retail programs (software) and retail software. Since MS began truly flaunting their position of power, the availability and usefulness of retail software has diminished tangibly. Walk through any software shop (that has survived) and look at the selections. There are a lot of Games, but most else is MS.

Interestingly, now MS is beginning to compete in Games. They already include several in the OS, thus justifying including more, since the government has also turned a blind eye to this situation. Soon, MS will also be the behemoth of games.

There is only one fair solution. Frankly, even Mr. Gates will prosper. MS should not be permitted to produce any retail (defined by others) software. The company should be split in two, permitting an even playing ground for everyone.

The health of computing and the economy depend on true open competition. The proposed settlement fails to even scratch the surface.

Subject: Professional opinion about settlement

For the record my name is Brian A. Horakh, my phone number is 760-944-7660, I am the CTO of a small software company. I am an MCSE (Microsoft Certified Systems Engineer), and also hold certifications from Compaq, Novell, Linux, Sun, and Oracle, I program in 14 different languages, on 3 different platforms, I've written books on topics such as system security, and high availability. In otherwords this settlement will directly affect my career—so I figured I ought to write in an give you my two cents. I have read the proposed draft and concluded that you are falling into the same Microsoft trap that they have so craftily woven for so many of their competitors. There are big gaping holes which prevent, or at least indefinitely delay enforcement, once this deal is signed they'll literally have to kill a dozen people in their business practices before it makes it back to court—because

without a homicide it's going to be really hard to prove dirty business tactics, but you can bet they're going to keep playing dirty. ou need to look at their implementation of contractual history with other companies (i'll provide a few highlights):

- 1998 Microsoft licenses Java, embeds into Internet explorer
 - 1999 Microsoft extends Java (knowing that Sun will get mad and sue them)
 - 2000 Sun gets mad and sues them.
 - 2001 Sun gets injunction, which says Microsoft can't use Java.—Microsoft drops Java support from Internet Explorer, effectively killing the language [it's still breathing, but trust me it's dead] .. whats ironic is Microsoft comes out smelling like a rose, in court they say "we have to have the freedom to do it our way, Sun told us it's their way or the highway, we took the highway" .. no legal expert in the world even consider accusing them of anti-competitive business practices from dropping Java support, after all Sun made them do it. But Sun was setup to fail, they were played like a puppet from day 1. Want another one:
 - 1992 Microsoft wants to own the Internet, realizes the way to do this through the browser.
 - 1995 Microsoft have a good market share, but is facing trouble due to anti-competitive behavior with Netscape, mostly because they are giving their software away for free—and everybody knows it's just to kill Netscape, but nobody cares. Meanwhile netscape begins to feel pressure.
 - 1997 Microsoft settles with court, continues to apply pressure to OEM's under the table. I can't tell you how many stories i've heard where they've done this—NOBODY comes forward because it would mean the end of your career.
 - 1997—Microsoft side steps the Netscape arrangement by "embedding" JE inside the operating system, blab blah blab.. stuff happens .. freedom to innovate (tell me one thing they've Innovated)
 - 2001- it's great, now a webpage can crash by Operating system (Which btw: I blame you guys for since you made them "take it into the OS"). They now have a 95% share?? I can keep going on and on and on .. just give me some time. The bottom line: YOU NEED TO RETHINK YOUR PLAN—go for broke, don't settle for less, otherwise you certainly aren't doing this industry, or the consumer a favor. Explain to the judge how they've consistently violated every agreement anytime it was in their best interest. Explain how the current arrangement will basically ensure that you're out of their hair, and they're free to do business as usual. Please reconsider the punitive damages for Microsoft, make them redo their licensing, make them publish ALL protocols they use as PUBLIC DOMAIN [okay at least no licensing which prevents the Linux folks from building an interoperable and better product].. please think about it.

Subject: Microsoft Antitrust Settlement comments

I think that the DOJ has let Microsoft get away with very light penalties (to put it mildly).

What is at stake for a consumer is one's freedom to choose, not the ability to restrict anybody's right to innovate. Most of the media coverage and even the DOJ's points, unfortunately, do not address this issue. It may not be directly the point of the antitrust case, but there is relationship here which cannot be ignored. Microsoft routinely flaunts open standards and protocols and misuses its dominant position in the desktop. Since it has lots of money, it can simply destroy any competition by buying the companies out and destroying them. Standards are there for a reason: they allow interoperability between different vendors products and ultimately drive down the costs for the consumer. If you look around many of the day to day products, like films and videotapes and electrical sockets and many other common items, the costs for consumers go down due to standardization, since companies have to compete ruthlessly to be the provider of the cheapest solution. Some standards examples from the computer and communications industry are:

- open PC architecture
- The Internet protocols (TCP/IP) and many communication standards
- Computer buses like PCI to interconnect peripherals and devices
- IEEE POSIX standards and so on.

The same can be applied to many widely used and common computer applications like word processing and spreadsheets. If the interfaces between applications and Operating System adhere to standards, there can be many competing applications to the now dominant Microsoft Word and Excel. History shows that wherever standardization occurs, ruthless competition drives down costs. But Microsoft does not allow this to happen.

Are there examples of products where two products are very similar and offer almost the same things, but one is practically invincible from it's position? Compare Microsoft Word and WordPerfect (from Corel). A reference to the ubiquitous Halloween documents (whose authenticity has been publicly acknowledged by Microsoft) shows the views Microsoft has towards standards.

Now, one cannot force a company to adopt a standard, since it may believe that what it has to offer is superior. Fine. It is perfectly OK not to follow standards. It is generally true that when a company does not follow a standard, it will end up pricing the product higher than the ones compliant with the standards (e.g. some Sony products, Bose sound systems etc.) This is logical, since customer may have to pay more for the superior products.

The current situation is so bad in Microsoft's case that consumers end up paying higher for an inferior product

(compared to the Linux operating system) and still feel that they don't have any choice in the matter.

It is almost evil to let injustice get away unpunished. It is unworthy of a great republic to let a situation develop where citizens are slaves to a dictator/monopoly rather than being able to choose. Each citizen can be a king only where the freedom to choose is not compromised.

Subject: comments about the settlement

The settlement is not in the public interest because:

1) Over years, Microsoft has made and continues to make large amounts of illegal monopoly profits. Nothing in the settlement remedies this. A large fine is necessary.

2) Tomorrow, if Microsoft decided that SQL Server was part of Windows, and Office was part of Windows, the settlement agrees that that would be okay as Microsoft gets to decide what is part of windows and what is not. Not putting a limit on what new functions can be integrated into Windows is obviously not acceptable.

3) As you know, and as many Microsoft employees and ex-employees have stated publicly before about cases in the past, if Microsoft, for whatever reason, is forced to publish their APIs early on, which would allow competitors to be on equal footing with similar Microsoft products, Microsoft outruns them by keeping changing the APIs—essentially forcing the competitors to always follow and never be on the same page. This is well-documented practice. There is nothing in the settlement that prevents this practice. Note that because of all the ill-gotten monopoly profits, Microsoft is better capitalized than any other software company, and will thus always win this battle.

4) The settlement makes free and highly innovative software such as Samba essentially impossible. This is very clearly against the public interest. Microsoft should be forced to license all API-related intellectual property for free.

5) A good measure for whether "competition has been restored" in the software industry is whether or not startup companies will get funded by professional venture capital investors in Silicon Valley, who may compete with Microsoft some time down the road. This settlement makes no difference in this respect at all. ANY investor will run immediately if there is even a remote chance that there will be competition with Microsoft at any point in time. This is clearly not a market that is level, allowing free innovation for the benefit of consumers.

6) The proposed restrictions on Microsoft conduct are in no relationships to the size of the violations of the law. The settlement is so obviously insufficient that we have to assume that the justice department was somehow politically motivated to agree to

these terms. If so, the judge is obliged to turn down the settlement under the relevant laws.

7) Any serious conduct remedies—while theoretically possible—will be so complex and difficult to enforce that they are infeasible in practice. The original court was correct that the appropriate remedy is breakup.

8) Microsoft should be forced to publish all APIs to its operating system sufficiently in advance to a commercial release, so that 3rd parties have a chance to build competing products in time. If a 3rd party could build a Linux-based Windows API emulator, for example (which they can't in practice, see issue #3 above ...), competition would be much more real. In an even better scenario, it would be a standards body under the auspices of a recognized standards authority who would define the APIs, not Microsoft.

9) Similarly to the rules that carmakers are under in California, Microsoft should be forced to make sure that by a certain date, say, 3 years from now, at least X percent of all desktop operating systems sold are not Microsoft's. I don't see a reason why this can't be demanded—and it would most certainly restore competition.

10) Microsoft should be prevented from leveraging the desktop monopoly into any other market whatsoever, such as embedded systems or servers.

Thus I believe the settlement is very far from the public interest. It should not be accepted by the court.

Best regards,
Johannes Ernst.

Subject: Inadequete

In the 1995 consent decree Microsoft promised to build a "chinese wall" between its applications and OS divisions. Microsoft also promised that it would reveal the API's to competitors to ensure a fair competitive environment for competing applications.

When Judge Sporkin refused to sign off on this consent decree the DOJ and MS went forum shopping and got Judge Jackson to sign off on the that consent decree.

Flash forward to the trail held before Judge Jackson and was shown that Microsoft purposefully ignored all the restrictions of the 1995 decree. Every witness that MS presented at the trail were shown to be disassembling and lying. When Judge Jackson expressed his honest outrage in seeing his court be insulted and abused by Microsoft's dishonest tactics Microsoft went forum shopping yet again.

Microsoft is on its 3rd Judge.

The Court of appeals has unanimously agreed that with Judge Jackson's ruling on Microsoft's anti trust criminal behavior. Microsoft has shown itself to be dishonest and untrustworthy by violating its previous agreements.

But the DOJ wishes to give them yet another bite of the apple. Once again the DoJ wishes to promote a toothless meaningless agreement with an organization that has shown its disregard for the laws of our country. This is a sham agreement with a corrupt company. Microsoft's excuse is its pursuit of power and greed. What is the excuse of the DOJ for selling out the American public.

From: David
To: Microsoft ATR
Date: 11/17/01 12:03am
Subject: Failure.

I feel that the settlement reached with Microsoft will be a great service to big business..., if by big business you mean Microsoft. 3 years of being watched by 3 people of whom Microsoft has a say and pays them and what after 3 years? You have enough emails about how this Settlement will suit M\$ interest VERY well indeed. And they will not be punished at ALL. ..i.e.-> no penalty. But I have an idea for you, and I'm sure I'm not the only one with this idea.

Recommendation that WILL get Microsoft's attention... put in place a penalty to M\$ to be paid out to (via an acceptable medium UN-influenced! un-influencable by M\$ but truly independent or at least less friendly towards M\$. This is a penalty after all!) to go towards Open-Source projects. More directly Linux. This WILL get M\$'s attention and present much more of a hammer over them than any amount of money could as they already have more than enough of it.

Open-Source.. that is what scares M\$ and they will respect (as long as it is monitored by Independent people with powers to monitor and make public their findings (Quarterly report?) without (!) Microsoft's influence or shadow hanging over them as well as the right to impose further fines as required) a fine which helps a competitor with whom M\$ is unable to bargain or exercise influence over. Most importantly Microsoft is Afraid of Open Source. Perhaps the only thing it is afraid of and will do everything it can to stop Open Source. Anything to stop it via any one of the companies past tactics to others. This can be reflected in M\$'s statements about open source of which I'm sure you have many examples already. One note; imagine what would happen, (of if you prefer? why it has not yet happened by a single major OEM company) if an OEM began to ship a small number to their computers directed at the "small" market out there that would like a pre-installed Open Source OS. There aren't any such examples that come to my mind, how about yours?

Otherwise I feel that the DoJ has let me as a consumer down and is not acting in my best interest with it's current apparent wish to quietly let this matter slide. I also feel that the idea of the DoJ "tiring" and being worn down insulting. I hope similar stances aren't

taken in other places in the government because the DoJ is tired of pursuing the case. Most important of all, this so called settlement stinks. I expected better of the DoJ in light it's representing not only a number of U.S. States? but that they appear too weak to win for lack of conviction, purpose, and sense of duty in the face of co-operate which has been found guilty of law breaking and monopoly abuse.

Thank for you time? and thank you for you help upholding the rights of the smaller companies looking to survive in light that to upset the giant is to cast yourself into it's shadow.

David.

Subject: Never Strong enough

Once again the government fails to meet the needs to protect the people that placed it in control. A WEAK effort to slap the wrists of a Monopoly, is how I would grade your agreement.

After being FORCED from my job as a Consultant at Immediant Consulting inc. Dallas, TX due to threats by regional Microsoft executives, I believe the DOJ did not present their case very well. While I do believe that some of the Microsoft bashing is unfounded, I know that there are efforts to hold back Java and Linux development by Microsoft. It amazes me that the government can't collect enough evidence to prove the FACTS that all US citizen's know.

MICROSOFT IS A MONOPOLY!!! Microsoft does not aggressively compete, they actively attack those that might offer innovation, or alternatives to a solution that is unstable, unscalable, and proprietary.

For future reference, why put out an Email address AFTER you have finished the case??? Why not publish an email address BEFORE the case, during the discovery phase, to help you find out where to look??? If you would have provided a way to give you evidence to prove your case, I'm sure you would have had warehouses of evidence.

Thanks...For nothing!!!

Shawn Fitzgerald

Java Consultant, Linux user, Windows sufferer.

Subject: good job:

As a young technology guru, I have seen the possibilities of how "high tech" will take us into the future and help to stabilize our economy. I very much agree with your decision in the Microsoft Corporation settlement. I am happy to see that the Bush Administration is not against Big Business, but instead, putting trust back in to business. Many may disagree with the effectiveness of the settlement but I truly believe this is in the best interests of our economy. Thanks for all of the hard work and especially the great job of the administration in defending freedom and democracy during these trying times.

You all are to be commended!

Thanks again,

Subject: Microsoft Settlement

I'd like to voice my displeasure with the Microsoft (MS) settlement. Given the fact that the Department of Justice (DoJ) essentially won the case, and rightfully so, it's sad to see that the end result is a toothless agreement that will have little impact on MS's actions. The agreement fails on three counts: It imposes no penalty for MS's prior actions, it

sets rules of conduct that have loopholes, and it sets up a system of oversight and enforcement that is closed to scrutiny and very favorable to MS.

Judge Jackson and every Judge on the Appeals Court all agreed that MS violated the antitrust laws on several counts. Yet, with this settlement, MS is getting the proverbial "slap on the wrist," not even facing a steep fine for their misdeeds. It seems to me akin to a convicted bank robber walking away scot-free with loot in hand, because he promised to mend his ways.

This agreement was apparently sought in part to provide quick relief, but anyone who has studied Microsoft's history will tell you that the corporation has always pressed the envelope of legality. Even as this case was ongoing, MS hastily released Windows 98 with IE integrated in order to preempt justice, and later released Windows XP, which takes the anticompetitive bundling of applications even further than the earlier products that got them into court in the first place. If MS has the incredible audacity to undertake such actions while being sued, who would believe they would willingly submit to the spirit of this agreement? I would think any settlement or judgement would depend upon the remorsefulness of the defendant, and there is absolutely none in evidence in this case. It seems quite naive to think that MS has changed its ways; if history is any guide, we will see MS dragged into a new antitrust suit in a few years, something that could have been avoided if proper remedies had been instituted now.

In conclusion, I'm shocked that the DoJ went from a position of victory, and pressing for punishment and an effective remedy, to one of timid, ineffective compromise. I as a consumer can see that MS wields incredible power in the computer industry thanks to their monopoly on the base operating system upon which other software is layered, and it's plain that Microsoft intends to leverage that power as much as possible to everyone else's detriment. Rumors abound of ugly politics setting the Department's agenda, but whatever the case, I still hope that justice can be served.

Sincerely,

Reid Rivenburgh

P.S. For a more detailed account of the problems with the settlement, see Ralph Nader's letter to Judge Kollar-Kotelly, available at <URL:<http://www.cptech.org/atlms/rnj12kollarkotellynov5O1.html>>.

Subject: ok...

So, cave in, do what our not really the majority elected president wants you to do. How can it be good for the economy for a proven monopoly (one the people have known to be a monopoly quite a great while before the courts decided it was) to go unchecked.

It seems rather futile to apply restrictions and reprimands to their rather old school markets. I really hope someone has been paying a good deal of attention to microsoft's

recent ventures. They are moving away from their "traditional" market and into the world of reoccurring prices. Ala passport and whatever the latest buzzword is. It is a market of services. Whatever you do, do not imply restrictions on something solid, imply those restrictions into behaviors, protocols, and licensing... I'm sorry I have little faith in the judicial government..., it has not worked in my favor for many years...

I don't expect you to do what is right for the people or industry. I don't even expect you to do what is right for our government. I don't expect a great deal anymore...

I would just like to see our government is a just a little bit stronger then a greedy corporation. (Publicly held corporations by law and definition are greed driven)

I'm sorry it has to be your heads all our anger will fall on...

Subject: Microsoft Settlement is unfair to the consumer

Dear sirs,

I would like to respectfully say that I believe the settlement between the DOJ and MS is VERY unfair. It will do very little to protect competition from monopolistic practices by microsoft, it will do nothing to help the consumer and open source software, and it has NO penalty for past monopolistic conduct on Microsoft's behalf.

First, while I highly commend the DOJ arguing for the option to have a version of windows shipped without certain extra

programs.. I feel the DOJ has neglected to realize that MS's vast potential for control with Windows XP. Many programs are built well into XP and are designed to control the user in a manner that benefits MS. They will control what hardware we can use, what software we can use (the registered hardware/software only), what we can see, hear, and do. While I sympathize with the DOJ's view that this will benefit the DOJ in regards to pirated software and obscenities such as child pornography, NO COMPANY DESERVES THIS AMOUNT OF CONTROL. I say it very strongly because I believe that this level of control goes against our constitutional right of choice in the pursuit of life, liberty (LIBERTY), and happiness. This is a big gamble on MS's part, if they succeed they will essentially OWN the entire Internet, all electronic transfers, and the electronic life of all individuals who want to do either.

Second, whether or not any competitor gains access to windows code makes little difference. What matters is that MS takes file and communications protocols and makes them trade secrets, then restricts the ability for anyone to use them only to those people who will not compete with MS. This destroys open source, free software, and the ability for a new company to get into the market in an environment where the majority of computers rely upon MS protocols. The FIRST thing that should be done is to forbid MS from making its protocols secret and keep them from making agreements with other companies for secret protocols, and instead require that all protocols in use by MS become open to ALL of the PUBLIC. This will keep them from destroying any more smaller competitors who are just trying to bring something new to market, and will likely make it a more friendly environment where individuals who were afraid to compete before will feel less threatened and less likely to lose their entire life's goals, dreams, and life savings trying to make a product MS will either want to swallow up or totally destroy.

Third, MS has repeatedly demonstrated that they believe they are above the law. They continue to do and flaunt their monopolistic practices despite the court battle, and frankly are saying "hey the DOJ can't touch us". Their monopolistic practices are WELL documented, yet the DOJ's settlement has no penalty for their past crimes!! Lo, should all criminals be so lucky! At the very least MS should have some major billion dollar penalty assessed against them, if not have some major oversight and payments. If the DOJ does not feel it deserves the reparation payments, feel free to pay them to all of MS's consumers. We won't argue, I would like to point out a few things as well:

* Judge Jackson said that Microsoft would raise the prices of its next version of Windows because it can do so and nobody would have a choice to pay it. Please note that Windows XP is double the cost of Windows 2000. He also said that they would continue to add new programs and hijack protocols for their own benefit, and they have done that as well. I have at least 6 utilities such as Zone Alarm (a personal firewall) that

will not operate under Windows XP) WHY? They are spitting in the face of the DOJ and saying "so what? do something about it.", while at the same time cutting the legs out from under competition such as Zone Alarm, who have done it right and refuse to sell to Microsoft.

* Windows XP only allows you to use it 5 times on different hardware configurations. They also argue that they should be allowed to restrict us to putting their software on only one program. WHY? Should we also be restricted to only using cars in the same state we bought them, or only being allowed to read books for only a year before destroying them or giving them back? The SOFTWARE INDUSTRY is NO DIFFERENT from other industry in respects to buyer's rights. Why let them cheat us out of that because they want to be different? The legal history on buyer's rights is VERY clear. Please don't change them.

* Microsoft has not "innovated" anything new for as long as I can remember. They buy other markets out, they steal, and they hijack. They take something that already exists, change it, and call it their own. They are "software terrorists". In fact I can think of a number of technological and/or software advancements that were squashed by Microsoft BEFORE THEY EVEN GOT STARTED because they would have been competition.

* Microsoft is NOTORIOUS for their software being buggy and full of security flaws and holes. Yet we are supposed to allow them access to all of our personal information and financial information? This is a HUGE national meltdown just waiting to happen!

* Microsoft is moving forward at an extremely rapid pace. Their .Net project is designed for two purposes: 1. to control the internet and get part of any micropayments or online transactions, and 2. to make a worldwide network where you pay for the temporary use of a program (whether it be an operating system, application, utility, or game matters not) and bypass the entire issue of "buying a program". Imagine that. That would be like all of the car companies getting together and deciding they will no longer sell cars, but ONLY rent them.

* Microsoft MUST be under some form of oversight and have NO SAY in who is in that con-m-iittee. TI-WY are the criminals! Why should they get a chance to make it easier on themselves? That would be like prison full of criminals getting to decide who the prison warden will be. Don't let Microsoft fool you! Please consider that Microsoft's plans for the future involve controlling each and every person who has a computer and wants to go online. Stop Microsoft before you can no longer do so. For the consumer's sake, for the sake of competition and free enterprise, and for the sake of technological advancements in the future.

Thank you for your time.

Subject: Microsoft Antitrust Settlement

I think that Microsoft should be made to sell a 'striped-down' version of Windows for a far less price. With all of the current bundled software included in WinXP, Microsoft is undoubtedly creating a large monopoly in the computer software industry, pushing larger and more experienced companies with better software out of business. Instead of also making it available to run other software without purposeful intervention. At yet, Microsoft forces all of its uneducated users to toy with their inferior versions of popular software. Microsoft has no previous experiences in the fields of instant messaging or digital photography, and yet they decide to include it with the operating system that will be forced down the throats of home users all over the country.

On another note, they are bosting their inferior software, and also ideas stolen from other operating systems (i.e. the virtual desktop concept from linux) to give their new WindowsXP more leverage over other versions of Windows. These will convince more users to pay the outstanding prices they are charging. As if they aren't getting enough revenue from their new Xbox. Along with offering a stripped down version of Windows, we should also FORCE Windows to remove their .NET, Bill Gates is going to take over the world scheme, and get rid of their insecure uS (internet information server) protocols which are being shipped and turned on as default in their Internet Explorer, which is the dominating browser ever since it was bundled and set as default with Windows.

Subject: this settlement is disgusting

I am a student at Michigan State University. Last Wednesday we reviewed the Microsoft anti-trust violations and deceptive practices in my telecommunications policy class. It made me think that the DOJ is very afraid of Microsoft, that George W. Bush does not want the Microsoft case to exist, and that Microsoft blatantly broke the law on numerous occasions. If I was a burglar and I broke into 10 houses and stole lots of jewelry. I would go to jail. I wouldn't be told, "hey, stop committing crime now okay? If

you say you won't do it again, we'll just keep an eye on you for a little while." If I was Microsoft and I did everything in my power to destroy any potential middleware from arising using despicable practices including forcing other companies to bend to their will through complete lies (Mac Office) and purposefully distributing Java tools which only worked on my version of JVM while proclaiming that not to be the case, I guess that I do only get told to stop, and promise NOT TO BE A CRIMINAL ANY MORE. THEY BROKE THEY LAW.

DoJ: Hold out your wrist please Mr. Gates. *slap!*

Bill: Ooooooaaaaay, I've learned my lesson. *mutters something under breath that sounds like, "suckers!!!!"*

DoJ: Well I guess it was worth the millions and millions spent on the case then, if you learned your lesson. Forget the court costs or any monetary reparations whatsoever Mr. Gates. The American taxpayers gladly shoulder the load of your invaluable lesson.

Angry Narrator: And no one lived happier ever after than Bill Gates, and no one in America really cared because they are disillusioned with the system and resigned to the fact that Microsoft does whatever it wants. Had the DoJ protected the people's interests, who knows? The day might have been won in the name of good, but alas, that is not the case.

The End

Good job DoJ. I mean bad job. yeah, bad job is what I meant. If you're going to have a giant trial and spend a lot of time and money, doesn't it make you feel frustrated to finally end up with a castrated settlement?

Thank goodness that Justice has 9 states with the common sense not to accept this rubbish, as Justice is not accustomed to dining on rubbish. Hopefully Microsoft will pay through the nose in civil trials as well. Whatever happens, you failed. That's how lots of people feel. Not just me. Lots of people. I can start a list if you want.

Subject: My comments on the DOJ—Microsoft settlement.

I am Jerry L Kreps

521 West Garber Avenue

Lincoln, NE 68521

(402) 475-4657

This settlement after FOUR years, and on the heels of an equally worthless consent decree from a previous 'settlement', which Microsoft totally and completely ignored, is exactly why the US legal system is held in such LOW regard by a large majority of the American People. The DOJ simply does not work for the best interests of the common citizen any more. They behave more like lackeys of big business. Why? The DOJ won the court case and Microsoft is convicted as a monopolist. The DOJ won the appeal and Microsoft's conviction stood. The original DOJ team is replaced by Bush appointees who immediately snatch defeat from the jaws of victory.

DOJ lawyers defended the settlement stating: "Government lawyers carefully weighed 'those proposals but ultimately chose other sanctions against Microsoft that they believed would result in the most effective and certain relief in the most timely manner.'" This is patently absurd. "Carefully weighed" suggests that Microsoft's side of the scale was preloaded in its favor. "most effective and certain relief in a timely manner" is a description of the relief that Microsoft received from the DOJ, but it is NOT a description of any possible relief the consumer might gain from this settlement. Microsoft's relief is effective, knowing they will not be fined a single penny after stealing Billions from the consumer. They know it is certain, because the DOJ is behaving like the 'fix is in'. They know it is timely because even though XP was quickly launched ahead of schedule in an attempt to snowball the DOJ into more lenient terms, Microsoft received NO terms of significance at all, so their XP launch, the biggest invasion against privacy and the Bill of Rights yet launched, goes ahead unhindered. The DOJ team goes on to say 'the settlement, if approved by the court, would "eliminate Microsoft's illegal practices, prevent recurrence of the same or similar practices and restore the competitive threat" the company faces from rivals.'

This, too, is patently absurd. There is absolutely NO teeth in this settlement. When Microsoft violates (not if) what paulty "restraints", and I use the term loosely, there is in the agreement, the ONLY punishment is that they have to endure another TWO years of the same ineffectual watchdogging.

Frankly, if you haven't been able to figure it out yet, I am disgusted at the DOJ incompetence. It goes beyond incompetence, it is criminal. Disbarment proceedings would have been undertaken had any of you performed so poorly in the public courts of the land. Mr Nader gave an excellent analysis of the "settlement" in his letter to the Judge. <http://www.cptech.org> Although a convicted monopolist Microsoft is given NO meaningful punishment, NO meaningful supervision. NO teeth which could restrain Mr. Gates and Mr. Ballmer from proceeding full steam ahead without changing any tactics. In fact, the settlement, rather than protecting the consumer, legalizes Microsoft's outrageous behavior. Of the three "watch kitten" (dog would be an inappropriate description) one will be selected by Microsoft, and that person will have a say in the selection of one of the other two. So, right from the start, the committee is biased at least 1.5 to 2 out of 3. If a two out of three vote is required then Microsoft already possesses the ability to BLOCK any unfavorable decisions the committee could make. What brilliant genius on the DOJ team agreed to that? In addition, the three "watch kittens" will be housed on the Microsoft campus, in Microsoft offices, paid by Microsoft, and they will be under a GAG order, essentially preventing them from informing the public about any progress Microsoft is making in abiding by the essentially worthless settlement. What brilliant genius on the DOJ team thought that scheme up, and how did he/she get the rest

of the team to sign on? A better question would be "How much did they get paid to sell out the American People, you know, the ones whose interests they are supposed to represent?"

Your "IMPACT" report is pure fabrication. It reminds me of Neville Chamberlain's peace treaty with Hitler. It became apparent SIX WEEKS before the settlement was announced that Microsoft had advanced notice of what the outcome of the settlement would be, and immediately returned to its Monoplistic, predatory attitudes by modifying its PC OEM licenses to restrict what icons and other software the PC OEM could put on the Desktop along with WinXP. Additionally, Microsoft forbade the PC OEMs from installing any other OS along with WinXP in a dual boot mode. These requirements are extremely egregious and certainly an example of Microsoft LEVERAGING its monopolistic position even before the settlement was announced. If Microsoft can be so bold as to embark on this course of behavior even before they supposedly knew what the outcome of the case would be, not one single point of this settlement will deter them for a single second to do even bolder and more outrageous acts. weak Expect to see their legal teams, by threats of legal action and by shady use of patents and other legal devices, intimidate Open Source programmers, the Linux Kernel team (one of whom, Alan Cox, has already resigned from maintenance of the 2.4 kernel because of fear of the DMCA being applied against him for revealing security fixes in a GPL product for which he is a principal programmer!!!! !!)

For the last ten years software houses and security companies and software researchers have had a consumer favorable policy of rapid reporting of bugs and security holes, along with demonstration code which proves the bugs or holes and which can be used to test the weak effectiveness of any patches software houses offer. Microsoft is against informing consumers of the threats to their personal and financial information that bugs in their software poses. They would rather such holes are kept secret. This was the standard 15 years ago, and such holes were rarely admitted, and bug patches rarely offered. In fact, anyone who announced bugs was immediately persecuted, both professionally and legally. Eventually, because of the never ending holes, primarily in Microsoft's OS and software, an democratic policy of rapid announcements was instituted. Recently, in response to a virtual flood of trojan horses, email viruses, server security holes found in Microsoft's software, especially the IIS web server engine, the Gartner Group has advised consumers to switch from 118 web servers to Apache web servers. Even though such holes had been known for several years in various Microsoft products, it is only after Gartner Group advised consumers to switch to Apache did Microsoft address the problem. Their solution, announced a couple of days ago, well AFTER the DOJ settlement, would have the computer world return to the bad old days where bugs and holes would be kept secret. Only Microsoft, flexing in new INVIGORATED MONOPOLY POWER would attempt such a wholesale brow beating of the

computer industry. I have no doubt that Microsoft has been accompanying the public lashings with private threats of economic penalties for all companies that don't toe their new line.

Subject: Microsoft Anti-trust trial

I think it sums it up to witness that Gates himself is "happy" with the settlement. Who in their right mind, when found guilty of such a severe crime as anti-trust law violations, should be "happy" with the punishment they receive? This is an obvious sign that the settlement was far too lenient on Microsoft. As a software engineer who is very aware of the enormous market power behind Microsoft, I sit here simply appalled at the weakness and lack of backbone in our government's justice department.

Corporate entities seek out business models that are ambiguously or even very clearly illegal or un-constitutional in foundation, then they expect the government to protect their flawed business models just because they "help support the US economy" by providing jobs and goods to our citizens. And what does our government do? It steps right in line and defends outrageous legislation like the DCMA and this bogus resolution to the antitrust trial.

Here I think it is very clear, the new administration came in, ignored the history of the case, ignored the experts who basically unanimously suggested not just breaking MS up into two or three companys, but several companies, as well as other severe restrictions on their business practices... and got right in line behind "the big american corporation, savior of our economy". Who cares if our constitution and laws are flushed down the toilet, as long as we keep unemployment low right? And even as you negotiated with microsoft, they made a fool of the justice department by continuing to flaunt their monopolistic practices, launching the most absurdly anti-trust violating piece of software yet, Microsoft XP, and continuing to bully the entire vertical market of PC manufacturing into locking out their competitors' products. History has proven that it is better to take the medicine now then wait till later, especially in the case of monopolistic practices. Unfortunately it appears the justice department doesn't even have the technological understanding to realize that microsoft is hurting and stifling

innovation and technological progress in our country by preventing nearly any other US company from having a chance to launch competing products because of the enormous barriers to entry they can impose through leveraging their monopoly of the PC operating system market. And this damage far outweighs any short term benefit to our economy. Eventually this will lead to the US being surpassed technologically by companies from other countries like Germany, Britain, or Israel. But I realize this letter is a complete waste of time. After all, it's clear you are on their side.

Thanks for nothing DOJ.

Subject: Settlement still insufficient

For quite some time now I have been following this case. I, as a tech., depend strongly on a decision that will force fair play in the market place. Microsoft as a whole has, as far as I have noticed, complete disrespect for any standardization. Which in its self is a step toward trying to force a monopoly. For example, when Netscape introduced Java Script microsoft decided to spin off a version that offered only enough limited compatibility so as to force people to switch web browsers, following started the Browser War". To further their plans for a takeover of the web market the then integrated Internet Explorer 4 into windows 95, and then following was the release of windows 98 which had no option of removal. This is what started the government intervention, but it doesn't stop there. With the release of Windows XP, Microsoft has, in the same fashion, bundled more of their software with the operating system without giving the user a means to remove it. Programs such as Windows Media Player, Windows Movie Maker, Microsoft Gaming Zone for example cannot be removed by standard uninstallation methods, nor even by deleting the files from the hard disk, due to the fact that they are immediately copied back regardless of the end user wanting the programs or not. This is the behavior that must be stopped, the company is doing exactly what it was doing before the court case had even started.

The result is the end user being forced into using a Microsoft product to force competition out of the market. Look at any of the bundled applications that microsoft has added to their standard installation and check the userbase of the bundled product vs competition. Every time they incorporate another item into their product another companies userbase goes down. It is invasion of citizens own personal freedom to be forced keep a product they do not want, and it is an even greater injustice to let a company continue to abuse their position in a marketplace the way microsoft has. All I can ask, is that the settlement not only be based on a way to secure a free marketplace for the US, but to also help the millions of windows users attain the ability to choose what applications they want to use on their PC.

Subject: Microsoft Case

I understand this is an e-mail where citizens can comment on the Microsoft anti-trust case.

My personal opinion is that the government should not interfere with the workings of the private sector. In cases of anti-trust, I thought that the law was intended to prevent monopolies. Well, there are other companies that produce office software and operating systems, which are they only things that Microsoft seems to even have a large market share on. Just because a company has a large market share, that doesn't mean they are monopolistic—it might just mean they are good at what they do.

Am I biased? Well, I personally won't buy Microsoft products because they are too expensive. But I think that in a free market system, if most people in the US decide to buy it, that's their choice and Microsoft should not be punished for it.

Sincerely,

Simon Smith

Subject: Please answer my questions...

Why did you, the government, let us down by letting Microsoft off the hook? A five year probationary period? A time-limited sneak peak at PORTIONS of the OS source code? That's all? For a company that has been using illegal practices and violating the Sherman Anti-Trust Act and subsequent antitrust laws ever since its domination of the OS market began?

I have a couple of questions for you:

(1) What about the draconian licensing agreements that MS has with some hardware companies saying that only Microsoft OSes can be shipped on their systems or they'll be cut out and not given MS OSes for their systems at all? That's not monopolistic? What did your agreement do to address this situation? Nothing? Was this rumor/issue addressed in discussions at all?

(2) Did the Republican/big business philosophical underpinnings of the prosecution have anything to do with it? The DOJ under Clinton was much more firm and seemed to have their act together much better than you guys, which pains me very much to say, considering I'm a conservative Republican...

(3) When there's a monopoly nobody gains in a market economy. Competition makes for better products and prices. The consumer gets higher quality at a lower price. When did you all forget this BASIC principle that I understood in junior high school?

(4) Most important question—How can putting any piece of software into their OS to compete with ANY other software in the market NOT be monopolistic? Even if 3rd party software companies have access to SOME MS code, for a limited period of time (5 years), how is that going to truly remedy a monopoly situation?

The bottom line: the computer desktop OS isn't just a tool for use. It's becoming a utility—necessary for everyday functioning in more peoples' lives every day. Monopolistic utilities need to be regulated and broken up. What was wrong with splitting MS in 2- one side goes OS development and the other does everything else?

Bottom line—You have failed me as a consumer, and in the long haul, you may have done more harm to information technology throughout the world than can ever be repaired. My choices for desktops will forever be limited (especially if Open Source Software fails in the marketplace)—and MS will control information throughout the world when .NET is implemented in its fullest form and I HAVE to use it because everyone else is. Thanks...

Id like to have some answers to my questions. I pay taxes—I pay your paychecks—give me some answers. So—WHAT THE HELL WERE YOU THINKING??

Subject: Comment on MS settlement

Microsoft has been harming consumers for years. From the early '80s they had tried to kill Apple's more advanced computer system, until the system architecture of the Intel world allowed an equivalent graphical interface. Now Microsoft COULD have supported Apple's system better, but CHOSE to make a less useful system available for years, all the while saying that the world needed DOS. This hurt consumers. It hurt Apple, and it hurt many small companies that were involved in the marketplace.

More recently, Microsoft has killed, one at a time, any small and successful product line. Disk Cache vendors were swallowed. TCP/IP vendors were destroyed. There are other examples of this predatory bundling in addition to Netscape's web browser.

And now you are proposing a settlement that will give Microsoft complete impunity from the guilt of their past actions.

Shame on you, DOJ. Are you for free enterprise or just afraid of those high paid lawyers that MS has?

Subject: Microsoft anti-trust case

Hi,

[one line summary: the proposed settlement is not strict enough]

Please consider this when considering the proposed settlement: This may very well be the most important antitrust case since the railroads were broken up.

By having a monopoly on the operating system, Microsoft is able to leverage into other areas of computer technology, with the stated goal of controlling all aspects of

computing. Controlling computing means controlling almost all aspects of modern financial life. Without strong legal intervention, it will be impossible for any business or individual to function without paying Microsoft whatever Microsoft wants them to pay.

A comparison with the railroads being the only form of transportation in or out of a town is a good one.

Microsoft has shown itself to be a well managed, and an effective company—we can absolutely count on them to be very clever and effective in maintaining, building, and exploiting the monopoly they have developed. Any possible loophole will be exploited. We can count on it.

Thanks for reading (whoever is reading this....)

Subject: proposed remedy not enough

Microsoft has thumbed its nose at the Department of Justice the entire trial. Even the trial has not curtailed their abusive practices, 2 weeks ago their new msn network forced web surfers to use Microsoft's browser to view their site! Their windows software is overpriced, filled with security flaws and the worst part it is, many have no other option but to use it. I'd be interested in seeing the world where innovation ruled, and the progress that would be made without monopolies.

Subject: DOJ/MS Settlement

To Whom it may concern,

I am greatly disappointed that although Microsoft was found guilty of violating the law, the U.S. Justice Department has essentially let them off with a slap on the hand. Microsoft has shown in the past, that it has no respect for the law or court rulings. It will continue to stifle innovation, crush competition, and charge whatever prices it wants for its products. I don't want to believe it, but it really looks like Microsoft bought their way out of legal trouble.

Thank you for reading this.

Subject: Words about Microsoft and the anti-trust issue

To whom it may concern,

I do not believe the best interests of American society, nor the interests of the free world are being considered with respect to the Microsoft Monopoly.

I am a business owner in a small technology based company providing

solutions to the industrial automation market. Manufacturing and processing industries in North America are facing increasing threats from low cost producers in other regions. This takes away jobs and displaces our workforce. For industry to compete in this environment, industrial automation is a necessity.

We have had experience with various operating systems and software. We build our own for our products while employing industry standard interfaces. Microsoft has too big a hand in the infant yet powerful area of computing. Microsoft is well recognized amongst the small guys making it happen, but just like the former USSR structure which existed and was talked about between trusted friends, but never 'officially recognized' for what it was, we are feeling powerless. The ultimate toll will be on the system that lets Microsoft continue to abuse it's market position. The business practices of Microsoft need to be moderated in the best interest of our future generations. Too much influence is being concentrated and only the influenced cannot see this.

With all due respect, Terry Hermary

Subject: should not have let them off easy

It is a shame that the DOJ has let Microsoft off with almost no real penalties. Having been in the industry, I have seen Microsoft kill great ideas and companies time and time again. They have repeatedly show that they are a predator, not an innovator. They have yet to contribute anything of their own to the industry. Now that they have been let off, they will no doubt continue to wreak havoc by altering standards and trying to make them proprietary. (They did it to kerberos and several others.)

Anybody familiar with the industry is insulted when the government says (or concedes) that Microsoft is not a monopoly or does not leverage their monopolistic position to squash competitive companies, standards and ideas.

Subject: Government Settlement

Dear Sirs:

As a consumer presently and in being in the PC business for 30 years at IBM, I do not agree with the your judgement against Microsoft. The judgement needs to go further into allowing Microsoft to bundle its software in an integrated package. Just look at

Microsofts XP software and you can see that the company has not changed it's ways. I am not against Microsoft for coming out with innovated programs but they should be sold separately with other competitive programs and not as an integrated software package.

Regards,

Ralph Butler

Retired IBM Staff Engineer in Product Development.

Subject: good decision

Since most of the e-mails directed to this address are probably sent by people who think that the ruling in this case was a poor decision, I felt the need to send an e-mail saying that I think it was a good decision. I believe this for many reasons, including the following.

First, OS. Microsoft is not a monopoly, Linux is becoming a larger "threat" as it gains more and more support, including support from industry giants such as Intel, AMD, and HP. If nothing else, Linux is certainly a viable option now and I don't think it can be argued that Microsoft is a monopoly in the OS market.

Second, Office Suites. Microsoft is not a monopoly in the Office Suite market either. Other options exist, such as Corell and Star Office. Adobe also makes good software for page layout and publishing, and Macromedia dominates the internet and web design market.

Third, Internet Browsers. In this area, other options such as Netscape and Opera exist.

Fourth, Intellectual Ownership. Microsoft retains intellectual ownership of the source code for all of their software, to force Microsoft to open their source code for their competitors to see is illegal according to our constitution. They own the software and have the right to open the code (or not open it) to whomever they want. It's called capitalism, the notion on which our country was founded.

Fifth, Innovation. Microsoft's competitors are upset because Microsoft includes to many applications and tools with their software and say that either Microsoft should not be allowed to do so, or should include their tools too. That is all innovation, Microsoft makes a good product, and then they bundle it with their other software, how is that illegal? They own the rights to the software and can distribute it however they want to. That is like telling a car maker that they have to allow the buyer to decide what company they want all the options in their car from. (I want my power windows from company X, and my automatic locks from company Y. No, the manufacturer makes their own equipment and bundles it with the car.) Again, it's capitalism. We are not talking about Standard Oil or Mitsubishi here. Microsoft does not own everything (I have yet to see an entire computer system designed, built, and sold by Microsoft, hardware and software—that could potentially be a monopoly—take a look at Apple). Microsoft designs good software and

many people use it because they like it. I don't use software just because it came bundled with my system. I use what I like to use best. Microsoft has plenty of competition and with the internet, the competitors software is plenty easy to get.

Date: 11/17/01 6:00pm

Subject: Microsoft Settlement

[Text body exceeds maximum size of message body (8192 bytes). It has been convened to attachment.]

Thank you for posting the settlement information on <http://www.usdoj.gov/atr/cases/ms-settle.htm>. I do appreciate this act of openness by the government's DOJ. It does facilitate some degree of hope! I just wish the rest of my reaction could have retained that happy, hopeful note.

As I read the settlement, I couldn't help but feel betrayed, cheated and dismayed by the real terms. Where's the pain of penalty? Where's any strenght in oversight? What is the real structural changes expected to occur and how will they be ensured to occur? It's toothless, clawless, and simpering in tone.

The DOT terms of settlement with Microsoft are incredibly weak and shortsighted, and show and incredible lack of concern for the consumer. It obviously yields a big ZERO value to the consumer and seems to ensure Microsoft's continued dominance. You are giving us a bandaid when our collective arms have been twisted and broken, and kneecaps kicked in by Bill Gates and cohorts.

There is no dollar amount penalty assessed against the richest company and richest man in the world for years of monopolistic and predatory practices, nothing against a company known for earning billions and also known for paying zero federal taxes. Their 'taxfree' dollars were being spent on the teams of lawyers that chewed up the DOT up like candy. It really makes me angry to see the DOT applying a few baby teeth to the armored and muscled 90000 pound Godzilla that is Microsoft is. In fact, the settlement appears to make things safer for Microsoft rather than show them there's a price to pay for behaving in a monopolistic manner for decades. IBM should have had such a deal!

The DOJ did not impose a single dollar amount penalty against this company which has billions of dollars in assets, greater than many 2nd world countries.

It did not stop Windows XP and require unbundling of products that supplanted dozens of competitor software maker's products. Microsoft tends to redefine any company making a profit selling something that runs on Windows as a competitor and try to grab their market with a low ball or free Microsoft alternative (that quickly becomes a standard). Remember Netscape? Not in the settlement.

It did not stop Microsoft from excluding Java from XP and the newest versions of it's Internet Explorer. For 8 years, Java has been the glue of the open world of the interative web...now it's tossed aside in favor of

Microsoft's insecure and proprietary ActiveX products and .NET. Microsoft can bald face declare Java as insecure without challenge. It can change Windows and other software delivery timetables to make sure that Java isn't available. Remember Netscape? Not in the settlement.

It doesn't make user security something that MUST be improved by Microsoft.. every week seems to bring out more flaws allowing the consumer's wallet to be picked by the electronic thieves using the internet. If there was any true competition, Microsoft would have to fix these flaws and fast! Digital Research had DR DOS which Microsoft worked hard to eliminate, and that was buried in some weak settlement. You know Microsoft operates like pirates, and yet the settlement doesn't seem to demand anything back to the consumers who tried to use DR DOS and Windows 3.1 and who eventually had no other choices. You leave us captive on the Microsoft pirate ship, and they have their hands in our pockets.

There are no rebates to the consumer for operating system software known for it's 'blue screen of death' and shoddy customer service (all problems solved by reinstall windows and rebooting or upgrading for hundreds of dollars). There are countless stories of people losing their data and functionality as Windows corrupts the data and itself. We have no recourse. The EULA says we can only get up to \$5 or a new CD from Microsoft if try to see any recompense for a misperforming \$600 Windows product. There EULA actually states their software isn't guaranteed to do anything useful although their marketing constantly stress ease of use, productivity and usefulness. No compensation to dozens of companies crushed by Microsoft, or bought out and folded, on it's way to global domination.

No compensation to the truly innovative companies like Borland, who had it's top development staff lured away with millions dangled before them. If a company dares to make something competitive with Microsoft, Microsoft tries to steal their developers, and set up obstacles to the companies success, invoke legal actions, anything but compete fairly and openly. No inquiry into it's use of stock options to hide wealth from taxation, pay off all sorts of parties, and how hard they work to keep the value propped up without really delivering true improvements to consumers.

Real security comes from peer review by real experts in the open market. No opportunity for this is created since whenever Microsoft can show a security concern, it can hide it's software or bring legal action against anyone trying to understand how it works. The settlement gives Microsoft further protections in this! Where's the penalty? I see them benefited! No requirement to fully open the Windows software APIs and source code to all developers who would dearly love to provide more innovation and variety and improved functionality to our free markets. Microsoft is a defacto standard but can protect it's products from competition by continuing to shield it's inner workings from other competition. Many competitors products stop working whenever a 'patch' is provided but

Microsoft's own products don't seem to snagged like that, but gain market share every time this occurs, since nobody wants software that will break when a new security patch is needed. Microsoft only grants access to the inner workings by requiring the viewer of source code to sign documents that cause an agreement to never write anything that competes with Microsoft products, and may not reveal anything viewed.

No penalties assessed to Microsoft or compensation awarded to PC manufacturers for the contracts restricting them from what they could distribute. No punishment to Microsoft or compensation to web ISPs where Microsoft is forcing them to adopt their software as standards. No support for developers and software firms who would dearly like to innovate but are shut out by Microsoft's closed approach to partnering and development, worse they are often steamrolled by Microsoft who pretends to show interest in supporting a developer's product until they can use their R&D to produce their own replacement. Their goal is to take every profitable market which PCs have, through other companies products, helped generate, and then to take all the credit for it.

There needs to be requirements of Microsoft that all it's products will begin to and continue to adhere to international computing standards instead of innovating their own private world of interfaces that only works with Microsoft products. The cost to the international and national businesses of having to constantly rewrite and upgrade in order to meet Microsoft's latest 'industry standard' is in the billions annually. NO business application I've written using Microsoft tools 3 years ago will work without being rewritten today. Businesses are bearing an incredible burden trying to keep up with Microsoft's pace of technology change, and being forced to constantly rewrite the same business critical software for each new version. This lack of stability is a cost no where addressed or calculated. Any IT manager can tell you that the cost of supporting a PC on a workstation desk amounts to thousands of dollars a year. adding critical inhouse business applications can triple that. Microsoft uses planned obsolescence to assure a constant need for developers to rewrite, for new license purchases, and new more powerful PCs to be purchased.

The government should be pressing Microsoft to fully cooperate with the Open Source groups and to open their systems. Closed systems offered by Microsoft are far more expensive than consumers realize, especially as free products steadily evolve into for fee products and then into monthly service fees. With .NET Microsoft is trying to move all Windows consumers to a subscription basis through MSN. Our rights as consumers have been reduced by every legal innovation in their EULA—software licenses, and further reduced by DCMA and UCITA. Now Microsoft and it's third party affiliates remand to themselves the right to shut down the PC of Americans where they believe some violation of their license terms might be occurring. . .no due process, no right to appeal, it's just shut down and

'deactivated'. Where was our Justice department when these changes occurred in Microsoft licensing? YOU MUST MONITOR THEIR EULA AGREEMENTS. They basically are giving themselves rights to our wallets and any information we have on our PCs and any consumer data collected by them or their affiliates (which they hope will be all business and governmental bodies). Why are you not protecting our right to privacy, our rights to control our own information, our rights to fair use of copyrighted material? You give this all to Microsoft without a fight.

Now Microsoft is trying to contain free speech about it's security weaknesses by restricting the conversation to only special privileged groups. What is the DOJ going to do about that? Consumers and businesses will have no idea whether or even if they lost control over their own wallets due to a security weakness known to Microsoft to terrorist groups or electronic crooks, or perhaps to political action groups favoring Microsoft's lobbying causes.

Microsoft is seeking to control access to the information and services on the internet through the MSN portals and requiring Windows XP users to go through this using Passport, Hotmail, etc. Where is the DOJ on this? No penalty. No inquiry. See no evil, hear no evil, say no evil. Your settlement with Microsoft befits the three legendary monkeys. Microsoft never improves the software already installed by making it faster, smaller, more efficient, or more reliable. They just pile on features, require more upgrades, require hardware upgrades, replace competitor packages with their own, make it require a bigger PC, which triggers more purchases of new Microsoft products, and continues the constant annual extraction of billions dollars from American and world consumers. Now they try to move us to subscription basis, and consumers can't figure out how to stop this madness!

I had hoped Republican leadership and constitutional conservatism would have meant real respect for constitutional rights of citizens and American freedoms of choice, advocating legal action which opens markets, supports free trade, and keeps the markets open to all American and world innovators. Instead, I see capitulation to THE CORPORATION, weakness, and the moral fiber of jello. You now seem to be the big corporation's department of justice, not The People's. Your settlement is encouraging Microsoft to continue it's dominance indefinitely. You apparently can't stand up to the biggest software bully in the world on behalf of your fellow American citizens or the world community. The DOJ staff were allowed to shrivel, to become so overworked, and so tired that they couldn't fight anymore. The DOJ was allowed to be bullied about and shaken down by Microsoft lawyers. The DOJ doesn't stand for much now, and to the world our DOJ looks like it's owned by Bill Gates. So many complain that people don't respect government anymore. . .I see it as government has obviously failed to retain that trust and respect, and I imagine Microsoft is secretly laughing at the DOJ as well. It has publically revealed it's arrogance against the DOJ and attempted to deceive courts and subvert process. So to me, this deal looks way too

sweet and easy on the single biggest company on the face of the earth, and vindicates their hard nosed, never yielding resistance and antagonism to our laws.

Subject: Microsoft Settlement

As a consumer and a Microsoft hardware and software user I wish to make a few comments about the settlement. I have never experienced any anti-competitive practices. I have always had choices of hardware and software products and have never had to make decisions based on any monopoly situation. I have purchased a lot of Microsoft products and other company's products as well. I purchase on the basis of the best match between the features of the various products and my specific needs and benefits from those products. I have never been forced into anything because of lack of choices.

Microsoft's continual marketing of new and innovative products has enhanced my personal and business productivity and has kept the competition continuing their product development to compete in the marketplace. This all works out to the benefit of all consumers.

The recent slide of the US economy began with the Government's attack on Microsoft. A remedy has been proposed that is acceptable to Microsoft and to consumers like myself. Let's activate this remedy now! I guarantee this will mark the beginning of a resurgence in the strength of the American economy!

Good Luck on moving forward on this—we all need it!

Subject: Microsoft Case
To: The Justice Department
Re: Consumer Response

Over the past few weeks I have been attempting to understand the decisions

coming from the Justice Department in response to the Microsoft case. It would appear as if they've decided to represent Microsoft rather than the people's best interest. The details of their most recent decision does little if anything to rein in the growing reach of Microsoft in it's efforts to dominate and control the PC/IS, wireless and Internet based technologies.

It seems to me that one of the keys areas left unresolved is "middle ware" and Microsoft intentions regarding the use, sale and deployment of "middle ware." It appears that Microsoft competitors have been left at the mercy of Microsoft by the Justice Departments proposed settlement. The settlement, if upheld by the court, allows Microsoft to continue using it's Monopoly operating system as a kind of Trojan Horse, bundling it's product offering into the operating system. Such a procedure further facilitates Microsoft's practice of injecting current and future applications directly into the consumers experience, while competing middle ware providers of applications for music players, browsers, CD burners, Java apps and financial programs (just to name a few) have to continue fighting an uphill battle to access the same customer space.

Action that were not adopted, such as the one mentioned below, would have given considerably more weight to the proposed settlement:

"The Justice Department also considered forcing Microsoft to sell a stripped-down version of Windows that did not include built-in software for browsing the Internet, reading e-mail, listening to music or sending instant-messages.

The current settlement seems to have found a way to ignore current reality and the future market implications. OEM equipment providers will not be significantly incented or motivated to challenge Microsoft and its present position of advantage. To do so would be too costly. Competing software companies are in no position to do so, given Microsoft's size, monopoly positioning and financial capabilities. Competing middle ware companies are going to get crushed; leaving Microsoft with a clear field to continue their domination.

There is much more that confounds me about this case. The proposed Justice department settlement is laced with loopholes for Microsoft to dance around it's obligations. Access to key Windows code has been effectively shielded from non-Microsoft application programmers. How absurd is it to think that a panel of 3 people can keep a tight rein on Microsoft, when even the Justice Department and the Federal Government seem to be unable to do so?

I hope the judge presiding over this case will give considerable consideration to pushing back against the Justice Departments and Microsoft's position. The current settlement proposal is comparable to giving General Motors unfettered power to determine the brand and type of cars that will use the interstate highway system and to allow them to deliver to the consumers door their own brand of gas, tires and oil. Given this kind of power to influence consumer choice, the results would be pretty obvious. Of course even this scenario, if enacted,

would be significantly farer than what the Justice Department is now offering up. At least General Motors has some form of competition already in place; something Microsoft has never had to deal with.

I have enormous respect for the 9 states and their attorneys, who have demonstrated the kind of intestinal fortitude, lacking by our federal judicial system and many of our elected officials. With all due respect to the Justice Department, political tinkering and political influence seems to be written all over this case.

I'm hoping the Justice Department will find cause to revisit their findings and their proposed solution.

Subject: Too Weak

The government caved!
Microsoft has 95% of the OS market in the world. And for the next 5 years someone is gonna watch em? Who pays, probably me, if for no other reason that to use computers in the world today one must buy Microsoft products.

WindowsXP extends this monopoly. It comes with normally extra products. Where one might buy Real player, it comes with Windows Media, putting Real out of business. Where one might buy any add on, Microsoft will usurp the industry standard, and extend it, putting anyone who tries out of business. Anyone who wants to work with the 95% is required to buy a microsoft product.

They didn't get here by participating, but by strong arming the their customers (in this case, computer buyers aren't the customers, since they were required to buy a computer pre-loaded with Microsoft software, the PC manufacturers were the customer). Microsoft argues they inovate. I have yet to see anything they have inovated. MSDOS, they bought that. Excel, purchased. Internet Explorer, purchased. Name one thing they invented? Sure they package all this, but so do others.

To only give them a pathetic minor set of requirements full of loopholes and

exceptions does no one any good. You might as well send 'em a check for all the money spent on the Justice department, maybe then they will stop trying so hard. Microsoft would be better served by putting Bill Gates in jail for a year or two, to remind corporations that strong arm tactics are the same for gangsters as well as corporations. If the president of the company served time, that would discourage illegal practices more than pathetic wimpy minimal restrictions.

I am moving to the country that does it. It is really hard to be patriotic when the very government that we ought to support doesn't support us.

Subject: An Alternate Solution

Dear DOJ,

The current agreement in the Microsoft antitrust case is seriously flawed. All the analysts agree that it will not have much effect on the companies operations, much like the previous 1995 consent decree. Indeed the MS stock price actually rose after the details of the agreement were published, a sure sign that it was ineffectual.

So what remedy would really bring competition back to this market? To know this one must understand how MS maintains its monopoly:

- 1) Tight control over OEMs.
- 2) Leveraging the windows installed base by bundling.
- 3) Secret file formats/APIs which hinders other software vendors compatability/performance.

Broadly speaking Microsoft is a box which denies access to its intellectual property. If you remove the box you solve the problem. The solution I propose is: The source code of the Windows family of operating systems should be made available under the LGPL (<http://www.gnu.org/licenses/licenses.html#LGPL>) except to any company which manufactures, supplies or sells PCs. The design documentation for this source code should also be made available under a similar license and in a format readable by non-Microsoft web browsers.

This solution has many beneficial aspects:

- 1) It is easy to implement.
- 2) Competition is installed within the market. Any company can build and sell windows or a derivative.
- 3) It is easy to police.
- 4) The exceptions guard against the build up of vertical market segments.
- 5) Microsoft remains free to innovate (it is just everyone else is now too!)
- 6) Under the terms of the LGPL license, any derivatives of the source code must themselves be licensed under the LGPL and therefore be available to those who buy the executable version. This prevents re-assertion of the monopoly by Microsoft or one of its new competitors by denying access to the source code again.

7) Access to the design documentaion aids understanding of the source code and hence gives competitors a leg up. It also stops Microsoft obsfucating the source code and

putting all the inforation about how the code really works elsewhere.

Microsoft certainly wont be undone by this solution. It has a strong brand name and it has a competitive advantage in that it knows the source code.

It also does not address Microsoft's monopoly in business software. My reasoning for this is that there are competing products in this arena and with the increasing importance of the web, the Office file formats will become less important.

I look forward to Microsoft arguing that IE is not part of the OS sometime in the near future. (At which point Microsoft's intentions toward the Internet should also be examined.)

Yours Sincerely,
Chris Moore
Software Engineer in the UK

Subject: BUNDLING

Why is bundling products against the law? There are many products bundling in the market in the world. Clock with radio, TV with VCR, computer with printer or scanner, buy one ice cream and get one free, 4 tires get one free, get dinner and get one free, buy a new car and get radio free and install. What's wrong bundling products?

When one is not smart enough to invent their own programmer codes for software. You can ask the government for help.

When one buys a software it will cost one price. And if one buys a million softwares the price will lower like wholesale. Right? Bill Gates goes out to promote his products everytime. I never see any competitors doing the same. Only they sit in their offices like church mouses and waiting for salary and bonus and cry monopoly. Some one said "Cut off the air supply" is that a crime? Heard many times and loud "I will kill you, you sob" that's what one call a figure speaking and not a crime.

Subject: Microsoft Settlement

Dear Sirs;

This is just to let you know that I believe that the settlement that you have proposed is ludicrous. It is a reward to Microsoft for breaking the law. The only thing that you can say about it is that it is prompt. It does not provide relief for the countless companies that they have put out of business nor does it bring any amount of equity to software companies. One item of of the settlement that will prove to be particularly troubling is that no person of the three member committee overseeing Microsoft will be able to testify against the company in court. Presumably this means that you would have to build a case independently of the committee. One question, What good does the committee do? Apparently nothing.

As a result of this settlement, Microsoft will be back in court within the next 5 years on different Antitrust violations. I can only hope that the next administration will not capitulate in the same manner that this administration did.

Sincerely yours;
Joseph N. Charmella

Subject: One 'vote' for harsher punishment
Hi

I'm the IT Manager of a small/medium business in Western Australia, the POST Newspapers (<http://www.postnewspapers.com.au>).

As an Australian citizen, I can't claim to have a direct say in this matter. However, I must express my concern for the current settlement, given that legislation made in the US about IT has the depressing habit of

filtering through to Australia—and also, the US is the only place where MS can be practically restrained.

While I can't claim to be well educated in the details of the MS v DOJ proceedings, I must express my concern about the potential for loopholes, etc., in the current settlement. As has been stated in some media, the settlement was reached more out of lawyer exhaustion than any real breakthrough. MS wore them down.

The settlement also strikes me as a slap on the wrist—it doesn't do much about the privacy concerns about MS. for example (though it may be outside the scope of the settlement to deal with these), all the hooks to MSN and other MS services, etc. tisers—can change these, but MS is unlikely to have the OS installer ask them to pick from a list of option for, say, seach site or web browser. They will set themselves as the default, and perhaps 5% of users will ever change it.

As for OEM rights—that is a step in the right direction and I applaud the settlement's handling of that part. Overall, I'm a proponent of the "harsher penalties for CRIMINAL COMPANIES," plus restrictions such as requiring them to ship both their product and the competing products in "middleware" applications like web browsers and eMail clients. So if they can't remove IE from windows, all well and good—integration has its advantages. But they can make the hooks available to Mozilla.org, they can implement an alternative and have it ship with windows as a user-selectable alternative. Even better, have the windows installer ask the user what mail program, etc, they want to use!

MS couldn't provide support of course—but they don't provide useful end-user support anyway.

So classify me under "tougher restrictions and penalties"... and thanks for taking the time to read this.

Subject: Criticism

Charles James was quoted as saying, "Some of the loudest and most vocal criticism has come from some of Microsoft's competitors." I would say that this is only true because they have the money and power to be vocal. However, I agree completely that if this is all that is going to be done to MS even though they have been found guilty, then the entire process was a waste of time. How much money did US tax payers spend to get a guilty verdict only to have it basically ignored by a remedy that has absolutely no teeth?

Most little guys in the industry are afraid of MS and will not be vocal.

Best regards.

MTC-00000969

From: Karen Asher
To: Microsoft ATR
Date: 11/17/01 7:32pm
Subject: Comment on Proposed MS Settlement

Sirs,

As a former employee of the Bell System who served during Divestiture, I would like to congratulate you on perpetrating the biggest joke ever attempted in the field of anti-trust/anti-competition law. It is encouraging to see evidence of such broad and uninhibited slapstick in a field that is, normally, devoid of any vestige of humor.

I won't address the Proposed Microsoft Settlement terms as I feel Mr. Nader's previous comments to you need no embellishment.

I will speak to my experience as a Microsoft customer and to the frustration and limitations of operating a consumer PC while using an MS platform. In order to keep my Operating System (OS) functional, it was necessary to refrain from deleting MS's Internet Explorer which I do not use. At that time, my resources were limited and I was not in a position to purchase either another PC or a larger hard disk drive. I was not able to fully use all of the functions of that machine which I bought for my own purposes. I consider that to be as intrusive as any other of MS's business practices.

Since then, I have purchased other machines with larger disk space and newer Operating Systems. All of these Operating Systems have been variations of MS Windows as I use MS Office for my personal and business needs. Each machine has the same limitation caused by disk space taken up by MS's Internet Explorer. The most recent OS (ME) will not perform the OS-update function unless Internet Explorer is loaded. No "patches", no security updates, nothing. If you feel that this isn't non-competitive in design and effect, then you have seriously failed to assess the totality of the circumstances from the consumer's point of interest. MS's intrusive and un-warranted business practices have cost me money I did not wish to spend over and above the cost of my purchase of their retail products. Microsoft has dictated to me, via their manipulation of their operating systems, the additional software that I could utilize and has prevented me from purchasing and/or using software that would have been of benefit to me.

As this trend has continued unabated since Windows 3.0, I have no reason to believe that it will cease as a result of your efforts. I insist that any settlement with Microsoft that purports to be undertaken on the behalf of consumers or potential competitors must include remedies sufficient to deter MS's monopolistic business practices. Full disclosure of source code to potential competitor's is essential to ensure this. It is also essential that MS not be permitted to place insurmountable obstacles in the path of such competitors. Your Proposed Settlement is not sufficient to guarantee the performance you claim it will produce and should be modified accordingly.

Respectfully,
Karen L. Asher

From: Sam Katz
To: Microsoft ATR
Date: 11/17/01 8:04pm
Subject: Antitrust settlement

Microsoft is not playing fair in its bundling game, the manufacturers have no incentive to replace the middleware, and Microsoft can change the user's preferences by simply giving them notice. Microsoft's bundling uses up system resources and hard drive space, and as I barely use any Microsoft products this is unacceptable. Microsoft uses the price of the Windows operating system to pay for its supposedly "free" software. They should sell them as separate componets. Here are some examples:

1. Firewall: Competes with Norton and a bunch of other utilities

2. CD Burning: Competes with Nero (arguably superior according to review sources.)

3. Windows Media Player (which thanks to the blocking of MP3 ripping puts sites like MP3.com at a difficult circumstance) It competes with realplayer. Its browser can be used to leverage standards like ActiveX and create sucerity hazards for users.

re: Microsoft Settlement

Bottom Line:

Settle with Microsoft and let them proceed with making better and improved software for the consumer.

Discussion:

As a retired electrical engineer, I have been a computer user in the last 12 years. Admittedly, I am a dumb computer user. I am good at word processing, but if I have to delve into the operating system, I am lost. So its a good thing the consumer has one operating system to work with.

I believe that a "standard" operating system is best for the consumer. Microsoft continues to improve their product and the price is not exorbitant. Considering what the software does, it's a bargain.

I can't imagine what the computer business would be like if there were X number of operating systems. Every application would have to be compatible with each operating system. It would be a mess. Sure it's competition, but has Microsoft raised their prices to hurt the consumer? I don't think so.

Forcing Microsoft to disclose Windows source code is NOT FAIR to any company.

Are companies willing to give away their proprietary information? Probably not!

The consumer has not been hurt by Microsoft! they have made computers available to all of America!

Thanks for considering my opinion.

Howard King

P.S. I am a Corel Word Perfect (competitor to Microsoft Word) user, but it is based on the Microsoft's operating system. Windows is great!

Subject: comment

Thank you for the opportunity to comment.

I think the government has demonstrated that Microsoft has monopoly power in operating systems for personal computers, and the evidence shows that it uses that

power in various ways to further its own ends to the detriment of consumers. Microsoft claims to innovate, but in fact Microsoft copies the work of smaller innovative companies and then uses its monopoly power to supplant their businesses.

Even throughout the trial period, Microsoft has continued to engage in these practices in new business areas such as streaming media. Microsoft's ownership of the operating system franchise makes this practice possible. This situation does not encourage innovation; on the contrary it puts a damper on it because no one can afford to compete with Microsoft.

I urge the DOJ to do something to stop this practice. The current settlement seems to be nothing more than a slap on the wrist. This is very disappointing.

Sincerely,

Roy Christmann

Subject: Microsoft issues

Please, please, please stop trying to "protect" us from Microsoft. If they were a monopoly, the quantity and/or quality of their product would have gone down, or the price would have gone up, or both.

Instead, we now get more computing capability by a huge factor, at a price that has actually gone down, than we ever could get before. Innovation proceeds apace in economies that leave innovators alone. It is squelched in economies that control, regulate, and "protect." We cannot afford to have you people "protecting" us any more. It's just simply too counterproductive. Government is an extraordinarily poor allocator of resources, whether they be capital, talent, entrepreneurship, or jobs. Please don't try to outthink, out-allocate, or outsmart the free marketplace of ideas. It's never been done successfully, and there's really no reason to try now. Could you just figure out a way to quietly leave us all alone? I know it flies in the face of what you're trained to do, but please try. We need you to be on our side for a while, and just let nature takes its course. We'll be fine. Honestly.

Subject: A monopolist should be punished.

Dear Sir/Madam,

The DOJ had previously found Microsoft to be a monopolist, but the settlement included no punishment for past actions. Isn't that a bit weird? It left doubt as to its protections against future Microsoft monopolistic practices. To make things even worse, not long after the DOJ settlement, Microsoft announced it had agreed to another settlement regarding a separate class-action suit brought against the company by numerous parties that alleged overpricing of Microsoft products. On the surface, the settlement forces Microsoft to donate

software, hardware, and services to America's poorest schools. However the settlement could simply introduce Microsoft to a market where they could further extend their monopoly.

I am writing to support a counter-proposal that Red Hat Inc. brought forward. In its counter-proposal, Red Hat offered to provide free software to every school in America if Microsoft provided the value of its donation in hardware costs rather than its own software. Please consider this proposal seriously, for the sake of the welfare of American schools and children.

Best Regards,
— Haifeng

Date: 11/17/01 8:55pm
Subject: Comments on the United States v. Microsoft Settlement

Dear Sir:

I am writing with a few comments and concerns about the settlement proposal that has recently been established with Microsoft. I am appreciative of the Department of Justice's action to provide this e-mail address for such concerns.

1.) This proposal doesn't seem to attempt to remedy the problem with non-Microsoft middleware accessing files from Microsoft middleware. For instance, it would be advisable to restrict Microsoft from making undocumented changes to the Microsoft Word file format to prevent Microsoft from illegally maintaining a monopoly on word processing software.

2.) This proposal doesn't cover potential problems with .Net, including Microsoft's potential ability to restrict projects (such as Ximian Mono) that attempt compatibility with this format. While the proposed remedy prevents Microsoft from making a protocol that only Microsoft servers can access, it does not seem to prevent Microsoft from making Windows use open protocols to access services that can only be powered by Microsoft products. This is crucial due to the fact that Microsoft's stated goal is to move most computing activities over to .Net infrastructure.

3.) The settlement does not restrict Microsoft from taking anti-competitive action by requiring Original Equipment Manufacturers to pay for Windows even on systems that do not include the Windows operating system. This could be a major hindrance for alternative operating systems such as Linux.

4.) The proposal lacks any preset penalty, other than extension of the proposal, to Microsoft should the terms be violated. Since Microsoft has a track record of ignoring the previous agreement with the U.S. Department of Justice, this could potentially be a problem. In the least, this lack of penalty could cause irreversible harm during the interlude before a new Judgment could be handed down.

5.) Finally, the proposed settlement lacks any retroactive fines or punishment for previous anti-competitive behavior.

Thank-you for your time, I appreciate your consideration of the points considered above.

Subject: Re: A Strong Disagreement...

To Whom It May Concern (The United States Department of Justice):

Quite frankly, I am strongly disappointed with your terms of settlement with Microsoft.

Your conditions are nothing more than an incredible slap on the wrist for the completely diabolical corporate behavior, Microsoft has clearly exhibited.

As well, many citizens, consumers, and businesses that are a great part of the high tech industry were considerably disgusted, as your result of lack of appropriate action.

Thousands of jobs, products, and new markets have clearly suffered as a result of Microsoft monopolistic pillaging.

Without equivocation, the applicable and suitable consequence would have been either the complete breakup of the behemoth, or a requirement that Microsoft only produce the basic Operating system- no internet browser, email, and media player.

For this would truly allow an open and free marketplace.

I, just as several others, are beginning to question what is the true purpose of having a Department of Justice—when it is apparent, the division is completely ineffective and worthless?

The DOJ needs be a part of the solution, not part of the problem.

Thank you for your time and consideration.

Subject: The Microsoft remedy"

To whom it may concern

I am a computer user and former worker in the IT industry (I have no reason or desire to work in IT anymore thanks to Microsoft). I find this "settlement" that the Department of Justice proposed to be disgusting and worthless. I believe that it will do nothing to bring competition back into the computer industry and will only harm the United States in the long run. If this "settlement" goes through, then the US will be put into a computer backwater where Microsoft rules and anyone who lives in the US will be unable to "talk" to the rest of world due to Microsoft protocols that don't "work" with any other computer system on the Earth.

If this is what the US government wants, then I am leaving this country as fast as I can.

Subject: I do not support the settlement

As an independant developer who, I feel, has been indirectly hindered in his operations by the Microsoft monopoly, I was very unhappy to see the proposed settlement with Microsoft.

The enforcement authority as presented is far too limited in ability, too closed from public view, and easily coopted, manipulated, and deceived.

You presume that you can somehow trust Microsoft to act in a proper manner, when they have clearly shown that they are untrustworthy lawbreakers, who will purjer themselves to hide their true intents and practices. Their behavior during the suit was absolutely disgraceful. Their extensive use of astroturf "grassroots" support shows how little true support they have. This cannot be ignored.

For the settlement to have any real effect, it must not give Microsoft future negotiating power. You cannot let them define things as being "security related" and then hide them. You cannot let them say they are doing a best effort, when that best effort is not successful. You cannot let them say anything, because they will *certainly* lie. The proposed settlement is clearly not in the interest of the People of the United States. If it takes longer to get a ruling that you can enforce, then so be it—the compromises you propose are far, far too great, and practically an encouragement to Microsoft that they can blatantly break the law and not receive significant punishment. I also hope you take into consideration the fact that some of the pro-Microsoft/pro-settlement feedback will be fraudulent, as Microsoft has done exactly this sort of thing before. If you do find evidence of this, I hope you make it public, and even better prosecute those who would manipulate the system in such a non-democratic and dishonest manner.

Subject: My opinion.

Dear readers,

I feel that I should write an e-mail like this because I would like you to know my thoughts about the MS/DOJ case that has been going on. I strongly feel that the DOJ has done an astonishing work for the settlement of the Microsoft case. The Microsoft company had to go to justice and be judged. The company didn't know how to play the role respecting other companies. The monopoly was getting huge and many other few companies were going down because of that. Users now have the free opportunity to choose wether to use Internet Explorer or not since it can be deleted. Other small companies now have the spot they never had before. I really believe that Microsoft is gonna have to work harder than never to keep up with rival softwares and companies. It means better products from Microsoft and more space for the others.

Congrats,

Ravi.

Subject: my 1c worth

I've been a software developer for almost 10 years.

In that time the options for the mainstream consumer seem to have dwindled. On the plus side, I guess it's easier for someone to walk in off the street and get a computer that mostly works most of the time. There are no confusing choices to make as to which OS, wordprocessor, browser etc., it's all there and it all mostly works. I guess it's like walking into a car yard and saying "I have \$5000 to spend and I want a red one!". That simple!

I'm annoyed that people don't have the choice anymore, or rather, that the choice is glossed over so completely. Maybe I'm a tech-snob, expecting everyone to have the same understanding and appreciation of computers that I do. Why should you have to understand the internal combustion engine, and how to service it, just to buy a car? The most charitable interpretation of some of Microsoft's actions are a desire to make things easier for the average consumer. Even if that were the intent, I think we've reached the point where the public at large is no longer served by this attitude. I think computers have become complex enough to warrant some respect/appreciation from the users. I don't think we can force consumers to have this appreciation (licenses to own and operate a computer? not likely, or even desirable!). However, when a mayor company completely disregards the consequences of their actions again and again in an effort for market share (mostly by adding features that more often than not result in security nightmares), then they should be held accountable in some way.

I can walk into a shop and buy a car powerful enough to be incredibly dangerous

in my novice hands (and I'll probably end up wrapped around a tree). I can buy a computer, connect it to the internet and become a source of a DDOS attack. The difference is that, at least the car manufacturer had to make some attempt to make the car safe to drive. Microsoft seems under no such obligation.

Though the cracked computer does not threaten life directly, how much longer will this be the case as more utilities are vulnerable to attacks from the net? how many lives would be at risk of major powerstations failed due to a DDOS my missions of compromised systems? OK, maybe that's stretching things a bit far, but what about the cost to industry? The email became a lot longer than I planned, and (until now) I even avoided mentioning the L word ("LINUX", there, I've said it!). I've tried to present what I feel are arguments applicable to the majority of computer users, there are many more applicable to computer nerds like myself.

I've you've gotten this far, I'd like to sincerely thank you for taking the time to read

my email.

with friendly regards,

Thomas Sprinkmeier

Subject: Microsoft Settlement

Forget about breaking Microsoft up.

The only way to allow the software business to become competitive is to force Microsoft to license their source code (on any product released for sale to the public), to anyone who wants it, for a reasonable fee (say \$5,000 or \$10,000), making it available within 90 days after first delivery date.

This allows anyone to make improvements and sell them, make additions and sell them, make competitive products and sell them. In other words, it allows competition to those who wish to pursue that course. It also allows anyone who claims Microsoft stole their code to see if the code sequence(s) are in the new product.

If you don't allow this, Microsoft will always hide behind the "improvements to the Windows experience" bunk and continue to pursue its cutthroat tactics

Subject: Enforce The Findings of a Federal Court!

Dear Renata Hesse,

Today in the mail I received an advertisement for Qwest DSL/MSN services (despite the fact that I'm already a Qwest DSL subscriber). I'm offended, on behalf of all computing consumers, on the technical requirements listed for using MSN internet service...

Nowhere on the cover letter, nor in the main text on the tri-fold brochure, is there any mention of technical requirements listed. The words "PC" and "Windows" are not even mentioned... On the back page, in a 3" square block of fine print, the requirements are identified as "Windows 98 Second Edition or later operating system." This, of course, means that only newer Windows PCs are supported, a typical Microsoft tactic...

A couple of months ago, a friend of mine in Colorado Springs got an iMac for his kids. He uses PC's for his business, and was already an MSN subscriber, and wanted to set up the iMac to use MSN for internet

access as well. Since the iMac already came with Internet Explorer (oops, I mean Explorer!) and Outlook Express, he thought that he already had the software that he would need to have installed. He called MSN tech support to get instructions on how to configure the iMac to dial in and get connected. After waiting on hold for a while, the tech support person told him that MSN could not be used on Macintoshes, and that they did not support it. My friend refused to accept this, and called me for a second opinion. Figuring that it just used a "PPP" dial up connection, I could see no reason why it wouldn't work with his iMac I had him open his "Dial-up Network Connections" dialog on his PC to get the phone number and user ID. Next I had him look at the network settings, and discovered that everything was set to use DHCP (Dynamic Host Configuration Protocol).

The only thing that I can think of that is different about DHCP on the Macintosh is that it expects to have the IP addresses for the Domain Name Service (DNS) manually entered into the configuration dialog. Since MS wouldn't give the DNS addresses to my friend, I had him dial up from his PC, then we used the "winipcfg" command to determine what addresses had been assigned by the server.

Now armed with the user ID and password, the phone numbers, and the DNS addresses, we set up the Internet preferences on the iMac, and within minutes we were online with MSN from a Macintosh! (It amuses me to do things that others, especially MS, say are not possible!) I think that it took us less time to solve the problem than he spent on hold waiting for MSN tech support!

As I've mentioned at a couple of MacinTech meetings this summer, Qwest has partnered with MSN to replace their own ISP services. Qwest.net, in exchange for offering Qwest DSL service to MSN users. They intend on converting all of their current Qwest.net residential subscribers to use MSN services by the end of the year, except for Macintosh and UNIX users that MSN says that they can't support. MSN doesn't offer several of the services that Qwest has offered for years, such as multiple email addresses for a single dial-up account, and automatic email virus scanning. These services will be discontinued when users switch to MSN.

I am offended not only because MSN won't support non-Windows platforms, but I'm also bothered by how they are treating PC users... Note in the requirements that it specifies Windows 98 Second Edition, or later. If a PC user was still running Windows 95, which would be perfectly reasonable for many home users, they would also not be supported. While they have the option of upgrading, this could turn into an expensive proposition. Chances are that they would be forced into adding memory, and perhaps adding disk space as well, as MS tends to increase the need for memory and disk space with each upgrade. While Win98SE is listed as the minimum, chances are not good that you would still be able to purchase an upgrade to 98, as it is (obviously) several years old. They would probably need to upgrade to Millennium Edition, which may introduce enough incompatibilities that they may then

be forced to purchase upgrades to many of their applications as well... All of this time, money, and effort just to have a faster internet connection!

As many of you know, even though my passion is really for the Macintosh, I have supported PC's for the past six years or so. I can't understand why a DSL connection that uses an Ethernet connection to connect to the computer, couldn't be supported adequately on Windows 95, or the first release of Win98, rather than only the Second Edition. The "or later" clause is also troublesome when you consider that NT4 came out in 1996, so it would apparently not be supported either. Only Win98SE, Millennium Edition, and Windows 2000 would be supported, as well as Windows XP.

It irritates me when technology companies almost seem to go out of their way to incorporate "planned obsolescence" into products and services in order to force consumers into upgrading. While sometimes the improvements in technology mandate changes and upgrades, both networks and the Internet were widely available prior to 1998, so I can't think of any reason that MSN would be unable to support high-speed internet access from older platforms. I believe that Apple has been extremely supportive of their installed customer base throughout the years. Apple's software upgrades have been kept very low cost, often free or available for the cost of shipping and handling, such as the 10.1 upgrade. Apple even used to offer hardware upgrades, where the logic board from an older machine could be replaced with a new one, literally making it the same as the new model. Microsoft's software upgrades are often more than half the price of the full product. Even though Apple's hardware may be a bit more expensive in the initial purchase, I still believe that they are less expensive in the long run to own, operate, upgrade, and support.

Microsoft has been working on new product licensing and support programs where the software and support are virtually rented or leased, rather than purchased. The cost to purchase standalone versions of the products will become increasingly high, until it becomes cost prohibitive to not participate in the programs, which force users to stay up to date with current software offerings. This isn't being done for the customers benefit, it is to provide a continuous revenue stream for Microsoft. They are afraid that users aren't going to be convinced that there are compelling reasons to upgrade to Windows XP or Office XP, and that they will just continue to use the applications and operating system that currently have, depriving MS of any additional profit. It has also been reported that Microsoft intends to stop supporting Java and JavaScript, popular Internet web site scripting languages developed by Sun Microsystems, in future versions of Internet Explorer. The only scripting that will be supported are Microsoft's own technologies like ActiveX and VBscript. This is not due to waning support for these competing tools in community, nor by expensive or restrictive licensing from Sun. I believe that Microsoft is once again attempting to "herd the sheep" in the direction that is best for Microsoft,

with no regard to the best interest of the user. I'm sure that MS hopes that since IE is so prevalent, with so many users, that more companies will be forced to switch their web sites to use MS web technologies, which of course are only available on MS servers.

I feel that companies should win customers and sell products by being better, not by being bigger. Positioning products to eliminate competition, reduce the number of alternative choices, or manipulate consumers down a path of increasing dependence are desperate practices. I have heard several sports commentators discussing the home run race during the past couple of seasons being driven by the competition between Bonds and McGwire. Without the pressure of the competition, and the incentive to outperform one another, many speculate that neither one would have accomplished the feats that they have. In the early days of desktop publishing, the race between PageMaker and XPress, or Illustrator and Freehand, made for better products all around. This kind of competitive, open market economy is what this country was built on. Microsoft, in my opinion, has lost sight of this view. They are not concerned about serving their customers, or providing them with innovative, useful tools to increase their productivity. At least, they are not as concerned with that as they are with making a bigger profit, squeezing more little competitors out of the picture, and expanding their market share until they have a completely captive market that they can lead around by the nose...

To serve customers with better products, and more options, they would want to offer the same products and services across a broader range of platforms. I have never understood why the Access database, such as it is, has not been offered on the Mac, when it is bundled with Office for Windows. FileMaker is cross-platform, with files that are interchangeable, so I am certain that this would be possible. Oracle has made their database run on Mac OS, why not SQL Server? There have been plenty of email servers on the Mac, why not Exchange? Why can't you synchronize a PocketPC device with a Macintosh the same as we do with Palm devices? My view is that MS offers products on other platforms only to dangle a carrot in the eyes of users, hoping to eventually lure them over to the dark side (a Windows-based platform) in order to get the rest of the features.

Apple, for instance, has produced FileMaker and ClarisWorks for Windows, and has recently released a Windows client for its free iTools web services. Palm offers desktop synchronization software for Macintosh and Windows, and there is free software available for Linux as well. Microsoft has also taken an adversarial approach to open source or free software such as Linux. Corel and Viso, before being sold out to Microsoft, had embraced the Linux community as an opportunity, offering their products to a new audience. Why wouldn't Microsoft want to offer Office for Linux, enabling users to pick the platform that best suited them? For that matter, it seems to me like Microsoft could do well to follow Corel's lead, and offer its own

distribution of Linux. MS could build a better installer wizard, port features like ODBC and OLE, and make a system that could easily interoperate with Windows machines, while perhaps offering higher performance on older hardware. They would still generate revenues by selling the OS, the applications, and the support services.

Well there you have it ! Now, have the "Ball's" to correct these situations and mead out the punishment to Microsoft that they have proven to deserve. A slap of the wrist won't cut it! They continue to abuse the consumer and the competition with their unbridled arrogance even while facing the pending punishment you are charge with coming up with. You know it and so do the nine states that will fight for justice.

Sincerely,
David C. Hill

Subject: DOJ/Microsoft settlement

To whom it may concern:

I feel that the proposed resolution was not properly worked out to the benefit of the American public. The proposed resolution was reached quickly under the disguise of Sept. 11. It was claimed that a quick resolution to this case would benefit the economy and the public. While in the very short term, this might have some validity, it seems that the long term needs more consideration.

Doesn't the release of Windows XP prove that Microsoft isn't going to change? They continue to "integrate" things into the OS so that alternatives are not available, and they continue to pressure vendors, so that alternative OSs are not available. While I feel that Microsoft has the privilege to include any software in the package that they wish to include, they should not be "integrating" everything into the OS. I also believe that parts of the proposed resolution might be good.

Microsoft providing references to file formats, etc would be a good thing as standards and inter-operability of systems would be a good thing. However forcing everyone into a single mold isn't good for anyone. Why should I be "forced" into the Windows XP mold like the rest of the world? Maybe it doesn't fit my needs. Free markets are founded on choice and I have not choice right now, I don't have a choice because the major vendors can't sell a computer with a Microsoft OS already installed. I have no choice, I must pay for it whether I use it or not. This would be like paying Chrysler before you can drive your Lincoln car. Please reconsider and withdraw this proposed resolution and spend a little more time helping the consumers and the economy, instead of caving in to what is good the Microsoft and is quick.

Subject: Comments about the Microsoft Antitrust Settlement

"...the settlement, if approved by the court, would "eliminate Microsoft's illegal practices, prevent recurrence of the same or similar practices and restore the competitive threat" the company faces from rivals."

The above is a quote from an Associated Press article about the Department of Justice's statements on the proposed Microsoft settlement. I can only believe that the Department of Justice may know a great deal about the law but they know very little about the computer industry and even less about Microsoft and their historical behavior in the industry.

The proposed settlement would do absolutely nothing to prevent the kind of abuses that Microsoft has employed time and again to first gain and then perpetuate their monopoly on desktop operating systems. I find it tragic that Judge Jackson chose to complicate this case by his actions, yet his assessment of Microsoft in the interviews he granted was absolutely accurate. In my experience, Microsoft is singular in its approach to business and demonstrates a complete lack of morals or ethics.

A conduct remedy will do absolutely nothing to change their approach to the marketplace. They have always been and will continue to be uncooperative in changing any of their business practices. They will choose to misinterpret every aspect of the settlement to their advantage, and the settlement doesn't really require them to give in that much in the first place. This settlement is not in the public interest and if approved, time will show that it is simply inadequate to change the monopolistic behavior of Microsoft.

From: Paul Rippey
To: Microsoft ATR
Date: 11/18/01 12:16am
Subject: Microsoft settlement

Imagine that Ford also made highways and gas stations, then got enough of the market so they could manipulate the technology and somehow make cars that worked better on their own highways, and ran better on their own gas stations. Ford would make half-hearted efforts to let other car manufacturers have their secret codes for adapting their own cars to the Ford highways and gas, but the others would know that there would always be new versions coming out, and that Ford would always have information first, and would not introduce the new highways until their cars were perfectly tuned for them. The situation is analogous in software. Please continue reading.

Dear Department of Justice,

My understanding is that you have solicited public comments on the MicroSoft case from consumers. I am a consumer and have a particular experience to share.

I believe that MicroSoft has been able to manipulate their operating system monopoly into a monopoly in other areas. A case in point: It is a problem for me that there is only, essentially, one word processor on the market. Since there are millions of computer users, and word processors are relatively easy to program, and tastes vary, this is a distortion.

I have used MicroSoft products for around fifteen years, I like some, and I don't like others. That seems like the way things should be in a competitive market. I personally find the word processor Word to be overkill. It has countless features that I don't want or need, and it does not do the things I want particularly well. I recognize that there might be other users who love it, which is fine. My problem is, as a Mac user, I have no choice. None. Because the Word file format is the

standard, and it is very difficult to open Word documents perfectly, I am obliged to have Word on my computer.

I have now upgraded my principal Mac to system OSX and want to upgrade my other software. The MS Office upgrade costs \$250. My wife has a second computer, and I use one at the office also. That is \$750 that will eventually be paid to MicroSoft for UPGRADES, not even buying the original program. Intuitively, this is more than the market price would be if there were competition. Like I say, it is heavy burden.

I believe that the MicroSoft monopoly constitutes a heavy burden on me and on the rest of the American Public, and the proposed settlement is too little and too late. Nothing in the proposed settlement makes me think that things will change in any substantial way.

D.O.J.—Show us some Justice. In the mid-nineties, Microsoft agreed to stop it's predatory and monopolistic practices. They obviously didn't. Their attitude has always been to push the limit. It's standard practice for them call in the lawyers and ask just how far they can go. All they're getting is a slap on the wrist, again. They know that in three or four years, they can drive on with doing what they do best. Putting a strangle-hold on the world by stifling competition, and overly restrictive licenses that won't even allow me to transfer my old copy of Windows 95 to my mother when I upgrade my computer.

We, the people who have been paying through the nose, would like to actually see some justice done. Their "screw the little

guy" attitude shouldn't go unanswered. If you aren't going to break the company up, which is the only just thing to do, at least make them to release their source code. As a matter of fact, really foster some competition. Make them release their source code to the linux developers. Then they'll really have to earn their market position. If you don't, they'll just do everything they can to circumvent the Law and fair business practices again and again. They were doing it elsewhere without any fear of reprisal, while this trial was underway. Included are a few examples of Microsoft's conduct. Pay attention to the dates. They go back a long way. Only a pittance few are listed here.

Quoted from <http://www.csse.monash.edu.au/~lloyd/tilde/InterNet/Law/> February 2001: Sun accepted \$20M from Microsoft in an out of court settlement for MS breaking the Java license conditions. Microsoft probably looks upon this as small change for delaying tactics to muddy the Java waters while getting a competitor up. 24 July 2001, Linux offer to charity in Windows row, The Age IT1 p2, Nathan Cochrane. "Sydney free software distributor and trainer Everything Linux has pledged to support a Geelong children's charity whose work Microsoft halted last week for distributing PCs with obsolete copies of its software." [...] a.. [LA: It shows the potential risk of getting locked in to a single source monopoly supplier. Many charities are donated old PCs. These often are not big enough or fast enough to run current MS Windows. MS have apparently stopped this charity from loading copies of e.g. Win3.1. Fortunately the Linux operating system will run fine, even on an old 486, and it's free. And Openoffice (Staroffice) is a free office software suite -word, -excel, etc.—see [Sun] in Refs.]

4 August 2000: The European Commission (EC) began investigating claims that Microsoft selectively withheld information from some software companies, seen as being competitors, with the aim of extending its near monopoly in the desk-top operating system market into other markets. This would violate European Union antitrust laws. February 2000: The European Commission (EC) will investigate complaints that Microsoft that indulges in anti-competitive practices, in particular making it difficult for competitors to write software that can interact with the new Windows 2000 p.c. operating system.

20 November 1998: The Microsoft Anti-Trust case has been running since 19 Oct 1998 and some heavyweights have now testified about pressure being applied to them by MS to do, or not do, 'uvw', or else MS might do 'xyz' e.g. Intel w.r.t, some Intel multi-media software that MS allegedly disliked, Apple w.r.t, its QuickTime movie product, its default web browser and MS Office software, and of course Netscape... Bill Gates has also testified, denying the significance of internal MS email messages containing threatening language against other companies.

17 November 1998: A US court found that Sun Microsystems Inc. would be likely to win its case, that Microsoft violated its Java contract and therefore granted an injunction

that Microsoft must change any of its products (e.g. Windows98, Explorer) that it claims to be Java compatible, or that are derived from Java technology, so that they genuinely are compatible with Sun's Javatm test suite.

19 October 1998: Microsoft Anti-Trust case begins in court. D. Lawsky. MS 'disabled' competitor's sound system. The Age, IT1, Tues 28 July 1998, p3. Realnetworks Inc. [make internet sound and music software] ... has accused Microsoft of releasing a program that disables its product. Chief executive Robert Glaser [of Realn] [...] told the Senate Judiciary Committee [MS] was using its dominant position to extend its grasp of the software market. [...]

Four other executives [inc' from Lotus, Acer] gave specifics on ways they said Microsoft used a monopoly in the Windows operating system to compete unfairly. [...] March 1998: A USA court told Microsoft to remove the Java-compatible logos from Microsoft Internet Explorer and Microsoft Software Developers Kit while a court case brought by Sun Microsystems continues. Sun has sued Microsoft for breach of contract over its Java licence; see 7 October 1997 below. This may yet be a case of Sun winning a battle but losing the war? January 1998: Apple turned in a profit after its recent losses, painful cuts and much debated \$150M investment by Microsoft (1997).

Conrad Walters Microsoft faces fine over Net dominance, The Australian Wed 22 October 1997. The US Justice Department yesterday asked the Federal Court to fine Microsoft \$US! million a day over the software giant's attempt to dominate the Internet. [...] [LA: Microsoft's web browser Explorer-4 grows ever more closely involved with the Windows-95 (soon Windows-98) operating system. Microsoft's argument is that they are just adding improvements and new functions to their o.s.. The counter view is that MS is attempting to stifle competition in the web browser market, specifically to knock-off Netscape which held 70% of it as of mid 1997. The European Commission is also investigating if Microsoft is using its monopoly of Windows-95, and hence monopoly (to all intents and purposes) of P.C. operating systems, to force computer suppliers to install Explorer as the default browser to the detriment of Netscape. Incidentally, it has been suggested that if the Windows O.S. specification was freely available there would be some real competition in P.C. operating systems because other software companies would be able to implement the spec', hence be able to run the applications programs which are the reason for Windows' popularity, and offer an alternative to MS.]

7 October 1997: Sun Sues Microsoft For Breach of Javatm Contract Sun claims that Microsoft products Explorer 4.0, the recently (Oct 1997) released ms web-browser, and Software Development Kit for Java (SDKJ) failed the Java compatibility tests and so should not be labelled as being Java compatible, nor should the Java-compatible logo be applied to them. The Sun press release alleges that Microsoft's actions include "...secretly adding Win32-specific and other APIs to the Java class libraries...".

Some conspiracy theorists believe that Microsoft would like to kill Java off, others that it would like to hijack it.

Ralph Nader's Essential Information is organising an Appraising Microsoft conference (13-14/11/97) to discuss whether or not Microsoft engages in unethical business practices and whether its dominance of the p.c. software market is harmful.

Quoted from Fox News:

"Speaking on CNNfn's Digital Jam, O'Reilly & Associates president Tim O'Reilly said he was questioned earlier this week by Justice officials, and that he told them that Microsoft is artificially trying to keep some competitors' software from functioning properly on its desktop Windows NT environment. [...]

"O'Reilly said he's concerned by the fact that Microsoft—which by its own admission is somewhat of a latecomer to the Internet software market—is trying to take control of the global network. 'They're doing all they can to take control (of the Internet). In the process, I think they're damaging it pretty seriously.' ... Microsoft started creating a showdown when it began bundling its Web server with Windows NT, it's high-end operating system. Microsoft is reportedly telling companies they can't use competitors' software on the NT workstation platform and have sought to limit the use of standard Internet protocols with their software. ... "They're saying 'you have to use our platform the way we want you to.' The vision they have is contrary to the way people want to use it. They're saying we'll tell you how to use the Internet and saying the way we want you to use it is the way that benefits our revenue the most." CNNfn, 8.22.96 LA Times:

"In the most dramatic allegation yet that Microsoft Corp. uses bullying tactics to protect its turf, Apple Computer Inc. has charged that the software giant threatened to withhold a key piece of software unless Apple agreed to drop two lawsuits and a competing product.

"The allegations are contained in a Feb. 13 letter from Apple to U.S. District Judge Stanley Sporkin. In a stunning decision last week, Sporkin rejected as too narrow a consent decree that settled antitrust charges by the Justice Department against Microsoft. [...]

"Microsoft ... denied the allegation, and Chairman Bill Gates said he was disappointed by Apple's treatment of Microsoft. [...]

"According to Apple... the computer maker a year ago attempted to obtain a copy of Windows 95, a yet-to-be released version of Microsoft's best-selling operating system software. ... Typically, Microsoft gives an early version of its software to independent software developers. Since December, 1993, about 40,000 independent software developers have received the early, so-called beta versions of Windows 95.

"Apple claims that Microsoft withheld Windows 95 because of two copyright infringement cases. In 1988, Apple filed suit against Microsoft, contending that Windows copied the Macintosh operating system. ... In December, Apple filed a lawsuit against San

Francisco Canyon Co., charging that the start-up company gave Apple's copyrighted video software to Intel Corp. and Microsoft. Later, Apple sued Microsoft.

"... Apple Chief Executive Michael Spindler and Microsoft's Gates met to settle their disputes Apple contends that Gates issued a veiled threat against Apple, saying that withholding Windows 95 was 'cause and effect' for Apple's decision to file a second lawsuit against Microsoft. "At the same meeting, Gates asked Apple to drop Open Doc, a software program that competes with a Microsoft product called Ole.

"Apple said it informed Assistant U.S. Arty. Gen. Anne K. Bingaman of its problems with Microsoft. After a phone call from Bingaman, confirmed on Thursday by the Justice Department, Apple received the early version of Windows 95.

"Although unorthodox, Bingaman's decision to intervene falls within her rights, legal experts said. 'I wouldn't call it mediation,' said Stanford University law professor William Baxter. 'I would call it law enforcement.' [...]

"Gates ... sent a letter to Spindler, saying that he was 'disappointed' by Apple's actions. 'Microsoft develops more software for Apple than any other company,' he stated. Reflecting the tense relations between the two, Gates listed more than two pages of grievances." Los Angeles Times, 2.24.1995, p. D-1

"Critics of the Redmond, Wash.-based company, the world's largest software publisher, have repeatedly claimed that it has used its dominance and relationship with IBM to crush tiny competitors and outmaneuver larger rivals.

"Particularly upsetting to many smaller software publishers is Microsoft's unique strategy of providing both system software, which controls the computer's basic operations, as well as application programs, such as word-processing and spreadsheet packages. "Critics argue that because Microsoft controls the system software, it has an unfair advantage in developing application programs that must operate with the system software."

Los Angeles Times, 3.13.91, p. D-2.

Caldera vs. Microsoft: It's Not Over Yet

By Mary Jo Foley

Smart Partner

February 4, 2000

Caldera and Microsoft may have ended up settling their four-year-old antitrust suit before it went to trial, but the fireworks aren't over. The latest explosion: Former Microsoft Germany employee Stefanie Reichel admitted in her deposition that she destroyed files and other information that potentially could have been used as evidence against Microsoft in the Caldera case. Reichel also admitted in the newly public deposition excerpts that her direct supervisor discarded hard drives of computers in Microsoft's German office.

Reichel said in her testimony she had destroyed e-mail messages that "could be problematic in an investigation," at the request of Microsoft management. Reichel also said she may have destroyed paper copies of documents.

At the end of January—as a result of a lawsuit brought by three media firms, The

Salt Lake Tribune, The San Jose Mercury News and Bloomberg News—a number of previously sealed documents in the Microsoft-Caldera case were unsealed. Among the two boxes of documents were tens of pages of excerpts from

Subject: Microsoft Anti-trust case

I cannot believe that the United States Federal Government is letting Microsoft off so easily after having been found guilty of so many charges. They are a monopoly that has absolute control over the PC market and will be free to charge whatever prices they choose for their products and there's not a thing that any of us in the Information Technology industry can do about it. Look at their new licensing policies for Pete's sake. I'm sure Bill Gates and Steve Ballmer are having a good laugh at all of our expense.

Don't believe me? Next time you go into a CompUSA or any other computer store and just try to find any application that doesn't run on Windows. This is wrong and it shouldn't be this way and it doesn't look like our government has the guts to stand up to a financial dictator.

Subject: Extremely disappointed with the proposed settlement

I work in IT and see how much money Microsoft's practices have cost my clients on a daily basis. When Microsoft was found guilty of antitrust violations, I had hoped it might restore competition to the industry. Unfortunately, the proposed settlement looks like it was written by Microsoft's lawyers—it gives up less than they were offering to settle for before losing the case!

Now that Charles James has sold out a significant fraction of the US economy and cost the US a few trillion dollars, I wonder if this approach will extend to other areas of law enforcement. Will a convicted drug dealer or murderer be released if they promise not to do it again? I'm sure many of them have enough money to pay off the same people.

Subject: Microsoft Settlement

Greetings,

A lot of people have been swayed by the headlines on how much of a monopoly Microsoft has, I just want to set a few things straight. I have been programming computers for almost 20 years and have seen a lot of changes in technology in that time. Microsoft has far surpassed others when it has come to opening the door for programmers.

They have piloted such technologies as Active X and the Component Object Model (COM).

We programmers have never had as much freedom as we do now. Instead of cutting us out of the picture or making us no more than vainglorious macro writers, Microsoft has given us the best (by far) programming environment in the world. They pioneered Rapid Application Development (RAD) and created an awesome opportunity by incorporating Visual Basic for Applications into all of the Office programs.

A lot of people may not speak highly of what they consider to be a monopoly, but others and myself are very grateful that Microsoft has given us this freedom.

Microsoft must spend millions of dollars just developing the technologies that I am speaking of.

They could have just as easily made all of the Office programs ?closed??. Instead they exposed all of the objects in them so that we could program them ourselves.

The battle between Internet Explorer and Netscape is now ludicrous. With the advent of COM and Distributed COM (DCOM) the horizon is now clear.

As I programmer I had to research for quite some time to decide what technologies that I would invest in and learn. I studied all of the available ones and found that Microsoft has, bar far, the best suite of languages and programming environments.

I am looking forward to what the future holds. We should all be grateful.

Subject: Microsoft/DOJ settlement
To whom it may concern,

I am writing this in response to the latest lawsuit against Microsoft. The proposed settlement is apparently satisfactory to some states and individuals. Clearly, however it is unsatisfactory to many. I am dissapointed that the business practices demonstrated and abused by Microsoft to gain their "lion's share" of the market have been penalized with what amounts to a slap on the wrist. I realize that in order to force a fair capitalist playing field, taking away the advantages gained by the clear violation of anti-trust laws would be difficult. I realize also that it would temporarily stagger a tech economy that is already struggling. But one of the main reasons that the tech economy is struggling is because of the illegitimate business practices of tech companies like Microsoft. The idea that Microsoft should be required to open up it's Windows OS source code to competitors and independent programmers is the best solution. This will not greatly impair the operation ! or profit scheme of the company. Microsoft's main profit comes from programs like their Office suite.

The ability for other companies and programmers to see their Operatin System source code would serve to level the unfair advantage that they have gained through the monopolistic practices that the legal action addresses. Please do not cave to the economic and political pressure and do right by the people in this country that you are sworn to serve the interests of. Thank you for your time.

Fellow citizens of the Department of Justice,

Microsoft was found guilty and they should have been punished more severely. However, you people are now going to enforce the hand slap they probably bought and that's fine with me, but I hope you keep one thing clear: people, as a whole, are developing memories that go further and further back. You people will be remembered for how you handle this so I hope you've looked into the future of computing and seen how things like open standards and free software may influence things to come. And I hope your decisions are made with a mental picture of a future that barely remembers the great monopoly—or uses anything it created. How will that future look at those involved in today's amazing injustice? Make good decisions that reflect the severity of the crime Microsoft was proven to have committed. And think of the MS-less future, you know, the one your children and mine are being handed.

Deeply concerned,

From: Gary Young
 To: Microsoft ATR
 Date: 11/18/01 1:57am
 Subject: Strong opposition to the proposed Microsoft settlement

If not for "political" and competitor's "survival" aspects regarding this case, Microsoft would be, and should be, severely punished. The agreed to "slap on the wrist" punishments are a joke and if Microsoft's competitors and (even) business allies would speak freely there would be double the evidence and vocal disdain against Microsoft. Microsoft's continued failure to acknowledge their past behavior should have an affect on the punishment. If there is anything I would NOT worry about, it is that severely punishing Microsoft would harm others. Even in the short term, most of even the strongest proposed remedies would be better for almost everyone. In the long run, we all gain and we would then have a precedent that shows you can't get away with illegal and unethical business practices. The proposed agreement is a big win for business thugs everywhere.

 Subject: have we become stupid

Gentlemen I ask again "have we become sooooo stupid" Have we forgotten what it takes to be a great nation of achievers. From time to time you hear or read completely stupid coments. Like three weeks ago I was reading our Today's News. On the front page the front page Was a picture of an American ground forces soldier. With full details on all the equipment that he carries while in combat with arrows showing where each of these article are on their bodies. I read this in total disbelief over how little we care for our military forces safety that are putting their lives on the line for us to maintain the (what we call) the right to freedom.

I built a company from my garage to a 255man operation based on an idea. I can't even imagine how angered I would have been if some jerk would have come to me and said, "You are way too successful and have achieved way too much" therefore we are going to force you to give up your monopoly because we have a group of stupid people over hear that need your business to slow down. Somebody forgot the working for three days without sleep, and working through Christmas, and worrying where the next dollar was coming from to be able to not get bad credit, etc., etc. Why have we as a nation become so stupid? In case anybody hasn't noticed. The superlatives (achievers) are the ones that create wealth and prosperity for our country, feed them don't stifle their efforts.

"An angry American"

 Date: 11/18/01 4:51am
 Subject: As a user of alternative operating systems such as BeOS,

As a user of alternative operating systems such as BeOS, OpenBSD, and Linux, and also as a former employee of a company (Be Incorporated) hurt by Microsoft's monopoly, I feel that the settlement doesn't do any justice. Microsoft essentially gets a slap on the wrist and told to play fair. Meanwhile, Microsoft has managed to slip out three new versions of Windows doing the exact same thing they've been doing since the antitrust

suit started, and aren't going to recompensate its competitors for its practices. Microsoft wins again.

In addition, Microsoft has just started shipping its X-Box video game system, which is backed by Microsoft's monopoly. Microsoft has purchased several significant video game companies in an effort to become the powerhouse in the video game industry, and likely will significantly hurt its competitors which mainly utilize independant software development companies to produce games. Result: Microsoft will likely obtain a large market share, possibly even another monopoly. Microsoft wins again.

Not to sound completely biased against Microsoft, but their tactics need to be halted. The Department of Justice holds the only opportunity to correct Microsoft's behavior, and allowing it to operate as a single company will not do that.

From: Colynn Kerr (Shaw)
To: Microsoft ATR
Date: 11/18/01 8:24am
Subject: Consumer Comment on Proposed Microsoft Settlement

As a consumer who has chosen the Mac OS, an operating system that competes with Windows, I would like to register my concern that the proposed settlement does little to discourage Microsoft from returning to its old anti-competitive ways.

Microsoft has shown by its actions in the past that it has little regard for court agreements, knowing full well that it can use the slowness of the judicial process to further extend its monopoly influence. Microsoft's pattern of behavior is likely to continue and the settlement is unlikely to prevent a recurrence. The three-person team charged with monitoring Microsoft's actions MUST be given a stronger mandate to stop problems quickly. If Microsoft uses the proposed process to stall as it has done in the past, the market will be further damaged. This settlement will remove Microsoft's restraint because there is no threat of swift preventative court action. The proposal must have more "teeth" to stop anti-competitive behaviors quickly.

Under these court measures, Microsoft will likely continue to enter new markets and create its own proprietary standards using its dominant market position to crush competing products. As it has done repeatedly, it will continue to bundle its own versions of competing products into

Windows, starving competitors out of the market. It took a lot of courage for competitors to come fourth during this long drawn out trial and there may not be the will to come fourth again if it only is to result in such a watered down settlement. This may be the last, best chance to curb Microsoft's habits.

To strengthen the court settlement I suggest:

1) creating a checklist of identified Microsoft anti-competitive actions and beside each item insuring a swift court action to be taken;

2) creating a streamlined process that remains in situ to act quickly to stop anti-competitive behaviors as they arise;

3) keeping in place a series of strong punitive measures that will be levied against Microsoft quickly and remain in force until Microsoft stops its anti-competitive behaviors;

4) require Microsoft to pay the costs for each and every investigation of its actions;

5) creating an Ombudsman position to field all competitors and consumer concerns, feeding the results of such investigations to the tribunal and requiring further investigation by them;

6) creating an office with funded staff for each member of the tribunal to give them all the tools they need;

7) requiring an immediate stop to Microsoft's efforts to extend its market influence into new markets for a set period of time, to allow those markets to flourish before Microsoft can enter them;

8) requiring Microsoft to charge fair market value for each and every bundled product, in addition to the cost of its other products;

9) requiring Microsoft to offer competing products or opportunities to choose competing products, with each Microsoft bundled product;

10) requiring full disclosure and prominent display to consumers of each and every Microsoft anti-competitive action.

In summary, the settlement must more strongly protect the market.

Subject: WebTv ownership!

October of 2000 I purchased a webtv system from Montgomery Wards as I could not afford a regular computer. I am used to the idea that when I buy something, I own it. No one at the store told me that Microsoft still owns the insides of the unit, which means that I paid \$200.00 for an empty metal box.

I didnt find out about this until I tried to find a low cost ISP. That's when I found out that even if I change ISP's, I still have to pay Microsoft \$9.95 per month to use their equipment. Also they charge the highest internet rate of all the ISP's, \$24.95 per month. I watched many commercials about this product before deceeding to buy one, I should say those 1/2hr infomercials, and nothing was said about this.

I think that Microsoft is guilty of consumer fraud, and this should be addressed also before you let them off the hook.

Sincerely,

James M. Russell

Subject: United States v. Microsoft Corporation

Dear Ms. Hesse:

I appreciate the opportunity to express my opinion. In response to your request for public comment on the proposed settlement in the case of United States v. Microsoft Corporation, I urge you to settle the case as soon as possible and in a way that imposes the fewest possible restrictions on Microsoft.

I have no direct financial interest in Microsoft nor any of its competitors. In my opinion, the government should interfere with successful companies as little as possible. We should applaud America's successful companies and allow them to innovate and to grow. This will in turn help our economy grow and thus create economic growth and better lives for all of us.

Sincerely,

Rune Q. Nordhagen

I'm not a USA citizen. This means I can't write "my congressman" when it comes to issues like the Microsoft trial. However I'm very much dependent on the results of this trial. I take the liberty of writing to you in the hope that foreign citizens have an equal standing—or at least some standing—at the current state of affairs.

I've been working as a paid computer professional ever since 1983. I've seen and used many operating system and companies come and go. And I don't like the trend which has been set by Microsoft's operating systems. There are many cases where there is a "natural synergy" between two services, but this synergy is still a bad thing. It happens every time there is "infrastructure" vs. "application". Infrastructure being a "natural monopoly", this allows the infrastructure company a monopolistic lock on the related application market.

In phone communication this is the actual wiring of houses vs. the actual end-point equipment (phones, office switchboards). Imagine only being able to buy an AT&T phone.

In cable TV it is the wiring vs. the set-top boxes and channels. I heard that France has managed to avoid the usual unhealthy synergy there. The cable company there serves a similar role to that of a phone company. It must distribute anyone's content (for a fee, of course), just like a phone company is bound to allow anyone to make a phone call with any content. This allowed a healthy competition in content creation, where everywhere else one is bound to a single channels provider together with the physical cable.

In computers, the "infrastructure" and "application" may seem less well-defined (but see below). The principle still stands, however. An unhealthy synergy between hardware and operating system was the hallmark of the monopolistic IBM era. Today decoupling them is taken for granted, allowing a healthy competitive market place—for hardware. The relationship between an "operating system" and "the applications" is the same as in all the above cases. There is a technical synergy, that's correct. But as in all the above cases, taking the easy way of mixing them together ends in an inefficient market place and inferior, over priced products.

The solution is the same, in principle, for all the above cases. A company may choose to be in the infrastructure business. Its products must be well-documented and open for use by anyone. This means anyone could duplicate the infrastructure (usually at a large cost) and hence profit margins are low—but the market is large. A company may also choose to be in the applications business. Its products may be closed, proprietary, and next to impossible to duplicate. Hence margins are high, but the market is smaller. An infrastructure company must focus on stability and standards. An application company must focus on innovation and tailored solutions. It is impossible for a company to be both. It is simply too lucrative to corrupt the infrastructure (the low margin operation) for a specific application (the high margin operation). This naturally discriminates against other application

companies. Publishing the infrastructure details doesn't help, either. The simple fact is that one company is able to change the infrastructure to fit its applications while all others must fit their applications to fit someone else's infrastructure.

In short, the only viable solution to the problem is to break Microsoft into two separate companies. One which makes "infrastructure", and one which makes "applications". Note that infrastructure isn't necessarily "operating system". Microsoft has invested a lot of effort in destroying the original, clean definition of what "operating system" means as opposed to "an application". For the purpose of the separation, "software infrastructure" is "any piece of software which monopolizes the use of resources in a computer or a network". These may be hardware resources or software resources (such as network addresses).

The monopolistic software infrastructure company must publish the full interface to its products. Any such company should fall under similar legislative restrictions to those of utility companies—the electric company, the phone company etc. The application software company would be free of such chains.

Any other solution won't address the core issues. Forcing Microsoft to publish all infrastructure details—including file formats, network protocols, and APIs—is better than nothing, but is a band aid solution where a surgeon scalpel is called for.

Note that this solution is not against Microsoft's own interests. One argument against a split was that the combined worth of the two companies would be greater than the worth of the current Microsoft (as in the AT&T case)—and what sort of a "punishment" is that? This argument proves that the current mixture of infrastructure and application is harming Microsoft's shareholders as well as its customers. The fact it may very well be profitable to split the company is proof that the only reason not to is the resulting loss of power by the few people leading Microsoft today. In fact these people have broken the law in the process of obtaining and wielding this power. Therefore splitting the company makes perfect sense. It would exactly "punish" the power-seeking few (by taking away their power), while benefiting (financially) everyone else.

Thank you for your time,
Oren Ben-Kiki

Subject: Leave microsoft alone

With all due respect to the US govt. and the Supreme Court Justices, Microsoft has made things easier for the average computer buyer. For example I just bought a brand new computer (I am an experienced user), a Compaq Presario and I have found that the way Microsoft bundles it's software makes it easy for the novice computer user to send e-mail, surf the web, and listen to mp3's. If Apple wants more customers then they should work on their software rather than the outside casings. If Microsoft did not standardize the PC then imagine how hard it would be to buy a computer game, or a word-processor that will only work on one type of OS that few have, instead people can buy games, and other software and know it will work on their computer. So in my humble opinion I think that there are other things going on in the world than computer software. Microsoft, I admit has a monopoly, but it is a helpful monopoly.

Subject: Settlement

The proposed Microsoft settlement is a travesty. Millions of taxpayer dollars have been spent on this case, proving Microsoft to be one of the most ruthless, underhanded operations this country has ever known. Is it really possible that all the Justice Department can do now is to say to Microsoft: "Because you have behaved so abominably in the past, we are going to ask you to please be nicer in the future, OK Microsoft, please, please, please?" Justice Jackson's remedies were infinitely more fitting and just.

As a consumer of computer products who has been hurt by Microsoft's policies repeatedly in the past, I am offended. As an IT consultant, I am shocked. As a US citizen,

I am disgusted to see that my government agencies can do no more than bow to the will of a monopolist.

To the United States Department of Justice,
Antitrust Division
Pennsylvania Avenue
Washington, DC
Comments Supporting Settlement of the Microsoft Antitrust Case

I am a semi-retired attorney who still is able to practice because of the capabilities of using the computer to communicate with long-term clients. It seems a bizarre concept that millions of people like me would not be able to continue to buy "turn key" information systems as they are developed because some competitor believes its ability to compete is reduced. As I understand it the "bundled" software products:

1. are not being priced at prices that are unaffordable to anyone who can afford the hardware, and so price gouging is not a realistic issue from the point of view of the user;
2. most of us users have neither the knowledge nor the inclination to buy a bunch of separate products and integrate them ourselves; and
3. a combination of new features in software will accelerate their integration and use, providing huge benefits including increased productivity for me and everyone else. Thus I strongly support the settlement.

Subject: Microsoft Advantages

Dear Madam,

Dear Sir,

First forgive my bad english and thank you for giving us a chance to comment.

I hope you'll not forgot the advantages that Microsoft has already taken from such unfair practices in such competitive markets during all those years.

All the money MS has accumulated while they were imposing their products without any ethic.

All the companies MS has been able to buy with that money.

All the MS rivals, and some were producing better products, technology breakthrough, that have gone to bankruptcy because they were unable to compete with such a giant able to spend money on huge advertisement campaigns, huge teams of developers to 'copy' similar products. You must review history, it's always the same process that MS is following.

A "new technology/standard" appears, MS quickly follow the trend and release a version, full of problems, bugs, and some tiny extensions, making both (their and original one) incompatible, and by benefiting from their market dominance, illegally acquired, and delayed communication to external developers, imposing MS copy of that technology: html, javascript, C#/J# <- java, MS Server/asp <- php/mysql, Windows <- Mac OS, XP <- OSX,...

Even a MS high-level manager was surprised to sell a product with so many bugs, I don't remember the exact sentence but that's the idea, that appeared in the press about a quickly released Windows version. Why people are using those bad MS version then? Just because most are simple users, which are not computer specialists, and they use what they receive "as-is" and a great percentage are using Windows and all the features that MS is imposing internally. And also because distributors were obliged to do so.

How many users are aware of what's going on behind the scene? How many users are able to switch to another, often better, technology? Even some professionals are unable because MS has intentionally made those changes almost impossible. Quickly those who are aware, computer technicians, etc... are too obliged to follow because most users are using MS "incompatible" versions.

Those last years press is full of events showing how aggressive, unfair, illegal practices MS has used intentionally at all possible levels, some even by illegally spying on its customers. Even if strong rules against MS might lead to short-term negative consequences (job loses, etc), on the long run all the industry and the consumers will benefit from a fair competition. But not forgetting all the advantages that MS has unfairly acquired during all those years is essential, perhaps mandatory!

Mr Bill Gates seems pleased by the current agreements probably for that reason.

They will not truly affect MS, the "powerful monster" is alive and running and it will not be too much affected by them. All that accumulated money allows now MS to buy any competitors (e.g. hotmail), to artificially support competitors to avoid antitrust accusations (e.g. Apple), to make huge investments to reproduce internally any new standard, to diversify its activities (e.g. Xbox) and repeat the same unfair suffocating tactics.

All the advantages obtained in such fast markets are essential and can make a huge difference between live and death for a concurrent company. A lot of people in Europe are hoping that the judgment will really mark the end for such unfair practices but also, and mainly, that it will redistribute/compensate the advantages MS has taken during all those years from other competitors.

Ineffective judgments and inadequate rules would be badly perceived by people from other countries in those troubled times that USA encounters now. USA is taken as a model for a lot of people, its attitude must be irreproachable. But I'm confident that fair and really effective solutions will be found, providing that email address to send our comments is a good proof.

Thank you for your time.

Sincerely,
Stephane Moureau

Subject: settlement doesn't rescind profits

Regarding the DOJ settlement with Microsoft. After reviewing the terms of the settlement I'm left scratching my head and wondering why Microsoft is permitted to keep the fruits of their illegal actions. In exploiting their monopoly position, Microsoft profited heavily while competitors were damaged and lost sales. In America, when someone profits from illegal activities it's customary to seize those illegal profits. I would suggest determining the extent of Microsoft's profits from their illegal actions and levying of an equivalent fine and additional punitive damages. The money should be distributed to the competitors directly injured by Microsoft's actions to help them recover and develop competing products.

 Subject: My Thoughts

For nearly 3 years the Microsoft matter has been before you, Microsoft, and the general public. My home state is Maine so I couldn't be further from local influence and live in the United States. The contribution Microsoft has made to our society as well as to all locations on the face of this earth is immeasurable. How did this accomplishment occur, HARD WORK!! This business was started from "scratch" and I admire greatly their accomplishments. Were they over zealous? I don't think so. In my little hometown in Maine we had a local orchardist who worked very diligently and built one of the largest apple businesses on the east coast. Was there jealousy and criticism of their operation? YES! This past year they went out of business because of foreign competition after being handed down three generations. What attitude prevailed?? "What a shame", jobs lost and thus consumer spending down and the local economy hurt badly. The economy on the face of this earth has been improved by Microsoft and I hope this thought will be prevalent in the decisions to be made.

Thank you, Leland C. Davis, Jr.

From: Trevor Doerksen
 To: Microsoft ATR
 Date: 11/18/01 11:05am
 Subject: Moving the big ship

Microsoft is a fantastic company with some great product. However, not all of its products are superior to its competitors and often demonstrate an ability to develop exactly what the market doesn't need, (e.g. Insecure server software, mediums in which viruses are able to flourish, and code that can affect the performance of 3rd part software within their browser or OS).

Even though they are a huge company they seem able to move this big ship with pinpoint accuracy when it comes to eliminating competition through its approach to international standards and 3rd party software. Although not examples of these

practices were discussed at the trial, and some new "dirty practices" have been witnessed, I think this is one of the most important things about MS technology and its approach to others.

As a monopoly, MS should have to clearly define to the rest of the market where it is going, when, and how it might impact those companies working with and in MS eyes against them to install and view software on its OS. A recent example of eliminating its plug-in architecture for its browser demonstrates the ability that a simple move can eliminate competition even further.

From a punitive point of view, I believe in a break up. From a solutions-focused point of view, I believe in full disclosure of its strategy, code, future directions, and all business meetings minutes be made public so that the public, media, government, etc. is able to keep their eyes on a company that demonstrates its continuing power with dominance over the market.

It won't be long until there is only one company selling word processing software, media players, and browsers in the world. This can only be good if we don't believe in a free market. Opening up source code and other company information for the market to openly compete is necessary. Like drug patents a time advantage can be put forward to the company that demonstrate research and development (not just buying or in most cases stealing ideas, information, and strategies) a very short term exclusive (the technology world moves fast) right to gain an in on the market.

Thanks,
 Trevor Doerksen

 Subject: Microsoft Settlement (not)
 Government lawyers "carefully weighed" those proposals but ultimately chose other sanctions against Microsoft that they believed would result in the "most effective and certain relief in the most timely manner."

This is sad. It is practically admitting that our government cannot discipline a company if they have enough money and lawyers. I believe it is also short-sighted. Without real and effective remedy, the same case will be back again in a few years.

In a 68-page court filing Thursday, the Justice Department formally defended its choices in the landmark settlement it negotiated between Microsoft and nine states. The government assured the judge the settlement, if approved by the court, would "eliminate Microsoft's illegal practices, prevent recurrence of the same or similar

practices and restore the competitive threat" the company faces from rivals.

This is what they thought the last time they compromised with Microsoft. And here we are again. Imagine what the monopoly will look like the next time.

Those of us who try to work in the computer realm are struggling constantly against the Microsoft monopoly. Those outside of it simply do not understand that the very nature of computer interconnectedness creates strong pressure for everyone to conform to the same standards. The only question is whether those standards will be universal ones, created by all parties, or those imposed by the biggest bully.

In the short run the public may think that the latter is an acceptable choice, but in the long run it is a disaster for everyone.

From: Rick Spung
To: Microsoft ATR
Date: 11/18/01 12:00pm
Subject: Microsoft Antitrust Case

Dear Sirs;

I am hopeful that the Judicial Department will tighten up the proposed settlement with Microsoft, because it appears to be full of loopholes and exemptions. Microsoft was found to be a monopoly, and it was found to have harmed the U.S. consumers, by stifling competition, restricting the development of new products and handcuffing computer users who wanted choice in applications.

Microsoft's conduct during the antitrust trial also shows that it plays fast and loose with the truth. Microsoft executives lied repeatedly under oath while giving testimony. Microsoft falsified evidence, misrepresented statements by industry experts, threatened and intimidated competitors and orchestrated a bogus public relations campaign by submitting fake letters from "concerned citizens" to state attorneys general.

I believe that Microsoft has no credibility, and has no intention of working in the best interests of the consumer. Microsoft's pattern of conduct over the past two decades has been to obtain, by any means necessary, a dominant market share in a particular software product, and then to maintain, by any means necessary, that market share. If it means preventing innovation by competitors, so be it. If it means preventing consumers from having access to software by competitors, so be it.

I believe that, at a minimum, Microsoft should be required to release ALL programming code of ALL software programs determined by the Justice Department to be in monopoly status, within six months of their release.

According to U.S. drug industry patent law, companies who develop new drugs are allowed a fixed time period of legal monopoly status, in order to recoup their costs of research and development. After the expiration of the time period, the products are no longer protected and thus become public domain information, eligible for generic production. Similarly, Microsoft's products that currently are categorized as having a monopoly status should be subject to the same arrangement, with a much shorter time period, due to the faster track of software development. I believe that a protected time period of roughly 180 days is sufficient.

My understanding of the proposed settlement is that the Judicial Department will be depending on Microsoft to define many of the terms, as situations arise. This is total and utter folly, as Microsoft's past conduct has amply demonstrated. I guarantee you, if these issues are not resolved in a more airtight and consumer-friendly fashion, future litigation will result.

Thank you for your time.

Sincerely;
Richard Spung

From: Siegfried Behrens
To: Microsoft ATR
Date: 11/18/01 11:58am
Subject: Microsoft Settlement

While I agree that a settlement with Microsoft is in the best interest of the nation, some of the terms in the CIS are a bit too harsh for Microsoft. The government should remember that Microsoft is one of America's best business assets. We need companies like Microsoft to remain strong in our war against terrorism. Microsoft's security technology is helping American business and government in its greatest time of need.

This is the language that I thought was too harsh:

"Creating the opportunity for software developers and other computer industry participants to develop new middleware products that compete directly with Microsoft by requiring Microsoft to disclose all of the interfaces and related technical information that Microsoft's middleware uses to interoperate with the Windows operating system."

I don't believe Microsoft should have to disclose this much information about how they work with Windows. This is their competitive advantage and they should be able to keep it, not have it stripped away by the government.

Thank you for considering my opinion.

 Subject: A potential resolution to the MS case

The feelings of myself and my colleagues is that the best way to resolve this is to force MS to break their OS and any future OS apart from the applications they install with the system. We should be able to purchase MS Windows without all the bells and whistles. It shouldn't simply be IE, or email, or messenger. It should extend even farther to Notepad, Paint, and Games. If I want the applications, I should be able to purchase the MS Plus! pack with all these applications. Or be able to purchase Symantec's, Network Associates, or any other company that would create an application package for the Windows system. By making MS reveal all the hooks and calls Windows has, it will level the playing field for industry and give new life to many many companies.

Thank you
 Craig Fry

 Subject: Settlement
 Gentlemen;

The recently announced settlement with Microsoft, Inc. in the case "US Vs Microsoft, Inc." under U.S. antitrust law is, for the most part, unacceptable.

It is my opinion that this settlement amounts to near approval of Microsoft's anti-competitive actions of the past. This settlement not only lets Microsoft off with a token "slap on the wrist" for its past misdeeds, including ignoring previous agreements with DoJ, it also leaves Microsoft wholly intact to pursue other avenues in its attempt to not just compete but completely destroy companies it views as potential "threats" to its hegemony.

A structural solution is the only one that would preclude future violations of anti-trust law by Microsoft. But this avenue appears to be anathema to the DoJ under President Bush. Only a structural solution can prevent Microsoft from using its OS leverage with computer manufacturers in stifling competition. Yes, this might reduce the value of Microsoft stock. So what? Microsoft's stock value is as high as it is BECAUSE of its anti-competitive practices. A reduction in its stock price due to a structural solution to this case would be a just penalty to the company and its owners.

Please reconsider the current remedy as proposed. It has no teeth and given Microsoft's historical lack of compliance with DoJ settlements a structural separation of the OS, application and languages divisions is the only course of action that will preclude this type of recidivism on Microsoft's part.

Thank you for your consideration of my amicus curiae.

Re: Justice Rejects Microsoft Penalty Critics... have said the settlement announced Nov. 2 is inadequate and charged that the company will be able to bypass many of the sanctions because of vague language.

The Microsoft Monopoly Menace will exploit any vague language in the settlement. You're dealing with the most hardcore there is. The federal government can't enforce those sanctions effectively because it has no software expertise. The chameleon nature of software allows the Menace to morph its products into something that can slip through your fingers. It is against the will of We The People to pay us lip service with the settlement with lesser intentions to enforce it. This case is hugely symbolic. Harvard Business School Press is ready to publish a dozen pulp mills worth of books on the market hammerlocking strategies of "america's favorite entrepreneur" after you bless it with this failure to enforce the Sherman Acts, ensuring deception and hegemony as not only the strategy du jour but urgently required to maintain the confidence of financiers.

The game gets shoved right into the mafia realm. If you care about truth and justice you have to pretend you don't notice the Menace. You have to lie to your students, let them learn the truth out in the "real world". You have to lie to yourself. And lie to everyone else while you refuse to face the fire and deal with the problem that the Menace defines with crystal clarity. Gates practically shouted out: "How much do we have to pay you to screw Netscape? This is your lucky day" and you failed to rise to the challenge. This has been the federal government's opportunity to continue its critical role in steering industry. Uncle Sam made aviation happen, and the radio, telephone, transistor, UNIX, and the internet. The government steers while imbecile corporations push like oxen. You could have created an open standard PC OS instead of passing IBM's monopoly torch to the Menace. It's a delusion to think the free market can steer itself—it just crashed through so-called "Windows".

You don't allow corporations to block sections of the public library for competitive purposes do you? Technical progress must flow unfettered just like your interests and ideas flow unfettered. Microsoft, Intel, Texas Instruments are all guilty of keeping great technologies out of the mainstream for stockholder benefit. This is flat insane. The armies of developers who had to adjust to those wildly inferior technologies represents a great cancer.

Monopolists commandeer the common sense of competition on the merits, and replace it with the hammerlocking of markets. There is an upper limit on the power allowed corporations before their abuse outweighs any benefits. Remember, corporations are the people's beasts of burden. When they start running off the row, they lose their reason for being, and must be retired. There are great efficiency benefits from placing the commodity OS into the public domain where it belongs. It takes government regulation out of the loop, raising its standing with the people. You get respect when you adhere to principles. Conservatives might be accurately accused of create dysfunction within government in order to turn the people against it. This is extremely dangerous as the corporation fills in the void and wreaks havoc. The corporation is a vice like war or even tobacco and alcohol. Its success is measured directly by its exploitation of customers and employees. The only sustainable way to implement the concept is to limit its power so as to reap the benefit of economy of scale without letting it rape and pillage society. The great big back hole that is MS Windows will continue sucking in all software functionality until it's devoured the entire telecommunications and computing infrastructure. Yeah, like the profit motive steered the development of the telephone and transistor. Like hell. Progress requires sorting out what is appropriate and what's not. The Microsoft Monopoly Menace dictating the rules of the game is not appropriate. The federal government must define the rules of the game for the new century. Get with it.

 Subject: Re: The Microsoft settlement and justice dept.

It seems clear to me that the current Justice department has an agenda for settling the monopoly abuse case that their Justice department predecessors have already proved in court rather than continue the case to its more logical conclusion in front of an impartial judge. What is that agenda??? When 9 appellate court justices agree that Microsoft was guilty of antitrust violations then what should happen is for the case to follow a course to conclusion that does not give the appearance of impropriety. If the court was right that the remedy set forth by Judge Jackson should be set aside because of the "appearance of impropriety" by Judge Jackson, then let's apply that same standard

now and have this matter concluded in the "light of public view" where the common person will better be able to judge the motives and agenda of both the Justice department and Microsoft. Many people have already concluded that both the Justice departments actions and words are suspect. Anything less than a complete rebuff of this "settlement" and a return to court in the light of public view is a sad travesty of justice.

Subject: Ruling...

Hi judge,
I have been following the Microsoft case from abroad and I must agree with the critics: the way justice works in the USA is not very clear. Guilty; split up; no split up and in fact a bonus being a con. It is true that Microsoft is what it is today due to his illegal behavior. The way your president became a president was distasteful for any democracy and especially for the biggest in the world.

There should be a fair sanction not only to prevent it from happening again but also for the fact that it happened and due to it people lost their jobs and perhaps even worse. No one can turn this back again, but these people finally got the law on their side during the first verdict and I think the law should not let them down.

Regards and a fair ruling,
Roger

Subject: Justice for sale?

When justice is put on sale, the robber barons (i.e. Microsoft in the case of IT industry) can always afford to make the highest bid. How can it be good for the US economy, or the global economy to that matter, when better technology or genuine

innovation (WordPerfect, Netscape etc. ad nauseam, not forgetting the uncountable startups that never happened or never will happen because going against the convicted but unhindered monopolist equates to a corporate infanticide) always loses to Microsoft's forcefully bundled (tied-in) versions??

The so-called settlement does nothing to correct Microsoft's past wrongdoings nor will it prevent any in the future. Judge Penfield Jackson was outraged for a very good reason, even though he only looked at Microsoft's business practises from a very narrow perspective, and his getting censured for speaking his mind was nothing short of tragicomic.

The Department of Justice should concentrate on delivering justice instead of being some sort of a business-political executive arm of the currently elected government. The September 11 terrorist attacks on America, despite being despicable acts, should have no bearing to the MS —anti-trust— case, all arguments should be based on law and all legal entities should be treated equally before it. I thought such things would only happen in Banana Republics.

Laissez-faire is a great idea, but it will never work efficiently under monopolies.

Patrick

Subject: microsoft settlement ineffective
thanks for your solicitation of comments.
i have been in the business since 1985 and have witnessed the rise of microsoft. i would say that their market position was largely gained in a perfectly legal manner through outmarketing the competition.

BUT, i have also seen them throw their weight around, at least since windows 3.1 was released. at that time, windows 3.0 worked on top of microsoft's own ms-dos, as well as dr-dos, which i believe novell owned at that time. windows 3.1 still worked with ms-dos, but not with dr-dos, thus forcing novell to assume the expense of a quick revision and sending disks to all customers. given their subsequent behavior, i can't believe this was a simple coincidence. this pattern has repeated itself many times since in my observation and as determined by the district court & the circuit court of appeals.

while it would be nice for microsoft to recognize their transgressions, that is not necessary. but solid measures to prevent such conduct in the future are a necessity, and they will need to be tough as microsoft still doesn't understand what they did wrong, and it thus likely to continue as before. this settlement is weaker than the previous one about not bundling internet explorer, which they have now successfully broken without consequence to microsoft.

i can only hope that the remaining states and european union will do their job where the justice department has abdicated their responsibility. their claims about innovation are met with laughter even amongst their proponents. the longer they can continue to abuse their monopoly position, the longer that the american and world public will

continue to have buggy and insecure software foisted upon them. remember, the recent spate of viruses, worms and web attacks (eg nimda, code red etc.) all relied on the gaping security holes in microsoft products.

please understand that microsoft stifles competition and weakens the US software industry, not the reverse. strict sanctions or a breakup strengthen the US software industry overall!

US DOJ

Why are you letting microsoft off so easy. Everyone and I mean EVERYONE knows that Microsoft is a Monopoly that pushes everyone else around. Consumers, Businesses, Competitors, and ultimately the Economy are going to suffer because you don't have the courage or integrity to do what is right. I have lost a little more faith in my government because of this weak attempt to "eliminate Microsoft's illegal practices, prevent recurrence of the same or similar practices and restore the competitive threat".

It was made apparent in a recent interview that reporters have a better understanding of this case than the Attorney General (<http://www.usdoj.gov/ag/speeches/2001/1102newsconference.htm>), but surely someone in the Justice Department is competent enough to see that this charade, cloaked in legal jargon, is not in the best interests of the American People.

My only question is whom do I need to vote out of office to get the Justice Department revamped from the special interest puppet it is today? A US Citizen jaded by the politics involved in our "Justice" Dept.

Subject: SMB/CIFS

I am sure that you have heard this before during the review period, but here goes. It is critical that Microsoft document many of the protocols used in cross platform computing. A very important one is CIFS. This enables

non Microsoft platforms to share files seamlessly with Windows machines.

With the advent of Windows XP, this is a protocol that is being changed to shut off non Microsoft solutions, steering system implementers towards Microsoft solutions even if the Microsoft solution is not the desired solution of first choice. Please take this into account in your decision making.

Thank You
Robert Lee

Subject: comments on antitrust settlement
To whom it may concern:

Having used the microsoft operating system since I have owned a computer, I have nothing but contempt for the company and its products. By its own admission, Microsoft has built bugs into its bloated operating system to cause problems with the Netscape browser, which I prefer to use. I am constantly rebooting and having messages that I have to close programs to run the program I am trying to run even when NO other programs are supposed to be operating. That is part of the bloat—microsoft running things in the background that I do not want or need.

What the consumer should be offered is an operating system—clean and simple—with the consumer able to add whatever he or she wants and needs. To be blunt, I do not believe Microsoft will follow any of the court's directives. In fact, it has already demonstrated its supreme arrogance and contempt of authority throughout these proceedings. Microsoft has an exceedingly large amount of cash and is a powerful company—both of which should have a negative bearing on the court's view. . . I really hate to see Bill Gates and company get away with their egregious attempt to destroy other companies and monopolize their sector to such an extent that the consumer cannot make a choice.

From: Mark D. Gregory
To: Microsoft ATR
Date: 11/18/01 4:36pm
Subject: It's about time

It's about time this case was settled. I've been a Microsoft customer for 20+ years. I've sold Microsoft products. I've sold products that competed with Microsoft products. I've worked at Microsoft. I've worked at competitors of Microsoft. I've programmed in Microsoft's environment as well as other OSs. I'm also a Microsoft stockholder. At no

time in all that time have I felt that Microsoft dealt with me in anything less than a professional and appropriate business manner. Have they been aggressive? Absolutely.

Have they violated any law in those dealings? I don't think so. Admittedly, a monopolist has different standards to live up to, but unless the monopoly is obtained illegally or until a company KNOWS that it falls under the monopoly statutes, that behavior is not illegal.

But, as I understand the laws on monopoly, the intent of those laws is to protect the consumer. Not competitors, not other companies, consumers. So, has Microsoft restrained competitors who would have brought better products to market? I don't think so. As an MS employee I used the Netscape browser for quite some time—it was a better product. Once IE became the better product, I started using it instead.

Could I have continued to use Netscape? Of course. I chose not to. How do I feel about having the browser imbedded? I'm extremely pleased. It's much easier to use that way, and it costs me less. I'm also not displeased to have Instant Messaging, music components or any of the other new things in Windows XP. If I wanted to use a competing product, I've got internet access built into my OS so finding the competing product is very easy and fast. Did Microsoft charge me too much? Not at all—if anything, they've driven the cost of quality software down, and then have NOT driven it back up. I'm convinced that this suit was prompted by Microsoft's rivals, who have proven themselves unable to compete on the merits if their products and therefore chose to use the courts to try to tilt the field in their direction—and manipulated the government into doing it for them.

So, you got the court to declare them a monopoly. They probably are, though I still am not totally convinced that the market definition for their marketplace was correctly set. In any case, I've read the proposed settlement and I believe it's fair to all parties involved. Microsoft is to be kept from business practices that are considered predatory from a monopolist. They're required to reveal their APIs (I've always thought they did—I've never needed one I couldn't find, or for that matter one that was there but hidden). They have the right to upgrade their products—after all, how do you improve a product if you can't add features? Even a monopolist needs to have that right.

I think that the court should enter into this agreement with no reservations and I also think that the court should impose the same settlement on the states that have refused to settle.

Respectfully
Mark D. Gregory

Subject: embarrassing settlement
count my vote AGAINST the DOJ's "slap on the wrist" settlement with Microsoft. Your e-mail address was provided at: <http://www.luskinreport.com/> along with Mr. Luskin's own pro-settlement message which I suspect is self-serving in spite of his claims to the contrary. Mr. Luskin's argues that "...we should applaud America's successful companies and allow them to innovate and to grow, rather than hold them back by pursuing regulatory actions born of the concerns of a century ago and dressed up in New Economy lingo, and motivated by the self-interested pleadings of competitors." This begs the question of why Standard Oil broken up? It also assumes that Microsoft is an innovator which it certainly is not, e.g. spreadsheet programs and web browsers both evolved from a freeware packages, MS was a late comer to the GUI and mouse, PowerPoint was formerly a successful product of an independent company, and MS Word started as a primarily Mac product because it initially couldn't compete with programs such as WordPerfect and WordStar on PCs (wonders what proprietary knowledge of the underlying OS can do) and then MS threatened Apple with discontinuing MS Office if Apple didn't do things the MS way.

Microsoft's products are frequently not superior and a competitive and open market would pass judgement; however, the tying of an OS with accessory software products combined with Microsoft's strong-arm marketing tactics on hardware distributors has allowed them to circumvent consumer based marketing controls. DOJ's proposed settlement will send MS merrily on their way to continue doing what they've been doing for nearly a decade—buying smaller competitors or forcing them out of the market or into niche positions which will probably ultimately fail. Only a group of humans with incredibly impaired judgement or no

experience with a wide variety of computing OSs and software packages would argue that the 'choices' provided by Microsoft are generally superior. When you have no choice but theirs is a bad time to wake up and argue that you're suddenly paying more than you were previously to accomplish a task which was formerly cheaper and more efficient.

Subject: Microsoft settlement

Dear sirs,

I started programming a computer in 1959. At that time, there were no such things as an operating system. The computer barely had a compiler, and my first language was called SOAP (believe it or not). That was the first generation of computers.

The second generation was also introduced without an operating system. It did however had a piece of one called IOCS or the input/output control system. Very late in the life of the second generation computers, the IBM 1410 released a version of an operating system. It had a few more features that were also announced with the operating system announced with the IBM 360 computer.

The first true operating system was released with the IBM 360, and it took several years to make it truly work.

The reason I'm giving you this little piece of history, is to illustrate the fact that any operating system evolves over time by adding features to support newer technology. Whole new features were added when computer systems first went on-line to support communications.

Therefore I believe that Microsoft did not do anything wrong by adding features to Windows to support the internet, if fact, I believe that it would have been wrong NOT to support the internet. We must allow Microsoft to expand Windows to allow it's users to take advantage of new technology. I believe that the verdict that Microsoft did anything wrong was a mistake and should be reversed.

Sincenly.

Subject: Comments re proposed settlement

I am both a corporate user and policy-maker regarding Microsoft products, and a personal consumer. I find deeply disturbing and negligent the proposed settlement the United States Department of Justice has made with regard to Microsoft's illegal, monopolistic behavior.

The proposed settlement does nothing regarding remedy for past illegal activities on Microsoft's part. Put baldly, in civil court, Microsoft, with in excess of US\$30 BILLION in cash and liquid assets, can well afford to excessively encumber any attempts at recovery by plaintiffs, perhaps to the point of

rendering such attempts moot by virtue of plaintiffs' more limited financial resources.

Microsoft has been convicted before of similar, anti-competitive behavior. The remedies reached in the past have done little or nothing to modify either its behavior or its basic attitude towards the legal rights of its competitors. Past behavior demonstrates a complete unwillingness on the part of Microsoft to endorse either the spirit, or the terms, of any remedy.

Microsoft's past behavior has eliminated numerous directly competitive and potentially competitive products. Their claimed justification for their actions, product innovation and market enhancement, is false. They have deliberately and illegally destroyed competing operating systems, applications, and utilities by manipulation of necessary technical interfaces to their products and by extorting distribution channels into denying access to the marketplace to such competing products.

Microsoft's industry domination has become a direct threat to the economic and technical health of our economy. It's current .NET initiative attempts, in the face of its conviction, to tie its operating system and integrated development environment to ALL electronic commerce. All such transactions would be directly monitored and their access controlled by centrally-located Microsoft servers. Even transactions having nothing to do with a Microsoft product or service would be forced to be completed on Microsoft-run computers in communication with Microsoft servers. A more insidious degree of control is difficult to imagine.

At the same time, Microsoft has demonstrated itself even just on technical merits to be completely unworthy of such control. Its Passport personal data storage mechanism, which it is increasingly FORCING its users to use in order to gain basic services with regard to its own products, has, despite Microsoft's assurances of security, already been compromised completely. Computer experts have demonstrated the ability to retrieve ALL of a Passport user's personal data: Name, address, full credit card information, and any other stored data, using a simple exploit that works over the Internet.

Of course, the Court must concern itself with circumstances germane to the case at hand and not necessarily with potential future problems. Nonetheless, Microsoft's current behavior belies its sincerity in entering into any settlement. It is not interested in acting within the limits of the law, and as such, the proposed settlement does not adequately resolve its current conviction.

Subject: Settlement in Microsoft Antitrust Case

Quick opinion: Sucks.

There's an old story about a guy who bought "the world's smartest mule". When he got it home, the mule simply wouldn't do anything. He complained to the guy who sold him the mule, who came out to see what the problem was. "You said this mule could plow a field practically by himself". "He can." "But he won't. He won't do anything".

The seller picked up an ax handle, walked over to the mule and hit it square between the eyes, as hard as he could, and said "plow the north 40". The mule then docilely walked off to do the plowing. "He'll do anything you tell him. But first you've got to get his attention."

This settlement simply isn't going to get Microsoft's attention. They have engaged in long standing anticompetitive practices, according to the Findings of Fact and the Findings of Law. Indeed, the Microsoft corporate culture holds that Microsoft's way of doing anything is automatically The Right Way, and that no other software companies have any right to exist. This is going to be very difficult to change, if it's possible at all.

It does not address the fundamental problem that got Microsoft into this mess in the first place—abuse of its monopoly position in both operating system software and office desktop applications. Indeed, it is difficult to see *any* effective change in Microsoft's more obnoxious business practices:

- * Tying Windows licensing fees to *total* computer production instead of computers with Microsoft Windows installed. Whether you use it or not, you still pay for it.

- * "Hijacking" open standards by extending them in Microsoft-proprietary directions and ensuring that their software will work only with the extended versions.

- * Keeping competitors' software from interoperating by using rapidly shifting, proprietary data formats. The settlement briefly touches on

APIs and communications protocols; however, it does so only in the context of licensed software. This allows Microsoft to effectively outlaw open-source alternatives to its own programs. (Open source projects

can't pay licensing fees, and reverse engineering has been effectively outlawed by the DMCA.)

- * Spreading "fear, uncertainty, and doubt" about competing products.

- * And the one that started the fuss, adding new application-level functions into the OS, specifically to run the competition out of business.

Even the sections that prohibit "retaliation" do so only in terms of pricing. Nothing prevents Microsoft from, say, refusing to provide technical support for any computer set up for "dual boot". The settlement's definition of "pricing" is also slippery; it specifically allows kickbacks (sect. 3, last paragraph of subsection A.) Another problem is that the settlement specifies no specific penalties for noncompliance. What will happen if Microsoft completely ignores the settlement? Nothing that I can see, except that it will run two more years (??!) Yeah, "such other relief as the Court may deem appropriate." Given that there are absolutely no penalties for the original violations (except for this powder-puff settlement and a bit of bad publicity), I can confidently state that there won't be any penalties.

What would be a penalty?

- * Corporate officers thrown in jail for contempt.

- * Fines significant for a company with more than \$10 billion in cash reserves.

- * Public release of "proprietary" interface code and data formats.

- * Blocking releases, or withdrawal of products.

During the 2000 election, I heard the confidant prediction from a number of quarters, both pro and anti Microsoft, that, if Bush were elected, the Microsoft case would be thrown out. Looks like they were right. As an aside, one hopeful sign is that the settlement is being published in WordPerfect format. Perhaps the Department of Justice is rethinking the U. S. Government's status as a Microsoft-only shop?

Subject: Microsoft Settlement

I for one am totally disappointed in the settlement reached by the Justice Department with Microsoft. After finding and reaffirming that Microsoft HAD indeed engaged in monopolistic practices, now, years later the Justice Department suddenly decides that Microsoft can be trusted to "play fair" by agreement alone? Like it agreed back in the mid 90's when it agreed to play fair?

You want to make the playing field level for all 3rd party software developers and the applications developers at Microsoft? Want to help so more of them don't go out of business or lose market share to Microsoft? Then split Microsoft into 2 companies. An operating system company and an application system company. THEN appoint your panel or committee to make sure neither company passes or requests "technical services" from the other sister company that wouldn't be publicly made to other 3rd party developers. The market would realize a sudden influx of new or improved competing software products with Microsofts applications if everyone has equal access to the hidden code or "hooks" that Microsofts Application Developers now have. . . Microsoft wouldn't have to release a single line of their "secret code" if they didn't want to—so long as the information they released to their respective sister company was the same information released to the 3rd party companies.

Subject: The USA can't sell out to Microsoft...!

To whom it concerns:

I'm a network administrator in Atlanta, GA. Microsoft has been bastardizing my industry in ways too numerous to mention. From changing industry standards (and forcing their adoption with their monopoly of

the Desktop PC) to forcing companies out of business by integrating features into their [undeniably dominant] operating system.

I am starkly opposed to the current proposed Microsoft remedies. I have been plagued with bug-ridden software from Microsoft and I can not escape thier grasp of my industry. If I had an option, I would certainly excise it. Please weigh the potential damage that will result if such a meaningless remedy is handed to Microsoft and Bill Gates. I can't help but think back to the Blackrock empire of old; and how my government avoided corruption and did the right thing and paved the way for REAL American progress.

Please don't allow Microsoft or Bill Gates to line the pockets of my representatives, and please see to it that an appropriate remedy gets forced upon Microsoft. They have been found GUILTY by US LAW, and I demand an appropriate punishment. Please don't sell our country out.

Sincerely,
Christopher M. Bergeron

Subject: Public Comment regarding Microsoft Settlement

To the Department of Justice:

As an IS professional who is intimately familiar with Microsoft's anti-competitive practices I must strenuously object to the settlement recently agreed to by Microsoft and the DoJ. My first objection is that the settlement does not address the most flagrantly illegal and unethical actions that Microsoft has taken: their secret agreements with original equipment manufacturers (OEM). Under these secret agreements, companies are forbidden to sell computers configured to run both Microsoft Windows and a competing operating system (such as Red Hat Linux or IBM OS/2). The penalty for breaking the agreement, or even acknowledging the existence of such an

agreement, is the revocation of the OEM's right to sell Microsoft Windows. Since Windows represents about 92% of OEM business, this would put most PC manufacturers out of business. As such, none are willing to challenge the agreements. The only benefactor of these agreements is Microsoft; All other parties suffer.

The consumer suffers because if they don't have the knowledge to install a third party operating system they are de facto prohibited from using said third-party software since they can't buy a PC with the software pre-installed, and don't have the ability to install it themselves. The consumer also suffers from decreased innovation in the field of computers and software. The OEM suffers because it cannot offer a unique product in a competitive marketplace, under threat of shutdown by Microsoft. My second objection is to the actual remedies indicated in the settlement. Microsoft is a company with \$25 billion in cash on its balance sheets. It could lose money for the next decade and still pay all employees. A seven year consent decree for Microsoft is like a being acquitted to a regular person. After all, we've been down the road of "be good, please" with this defendant before.

When their business practices ran afoul of the last settlement, Microsoft simply chose to break the agreement it had previously made, rather than fail to conquer the browser market. It is my opinion that this settlement is not in the public interest. The public's interest is best served by having a rich menu of software delights to choose from, not a 3x5 card with one word written on it, "Windows".

Subject: Proposed Microsoft antitrust settlement

To whom it may concern:

I must object in the strongest possible terms to the proposed settlement of the Microsoft antitrust lawsuit. The net effect of this settlement is a complete cave-in on the part of the government, AFTER winning a finding of fact in the trial court. I can see nothing in this agreement that benefits consumers or the public at large, but I can see that this settlement will allow Microsoft to continue its anti-competitive activities, but now under the approval of the U.S. government. The best outcome to this situation would be to split Microsoft into multiple companies, but I recognize that this is not a viable option in the current economic environment. Given these realities, the next best option would be to require Microsoft to publish:

- * the entire Windows applications programming interface (API) in a manner that would allow others to reverse engineer clones of the Windows operating system.

- * the complete file format of each Microsoft application, such as Word or Excel in a manner that would allow others to reverse engineer work alike applications.

- * the complete specification of any Microsoft extensions to industry standards such as the Kerberos security interface. Microsoft must not be allowed to "embrace and extend" software into proprietary implementations.

For at least the next 10 years, Microsoft must be required to publicize the APIs and file formats for all its applications at least 60 days prior to their release to prevent Microsoft from creating "moving target" applications.

There is ample historic precedent for imposing these rather mild restrictions on Microsoft. Just as one example, AT&T was required to open its networks to other carriers and to create a standard plug interface to allow other manufacturers to sell telephones.

While I appreciate the governments large amount of work, the current settlement is not sufficient to protect the consumer or the national interest. Please go back and create a settlement that works for all of us.

Please feel free to contact me if you have any questions or comments.

From: Bar1215@aol.com@inetgw
To: Microsoft ATR
Date: 11/18/01 8:33pm
Subject: Microsoft settlement

If I understand the Microsoft antitrust case correctly, Microsoft was found guilty of breaking the law by using its monopoly position as the operating system on the computer to undercut Netscape and drive them basically out of business (i.e. they were bought by AOL). They achieved this by bundling their software/browser with the operating system and offering it for free where Netscape charged for theirs (i.e. to make themselves a viable company). Since Netscape didn't have an operating system of their own, this gave them NO chance to compete with Microsoft. Since the courts unanimously found Microsoft guilty of breaking the law on this issue—shouldn't Netscape shareholders have the right to sue Microsoft for financial losses as well as punitive damages? Who knows how Netscape would have done if Microsoft had been forced to only challenge them on their own turf. When a company (Microsoft) can toss in other goodies where they have total control to squash competition, then that does violate the Sherman antitrust act in my opinion and that company should be made to pay the appropriate penalty. In my opinion Microsoft has not. They got a slap on the wrist from a pro-business Justice Department and are already engaging in the same behaviour again with Microsoft XP. This was a case in which the courts found UNANIMOUSLY—TWICE—

that Microsoft was guilty. It is my opinion that this administration is so concerned about the economy and their inability to do something about correcting the downturn (especially after Sept. 11), that they would just as soon this case go away. In this economic uncertainty the federal government caved in on a case the courts had them winning. IT SETS AN EXTREMELY DANGEROUS PRECEDENT FOR THE FUTURE! It sends the signal that if your pockets are deep enough you can buy your way out of anything—INCLUDING BREAKING THE LAW and INCLUDING DRIVING COMPETITORS OUT OF BUSINESS. Is this the message this government wants to send? Because in my opinion this is the message this justice department did send in their settlement with Microsoft—AND THEY SHOULD BE ASHAMED!

Subject: Allow non-MS Operating Systems to be preinstalled.

DOJ,

One of the key abuses of Microsoft's (MS) monopoly power is the way they leverage their operating system (OS) monopoly to keep hardware sellers from providing systems that have both a MS OS and other non-MS OSs preinstalled. Forcing MS to drop this practice would have many benefits.

1) Easier for users to experiment with new OSs.

2) More incentive for hardware developers to provide drivers for more OS's making the OS's easier to use and more reliable.

These two effects would allow other OSs to build a foothold amongst the non-expert computing public. This is the market that must be penetrated to compete with MS in the OS area. The only reason computer sellers such as Dell, Gateway, and others are not currently selling machines with multiple OSs is because of MS contract restrictions. The BeOS (now defunct) and Linux OSs would both benefit greatly from this policy.

 Subject: Microsoft Case

I have been employed in the software development field for over 25 years, spending the past 10 years writing software for the various Windows operating systems, using mainly Microsoft tools. I am currently Beta testing the Microsoft VS.NET development tools.

I recently spec'ed a new PC. I had the choice of either an Intel or AMD processor, motherboard from 5 top-tier suppliers, memory from 3 top-tier suppliers, a NIC from 5 top-tier suppliers, hard drives from 3 top-tier suppliers, video card from 3 top-tier suppliers, audio card from 2 top-tier suppliers, monitor from over 6 top-tier suppliers, and an overwhelming choice of CD-RWs, DVDs, keyboards and mice.

For the operating system, I had the choice of Microsoft and nobody. I have followed the Microsoft trial in both the print and electronic media. Microsoft has been found guilty of violating the anti-trust laws. I fail to see how the proposed settlement will prevent Microsoft from continuing to violate the law. At the same time, I don't see ANY punishment for its illegal behavior. Hello? What incentive does Microsoft have to avoid becoming a repeat offender when there is no punishment for the crimes of which it has been convicted? So far, it appears that Microsoft calculated correctly that any punishment it might receive would simply be a minor cost of doing business to continue its illegal monopoly. Microsoft needs to be punished to such an extent that should Mr. Gates consider violating the law again, he will remember that the last time he did that, he lost a lot more than he ever gained, and quickly decide against that course of action.

Sincerely,
 Robert Ainsley

From: Frank Loebig
 To: Microsoft ATR
 Date: 11/18/01 10:19pm
 Subject: MSFT ANTITRUST CASE

I am one of the millions of Americans using microsoft software on my computer. I have been told by the Department of Justice that I should not be happy with it because Microsoft is a Monopoly and created it.

They will be the White Knights riding to my rescue. Well, here is the way I see it.

1. The entire case was brought to trial because the Microsoft competition saw that better products could be produced by Microsoft at less cost, or free. It would mean that companies like Sun Microsystems would be threatened by competition and they would lose their monopoly for their product.

2. For the first time, Silicon Valley, who ignored the politicians and political contributions, make huge contributions to politicians to get the suit brought by the Justice Department and paid off Attorney Generals, through contributions of course. Microsoft was a little late getting into this game and lost the race.

3. The public was certainly hurt financially by what Microsoft did; the stock that is. Almost every mutual fund had MSFT stock as a pretty good percentage of their portfolio. The Justice Department suit not only brought down the MSFT stock but also burst the bubble of the this sector of the market, dragging down the rest of the market with it. It cost me and millions of investors, pension funds, etc., billions or trillions of dollars which may never be recovered.

So, who was hurt by a small group of companies, who couldn't compete in the marketplace, and decided to get the government to squash the competition? Millions of small investors, that's who!

Settle this thing and let the free market in America determine determine who should survive or go under. When the PUBLIC demands that the Justice Department take action against a Monopoly, that's when a case should be brought. For example, 99% of Americans will tell you that Cable Companies are a TRUE Monopoly, they are gouging the public, making you buy channels you don't want and somehow, the Justice Department can't seem to get the picture. I think that once again, the cable companies got to the politicians first, and in this case, made sure NO suit would be brought by Justice Department.

Renata B.

Hesse, you have no courage if you don't suggest and insist that something be done about the Cable Monopoly.

Thank you,
 Frank A. Loebig

From: Ronnie Jensen
 To: Microsoft ATR
 Date: 11/18/01 10:07pm
 Subject: Microsoft settlement

The proposed settlement between Microsoft and the government has no teeth.

(1) Microsoft is a monopoly..this is a proven fact held up in court and on appeals.

(2) Not knowing the law, what is the boundries of a monopoly..Can they keep their monopoly based on the law, where the law protects them, or is the court's intention to promote competition.

(3) The findings of the court should have no loopholes (as I have read in the settlement agreement)

(4) If an OEM is responsible for installing and supporting a Microsoft product then they shall have the right to adjust what they want the customer to see. Which means it is not up to them to supply Microsoft icons on the screen. However if Microsoft sells their product to an end-user they can do want they want. The difference is that by having an OEM reseller install and support the product, Microsoft is almost entirely void of anti-class action suits, whereas the reseller is not.

(5) All Microsoft products should be sold at the same price, whether to an OEM'er or to the general public.

This would take away all secret deals and clout. It would raise the price of their software, however it would be fair for all, which is what a monopoly should be concerned about.

(6) Since the federal government and a number of states have "won" the case and found Microsoft to be guilty, they should bar any Microsoft products from being installed for 5 years. This would give all other vendors an opportunity for market share. This is what Microsoft has done..as in the settlement with Caldera for DR-DOS.

(7) On the X-box..Microsoft has said they are selling the product below cost..Is there not a law against "dumping" in the United States..They are using their "Monopoly Money" to drive more companies out of business by this dumping. I could go on and on and on..but please do not let this company be above the laws. we must be tough.

Thanks,
 Ronnie Jensen

From: Rudy Stefenel
 To: Microsoft ATR
 Date: 11/18/01 10:07pm
 Subject: Microsoft hearing and a fair penility phase.

Hello,

I have been using Microsoft products for over twenty years so I am especially interested in the outcome of the case between the US Justice Department and Microsoft. This is especially interesting because Bill Gates is a prince of a person who donated literally over a billion dollars to education.

Also, I know President Bush is partial to big business, and I know that he hopes that this case does not have much impact on Microsoft. I knew from the beginning that this case would be a great test to see how fair the US Justice Department will be with these kind of pressures.

I had a lot of confidence in U.S. District Judge Colleen Kollar-Kotelly when I first heard that she was taking the case. I even wrote to her to tell her that. I lost confidence when she announced part of the government's decision early in the penalty part of the case. She announced that the government would not break up Microsoft. Even if that is part of the outcome, how it could be fair to the Prosecution by giving the Microsoft Lawyers the advantage of knowing that they don't have to worry about this possibility early on in the case?

It is my opinion that the US Justice Department is too afraid to take a fair stand with Microsoft because doing so might hurt the economy. Also I think that the US Justice Department is frightened of Microsoft because Microsoft has enormous financial resources and hires top of the line lawyers. If Bill Gates is not happy with the settlement, he will find a way to drag the case on indefinitely. He already got one Judge fired from this case.

In fact, U.S. District Judge Colleen Kollar-Kotelly is at risk if Microsoft is not happy with the outcome. I read in the news that she owned lots of stock in Microsoft's competitors and that she did not sell all this stock right away when she was handed this case. I read that she sold it a little at a time. She still owned a significant amount of this stock well into the case. If Bill Gates is infuriated at her judgment, then his lawyers can demand a new hearing because U.S. District Judge Colleen Kollar-Kotelly owned stock in competitors of Microsoft who stand to gain if the Judgment is hard on Microsoft.

I am disappointed in the Bush administration, and the US Justice Department, for not taking a position with U.S. District Judge Colleen Kollar-Kotelly and demanding that she diverse herself of all this stock immediately upon taking on this case.

Even though Microsoft's success is important for our economy, it is important that the US Justice Department do not cave into Microsoft. The integrity of the Justice Department and the Bush administration is at stake.

The settlement must address the fact that Microsoft bundles application software programs with Windows and this is unfair to competition. Users are forced to buy Microsoft's application software programs because they are included with Windows. Microsoft will either price these application into the cost of Windows or this becomes as a means of putting Microsoft's competition out of business, deliberate or not. When the competition is gone, Microsoft is free to raise the price of Windows.

It seems that U.S. District Judge Colleen Kollar-Kotelly is not concerned about the bundling aspect of this or she would have stopped or delayed the sale of Windows XP. More likely, she did not have the courage to stop Windows XP. This worries me terribly.

Also, I am not sure that U.S. District Judge Colleen Kollar-Kotelly will demand that Microsoft give enough details about writing software application programs so that Microsoft's competitors can write full effective programs to run under Windows. Microsoft is likely to have secret ways of linking Microsoft applications like Microsoft Office into Windows. Microsoft software will run better under Windows because Microsoft will keep secrets. Microsoft will probably get around this by saying that giving out this information would be a security risk.

At this point, either U.S. District Judge Colleen Kollar-Kotelly must grow courage to issue a fair judgment against Microsoft fast or she should be taken off this case. Even if she achieves the guts to do the right thing, it might backfire on her because Microsoft knows that she did not diverse herself of all the stock in Microsoft's competitors right away. It may be that our only hope of getting a fair judgment against Microsoft is by the determination and courage of the few states who are not happy with the proposed settlement with Microsoft.

Think about this: Microsoft has offered to pay the all the legal expenses to date to the states holding out if they will give in. Making an offer like this should be against the law. It is like bribery. What is U.S. District Judge Colleen Kollar-Kotelly doing about this? Is anyone in the US Justice Department going to do anything about it?

The US Justice Department has already determined that Microsoft is guilty. What is going on now is the penalty phase of the case. We need a US Justice Department with the conviction and guts to give a fair penalty, even if it hurts our economy and even if it brings on a wrath of more legal fighting back from Microsoft.

If U.S. District Judge Colleen Kollar-Kotelly does not have the guts, then we should get someone who does. Is the only hope for courage a few hold out states now?

Subject: Antitrust Document

This document is totally full of holes that Bill Gates could drive a truck through. Microsoft has never been punished for delivering promises that it never met, destroying other company's products and wasting the planets resources by delivering software that requires constant repair (if indeed it is repairable).

Nothing about this judgement will change that. Microsoft employs very sharp and very cunning people with almost no ethics. There is nothing that even resembles a slap on the wrist.

I don't have the time to spend rewriting it for you, I'm wasting my time trying to fix outlook express so that it will read newsgroups properly because Qwest sold out to Microsoft and now I have to use their reader instead of the Netscape one that actually worked properly. Read some of the books on Bill—especially "Hard drive"—and

you'll know you want to rewrite this. In some ways he's worse than a terrorist—he looks legit. His aunt taught him to be like this. You've got to punish this company and stop them from giving us crappy products and smothering the competition.

Subject: Microsoft Settlement

As a non-U.S. citizen, I and many others find that the settlement between the U.S. Government and Microsoft is extremely weak kneed. I have followed this case since 1998. The settlement sends a message to the rest of the world that the U.S. is unable to protect fair business practices where it is seemingly against the interests of U.S. politics or economy. The settlement is however, against the interests of the public.

The settlement only tells Microsoft to modify its future behaviour. That is no punishment or compensation for the acts it has already committed against other companies. In other words, although Microsoft has been found guilty of such conduct under the Sherman Act, it is a win for Microsoft.

Microsoft bleats that it is defending the right to innovate. However, it has successfully defended the right to crush the innovation of others, without which many Microsoft products would not now exist, either by take over or by stealing the ideas and programming code off others. The U.S. DOJ must review this case and impose stiffer penalties, even the break up into two or more companies, if the U.S. is to be trusted in the international community.

As a software professional, I would like to see balance and fairness restored in this industry, and am very concerned about this latest turn in this trial.

Subject: Comments regarding Microsoft

Dear Justice Department,

As a member of the software industry since graduation with a BSCIS and BSBA from Ohio State University in 1984, a Microsoft stockholder and a Microsoft business partner, I find it refreshing to see this ugly chapter of government interference in the fast moving high tech industry coming to a close. Microsoft should be held to the same laws as every other corporation in the land. However, the actual damages to anyone in this case is highly suspect. It appears that this case was brought by a number of companies unable to succeed in the industry without resorting to the courts, and some sympathetic government lawyers eager to hang the Microsoft hide on their wall as a trophy. The issue between Netscape and Microsoft as long since been settled and Netscape is a Microsoft business partner. Microsoft came

up with their own browser, a fairly simple piece of software, rather than buy Netscape licenses for it's thousands of employees. Since the development of the browser was already paid for, they offered the browser as part of their operating system to enhance their Internet presence. I see nothing wrong with this. The general market has flourished well due to the standardization Microsoft provided in operating systems and office suites (Word, Excel, etc.). This country's government should be treating Microsoft as a national treasure. The US government should be approaching Microsoft and asking how we can enhance the development of Microsoft and grow the software industry in the USA as it is one of the few industries with any future in the USA. We are luck that Bill Gates didn't pack up his company and move it across the border into Canada. Other countries would nurture a wonderful success such as Microsoft, not try to tear it down.

This lawsuit caused the technology bubble to burst and caused more loss in shareholder value for millions of Americans than any other single event in history. If I was a government lawyer, this is not the legacy I would want to leave behind. A legacy in which millions of Americans were robbed of their retirement savings, a legacy of millions of layoffs and company closures. And for what? What did this lawsuit actually accomplish? Even if Microsoft had been broken up, was this a good thing for America? Once again, what could the motives behind this lawsuit be other than a bunch of "has been" sour grapes from companies like Sun Microsystems who got together with a bunch of underpaid government lawyers who want to make a name for themselves and fostered by the Clinton administration who was angry at Microsoft for not contributing enough to the Clinton campaign. Isn't there a better use of the justice department's time than this? Isn't there any "real" criminals that you should be focusing on?

From: Andrew Ling
To: Microsoft ATR
Date: 11/18/01 11:53pm
Subject: Case Settlement

To Whom It May Concern:

Hello. My name is Andrew Ling and as a member of the I.T industry, a former employee at Microsoft and as a concerned citizen, I wish to voice my opinion on the recent settlement reached in the case of DOJ v. Microsoft Corp.

I have been using Microsoft products for well over ten years now. I have become so familiar with their products and technologies that I have achieved Microsoft's highest level of certification, the MCSE. Needless to say, I have a thorough understanding of many of Microsoft's products and in fact I myself use them everyday. As far as computer software

goes, Microsoft can hardly be equaled amongst many types of software and operating systems technology let alone bested. In my opinion Microsoft's newest OS, WindowsXP, is the best operating system I have ever used, or ever even conceived of using; and this leads me to my point. Nobody else can touch Microsoft's products because nobody has been allowed to compete with them for at least the past 10 years. Microsoft has crushed their competition any way they could in order to come out on top.

As I said in the opening of this email, I am a former employee at Microsoft. I was in fact a contractor, not a Microsoft employee; I worked for Compuware Corporation on contract with, and on location at Microsoft, here in Charlotte, NC as a telephone support engineer. Although I was a contractor I was still allowed to attend most meetings, and during some of these meetings Microsoft's true colors would shine through. Granted, I heard nothing of true substance or anything blatantly illegal or wrong, but one absolutely gets a feel for what they are all about, and what they are about is putting every single one of their competitors out of business. I had long suspected that was the mood of Microsoft from hearing "leaked" information off the internet or seeing hidden-camera videos of some of Microsoft's meetings and strategy planning sessions. I suspected that before going to work there, but actually working there made it a fact.

In defense of Microsoft I will say this:

*They are an extremely generous employer to their employees

*The workforce is tremendously diverse and,

*They put a lot of pride and hard work into the products they make and the services they offer.

These good things I say about Microsoft do not matter however; they were found guilty of breaking the law and I fully agree with that ruling. As I said before, I always knew Microsoft was "evil" ever before I worked there, but now this is apparent to the rest of the country. If you read anything in this email read this; the settlement is tremendously weak. Microsoft will continue to dominate with such a slap on the wrist and nothing will have changed. And I fully believe that this is why not all of the states involved in this case agreed to the current settlement. It is way too weak. The noose needs to tighten around Microsoft a lot more. When this happens we will truly begin to see the "true" essence of innovation and more importantly, competition.

These are just my opinions.

I wish to remain anonymous

I wish this letter to be held in confidence

*for the record I left Microsoft amicably at the end of my contract

Sincerely,

Andrew Ling—MCSE, A+

Subject: Settlement appears very bad

I have been keeping up with the case and reading extensively. I started out doubtful about the legal merits of the government's case, but I followed the trial almost daily and agreed with the judge's findings. I have read the terms of the proposed final judgment. Microsoft engaged in section 1 violations of a nature that might have put executives of a less-powerful and self-righteous company in jail. The government proved illegal conduct, to the satisfaction of the appellate court. There have been blatant attempts to use the monopoly in Windows to create monopolies in other products. I believe Microsoft has succeeded with Word and Outlook—formerly two products that have been bundled in "Office." As a small-business owner, I can't avoid doing business with Microsoft without suffering a lot of aggravation and expense. It starts with being dependent on Windows and the far lesser compatibility of non-Microsoft browsers, word-processors, email programs, and now imaging software. This is not a result of innovating. Its leverage of market power. The proposed settlement has got to have Microsoft executives cheering. There are few specific requirements (and therefore interpretation and proof problems) and there are no teeth. At best, the government wins the opportunity to start over. The government's capitulation smells of influence and politics.

It is probably too late to do anything to tighten up, but please try.

Mickey Aberman

To whom it may concern:

I have been working with and teaching people how to use Microsoft products for several years now. In fact, I am an MCT—a Microsoft Certified Trainer—a distinction held by few individuals. During the time I have been in the computer industry, I have heard many points of view. But to quote George W. Bush, "Make No Mistake", there has never been any controversy over whether or not Microsoft is a monopoly. It has been manifestly evident to all intelligent parties. It is a common joke. What else can we do but joke about it? It is reality. I don't like the idea of "biting the hand that feeds me", but the best solution for this industry is nothing less than a full breakup of the company and the opening up of Windows source code. Don't worry, Bill Gates, Paul Allen, and whatever piece they still control will still be fine. They ARE the wealthiest men in the world. And there is a reason they are the wealthiest people in the world—they have a stranglehold on the industry. Break them up—life will go on. Gates will still be rich. The difference is that millions of people will finally have a CHOICE. Isn't that what America is all about? PLEASE, live up to your name—The Department of Justice. Give us *justice*. Please. Break Microsoft up.

We're waiting, we're hoping, we are the American people,

From: briand@zipcon.net@inetgw
To: Microsoft ATR
Date: 11/19/01 2:00am
Subject: Microsoft/DOJ settlement

To whom it may concern,
I believe it is crucial that Microsoft be required to fully document:

1. The Application Programming Interface to any current or future operating system. More importantly, there must be some way to prevent other Microsoft software, e.g. Word, Excel, etc.. from using undocumented API calls which give those programs an advantage.

2. Microsoft's true stranglehold is the use of proprietary datafile formats which make it exceedingly difficult for other vendors to write program which can interact with those formats. It is crucial that the file formats be documented and made publicly available. This still requires would be competitors to implement the functionality, a non-trivial task, but would allow competing programs to interact with Microsoft file formats.

The key to any settlement with Microsoft must include these items to make it possible for competing programs to evolve. All of the user applications will then compete on the basis of ease-of-use and stability and other important merits. The current situation, i.e. control of the file formats and API's, has in fact created an artificially limited resource. Microsoft must document this information for internal use. It is hardly a difficult or expensive task to make these things public knowledge.

This sort of standardization is usually done by industry groups. Microsoft's monopoly position has allowed them to completely ignore this process and prevents such standards from being implemented. Wherever standards exist and are publicly available, purchasers of materials covered by the standards benefit.

From: Bill MacAllister
To: Microsoft ATR
Date: 12/6/01 1:21pm
Subject: Please breakup Microsoft

Hello,
I just wanted to a short indication of my view of the business practices of Microsoft and its effect on technology. For 5 years I worked at a software company that produced Internet email software. For years now Microsoft has made life very difficult for internet postmasters both by:

1. Producing software that flaunts the messaging standards, both Internet and OSI standards.

2. Producing email user agents and word processing software that are targets for even the novice hacker to attack random hosts.

The penetration of Microsoft email products into the market place has been dramatic. In large part this can be attributed to the delivery of Microsoft Mail as a "free" add-on to Microsoft Office. This is very similar to the problem that the court considered in looking at web browser embedded in the operating system.

In my opinion, any settlement that does not require Microsoft applications divisions to operate independently from the operating system developers is a waste of your effort and my tax dollars. It needs to be in the best interest of the Microsoft applications group to provide software on any or all

In my mind, the settlement is fair.

We don't need to punish one of our great companies just because they have a good product that no one else can compete with.

I have Linux on my machine also (dual system). Windows is far superior in every way. When Linux puts together a competitive product I'm sure they'll attract a good following as Windows has been able to do. Redhat and the others need to work harder at improving their product. The same goes for Netscape.

I believe it is sufficient to monitor Microsoft and insure that they don't attempt predatory practices, but punishing them for success is not acceptable.

 Subject: Microsoft case
 Renata Hesse

I would like to say that it is about time the Microsoft case is settled. I do not believe it should ever have begun in fact. As a senior citizen, now retired I believe Microsoft has done far more good than bad for the computer public. I had never touched a computer until I was in my fifty's and I have seen things much improved with the Microsoft products ever since. I have run Gateway and Dell computers. I have used Windows 95, 98, ME and soon will use Windows XP. I have run Explorer and Netscape, both at the same time on one computer with out a problem. I currently run three chat programs, AOL, ICQ and MSN with no problems. I am not a computer genius and I have not worked in the industry either.

I also have run several other competing products side by side on my computer. Quicken and MS Money, Microsoft media player and Real Jukebox. Various email programs, etc. I have been able to add or remove these programs without any major problems and was free to decide which I wanted to keep. I also was never forced to buy any Microsoft programs. Why have we been prolonging this outcome other then to benefit competitors? I guess if I had a product that could not compete it would be okay to

have the government to step in and slow the other guy down. Most anti trust parts of this case have disappeared due to time and circumstances anyway. My thought on this is if you don't like the company or the products don't buy it. There are other systems and programs available. This is a no brainer.

And if the government wants to worry about monopolies they can start with the oil companies before we have only 2-3 left and gas prices go sky high and never return. The options for the consumer are much worse in this case. If you do take on big oil give us another judge that has his mind already made up and sleeps in court. What a bozo.

 Subject: The wheels of US justice are incomprehensible
 Dear US DOJ

I am a programmer who has been following the various Microsoft lawsuits with interest over the years and I must say that your proposed settlement with Microsoft amounts to more of a capitulation than a settlement. If Microsoft is guilty of a crime, then surely it should be punished? If it has inflated prices over the years, then a refund would be a good place to start.

If it has broken the law by producing operating systems that harm other products, then surely Microsoft should be forced to issue a CD to all *existing* Windows users, starting with Windows 95, containing updates to those operating systems that will enforce compliance with the law? If MS is going to be forced to sell a cheaper version of Windows without all the other junk, then

this should apply to all versions of Windows 95 onwards, and not just Windows XP onwards.

Perhaps you could do it as part of the enforcement process: the first time that MS gets cheeky and violates the compliance issue, then Windows XP and Windows 2000 should be included in the list of operating systems that need to be changed to comply with the law. Next time they get cheeky, then add Windows ME, and then Windows 98 SE, and so on. Not only will this allow existing customers to benefit from the enforcement of the law, but it will increase Microsoft's costs, by having to go back to older versions of their code and change it.

The wording of the proposed agreement sounds all well and good in theory, but it was obviously written by people who have never struggled to get Microsoft to

- a) Admit there is a problem
- b) Work on fixing it
- c) Getting a fix that makes things better, not worse

Have you guys ever actually tried to report a problem and get it fixed? I doubt it! If so, then you would provide mechanisms whereby Microsoft's own reluctance to admit that they have done anything wrong would be addressed. Until you get that mindset to change, you are going to continue to look like fools in the eyes of the general public, both at home and abroad.

Best wishes,
Donn Edwards <vmusic@global.co.za>

Subject: Anti Trust

I cannot believe that you folks entered into this limp dick settlement against MS. Gates is the ultimate capitalist pig, trashing competition and foisting trash OS's on folks. MS continues to violate the spirit of competition as we speak. As an example their file backup system in ME & XP backs up Interbase database files (an open source competitor) every time there is a change. This has the effect of slowing a system using IB to the point it is useless and appears inferior to MS products. This was done purposely to make IB look bad. But you go ahead with your settlement. You have really acted in the interest of the citizenry.

Or is it that Bill Gates contributed big time the the republicans. Shame on you and the government. You failed. I will not comply.

Subject: microsoft decision

To Whom It May Concern,

I realise that as an Australian citizen my views on the Microsoft (MS) case are probably of little concern. However, I find the US court decision somewhat perplexing. Your court has seen evidence of Microsoft creating, maintaining and increasing a monopoly in not only the United States of America, but the whole world. The Windows

Operating System contains so much peripheral software that the vast majority of users will never consider using alternative software. Added to this is the difficulty in disassociating software such as Explorer, MS Messenger and MediaPlayer. Adding alternative software is beyond the average user as MS products keep on usurping installed software from competitors as the primary program. MS is a company that has bullied OEM's, bought out rivals (e.g. Corel) and stymied competition such as Netscape by giving its software away for free and claiming it is part of the Operating System and can't be disassociated (e.g. Explorer). The remedies you have proposed seem inadequate to quell fears that MS will continue to gain dominance in computing software markets etc. The original decision to force Microsoft to split into an operating system and general software companies seemed like a sensible decision based on MS executive's failure to comply with previous restraints on their marketing behaviour, in fact for most people in the computing world believe even this was inadequate. Even during the trial, MS executives were shown to be deceptive, in particular Bill Gates. Your failure to place sufficient restraints on this company will hopefully be rectified by the European Union courts and other foreign legislative authorities. As it stands, the Justice of the United States of America appears to be inversely proportional to one's wealth.

Yours Sincerely,
Chris Norwood

Subject: Justice Stepped Aside for Microsoft

This settlement does nothing to solve the problem and nothing to punish the offender. It serves no purpose except for Microsoft. For them, it gets them out of this litigation free. With Windows XP, Microsoft now continues to destroy the industry, and to usurp additional industries, leaving only itself. Microsoft continues to see that it has nothing to fear from the U.S. Justice Department.

What kind of law even allows for a ?settlement1 anyway? Can I go out and kill someone and ?settle1 with the courts on the kind of punishment I want? The courts found that Microsoft broke the law. Punish them and disable this repeat offender which has no regard for law from doing it again.

Subject: Microsoft Case

Dear DoJ,

During the last couple of years I have been following the case against Microsoft closely. Lately, I've been baffled by the outcome. I would like to know the motivations you've used to withdraw from the previous course. I also learned that your president has shown leniency towards Microsoft and tried to stop the lawsuit from continuing: he has asked the DoJ for a settlement course instead of a conviction course. This shocked me.

I would like to ask you to pursue a conviction course that will lead to a split-up of the company in at least three different companies, as Microsoft is most definitely controlling the market in an unhealthy way. Their ethics are questionable, at the least, and their strategies and tactics are to be considered murderous for software development around the world.

Sincerely,
Eelko de Vos, the Netherlands

From: Michael Foy
To: Microsoft ATR
Date: 11/19/01 8:02am
Subject: Very disappointed in the recent settlement with microsoft

As an individual living in England, I don't suppose my views about your recent microsoft settlement should count for very much, but I thought I'd at least have my say, after all, 'if you remain silent when evil is done, then you are supporting it.'

Microsoft is a monopoly, which uses its dominant position in the computer market to stifle innovation and rivals. Their use of passport system is an infringement of my rights to privacy, their OS XP is full of holes, allowing easy access by zombie programs, they buy up shares in rival companies to get leverage. They lie about their products, plagiarise other people's software and use their size to undercut any opposition.

It's like having ONE oil company, who will only sell petrol to certain manufactures of cars. Please reconsider your verdict, and rather than split microsoft into two, just take away windows from them, allow them to work on applications, which will sell themselves, but make windows a 'FREE' operating system with open source, like linux.

Thank you.
Michael Foy

Subject: Netscape & Windows XP problem

I have come across a problem that in Windows XP that STOPS Netscape from installing. I reported this as a bug when I received Windows XP Professional RC2 but it wasn't fixed. Do the following: i.e. Have a directory called win98 that contains the setup files for Windows 98. i.e.—c:/masters/win98. Then have the netscape setup program in parent directory. i.e.—c:/masters/cc32e47.exe run cc32e47.exe and when it gets to 100% it reports that it can't install Windows 98 and then fails. If you rename the win98 directory to something else then it works okay.

To: Microsoft ATR
Date: 11/19/01 8:15am
Subject: MS dependencies

My name is Robert Morton. I am a Senior Computer Support Specialist. I was happy when the US Justice Department decided that Microsoft needed to be pursued as a monopoly. It is clear to anyone that they are a monopoly and use this power to go into other markets. They essentially killed Netscape, and are now focusing on instant messaging. If you happen to use a computer that is not dependant on their operating system, they will hold your company hostage with Office.

MS has shown time and time again that they do not care about the law. Any minor action you take against them will be ignored. Once that happens the entire process will have to start all over again. How many times will the US allow MS to lie in court, submit false evidence, etc. before something is done? Please reconsider the solution. The US has spent a lot of money creating a solid case. The proposed solution will not even slow MS down from repeating their past transgressions.

There are only two solutions that could work. One, break the company up. Since that probably will not fly in the current process, there is one other possibility. Have MS open up the file formats for their applications. This would allow other companies to write compatible versions of all their applications. The file format would have to remain open and changes approved before they can be released. This one change would allow WordPerfect or AppleWorks to legitimately compete with MS Office. Also if MS does not feel there is a market for a product, someone else could fill the gap. For example, MS Project is not made for other platforms any longer. If the file format was open, someone could write an application for UNIX or Mac that would be able to read, edit and save MS Project files. At least this would weaken the company's strangle hold on other platforms.

From: Walter Padgett
To: Microsoft ATR
Date: 11/19/01 8:34am
Subject: Microsoft

Good Morning,

I've tried to follow this case as close as my schedule would allow. My brief summary of all of it is as follows:

1. Bill Gates has a history of not following the law in the past, so what will make him change now?
2. Technology changes too fast for this type of settlement to be effective five years out.
3. Bill Gates uses other companies technology and then settles out of court.

I am a supporter of the American way but Bill Gates tramples all over the smaller Americans. I understand that everyone has the chance to make something of themselves but it is more difficult when someone steals your code. I believe the settlement should include some type of provision protecting the small guy when he sues to reclaim his code or program. It's a formidable task to fund a legal defense that can combat Microsoft's team of lawyers.

I believe the laws of the land should be changed to allow technology lawsuits to proceed fairly quickly through the courts. The reasoning for this is that technology changes everyday and by the time the case is settled, companies have a chance to change their program to avoid future lawsuits and release a new version during the current lawsuit. This basically makes it harder for the small guy who might be a victor to continue writing and selling his program.

Thanks for your time,
Walter "Wally" Padgett

I respectfully submit these comments and observations. I am a technologist who has been in this industry since 1985. I currently work of a brand building corporation that uses both Windows and Macintosh systems. In a prior career I worked for Ameritech (now SBC) for 30 years, five of which were in the IT organization.

It appears that Microsoft has again accomplished its objectives and will continue now on its campaign of total dominance of anything it chooses. I fail to understand why you, our Justice representatives, would once again offer a simple slap on the wrist to a company that has ignored a similar punishment in the past. Clearly, this approach has not and will not work. You have given Microsoft has so many ways to interpret this agreement that it is a total waste of paper. Were they not convicted of being an illegal monopoly? Did they not destroy competition in as many ruthless and illegal ways as they desired? Are you, with this agreement, increasing competition? Is this agreement good for our future? I believe, along with many others, that the answer to all these questions is a resounding NO.

I strongly encourage the Justice department to reconsider its position and to enjoin the remaining 9 states to vigorously bring this case to justice. A justice that will encourage competition and send a clear message to Microsoft and any others who operate outside the law. The Justice department should stop Microsoft's aggressive and illegal behavior once and for all. It is harmful to our future IT economy to allow this evil doer to continue in his illegal pursuits.

Subject: collect and give where needed—not punishment

Dear Staff,

Gates is getting off by offering little to nothing. Operating Systems like Bill's need to allow other systems and programs like Linux to run together otherwise the same monopoly is there.

I work in mental health research and people who receive mental health services are in great need of computers. This will not only help them but the whole community will be benefited by creating tax payers and lower the great benefit dollar that is paid out to may who could work if they received proper training and employment assistance. The ticket to work program is spreading out and many people with brain disorders will have the opportunity to work and not suffer the benefit cliff.

With all the time and money that public funds were used in the legal battle why rush

into an agreement before spending the time to get a return for the public for the illegal business practices Microsoft has engaged in? Please don't overlook people with disabilities when opportunities like these surface.

We need computers and software to train people to become taxpayers. If not now when?

With all the money being shift to children's education, which is the way it should be, it is leaving people with work histories like children out in the cold. Don't just punish Gates; rather use some of this ill-gotten gain to help people who truly need the help. Remember those whom you know with brain disorders and how hard they try to work with their limitations. I am one and work around many and advocate by research and trying to get a grant to address well documented unmet informational needs that consumers, loved ones, service providers and the public are telling us they need.

Subject: Microsoft antitrust settlement

I was very disappointed to see the DOJ vs. Microsoft case proposed for settlement without meaningful reformation. I believe it has become nearly impossible for new companies to truly innovate by introducing products that would complete with Microsoft. Wasn't the purpose of the original action to create an environment where competition could be fostered without the domination of the technological field by a single player? I am concerned that Microsoft will own and control all aspects of the Internet. I do not trust their benevolence to manage it for the public good. While it should not be the role of government to do so, as Americans we trust the free enterprise system of competition to offer reasonable alternatives to consumers.

I just don't understand—monopoly power was demonstrated as a finding of fact, then no credible action was taken to counter its

continued dominance. It is my opinion that Judge Jackson, even with the years of experience on the bench, and scholarly restraint, found it impossible to contain himself after witnessing the patently false and outrageous claims put forth by the defendant. I am certain the press was constantly pressuring him for comment.

I do not believe he entered the trial with prejudice, but that his opinion was formed during presentation of the evidence. Please consider meaningful reform in the Microsoft case. I do not believe they have excelled through innovation, but through bullying competitors into oblivion with threat and intimidation.

Subject: Microsoft Settlement.

To Whom It May Concern:

Thank you for this opportunity to express my views and opinions on the Microsoft Anti-Trust matter.

First of all, it has been, and always will be, my belief that the Anti-trust laws were designed to protect the Consumers—not the Competitors. It is my understanding that this action was taken by Competitors in voice of the Consumers. As a consumer of Microsoft products, I neither felt threatened nor victimized by Microsoft's methods of Marketing of its Internet Browser, Windows or other Software Products. Instead, I felt I was getting a Quality product at a reasonable cost.

Secondly, I applaud the diligence of the DOJ for protecting consumers such as me. As aggressive as Microsoft is in the Market Place, your actions should make all consumers feel that their rights are kept first and foremost in the highest regard by your branch of Government.

Thirdly, I do not feel Microsoft's actions warrant any punitive retribution any stronger than what is proposed. I do wish the remaining nine states drop their law suits and "cease and desist" further action as we know that they are Competitor Friendly states with ulterior motives in mind.

Thank you, and with kindest regards I am very truly yours,

Subject: This settlement is a joke

They are still doing it. Bundling msn messenger and the windows media player with XP Sending out emails to novel's customers telling them their product has an expiry date Using sun's java pet store unjustly as a benchmark The list goes on and on Companies like real networks, aol, sun stand to lose billions, and with settlements like this well why stop?

Even more important the freedom of choice of the consumer in taken away. Sure you can download netscape instead of internet explorer. But fact is most users will take what they've got. After a long day of work they don't want to bother with installing another browser if this one works just as well. Bundle it with windows and at least 40% will start using it right away. When that is in place they add some proprietary technology to it , like active X or some nifty eyecandy that makes your screen fade away when you leave the page. Deviating from the standard just enough to make it impossible to make it annoying for the casual user to browse with netscape. (make msn network inaccessible for netscape browsers is another good way to achieve this) Put a stop to Microsoft misusing its position in the market, split up the company or let them sell a bare bones operating system. There is NO OTHER option. Even opensourcing windows would be a joke, as no one can create a 100% compatible windows. Annoying the casual user again and thus they will not use it

Hope you reconsider the agreement
Sincerely,
jelmer

Subject: my thoughts on DOJ vs MS

Are you using linux or unix operating system to trying to figure out the penalty against microsoft...i bet you're using a microsoft os....are you using star office for linux as your word processor or microsoft word?.... probably ms word....are you using netscape or internet explorer to send e-mail regarding microsoft will you attempt to screw them?....probably internet explorer. I just wanted to point out that Linux, star office and netscape are all free software that you can get from the internet. Microsoft Windows is something that you need to pay for microsoft internet explorer is in the windows program but again you paid for it...(and the price wasn't low by the way), microsoft word is something that you paid for too.

I don't understand why everyone is going against microsoft when you had to pay for their products and everyone else gives their stuff away for free. Microsoft may bundle things together but shouldn't the fact that one had to pay for microsoft products be a deterrent to help the other companies keep up with microsoft. Most people don't know how to use computers, so they would rather pay microsoft to put everything together for them than put it together themselves....they don't know how to set up an Operating system, they don't know how to install software like staroffice or netscape...or they are just to lazy to learn how to do it. Red Hat Linux operating system has a graphical user interface (gui) that looks just like windows, i don't see anyone going after red hat linux. The reason you're going after microsoft is because microsoft is bigger than, and run better than the government. microsoft influences the world with it's software, you make it seem like MS is run by the mafia or something with all these illegal practices.

The fact is some people got mad that Bill Gates is richer and more powerful than they were and they are trying to knock him down a few pegs. I think microsoft is doing the general non-computer using public a favor by intergrating all of these products together. As an example of what i mean...today, go out and get a computer with linux installed....get yourself a copy of star office from the internet....install netscape and see how terrible it is now that it's made by AOL(time/warner)(which i can't believe that you allowed that company to get so big...when are you going to go after them). After you get so mad that you can't get anything to work properly, you'll thank God that microsoft put everything together for you so you didn't have to.

PS. Anyone who recieves this can forward it to whom ever they please. I tried to send it to Bill Gates also, but I expect it will fail. If it gets to someone who has the ability to forward it to Bill, please do so. Thank you.

PPS. I teach computers. If it wasn't for Microsoft, I wouldn't have a roof over my family's head, food on the table, or a car in the driveway, or a job to go to. No one has yet to sign up for a linux class but my microsoft classes always seem to have someone in the seats. Thank you Bill and thank you microsoft...Keep up the good work.

PPPS. This email is not biased for microsoft because i teach their classes either. I make low wages for the computer and teaching fields. I just really enjoy what I am doing.

From: Warren Hack
To: Microsoft ATR
Date: 11/19/01 9:44am
Subject: Comments on Proposed Settlement

I work for a contractor on a NASA budgetted mission, specifically the Hubble Space Telescope project, as a Sr. Software Systems Engineer. I do not have any commercial stake in PC software, but rather develop software for scientific use on a variety of computer platforms, including PCs. I also have professional experience selling and servicing PCs. Therefore, as a professional in the software industry, the proposed settlement with Microsoft would firmly entrench the monopolistic policies of Microsoft as the norm for the industry. This settlement does nothing to address the true problems that Microsoft was found guilty of in court: that they use Windows as a platform to dominate the PC with their software in lieu of anyone's software. There are no sanctions in this settlement to keep them from buying out one promising company working on some software, 'bundling it' with Windows and overwhelming all the desktops with their version when other companies are making better versions. This practice formed the basis for the suit against Microsoft in the first place, as that was how Microsoft's Internet Explorer came to be so ubiquitous despite it being inferior to Netscape. They have also done the same with screen savers (remember After Dark, the once standard for screen savers), media players (how much longer will RealPlayer last thanks to you?),

backup software (remember Colorado Systems), and many other programs that Windows has 'bundled' with the OS. Thanks to you no other software companies will have much of a chance of success. As new applications develop outside of Microsoft, they will simply do as they have always done: buy whichever company they can developing that type of application (regardless of the software's actual quality), 'bundle it' with Windows and swamp every desktop with their version before the other companies can even establish their software in the marketplace.

None of those programs, I do repeat NONE of them, affect the core functionality of the operating system; they only serve to pad Microsoft's bank accounts at the expense of others through the use of monopolistic practices as defined in the court of law. The proposed settlement went out of its way to leave these practices in-tact, and therefore, preserve the very basis of their monopolistic trade. After getting such a resounding conviction, I wouldn't be surprised to hear your budget's have been supplemented by Microsoft given the settlement you proposed. That opinion reflects the perception this settlement gives to the public, and especially to those of us who work professionally with PCs and software development. I only hope that your department will review this settlement with the attorney general's that are holding out and seek a stronger settlement with them.

Subject: Microsoft

Thank you for the forum to allow the public to submit their opinion concerning Microsoft.

I am a computer programmer and have used Personal Computers since their inception. I started with MS-DOS 1.0 and have progressed through every release. One more than one occasion, I purchased products (e.g. DR-DOS, Rbase) which were subsequently driven out of business by Microsoft's predatory practices. An excellent book on this subject is "Barbarians Led by Bill Gates" by Melissa Edstrom.

The fundamental aspect of this case is the definition of an Operating System. Microsoft has declared that any feature which can be integrated into the Operating Systems IS part of the Operating System. This is incorrect. The Operating System is simply the software required to allow application programs to "communicate" with the physical hardware.

This perspective is applied in the Linux/Unix worlds with the Operating System defined uniquely as a "kernel". "Windows" is an application which directly interfaces to the hardware. Because of the intimate relationship between Microsoft applications and underlying "Operating System", other applications vendors can not possibly compete. No competition equates to mediocre products. This is proven.

Please reconsider these remedies and allow the Justice Department to force Microsoft to create and maintain a generic operating system. This is good for business and the people who use computers.

Thanks,
Gary R. Page

Subject: settlement comments

Regarding the Microsoft settlement: Not enough was done to ensure a proper settlement. Microsoft will continue to devour companies it thinks are coming up with something too competitive. Microsoft only thinks of itself and should be punished for its harsh business practices. The company should have been broken up or made to pay extremely severe fines. As it stands now, only the consumer will be punished.

Subject: Microsoft vs. Justice Opinion

Dear Justice Department Representative:

I just found this Email address on my latest edition of Wired News and thought it was an opportunity too good to ignore. If the opinions of a Microsoft consumer have any weight whatsoever (which is historically untrue) then let my thoughts add to the tired scales of justice.

Having watched your comedic battle against Microsoft for the last few years, I can agree with Mr. Gates that the strain on the taxpayer and the waste of manpower are ridiculous. That is by design, of course. Knowing that there was no other way to win, Microsoft has won the war of attrition vs. the resources of the U.S. Government. Not even the entire country of Afghanistan could do that.

I use Microsoft products every day. I work with them. I play with them. However, I remember a day when FoxPro was the best database (they were devoured by Microsoft) and WordPerfect was an efficient and effective word processor (they were kicked out by the Microsoft clone, Word). Those softwares were the best because they were made by companies that had to create quality software in order to compete. There were dozens of productivity software makers out there. If one of them was prone to nasty macro viruses or crashed every hour or so, you could easily switch to another one. Now? To get software from other vendors requires

a Mac—but, of course, Microsoft will take care of all of their tools as well.

The remedies proposed by the settlement are weak. In fact, behavioral remedies will be as hard to enforce as this entire farce has been to execute. Microsoft will still continue to push its competitors out of the market—not by offering a better product—but by their established and growing strangle-hold on the software industry.

The only solution would have been to split up the giant and let it compete with itself. Two (or more) extremely powerful software companies—bloated but at least with a competitor on equal terms—would at least have less time and resources to smother innovation and might even create something of their own for once.

I'm sure you've read quite enough of these now (in fact, I doubt you've even gotten this far) so I will finish. Once upon a time, I believed my government could protect me from tyrants, thieves, and tragedy. It seems that isn't true... and every time I see MSnbc, MS windows, and MS passport I will remember that Microsoft is now my big brother who will tell me what to think, what to do, and to keep all my secrets (and I didn't even elect them). We all suffer for your failure.

Sincerely,
Glenn Anderson

Subject: Disappointing Settlement

Dear Sirs:

While it's true that neither party ever gets everything they want in a settlement, you've proven that once again, if you have enough money you don't have to be responsible for your actions in America. Why didn't you insist on changes to XP? Why only 5 years of monitoring? Microsoft has proven time and again that it will not abide by court judgments, let alone settlements. What makes you think this time is any different?

You should have pushed along to trial, and Justice should have asked Congress to create a law providing for a "corporate death-penalty" where anti-trust violations are concerned. Capitalism represents the core of our economic strength, and you've allowed one of the greatest cheaters of capitalism to get off the hook with a slap on the hand. When a corporation engages in anti-competitive practices, it commits the most serious crime (short of physical injury or murder) possible to our system. Such evildoers must be tried and punished at all cost.

You ought to be ashamed of yourselves. Microsoft can now continue to hold customers hostage, thanks to you.

Subject: DOJ missed the bigger monopoly case against MS

Bigger than the browser antitrust issue, please look into why Microsoft owns 98% of

the word processing market. This was far more devastating to consumers than the browser issue. In a textbook monopoly move, Microsoft systematically removed WordPerfect and other hopefuls as choice we might have for word processors. Around 1995-96, WordPerfect dominated with its \$495 product. People loved it and tech support was free. Then, Microsoft released Word for Windows at \$99, a price point they knew would destroy WordPerfect. Consumers cheered as \$99 became the new price for a word processor. Microsoft's could low ball Word because revenue from Microsoft's OS division paid the bills. Their plan worked and WordPerfect all but died. One might say that's competition, but here's the problem. Fast forward to 2001 and Microsoft no longer offers Word for \$99. With competition eliminated, Word now sells for \$339!!!! Do we get added value for the extra price? No, they eliminated the competition so they can charge anything. Free tech support like before? Ha, get out your credit card. We all pay their price because they removed our choice. The monopoly worked. Bigger problem is, MS Word is not a good program, and we're all forced to use it.

PLEASE DOJ. You must stop this activity so software authors can innovate in the future.

Thank you,
Dave Dahl

Subject: Microsoft Settlement Too Lenient

Dear Sir or Madam:

I was very disturbed to read about the extremely mild remedies that the Department of Justice has offered to settle the Microsoft anti-trust case.

The courts have found that Microsoft has a monopoly on operating system software and that Microsoft has used that monopoly unfairly to enrich itself in other markets. Extending its monopoly powers into other markets has chilled the competitive environment and damaged consumers by depriving them of the products and price-competition in these markets.

Please consider other, more severe, remedies for Microsoft's antitrust violations including breaking up the company into a separate organization for the operating system. Thank you for your time and attention.

RE MICROSOFT SETTLEMENT

As a former CEO of a .dot.com, a long-term businessperson in the Seattle area, and

a practicing attorney concentrating in business litigation, I have a different perspective than that of the Justice Department (at least as I see in the press). The major issue and the critical need in the software industry is the survival of independent software development. To defend their actions, Microsoft has raised the 'straw men': right to innovate and right to improve their products for the benefit of consumers. Consider the example Bill Gate uses in his press conferences: General Motors is not told that it cannot add headlights to their automobiles are they? This is actually a very good example of the problem. The answer is 'No, when headlights were invented, General Motors had the right to include them in automobiles.' The problem arises because Microsoft not only wants to include the headlights in their automobile, it wants to be the exclusive manufacturer of them (?It's a matter of quality control, you know?). From what I can understand from the settlement, it misses the point. The key issue is not how much the market knows about Microsoft software and source code, the issue is whether Microsoft has the right to own all new innovations. Thus, it should have the right to integrate a browser, but as a monopolist, it must purchase from more than one outside supplier. It also cannot be allowed to use its market power to decide that only one supplier of browsers (e.g.) can exist.

As a small time developer of software, I see Microsoft as a monopolist and Netscape that was equally ruthless company both of whom attempted to monopolize the browser market. If Microsoft had not stopped Netscape, it would now own (as a monopolist) the browser market. The right solution would have stopped both Netscape and Microsoft from driving alternative (some very good) browsers from the market.

In short, I see the settlement as benefiting a few large companies who are near monopolies themselves and doing little or nothing to protect small developers from the immense market and political power of these companies.

Subject: Microsoft

Dear Sir:

I read large parts of the findings of fact that were released many months ago by the previous judge in the case. Therefore, it was with total shock and dismay that I read the proposed settlement of the case last week. Once again, the justice department is giving Microsoft a slap on the wrist for their totally corrupt and harmful procedures in the business place.

I suggest that any justice department official be required to watch the sleazy testimony of Bill Gates before they are allowed to have any say in the settlement. A re-reading of the findings of fact would also be helpful. Microsoft is bound and determined to use any tactics, legal or

otherwise to control every aspect of the market. Where is the competition we have been taught in school that was the backbone of this nation? There is none if Microsoft is allowed to keep up their illegal actions.

How about some teeth in your proposal??

Dr. Bruce Rogovin

Subject: Microsoft economies of scale = Higher Prices ????

Forget the browser issue, Microsoft continues to steal from us all...

While PC hardware prices have fallen steadily, Windows OS and upgrade prices have risen. The proportions are completely out of whack. WindowsME lists for \$209 and you can buy basic PC hardware for not much more. Remember back when Win3.1 was \$119 and 79? Why the higher price now? The enormous volume of PCs sold would indicate Microsoft could now charge less to everyone. Shouldn't the public benefit from economies of scale? No need to. There's no competition, so they charge more then call it innovation.

So when are they going to help consumers and drop their absurdly high pricing, and place reasonable charges on support? Where are the economies that come with high volume sales? When there's competition? There isn't any because they eliminated it. Microsoft simply continues to hold the huge userbase hostage.

Please DOJ. It is time to stop them.

From: Olszewski, James
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/19/01 10:07am
Subject: Microsoft Case—James F. Olszewski II

I am writing to this email address as I was informed that the DOJ was seeking opinions on the case.

I have been a Computer Technician and Network Administrator for several years. I have worked with Microsoft products for many years, as well as numerous other-vendor products. I have also kept a close eye on this case, as I have witnessed Microsoft's anti-competitive and predatory behavior over several years time.

My opinion of the settlement is that it is incomplete. It does not even come close to making Microsoft 'atone' for the businesses or careers it has destroyed nor for the misperceptions it has inflicted upon the public with its media practices. Many of its customers have absolutely no idea what kind of damage this company has done and this is by design. Also, those companies that decide to stand up against Microsoft's unreasonable requirements for licensing are not protected from retaliation.

Microsoft has also, in my opinion, treated the Federal Government with disdain and has used the same 'sheer weight of power' tactics it uses with any company that does not fit in with its business model. Besides being legally questionable, this insults all US citizens and hints at future behavioral

problems when that 'weight' grows even larger. Microsoft is NOT above the United States and MAY NOT choose when and where to obey the law.

In my opinion, fees and damages should be levied in proportion to the net worth of the company and the business it has stolen. It should be immediately accountable for its actions when dealing with competitors and customers. It should be expected to meet product quality standards, without being allowed to solely create those standards.

In short, it should be treated as any other company and one that has been tried and convicted of aggressive and anti-competitive practices. In any other case, an individual or company that has repeatedly thumbed its nose at authority and has consistently worked loopholes to take advantage of the 'letter of the law' as opposed to the 'spirit of the law' would have been punished and made an example of.

Why should Microsoft be any different?

Subject: MS "Settlement"

This has got to be, without a doubt, the single worst settlement ever made. It's obvious to myself and everyone else who actually understands the "tech industry" that the Department of Justice has no idea whatsoever of how to handle businesses that abuse the system so blatantly as Microsoft has. They have put up with Microsoft dragging their heels for years and, just as there was some hope of actually getting somewhere, they completely and utterly fold. Granted, breakup of the company is far from the best idea, but there are literally dozens of other solutions which, as far as the public has been notified, were not even considered. At the VERY least the government ought to have forced TOTAL licensing of ALL Windows code to whoever wants it for a fixed, REASONABLE price. The "remedies" that the DOJ/MS team have come up with are a travesty and will in no way impair Microsoft's illegal, immoral actions in the slightest nor will they "stimulate the economy". In fact, the only thing they will do is hurt the consumer and impair their "choices" in software and hardware resources for now and years to come. I can only hope that the court will see reason and reject the "settlement" outright. I'm ashamed, as an American, to have this "Justice" department representing me.

Subject: Don't let them get away with it...

Let me begin by noting that I do not work for any of Microsoft's competitors, nor do I have any significant investments in those competitors. However, spending thirty years in the computer business guarantees one broad exposure to Microsoft products and practices, so I am well aware of that

company's behavior and their on-balance negative contribution to the computer and technology industries.

1. Microsoft does not innovate in technology, despite Gates's public pleas to let them innovate. Microsoft instead stifles innovation, through the most innovative application of anti-competitive behavior in history. The Internet Explorer browser is just the latest example of the well-proven Microsoft strategy: spend just enough on development to make the product barely acceptable to allow the business and marketing forces to overwhelm competitive products, and then slash the development budget and stop innovation. Word, Excel, PowerPoint and numerous other products have been through the same process. Unfortunately the innovative competitors squashed by Microsoft's illegal activities in those areas are no longer around to defend themselves, while computer users are forced to use products which last had serious innovation applied more than five years ago. The masses accept this like sheep; they're not aware of how good computer products could be had Microsoft not stopped innovation. Of course the worst offender is the Windows operating system. Major releases of Windows have had only two purposes: to fix devastating bugs that major corporate customers were complaining loudest about, and to carry the water for the destruction of competitive applications such as the browser. No student of computer science would give Microsoft even partial credit for innovation in operating systems beyond those two functions.

2. Microsoft destroys the innovation of others. For example, read the book "Startup" by Jerrold Kaplan for just one example of Microsoft's behavior in destroying companies whose technology threatens their monopoly or their plans for expansion of that monopoly. The well-known and often-repeated process goes something like this: innovative startup company creates new technology; Microsoft meets with company under the guise of strategic alliance; if Microsoft can learn enough to steal the technology, it does so and uses its Windows monopoly to prevent the startup from coming to market; if it can't steal the technology, it finds all the companies in the space and conducts a dutch auction, buying the company which will sell itself for the lowest price, using the threat of buying a competitor to get companies to lower their price; Microsoft assimilates the purchased company and uses its monopoly power to put all the other competitors out of business, then slashes the development budget for the acquired product and moves to the next victim.

3. Microsoft is a terrible corporate citizen. Consider simply their success in getting Judge Jackson to despise their behavior during the trial, resulting in aberrant judicial behavior, exactly what Microsoft wanted. This is a company whose business arrogance and flagrant law-breaking must be stopped. No legal settlement will have any impact whatsoever on Microsoft's behavior. Please study the history of the suit brought by Palm Computer against Microsoft a few years ago. You will note that Microsoft clearly infringed

Pal's trademark in calling their new handheld systems Palm computers. Palm sued, and Microsoft settled saying they would no longer use the term "Palm computer". The DAY AFTER the settlement, full page ads appeared in the Wall Street Journal, New York Times, and USA Today boasting of Microsoft's "Palm-sized computer", yes with the "P" capitalized. You can be assured that Microsoft is already preparing the fuck-you ad to follow the proposed settlement of the federal anti-trust suit.

4. The proposed settlement will have NO impact on Microsoft which is beneficial to consumers. Microsoft will only be emboldened by the fact that the government spent so much time and money and achieved nothing. Concluding the proposed settlement with Microsoft will allow you to look back in five or ten years and realize that Microsoft has gained and abused even more monopoly power, and that software innovation has effectively stopped.

PLEASE BREAK UP THIS COMPANY IN A WAY THAT DOES NOT ALLOW THEM TO LEVERAGE THEIR MONOPOLY TO DESTROY INNOVATION AND INNOVATIVE COMPANIES!!!!

From: Fred Kinder
To: Microsoft ATR
Date: 11/19/01 10:35am
Subject: Microsoft Antitrust Settlement

If this is the best settlement you can come up with, why on earth did you even bother to initiate the antitrust action in the first place. From what I can see in the proposed settlement, there are virtually no competitive restrictions placed on Microsoft and certainly the proposed settlement contains no punitive action whatsoever.

Come on folks, Microsoft was found guilty and does not even have to pay court costs?

The settlement offer provides nothing to delay, let alone inhibit, the anti-competitive tactics that Microsoft has employed (and enjoyed) in the past. You have allowed yourselves to become so wrapped up in obscure technical details such as middleware, that you have completely lost sight of the objective of a settlement in a case where the defendant has been found guilty—that is, the objective of any settlement should have provided (1) some form of punishment for the guilty party and (2) a mechanism to assure all competitors and consumers that the transgressions of the guilty party will not be allowed to be repeated. The settlement offer provides nothing substantial relative to either of these objectives.

It seems to me that this entire process has been a massive waste of time and taxpayer money.

Just my opinion.

From: Andrew F. Herrmann
To: Microsoft ATR
Date: 11/19/01 10:36am
Subject: Microsoft Settlement

Dear DOJ—

The settlement you have proposed with Microsoft is unacceptable. Given that Microsoft owns 95% of the desktop operating systems worldwide, you can be assured they have a monopoly. Their next biggest rival, Apple Computer has less than a 5% market share. Even our own courts have determined that Microsoft is a monopoly. So, the question remains, did Microsoft use its monopoly power to hinder competitiveness?

Undoubtedly, the answer is yes. MS when taking on much smaller rival Netscape in the browser arena, decided, the easiest way to kill that company was to give Internet Explorer away for free. With their large bank account and multiple income making products, they readily destroyed Netscape, who's only income was from Navigator. Netscape as a browser only exists today

because AOL bought it. How can one not think this was an abuse of power? Secondly, with such sway over the personal computer desktop, Microsoft was also able to make a "deal" with Apple Computer saying at its base "if you don't make IE your standard browser, we will stop making MS Office for your platform." Is this business as usual in the United States? I think not. Finally, the bundling that Microsoft continues to aspire to, including Windows Media Player and the new Windows Movie Player are but another attempt by MS to set itself up as the provider of choice, by offering the American people no choice. I believe that the people of the US deserve a pro-active DOJ that will not allow the continuing dominance of a company that continues to abuse its monopolistic position.

Our own court system has determined and affirmed that Microsoft is a monopoly. I urge you to require harsh measures upon Microsoft, including the possibility of a breakup of the company. It would be an injustice if the Executive Branch of the United States Government, overstepped its bounds and proceeded with the settlement as proposed. Let the court's ruling stand, and let's give innovation back to the people who CAN and DO innovate, not the company in Redmond that stifles it for its own protection. —

Subject: Don't let Microsoft off lightly
Sirs,

I implore you to not settle the case against Microsoft in the manner that has been publicized. Microsoft has already been found guilty of abusing its monopoly power—please dictate a suitable punishment to fit the crime, and one, given Microsoft's poor track record, that does not allow Microsoft to police itself. They have proven incapable of such behavior in the past.

Microsoft has shown, time and time again, that it is not interested in following the rulings of courts. It still bullies and threatens real and perceived competitors. Its products are hardly innovative. What Microsoft does best is see when another company creates real innovation, and either buys the company (if that company is small), blatantly creates a rip off of that innovation, or undercuts the innovative company by offering its own product in that market segment that is either free or so low cost that it drives the competitor out of that segment. Ultimately, consumers are the real losers in this scenario.

Standard Oil was broken up for some of the reasons mentioned above. As an American taxpayer and computer end user, I ask that you help computer industry innovation flourish by creating an environment where might does not make right.

Sincerely,
David Sopchak—

From: Gary Rehorka
To: Microsoft ATR
Date: 11/19/01 10:41am
Subject: Proposed Microsoft settlement

I am writing to express my concern over what I feel is a major shortcoming in the proposed settlement. Microsoft has been found to have engaged in illegal monopolistic activities. The proposed settlement seems only to deal with potential future acts by Microsoft and attempts to place controls on that behavior. Nothing in the settlement seeks to correct the harm Microsoft's illegal acts has caused. Microsoft escapes all punishment for having broken the law. It is my position that without some form of punishment the proposed settlement will always be fatally flawed. Microsoft has acted to stifle competition in the past. Microsoft's illegal activities have forever changed the competitive landscape in the area of software development, both in regards to operation systems and consumer software. Microsoft has used its monopoly position to force out smaller competitors and to disincline the development of competing software products. It should be forced that correct that wrong by fostering competition in the future. I believe that a large fine, commensurate with the revenue Microsoft derived from its illegal activities, should be levied on Microsoft.

I propose that the fine levied on Microsoft should be used to correct the market changes the company's illegal activities have caused. The fine should be used to establish a fund that would provide monies to independent software developers to develop competing or complimentary software to that which Microsoft supplies. I would add the provision that the resulting code be made freely available to all interested parties using the method pioneered by the open software movement by having the software published

using the GNU Public License. This will insure that the money illegally gained by Microsoft is used to reestablish a healthy competitive software industry.

Only by working to undo the harm done by Microsoft's illegal monopolistic behavior can the proposed settlement be seen as being in the interest of the American public. Simply attempting to restrain future illegal acts by Microsoft fails to address its past wrongs and leave Microsoft in a stronger position directly gained via illegal means.

Thank you for your consideration,

Subject: Proposed settlement: You've got to be kidding

It is with shock, amazement and no small amount of disappointment that I've read the terms associated with the proposed settlement in the Microsoft anti-trust actions.

I cannot believe that after the years of research and litigation involved in this effort that the Department of Justice is wholly ignorant of what Microsoft has done and what they are likely to do in the future if such an anemic set of 'guidelines' and 'restrictions' are imposed. My composing and presenting a lengthy argument to you via eMail is likely not to have any kind of impact (if it is even read) so I will not waste my time.

In summary, please take this eMail as an emphatic vote against the current settlement and for a much stronger solution. After 20 years in the industry—the last 12 of which have been in the Silicon Valley, I can hardly imagine a greater danger to innovation and customer choice than Microsoft being 'forced' to operate under these guidelines—except perhaps an unfettered Microsoft. Please understand that you have the burden of an incredible responsibility on your shoulders and tens of millions of people are depending on you. Please don't fail us.

Subject: Microsoft—Anti Trust (Appendage)
Dear DOJ,

This eMail serves as an appendage of an original eMail sent 11/16/01 (which is included after the following text).

The previous message neglected to mention the browser issue. During the court proceedings under Judge Thomas Penfield Jackson, William Gates (as I have read in technology news) states he didn't know what a browser is. I take his statement to mean that there is no clear definition of a browser simply because his own software package can be found specifying the need for a browser. Further, tying in of his browser to the Windows OS is not as clear an issue as Microsoft has pressed. My experience with Windows and the accompanying browser lead me to understand that:

- 1) The browser technically has nothing to do with the OS.
- 2) The Internet has nothing to do with the OS.
- 3) Internet access and a browser are two separate things.

To explain the above declarations in simple terms. The browser that was originally created as a method of viewing information stored and accessed from the internet was later extended to the OS as a means of maintaining consistency of appearance and usage between the OS and the internet. To simplify further, the code used for the browser and the code used for connecting/accessing the internet are two distinct components. Competing browser products as it relates to the internet are defrauded on the basis of underlying code that uses the Windows OS (now the primary use) browser to display internet information. Again, to simplify further, it is the internet access code that is the object of tying or commingling. It is this component that should be the focus of litigation.

To clarify why I chose to de-emphasize the technical merits of the browser with the OS (Windows) is that confusion arises from Microsoft's argument about the importance/difficulties of the browser. The browser as it stands today is important to Microsoft only as it relates to the importance that made the GUI (Graphical User Interface) a successful technology. However, my PERSONAL opinion is that this is contrived to a large degree. I PERSONALLY don't like the CONVENTION (browser as it relates to the OS) which is all it offers, in MY OPINION.

Original Message

First I would like to say that this legal proceeding must be handled with great care.

It is very economically important to settle a case like this so everyone comes out ahead. It is obvious at this point that your expert opinion is that conduct provisions be established to bring about a beneficial SETTLEMENT.

I am a software developer. My experience with the technology/products in question lead me to conclude that conduct provision MAY be a sensible route to a reasonable outcome. I must stress that technology is pushing forward and is requiring all software developers to use ever greater efforts to bring about products that are desirable. The comfort in the use of various techniques matured during the 1980s that still serve as the building blocks for products in the year 2001. These building blocks have to advance in order to meet the needs of the current/next generation of software products. What I am specifically addressing is that Microsoft has advanced EXPERIENCE in what ever technology it implements in its Windows OS. Competitors must struggle to implement new FEATURES provided in the Windows OS from the point of view of implementer. We all have to understand that Microsoft has invested money and effort to develop these new features, an intimate understanding of the theory behind that technology thus exists. For those who are in competition with Microsoft to develop feature rich technologies timely exposure to privileged THEORY does not exist. Instead, while Microsoft has "the inside track" and is working on next years projects, the competition is just learning how the present features can and should be used.

All of this is said to emphasize that one critical element to this very important legal matter is that there has to be fair access to new developments within the key technology, WINDOWS. If there were a way to maintain a list of technology being implemented and detailed information on the theory behind it, everyone would be in the advantages situation of technical literacy behind "A" target technology (WINDOWS). If there is no efficient method to implement such a strategy then I must urge on this basis alone that the company (MICROSOFT) be divided into an OS (WINDOWS) company and an Application company, two totally distinct companies, no ties. At this point, if a division was used, I would suggest no further remedy.

If a division of the company was is not selected as a remedy for the Anti-trust case and a "fair sharing of technology is used", then I would also suggest that Microsoft be restricted from bundling "value added applets". Examples range from the simple, (Notepad, a simple text editor), to the more sophisticated (Instant Messaging, Video Editing, the Windows Media Player). These applets have no place under the title Operating System. They have no bearing on the OS, they should all be omitted for (I'm no legal professional) legal simplicity. If however one decided not to pursue this aspect of this legality in this fashion, I then suggest at the least, competitors be allowed prominent accessibility/exposure to the OS (WINDOWS) consumer. A prominently exposed method to "use" or "try" a competitor's product should be available.

This equal accessible method might encapsulate ALL competitor products to provide a clear distinction between what is "a part of Windows" and what is offered as an alternative. These alternatives would be included with the Windows OS with respect to competitor participation.

This proposal for the Microsoft—DOJ, Anti Trust case is offered as a suggestion(s)

Sincerely,
A Concerned Citizen

Subject: Another victory for Microsoft

To whom it may concern,
I would like to say how displeased I was when I read the "penalties" that were imposed on Microsoft. Companies like IBM and ATT learned the hard way... monopolies are NOT in america's best interest.

But I guess times have changed, and laws can be bent! How Microsoft can have a SAY in what they will accept for penalties is outrageous. Found GUILTY, they must accept the ruling passed by a judge or jury.

I may not be seeing things correctly, from a legal point of view, but this is how the average american sees it!!

Justice has NOT been served.

Subject: Abuse of Monopoly has reached the consumer level

A few years ago, I purchased a database product from Microsoft. On the box and in its advertising, it explicitly stated "designed for the Power Macintosh". I spent over \$400 on this piece of software. It was so badly bug-ridden as to be unusable for my purposes, so I called the Microsoft Help Line.

I was transferred many times until I reached a person who was experienced with that product. They told me that what I wanted to do was not operational in the software version that I owned (though the box clearly said it should be), that they knew it was a bug in the code, and that the software I bought was not really designed for Power Macintosh but was instead a hastily made port of their Windows product.

Further, they said that the bug was going to be fixed in the Windows product (free updates for users of their OS), but that there would be no further updates of the Mac product (since it was not really "designed for Power Macintosh" as they claimed). They also said no, I could *not* have a refund because the box was opened. When I complained that I deserved a refund because they had both misrepresented themselves and sold me a defective product, the Microsoft representative *actually laughed at me*, and said, "Yeah, well.... Who you gonna go to? The competition??" This sort of arrogant customer abuse comes with the confidence of impunity. They had already violated earlier "remedies" for their earlier abuses, and did not hesitate to trample the consumer who didn't comply with their will (their OS or no OS).

Good for consumers? Ha! the only remedy good for consumers would be to break up this company to allow competition among the real innovators in the marketplace.

From: Theo M
To: Microsoft ATR
Date: 11/19/01 10:49am
Subject: Comment on the proposed settlement

I am extremely disappointed at the proposed settlement with Microsoft, following the Appellate court decision of 7-0 on the most important parts of the case, and the subsequent denial of review of this decision by the Supreme Court, in effect signaling you all how to proceed with a strong DOJ case, which would allow you to turn Microsoft into a company that competes based on merit, rather than by twisting the arms of everyone it considers a threat to its illegal monopoly.

To forfeit that strong position with the proposed settlement, and allowing Microsoft to be arbiter of its future, and of how to handle itself with regard to its policies towards competitors, and bundling of its products, is a travesty of justice.

How did we go from a proposed breakup in two of the company to this situation of giving it all it wants with a "behavior adjusting" settlement? Have we learned nothing from the past? Isn't experience with "consent decrees" that Microsoft has totally disregarded in the past, that we are where we are today? What are the guarantees that we won't have to deal with Microsoft with a new lawsuit in the future, and why should we, the taxpayers, foot the bill of monitoring this outlaw corporation? How have you dealt with ALL the violations of the Sherman Act it was found guilty of? Is this what Justice is in this country—watching Bill Gates lie repeatedly during his deposition, and no one at all taking issue with it—then allowing him to keep his pie and eat it too? The proposed breakup of the company is the only long term viable solution, which would allow for increased competition, the absence of monopoly abuses, and will not cost taxpayers

any more tax dollars. How could you put aside the chilling testimonies of witnesses to Microsoft's abusive and lawless monopoly maintenance practices? How dare you?

You have created an environment where corporate predators are rewarded, and entrepreneurs are considered fodder for monopoly abusers. You have abrogated your responsibilities to protecting the laws of competition in this country, and of properly punishing those who blatantly, and repeatedly abuse them.

Sincerely,
Theo Maschas

Subject: getting away with anything

Microsoft has proven it is stronger than the U.S. government, and can do anything it wants. As a convicted illegal monopolist, Microsoft receives only a slap on the wrist.

I've been working in the computer industry since the days before Microsoft was a monopoly. Back then, there was lots of healthy competition. Slowly but surely, Microsoft used illegal tactics to squeeze the life out of all the other companies. Today, the computer industry is at the mercy of an 800 lb gorilla. There is no way for new companies to come out with new products.

The root of the problem is that Microsoft has a monopoly on BOTH the OS and leading office applications. They can afford to "dump" on the market with money-losing products in either area, just long enough to starve out the competition. Today, they are choking the life out of Palm primarily because people mistakenly believe they need to be compatible with Word and Excel, therefore they choose Pocket PC devices. Today, they are targeting the video game market and they can afford to dump the hardware and lose money on every sale, because they have the huge bankroll of an illegal monopolist.

Just look at the net profit of Microsoft. It is an obscenely high percentage of sales. No other company in the industry has such high profit margins. Consumers are being screwed.

The only way to restore healthy competition is to make Microsoft compete fairly: the OS and Applications businesses need to be separated. The current settlement agreement is about as effective as the last one. Too little, too late...

Subject: MicroSoft Settlement

These are my comments regarding your settlement. I offer them as a user in a business environment:

* You have provided no punishment, therefore, no reason for MS to change its behavior. You have only introduced inconvenience which MS will ignore as it has in the past. The EU will be harsher on them than this settlement.

* There is no compensation for the companies that were injured or eliminated by MS tying their product to the OS.

* The oversight panel has no authority to stop/correct improper behavior.

* Even among very strong MS supporters there is a feeling that DOJ let them down and that MS will continue to provide mediocre products to the Government, private industry and home use. Non MS supporters are much less kind, both to MS and to DOJ. When there is no competition there is no reason to get better than marginally adequate. As a continuing monopoly this settlement means we get no relief. It only would have improved if the operating system was split away from the other products in a separate company. The OS would continue to be what ever it wants but the MS applications would have had to compete on merit.

Sorry you couldn't do better.

Subject: Much harsher Microsoft punishment required.

I am extremely dissatisfied with the DOJ decisions on the Microsoft anti-trust case. Not only has clear evidence been shown that Microsoft has illegally manipulated the market, but even during the case, Microsoft has continued to push their domination plans forward by great leaps and bounds. I do my best to avoid their software as much as possible, but it is actually quite impossible. What that is the case-you know that there are serious anti-trust issues.

Case in point: Microsoft's new "Passport" which forces everyone, even users of free software and unrelated services, to enter their personal information into this privately held database of Microsoft. What will it be used for? I have no control over it. Yet Microsoft forces us to join and gives us no other option.

They are starting to take over the gateways... and the toll of my privacy is too expensive. Would you rather let Microsoft have more power than the government? Because, if it is a government of the people, they have already won. Unless the DOJ acts strongly and swiftly to break Microsoft apart into completely separate, and competing groups, you are acknowledging that they are the matrix, and we have no one who can stop them. From: Besedick, Stephen
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/19/01 11:02am
Subject: Microsoft Penalty Phase
To Whom it May Concern,

My name is Stephen Besedick, and I am a Technology Coordinator at an elementary school in Orlando, Florida. My job centers around finding and integrating technology solutions for the faculty and students at my school. It is not hard to see (especially with the movement in our school district to establish a PC standard), that the "blind" adoption of the Microsoft OS (Windows) as

well as its corresponding applications solutions is "forcing" people to accept technology solutions that may not necessarily match how they want to work, or give them opportunities to see if other, more viable solutions exist. The rush to use Microsoft as a "standard" eliminates the option of "choice," . . . and choice is what drives a competitive market. If schools, businesses, and individuals do not have a choice in how they want to complete their work, they they all become slaves to the system that they endorse. Microsoft certainly has a right to operate and innovate to satisfy their customer base, but they do not have the right to bury (at this stage of the market) legitimate attempts to offer competitive products in the areas that Microsoft does business. It is a well known that Microsoft has simply swallowed competitive technologies, and then turned around and offered them under their name, in order to keep their cash box full. If this situation was accepted as the norm in every other business or consumer category, we would only be driving ONE brand of car, eating ONE brand of food, and buying all of our other goods and services from ONE branded store. I do not think that this is an American vision. Microsoft has gotten too big to think rationally about how its business practices affect society . . . they are driven simply by cash and control. If we aren't careful, our technology infrastructure will be influenced by just one company, and everyone will just have to like it! It is the Federal Government's duty to make sure that the technology section of our economy has a level playing field . . . a field where EVERYONE plays by the same rules, and that the winners and ultimate moneymakers are those which offer the best product at the best price.

Subject: Inadequate Settlement

This settlement is completely against the public interest. It does not address the key problems with the Microsoft monopoly. When a company that has 90% of the market can use layers in combination with relatively unlimited money and as see by this settlement doesn't have to answer to anyone including the government we, the average american citizen pay dearly.

In other industries when you buy a product that is shipped defective, you can return it. Then go somewhere else to buy an alternative product. This form of capitalism keeps the industry in line. Every version of Windows I have owned has crashed, damaged my files, caused me to lose many hours of work. Every version of Windows I have used has been defective. In fact I know of no single person who hasn't lost many hours of work because of defects in Windows.

If you are to run Windows you have to agree to the End User License Agreement, which rids you of any legal rights to seek compensation for damages caused by Microsoft products.

That in itself wouldn't be a problem if there were competing products to choose from, because any business that acted in this

way would be washed out of the industry because people wouldn't stand for it and would buy competing products. For example say you bought a refrigerator that randomly turned off (crashed) and spoiled your food, and one that you had to agree to a legal agreement that said that you have no rights to go after the manufacture of the refrigerator to simply turn the refrigerator on. You wouldn't stand for that. You would never buy anything from that manufacturer ever again.

Now imagine that there was only one manufacturer of refrigerators that had inside monopoly deals with all the appliance stores (where can you find a PC computer that you can buy from a store that doesn't have windows). Or better yet, monopoly deals with the manufactures that build the outlets for electrical plugs, so there was a special plug that was pre-installed in all new homes that would only work with this one manufactures refrigerators. Would those people even know that they should have a right to a refrigerator that actually works correctly if there has never been a competitor in the industry. The status quo would be the wool over the eyes of the common everyday person.

As one who works in the computer industry it is as clear as day to me. And I pay for this problem every day. Here are some more examples.

1.) Say you have an idea for a new product. Like the web-browser was or say like video compression tools are now. Then you produce that product. You find that you cannot sell it. And the reason is simply that Microsoft will copy the idea then bundle it with Windows and sell it for free in combination with raising the costs of the operating system which you have no choice to buy. New examples of new products bundled with XP,

a.) Movie maker (movie editing, capturing, compression, etc).

b.) Media Player (playback of compressed media, watch and listen to online radio and tv, play dvds, etc).

c.) Windows Messenger (online communication).

d.) Digital photography tools.

e.) Msn (aol clone).

f.) and more

How are you suppost to produce a competitive product when Microsoft takes any idea that becomes profitable by someone else and then uses monopoly power to bundle it and sell it way under cost (in many cases for free).

2.) Look what is happening with the Xbox. They are selling it way under cost just to try and take over another industry. First they take advantage of Sega when Sega is hurting making a deal with Sega to use WinCE in the Dreamcast. Then Microsoft copies the hardware work that Sega put into the Dreamcast and uses the software knowledge gained in that previous deal to produce a clone product called the Xbox. Then Microsoft uses its deals with the PC game industry to get a lot of developers writing games for the Xbox. And finally they use huge amounts of monopoly money to sell the thing under cost. They have already pushed Sega out of the industry, soon they will do whatever they can to push out Sony and Nintendo.

In all they progress completely un-checked by any method. There is no innovation going on at Microsoft other than to take advantage of monopoly power.

RESTORE CAPITALISM AND
COMPITION IN THE PC COMPUTER
INDUSTRY AND BREAK UP THIS
MONOPOLY NOW! OR WE WILL ALL
CONTINUE TO PAY, PERHAPS WITH

Subject: A proposal to deal with Microsoft
US Department of Justice,

Like many Americans, I suppose, I have been pondering the Microsoft case currently being tried by the US Department of Justice, and thinking about what solution I would favor. I have an idea for how the DOJ could deal with Microsoft that I have not heard discussed as one of the options, and I am grateful that the US Department of Justice has opened this forum to share ideas on the case. I strongly believe that the ruling is correct that Microsoft's monopoly was gained illegally and hurts consumers. Microsoft has clearly demonstrated the willingness to wield its monopoly power to benefit itself at the expense of others. Microsoft's monopoly power must be ended. I also strongly believe that, especially during these times of war, it is not in the US governments best interest to be reliant on one computing platform for its function and national security. Recent events have demonstrated that one computing platform can be devastated by hackers or viruses, while others are immune. My proposed remedy is this: rule that the Federal Government must support multiple computer platforms, operating systems, and software suites in the interest of national security and in support of the free market.

While the US DOJ does not have the power to dictate the market in a free market economy, it does have the power to affect how the Federal government responds to it. A DOJ ruling that it is not in the governments best interest to be dependant upon one supplier for most of its computing resources, and that the government must foster competition in the computer marketplace where possible, would be fair, effective, and within its powers. To that end, the President

should issue an executive order that the US Federal Government will support multiple computer platforms, operating systems, and productivity software suites, and no single computer platform, operating system, or suite of software will hold greater than a 50% market share within the federal government (The Federal market share percentage could be debated). This ruling would create an immediate demand for Microsoft's competition within the Federal Government, and with all those who deal computationally with the Federal Government, which, I would think, is a large part of the computer market as a whole. Thus, this ruling would have the effect of destroying Microsoft's power to monopolize the market while preserving the company and its products. This ruling would have the additional effect of driving the computer industry towards standards to improve interoperability between platforms, operating systems, and standard software suites, which benefits all consumers. Microsoft would then be forced to play fair with its competitors products and standards.

I welcome comments on the idea.

Respectfully,
Leonard A. Dudzinski

Subject: Settlement issue

Hi,
Regarding the MSFT settlement as an Apple user I'm a little concerned. I did not see any provision that prevented MSFT from not excluding Apple's OS from their development plans. For example Apple would have gone out of business if MSFT did not make the deal with them to continue development of Office. And Apple had to sell 10% of the company to them to do it.

What about Linux?

MSFT has become the most powerful application developer because of the OS monopoly. What does the settlement do to address this issue?

Thanks,
Bill Malgieri

From: Heck, Gregory
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/19/01 11:38am
Subject: Microsoft Settlement

As a user of Microsoft and Apple software I have an intimate understanding of the implications of Microsoft's monopoly. I feel the DOJ has folded and let the American public down. Microsoft is now stronger than ever. They have won and are unstoppable. Anything less than a restructuring plan is a waste of all of the time and money that was put into this endeavor. I don't think destroying the company will solve anything, but I do think they need much stronger remedies than what is on the table now. Microsoft didn't get it 95% market share on quality, the got it through questionable deals and predatory policies. Microsoft has made competitors software unstable on their OS numerous times. Once the competitor has lost a lot of ground Microsoft will then buy that technology and incorporate it into their products making it work.

The DOJ has really messed this one up. I wouldn't want to be the one who history records as the people who let the largest monopoly in history get away free and clear.

I sincerely hope the judge rejects the terms of this settlement and asks for much harsher penalties such as breaking the company into groups as was discussed in the beginning of this process.

You must reign in Microsoft now before they have the chance to destroy the Internet and dominate it like they have the desktop. If you believe in free enterprise and equal opportunity for everyone, Microsoft must be stopped now before .NET can spread and stop free enterprise as we know it.

Thank you
Greg Heck

Subject: Justice Department—Microsoft Settlement

Dear Sirs:

I am an independent computer consultant, and I have long been angered and repulsed by Microsoft's attitude and marketplace actions. It came as no surprise to me that they were found to be an illegal monopoly. My business virtually requires that I use their products (system software, web browser, applications), and my strong preference would be to do otherwise. I simply have no choice in the matter. Which brings me to the proposed settlement of the case. I have grave doubts that it will change ANYTHING regarding Microsoft's attitude, behavior, or market dominance. Microsoft has signed consent decrees before and nothing has changed. I don't know that breaking the company into pieces would have solved the problem faced by consumers, but at least it would have injected competition into the marketplace. As it stands, I do not believe that Justice Department's agreement will do that. Please reconsider your position.

Sincerely,
Ty Davison

Subject: Anti-trust misused

I'm sure you are getting a bunch of comments from people who do not like Microsoft and wanted you to bury them. Me I do not particularly care for Microsoft either, but as an American who has lived overseas and seen the harm that a competition based instead of customer based Anti-trust law can inflict, I wonder if we are not slipping into wrong mold. Anti trust law is supposed to be about protecting consumers not competitors. Hey Microsoft might not produce a perfect product; but neither does anyone else.

Consumers will not be harmed until Microsoft begins gouging them with higher prices. They have not been harmed and neither has competition. Here are some real Antitrust issues:

I do not see you going after Mobile who pulled the lic from their biggest supplier in Nebraska (an independent) because he would not sell only Mobile (35% of his business). Here's another one for you. My own phone supplier Quest is dragging its feet upgrading the CO's and relocating them waiting until the competition is out of business so they do

not have to give away market share and compete. They refused to upgrade my local CO (central Office) so I could get DSL from a competitor but parts of the CO that are used by their customers are DSL compliant. Here's another real monopoly...Cable modem internet access. Why don't the cable companies have to release their lines for the internet the same way that AT&T had to for long distance. Here's another one...I live in Minneapolis. Northwest has 85% of the gates. Why does it cost me \$300 more to fly northwest from Minneapolis to Denver for Thanksgiving than it does to fly from Chicago to Denver on Northwest? (I checked...airport fees are higher in Chicago and ridership is comparable) Now that is gouging customers because you have a monopoly.

Back to this case...

People do have choices in operating systems and software. Amazon just made a big splash about how much money they save my going to Linux. I use IBM dos for a lot of my floppy's for boot disks and batch programs. And I still use Netscape as a browser and Wordperfect for word processing, even on my Windows operating systems. UNIX is not about to go out of business and neither is Apple or Java. But even if they do, someone else will take their place.

How does giving software away for free hurt consumers? Just because I no longer have to pay for Netscape doesn't hurt me as a consumer in the slightest. In fact it helps keep costs down. And who the hell ever asked for a dos based PC OS like Java anyway. If they lose out because their interface is harder to use than the GUI provided by windows and Apple, tough for them. They made a losing bet. We need to remove our concern for competition and competitive companies from the equation unless we can prove that customers are being gouged.

Netscape had several options that it chose not to pursue:

1. They could have taken Gate's offer to buy their company and make them the Internet browser of the future. But no they just wanted Gates and customers to pay too much for a browser. So Microsoft invented their own. If they had sold out, their stock holders would be much better off today too.
2. They could have chosen to build a better operating system and compete with Gates and company. There are plenty of anti-microsoft techies out there who would love nothing better.
3. They could have started giving away their browser at a lower cost making it economically unfeasible to develop a competing product. Did they really think that Gates would go to all the trouble and legal/management expense of trying to buy their company and then not go after another solution? duh?

4. They could have aggressively marketed to the public the benefits of their product over Microsoft and they might still be selling a browser because there are people out there like me who would gladly pay for the increased functionality of their product.

PS...you could just as easily substitute Word Perfect here. They chose foolishly and paid the price.

THE REAL LAW:

If Microsoft decided to build an operating system that would only work with Microsoft software...it would be perfectly legal. But of course, this will not happen because every person and company I know needs and uses products that are not Microsoft. If they did something this stupid their market share and stock price would drop like a rock.

THE REAL TRUTH:

If Gates had given a little more money to the political parties who saw him giving away billions to charity and got jealous and wanted more of the pie...this whole law suit would probably have disappeared like a fart in the wind.

Subject: Dear Anti-Trust Division
Dear Anti-Trust Division

I thank you for coming to the agreement with Microsoft and allowing them to continue as the provider of "AFFORDABLE" software and systems that allow individuals like myself the benefit of email communication, powerful document production equal to Multi-Million Dollar companies and organizations, and a better way of life for the USA and world.

I have been associated as a user of computers and computer systems since the mid 1960's when the computer filled a 20 x 40 room, and required an army of specialized individuals to operate it, and the output was only available on reams and reams of paper. I have benefited most by the Microsoft developments and improvements through out the years.

I first began PC applications using a Spreadsheet program called VisiCalc, which was replaced by Lotus, a very significant improvement, but a much more significant program called Excel was provided by Microsoft. Microsoft provided Excel to me at a very competitive price, and had broader compatibility and so many advantages over Lotus that it soon became the Spreadsheet of choice. The same situation is true with WordPerfect. I paid \$400.00 for WordPerfect as a word processing software, it was the best there was, until Microsoft provided Word for \$100.00 and the ease of use and quality of delivery put WordPerfect in the drawer.

I had opportunity to use Sun Microsystems, Hewlett Packard 3000, IBM System 30, Novell PC Network, and Microsoft NT. Again, cost and ease of installation and use

made Microsoft the one of choice. Each of the other named systems had a better opportunity to provide benefit to the consumer than Microsoft!

They chose to keep costs high and less innovative than Microsoft! So for me, to go after Microsoft as the Justice Department did, hurt consumers and businesses much more than it helped.

Again, thank you for coming to this conclusion!

Subject: What Has Changed Except MS is Off-the-Hook?

Several questions, I think you know the answers....

* Does the settlement impose a monetary penalty that strips MS of moneys obtained by using illegal practices?

* Does the settlement make it substantially more difficult for MS to buy any other competitors, technologies, or industries in which to launder its ill gotten gains?

* Does the settlement break up MS into smaller, more competitive companies making it easier for the people and their government to monitor compliance with the settlement?

* Does the settlement force MS to publicly admit to illegal and anticompetitive activities?

* Does the settlement release into the public domain important Windows technologies so all companies can take their place at the PC OS and application table?

I am not a lawyer, but I believe the answer to all of these questions is NO! Then I ask, what will be accomplished by the settlement? I cheer those states that will continue the legal process against MS!

Subject: secure new government communications network

How to kill two birds with one stone, remove Microsoft from the loop.

Can the government remove Microsoft IIS and Windows XP/2000 from its approved buying list?

Can Microsoft OS/Office products ever be said to be secure?

Are you locking the barn after letting out the cows?

Five year moratorium on Windows OS for desktop and servers would go a long way to sending the message that monopolies that force users into needless upgrades, bundled software, and insecure desktop and servers are no longer approved.

Why add GovNet when what you need to do is secure the desktop and server and remove Microsoft servers and desktop machines from vulnerable, sensitive and critical areas?

OS/2 died due to FUD, not because of any inherent flaw or that Microsoft was a

superior operating system. Of course at that time there was anti-IBM sentiment and Microsoft was the perceived to be the underdog at the time.

First Microsoft developed its own set of java tools to insure that its version of java and not Sun1s, was deployed and lead to confusion for users. Now it has dropped support for java.

Even as this is being resolved Microsoft had the audacity to 3pull the plug on MSN.com and disable features if it didn't see a 3supported browser. By the way, Explorer doesn't have as good a support as Mozilla (Open Source) and Mozilla worked better than Explorer on MSN.com. But Microsoft was the sole arbiter of what was or was not 3compliant- and 3supported.- You expect Microsoft to act any different or police itself or allow itself to be policed by any standards that it doesn't agree to?

Force Microsoft to change by removing it from all government purchase lists for 5 yrs unless there is absolutely no Linux or OS/2 or *nix or other available platform from HP, IBM, Sun, Apple, etc based on ability to deliver a solution.

Subject: Feedback on proposed settlement

Dear Sirs:

I am extremely disappointed in the Dept of Justice's proposed settlement with Microsoft. Microsoft is clearly a monopoly and has clearly used it's monopolistic position to manipulate the marketplace to the detriment of consumers and competitors (many of which that are no longer in business).

The proposed settlement does not introduce any real restrictions on the market

behavior of Microsoft. It does not include any penalties for past violations of previously agreed conditions. It is not enforceable. And if it is violated by Microsoft, it will take another long trial at taxpayer's expense to re-establish what has already been proven by this trial.

Clearly, the DOJ has lost it's effectiveness in dealing with anti-trust issues. (It almost appears as if the DOJ has been bought and paid for.) The waste of dollars in winning an anti-trust case and then failing to follow up with relevant and effective penalties truly sickens me as taxpaying US citizen.

Subject: settlement is a waste of taxpayer money

Hello,

I work in the IT Industry currently, and am disappointed with the current settlement proposal between the DOJ and Microsoft. It seems to indicate a complete surrender by the organization that is supposed to enforce our nation's laws. If Microsoft has broken the law, it should be punished. The current settlement proposal is essentially a "don't do it again" response that doesn't even adequately enforce compliance. The oversight committee described in the proposal would seem to have little incentive to actually enforce the terms of the agreement.

A much simpler solution that would force Microsoft to compete would be to prevent it from any future purchases of other companies and prevention of purchase of other software product code. It would force Microsoft to compete on their actual ability to write software, rather than allow them to buy out any threat. Whatever is done, surrender, after a fairly successful litigation, is an absolute waste of taxpayer money.

Thank you,

Subject: Proposed Settlement is unacceptable

I just wanted to voice to you that I believe the currently proposed settlement is insufficient. Although I don't believe that breaking up Microsoft is the answer, the current plans are not strong enough. The

main problem (as is currently evidenced in Windows XP) is that because Microsoft controls the Operating System, they can force users to use their software and keep them from using other, better software; thus running good software companies out of business. Microsoft needs to follow the same rules as everyone else, and instead is making the rules up. Consumers and businesses have been harmed by Microsoft's business practices, and they need to be shown they can't do that. Justice must be done.

Subject: Proposed Microsoft settlement comments

To Whom It May Concern,

I am writing to express my opinion that the settlement between Microsoft and the U.S. Department of Justice announced on November 2 is inadequate. The proposed settlement includes vague language that provides little assurance that it will eliminate Microsoft's illegal practices, nor will it prevent recurrence of the same or similar illegal practices

The court has found that Microsoft has a monopoly for desk-top computer operating systems. Unfortunately, the proposed settlement shows little understanding for what a desk-top computer operating system is. An operating system is a distinct set of processes that enable application system software to use the various hardware and peripherals of a computer system. Under the proposed terms of the settlement, Microsoft will be free to continue to use its operating system monopoly power to an unfair advantage with various and multiple application systems businesses.

A more fair settlement would require that Microsoft sell a stripped-down version of Windows only performs operating system functions. Application systems that should not be considered part of an operating system include software for browsing the Internet, reading e-mail, listening to music or sending instant-messages. I would prefer that the court require that Microsoft and the Department of Justice enter a settlement that

ensures effective and certain relief. Such a settlement should clearly delineate restrictions on Microsoft's behavior that limit use of its monopoly power to unfairly expand into application systems business.

From: jwt
To: Microsoft ATR
Date: 11/19/01 12:13pm
Subject: DOJ & Microsoft settlement agreement

Department of Justice,
I would like to comment on the proposed Microsoft and DOJ anti-trust settlement agreement.

In general I do not believe the agreement adequate to solve past, or likely future, abuses by Microsoft.

Specifically, I believe the dominance of the Windows operating system allows Microsoft to leverage pricing structure and pricing plans to the detriment of business and personal consumers. With regard to the OS Microsoft has also made it virtually impossible for third party developers to make true competition possible through refusal to release all OS code, such as all APIs, which would allow third parties to compete on a level playing field. New pricing also works to the serious detriment of small business and non-profit corporations whose present investment in hardware and software make alternate selection of an operating system impractical and forces them to pay prices for OS software that is excessive when compared with previous purchases.

More significantly, the ability of Microsoft to leverage its operating system and applications software is so widely known and so seriously abused that the present agreement is at best a joke and not taken as a serious remedy by any user. The original basis for action, the Netscape browser, has been followed by a multitude of similar examples including, but not limited to, the email client, music and audio software, instant messenger software, and others. Java, a common Internet protocol from Sun Microsystems, Quick Time from Apple Computer, and Real Player from Real Audio, are examples, under the current operating system, which have been made more difficult to implement.

In the current OS "minor" issues like the constant nagging of the user who fails to sign up for a "Passport Account" under Windows XP (personal and professional) is a clear example of a marketing advantage on the Internet not available to any other vendor of an operating system. The hassle just to get rid of the undesired Microsoft applications software or getting third party software to function in its place is another example of monopolistic abuses exercised in the XP OS by Microsoft.

I am a consumer of business and personal operating system and applications software and have no affiliation with any computer industry entity. I had hoped that the Federal government, through the Department of Justice, would serve as my last bastion of

defense via the anti-trust laws of our great nation in protecting my rights. I have been most disappointed.

This is not a business versus consumer issue in the usual sense. It is an abuse of monopolistic powers in one of the most flagrant cases of the behavior of monopolies in U.S. history. The issue is not that of "pro-business" or "pro-consumer." The issue ultimately, if not resolved in accordance with U.S. anti-monopoly statutes, could well undermine the technology capabilities of the U.S. by undermining the free and open competition in all areas of business and commerce which has made our country great. Without fair and free competition our country cannot continue to prosper.

Finally, the proposed settlement works to the disadvantage of all "consumers," from large corporations to university research science departments, from small business to individual consumers. The proposed settlement is a travesty of anything resembling "justice" in this case.

I am a thirty year practicing CPA who began his career at a "big eight" firm and continues to serve small and local businesses and organizations in the US.

Those who believe Microsoft or any other monopolist will not quickly invent new means of restoring its market power are only fooling themselves. How else could a software publisher release obviously faulty (buggy) programs with impunity?

By convincing the courts that it is only leasing—not selling—a computer operating system, this monopolist has burdened all of us with a renewable payment system subject to its exclusive benediction.

By "bundling" application software into its operating system, Microsoft has prevented any realistic competition.

Why can the courts not understand the harmful effects Microsoft's corporate policies wreak? Real users (citizens actually purchasing the programs) noticed and published their complaints ten years ago. Nothing significant has been done or is proposed to address those illegal practices.

Subject: Microsoft is guilty and should be split up and watched carefully

I believe everything that MS has been accused of is patently true, and they should be spit up and watched carefully for anticompetitive and predatory behavior ... of which they practice regularly in the market. I have a friend who is the IT Director for a very large asian laptop and desktop computer manufacturer. They ship MS software standard on their system, and also employ many thousand people here in their US headquarters. He tells me every time MS comes out with a new product (dot release or brand new), the MS "thugs" come to see him a few months ahead of release to "emphasize" that he should install and be using this new product or release on all his desktop systems when the production version is available, which of course requires him to issue a substantial purchase order. If he does not order and install this new software, his company will not be allowed to ship the new MS software to their customers on the laptops and desktop systems! ... yes this is blackmail! But, they can't do anything about it.

Now any IT manager knows you never install the first release of any new software on your production systems ... you install it in a test environment first, until all the bugs are out and then roll it out to your users. This is especially true with MS Windows, since they usually get it right the 3rd time, after copying some other innovative product in the market, embedding it in their OS or giving it away for free to put the other company out of business. So, my friend is forced to play this game with the MS thugs, giving them their purchase order, telling them he's installing it on all their desktops, but only installing it on selected, non-critical systems. When the MS thugs come to check this out, he takes them to each department and shows them only a small number of systems that have the software running, then de-installs these machines after they leave. But, in the end, MS wins because they get their money and they can say that the new software is being used by certain companies (when is really isn't). Yet, since my friend looks at MS as the "defacto" standard supplier of operating systems and office productivity software, and doesn't want to be "blacklisted" in his profession, he plays this game to keep his job. Hmmm..... doesn't this sound like IBM in the 60's!

I know the current administration doesn't favor the breaking up of Microsoft. I'm actually a republican and absolutely believe in letting the markets work things out thru competition. But, I've seen so much over the years in predatory and monopolistic behavior that I believe MS will eventually take all innovation out of the market, and continue to put competitors out of business thru this behavior. MS always releases inferior software the first time ... they wait to see what competition does, then just copies them and either includes the functionality in Windows, or releases a product to compete which is for free or at a substantial discount over their competitor. Look at innovations like Java, Quicktime, MP3, streaming video, XML, etc. (not to mention the original word processors, spreadsheets, and presentation packages) All of these "open" standards have been changed slightly, included in a microsoft product, making them proprietary ... only working under MS software.

Example, look at the number of web sites now that ONLY are viewable on a Windows system with Internet Explorer! This is because of what they did with Java ... first saying they will license it from Sun and abide by the standard, then changing it under ActiveX and making it proprietary. They are doing the same thing with XML now ... under their .NET initiative. What them twist the XML standards to their own version, then force their developer community to use it.

I have been in the computer hardware and software business for 20 years ... and have quite a few business associates who have echoed these same observations over the years. Microsoft is a monopoly and it's leaders are laughing all the way to the bank. The difference between Bill Gates and IBM in the 60's is that IBM had blinders on and was too big and entrenched in its mainframe technology to change quickly ... Gates doesn't believe that any of his tactics are bad for consumers of computing ... he's paranoid and

will continue to take new markets and put competitors out of business without hesitation ... at the cost of innovation and value to the consumer.

Paul Hewitt

Subject: Settlement

Gentlemen,

I do not believe that the proposed settlement in the Microsoft case is nearly strong enough. I have been a software developer for almost 40 years and have observed Microsoft's practices from their emergence up to the present. Note that I am a contract developer of software used primarily by the Government; I am not a Microsoft competitor. I strongly believe that MS practices have stifled creativity, been the root cause of failure for numerous small software companies and have resulted in a restriction of choices for users.

Their primary methods for accomplishing this have been:

- * bundling deals with large PC manufacturers that demotivate users from purchasing alternatives—in many cases the "alternative" was actually the original inventor of the technology who today is not in business.

- * development of unnecessary MS specific variations of fundamental technologies—market share is then used to capture users, and since the MS technology is not compatible with the originals, the urge for compatibility creates a tidal force to assist them in capturing the market. Examples: Java and the present activity to capture multimedia web technology.

- * erection of roadblocks to file compatibility and other forms of secretiveness that make it difficult and sometimes impossible to use applications from other developers in conjunction with that from MS—try translating a Powerpoint file to any other format for example, or a Word document loaded with equations and figures. I note that most other developers go to great lengths to make their applications compatible with others and that this practice is of considerable benefit to users.

- * bundling price structures that make it uneconomic to use other applications.

Let's see how these practices work together to eliminate competition. For example MS Office is priced so as to make purchase of a single package uneconomic—suppose I need only Word; the purchase price is very large compared with that of Office (assuming I can find a copy), so I buy Office. I would have bought a competing product based on price and features, but I had to have Word for compatibility. Later, I need graphics software. Since I bought Office, I own a copy of Powerpoint. Although I detest the way it works, I am now faced with a choice: use Powerpoint unhappily or spend more money on a graphics application that I like and face incompatibility with my customers who use Powerpoint mainly because Microsoft made it too hard for them not to.

I feel that that methods like these are exactly what is meant by the term

"monopolistic practices". I am very unhappy that the proposed settlement is likely to enable Microsoft to continue to follow their historic course to the detriment of both the software development and user communities. I hope you will consider these thoughts in your deliberations.

The opinions expressed above are entirely my own and might or might not be shared by my employer.

Subject: Unsatisfied with agreement
To whom it may concern,

From what I have read in the press related Internet-based coverage, I must express my concerns that the negotiated agreement between the Department of Justice (which hopefully represents me, an American citizen) and Microsoft regarding the ongoing anti-trust case falls woefully short of providing any real benefit or relief to me, an individual consumer, nor to me as an employee of a technology company that competes with Microsoft.

Microsoft has been ruled a monopoly which abused its position to further its goals in other related markets. This, to my understanding, is illegal. However, there appears to be no consequences of these actions. A promise to not break the law for five years (with regards to pricing and requiring hardware manufactures to install Microsoft products) hardly sounds like a punishment.

Microsoft has repeatedly stated that they would not "give up their RIGHT to innovate" throughout this case. This is a great marketing catch-phrase that any technology company could use. However, Microsoft has a relatively weak track record when it comes to "innovation." The notion that "integrating" a product into the core Windows operating system is the same as "innovation" is a subtle but important misstatement made by Microsoft. Nobody would suggest that Microsoft stop improving their products (ask anybody who runs a Windows-based machine and has encountered the "blue screen of death" if they would appreciate Microsoft improving their products).

My concern is that I do not see how this agreement will curtail Microsoft's efforts to continue to "innovate" by "integration" in

anti-competitive means. They have made the argument that their customers benefit by the "integration" of Internet Explorer into Windows. What is to prevent their making the following argument: Our customers will benefit by our providing Word Processing capabilities in our Windows operating system. In fact, our customers would also benefit from the "integration" of a spread sheet as well as a presentation package into our Windows operating system. So, from now on, all copies of Windows will be "integrated" with what was once known as "Office". And, this is because our customers will benefit from this. Now, this is not likely to happen simply because Microsoft makes so much money off of the Office product line. But they are doing this exact type of thing with their "Passport" technology.

What is to prevent Microsoft from doing what they have done all along and watch the industry, and when a truly innovative concept comes along (almost always from a relatively small company), Microsoft announces that they intend to "integrate" that type of technology into Windows? This type of "innovation" by "integration" needs to be addressed. My final area of concern is Microsoft's history of furthering their monopoly by a policy of selective exclusion, usually made under the guise of "providing the best user experience possible for our customers." An example of this type of behavior is Microsoft's treatment of the Java platform and programming language. Rather than support Java in an inter-operable and industry-friendly manner, Microsoft chose to "pollute" Java in ways that allowed it to only operate on Windows-based machines. For the most part, Microsoft's Java implementation was one of the better ones on the market at the time. So, it is clear that Microsoft can produce a quality product. They could have chosen to fully support Java, and then provide separate Windows-specific "enhancements" to Java. For reasons left to other to argue, they choose to disrupt technology that they cannot make proprietary.

The current release of Windows XP has caused some concern regarding the Passport technology "integrated" into it. If one assumes that this is an "innovative" idea that will benefit the customer (now who the customer is may be up to debate—is it me, the individual, or the Internet-based business, like Amazon.com?), then why exactly does the technology only exist on Windows-XP? Why is this "Passport" technology not also available on the Macintosh platform? Microsoft does develop some software for this non-Windows-based platform (Office and surprisingly the "cannot be removed without breaking Windows" Internet Explorer). Why is this technology not available on any UNIX-based or other non-Windows-based platforms? A good idea that benefits customers should be made available to customers, without requiring the customer to change platforms. There is nothing fundamentally "operating system-specific" in the idea of "single sign on" technology. The fact that the client machines (a Windows XP) machine will communicate with the authentication server(s) over the Internet dramatically weakens any

notion that the client (or the server for that matter) necessarily be a Windows-based machine, and by inference that this is in any way a piece of technology that need be "integrated" into the operating system. The ability to read and write to a hard drive or CD ROM on the local desktop are clearly areas where "integration" into the operating system makes sense. But when you are talking about electronic communication (whether it be low-level authentication services or higher level web-browsing or MP3-playing), it can be more correctly identified as either a seriously poor engineering design or a ploy to leverage the Windows market share into dominating other markets, such as authentication, web browsing, MP-3 playing or other such markets.

In short, I wish to express my concerns again that the current agreement does not appear to provide any benefit nor relief from past abuses by Microsoft, current efforts by Microsoft to leverage the dominance of Windows (see my concerns about the Passport technology), nor any means of preventing future abuses of the "innovation by integration" argument made by Microsoft.

Thank you,
Eugene Anaya

Subject: Comments about the Microsoft antitrust settlement

I am writing this as a consumer:

My belief is that there is no reason for Microsoft to bundle their version of a web browser, multimedia players, instant messaging, and so on, with their operating system other than to extend their monopoly to other areas. I believe the current settlement will allow Microsoft to get back to "business as usual" very quickly. I believe that consumers need a better remedy than the one proposed.

Microsoft will still continue to be the dominant player in operating systems and software even if the harshest penalties suggested were imposed. Why waste taxpayer dollars in the courts if antitrust laws are not going to be enforced?

Subject: Make Microsoft Play Fair

I recently upgraded my home-office PC's operating system to Windows XP. The OS itself so far seems to be very robust: an excellent product. This is where my praise of the new operating system ends.

Did you know that when you purchase the Windows XP upgrade and then try to set up your internet connections, you are almost FORCED to choose the Microsoft Network for your Internet service provider? Ok, perhaps "forced" is a strong word. Let me put it to you this way. I've been an Internet user for almost 10 years. When setting up Windows XP to work with my internet provider, the

ONLY option presented to me for browsing the Web was the MSN Explorer. Upon clicking on this option, I am brought to the Microsoft Network signup wizard. I did NOT want to sign up for Microsoft Network. After searching through the programs in the "Start" menu, I found what I actually wanted. Microsoft Explorer. Fortunately, I knew what I was after and looked for it. I can't help but wonder what a first-time user would have done. I should note that both Windows Explorer and Windows Outlook Express (for E-Mail & Newsgroups) are built into Windows. There is no option to use other products. While there ARE ways to avoid having these applications installed with Windows, or to remove them later, it is not done easily.

There is no doubt that Microsoft Windows IS the dominant operating system. I've tried other operating systems (IBM OS/2 and several versions of LINUX) and have been forced to return to Windows due to the lack of applications available for the other Operating Systems. In my opinion, this is a "Chicken or the Egg" conundrum, and not something I have the knowledge to solve.

However, what I DO know is that Microsoft makes it VERY difficult to use Non-Microsoft products with its operating system. Prove this fact to yourself. Give a novice user a computer with a blank hard drive, bootable CD-ROM drive and ISP information, along with the retail version of Windows XP Home Edition. The user's assignment: Set up Windows XP, and then sign onto the internet.

How to solve this problem? Microsoft should be broken up into 3 parts. (1) The operation system division. (2) Applications Division. (3) Internet Services Division.

This would stop Microsoft from using its virtual monopoly in the OS market to force users into using other Microsoft products. It would restore free and fair competition to the Applications market. Perhaps the newly independent Applications division would create versions of former Microsoft products for LINUX and other operation systems. The newly created Internet Services Division would now have to compete head-to-head with AOL, Earthlink, etc. (a fight, I suspect, they would lose, but who knows).

The question is not and SHOULD not be, "Is this good for Microsoft?" but "Is this good for consumers and the technology sector in general?" The answer to the first question would be "possibly, possibly not." The answer to the second question is a resounding "YES."

Microsoft makes an excellent operation system today. (I don't know how they came to dominance with their Windows 9* and ME products, they were horrible. But Windows NT/2000/XP operating systems are fantastic!) Some of their applications are top-notch and should be able to compete well with other vendors independent of Microsoft. Their Internet Services, well, that remains to be seen. I say these things so that you understand that I'm not of the radical "I Hate Microsoft" group. I simply want to see more options available to me.

From: James Nicholas Rhodes
 To: Microsoft ATR
 Date: 11/19/01 12:57pm
 Subject: hello

Dear Sir/Madam:

I am a Canadian who is marrying my American fiancée soon, so since I am moving to the United States once approved by INS, I hope that my input is put into this discussion.

I am studying to be a Computer Analyst/Programmer at Red River College in Winnipeg, Canada. I have used Windows every day since the first iteration of it and even DOS before that. I also am a Macintosh user, and I am running Mac OS X at home on my iBook from Apple. Since I am well versed with both Windows and the Mac, I think I can provide some enlightenment here. Being a Macintosh user, I am so tired of Microsoft bullying Mac users into accepting their "standard" for the internet, Internet Explorer. Just because Microsoft has lots of money, they think they can enforce any "standard" they want on the internet. What Microsoft needs is not a slap on the wrist, as I will put what this deal appears to render Microsoft. The US DOJ cannot allow Microsoft to continue its anti-competitive behavior. A prime example is in the new OS, Windows XP. Microsoft has made it very difficult for someone to record a music CD into the MP3 format, forcing end-users to use their own proprietary format. This is ridiculous, since I own the CDs I make MP3s from, I have a LEGAL right to do so. Why is Microsoft being allowed to do this? This is a prime example of Microsoft trying to shove their "standard" on the rest of the computing world.

Another example is the blocking of QuickTime 5 use on Windows PCs by Microsoft. They deliberately made it difficult for Apple to allow Windows users to use QuickTime on the Windows platform. Thank God that Apple has some really genius-level software engineers, because Apple was able to provide an updated version to combat Microsoft's anti-competitive behavior.

A further example is the Java programming language from Sun... I just finished a course in Java programming and it is the most wonderful programming language to use. But Microsoft continually does whatever it can to kill Sun's Java, because it is just too good for Microsoft's own liking. It is a threat to their stability as a software producer because an application properly coded with Java can run on any platform, since it is platform agnostic. All of the Java programs I wrote in my course can be run on my iBook running Mac OS X which is a sheer delight. No code changes have to be made...

I only use Windows at college now, because I am forced to. I chose to use a Mac a long time ago, and with the new OS, Mac OS X, it is more stable and more user-friendly than Windows XP will ever hope to achieve. Mac OS X does not have all of the security flaws that Windows (whatever version one chooses) has, and this is one reason why I dislike Windows—the product is just so unstable at best.

The DOJ has to listen to people who use both platforms, because it is important to get their input on this case. The final judgment will have many ramifications in the future, so please choose wisely. Letting a company this big get away with anything it feels like doing is dangerous to the consumer like myself, but I also say it is dangerous to the stability of a government in the long run. I would hate to see the US government become a "puppet" of Microsoft's whims, because I care about the US very much since I am marrying my American sweetheart. I was very glad to see the US Army change critical systems from Windows NT to the Mac platform because of security concerns. I routinely even get people trying to hack into my system, but with my trusty built in firewall into Mac OS X I wish them all the luck in the world. :)

President Bush's office even sent me an Official Presidential portrait with a letter once they were available, because they were impressed with my letter about why I want to become an American. I even decided I am going to be a Republican when I can... :)

Regards,
 James Rhodes
 p.s. God bless America...

 Subject: How much did MS pay to get off?

My colleagues and I wonder how much more MS paid to get off compared to O.J. This case that originally was off to a good start has now been touched by dirty hands. The proposed punitive measures are grossly disproportionate to the offenses. Talk about a slap on the wrist. How can our government try to fight voter apathy when it turns its back on its people. A case against a Mega-Monopoly like this has to be fought by a giant if justice stands a chance. The only thing we have to put up against MS is the Federal Government. And our government has backed down again, and once again the badguy gets off, and the people lose hope and respect for our elected officials.

My suggestion to get this case back on track, so that justice can be served—

1. Root out the spineless among you and replace them with people with integrity.
2. Fight this case like you mean it. The fact finding has revealed a lot of dirt and wrongdoing.

Sincerely,
 Eric Geoffroy

 Subject: DOJ Proposed Settlement—Total Capitulation

Hi,

I was told this email address was set up for consumer comments on the proposed DOJ settlement with Microsoft.

I think the proposed settlement does not address any of the significant issues facing the US software industry:

* It does nothing to curb Microsoft's aggressive monopolistic practices with third parties.

* It does nothing to compensate those businesses terrorized and destroyed by Microsofts monopolistic practices in the past

* It does nothing to keep Microsoft from continuing down the same path again and again. Witness the recent launch of their Windows XP product which now bundles even more applications into the operating system in an effort to do to more companies what they did to Netscape with the release of Windows 95 that sparked this case.

The agreement I have read basically feels like a complete government capitulation to Microsoft business as usual and I am VERY dissatisfied with my taxpayer dollars being WASTED to try Microsoft and find them guilty only to have the Department of Justice let them go with a pat on the back.

 Subject: complaint about settlement

Dear Department of Justice,

I am writing to voice my disappointment in the recent settlement offer to resolve the anti-trust litigation being brought by the Dept. of Justice and the States against Microsoft. From my perspective, the proposed settlement gives Microsoft too many avenues to prevent or delay any process that might interfere with an anti-competitive action on Microsoft's part. The appeal mechanisms in the agreement will allow Microsoft to carry out anti-competitive actions for some time before the government will be able to force an end to such behavior. As was argued frequently during the trial, time is everything in the computer industry, and belated efforts by the government to restrict anti-competitive behavior are meaningless. Please revise the agreement with Microsoft to explicitly ban anti-competitive types of business practices by Microsoft, and to put in place a fast-acting mechanism to punish the company for violations in the agreement. The current agreement will do nothing to change Microsoft's behavior or its effects: the illegal

maintenance of monopoly power in an incredibly important and rapidly expanding American industry.

Sincerely,
David Plas

From: Pete Schloss
To: Microsoft ATR
Date: 11/19/01 1:03pm
Subject: Microsoft Settlement

The remedies in the proposed settlement do not address two areas: the price fixing which Microsoft accomplishes using its monopoly position in computer operating systems, and monetary damages due to other companies harmed by these acts. Consumers have been and are continuing to be harmed by these practices.

(1) Pricing for Microsoft Windows and Office products are artificially high and are maintained high due to lack of competition. All other components of PC pricing have declined greatly in the past ten years, but Microsoft software prices have increased. Only in areas where Microsoft has competition have prices been lowered.

(2) In one area in particular, the IE browser, the pricing is predatory (zero), because this pricing is intended to drive competition out of business. This tactic has almost succeeded now. The purchase of Netscape by AOL was an indication of how successful this tactic is. Monetary compensation is due to Netscape.

(3) Bundling of other zero-priced features like CD writing in the Windows XP version is intended to drive other competitors out of business; at which point Microsoft will raise prices in these future non-competitive areas. Restrictions on bundling of competitive products into Windows are needed to prevent future damage to competitors.

(4) Microsoft has used its OEM license agreements to further the above goals. The proposed remedies do not address damages to parties caused by the illegal license agreements in place up until now. In particular, BeOS was driven out of business due to the restrictions in the OEM license agreements. At a minimum damages, should be awarded to BeOS to compensate for their losses due to unfair practices.

(5) Microsoft has signed consent decrees in the past and then ignored them, continuing the conduct which the consent decrees were supposed to remedy. To prevent this from happening, there should be significant monetary damages (for example, treble the amount of losses at a minimum) specified for any future violations of the terms of this

Final Judgement. It also should be made very easy for harmed parties to make claims for these damages. Many of Microsoft's competitors do not have the resources needed to pursue remedies through the court system, so an arbitrator should be appointed by the Court to hear these challenges in a simplified forum without requiring major resources for batteries of lawyers. This may sound like a peculiar request, but if similar mechanics had been in place previously, this current lengthy court procedure might not have been needed.

Detailed comments supporting these arguments are contained at this URL: <http://money.york.pa.us/Articles/Microsoft.htm>

Subject: Microsoft settlement

I am tired of Microsoft running good competitors out by bundling their similar programs with the operating system. Microsoft does not make the best or most reliable product & when they integrate it makes the individual products worse not better. Please make part of the settlement just the operating system, a product separate from media player or internet explorer.

I looked at the license agreement for a media player upgrade & they come out a say that it may disable other products without your knowledge or consent. It may also download security updates without your knowledge or consent. They should not be allowed to take control of the software I already have on my system with out my consent. Stop them from forcing their garbage to the user.

Digital Rights Management (Security). You agree that in order to protect the integrity of content and software protected by digital rights management ("Secure Content"), Microsoft may provide security related updates to the OS Components that will be automatically downloaded onto your computer. These security related updates may disable your ability to copy and/or play Secure Content and use other software on your computer. If we provide such a security update, we will use reasonable efforts to post notices on a web site explaining the update.

Protect the people from the monopoly called Microsoft. Do not give up on the unbundled, cheaper, more reliable versions of software. I should not have to uninstall it afterwards, should be options to install or not the whole time.

Subject: Public Comments on the Microsoft Antitrust settlement
Sirs—

I am taking this opportunity to express my extreme dissatisfaction with the proposed settlement of the Microsoft/DOJ antitrust lawsuit. As a web application programmer and analyst, I have been continually exposed

to the effects of Microsoft's extreme monopolistic practices. Microsoft likes to brag about its extreme market share, and they would have us believe that the sole reason for this market share is its creation of well-written, innovative products, which can easily fill the needs of consumers.

Unfortunately, having to work with these prematurely released, extremely buggy and inconsistent products, it is obvious to me that if any real competition existed, Microsoft would soon be in the position of having to spend a lot more money tightening up its programs if they are to risk fading into obscurity. It is equally clear that they chose to spend that money eliminating the opposition through grossly unfair marketing and advertising practices rather than improving the quality of the product. I believe that the findings of fact in the trial more than adequately proved this, regardless of any judicial bias which may be claimed.

The proposed settlement is nothing more than a slap on the wrist for Microsoft. It will have neither the effect of punishing them for past misdeeds, nor that of discouraging future ones. There is no public accountability. Because it does nothing to whittle away the vast advantage Microsoft has built for itself over the years, it does nothing to encourage other companies to compete with Microsoft. There is, after all, a huge juggernaut to overcome, and precious few companies have the resources to overcome that barrier. Thus, with no competition, the consumer is left in the same place that he has been all along—lacking alternatives, he will remain with Microsoft because of their foothold.

In short, the proposed settlement actually rewards Microsoft for past misdeeds, and ensures that they will continue to profit from them. It is my sincere hope that this settlement fails, and that the individual states who have relied upon the department of justice to look after their best interests react to this betrayal with lawsuits of their own. No other course of action seems at all likely to bring the sort of justice that the American consumer requires and deserves.

MTC-00001255

From: Sam Barnum
To: Microsoft ATR
Date: 11/19/01 1:18pm
Subject: Obvious Problems with MS
The primary issues with Microsoft's practices are

* Prohibiting hardware vendors from offering products that compete with Microsoft products

* Using its monopoly to leverage closed, proprietary data formats, and exclude competing, standards-based formats.

* Extremely poor security on homogenous server software which could lead to huge disruptions of internet traffic.

The first seems to be the easier issue to deal with. Open up the OEM agreements with hardware vendors, expose any shady/

unethical goings-on. The second case is probably the more harmful of the two. It comes down to playing nice, and acting as part of the information systems community rather than a corporate predator. Microsoft seems to view all technology as something to be supplanted/assimilated rather than utilized within a framework. Abandonment of Samba and Java, development of Internet Explorer-only websites (including MSNGB), and the undermining of the TCP/IP protocol with Denial-of-service-friendly Windows XP are some of the more troubling examples that come to mind. If Microsoft were not a monopoly, the above behavior would be laughably self-destructive for any company. However, when Microsoft flouts standards, those standards lose a lot of their meaning. Anyway, I appreciate the chance to voice my concerns, good luck to you.

Subject: Microsoft vs. DoJ settlement.

Ms. Renata Hesse,

I have been told that this email address is for public comment on the settlement between Microsoft (MS) and the The Department of Justice (DoJ). As a long time user of MS's products and other operating systems may I open my comment by saying how sorry I was to see such meager sanctions imposed and the way the DoJ has failed to seek more effective remedies. I've been in the IT industry for over fifteen years. Most of that time I was in Australia before being lured to the US by Oracle. In that time I had to pay punishingly high rates for MS products. In some cases the products didn't even work as stated. I can give an example of MS-DOS 3.3 with MS Word and output to early laser printers. There was no effective support and no way to get this fixed and no ability to get a refund thanks to the barriers MS had put up between itself and the customer base.

Over the years, up to MS-DOS 6.1 and into Windows 95, 98, 2000, Windows for WorkGroups and NT I see nothing has changed. They make their systems more proprietary, make it harder to connect to and refuse to acknowledge any problems with their products. Over the years they have blamed the hardware, other products and

hackers—generally only to release a patch to fix a problem with their products. I had hopes that the DoJ would take the way MS acted in court, their history of non-compliance and their predatory practices into account. I was sad when I read the current turnabout.

As to the future—does anyone really believe they will abide by any court order that restrains them from further unscrupulous acts? I don't think so and neither do many of the pundits in the media and the internet. We have been burned so many times by MS that I think the negative reaction to MS is very understated. I hope that you and your fellow prosecutors who have basically given MS free reign are left to untangle some of the technical problems that you are now saddling the IT community with. Ever tried to download a patch for MS from a non-MS browser to help someone else—it just hangs.

If I went into every problem I've had over the years from MS's control of the boot loader to it's almost PostScript compliant output in its applications I would need several weeks. However I'm sure you will have many other people who also wish to voice their disgust so I'll leave me email here.

If anybody wants further contact I'm willing to expand on details by email.

From: Marsha McCurley
To: Microsoft ATR
Date: 11/19/01 1:27pm
Subject: Microsoft penalties

Dear Sirs:

Many of Microsoft's business practices were predatory and worthy of praise only by Attila the Hun. No one disputes that they got caught doing illegal dealings that smack of Nazi power plays. I feel the most sorry for their so-called partners, not their rivals. I recall overhearing the last part of a tv news broadcast describing some of what they had forced their partners to do, and it was a shock when I realized that they were talking about Microsoft—I had thought they were discussing Mafia business practices.

I feel that Microsoft has harmed us all by forcing companies and consumers to take their software junk and thereby limit our choices, and also that also limits the directions for software and hardware development in the future. America has always been the land of choices—don't let Microsoft take that freedom away from us.

I am shocked that after the USDOJ found Microsoft to be guilty of being the largest monopoly in history that you would then turn around and be the wimpiest bunch of fools I've ever heard of and let them get away with it. If you don't take measures now to stop them, you will be proving to the whole world that you're on their payroll, too. Get some guts and put a stop to them. Separate the OS division from the rest of the company. Make them show some ethics for a change. Make them let consumers have choices instead of the omnipotent Bill deciding what we should have. Make them really have to compete and the whole technology market will improve.

Sincerely,
Marsha McCurley

From: George A. Denino
To: Microsoft ATR
Date: 11/19/01 1:34pm
Subject: OS vs. Application Software: A Primer

OS vs. Application Software: A Primer

1. All computers start up (boot) by running operating system (OS) software. This software creates an environment in which useful work (word processing, page layout, image manipulation, web site creation, sound editing, etc.) is accomplished through the use of task specific applications running within the parameters established by the operating system.

2. An application can run correctly under an operating system only if the developers of the application software know the requirements dictated by the operating system.

3. A company which creates both the operating system and task specific applications has a distinct advantage over any competitor wishing to create a similar task specific product. The OS developer need not divulge all of its programming code to developers of competing applications. In fact, it may even incorporate, within its operating system, lines of code designed specifically to break a competing program.

4. The recent settlement between the government and Microsoft Corp. ignores these facts as well as the well established history of Microsoft's anti competitive and monopolistic tactics used to undermine applications such as Netscape Navigator and WordPerfect. These applications did the same work as Microsoft's Internet Explorer and Word. Each did its task far better than its Microsoft counterpart until Microsoft decided to "integrate" its own products into its Windows operating system. Neither Microsoft product could have become the de facto "standard" in its respective realm without this sham policy of "integration."

5. Any settlement which allows Microsoft to continue this blatantly monopolistic policy is ludicrous. Only one of two possible solutions would adequately address the underlying problem which led to the government's initial legal action against Microsoft:

a. To level the playing field, Microsoft would be required to release its entire Windows code to all software developers.

b. Microsoft would not be permitted to "integrate" any of its in house applications into its operating system, and sanctions sufficient to restore true competition within the software industry would be implemented against the company.

Subject: bad descision

It seems to me that in light of the latest ruling by judge Koleen that Bill Gates is now more powerful than George Bush. Microsoft now controls over 90% of the world's computers. Almost our entire government is controlled by Bill Gates' software. You think that because we have bigger troubles in Afganhanstan, that we don't need to be fighting with Microsoft? The Taliban will lose significance in a few months but Bill's software will be controlling our lives for decades to come. Being that Microsoft has 30 billion in cash and owns many other businesses including a national broadcasting company. They now have the power to buy politicians, influence public opinion and control what people will and will not do on the internet. The government is apparently harder on kids that copy music and software than they are on criminals with guns. Judge Koleen doesn't know enough about technology to be making landmark descisions on who will control the internet and what constitutes as a potential copyright problem. Even our armed forces relies heavily on Microsoft products. How can some young college kid in a remote country write a superior OS and our entire defense forces has to liscence buggy insecure software from Bill Gates. I guess I know the answer... its hard to collect taxes on free software.

Subject: complications by design greetings, as an apple developer producing content for both macOS and windows platforms, i've repeatedly seen my efforts seemingly blocked by microsoft in their attempt to control the marketplace. two such examples include the mime-type "hijacking" which windows media player was notorious for, so that content that was intended for playback w/in the quicktime architecture (cross platform) was instead stolen by WMP; and in the case of advanced interactive movies (which i author) like wired sprites and QTVR, windows media player could not play correctly, thus giving the end-user a failing experience and the impression that either i as the author had done something wrong, or that quicktime was at fault (neither being true).

most recently w/ the announcement that MS had dropped support for netscape-style plugins, an established protocol on the web, in favor of (no surprise) their object/active-x mechanism.

i hope that, politics aside, this matter will continue to get the attention it deserves from the DOJ. microsoft can make decent software (i'm using their mail program and web browser on my mac), i just wish they could "play nicely" realizing that we're all trying to deliver compelling content to the public and don't need unnecessary hurdles in an attempt to block the competition.

thank you in advance.

Subject: Microsoft Settlement

I find it amazing that as a user of many computer products, the settlement clearly does not address the core issue of the complaint that most people who would enjoy a lower cost Window's Operating System's without all the new add on's that may or may not be wanted.

A break up of MSFT may be too harsh but a break up of bundling applications with the operating system would lead to a lower OS cost. This would still allow MSFT to develop those "innovative" applications but in a competitive environment that is equal to all given that everyone has access to the necessary API's.

That would allow the consumer to spend their money where they want and still allow MSFT to compete. As it stands now if you want a competing application you need to pay twice. There is consumer protection at it's best. Also the basis of MSFT's PR campaign has been innovation. However with the descent decree fresh in hand how long did it take them to announce their intention to "unbundle" JAVA from Window's? A truly innovative feature which competes directly with MSFT's view of the future. I hope the judicial system shows more common sense than the new DOJ did.

Subject: settlement

Dear Government Representatives,

I am very disappointed in the DOJ decision to settle with Microsoft with no real punitive damages assessed against an organization that has clearly done more to stifle innovation rather than develop it as they frequently assert at every rhetorical opportunity. This organization has, in my humble opinion, created road blocks to the advancement of technology while appropriating and constraining developments from other organizations. It is unfathomable that such an organization will be allowed to continue to do such harm to the advancement of technology especially while we are all looking forward to economic recovery. If there is any way for this decision to be reversed I strongly urge you to do so. I sincerely hope the states who have decided to challenge the settlement will prevail.

Subject: Social Policy Litigation
BROWN ENTERPRISES

You cannot fail, you can only produce results!

SUCCESS STARTS NOW

In preface, let me say that I have no vested interest in either the DOJ or in the stock of Microsoft. My investment has been in my country as a loyal, patriotic, and voting citizen through the decades.

Now retired from years in middle and upper management, I have watched the serge of litigious terrorists in the environmental, family, social, civil, and recently political business policy arenas.

Much more in touch now with the pulse of the masses, I can tell you with all confidence that the case against Microsoft has been and continues to be viewed as a contrived liberal attempt to punish the wealthy and redistribute wealth, in this case knowledge, to those companies unable, unwilling, and less dedicated to the pursuit of excellence. It is not the practices of Microsoft that appear to be unfair; rather, it is the manipulation of the government against them that appears sinister and an invasion of pure competition in a capitalistic society. Even a cursory recollection of the tenants of Antitrust Acts show a factitious extension to support the governments case.

Do not expect the American public and business person to agree or respect the prosecution of a company who, has from it's inception, exemplified the American business ethics of creativity, investment, hard work, intensity, comprehensive marketing, and dominating success. From the first trading post in Jamestown to date, those companies who succeed are those who prove themselves to be the best to the buying public. They do not depend on a "big brother" using the peoples money to punish the successful and subsidies the inferior.

Personally, I have always thrived on competition in sports and business and measured results in terms of final score or sales by the rules as they existed during the competition. When the government has to redefine the definition of "antitrust" in order to justify it's position, the ad hoc assault becomes a ludicrous farce in the eyes of all those who have watched and benefited from the software company. The DOJ case seems to depend on what the definition of "is" is. If we apply the same definitions to other companies in other industries, who will be next..... Wal Mart, Coke, Home Depot, GE?

Henry David Thoreau saw the demon of political government litigation when he wrote in 1849, "Policy does not make morality". With all due respect, let the best company(s) win. Regarding your efforts against military and religious terrorists: God's speed for your safety and success and God bless you all.

We look forward to the DOJ regaining it's respectability after the embarrassing rein of Ms. Reno, the most unqualified Attorney General in the history of the department.

Sincerely,
Skip Brown

From: John Springer
To: Microsoft ATR
Date: 11/19/01 1:47pm
Subject: Proposed settlement doesn't solve anything

I object to the proposed settlement agreement, as it does NOT make it possible for anyone to compete with Microsoft in any computer-related market they choose to be in.

I believe the Windows operating system needs to be treated like a publicly owned standard, not a private money machine. Every software maker needs to have equal access to it, and computer manufacturers should be free to do whatever they want with it on machines they build.

It is an enormous myth that Microsoft was the magician that drove the computer industry to success. Microsoft has never made anything better, cheaper, or simpler in their history. It is Intel's success at continuously increasing hardware performance at lower prices that made the PC industry happen. So we can stop thinking that the success of the whole industry depends on keeping Microsoft at unconscionable, monopolistic profit margins. I am most concerned about the future of the Internet. The Internet, as originally conceived, was built on simple open standards that everyone could use. Microsoft is hell-bent on destroying open standards and the DOJ settlement does not prevent them from marching forward by building more and more proprietary things into their monopoly OS until they control all electronic communications. That is wrong. And no-one but the DOJ can stop it.

Subject: Problem not solved

Hi,

I don't feel the the deal made solves the underlining problem—Microsoft's monopoly.

At the end of the day they will still be able to leverage their monopoly to gain advantages which will reduce or eliminate the competition. Microsoft has bundled software in several key areas such as downloadable sound and video which has nothing to do with the core os. But because this software is bundled, people are less likely to download competitors, even if the software is free, because of the difficulty of downloading and installing, especially if your are not a technically minded person. (How many people do you know who don't know how to set the time on their vcr.)

It would be far better to force Microsoft to license their os to other venders but at a regulated rate. (Otherwise they will price it so high nobody will want to touch it.) Dividing the company is no good either as the os portion would still have the monopoly. The best would be to open source the code for the OS. Microsoft would still be able to develop and market their product but they wouldn't be able to leverage it for fear of someone else coming in and doing what they won't.

In short, please remember what this case was all about—Microsoft using its monopoly to illegally leverage dominance in emerging technologies such as the internet. The solution must directly prevent Microsoft from ever having even the slightest chance of doing this ever again. From past experience with Windows 95 and Internet Explorer you can see that only the strongest action will prevent further abuse.

Thanks,
Rod Hankel

From: Trevor Tally
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/19/01 1:57pm
Subject: Comments on Microsoft Case

As a consumer, I don't think the proposed settlement benefits me at all. Being that it is pretty much agreed that Microsoft is a monopoly, I would have liked to have seen Microsoft forced to reduce prices and fees for the consumer. For instance:

1. Set a maximum price for products that they have a large share of the market (Similar to Utility Regulation in the past)

2. Force them to provide free customer and product support to registered product owners

Let's look at the facts:

1. Microsoft typically Nets \$5–8 Billion dollars on \$20 Billion in sales per year. I don't know of any large company that makes that kind of profit margin.

2. Developer support is charged at nearly \$250 per hour, regular support is about \$150 per hour. Microsoft thinks it is generous by giving you two free calls when you buy a

product, but then they don't provide a manual with the product. You have to purchase their books if you need to help or pay their high fee for help after two lousy calls.

The two points above indicate that Microsoft is using its monopoly power to gouge the consumer. Secondly, these numbers paint a telling picture as to why competitors can not compete. Microsoft has so much money to throw around that they either outspend in R&D or buy any company that develops a better product.

Please, re-focus your attention on actually doing something that benefits the consumer. Basically, Microsoft is our only option for many products and we are getting gouged big time in our pocket book by their business practices.

Thank you for your time.

Subject: Settlement

I am very disappointed in the settlement agreed upon between the DOJ and Microsoft. Where is justice being served except to benefit the Government. This settlement is nothing more than slap on the hand for Microsoft and a punch in the gut to consumers.

In any other industry these similar practices would incite the government to break up the company.

The SEC prevents mergers between companies based upon the benefits to consumers using a method that evidently does not hold up in a court of law. The market share that Microsoft holds is easily enough to be called a Monopoly. Even the lower courts ruled that Microsoft was a Monopoly and the ruling was held up in the appeals courts.

Please tell me how a fine is going to prevent Microsoft from being a monopoly.

From: Steve Cohn
To: Microsoft ATR
Date: 11/19/01 2:16pm
Subject: Proposed settlement is not appropriate for the industry

Although the intent of the Justice Department's settlement with Microsoft is laudable, I do not believe that it takes into account the fast pace of the technology industry, contrasted with the slow pace of litigation. Microsoft has used this discrepancy in the past to its advantage. The charges around the current case stem from violations made in 1998 while Microsoft was already under a consent decree. It has taken over three years for remedies to even be proposed. During that time, hundreds of companies have been trampled over by Microsoft, and the market position of Windows has only solidified. It is also impossible to estimate how many potential competitors never got off the ground because they dreaded the idea of going up against a monopoly.

The solutions proposed do not prevent these kinds of issues from occurring again, they only provide ways of monitoring them when they do occur; which puts consumers and competitors at the same disadvantage that they were three years ago. If the remedies concentrate on specific technologies and terminologies, rather than the inherent structure and practices of the company, Microsoft will always find a way around them and count on the delay of the Justice system to render the issues moot.

Their history speaks for itself.

Subject: comments about the Microsoft settlement

DOJ:

I feel that the proposed settlement with Microsoft is utterly toothless and will only serve to legitimize Microsoft's existing illegal practices. It is clear that the DOJ is not up

to enforcing a consent decree, judging by the circumstance in which we now find ourselves after the last consent decree. It would serve the public interest better for Microsoft to be convicted of abusing monopoly power, and for dire consequences to occur as a result.

In short, the recent actions of the DOJ in regards to this case run roughshod over the hard work of your predecessors. So much has been accomplished in bringing Microsoft to account for its criminal behavior, and now you are going to drop the ball? It is absolutely disgraceful— without government to protect the public, who will? You should be ashamed.

From: Fox
To: Microsoft ATR
Date: 11/19/01 2:24pm
Subject: Microsoft Settlement

Department of Justice,

I am disappointed in the settlement between Microsoft and the DOJ. Microsoft is the most predatory corporation in the 1900's and has received little more than a hand slap. The settlement is a step in the right direction but there need to be some additional, stiffer penalties to give Microsoft's competition a fair footing on which to compete against them. The most important thing I would recommend is forcing Microsoft to publish the specifications for their file formats for Word, Excel, Powerpoint and Access. With a market share of 90%+ for Microsoft Office, no one can successfully sell an alternative for Microsoft Office because it will not reliably read Microsoft Office documents, which are emailed from Corporation A to Corporation B, assuming Corporation B has Microsoft Office to open them. Every copy of Microsoft Office sold increases this barrier of entry for competitors. Forcing Microsoft to publish its file formats will ensure that other office suites can compete with Microsoft Office on features and quality, not on how well they read Microsoft Office documents, 90% of the documents out there.

Hardware vendors should be allowed to sell their machines with no operating system or a free operating system preinstalled for \$50 or \$100 dollars cheaper than with Windows preinstalled. The way Microsoft currently forces vendors to buy Windows licenses makes this financially implausible for hardware vendors. Just like you can buy a car cheaper without an option, you should be able to buy your computer cheaper without the Microsoft Windows option.

The penalty for non-compliance with this settlement should be stiffer. If Microsoft does not comply with current terms of its settlement, there should be a \$1 billion dollar initial fine with a \$50 million dollar a day fine until they comply, not simply an extension to their probationary period. That would be a meaningful penalty for non-compliance. Thanks for hearing the voice of the people and not merely the sound of campaign contributions by the pro-Microsoft lobbying campaign.

Ladies and gentlemen:

As a laissez-faire Republican who opposes government intervention in most cases, and believes that there is nothing the Government can't screw up by intervening, I never thought I would be writing this letter. But I cannot object more strongly to the proposed settlement with Microsoft.

Microsoft has stifled innovation and sucked the life-blood out of the computer industry for long enough. They have built their empire on marketing prowess and on making customers need them, not on innovation. They have systematically crushed competition. When DOJ filed suit, I thought it was long past time. When they won, I saw a ray of hope. It was the ONLY significantly good thing I ever saw come out of the Clinton administration.

To settle now, on the terms you have proposed, is the most pathetic breach of faith with the American people I have ever seen. Why not just give them a federal license to continue to steal? The new XP is the worst yet in terms of over-reaching the consumer that pays for it. If they didn't have such an oppressive monopoly, I would never have bought the stuff. Put an end to these shenanigans by pushing these idiots to the wall.

These people don't need consent decrees, they have already had them. They need jail terms.

Subject: Inadequate

The proposed settlement is inadequate to discourage and prevent Microsoft's abusive practices. This is a CONVICTED

MONOPOLIST! Consider what effect similar constraints would have had on Standard Oil 100 years ago—effectively nothing. Ridiculous! This is one of the richest companies in the country, with a stranglehold on desktop computing (achieved illegally!!) that has every intention of exploiting its current (illegally obtained) position to further its stranglehold.

Very severe penalties are required if innovation (and the associated creation of value, wealth, and progress) is to return to the computer software industry.

Read the history of the AT&T breakup! The only part of the communications industry that DIDN'T benefit was local services, where the monopoly was maintained. And we see the impact to this day with the predatory practices of the RBOCs on the aspiring broadband internet service providers. Monopolies MUST be dismembered or they continue to perform against their charter (maximize shareholder value) irrespective of the consequences to the public.

Break Microsoft up into MANY pieces. In the end, it will be better for Microsoft's shareholders as well as the public interest.

From: Phil Russell
To: Microsoft ATR
Date: 11/19/01 2:39pm
Subject: Statment on the DOJ-Microsoft
Proposed Settlement

I am addressing this to the email address given for consumer response to the proposed Microsoft Anti-Trust Settlement.

I am pleased that you have given us this email address and now are listening to average computer users.

In my opinion, the agreement as I have read about it lets Microsoft almost completely off the track. Microsoft's destruction of Netscape is not addressed in any way, form, shape or manner.

Because of their threats to Apple, novice Macintosh users are now effectively forced to use Microsoft Internet Explorer and Microsoft Outlook Express for web and email through the forced use of Mail and Browse aliases Apple must place on the desktop. These aliases make the novice user have these programs as default since the novice does not know how to evade using these aliases.

It might be educational for the judge in this case to listen to Bill Gates as he continually pounds on the suggestion that he does not want to see Microsoft kept from "innovating." He uses this word over and over. The challenge I pose to any Windows user is to show me just ONE thing Microsoft has EVER innovated. I have yet to see a Windows user come up with a SINGLE innovation. It is my observation that Microsoft borrows, steals or buys anything in the marketplace which looks good. Microsoft's real expertise lies in the fields of marketing and of improvement of products they borrow, steal or buy.

Indeed, it is Apple Computer which innovates... the first commercial graphic user interface (1984 Macintosh and earlier Lisa), QuickDraw, and Firewire as a few examples. So the court cannot and should not seek to protect innovation by a company. Microsoft, which never innovates at all. Further, in fashioning a remedy, I think the judge should take particular notice of the absolute lies Bill Gates told the previous judge in the case, Penfield Jackson. This kind of behavior can tell the current judge much about how drastic the remedy must be to counter this kind of lying by the CEO of the leading corporation in America.

My bottom line is that the agreement, as I currently read of it, lets Microsoft almost completely off the hook. Please back off and try again for a remedy which curbs Microsoft's predatory behavior in the marketplace.

This case should not be a political football, with Democrats fighting for anti-trust protection and Republicans seeking advantages for big business. Let common sense reign!

Thank you for listening to a home user,
Phil Russell

"Within the computer industry, the description, 'more like a Macintosh' is always a high praise. The description 'more like Windows' is rarely used as praise."—The Seattle Times

MTC-00001287

From: James E. Gazin
To: Microsoft ATR
Date: 11/19/01 3:07pm
Subject: Microsoft Settlement

To whom it may concern:

I've been following the Microsoft case since it's inception. Early on, I was cheering for Microsoft, but recent developments have caused me to change my mind. The new licensing requirements for Windows XP and the changes that have been made to MSN.COM to kick off Microsoft's new ".NET" initiative have left me cold.

On Windows XP licensing:

I have never installed Windows without having to reinstall it at some point in time. I also make frequent changes to my hardware as I try to keep up with technology. Windows XP, should I upgrade to it, would have me call MS Tech Support every time I did an install or made changes to my hardware and put me in the position of having to explain to an MS representative why I need to reinstall or reactivate the OS.

It is none of MS's business what hardware I install Windows on. They have no right to peek into my computer and see how their OS is being used. Just imagine the possibilities for Microsoft: They know what hardware I'm using and that puts them in a position to "suggest" that I add certain hardware to my system. It gives them an edge over the competition. Microsoft justifies their registration requirements by raising the software piracy banner and claiming that they are just trying to protect themselves. Microsoft is the richest corporation in the world! They can't be hurt too much by piracy.

On the new ".NET" initiative:

I've had a HotMail account for the last several months. I don't have one now, because MS broke their own licensing agreement and claimed I hadn't accessed my account recently and therefore had to reapply. (I hadn't accessed my account for one week and according to the agreement I only had to access it once every 90 days.) To reactivate my account, I would have had to read and agree to a new 20 page licensing agreement that included this new ".NET" stuff. Microsoft is trying to force everyone on the WEB to use their new "Microsoft Wallet" and store all their personal information on MS servers. Microsoft servers have a long history of being hacked and I, for one, believe that if you put all your eggs in one basket and tell all the thieves where your basket is, you increase your odds of being ripped off.

In my opinion there is only one possible solution that would truly level Microsoft's playing field. The justice department must require Microsoft to publish all Windows programming hooks and the purpose of each hook. (I use the word HOOK as a synonym for program calls to the operating system.) This would allow other companies to create

operating systems that were compatible with Windows and Microsoft would be forced to compete in the market solely on the merits of its OS. We would have a standard operating system template and competition: the best of both worlds.

What do you think computers would cost today if Advanced Micro Devices hadn't challenged Intel and forced performance up and prices down? We NEED competition in the OS workspace as well. It is the only reasonable solution.

Sincerely,
James E. Gazin

Subject: Microsoft Antitrust Settlement

Opinion

To Whom It May Concern,

I can't say that I know much about the final results of the anti-trust suit, but I can say that I am sickened, saddened, and horrified that one of the largest innovation-crushing, illegal, and underhanded monopolies in the history of the United States is being dismissed with hardly more than a slap on the wrist. The only course with any hope at all is to BREAK MICROSOFT INTO THREE COMPANIES, AS ORIGINALLY PROPOSED. This is indeed a sad time for our democracy. I only hope that one day, all of those responsible for this travesty will have to support Microsoft operating systems for the rest of their natural lives, without benefit of investment in Microsoft.

Gregory Santos

Subject: Comments about the proposed settlement with Microsoft

Thank you, first of all, for providing a venue for concerned citizens to add their opinions to this important court case I hope that the volume of response you will surely get does not overwhelm your systems and proves valuable in concluding this case in a manner that restores fairness to the marketplace.

Microsoft has grown to the point that it dwarfs many nations in its size and influence world wide. How it got to be this big is a matter of some contention, but it has been proven, time and again, to have leveraged its overwhelming market share in one area to gain dominance in others. I see no end to this trend. It may be too late to stop this process, as Microsoft could simply purchase a small country and move its operational headquarters there, if it is presented with a compelling business reason to do so.

Any fair penalty in this case will address the financial losses of the companies that Microsoft competed with unfairly, as well as

the losses of individual computer users who have had their freedom of choice artificially restricted. A penalty that does not include Microsoft admitting guilt for what they have done to date, and does not preclude them from developing new products or services which could be used to reduce competition and raise the barrier to entry for competitors, does not go far enough to stop this behavior from ever occurring again.

As a monopoly in the desktop computer system software industry, Microsoft has to live by a different set of rules than the companies that make up the other 5% of the desktop market share. Where other companies can seek to create coalitions and partnerships with other companies in order to mutually promote their products' use, Microsoft is larger than the rest of the software industry put together. Any partnership it is likely to make is strictly for the purpose of restricting that partner's actions to those that benefit Microsoft directly or indirectly. Microsoft's relationships with other companies should be monitored directly by the court for any hint of anti-competitive behavior.

As a latecomer to the Internet party, Microsoft used its desktop dominance to artificially inflate the market for its web browser software. The fact that its browser was weaker and buggier than the competition did not matter—the enormous push of the Microsoft marketing machine (not a crime, but a case where dollars could out-do technical quality or competence), the fact that they gave it away for free (technically "dumping", since it cost something to produce, after all), and the fact that ISP's and hardware manufacturers were coerced into promoting it rather than Netscape Navigator (definitely illegal) combined to give it a commanding lead over technically superior products. Microsoft should be fined billions, the proceeds should be distributed to Netscape and other browser manufacturers, hardware manufacturers, and the end users.

Microsoft would like to extend its dominance in the desktop to file servers as well. Even though file servers need to be available to many different client operating systems, Microsoft can take the open standards that make this cross-platform intercommunication possible and change their interpretation of them subtly to ensure that only a Microsoft client can communicate efficiently with a Microsoft server. In many cases, they have done this already. The net result is that competition in the desktop client marketplace is restricted by behavior in the server marketplace and vice-versa.

Even more frightening is the thought that Microsoft might use this same strategy in the web server market. The net result would be catastrophic for the Web and its users, as Microsoft would effectively be in control of the entire internet, and could change the underlying transport protocols to restrict use of the Web to their browser or desktop operating system or both.

Microsoft must be enjoined from deviating from any open standards, and must follow them explicitly. They may be a party to the creation of these standards, but they cannot have more than one vote in that process. If they make a web server software, it must

interoperate with all browser clients equally. If they make a file-sharing server, it must interoperate with all desktop operating systems equally. If they incorporate any features into their desktop or server operating systems that are either available on other platforms as middleware or third-party software applications or were previously available as middleware or third-party software applications on their desktop or server operating systems, those operating system features should have to meet the same standards of universal availability to non-Microsoft client systems as their predecessors.

Finally, it doesn't seem possible to keep Microsoft from giving itself an unfair advantage, since they make the server operating system, desktop operating system, middleware, application software, utilities, etc. all in one shop. The last time this sort of behavior was noticed by the courts, it was because US Steel owned the mines, the mills, the railroads, the ships, and the trains. They could set any price they liked, and could keep competitors from ever reaching profitability.

Microsoft should be divided into separate companies: Programming Languages, Server Operating Systems, Desktop Operating Systems, Server Application Software, Desktop Application Software, Middleware. Each of these companies would be walled away from the others, and would expose only the programming interfaces and source codes that they would share with any non-Microsoft competitor to each other.

These standards are much higher than those that Microsoft's competition lives by, but until the day comes that Microsoft is not larger than all its competitors combined, it must live by them. Right now, no matter how bad a product they produce, people will buy it. The ordinary expectation of "survival of the fittest" has been supplanted by "rule by the fittest". That is not good for business and it is not good for the world.

Thanks for your time,
Walter Lee Davis

I am glad, as most of America, that this matter is almost over. Competition is not the answered question, AOL/Turner should show all of us that competition has never been better. IBM, SUN, Lunix (all kinds), and many others all try to give ME what I need and want. I and others like me buy, install, and maintain systems from Home to factories and Offices across the land. We use the stuff and decided that Microsoft wins for the best effort to design software that works together and performs the many different tasks that we ask. Had we liked the other products out like IBM—OS2, AOL's Netscape Browser, or any other 'wow-sir we would have used theirs more. But We Didn't. Settle this now and keep the 'think tank' that has been doing what the world needed together at one Microsoft.

Subject: MS monopoly settlement
To Whom, etc;

I am appalled that Microsoft is getting off so easily. Microsoft stifles innovation in the marketplace through their strongarm tactics as regards competing companies and will strengthen their hegemonic grip on the marketplace if they (Microsoft) are not properly punished, and duly regulated, for their illegal business practices which have made them a de facto monopoly.

Ralph Nader recently submitted a letter to the Department of Justice and Judge Kollar-Kelly on the matter of the Microsoft case settlement. I wholeheartedly support the points Mr. Nader made in that letter. Microsoft must be made to understand that they can not run roughshod over the marketplace and consumers and this settlement, as it is now, will do little or nothing to discourage Microsoft from conducting their illegal business practices ad infinitum.

Sincerely,
W. Lon Hutchison

Subject: Proposed Microsoft Settlement

Microsoft's business model has been and still is abusively anti competitive and anti innovative (despite what their PR hyperbole claims). The cost to consumers and to industry wide innovation has been immense. Even today after losing all the way to the Supreme Court, MS continues its business model largely unabated. The proposed settlement "penalties" are easily thwarted by MS, creating essentially no penalties at all; so, why should MS—or any other large firm—cease violating anti-trust laws? So far the MS model is a textbook example of the financial success of such unethical and even illegal business practices. Please consider this my request that the very weak Proposed Microsoft/DOJ Settlement NOT BE ENACTED. MS has been found guilty and has lost all appeals. They made a joke of their earlier (1994) settlement. Now it is time for them to be STRONGLY PENALIZED:

[1] Their anti competitive behavior must be prohibited, and permanently, not just for five years. Any firm with such immense resources can and will make a mockery of any weak 5 year restrictions, simply by spending a few tens of millions slipping and sliding around the legal system.

[2] Very large fines must be imposed, sufficient to make Gates et. al. sufficiently aware of the consequences of the firm's illicit behavior that they are stimulated to want to change that behavior.

[3] Anti competitive business dealings (e.g. it has been and still is virtually impossible to buy —any— personal computer, even an Apple Macintosh, that does not default to Microsoft's browser whether the buyer wants it or not!) must be clearly and unequivocally prohibited.

[4] Perhaps most important, a—permanent—"Microsoft Litigants' Defense Fund" should be created from fines levied against Microsoft. Such a fund (with zero influence or participation by MS allowed) should make litigation funding and legal support available to firms who feel that they have been harmed by MS's failure to comply either with anti-trust law or with the (hopefully very harsh) terms of the 2001 penalties when they are promulgated.

[5] Movement of Microsoft's abusively anti-competitive and anti-innovative business model into emerging markets MUST be enforceably prohibited. The internet and the "convergence" market spaces in particular (but not limited to) need be kept accessible to small innovators and not locked up by the likes of Microsoft. Much has been expressed that MS is a market leader and that penalizing them penalizes an already weak tech sector. What MS really is is an industry bully; penalizing such business behavior will in a very short time period overall stimulate the tech sector as innovators can again start innovating unfettered by fear of what type of response may come from the industry bully.

Thank you.

From: Schwalb, Robert
To: 'Microsoft.atr(a)usdoj.gov'
Date: 11/19/01 3:26pm
Subject: Microsoft Settlement

As evidenced by the recent release of Windows XP, Microsoft will continue its predatory practices unless it is broken into at least two companies; the first producing application software, and the second operating systems. The logic of Microsoft's position on bundling application software with the operating system, would allow it to include, for example, a compiler. After all, following Microsoft's arguments, any application will present a "better user experience" if it's part of the operating system. Then there are the implications for national security— In a 1998 Computerworld article Paul Strassman of the National Defense University in Washington, DC, rightly observed that: Microsoft's dominance in operating systems represents a new threat to the national security of our information-based society. The government is trying hard to contain the expanding power of Microsoft by antitrust litigation that would prove present harm to consumers. That's insufficient. The government also should address the risks from information warfare attacks on a largely homogeneous systems management environment. Inevitably, infoterrorists and criminals will take advantage of flaws in the gigantic Microsoft operating systems that are on their way to becoming the engines for running most of our information infrastructure....An all-encompassing operating system bares itself to hostile exploitation of paralyzing security

flaws. The presence of a fatal defect is unavoidable, as the complexity of Microsoft systems expands to bizarre proportions with each new release. It's the search for such a fault that occupies the minds of some of the brightest computer experts. Finding a crack through which one could induce mayhem with only a few keystrokes would be worth a great deal of money, especially when supporting an act of terrorism....No agricultural expert would suggest that only one crop, using the identical seed strain, be planted in Kansas, Ohio, Illinois and Iowa. "Monocultures," as biologists call them, are just too vulnerable to pests, disease and an unprecedented combination of ecological conditions. The Irish potato famine, for example, was caused by reliance on a single strain of potato.

Subject: MicroSoft antitrust settlement
I, as do most persons I know, feel that this settlement is a mere slap on the wrist. MicroSoft has done more to harm innovation, quell creativity, and limit consumer choice than any company I have witnessed in my twenty five years working in the computer and high tech industry.

I am astounded that they are being allowed to remain a single company marketing both operating system software as well as applications software. I've seen many software applications that were clearly superior and offered a legitimate alternative to MicroSoft products destroyed by MicroSofts' monopoly power and underhanded marketing practices.

If this settlement goes through it will be a sad day for justice. Mr. Gates thinks this is a fair settlement. That means they are getting off easy. A fair settlement would have him screaming.

Subject: huge disappointment
Hello DOJ:

I just wanted to drop you a line to express my huge disappointment over your settlement with Microsoft. I realize you've got bigger fish to fry, what with the terrorist attacks on 9/11, but since your dept. invested so much time, energy, and effort into this trial—why keel over and die now? Seriously, I've been teaching about this trial for the past 2-3 years now in most of my Telecommunications classes, and I can't believe you're basically slapping MS on their collective wrists again, knowing full well how they blatantly ignored similar "remedies" in the past.

You had them on the ropes and—seemingly at the moment of victory—opted to instead let MS slither away. I'm not a huge fan of Ralph Nader, but fully agree when his recent views on the settlement. Bush (and consequently Ashcroft) have lost my vote in '04. —

 To: Microsoft ATR
 Date: 11/19/01 3:51pm
 Subject: Worried About Microsoft

To Whom It May Concern:

I appreciate having the opportunity to address the current situation involving the DOJ and Microsoft's antitrust case. Thank you for setting up this email address to gather the thoughts of "common" folk like myself.

I have been extremely disheartened by the turnaround experienced in this trial beginning with Judge Jackson's dismissal from the case. I watched the initial proceedings with great ferocity and was very pleased to see all the terrible things Microsoft had done brought to light. I had been paying attention to the atrocities of this company for quite some time, as it had affected me in many ways. I have been a Macintosh user for a long time, and had repeatedly witnessed the crushing power of Microsoft as its juggernaut mentality left few small companies in its path. I witnessed things like Netscape, being toyed with by Microsoft's bullying tactics with PC makers and by using competing, but always incompatible, technologies. I watched a good company, Spy Glass, go the way of the dodo bird, because Microsoft essentially tricked them into giving up their web browser product for a cut in revenues which would never come, since they gave it away for free.

I have watched many things. At each and every turn, I watched Microsoft do things that no other company could do. I watched as they got away with it all. I'm not saying that companies never do anything wrong ... but Microsoft goes beyond bending rules and blurring lines. Microsoft blatantly lies. Microsoft cheats customers. Microsoft bullies people into being its ally, leaving competing companies with nowhere to go. I thought there was going to be some relief from all this horrendous monopolization, but then the tide was turned. I have a sinking feeling that there are pockets being filled in the Bush administration. It's no secret that the Bush administration coddles big businesses and this looks like just another example of a "you scratch my back..." mentality. The one saving grace of this whole debacle is that California and other states have not given in. Microsoft deserves the fate decided by Judge Jackson. More people need to read the findings from that case. It goes on and on for hundreds of pages. Company after company has been

pushed, bullied, unfairly shutdown and broken. It is time for them to reap what they have sewn.

I am begging and pleading with whomever reads this to bring more light to what they have done. (And what they have not done, which is innovate! It is curious how often that word is mumbled, when nary a person can name an innovation that has come out of Microsoft—almost everything they claim as an innovation was bought, stolen or copied from someone else.) Don't let them off so easily. The current settlement does not do anything to prevent these same things from happening again and again. I urge the DOJ to take this seriously and use Microsoft as an example of what will happen to companies that cross the line. They have no scruples, no ethics and, so far, no accountability for what they have done.

Thank you for taking the time to listen to one person's point of view. I know I am not the only one that feels this way. (I could easily name 100 people that feel exactly as I do ... and many magnitudes more if I were to do a simple query on the internet.) I hope that this "comments" period has some affect on the case at hand. I hope the voices of the masses are not ignored. Microsoft is a deceptive, over-grown, evil beast that will stop at nothing to stay on top. I simply hope that our government can see through the dollar bills and give us all a little glimpse of truth and justice.

Sincerely,

Ted Rust

 Subject: Proposed MS settlement.

Microsoft has a history of lying and evading. Absent stringent oversight and concrete enforcement provisions, there is no reason to expect they will do otherwise in future. Furthermore, 'simply telling a defendant to go forth and sin no more does little or nothing to address the unfair advantage it has already gained.' Meaningful penalties are the least the government can do to redress some of the harm done to consumers and competitors.

MTC-00001303

From: Barry Levine
 To: Microsoft ATR
 Date: 11/19/01 4:03pm
 Subject: Doesn't even pass the laugh test

There can be no remedy for the grievous offenses committed by Microsoft unless it includes breaking up the company into two distinct groups:

1. Operating Systems (OS)
2. Applications

They idea that Internet Explorer (IE) is, or should be, "part of the Operating System" is ludicrous. IE is an application, period. Attempting to claim otherwise by sabotaging the OS so that removing IE renders Windows somehow "incapable" or "less than it was" is a blatant attempt to link the OS with the IE browser. This is, on its face, absurd. For proof of my assertion, consider that Apple's MacOS9 (and its new MacOSX) can use ANY vendor's browser and STILL maintain a tight

integration of services between the application and the operating system. Microsoft is simply attempting to push users of its OS over to its portals in an attempt to squeeze every penny of revenue out of its customers at the expense of its competitors AND its customers (by removing choice!). EVERYONE out here (both Apple and non-Apple users) knows this. For the DOJ to feign blindness in this regard is the height of cynicism; it doesn't even pass the laugh test.

The proper way to manage the breakup is to force ALL communications between the two groups to be public—via postings in the Internet. It is only in this manner that the public (and the applications vendors) can be assured that the OS group and the Applications group do not pass "secrets" to each other.

Judge Jackson's interviews with the reporter may have been inappropriate but his findings of fact -AND- his remedies were "spot-on".

Subject: Microsoft case

To the Dept. of Justice:

I'm really unhappy with the outcome of the Microsoft case. It's the Bush administration going easy on big companies who don't need the help at the expense of people and small businesses. Microsoft has one goal: it's not innovation, it's not making the world a better place, it's not making great software. It's only about the bottom line, and we know this for a fact. They lied for years about having a firewall between applications and OS development, and finally admitted the truth. They haven't exactly shown us they're trustworthy. Why is this company not being forced to change their policies regarding monopolistic bundling? Why aren't they being forced to be fairer about their operating systems. Why isn't the Justice Department angry that Microsoft shows a blatant arrogant, dismissive attitude towards you? Top that with the lenient attitude the Bush is now taking with the tobacco industry, and it looks like favoritism to me. I think it stinks. I applaud the effort Judge Kollar-Kotelly and the mediators put into the agreement, but the gov't completely folded. This settlement hardly affects the way Microsoft does business. I'm sure that Bill gates is "really

pleased to have" this impotent settlement. Thanks for listening.

Subject: Cave-In

I think DOJ needs to realize that in the past, Microsoft ignored consent decrees it had agreed to.

Penalties for violations must be in place, otherwise Microsft will continue to ignore the government, AS IT HAS IN THE PAST. What if your average citizen performed felony acts, and as the ONLY penalty..... was asked by the government: "Please don't do this in the future" ?????

Subject: Sell their language business

Dear DOJ,

Microsoft's predatory actions will not be stopped by this settlement. The settlement provisions are much too vague and aren't forward-looking. Microsoft's .NET will ensure its continued monopoly. The amount of information they (and they alone) will glean from the public's use of .NET will give them a huge tactical advantage over any other company that would like to compete in any computing environment.

The hardest tie-in to Microsoft is their new programming languages. Create a program for Microsoft using one of their languages and your product becomes very hard to move to any other platform; this due to designed differences. I feel the punishment should be that Microsoft must sell their language business and give the proceeds to registered users of Microsoft products. Microsoft has not made the computer revolution possible. The revolution has been the internet. Don't be lenient on them due to their supposed

importance in today's world. We would have what we have today without Microsoft having ever existed. They do not innovate, they assimilate.

Sincerely,

Yannick Rendu

Subject: Microsoft Antitrust Case
To whom it may concern,

Please be aware that while the economy is a major concern right now, tomorrow will be another day, and the decisions of today will have to be lived with for a very long time.

Being concerned about terrorism is everybody's business, as is this antitrust case, whether one is an American or not. This is an issue of worldwide concern. And while the world is at war against terrorism, standing shoulder to shoulder with Americans in this time of crisis, America is busy giving world domination to Microsoft on a platter! Don't be under any delusions, this is exactly what is proposed by the recent settlement of the antitrust case and the world is watching in disbelief!

Please understand that the US government has a responsibility to the whole world on this issue, and more than just the domestic economy of today needs to be considered. This behemoth (Microsoft Corporation) of industrial/commercial terrorism needs to be brought to justice just as assuredly as Osama bin Laden. Please do the right thing.

Subject: Microsoft Settlement

My take on this is simply that the punishment for Microsoft should be based on the amount of money they made from violating the antitrust laws. This would be an enormous sum and would probably break up the company as we know it. So much the better for the marketplace. The best technologies being developed right now will never stand a chance to make it to consumers if Microsoft remains intact and without fear of reprisal from the DOJ. Redmond is laughing their asses off right now. And the joke is on all of us.

Unmasking Microsoft's innovation scam
Microsoft argues that integrating new features such as MediaPlayer into its operating system is innovation. That's untrue—and should be illegal.

BY MARTIN GOETZ
(November 08, 2001) Should Microsoft's integration strategy be considered illegal? Join the discussion in Computerworld's Operating Systems Forum to discuss the issues with your peers. Now that Microsoft Corp. and the U.S. Department of Justice have reached an out-of-court settlement that won't restrict the vendor from bundling applications with its operating systems, Microsoft thinks the world should cheer now that it can "freely innovate." What could be more un-American than stopping a company from its inalienable right to innovate? The Justice Department says it will impose restraints on Microsoft that "will open the operating system to competition." But the issue isn't operating system competition. It is the illegal bundling of new functions that shouldn't be part of anyone's operating system.

Integration Isn't Innovation

In 1998, well before it made that same argument in court, Microsoft began its public relations effort to try to convince the world that its "integration" of new Windows functions was critical to its ability to innovate. To the public, and probably to a vast number of computer professionals, it didn't seem such an outlandish claim. But it really was. When this claim is examined more closely in terms of what it takes to build, maintain and improve software systems, one can only conclude that Microsoft is trying to pull the wool over the world's eyes.

The desire to innovate in software systems hasn't changed since I started programming in 1954. The concept of developing new versions of software systems, including operating systems like DOS, VMS and Windows, with new features and functions has been with us for at least 40 years. When IBM unbundled its software in 1970 and created a competitive environment, innovation became more important, because adding features to a software system improved its marketability. Tie-ins have been illegal since the end of the 19th century, when the Sherman Act antitrust laws were written. The question of the legality of software tie-ins was raised back in the 1960s in several suits against IBM, which included lawsuits filed by the Justice Department and Applied Data Research.

Microsoft apparently wants to change the antitrust tie-in laws by convincing the world that the ability of its staffers to innovate would be limited if they couldn't integrate freely and without restraint. What nonsense.

"Integration," as the word is used by Microsoft, means "tie-in" to the rest of the world.

PR Pitch Falls Short

Microsoft's "innovation through integration" public relations effort began with Bill Gates' unveiling of Windows 98 in April 1998, when he discussed a Microsoft white paper entitled "Integration, Innovation and the PC." Microsoft stated in the paper that the integration of new features and services in Windows 98 would benefit both consumers and independent developers. At about the same time, Microsoft announced its "Freedom to Innovate Network" Web site as an ongoing method of communicating to the public. It included statements made by elected federal and state officials who supported Microsoft's right to innovate. The site also contained Microsoft's latest legal briefs, as well as propaganda aimed at showing that the government's case against the company had no merit. The thrust of the message was that the government, should it win the case, would restrict Microsoft's freedom (or ability) to innovate.

Just about everyone recognizes that "Freedom to Innovate" is synonymous with motherhood and apple pie. We're all for it; enough said. But what about illegal tie-ins, monopolization, unfair competition and freedom of choice? Where do those subjects fit into the equation? And is it an axiom that you need integration to innovate? The facts prove just the opposite. Integration not only has zero correlation with innovation, but it also actually discourages it. In the antitrust trial, Microsoft's main defense witness, James Allchin, testified that the company's deep integration of Internet technologies into Windows 98 was a natural step in the evolution of operating systems. The District Court, as well as the appeals court, didn't buy his argument.

It's no accident that the eight appellate judges stated twice in their briefs that Microsoft failed to show the benefits of integrating. The court said, "Although Microsoft does make some general claims regarding the benefits of integrating the browser and the operating system, it neither specifies nor substantiates those claims." The

judges added that "Microsoft failed to meet the burden of showing its conduct [in integrating functions into its operating systems] serves a purpose other than protecting its operating system monopoly." Clearly, it's no oversight or accident that Microsoft's expensive law firm and technical staff didn't make strong arguments before both courts.

The Integration Option

The real question that the courts would have had to decide if the trial continued was: Could Microsoft develop new functions (or innovate) only through integration, or could those be developed just as well using interfaces? New functions can be implemented either way, but they should be implemented through interfaces. Here's why:

- Software engineering principles state that functions should be isolated and made as independent as possible so they can be systematically debugged and changed. Changes are always required to accommodate new user requirements, new hardware or operating system requirements and for ongoing maintenance for correcting errors after programs are operational.
- Tight integration just creates larger and larger programs, which over time become unmanageable. The design, programming, testing and maintenance of these larger programs becomes more complex, expensive and time-consuming.

- It's desirable to design new functions so that they can operate in several environments—for example, with different versions of Windows 9x or NT or other operating systems. Tightly integrated programs don't allow for cross-platform use. Lastly, it's easier to release new versions of a program when it isn't tightly integrated with another program. For instance, new versions of Microsoft's Windows and Internet Explorer could be developed and released independently if they just interfaced with each other.

Clearly, in the case of Windows 98, the tight integration with the Internet Explorer browser produced no technical innovation. This is obvious because the functions of the Windows 98 Internet Explorer browser that was tightly integrated with Windows 98 were identical to the functions of the Internet Explorer 4.0 browser that bundled with Windows NT, 95 and 3.1; the Macintosh systems; and the Solaris operating systems.

Under the law, tie-ins are illegal. Bill Gates' statement that Microsoft should be able to put "anything under the sun into its operating system" should be challenged in court. One can only hope that the nine states that are opposed to the proposed settlement, as well as the European Commission, will pick up the gauntlet that the Justice Department has dropped. Subject: settlement

I am extremely disappointed with the Department of Justice regarding the Microsoft Monopoly proposed settlement. Basically, you are telling Microsoft, "You've been naughty, now don't do it again." Did I miss something? Didn't the Department of Justice win the case, and prove that Microsoft illegally used its monopoly power to increase and maintain market share, and drive competitors out of business? What prevents Microsoft from continuing this pattern of illegal behavior? Where is the punishment for their past misdeeds? What is the Department of Justice thinking?

This proposed settlement is unacceptable, but not a surprise under the Ashcroft/Bush administration. You are not looking out for the interests of the citizens of the United States, and you are caving in to the ill gotten interests of an illegal monopoly.

Sincerely,
George Sievers

Subject: my contribution
To Whom It May Concern:

After years of watching companies like Dell, Compaq, and Apple bullied by Microsoft, I had hope that the antitrust suit would reign in the monopolist. I was disappointed to hear things will be "business as usual".

I've used a variety of hardware and software platforms for the past several years, and I've seen several favorite applications die because they weren't born in Redmond. It's clear that Microsoft did not create products such as Money, Internet Explorer, and FrontPage in order to make a superior product: those products were created explicitly to destroy Quicken, Netscape Navigator, and Pagemill. There are companies innovating out there, but Microsoft is not one of them. Deciding to allow them to continue on as they have been will only lead to fewer choices for consumers and more compatibility problems for anyone who doesn't run a Windows PC. Many companies and individuals are working towards creating standards for the industry, and Microsoft is doing its best to force everyone else to adhere to theirs. This is not right, and it does not benefit consumers. I wish you the best as you evaluate this decision and work to better the state of computing for everyone.

Subject: Microsoft settlement
Hello—

I am appalled by the USDOJ settlement with Microsoft. I don't see how this settlement will be truly enforced, nor how it relieves consumers of information systems from the monopolistic practices of Microsoft. I believe that this settlement is bad for consumers, bad for companies, and bad for innovation in the information systems area.

I urge you to reconsider this settlement, and look at remedies that will have an actual impact in the marketplace rather than those that have a surface appearance of making a change.

Thank you very much,
—eric

Subject: Opposition to settlement

I write to oppose the Microsoft settlement with the DOJ. Microsoft almost entirely ignored their last consent decree, and I see no reason why they won't do the same again. They do not feel that they have done anything wrong, and there is no penalty for continuing their practices, so why would they change anything. Please, step outside your offices and talk off the record to people in the software industry. Microsoft is the primary killer of innovation and new products in the market. Any time a company comes up with a new product that is threatening to Microsoft's monopoly, Microsoft either (1) buys it, (2) announces their own similar product to ship "very soon." Who will buy the new product when Microsoft is going to bring one out "very soon"? Especially since, in the hard cases, Microsoft can simply add the functionality to Windows for "free". And then raise the price of Windows to account for it, of course.

This is a truly terrible deal for the software industry. You have snatched defeat from the jaws of victory. We will be back in this exact same place again in another few years—if any companies beside Microsoft are still standing to complain. Please reconsider.

Subject: Public Response

It appears to me that everything and the only thing that the Justice Department ever has said about MICROSOFT is always negative, demeaning, condescending and always a put down. Why is that? Certainly

some one in the whole US Government must believe that maybe just once that have done some good.

You know businesses are like a beautiful, tender, wholesome, lovely, kind women and they should be cared for and nurtured. Have you ever done anything to help Microsoft or Bill Gates or to help businesses? Possibly you'd like to take another point of view for a few moments! Bill Gates has single handedly built up, developed and most importantly STANDARDIZED this industry. It still needs a lot of work but think of how many light years ahead the USA and the world are because of the leadership and competition he has offer to the industry.

Several times I have emailed to Microsoft and to Bill Gates, to no avail, (but I'm not going to give up), requesting an audience to project my personally developed pro forma ideas which would negate your entire 'bullying' effort towards Bill Gates and Microsoft.

You should know that none of us are perfect but BG and MS have done so much for this country that he should be given the Medal of Honor. Well that is my point of view for what its worth. Thank you for taking the time to present my opinionated ideas.

All the Best,

Subject: Comments on proposed deal

I have read the text of the proposed settlement, as well as various opinions and analyses appearing in the on-line press, and I believe the proposal as it exists is very, very weak. Weak to the point of irrelevance, even. Where is the penalty? What price must Microsoft pay for having broken the law? There is nothing here that is going to prevent or even discourage MS from continuing to bully their own customers. There is nothing here that is going to substantially alter the relationship between MS and their competitors. History has shown that once MS decides to integrate a piece of software into Windows, the competition quickly vanishes. How can anybody compete against something that is being given away? If there is to be a thriving, innovative, competitive software industry MS must be prevented from stealing their competitors customers in this way. The only real, effective, long-term solution I can see is to break the company up. To attempt to police MS in the long term is simply not practical. The bureaucracy that would have to be created to do this effectively would be enormous.

I am extremely dissapointed in the DoJ. I feel they have sold us out, and I hope the Judge sees it too.

M Hale, average computer user

Subject: Microsoft Antitrust Settlement

Dear Sir/Madame:

I understand that this e-mail address has been set up so that citizens can offer their

feedback on the recently negotiated settlement between MS and the Justice Department. I have no idea how a company like MS can be found guilty by two federal courts of using their monopoly power to injure consumers and the competition and be let off the way they are by this settlement. Below is a recent column by Thomas Oliphante of the Boston Globe which speaks better to my feelings than I feel capable.

Kevin R. O'Connor

Buffalo, New York

FOR TOM REILLY, part of whose job as Massachusetts attorney general involves smelling rats, the so-called settlement with Microsoft he was asked to sign off on this month with virtually no notice reeked of rodent. Because his nose was working, Reilly put up a caution sign, which became a stop sign. The result: Possibly the worst settlement ever negotiated in the most important antitrust case since Big Oil got busted nearly a century ago will have to fight for its life on the merits.

Maybe parts of the deal with Microsoft will prove worthwhile upon close inspection. Maybe the bad parts will get exposed clearly for what they are. Maybe the whole thing deserves the garbage pile. But at least, thanks to Reilly's unwillingness to get rolled in what he described as "a classic maneuver," we will all get a fair chance to find out. In major league lawsuits involving the public interest—and the Microsoft case is a classic—there ought to be two basic rules for negotiations between the government and the offending firm. The first should be that a settlement should not be welcomed or approved simply because it has been reached. Conversely, it should not be opposed or rejected simply because of the compromises it includes.

In this case, Reilly responded with a snap of his fingers when I asked him how tough it was to figure out what was going on in the Microsoft case. The federal judge now in charge of the case in Washington had encouraged settlement talks, but as far as anyone knew (particularly the 18 states that are every bit as much a part of the action as the Justice Department) they were proceeding very slowly.

Then, with what Reilly calls "unexpected suddenness," the states were told from Washington that there was a deal, in which their input has been a flat zero. They would have no more than 48 hours to review it before it would be announced to the public and to Judge Colleen Kollar-Kotelly.

The Justice Department—as in President Bush's political appointees who had frozen out the experienced lawyers who had actually dealt with the case—signed the deal. When Reilly, on behalf of Massachusetts, asked for a week to study the thing, he got two working days plus last weekend. But it was enough. It was obvious that a steamroller had been put in motion. When that happens, it's usually because the light of day is feared. It was then up to the states to find out why. During that weekend, the other major player from the states, the veteran attorney general of Iowa, Tom Miller, organized a series of conference calls with various players in the technology business, the victims as it were of Microsoft's officially found violations of the

law. The result was a sound basis for opposing the Bush administration's proposed deal.

For Reilly, whose background is in trial courts as a prosecutor going after crooks, it helped to start with the fact that Microsoft was found guilty (twice) of illegally abusing its monopoly position in the operating system software for personal computers. So, as Reilly told me, it made sense to examine the penalties in the settlement suggested for the repeated offenses.

There were none. There was nothing to undo the monopoly power—and precious little to effectively prevent future violations. As Reilly put it, for every proposed rule there was an exception, for every Microsoft commitment there was a loophole. The agreement had only a five-year time frame, with the computer manufacturers designated as the cop on the beat for the deal, but deprived of nightstick or gun.

Not only that, but the oversight committee for the deal would be dominated by members beholden to the convicted defendant, Microsoft. And get this: If the committee found evidence of noncompliance in its work, that evidence could not be presented to a judge in court.

"That is crazy," Reilly said. Microsoft, and its Bushie allies, have succeeded in splitting the 18 state plaintiffs. But the remaining nine are anchored by arguably the two most important technology states, California and Massachusetts, with Tom Miller's Iowa, a consumer protection leader, in the middle. The steamroller was stalled. What happens now is that the settlement can be examined in depth, with the aid of evidence and testimony under oath. As I said, parts of it may hold up under this light.

But those like Reilly who want to pursue their vision of a fair shot for innovation and maybe a cheaper Windows some day, who believe that the opportunity to make a better widget out of Microsoft's shadow is central to the country's economic future get a chance, too. In all, it was one fine piece of lawyering on behalf of the beleaguered public interest.

From: Trout

To: Microsoft ATR
 Date: 11/19/01 6:38pm
 Subject: Microsoft Settlement Does not go far enough

Department of Justice,
 Representatives,

I have worked in the computer industry for quite some time, in tech support, web development, video and film directing/editing, multimedia and sound engineering. I have used all sorts of Operating Systems, from various forms of Windows, to various MacOS-es, to many varieties of unix. I should also say I am not in any way affiliated with any plaintiffs in the Microsoft case, and I do not work for any of their competing companies (and I haven't worked for any competing companies in the past). From the ground though, I have seen many effects from Microsoft's way of doing things.

As the court has ruled, I agree Microsoft is a monopoly. They control a vast majority of the Operating Systems in use by computer users, and a vast majority of the "office productivity" suites through Microsoft Office. As you know, this is not a crime. Simply being a monopoly is not the problem. It's what you do with your monopoly once you have it.

There are many known facts that indicate even before Microsoft could likely be considered a monopoly, it was conducting questionable or even illegal business practices. Some of these issues have been raised in previous court cases, many which Microsoft has lost, and others Microsoft has settled out of court.

When Microsoft achieved dominant marketshare, I believe they continued their questionable practices, but this time with added strength. Microsoft has continually used strong-arm tactics to bully other companies into doing things to fit Microsoft's vision. That sounds rather flighty in a tight sentence. What it means in reality is that Microsoft has used it's position to guarantee further sales, harming other companies in the process, without regard to the consequences.

It has said to computer manufacturers "If you don't put our office suites on your computers, you have to pay full retail prices for Windows (or you can't ship Windows at all). If you don't put Windows on all your computers, or you ship computers with other operating systems, you will have to pay more for Windows (or you can't ship Windows at all). If you put competing or unapproved ISPs or multimedia software on the desktop, you will have to pay more for Windows (or you can't ship Windows at all)." In a highly competitive marketplace like computer manufacturing, can a company afford to tack on an extra \$200 to the cost of production just to include a non-Microsoft software package? Even if that software is easier to use or has more features?

When competing products have come from other companies, threatening to overtake a market Microsoft has it's eye on, Microsoft often buys the company, or releases free similar software. Microsoft can continue to profit from it's monopoly products (Windows and Office) while the other company is losing money. Once the competitor is out the door, they can begin profiting from that sector. Cases where Microsoft has attempted this

strategy recently is Internet Explorer vs Netscape; Windows Media Player vs. Real Networks, Quicktime and Macromedia; MSN Instant Messenger vs AOL IM, ICQ, and Yahoo IM; .net vs Java. This list is the current battleground. The Federal Court has addressed these issues before. In the early 90's it ruled against Microsoft, making it operate under certain restrictions because of it's prior abuses.

If you look as Microsoft throughout it's history, has it changed? Has it made any corrections to it's bad behavior? Or has it simply tried to hide the fact that it operates the same way it always has, continuing to force-bundle it's products, and driving competitors out of business just so it can hold onto a monopoly marketplace? I think it has. I think the last major judgement in the Microsoft case has been largely ignored. Microsoft is still bundling products against the prior ruling, and it is still acting like a child without any moral direction.

During the current court-case, Microsoft has continually said, "If judgement is ruled against us, it will hinder innovation, and deprive other companies who depend on us from being able to do their jobs." I think this is revisionist and just plain wrong. This statement is so transparent in protecting Microsoft's own interest, it is ridiculous. Historically, Microsoft's actions have been in exact opposition to statements like this.

As a judge, if a thief kept re-appearing in the court because he kept robbing banks, would you let him off, or give him probation, just because he kept promising to do better? How many times would it take for this thief to be brought before the court before you said, "Ok, look, you just don't get it. You are a menace to society so I am putting you away." How many times does Microsoft have to be brought into a courtroom before somebody finally says, "Ok, you obviously don't get it, so we're going to keep you from doing any more harm"?

I don't necessarily think Microsoft should be broken up. I don't know what the final solution is. But the settlement on the table has no teeth. It is another slap on the wrist, the kind Microsoft is used to. I imagine this is what Microsoft imagined would happen all along. Even during settlement talks, it is continuing to practice illegal bundling tactics and other questionable licensing schemes with Windows XP. It is saying it will do one thing to the court, while doing the same old thing behind it's back. And again, even without the monopoly issues, this was all covered in previous cases. Even though illegal, they are also operating against the previous restrictions. What makes you think they will treat the new restrictions any differently?

Microsoft must be shown that it cannot partake in illegal practices, not simply with a slap on the wrist, not just with more restrictions and watch-dogs, not with the court just saying "Ok, you've been bad, so we'll be watching you! Don't do it again!"

The court must enact real punishment that shows Microsoft it's behavior is unacceptable. It must also enact real incarceration that prevents Microsoft from causing more harm.

Thank you for your time.

 Subject: Microsoft Settlement

I am attaching my comments written in my last Microsoft program. Because of the problems I had with FrontPage and bCentral I am filing a complaint with the FTC for bait and switch. Someone needs to do something to protect the American public if you won't. If you don't want to do your job, why don't you quit and find another one? The software companies opposing Gates have lawyer, Gates has his lawyer, you were supposed to be my lawyer. Your job is to protect your employer, the American taxpayer but with the "settlement" you abandoned your responsibility.

What you have done is given Microsoft permission to destroy small businesses everywhere. I'm a small businesswoman and Bill Gates' tentacles are reaching out and squeezing the life out of me. Three examples should hopefully explain why I am so upset. They should also illustrate the inherent danger of any monopoly, like the one you are sanctioning.

First, I love a word processing program called WordPerfect because it let's me do everything that I want to do. I can't use it any longer because Bill Gates makes it impossible to use. I know you're saying that WordPerfect Mill exists—but that doesn't matter, I can't use it. Most people use the grossly inferior product put out by Microsoft called Word and then only because it is bundled in with other Microsoft products. If I used WordPerfect I could not exchange my documents with Word users—including Outlook users, etc. I would be cutting myself off from clients, friends, etc who use Word.

Years ago Bill Gates apparently admitted his and his employees' incompetence when he stated that Word just couldn't read WordPerfect. That was a crock then as it is now since they could have found a way. There were a lot of bridges that independent shareware producers had created between Word and WordPerfect. Gates just wanted to destroy WordPerfect, which is what he has done. So what is the result to the American public? We're stuck with a program full of glitches that is slowly dumbing down the American public. As a joke I typed in some famous American documents including the Gettysburg Address. I remember that document specifically since Word declared it to be riddled with errors and faulted it for having many "long sentences." In fact, I just ran spell check and it didn't recognize Gettysburg but it did recognize Microsoft.

Second, I had an account through bCentral for a website. I have canceled the account since I have reached my frustration level with the site and Microsoft's products. The site was created using a site manager that was exclusive to Microsoft. It took me a good day to master using the manager and then another day to get the site up. Microsoft decided it

couldn't leave well enough alone and did away with the site manager. It sent me a "free" copy of FrontPage so that I was forced to use it, which meant spending another day or two learning another program. Well, I had problems almost from the start. First, the program caused RealPlayer to crash twice. Then all non-Microsoft products starting glitching in small ways—e.g. pop up boxes on the Internet would not work unless they were Microsoft's.

Then I imported my website into the program so I could edit it. There is obviously something that I did wrong or there is a problem with the program since all links showed except "Home". It's hard to put out a website when the reader can't go home whenever they want. I read and re-read their instructions but nothing worked. So I contacted Microsoft and asked for help. Their response, "Read the book". I did that again and still couldn't do anything. Finally I decided I'd live with no link to Home and published the site. Well, it ate my site. I tried to contact Microsoft again and no response. So I threatened to cancel my account. Then I got the offer of support for \$35. This is on a product that they forced me to use when they unilaterally did away with the site manager and forced me to use FrontPage. Obviously they are too big to care if their products work or not—another problem with monopolies.

Finally, Microsoft is "partnered" with Intuit, which produces low-end accounting software including Quickbooks. Quickbooks is used by many small business people to do their books and this low-end monopoly generates a lot of money for Intuit since they do the Microsoft shuffle. They create inferior products and then do "upgrades". My question is, why do they need to do so many upgrades if their products were good to begin with? They do the "upgrades" for one reason and that is to force people to purchase the "upgraded" product. You see, their products don't read up, only down. In other words, when my clients do their books on a Quickbooks upgrade produced after the one that I have, I cannot read it. So I have to upgrade whether I want to or not. The same is true of regular Microsoft products—they read down but not up. We're forced to continually buy "upgraded" products, which to me means that the initial products were inferior. If there was competition a company couldn't do that. They'd have to get it right the first time or their competitors would put them out of business.

All these problems develop because of monopolies and you're doing nothing to stop Microsoft. And they are costing me time and money. If the problem is the Windows operating system and Gate's control of Windows, you need to split it off into a separate company. Either that or make it a public utility, like the electric company. Pay them royalties but take it out of their control. Then they'd have to compete on a level playing field and I have the feeling that Bill Gates would fail since his products are inferior to those of his competitors. He just controls Windows and can force the public to use the crap that he produces.

Subject: Microsoft Settlement

To Whom It May Concern:

It is with great concern and a deep sense of foreboding that I have read the settlement agreement between the United States Department of Justice and Microsoft. It is my opinion that the agreement falls far short of achieving any real remedy to Microsoft's predatory and anti-competitive business practices. It will neither provide reparations for damage that has already been done to a number of individuals and corporations nor will it prevent future abuses of Microsoft's monopolistic advantage in the computer software marketplace. From what I have read and seen in the news media concerning this case, whether or not Microsoft is a monopoly and whether or not it uses this monopoly to unfair advantage over competitors is not in question. This has been found to be true and Microsoft is guilty of violating our country's anti-trust laws. The question is how to go about setting things right so these activities are stopped and competition is returned to the industry. The settlement appears to do little to answer this question.

The settlement as it stands places a great degree of emphasis on Microsoft acting in good faith to avoid certain specific practices that unfairly leverages its operating system monopoly to place its products at an advantage over those of other software developers. Microsoft has already shown by its violation of a previous consent decree that it cannot be trusted to act in good faith. Also, during the course of the legal proceedings, Microsoft continued to carry on with business as usual as though its business practices were not even under scrutiny. This "business as usual" recently culminated with the release of the Windows XP operating system that not only contains the Internet Explorer web browser with code co-mingled with the operating system, but also introduces new bundled applications such as a video editing package and instant messaging software that are placed at an advantage over competing products by their inclusion with the operating system bundle. Windows XP also further attempts to extend Microsoft's monopoly into other areas by leveraging its compressed digital music format, Media Player multimedia viewing application, PassPort user authentication system, and .NET Internet technologies against competing technologies from Apple Computer, Sun Microsystems, IBM, and others. Microsoft continues to operate as it always has with no apparent regard for the laws it violates, the companies it harms, or the consumers who suffer because of the stifled competition and innovation that result from these activities.

This being the case, I would have been somewhat relieved to have discovered the settlement contains meaningful and effective consequences should Microsoft violate the agreement. I was astounded to find out that it does not. The settlement provides little more than a slap on the wrist should Microsoft not curb its anti-competitive practices. If this were not enough, the settlement appears to provide plenty of loopholes through which Microsoft will be

able to squirm that will allow it to continue operating as usual without technically violating the agreement. Obviously, I am not the only one who believes this. The settlement has come under fire from computer industry leaders, consumer advocacy groups, and prominent citizens. It has proven so inadequate that a number of states that participated in the case are refusing to accept the settlement and a number of corporations are considering filing civil lawsuits in an attempt to seek justice where the Justice Department has fallen short.

As a tax-payer and voter who has watched as the Justice Department invested countless man-hours and tax dollars into the fight against the Microsoft monopoly, I am deeply disappointed in the end result. As far as I can tell, little has been accomplished and nothing has really changed. Microsoft is still a monopoly, it is still using this unfair advantage to the detriment of others, and most likely will continue to do so for the foreseeable future. As a result, they will be able to continue to run other companies out of business, squash innovation that does not fit into their plans, and take advantage of consumers through higher prices, the undermining of better competing technology, and the ongoing elimination of viable alternatives to their operating systems and other software products. In regard to the Microsoft anti-trust case, I believe the Justice Department has failed the American people.

Sincerely,

Douglas J. Cramer

Subject: Settlement Feedback

To whom it may concern,

Having been in the computer support industry for the last 13 years, I can say for certain how disappointed I am in this possible settlement structure.

Microsoft should not be allowed to exploit their co-mingling of application & OS products. Doing so *hurts* innovation, and fosters additional monopoly abuses. These abuses have been **PROVEN** true. Any move by the justice system that doesn't prevent this from happening again is a slap to the face of consumers...

Sincerely,

Steve Clark

Subject: Microsoft Settlement

Hello,

I am an information technology professional and am extremely concerned about the failure to rein in the Microsoft monopoly. They are already way too powerful and now that you appear to have caved in to them, they are demonstrating an

anti-competitive attitude worse than I have ever seen in them.

This is serious business. Information technology does or will rule the world. Too much of that power is in Microsoft's hands. They feel once again in a position to dominate virtually any market by using the proceeds of their monopolies to outlast their competitors and forcing users of their operating systems to use other monopoly-extending technologies. This is not good for consumers, or for business, or for anything else but the protection and extension of the Microsoft monopolies. If Microsoft is not severely chastened now, we will all deeply regret it. You must either break them up into three pieces: Operating Systems, Applications, and Entertainment, or you must prohibit them from bundling any applications or services with the operating systems.

At the very least, you must do these things:
1) the Passport technology must be removed from Windows XP and not allowed to be included in any future version of Windows

2) all media applications must also be removed from the operating systems

3) the browser must be decoupled from the operating system and made available only as competing browsers are available to Windows users (i.e. downloadable, and not included with the operating system).

Thanks for listening, and don't screw this up. The consequences are far too dire.

Subject: MS ruling
Justice,

Your decision on Microsoft is a welcome sign of sanity in the petty politics that have pervaded this case from the beginning. We are all better off with a common platform for developers controlled by a solid company willing to invest far more than anyone else in ongoing research and development. Apple, by comparison, has had a dismal R&D record combined with the most anti-competitive behavior ever demonstrated by a computer company. Their squashing of Apple clone companies showed they were not competitive and were not interested in providing consumers with a good product at the best price. Even Linux companies charge nearly as much as Microsoft for their operating systems which were built largely on open-source code and contributions from thousands of volunteers. OK, Microsoft can be a bully and needs to be watched closely, but overall they have been good for consumers and the industry.

Your solution recognizes these facts and doesn't fall into the "tear down the giant" mentality that made a mess of the telephone industry where lesser measures might have left us with an amazing Bell Labs and a seamless nationwide wireless network. Microsoft will eventually provide regular users great new science like their data mining technology (included free with SQL 2000), or

perhaps break-through speech recognition, thanks to your settlement.

Subject: Concerns about MS settlement

After the WTC attack governments in all countries are reassessing their vulnerability to terrorist attack. Operating systems and the internet now represent essential public infrastructure. Modern corporations absolutely depend on their e-mail, www access, databases etc. Is this infrastructure too valuable to be trusted to a tiny centralized group of people? It would seem that any widely used operating system controlled by a tiny group represents a single point of failure. A perfect target for anyone trying to cause maximum disruption. The vulnerability exists on several levels:

1) A military attack on Microsoft's Redmond campus combined with some assassinations of key people could easily render the company unable to support, develop, and security patch its products. Considering how widely the software is deployed and that Microsoft is trying to convince Telcos, Stock Exchanges, Banks and Airports to use its products this is a scary thing.

2) Viruses like code red were able to propagate so quickly because all Windows boxes are clones of each other. The internet is becoming like an ecosystem with no genetic diversity. A pathogen can wipe out 100% of the population easily once it can kill a single member. We should remember that code red was almost benign. Most of the damage it caused was due the network traffic generated by its propagation. Imagine if it had been malicious (propagate for 2.5 hours then reformat). It would have made the WTC attack look like someone bombing a mailbox. The extraordinary market share of Microsoft has made us extremely vulnerable to this sort of attack.

3) Free markets with lots of competitors are like democracies and tend to result in product excellence and satisfied consumers. Consumers vote with their dollars. Monopolies on the other hand are like empires. An empire can be well governed but if the emperor is a tyrant then everyone suffers. Is Bill Gates a good emperor? Who will succeed him if he were killed? What if we get a tyrant?

4) If anything happens to the software vendor responsible for our public infrastructure then its customers are left high and dry. With no access to the source code and unable to purchase service contracts, many other companies could fail along with the software vendor.

5) Since the source code for MS software is kept secret and is accessed by a tiny group of programmers there is a lot of opportunity for coders to write backdoors or time bombs into the software. Who is doing the background checks on these programmers? It should also be noted that the whole world is dependant on this tiny group of programmers for security fixes. For example consider the

vulnerability in IE reported on November 1st that took 3 weeks to fix. Should this tiny group of programmers be responsible for deciding which bugs should be fixed and when then get fixed? What if the entire programming team were assassinated?

Net is Microsoft's attempt to centralize things more than ever. So the single point of failure problem is going to get worse rather than better. Fifteen years ago PCs were nifty gadgets adored by computer geeks. In such a niche market a monopoly is tolerable. Today PCs are as important as phone lines, railroads, hospitals and highways. Allowing a single company to control these is absurd. Considering the civil rights that citizens are being asked to surrender in the name of safety from terrorism should large monopolies not also be required to surrender some of their ownership, control and copyright?

Subject: Proposed settlement

In other words, Microsoft won. Since they are not being broken up, Microsoft should have, at least, been required to make the Windows operating system open source. Concealing the source code of the operating system and allowing them to write software for the operating system gives them an unfair advantage, which they have abundantly abused in the past. Indeed, all the abuses for which Microsoft has been found guilty have their root in the secrecy of the Windows operating system source code.

Subject: Comment on the proposed Microsoft settlement with U.S. DOJ

Dear Sir,
Thank you for this opportunity to comment on the proposed settlement between Microsoft and the U.S. Department of Justice relating to the current antitrust activities.

As a consumer, the proposed settlement does not provide any effective remedies in the short term or more importantly, the long term. Microsoft is leveraging their Operating System monopoly to support other Microsoft application software. Microsoft is accomplishing this by ?bundling? other application software with the Operating System software. The other Microsoft application software should stand via their own merit. The Operating System monopoly, when ?bundling? occurs, provides Microsoft with a clear unmatched advantage that allows Microsoft with the capability to ?attack? competitors. There is only one effective solution. This solution is to break

Microsoft into at least two companies. One company would be the Operating System company and the other company would be the application software company. In addition, the application software company must be treated the same as any software development company by the Operating System company.

This is the only method that I see that can effectively level the playing field for all software developers. If you have any questions, feel free to ask.

Thank you for your time.

Subject: comment on antitrust settlement with Microsoft

1. As a web developer, my job has become increasingly more difficult by Microsoft's abuse of its monopoly power. Now that they have acquired browser dominance through illegal means, they have slowly but surely began to make changes to their dominant browser so that web developers such as myself must start using Microsoft-specific code to make sure our web pages appear okay in their browser (Internet Explorer). This has meant that some of the pages I develop that look okay on Microsoft's browser will NOT look okay using another company's browser. Since I would like the web pages I develop to have as much hits as possible, I am thus forced to make two versions, one that works with most browsers and one that works with Microsoft's browser. This has led to increased development time and development cost.

2. Though Microsoft pays lip service to following "web standards", their web development tools (ASP, Frontpage), by default, create proprietary features which prevent other browsers from viewing pages created with those tools properly.

3. When I use non-Microsoft web servers such as Apache as well as non-Microsoft CGI technology such as Cold Fusion, PHP, recent versions of Internet Explorer have caused problems. Functions that used to work with older versions of Internet Explorer (when it was not yet the dominant browser) no longer work. Web users thus get the impression that there is something wrong with the site when in fact it is their browser (because it doesn't conform to web standards) that is at fault.

4. Despite the fact that their multimedia-streaming technology is inferior to offerings by Real and Apple, Microsoft through its dominance of the desktop is forcing users to use Windows Media Player at the expense of Real Audio/Video and Apple's Quicktime.

5. Palm users are starting to have difficulties syncing their PDAs with certain versions of Windows—may be because Microsoft has a competing product: Microsoft PocketPC.

6. It is virtually impossible to purchase PCs without having to pay for Microsoft Windows even if the buyer will be using Linux or other OSes. If you will do rudimentary checks with most PC sellers (Gateway, Compaq, HP, IBM, Acer, Dell), they will inform you that you cannot buy the PC without paying for

Microsoft Windows. If you say you will be installing Linux, they will say their contract with Microsoft prevents them selling you a "bare" PC without an OS—they will lose their OS discounts if they do so.

9. There are rumors that after the settlement is completed, Microsoft plans to go on a buying spree and purchase their rivals outright.

Suggestions:

1. Force Microsoft to divest itself of the browser (Internet Explorer) and prevent them from creating their own proprietary browser.

2. Make Internet Explorer public-domain and placed under the control of an open-source standards body.

3. In the interim, make sure all versions of Internet Explorer conform to all web standards and if they are not, have Microsoft pull them from use and recode them—to be tested by the WWC (Worldwide Web Consortium).

4. Have all versions of Microsoft web servers, web development tools, CGI technology (IIS, Frontpage, ASP) conform to all web standards and if they are not, have Microsoft pull them from use and recode them—to be tested by the WWC (Worldwide Web Consortium).

5. Have Microsoft pay monetary damages to companies they have harmed by their illegal activities: Netscape, Apple, Intel, Borland International, Novell, etc.

6. Have Microsoft include Real and Apple multimedia technology with Windows.

7. Have Microsoft include Palm technology with Windows and make sure they work well.

8. Disallow Microsoft from giving discounts to PC manufacturers. There must be uniform pricing to prevent Microsoft from using monetary enticements to prevent PC manufacturers from selling "bare" PCs or PCs with other OSes pre-installed.

9. Disallow Microsoft from purchasing or merging with companies that offer rival software or are dominant in their category. These suggestions, if implemented, will ensure competition and greater innovation in the computer arena.

Thank you for your time.

Subject: comment on antitrust settlement with Microsoft

From <http://www.sltrib.com/11182001/Business/149631.htm> Most Microsoft Foes Won't Criticize Settlement for Fear of Retaliation SAN JOSE, Calif.—Not many high-tech companies talk openly about the proposed Microsoft antitrust settlement. Even fewer criticize the deal in public, despite private misgivings.

They still, after all, must work with the world's largest software maker, which controls the operating systems of more than 90 percent of desktop computers and can play a big role in the fate of their businesses.

The exceptions are the usual suspects—mainly those companies that possess enough clout, money and muscle to risk a run-in with the software giant.

The most outspoken critics include database powerhouse Oracle Corp. and Unix server king Sun Microsystems Inc. Both dominate their core markets despite Microsoft's efforts.

Larry Ellison, Oracle's billionaire chief executive, told a crowd at the Comdex computer show in Las Vegas this week that the settlement is "a complete victory for Microsoft, a complete defeat for the government. I give Microsoft credit for keeping a straight face."

Sun's chief, Scott McNealy, also expressed outrage that the Department of Justice—after winning the case—seemed to snatch defeat from the jaws of victory.

It is not just provisions riddled with loopholes or toothless enforcement. The deal indicates an unwillingness of the government to police antitrust crimes, critics say.

"The only thing I can conclude is either the Justice Department didn't know what it was doing or they did know and just decided to give up," said Michael Morris, Sun's vice president and general counsel.

Microsoft declined to answer specific questions about the deal, but co-founder Bill Gates has said the company will accept its strictures.

Most companies that must work with or compete against the software giant either refused to elaborate beyond short written statements, or remained silent altogether.

Real Networks, which makes streaming media software, declined to comment beyond a short statement, which called the settlement a reward not a remedy. Ditto for AOL Time Warner, Palm and Novell. Others, including software-maker Adobe Inc., computer-maker Apple Computer Inc. and chipmaker Intel Corp. refused to make any statements at all.

Major PC manufacturers also were silent. Only a handful of other high-tech companies would discuss specific reasons for their opposition to the settlement. Opera Software ASA had little to lose.

The Norway-based company long ago gave up on persuading PC makers to install its critically acclaimed Web browser on new PCs. Microsoft's exclusive deals had already shut it out of the market.

Opera might benefit from the settlement under some provisions that allow computer makers to install non-Microsoft "middleware" such as Web browsers. But only the links to Microsoft software could be removed, not the programs themselves. That means Microsoft could set itself up as the default system despite any agreements with PC and software makers.

"We're not being extremely hopeful that this is going to open up a lot of doors in the PC marketplace," said Jon von Tetzchner, Opera's chief executive.

At any rate, the same PC makers that won't comment on the settlement probably aren't interested in raising the ire of Microsoft, even if retribution is barred in the settlement.

"There are loopholes," von Tetzchner said. "And there's the practice of life. All of those companies will think twice before upsetting Microsoft."

The entire debate over what Microsoft can do and cannot do appears to be rendered moot: Under the settlement, Microsoft can

define what comprises the Windows operating system "in its sole discretion."

Companies also might be reluctant to talk because the deal allows Microsoft to keep from its competitors the critical details about how programs and operating systems can function best in a Windows environment.

Software programs are intricate tapestries. To function smoothly when running on top of an operating system such as Windows, the stitches that link an application with the operating system must be snug and seamless.

Competitors complain that because Microsoft was not compelled to immediately reveal to them how to make those stitches, it will continue to dominate in such areas as word processing, spreadsheets and e-mail.

"This settlement does not remedy the monopoly. It legitimizes it," said Michael Tiemann, chief technical officer at Red Hat Inc., a distributor of a variant of Linux, a competing operating system whose basic code is open and public.

Microsoft has a history of undermining software projects backed by consortia of major tech companies that aim to create applications that work well with a variety of operating systems, potentially threatening the Windows monopoly.

The company infuriated promoters of Java when it created Microsoft-specific versions of the programming language in the late 1990s. This year, Microsoft changed and patented a protocol used by Samba, open-source software that lets a Linux machine share files or manage print jobs such as a Windows server.

"The whole concept of a free market is to allow fair and open competition and to permit customers to make choices," Tiemann said.

Drew Spencer, chief technology officer of Orem's Caldera International, a Linux provider, worries that Microsoft won't release enough information to allow alternative platforms to participate in upcoming Web services.

Steven McGeady, a former Intel Corp. vice president who made headlines during the antitrust trial for testifying against Microsoft, said the deal only reinforces his own, post-Intel business strategy.

"Competing with Microsoft head-on is a bad business practice," he said. "And it would be a bad business practice regardless of any of the potential remedies."

Subject: Microsoft Case

We're writing to add our voice in the outcry against the Justice Department's antitrust suit settlement for Microsoft. Fortunately, our Utah attorney general is willing to reject the settlement, though it jeopardizes his promise for re-election. As usual, it appears that people are voting with either their wallets or along party lines. It's disappointing that people are obviously losing the clear perspective on this issue, due to the financial benefits which some can gain in this, or due to the assumption that to defy Microsoft is somehow at odds with the

Republican philosophy of supporting big business. This is a clear case of a company conducting bad business, and it should be punished accordingly.

Microsoft has shown repeatedly that it is determined to use its substantial monopoly to take over countless sectors in the business world. This is a situation that is not healthy for our economy, especially at a time when so many companies are barely making it anyway. We are in an environment where only the very strong and very established can survive. Such an environment does not encourage new ideas and new companies—something our economy needs so desperately at this time.

We support politicians and lawmakers who vote to uphold the laws and principles which enable free enterprise to thrive.

Subject: comment on antitrust settlement with Microsoft From <http://www.siliconvalley.com/docs/opinion/dgillmor/dg110701.htm> Holdout states last hope to help ease Microsoft's grip on U.S. consumers

BY DAN GILLMOR

Mercury News

So it's down to a few states that have enough money to fight and refuse to be bullied. They are American consumers' last hope for an outcome that doesn't leave Microsoft on a clear path toward controlling the choke points of tomorrow's commerce and communications.

No one should be surprised that half of the state attorneys general have given up. A few undoubtedly believe the Justice Department's sellout achieved something. Others were just along for the ride and are feeling Microsoft's—and the federal government's—enormous lobbying pressure. Watch the campaign contributions flow to see what may have happened with at least some of the politicians who were handling this lawsuit.

If U.S. District Judge Colleen Kollar-Kotelly, who's now hearing the case, has any courage, the Tunney Act hearing should be extremely revealing. There are so many questions raised by the malodorous deal cut by the Justice Department that it's hard to know where to begin. The best place to start is with the bizarre settlement itself. The document reads as though it had been written by Microsoft lawyers. Every time you read an item that suggests actual restraint on Microsoft's behavior, you find weasel language elsewhere that undermines the supposed concession. This thing isn't just full of loopholes. It's meaningless.

For instance:

? Why did the lawbreaker get to keep the loot it made from violating the law? Do we give bank robbers the same courtesy?

? Why does this settlement implicitly give Microsoft the right to withhold information about its programming interfaces to open-source and free software writers?

? Microsoft, in its sole authority, gets to decide what goes into Windows. Since that eviscerates every other provision in the

agreement, why bother with this charade at all? It would also be useful to put some key people under oath, to answer questions about the politics of this case. For instance:

? Why did none of the non-political professional staff members who worked on this case support the settlement? Have they been ordered to keep their mouths shut? If so, why?

? What was the substance of the summer conversation between Vice President Dick Cheney and Microsoft Chief Executive Steve Ballmer?

? Attorney General John Ashcroft's deputy chief of staff—a Microsoft shareholder and former official of the Republican Party, which got massive Microsoft campaign "contributions"—reportedly told Microsoft opponents to back off even after he'd supposedly recused himself from the case. He's denied the report, but let him do so under penalty of perjury. (Oh, wait, who'd prosecute? This Justice Department?)
