Unfortunately though, it seems that the penalty does not fit the crime. Allowing Microsoft to be kept in tact and furthermore to force feed schools with more of it's operating system and software does little to curtail what it is already doing. It amounts to a slap on the wrist and the government looking the other way while Microsoft goes merilly on it's way continuing to violate the law. Other than breaking up Microsoft, the only other solution that may help is the recent response from RedHat to provide the OS and support for the systems that Microsoft would purchase for the schools. This would impose a monetary penalty on Microsoft having to foot the bill for the computers while stopping it's continued in roads into the schools.

Do something about this problem and don't just look the other way. We need this practice to stop and a true penalty to be imposed not just a wink of the eye after a mild scolding...

Subject: MS Settlement

Windows XP now prohibits users from changing hardware at random. (if you test software and hardware products, you now have to go through the bureaucratic nightmare of having to ask Microsoft for a new license Key after changing hardware a couple of times.)

You wanna tell me how a software manufacturer has the legal right to tell you, (simply because you modified your hardware) you can no longer use what you already paid for? (unless you invest more time and money dealing with their licensing department)

CONGRATULATIONS: DOJ, THE MONOPOLY LIVES ON, BUT ITS OK BECAUSE ALL OF YOUR MASTERS ARE GETTING SUBSTANTIAL CAMPAIGN CONTRIBUTIONS. (I love this country!)

Subject: Settlement

Gentlemen,

Microsoft was a monopoly is still a monopoly and based on the settlement, will continue to be a monopoly. Microsoft does not follow most standards but leaves things out or adds a twist to make itself and other systems partially incompatible.

Through software changes and bundling they have driven out most of the competition.

Computer systems have been my career for over 25 years. I believe the operating system should be separated from the applications. As long as the operating system and applications come from the same company, Microsoft will be a monopoly.

Subject: Microsoft Scheme Collapses Enron and Excite at Home bcc: leading business journalists, regulators, pension managers and academics

Hello Steve.

This week I posted a series of "raw notes" regarding activities at Microsoft in the billparish.com report.

The report, a work in progress, is now available on my website at www.billparish.com. This report is an excellent way for readers to get a genuine inside look at some of your not yet disclosed business strategies. The report also includes seven specific recommendations to help energize the technology sector and the economy in general.

I continue to be optimistic that you and Bill will want to get together and share a few ideas regarding how you might adopt a more win/win oriented approach and help stabilize the pension system. Please do not think that, given the strong tone of this report, I am unwilling to talk. This will be the first in a series of 10-13 reports.

One area examined in the report is your brilliant use of Paul Allen's enterprises to pry your way into new markets. It is astonishing that the DOJ did not consider any of this activity given that Allen is Microsoft's 2nd largest shareholder. One such Allen entity, Charter Communications, is the nations 4th largest cable company and already positioned to convert most software and support to MSN based relationships.

Similarly, Qwest has already converted all its high speed DSL in 14 Western States and renamed it MSN Broadband. Imagine that while at the same time you are using Cox, Comcast, Rogers Cable in Canada and other foreign cable entities to destabilize and either directly or indirectly take over AT&T broadband, the nations largest cable system. How could a judge possibly approve the DOJ settlement with such activity occurring?

Due to the significance of the cable system, Parish & Company now formally supports a government bail out of AT&T broadband with the objective of maintaining competition in this most important industry.

This would be an excellent point for a leading journalist to make. It is almost silly to be talking about a bailout of Enron, a company that should clearly be allowed to fail.

Other topics include discussions involving Microsoft's circles of influence and how your pyramid scheme is collapsing major companies in a variety of industries, in addition to being the root cause of the current economic slowdown. It can't be long before even Alan Greenspan starts seeing the staggering cost to productivity created by all

the Windows based viruses such as "I love you", etc. And this product liability issue is but one small issue regarding your overall scheme.

One common sense strategy here regarding viruses would be for the states to organize and initiate massive product liability actions designed to recover support costs and force you to re engineer your products to prevent such viruses. You must be genuinely surprised that few of your competitors have realized that this is indeed your real vulnerability, not anti-trust actions. Please do let me know if take exception to anything in the report Steve. Best regards.

Sincerely,

Bill

Subject: 11/28/2001 Intentional Food Poisoning

My family has once again prepared food that has been poisoned with an agent that solidifies waste products in the area between the small and large intestine, making elimination almost impossible.

The agent was prepared in a home made pastry on Wednesday, November 28, 2001. I ate the pastry after I had returned from the studio audience tapings of the Tonight Show and Late Friday at NBC Studios in Burbank. Once again, video surveillance of my home as well as next day newspaper feedback from the Orange County Register's Horoscope section as well as a few of the comics confirm the attack and subsequent discomfort. The PAC of Disney and Disney affiliated people along with their business partner, Mc Donald's Restaurants of suburban Chicago continue to harass me, targeting me because of the influential essays on their continued subversion, obstruction of justice, illegal use of funds, and assaults.

A large land transaction in Orange County with the Irvine Company as well as Major League Baseball's contraction negotiations in Chicago are part of the scenario. It plays like this: ML Baseball has announced that 2 teams

will be eliminated from the League in a year or so due to unprofitable business. The most likely of the teams are the Minnesota Twins, Florida Marlins, Montreal Expos, as well as the Tampa Bay Devil Rays. The MLB contraction game also involves millionaire owners who will shuffle properties. It has been suggested by many in the media that the Marlin's owner will sell the team and purchase the Anaheim Angels from Disney Corporation and the Expos will be purchased by all of MLB, and then eliminated in a year or so. The new Marlins owner would then move the Florida Marlins to the Washington DC area where MLB has been missing since the Washington Senators left town years ago.

The other team that would fold would then be the Minnesota Twins, although after the Tuesday Chicago meeting of baseball's owners, the Minnesota Legislature drafted legislation to keep the Twins in Minnesota, thwarting the MLB owners' efforts at contraction. So, where does it stand now, and why are people so mad to attempt assaults and subversion???? Millions of dollars in concessions from the Disney Corporation as they try to put a public relations spin on Uncle Walt's 100th birthday celebration last weekend (designed to coordinate with the gift of private land to the public by the Irvine Company last week) without resolution on the necessary sale of the losing NHL Mighty Ducks Hockey Team and Anaheim Angels. Since the Microsoft Anti-Trust Trial has been placed on indefinite permafrost, the other large 'Power Kite' was the transfer of money and ownership between MLB owners and Disney as Disney tries to assimilate the 5.2 billion dollar purchase of the FOX / Haim Saban Power Rangers—FOX Family Channel deal.

So, MLB places the team transfers on hold for a year, while Minnesota enacts legislation to keep the Twins in Minnesota. MLB owners have to buy out the Expo's owner and run the Expos. Disney's hopeful sale of the NHL Mighty Ducks and MLB Anaheim Angels is stuck in neutral for a year ... good! All of their stalling on my settlement for over ten years is now beginning to receive a message about fair business practices. The OC Register and LA Times mentioned how so many people are extremely upset because the MLB baseball swaps did not go down as planned.

The 12/4/2001 Randolph Itch 2 A.M. cartoon in the OC Register sums up the intestinal poisoning ... and the Leo Horoscope details one of the remedies I used, large Sunsweet Prunes with pits as opposed to the family's Sunsweet Pitted Prunes kept in the refrigerator. The comment went to my sister, a Leo, saying that her pitfall was not knowing I purchased a new version. The Get Fuzzy cartoon also mentions a muffin today ... the actual pastry was a home made coffee cake. My three visits to NBC—Burbank and follow-up on employment applications at KNBC-TV and the NBC Network were no more than a continued search for legitimate employment at a company I have visited since 1977, Otherh especially archival AOL / Time-Warner, with a major studio down the street from

NBC, and Disney, with their corporate HQ only blocks from NBC in the opposite direction from Warner Studios, see my visit

as a challenge to their 'supreme' right to decide 'other's' careers. Most of these characters have fancy titles at large corporations, however most of them have little legal experience, backed by the large corporate staffs that may be ignorant of their actions. These challengers are no more than smoke and mirrors, in fact they have acted in totally illegal manners without prosecution from the Justice Department or local authorities. Bringing it all together, and closer to home ... the business relationships my brother-in-law, A1 Rex and my sister Bonnie have with A1's corporate employment at McDonald's regional offices in Irvine as well as my family's sentimental attachment and brainwashing with Disney 'magic' have caused my immediate family to continue to subvert my efforts to obtain a satisfying career, stalling the replacement of money that was stolen from me, and invested in real estate and stocks without my consent.

The fact that I am fighting for my rights, and that previous investigations by the US Department of Justice and the Orange County Sheriffs Department have proven my allegations to be correct, is the reason for this message. Please instruct these people to cease all of the food poisonings, and return all of my stolen money to me with interest, or in the event that your polite messages are again refused, freeze their bank accounts as terrorists for many years without prosecution, and rightfully return my money to me as well as interest and penalties for uncovering federal and state corruption, as provided by law.

Thank you, Robert Remington

Subject: Microsoft Settlement

Hello

Though I'm from Michigan, a state that settled with Microsoft, I am outraged that this state and the Federal government did so. I am a retired attorney, former consumer affairs specialist, computer science educator and a computer expert, who feels strongly that consumers are the losers in the proposed settlement. By this settlement, Microsoft gets away with flagrant antitrust violations thereby undermining confidence in the very nature of our government. If Microsoft isn't a monopoly worthy of breakup, there is no substance to the entire Sherman Act. Thousands of industrious computer software developers have been harmed by Microsoft's predatory and wholly illegal practices.

Instead of being offered quality software products, Microsoft's tactics have restricted consumer choices to the detriment of all consumers. Microsoft must be brought to justice. The company must be dismantled. Please do all you can to kill the proposed settlement.

Subject: Microsoft anti-trust trial settlements and penalties

To whom it may concern,
I am very dissatisfied with the state of settlements and penalties applied to Microsoft for the crime Bill Gates and his company perpetrated against the software and computer industries. By eradicating his competitors in the most unfair fashion, Mr. Gates robbed us, the computer users from the benefit of better and more creative software and destroyed the income of other creative software developers in the name of greed.

I feel that the proposed settlements and penalties are very inadequate. They are too weak and do not fit the crime. They do not assure deterrence and prevention of any future recurrence of such unfair practices. They also do not address the damage done to everyone, users and developers. We must send a message that "Greed does not pay", Microsoft/Bill Gates should pay back in a way that serves every community around the states ... Mr. Gates is one of the richest man on the planet because of it, and we can't let him get away with it. He must pay the appropriate penalty and make amend in a meaningful way.

Thank you for your continued fight for justice.

From: root@wt6.usdoj.gov@inetgw

To: Microsoft ATR
Date: 12/4/01 10:31pm
Subject: Doj-Microsoft settlement

I would like to say that I don't agree with the current settlement that is proposed by Microsoft. I don't understand how a corporation convicted of monopolistic business practices is allowed to settle by paying a minimum amount.

Also, why should they be allowed to buy their way into another source of future revenue? Isn't that what this was all about in the beginning. Allowing Microsoft to settle with a slap on the hand is not sufficient. It just goes to show others that the one with the big wallet has their way over the rest of us. I don't believe that allowing them off the hook is going to bring back the tech sector.

The only thing that will come back is Microsoft's guaranteed income and not the rest of ours. This is just an excuse to allow them to implement technology that they want on their terms. (monopoly).

Thanks for taking the time to read this.

Subject: Microsoft Settlement
Dear Sirs,

Your recent settlement agreement with Microsoft falls way short of what anyone I know would call fair.

How can it be fair when they continue to "bundle" extra software and call it an "operating system"?

A case in point would be their latest release, Windows XP. It contains CD "burning" software that allows you to make music or data CD's. A company call Roxio also makes this type of software, called EasyCD Creator 5. Since you have to have an operating system to run a program like EasyCD Creator 5 and the Windows O.S. already has such software in it, why would anyone pay for the something twice?

The only thing that would be fair would be to force Microsoft to unbundle all of it's software and prohibit it from forcing, in any way, computer manufactures or customers to buy something that they don't want to get something that they do.

That way, a customer would be able to pick and choose the software that best fits there needs without having to purchase unwanted software. And since this would force Microsoft to display their individual software products side by side with their competitors, competition would be greatly improved.

In this way a customer would be better served by making the choice entirely theirs.
Thank you for your time.
C. Lazarich

MTC-00002701

From: John Craven
To: Microsoft ATR
Date: 12/4/01 10:33pm
Subject: Suggestion

To whom it may concern:

The proposed settlement does not prevent Microsoft from continuing it's monopoly. It's nothing more than a slap on the wrist. Companies may be given the ability to load other operating system on the boxes they sell, but now that Microsoft is in control of 90%+ of the market, there is no incentive for those sellers to expend much effort to in doing so. It would only cause them more support headaches and costs.

I imagine there are a significant number of users that would love to rid themselves of Microsoft, but cannot since they feel compelled to be compatible with their co-workers around the country/world that use Microsoft's office suite, even if those other workers themselves are wanting the same thing. Kind of like lemmings rushing to the sea :). Simply put: many people of the country/world are being forced to buy an operating system, when all they really want is to be compatible with a word processor!!!!

So, how about forcing Microsoft to disclosing it's file format's for Word, Powerpoint and Excel. These have become de facto standards (read: monopolized) because of their operating system monopoly. By doing this other developers can create office suites that are cheaper, faster and with a different feature set than Microsoft has deemed obligatory. Their file format's could be the start of a new ANSI standard that could then be cussed and discussed by all interested parties. For the good of all, not just Microsoft.

Respectfully yours,
John R. Craven

MTC-00002702

From: Andrew Parfomak
To: 'microsoft.atr@usdoj.gov'
Date: 12/4/01 10:32pm
Subject: Microsoft. . . why bigger isn't better (!!)

I'd like to point out that Microsoft has, in the eyes of this long-time computer user, had a strong history of (a) crushing promising software companies from developing truly better products, or (b) buying out promising companies, and often redirecting the promise of these companies into ways which primarily benefit Microsoft's long term goals, and not necessarily improve the software 'landscape' and the types of products available to consumers.

I've long since been a fan of a once-strong contender, Borland Inc. which historically produced better products and had them available months or years prior to Microsoft's own offerings. The most comprehensive spreadsheet program first available on a Windows platform was QuattroPro, . . . and not Excel which appeared somewhat later. More significantly, Borland's relational database software program, Paradox (for Windows) by far is still the most powerful, easiest to use, most attractive to configure and most elegant to program product in the single-user or small network market. Microsoft's product, Access, to this day doesn't boast half the functionality, or elegant interface designability which Borland's product, (now several years old) can provide. Borland's story is a classic example of Microsoft's strategy. Other software companies have, like Borland, also long since fallen under Microsoft's chariot wheels and have been excluded from the race to develop better products.

Microsoft, in my view, should at least be required to open up its sourcecode, as well as open up its proprietary file formats in which it stores data (such as documents in WORD, or spreadsheets in EXCEL) to the programming community, and without any hampering of the use of these file formats. By virtue of their hidden code, and hidden file formats, as well as Microsoft's continued resistance to have it widely available for review and understanding by independent programmers, have they thwarted real and independent advance by third party programmers which would have borne fruition in the form of better, faster and more creative software products available to the public. This has not happened, as their market dominance which is in no small part protected by their hidden sourcecode and proprietary file formats (i.e., Word, Excel, etc.) which have unfairly denied other software developers from producing truly useful and truly compatible products. Instead, we are stuck with a Microsoft dominated view of personal and organizational computing ... whether we agree with Microsoft's views or

Microsoft's implementation ... or not.

Thank you for your attention to my opinion.

Subject: Settlement

Dear sir or madam,

I think the microsoft settlements seem to be nothing more than a slap on the wrist, if even that. I cannot believe that this latest settlement is giving them a way to extend their monopoly further, into schools. This is absolutely absurd. Furthermore, it allows them to claim they are giving hundreds of millions of dollars away, when in reality software has almost zero marginal cost so it costs them next to nothing to give away software. I am really tired of the aggressive tactics that microsoft uses. I am sick of them leveraging their products to extend their monopoly further. It is unfair, and it stifles competition. I am not a competitor of microsoft, just a user who is sick of having products I don't want rammed down my throat, only because I need to run Windows to survive and be compatible with everyone else. I thought the DOJ was going to do something about this, and I am disgusted about how they now have dropped the ball on the case that they first had appeared to have won.

Thank you,

To: Microsoft ATR
Date: 12/5/01 12:09am
Subject: RedHat/Microsoft proposal

I just read the alternative proposal offered by RedHat for providing computer systems and software to schools.

As a professional in the computer industry, I have seen the impact of Microsoft's monopolistic practices in ways that were not even addressed in the recent litigation. I have seen a generation of people entering the field of information technology that are poorly equipped to keep that industry moving ahead. They have been poorly equipped by a lack of exposure to development platforms, operating systems, and applications that do not originate from Microsoft Corporation. Microsoft has not only held back the industry

through monopolistic business practices with their products, but has created a generation of people who are indifferent to alternatives.

The technology industry needs to be freed of the restraints that have been placed on it directly or indirectly by Microsoft. RedHat's proposal for providing the open source Linux operating system to school children can offer exposure to technology that may open new doors to a different future. By providing access to a platform of open technology and standards, tomorrow's workers and leaders in the technology business may be able to think beyond the boundaries that have been erected by Microsoft.

I hope you will seriously consider the alternative that has been offered by RedHat, as well as any others that fall along those lines.—

Subject: Let us decide

I have been using computers since 1963, when I started on an IBM 7090 using FORTRAN.

Thru all these generations of computing power, even including IBM, when they were broken up by the DOJ, I have never seen anyone quite as arrogant as Microsoft. They do NOT speak for consumers when they build their products. The ONLY innovation they are responsible for is innovation in restrictive contracts.

Instead, Microsoft has won out by purchasing technology (including, I remind you, the original version of MS-DOS itself) or by stealing it (Xerox PARC, Apple, Intuit, Netscape, ...) and encapsulating it into a take-it-or-else bundle. They have NEVER listened to the desires of the end consumers. I never wanted Internet Explorer forced onto my desktop! Where did they get that? I never wanted Windows Media Whatsit—I use RealNetworks. Why can't I choose? Why do I have to take one size fits all from EVERY computer manufacturer out there. Give me the option of a basic OS on which I can place the applications I like—that is what competition is for!

They have killed many fine products over the years when they have been unable to buy them out—Novell DOS, WordPerfect, and Netscape come to mind as superior products effectively pushed out of the market. They have prevented innovation by requiring outside developers to work with their bloated software and requiring manufacturers to install exactly what is shipped, with no changes, no matter how bad it is. Indeed, Windows 98 is widely recognized as the bug fix for Windows 95, but you have to pay for it. It is always amazing to me when I see Linux loading essentially the same apps as Windows but in ¼ of the time and twice as robustly. If anything, the FTC (or whoever) should have issued a recall notice and consumer alert on anything as badly broken as their early releases. But remember, we are FORCED to take them—no choice. It would be a real miscarriage of justice to allow them to continue under the remedies proposed by

the US Attorney General. Can you say rewards—where does the proposal have Microsoft compensate us for our lack of freedom of choice?

Bill Gates has to be even more iron-willed than I thought—otherwise he would be unable to avoid laughing out loud in public about this settlement.

Good grief guys—open your eyes and look at what they are doing to us—is this ACCEPTABLE?

Mike

Subject: Comments on Microsoft Antitrust suit

It's my personal (not the college's) belief that Microsoft needs to have several restrictions placed on itself:

1. Fair/open contracts with OEM's that don't limit OEM's right to put additional software/icons on the PC's.
2. Microsoft ought to open up ALL it's Window API's up to all developers so that Microsoft's developers (of other product) don't have a heads up over others. Microsoft has enough of a lead and market share with other products that this would help level the playing field.

Subject: Microsoft antitrust settlement

Dear Department of Justice,

I am dissatisfied with the proposed Microsoft antitrust settlement, particularly with the lack of any clause requiring Microsoft to reveal its proprietary file formats. This affects me directly because I mainly use non-Microsoft, competitive products such as Star Office to do my office tasks. When colleagues send me a file in a Microsoft Office format during the next several years, I want to know that I will be able to open it in my software of choice. Because Microsoft also controls the market for office software, they could at present change their file formats and keep them secret to prevent competitors' products from interoperating. While the proposed settlement has language requiring Microsoft to reveal its middleware APIs, which is good, there should also be a clause requiring Microsoft to reveal its application file formats.

Sincerely,
Jeff Nelson

Subject: Opinions on Microsoft Federal Antitrust Settlement

Dear sir or madam,

I would like to voice my opinion about the Microsoft antitrust settlement in the federal government's case.

Microsoft's lawyers have found another shrewd way to devastate the competition of their product line in the nation's schools and weaseling out of this antitrust case at the same time.

In the part of this settlement where Microsoft agrees to donate a billion dollars worth of computers to the nations schools, if Microsoft is allowed to make this donation using computers running Microsoft operating systems, or running Microsoft software, then it succeeds in the following.

1. Microsoft displaces other vendor's hardware and software out of the schools. A prime target here is Apple Computer, who maintains a large market share of computers in schools because of their superior ease of use and graphics capabilities. Microsoft will also displace other operating systems such as MacOS, Solaris, and Linux, and other application software such as Netscape, Corel, Applixware, Appleworks, Apache, etc. from the schools. As good as the other products are, they can't compete with free hardware and software. It may well put some of these competitors out of business by flooding the schools with free Microsoft products or computers dependent on Microsoft software to operate.

2. Microsoft will force schools to have to buy software from Microsoft for future upgrades.

3. Microsoft will make children come home to their parents saying they need Microsoft software and computers running Microsoft operating systems and software to do their homework.

4. They will make themselves look like the good guys to schools, administrators, and children who will think Microsoft is coming bearing gifts, rather than buying themselves out of a criminal prosecution. A true public relations victory for the wolf in sheep's clothing.

5. Microsoft does not have to make reparations to the victims of its criminal antitrust crimes and does not get broken up. Instead, Microsoft gets to further steal market share and customer base from it's competitor victims with money that should rightfully be paid to it's victims or the government as a fine. Had AT&T come to such an agreement in their antitrust case they would not have been broken up. Instead AT&T would have been able to stay a monopoly and would have agreed to providing free long distance to the customers of all its long distance competitors for just long enough to drive its competitors out of business. This settlement is a windfall reward for Microsoft for criminal behavior, not a punishment.

As a current user of Windows, Macintosh, Unix, and Linux, plus many others in the past, I can say with expert confidence that Windows is an acceptable operating system, it still lacks the system stability, virus resistance, and user empowerment of creativity offered by other operating systems. This settlement could wield a death blow to Apple and possibly others by robbing their customer base and keeping the abusive Microsoft monopoly intact, leaving the computer world under Microsoft's thumb.

Microsoft truly needs to be broken in two to separate companies to separate their operating system business from its application software business. The current structure permits Microsoft to sabotage competing application software with ?incompatibility? changes to its operating system each revision of its operating system, and to provide other operating systems with slow, buggy, or otherwise dysfunctional versions of its application software. Its further expansion into internet services with msn.com, and its plans to deny msn.com web service to browsers other than its Internet Explorer are further examples of Microsoft's plans to cut out competing vendor's products through the use of its monopoly powers.

My opinion is:

1. Microsoft should still be broken up.
2. Microsoft should not be allowed to flood schools with free computers and software unless the computers are up-to-date Macintosh, Linux, Solaris, Unix, or other non-Windows computers. Any freely provided software should be that of current competitor software (AOL, Netscape, Kodak, FileMaker, Apple, Red Hat, Yellow Dog, ApplixWare, gnu, Sun, etc.) Only then will this settlement make any kind of reparation to Microsoft's victims and aid in discouraging and diminishing Microsoft's monopolistic abuse.

3. Microsoft should not be able to provide free internet service to schools as a part of any revised settlement, as msn provides good service and up-to-date software only for Windows based computers.

4. If Intel or other PC clone based computers are provided to schools for free as a part of this settlement Microsoft should be required to bar these computers from being activated with Windows XP for a period of at least 5 years. This is technically doable, as activation requires users to call Microsoft and provide the computer's unique machine ID for activation.

5. An alternative would be to require Microsoft to first pay victim competitors (if they are still in business) directly for damages, and use the remaining funds as described in 2 to 4 above. I hope that you will be able to get to get the courts to reconsider separating Microsoft's operating system, application software, and internet operations into three separate companies to promote fair competition for the benefit of all of us, and to drop plans of this incredible competition devastating free giveaway of computers to schools unless they conform to restrictions like I mentioned in 2 to 5 above.

Thank you for your time in reading this,
John Nakai

Subject: Proposed settlement in U.S. versus Microsoft case
To: U.S. Department of Justice
Re: Proposed settlement in the United States v. Microsoft case

There are so many things wrong with this "settlement" that I don't know where to begin.

First of all, there's no punishment. Microsoft has been found guilty, but gets

away with the crime completely. The suggestion the someone made that Microsoft should contribute computers to aid the poorest schools seems to have some merit, but that "contribution" should under no circumstances include "donation" of Microsoft products. The counter-proposal from Red Hat would seem to be a nice option. Secondly, the proposed behavioural remedies contain far too many loopholes through which Microsoft no doubt already has plans to wriggle. A glaring example is that there is nothing to prevent Microsoft from "retaliating" against vendors who sell computers without an operating system, or with only a non-Microsoft OS installed.

So back to the drawing board please. While I don't favor the breakup that was proposed by Judge Jackson, I feel that an acceptable settlement should include a punishment to fit the crime, and a form of behavioural remedy that will ensure that Microsoft cannot offend again.

Subject: Microsoft Settlement—Not I read your settlement document.

The company (Microsoft) was found to be a criminal. There is no doubt about that. Last I looked, criminals in this country are punished. Sent to jail, fined and stuff like that.

Your settlement is bullshit. It does not matter that you think the government saves time and effort. The role of the government is to prosecute anyone that breaks the law.

That includes Microsoft. Potential savings of time and effort and a "decent" outcome don't matter. Microsoft broke the damn law! They have to be punished. Do it and do it now!

Else, you make a mockery of justice in this country. There are too many other instances where the US is mocking justice these days. BTW, the idiots that wrote the crap you published in the Federal Register don't know anything about real computing. The authors are idiots that merely know how to use Microsoft Word to type a really uninformed letter.

Subject: Antitrust Settlement cut with Microsoft

Simply placing well defined restrictions on Microsoft has never and will never keep this company from using its monopolist power to squash competition. I know it, the Public knows it, the Industry knows it, and YOU know it.

Microsoft always finds a fuzzy path around any restrictions put on it by the government. At this moment in time it already basically owns the desktop computer software market and soon will control most of the way information is passed around on the Internet. Windows XP is a perfect example of Microsoft thumbing its nose at the government and its market competitors, yet the DOJ ignores or chooses not to understand how it will further Microsoft's monopoly hold on the tech sector. I personally believe that the DOJ has sold out to 'big business'. The DOJ's 'deal' with Microsoft is a disgrace.

From: Alan Martello
To: Microsoft ATR
Date: 12/5/01 8:33am
Subject: Proposed Microsoft Settlement To whom it may concern:

I am outraged that the same company that has monopolized operating systems and desktop application development for the past 10 years is being granted, courtesy my tax dollar and the U.S. Government, a new monopoly in our school systems.

Clearly, most of the people negotiating the deal have never sat *FOR DAYS STRAIGHT* (4 days this past week) in front of a Microsoft operating system trying to perform a relatively simple task which simply can't be done due to poor planning on Microsoft's part. "But in our free market economy" (I hear the critics charge), "this would change

as market forces would propel them to make changes."

NOT WHEN YOU HOLD A MONOPOLY

And just in case their stranglehold on desktop operating systems is not strong enough, let's allow them to put \$1 Billion dollars of their product in our schools. ... oh, and by the way ... let's see ... if the OS + Microsoft desktop apps (Word, Excel, etc.) costs (conservatively) \$500 retail BUT the CD and distribution material costs them (in quantity) around \$0.25 (seems reasonable since I can get 1,000 CD's manufactured for less than \$1 each), that means their \$1 Billion settlement is worth 1/2000th of that or \$500,000 in real cash (not "lost sales", REAL CASH!). Let's see ... perhaps Bill G., Steve B. and Paul A. can set aside a hand in their weekly poker game to cover the settlement. \$500,000 is a pretty small sum to buy a government sanctioned monopoly in our schools. Do the people negotiating the DOJ settlement honestly think this is a good idea?

At a minimum, the \$1 Billion settlement to benefit schools should be for HARDWARE ONLY which each school district or state should get directly. In that way, Microsoft can't use it's \$1 Billion hardware purchase to put the screws to local vendors or make a sweetheart deal with one of the big multi-national hardware companies that Microsoft routinely is discovered in bed with making backroom marketing and distribution deals. In closing, let me add that my company has made its livelihood using Microsoft products for almost ten years. While they do bring some useful offerings to the marketplace, their unembarassed attitude as they strongarm the industry has resulted in my working LONGER HOURS for LESS MONEY because of INFERIOR MICROSOFT PRODUCTS. Any significant competition is simply silenced by driving them out of business. Is there any other definition of a monopoly?

I feel outraged and frustrated that it is going to take the EU to show the DOJ what backbone is about when it comes to negotiating with the world's largest software monopoly.

Subject: Microsoft Settlement

I would like to state for the record my opposition as a citizen and as a computer professional against the government settlement with Microsoft. In my opinion and experience with the IT industry, this settlement will neither

A. Redress the damage done by Microsoft using its monopoly power in desktop operating systems for Intel based microprocessors. Venture Capitalists are extremely hesitant to fund start-up companies that wish to compete in Intel desktop operating systems. Microsoft's past actions have resulted in the almost complete

elimination of any commercially viable alternative to Microsoft in desktop operating systems for Intel microprocessors. LINUX is not a commercial operating system, its license does not allow for companies who distribute it to charge for it, they are as the law applies, only selling support services for LINUX, the development of LINUX cannot be funded with by sales, therefore does not apply, the Macintosh is not an Intel based operating system and also does not apply.

B. Restrict Microsoft from using its monopoly power to stifle competition within or near their Desktop Operating system. The current settlement does not address the future, almost all of the restrictions placed on Microsoft have legal loopholes allowing Microsoft to ad-hear to the letter of the law, but not the spirit. The current settlement also mainly restricts actions that Microsoft has eliminated from it's business practices years ago.

From: ADAZA.COM
To: Microsoft ATR
Date: 12/5/01 12:21pm
Subject: Monopolies harm industry first, then the consumer.

Dear Dept of Justice,

Microsoft is a successful company. It has achieved its monopolies through successful marketing strategies. Whether it has used illegal means to achieve and maintain its monopolies is NOT of primary importance to the industry, the consumer, or the economy. What IS of primary importance to the industry, consumer, and economy, is that Microsoft has monopolies in a number of areas and is using those monopolies to extend into other areas. The technique of using a monopoly in one area to create a monopoly in another area has been understood for centuries. That monopolies eventually harm the industry, the consumer, and the economy has also been understood for centuries. For these reasons, every capitalistic country has developed antitrust law to protect the country from private monopolies.

The industries in which Microsoft enjoys monopolies have withered just as monopoly-dominated industries in the past have. Evidence:

1) Industry-wide development in personal computer operating systems has all but ceased. Apart from cosmetically, MS Windows is hardly different from what it was five years ago.

2) Industry-wide development in internet browsers has all but ceased. Apart from cosmetically, MS Internet Explorer is hardly different from what it was five years ago.

3) Industry-wide development in office productivity software has all but ceased. Apart from cosmetically, MS Office is hardly different from what it was five years ago. (And yet, Microsoft still charges \$500 for it. They do because they can.) Yes, a lot of healthy, competitive, software development is occurring, even at Microsoft, but not in the areas Microsoft monopolizes. Some argue: "But stable standards are good for an industry. A lot of businesses do well developing products which depend on Microsoft's "standards"." IF it is determined that a standard operating system or office software is good for the industry, (which I personally do not believe but realise that there are certain short-term advantages) THEN those standards should not be privately owned and manipulated for the benefit of the standard's owner, in the way that Microsoft does. Many non-MS-owned standards do exist.

They are under-utilized, in general, because Microsoft benefits more from creating its own versions of these standards and discriminantly selling their use. If Microsoft has acted illegally, it should be punished in order to demonstrate to the world that Microsoft is not above the law of the United States. However, separately from "punishment," Microsofts monopolies need

to be broken in order to restore productive competitive growth to these industries and to ensure that more industries aren't similarly strangled.

The Microsoft monopoly situation is exactly the type of situation that US antitrust law was designed for. It should be used.

Sincerely
Drew Cover

Subject: Settlement

I am in full agreement with Red Hat on the \$1 billion in computers and software to education. Microsoft will inflate the cost of purchasing and distributing the systems as well as inflating the cost of the software to

spend substantially less than proposed. They should be charged with purchasing the hardware and having Linux & Staroffice installed on those systems. This will allow for more children to be helped and will not let them more securely put the strangle hold on the kids and the school systems.

I have been working with computers for over 20 years and I am more disgusted and disappointed with each release of Microsoft's products. I look forward to the maturing of Linux to truly give some competition to Microsoft so that they start designing their products better versus buying out there competitors or bullying the competitors out of business.

I also work in the school system as a technology person and dislike being "forced" to purchase upgrades. It is wrong!

This is just my opinion but it is shared by many of my coworkers as well as people I know in and around the industry.

Thanx for your time.

Subject: Changes In Microsoft Policies Over The Past 30-Days Render Settlement Harmless

TO: Renata Hesse, Trial Attorney, Antitrust Division, U.S. Department of Justice, 601 D Street, NW, Suite 1200, Washington, DC 20530

RE: Microsoft Settlement, getting the big picture.

While I have major concerns regarding (and do not support the signing of) the settlement agreement with Microsoft, I wish to point out several new issues that relate not only to the settlement, but to new activities on the part of Microsoft that leave the settlement quite short in resolving today's and tomorrow's Information Technologies relating to Microsoft.

1) Microsoft has changed part of its business model by modifying how SOME Microsoft applications (not middleware, but applications) work with one another. A perfect example is that in EVERY previous version of Microsoft Word since the creation of Outlook Express (OE) was able to integrate seamlessly with the shared OE/Windows address book. Now however, this integration has been removed from all new applications

(post Office 2000). Thus, if you upgrade now, you are FORCED to also upgrade your Email & Address Management from the free Outlook Express to the full blown Microsoft Outlook 2002 product. This fact alone translates to the following:

a) Consumers upgrading to the latest versions of Microsoft Application software are promised enhanced functionality, but instead receive REDUCED functionality and interoperability with freeware applications (which are still being support, updated, and released by Microsoft).

b) Consumers are not told of the reduced functionality. In fact, Microsoft has hidden this issue even from OEMs and dealers.

c) Consumers upgrading Word or any other application that previously had integration with OE or the Microsoft Middleware "Windows Address Book" will no longer have this interoperable functionality and the wording of the EULA and OEM agreements moves all liability issues from reduced functionality to dealers or the entity deploying the upgrade, leaving Microsoft "held harmless" from liability and forcing consumers from a "Free" solution to a "Purchased Licensed Required" scenario. This represents an unfixable liability to dealers and also potential creates non-rectifiable liabilities for anyone deploying any updates of Microsoft Application software.

d) This integrated functionality has existed since the creation of Outlook Express, yet Microsoft is now reluctantly stating that the removal of these features "Is not a bug, but rather an interoperability feature removed by Microsoft at their own discretion.

e) This move represents a monopolistic campaign and marketing strategy in that:

i. Outlook Express was created to compete as freeware against Netscape Messenger. Now that this threat to Microsoft has been removed, it is no longer necessary to "Give a product away (OE) when Microsoft can force consumers to purchase it (Outlook)"

ii. There is no liability to Microsoft from enacting this change.

iii. This move has the potential of creating over a billion dollars in new Outlook 2002 revenues for Microsoft this year, as consumers have no viable alternative for performing these basic tasks.

iv. Microsoft has also removed this functionality from "Suite" products including Microsoft Works, again, forcing consumers to purchase a second product when the suite previously delivered this functionality.

v. This represents the perfect example of how the Operating Systems (which includes the "Address Book" application) development is being controlled and influenced by the Applications division. Removing functionality is the first step (in what will be many) of forcing consumers to purchase multiple products to deliver the same functionality that was previously available for free.

2) Microsoft's latest Operating System includes many new freeware applications that will follow this same model which is:

a) Release a freeware product (which may have cost hundreds of millions of dollars to create) to eliminate non-freeware competitor application software.

b) Consume market share through delivering these applications via Operating System releases. (As is the case with Media Player, Outlook Express, Internet Explorer, Messenger, etc.)

c) Create Application smart tags which utilize security protocols thus preventing competitors from delivering this same functionality due to Microsoft's settlement agreement which would allow them to keep this information proprietary as "Application Software Functionality" and NOT middleware or API functionality.

d) Wherever possible, once the market has been saturated, remove application integration features so that they only work with software that must be purchased (as they have just done with Word/OE)

In this regard, Microsoft eliminates "Middleware" and instead leverages "Application Integration" features which are exempt from the settlement agreement.

The bottom line is that they are making a shambles out of the entire case by moving OEM relationships and Middleware issues to the forefront. Behind closed doors, Microsoft is instead redefining middleware by more tightly integrating applications and proprietary cross-application functionality. At this point, the concern should not be how these changes affect OTHER software manufacturers, (which is serious enough on its own) but rather how the settlement affects how Microsoft will integrate application functionality with previously delivered Operating System to Applications features. This now evident threat extends to all Microsoft applications including those delivered in its newest Operating Systems including:

- a) Outlook Express
- b) Internet Explorer
- c) Media Player
- d) Messenger
- e) Remote Assistance
- f) Disk Defragmenter
- Internet Connection Sharing
- h) Internet Connection Firewall
- i) Windows Address Book (Delivered with Windows XP, but now not functional with other Windows Based Application Software beyond Outlook Express)
- j) Remote Desktop
- k) Internet Information Service (IIS)

The fact remains that each listing above is application software by definition, yet Microsoft has somehow been able to disguise them as part of the Operating System. As time progresses, Microsoft will now continue to further evolve fee based application software to replace these "Free" applications while in each new release and update they have and will continue to slowly remove integrated functionality in favor of forcing the consumer to purchase a retail equivalent by completing the steps outlined in Sections 2a through 2d. This is no longer a theory of motive operandi but rather one that had been successfully practiced by Microsoft in the past 30 days.

What this means, is that eventually you will see full-retail application versions of EACH AND EVERY application mentioned above and that ONLY by purchasing these products will you obtain the same functionality that you had previously. In

other words, upgrading means losing functionality of your previously licensed applications

I additionally have several other examples of newly discovered reduced functionality that not only concern me as a dealer, but also as a Computer Manufacturer. Unfortunately, I have had no success in resolving these issues with Microsoft as they are now stating officially that these problems are not bugs (which would be the assumption when you lose a feature that you previously had) but rather "Changes in the company policies regarding integration with freeware". As the settlement agreement NEVER mentions how Microsoft will deal with Microsoft integrations of Microsoft Applications, they are therefore left with a big fat loophole in the settlement agreement which gives them license to create freeware to eliminate application software competition, then saturate the market via Operating System deployments and then remove the functionality of this freeware once market dominance has been achieved. A conscious M-O-N-O-P-O-L-Y!

My primary concern at this point is the liability of my company when performing updates. It is conceivable that I will be liable to purchase Outlook 2002 for every customer that had Only Microsoft Word or any office suite that does not include Outlook 2002 on the grounds that if I remove functionality by implementing the update, I can be held directly liable to the consumer. Thus, this move places my company at high risk of law suits from both Consumers here in New Hampshire as well as our clients in other states throughout the United States. Furthermore, the official line from Microsoft is that there is no remedy of liability from reduced functionality between consumers and Microsoft, but rather we alone (those deploying updates) are liable for any impacts to consumers. In other words, Sue your dealer, not Microsoft. As Microsoft actively promoted this functionality through intense marketing campaigns (including information that you can still view on their website), this is furthermore a blatant example of "Bait and Switch". In summary, this model gives Microsoft the ability to develop any application software they want (at any cost to the company), give it away until the competition for that product is eliminated and then change the configuration of how that application is used to force the consumer to then purchase the product.

Should you have any questions, comments or wish to discuss these dramatic new changes in Microsoft development practices and marketing strategies, please contact me at your earliest convenience.

Subject: settlement

Of the settlement intricacies I couldn't speak. But if most of what I read in the rags is correct, I believe Microsoft is very happily celebrating in their hallways about the new inroads they will be making in the schools, where Apple has had a stronghold. I hope the settlement will be revisited and their "donations" to the schools will be required to take monetary form instead of software from them. Thanks.

Subject: Antitrust Settlement...

Dir Sirs,
As a hard-working American taxpayer that fully supports your efforts to combat terrorism, I must say that I am dismayed by the "slap on the wrist" action seemingly being handed down to Microsoft for, in my opinion, one of the most grievous monopoly abuses in United States history. I feel that if Microsoft is allowed to maintain its dominate market position and extend its market domination into even more of the new markets that are just now blossoming in this information age, the results will be catastrophic. If Microsoft is indeed allowed to keep its monopoly control over the desktop PC market, and stifle its competition, then Microsoft is no longer in competition in the IT market, and hence, its source code for the Windows operating system should be made public domain. If Linux platforms like RedHat and SUSE can make a profit while releasing their source, microsoft should be able to as well. In any event, OEM distributors of the various Windows platforms should have as much freedom as possible in being able to modify/change the operating system to better tailor the operating systems to their PCs.

I have faith that you really will take the consumer into account instead of paying lip service to US (the US people). If Microsoft gets a slap on the wrist then it will become self-evident that this is no longer the land of the free and the home of the brave, but the land of the greed and the home of the slave. I pray to the Lord you at the DOJ do what is right for the people, instead of being a whore for the corporate special interests.

Subject: Microsoft Antitrust Case

Quite frankly the "deal" that was cut simply will not take care of the problem. What's thousands, millions, or billions of dollars in software when they're the publishers of said software? The answer is the cost of the media, training, and the hardware. Does the government actually believe that Microsoft will provide the training and the hardware? The media is easy, simply copy some CDs, throw them in boxes and ship. Hardware, a little more difficult, but still an obtainable goal. The training? Forget it. Not one school will have any trainers knocking on their door. Any money given to the schools for training will be spent in other much needed areas I'm sure.

Did the government think that Microsoft would find a hardware manufacturer that wouldn't give them an excellent break of the cost of the hardware? I don't know of a manufacturer that wouldn't be willing to provide that equipment for pennies and their first born. My niece's school district uses Gateway computers. If you ask her what kind of computer she wants for home, her answer (surprise, surprise) is Gateway. What a wonderful marketing opportunity for the hardware manufacturer. If I made computers I would love to be the recipient of that contract.

Likewise for Microsoft, who stands to lose nothing and gain everything from this "deal." By "donating" the software to the schools they're ensuring that the next generation of computer users will (again surprise, surprise) choose Microsoft products when asked. They're insuring their product line into the next generation.

At the beginning of my IT career I was a Microsoft supporter. As time has passed, however I've become more and more reluctant to choose Microsoft products. If you choose one product, you're forced into using at least three others that are required to make the first product function correctly. With their recent release of Windows XP and their Passport service it is clearly evident that they have no intention of changing their predatory ways. Back in the 80's everyone had a chance, little guys and big companies alike. With today's tech landscape only the big companies can make it. The largest of the big companies is easy to identify—Microsoft.

The only solution is for a break up—unpalatable as it may be for the economy and for the growing number of Microsoft only IT shops around the world.

Subject: Microsoft Settlement

I object in the strongest possible terms to the proposed settlement, for several reasons, primarily:

1. No punishment has been imposed on Microsoft for its behavior in the past, nor any damages assessed for the harm to the public good effected by those actions. The settlement appears to be instead directed at controlling future Microsoft behavior, and appears to ignore the past.

2. The settlement does not appear to provide for penalties in the case that Microsoft is found to continue its illegal behavior.

3. The settlement expires, and there is apparently no provision for any restrictions on Microsoft's behavior beyond the next five years. These are critical defects, as Microsoft has demonstrated by its actions in the past. Microsoft has no motivation to restrict its behavior if the government never imposes any penalties, as was clearly demonstrated by the 1995 consent decree and Microsoft's subsequent actions. If we as a government only ever say to transgressors "You have broken the law, don't do it again," without imposing penalties, why would we expect anyone to follow the law?

I have also read that Microsoft is offering to give away equipment to schools as part of its "penalty". This action will only increase Microsoft's monopoly in the PC desktop operating system market. I suggest that if this to be a true remedy, that Microsoft be required to give equipment to schools that do *not* run Microsoft Windows, such as Apple or Sun computers.

Thank you for your consideration of this point of view.

From: James B. Czebotar

To: Microsoft ATR

Date: 12/5/01 5:48pm

Subject: Micro\$oft \$ettlement

Greetings.

My name is James Czebotar. I work for Washington State University as a Computer Support Analyst. I have worked in the field of computers my entire adult life. I feel it is my duty as a citizen to express my opinions and experiences regarding Microsoft and its operation as in illegal monopoly as already ruled.

I have witnessed Microsoft's monopolistic tentacles first hand. When I started working on WSU's campus, Netscape was the most

common browser. Other than the obvious practice of bundling Internet Explorer with Windows 9x/NT, other more subtle methods of forcing IE upon my department sprang up.

Among them: Requiring IE to install other MS related products. For example, if you want to install Microsoft's IntelliMouse software 4.01, mouse drivers for MS's Mouse, you must install IE first. Why is IE necessary for mouse drivers?

Other departments are adopting proprietary IE only systems. Professors are creating IE only web sites, requiring IE to be used by their students. Some of those Profs and Departments benefit from MS grants. A cozy arrangement.

WSU's Administration Departments are developing and using systems which require IE/Outlook to function. For example, they send out budget information to our department in an MS Outlook Encrypted format, as well as forcing us to use IE to use their online web based functions. I have held out for years, giving IE only to the select few who can demonstrate a need for it. IE and Outlook are notorious for their security flaws, the main reason I try to keep my department away from them. However I couldn't fight the tied forever, and this year I have little choice but to implement IE on all 500+ of our computers. A fellow employee put it quite well as I was updating his machine: "Now that I have IE, why do I need Netscape?" Most of our employees have IE at home, being that their computers came with it. They have been conditioned like Pavlov's Dog.

I can only speculate as to the financial arrangements between WSU and MS. In a proper competitive setting, WSU should be buying software and adopting standards based on common capitalistic parameters, such as prices, quality, support, etc. In reality, it appears as if MS has its tentacles around WSU, giving out ca\$h and \$oftware in order to secure a foothold of MS products on campus.

I am disappointed that the new administration has backed off and wants to settle with Microsoft. However I am not surprised. Anyone who monitors politics is fully aware of the reality of the dominance of special interests and their control over the system. My voice in this matter is so small it is almost silent, but I feel I must speak out nonetheless. For if I don't, I have no one to blame but myself when we must all follow them whims of MicrosoftAOLTimeWarnerGeneralElectricSonyExxonWalMartGMFordATTVerizon Thank you for your time, and your consideration of my comments.

We would like to express our strong support for the current settlement of the antitrust case against Microsoft. We believe that the country and its economy benefits from having Microsoft as a strong, innovative competitor in the free market.

In addition consumers have traditionally experienced lower prices for software when Microsoft competes in a market. For evidence of this, one need look no further than the fact that web browsers are now free to consumers based solely on Microsoft's presence in that arena.

Subject: Apparently the DOJ is owned by Microsoft also

This is a reaction piece so I will limit myself.

Apparently the DOJ is owned by Microsoft also. Lucky for the DOJ that we have a fresh

new war for us to watch on CNN and public opinion is far removed from the issue.

Ask anyone else in the software industry that tries to make a living (life, liberty and the pursuit of happiness...remember?) writing and selling software in a fair and competitive way, ask whether this is a good deal?...you will here, "no its not."

The settlement is lacking in many ways, but creates a lot of nice loopholes that creative lawyers can exploit. Look, its obvious the DOJ is protecting Microsoft with this compromise. Protecting the very company they were trying to punish, nice one.

The solutions that any software company, and vender, would have Microsoft undertake I guess would take down the economy? Cause a unfavorable market? Cause Microsoft to issue licensing audits on every public office desk in America? BS. Look what's happened, the market is falling apart anyway, many (once) competitive companies are struggling. The DOJ is to late, so they will not even try to make a difference. Its like showing up to a car wreck and not even trying to help because you think the driver will die anyway (that's unlawful).

Principle. The Constitution, must be redefined in a way that benefits people not a select group of persons, all the time. I understand that there are laws on the books that are supposed to stop monopolies from forming and then punish companies that contribute;....but to bring a monopoly, Microsoft, to trial, get scared, and then protect them? Sorry, thats the image out here.

Image is everything right? Well the DOJ is looking real good now. Welcome to the dark side of the force (Star Wars reference). I guess you all got new XP laptops and neat stuff...good for you. Thank you for doing your jobs. I guess in America I'm free to do what I'm told, and I should just be thankful for that, right? Right.

People are stronger than any government that rules them. The industry will do what the DOJ failed to do. And, again, the DOJ image becomes more tarnished, less visible, darker and darker until it ends with a big blue screen of death. You could reboot, but that may piss-off Microsoft. Better call support first and ask them if its ok.

MTC-00002745

To: Microsoft ATR
Date: 12/5/01 8:23pm
Subject: Microsoft Settlement

How is this justice to the consumer and the market. Sure you say you are making Microsoft give away around \$1 billion in software and hardware. The software costs pennies to produce, their biggest outlay would be the cost of the hardware. Plus, in giving it to schools, they just increased their marketshare and psychological hold on the world as the #1 operating system.

You would, by fiat, push all other competitors out of the education system for at least one year. And as close to the breaking point as some companies run, this would probably break many of them, leaving even less competition for Microsoft.

Why not have them donate the money to the schools directly, by getting a list from the

Education department or somewhere. Then let the schools decide on how best to spend it. Your case was for the cause of consumers to have choice, let the schools have the same choice you were fighting for us to have.

To: GENERAL@ksag.org
Subject: Microsoft antitrust case: the open source community's interests

Dear Attorney General Stovall:
I understand that you, along with several other state AGs, plan to continue litigating the Microsoft antitrust case rather than agree to the U.S. DOJ's proposed settlement. Good for you!

Much of the existing record in this case has dealt with the effects of Microsoft's behavior on competing commercial software vendors. That needs no further discussion here. I'd like to draw your attention to some important remedies that would benefit open source software users and developers, and by extension, computer users in general. My interest derives from being a long-time GNU/Linux user and advocate, and a stockholder in Red Hat, Inc. Because the open source software community isn't a business or even an organization, I can't claim to "represent" anyone other than myself in any legal sense. In a statistical sense, I believe I'm a fairly typical member of the loose-knit open source community.

There appears to be a widespread consensus that a monopoly in operating systems is harmful to the public interest in many ways; I doubt that I need to present arguments to convince you of that. I suggest to you that Microsoft's OS monopoly has already been broken, and that its dominance of business desktop applications is rapidly coming under serious challenge. Knowledgeable businesses and consumers have several practical alternatives today. It's important to the public interest that this become more widely known, and that these choices remain readily available. Microsoft is doing everything possible to regain a de facto monopoly in desktop operating systems and essential applications. Several specific remedies should be imposed to prevent Microsoft from depriving users of a choice.

PROPOSED REMEDIES

1. Microsoft should be prohibited from using contract terms or any other tactics to collect license fees from computer vendors for any machine on which Microsoft software is not installed. The practice of collecting a fee for every machine a vendor ships is the infamous "Microsoft Tax". Its practical effect is to economically exclude large computer vendors who offer Microsoft preloads from also serving markets that don't use Microsoft products.

2. Microsoft should be prohibited from using licensing terms or technical measures to prevent or discourage computer vendors from installing other operating systems alongside Microsoft software, on the same computer. We call those "dual-boot" systems; only users who do their own OS installations have them now.

3. It's crucially important that Microsoft be required to document and publish the standards for the file formats its applications use. It's not enough to document and publish only the application programming interfaces (APIs); those benefit only programmers who develop applications which run on Microsoft operating systems. Nor is it sufficient to break up Microsoft into an applications company and an OS company; Microsoft applications ported to other operating systems still wouldn't exchange files with independently written applications. File format documentation is necessary to create a level playing field, for as long as Microsoft applications continue to have a dominant market share.

4. For the same reason, Microsoft should be required to publish and strictly adhere to formal standards for its network protocols; applications and servers running on non-Microsoft operating systems need these to interact with machines running Microsoft systems.

DISCUSSION

Microsoft has gone to great lengths to convince the world that a monopoly in desktop operating systems is either natural, or irresistible, or a necessary standard. In fact, none of those propositions is true.

It's much more natural that the operating system, the common infrastructure which serves application software, be open to any interested party to improve and extend. During the last 10 years, open source software has advanced at a rate that no commercial vendor could possibly have the resources to match, even if they wanted to serve the best interests of the users—which Microsoft clearly doesn't. Today, most new advances are tried out first on open source systems, because they're accessible for experiment; as a result, they're rapidly taking the technical lead over even the best of the commercial Unix variants.

The user base of open source operating systems and servers is expanding rapidly. They're already running large segments of the Internet's infrastructure, they're moving into embedded systems on a large scale, and they've begun to penetrate the business desktop, especially in the Third World. To a software professional, a "standard" is a thick document that prescribes the behavior of some interface or protocol in precise and excruciating detail. The purpose of a

standard is to achieve absolute certainty that any two independent designs that are in compliance with the same standard will work together without problems. By policy, Microsoft is the implacable enemy of all standards, because standards are a powerful weapon against monopolism. Microsoft conceals, obfuscates, and complicates the interfaces to its own programs. They violate pre-existing standards to cause incompatibilities, then try to convince users that their nonstandard implementation is the "standard". Open source systems, on the other hand, typically make every effort to comply with published standards, and the resulting source code is open for anyone to audit and correct.

Abolition of the Microsoft tax presupposes another widely discussed remedy; requiring Microsoft to treat all customers the same, according to published price lists and terms. Without that constraint, the company could manipulate pricing to place selected computer vendors at a disadvantage if they offer machines with non-Microsoft preloads, with dual-boot preloads, or without software.

I think this is a critical moment. Decisions made now may have powerful effects; very different futures are possible, depending on what happens next. Microsoft's dominant position is becoming rather precarious. Its long-term survival is in doubt. A number of pressures are combining to degrade its revenue potential while its costs remain high. Unlike many a company with a dark future, Microsoft's massive financial reserves give it the time and means to try many things simultaneously in an effort to regain a secure stream of large-scale revenue. In this effort, the company is becoming more aggressive and manipulative toward its users and competitors than ever before. Some of its legislative initiatives may have destructive effects on the society as a whole.

Microsoft's most basic problem is market saturation. In the developed world, nearly everybody who needs a computer has one. Most of them run Microsoft OS and application software, so there's no place for the market share to grow. The total market itself is shrinking; while the software on many of these machines is hardly satisfactory, it works just well enough so that the pain of continuing to use it doesn't justify the effort and expense of immediate upgrades—and anyway, the customers have gotten wise to Microsoft's game, and understand quite well that the next upgrade isn't going to fix their problems without introducing new ones. So the forced-upgrade cycle is no longer a reliable cash cow. I've seen assertions that if employee stock options are accounted for, the company is losing money.

The twin phenomena of open-source and free software are hitting Microsoft's revenues from another direction. Microsoft can't match either the quality or the cost-of-ownership of these products of user-directed cooperative development. Microsoft was able to buy or destroy most of its commercial competitors, but this new source of software can't be owned and doesn't need revenue. Several industrial-strength operating systems (FreeBSD, OpenBSD, Linux) are solid and hard at work, with thousands of volunteers

extending their capabilities and fixing bugs as fast as they're discovered. Multiple application suites (Star Office, K Office, Abi Word) are rapidly approaching maturity, and are already being put into everyday service in markets that can't afford the cost of Microsoft user licenses. In this environment, Microsoft no longer has the luxury of holding back bug fixes and new capabilities to use as leverage for the continuing upgrade cycle. A rapidly maturing mix of open-source and free software is moving into the server and embedded-systems markets that Microsoft was never able to penetrate on any large scale, cutting off Microsoft's planned directions of expansion. Microsoft is now contained on the desktop and some business servers, and the prerequisites to erode its market share there are falling into place.

The antitrust suit has hurt Microsoft mainly by distracting its management's attention while these other changes were taking place. It's too late for litigation to help the business competitors that Microsoft stifled, other than by monetary damages to their creditors and stockholders. However, the settlement could make an important difference to the public interest, by blocking both overt and subtle maneuvers to re-impose its vanished monopoly.

The company's strategy appears to center on getting users to accept one more upgrade cycle, by finally offering software of reasonable quality, and poisoning it with traps that ensure revenue into the indefinite future. Measures such as time-limited licensing, back doors that allow remote disabling, shipping systems without installation media, bugging the software against transfer to a newer computer, and patented file formats that forbid reverse engineering are examples of techniques to dominate and exploit the end user. Once a user makes the mistake of putting his data into a Microsoft file format, he has to pay ransom to Microsoft forever to retain access to that data.

To fight off the defection of end users and computer manufacturers in the meantime, Microsoft can use restrictive licensing terms, secret agreements, propaganda, legislation to interfere with free participation in software and hardware design, and possibly support for unrelated litigation to drain the working capital of companies involved with open-source software. In the legislative arena it may find allies in the record and movie industries, themselves famous for shady and aggressive dealings. Senator Fritz Hollings recently introduced legislation that would have the practical effect of making computer programming and engineering by private citizens illegal; this seems to have been stopped for the moment.

If Microsoft isn't allowed to block major computer manufacturers from offering open source preloads, there's a good chance the defection from proprietary software will become unstoppable in the next year or two. Personally, I look forward to a world without Microsoft. I think it's possible.

Subject: What Happened to the Microsoft Anti-Trust Case?

As a taxpaying American citizen and a member of the high tech workforce, and a software executive, I have to voice my outrage at the DOJ's treatment of the Microsoft case.

Microsoft has been convicted of tied product sales. They have been convicted of illegally blocking competitors from unbundling products, and of preventing legitimate software competitors from building products on Windows that compete with Microsoft products. They even lied at the trial. I was an executive at Sybase during our contact negotiations, and we actually developed the original code for SQL Server which Microsoft now sells as part of Windows 2000/XP. Microsoft badgered us, bullied us, and used terrorist tactics which eventually forced our CEO to license source code to them.

They have done this to all vendors of word processing software, of presentation software, of email software, browsers, and now, with Windows XP, they will eliminate remaining software providers of streaming media software, MP3 players, and other windows accessories. There is no business model which can compete with "give it away with the operating system." Clearly they are a monopoly and continue to use that monopoly to kill off other markets peripheral to their core market (operating software).

I worked at IBM in the 1980s when IBM was broken up from tying its services with its hardware and software. It made IBM a better company and it made the mainframe industry a cleaner, more profitable industry for everyone. It allowed many companies to grow and flourish (I would venture to say that Oracle would not exist if IBM had been allowed to give away DB2 for free).

What is the harm to consumers of this monopoly? Plenty.

First, innovation on PC software has nearly halted. There are no more software companies left building desktop productivity applications (except maybe Adobe and Macromedia). There are no more options for email software, word-processing, presentations, etc. Lotus is gone, WordPerfect is gone, they're all gone. We have no choice. Second, prices for software are going through the roof. With Windows XP Microsoft has now taken the gloves off. Clearly they now believe that the competition for desktop software is gone, so they can price however they want. A copy of Office for Windows XP now costs nearly \$500-600 list price. This is nearly the cost of an entire mid-range PC.

The Office XP Division at Microsoft is generating billions of dollars of revenue with margins well over 80%.

Consumers and businesses are getting gouged, and there is no alternative. Third, there is no possibility of high quality support for these products. I have to agree with Jeremy (his article just appeared in the Wall Street Journal online). I have had numerous problems with just PowerPoint XP. Microsoft has no fixes for these problems, nor is there an incentive for them to fix them. What other presentation software can I use? There are no vendors left. Fourth, innovation has halted. The newest versions of Outlook, Word, Powerpoint, and Excel have added no significant exciting new functionality. They have added complexity and primarily more and more links to Microsoft web properties—forcing consumers to go to Microsoft.com for updates, releases, plugins, etc.

I am not a lawyer, but I am a business person. I know what happens when you think you can get away with being a monopoly. You deliberately tie in products, you deliberately lose money on new products to make it up on monopoly products. You deliberately mislead competitors. You deliberately steal ideas from small underfunded competitors. None of this has stopped at Microsoft—they continue unchecked. And when I heard that they were given the OPPORTUNITY to donate \$1B of equipment to schools, I knew “they got away with it AGAIN.” Now the US Government is giving the Microsoft Monopoly the ability to start their monopoly games at the age of 6.

What is going on at the DOJ? Are you afraid of hurting the economy? I promise you that if Microsoft was split into two independent companies—the Microsoft Windows Company, and the Microsoft Applications Company—both would flourish and prosper. Innovation would start again. New companies would form. New software would be developed. The PC, which is becoming one of the most important appliances of our lives, would be given a new life.

As it is, look at the software industry today. There are only a handful of companies making money any more, and the rest are gone. Our international competitiveness in software will over time be overcome by countries that prevent Microsoft from exerting influence. I believe the writing is on the wall—India, Russia, and the far east will become bigger software providers over time than the US with the exception of Microsoft.

What recourse do I have as a consumer, a member of this industry, and as a tax paying citizen, to tell the DOJ to work harder. Fight these guys. They are NOT acting in the public interest. They are NOT acting in the consumers' interest. They are NOT acting in the interest of the industry. They see a world where Microsoft logos appear on every appliance, every desktop, every cell phone, and every web site. Their vision is clear and it is all built upon the Windows monopoly money machine. I would be happy to travel to Washington to testify or give additional insights to the team ... but it appears that the DOJ has already given up!

Subject: Microsoft vs USA
To the U.S. Antitrust Division,
Take a real good look around you, what do you see ???

Monopoly after Monopoly, Hardly any competition.

A BIG RECESSION

This settlement is NOT in the best interest of the people. YOU can change it to be much better than what it is. IF you don't, we will continue to see lay-off after lay-off. We will continue to see Microsoft stifle competition. We will continue to have very few choices. Microsoft is TOO BIG to ignore.

It continues to get it's fingers and roots into everything. Can't you see that ??? If you can't you must be blind. It is so obvious, even my 3yr old can tell. So, Make the right choice.....Give the people a better solution. And do something right for America. You do love this country....don't you ????

Subject: Microsoft Settlement
Dear Sirs,

I am a computer literate individual who has utilized computers and software for 30 years, from the era of punch-card to laptops, to pc-phones. I continue to be amazed at all the excellent products that arise and then get bullied into sale or oblivion by Microsoft. Microsoft has always been a follower, a stifler, a “not-invented-here” enveloper (not developer) of products. I utilize and like many microsoft products, but many others as well, and consistently find the “bent” within microsoft products to exclude competition, either subtly or overtly.

I am incredulous at the appeasement made by the DOJ on the lawsuit. Please reconsider.... the situation is moving in the direction of loss of choice and continued worsening of product. It is akin to having one's choice of cars limited to what Chevrolet has to offer, or to years ago with ATT, where they were the only phone service and equipment provider in town. To develop competition, to foster world-wide growth, and to enable opportunities for the industry world-wide, choice is needed. This requires openness in standards and arms-length relationships between applications and operating systems. A clear example is the VHS tape, we can have “standardization” that supports growth without having to buy the player only from Sony (Beta). How many more blatant examples are needed (attempts to use its own standards for media files, corruption and avoidance of JAVA, etc.) to

prove it explicitly wants only its own solutions forced on the public, and that with its current mass and momentum, can effectively make it happen?

Dear Attorney General,

I am writing about the anti-trust case against Microsoft. I am writing to say I think they should be held responsible for their many documented illegal and/or unethical actions in a much more effective way than current information indicates is the case.

It is clear to those who know the field, that while professing to be technology leaders, Microsoft has stifled the development of software technology by their practices. Their actions against IBM's OS/2 operating system is one prime example.

That they should get away with what they have done with nothing more than the currently reported slap on the wrist is nothing less than a travesty that you would do well to act against. I strongly suggest further pressing the matter against them with vigor.

Subject: taking our lives in small chunks

Hi

MS, from it's dominant position, has damaged me, you, and we all. All those “hung computer” problems, and many other related problems, should not exist. Windows should work “as advertised”, which means flawlessly. All other operating systems do so.

The Windows failures and hangs infringe a small damage everyday to all of us. See an example: if somebody takes other's guy life he is sent to jail. MS's low quality operating systems are taking, globally, much more than one life. They are taking a few minutes from everybody's life to make a gross total equivalent to an important genocide.

Something comparable with the september 11 casualties, per month (I'm not doing the arithmetic, but it might well be even more).

As a monopolic supplier, MS doesn't feel pressed to fix the problems. If DOJ doesn't, who might help us now?

Subject: Antitrust Settlement

I find it amazing how much Microsoft is being allowed to get away with. It has become obvious that their money can get them anything they want. The settlement is a cover that does nothing but push Microsoft's software even further down the throats of the people of this country. It was found as fact that Microsoft has formed an illegal monopoly regardless of how the Judge acted. Yet Microsoft has found a way to wriggle their way out of it.

Let's stop helping the large companies and do what is right for the people of this country and just do the right thing. DO NOT allow Microsoft to once again get away with their illegal business practices.

Thank you

Chris Hammond

Subject: Hi, this is from a link on the RedHat site (www.redhat.com)

Hi there,

According to the RedHat site, the Justice Department is collecting opinions via email about the antitrust settlement, but, whilst this disclaimer is that I am a Linux user and pretty much use that OS exclusively.

My belief is that Microsoft are guilty of suppressing competition, but, whilst this does not excuse them, any multi-national company would do that in a heart-beat, if they felt they could get away with it. That said, I believe the settlement is a win for Microsoft. If I were Bill Gates, with \$36 billion in cash, XP and Xbox just released, I'd find it pretty difficult to think things went badly in the settlement and for Microsoft.

Microsoft offer their \$1.x Billion for schools and even that has them using the situation for a multi-million dollar write-off. The worst aspect of the settlement is that if this is as bad as it gets for Microsoft then what do the Justice Department do next? Its over for you guys, but you guys were right! Microsoft walk away and just get smarter next time. Hey, they caught up with the Internet (finally) and now have *easy* global reach. They achieved what they needed to do and if it cost them a couple of billion dollars, well, that was just an R&D project for them.

What is the current expected return on \$36 billion? \$3 billion \geq \$4 billion dollars a *year*? They won and don't believe Bill Gates doesn't think it too. He's laughing all the way to the bank. This is the only time you'll get an offer like this out of Microsoft and they are low-balling so much, its embarrassing.

How much does the US government itself, across all its organizations pump into Microsoft each year? Not only did Microsoft win, we are *paying* them for that privilege too!

If all our government organizations switched to Open Source, you'd have more tax dollars to help the poor schools that Microsoft are claiming to want to do.

Not just one time, but forever!

Now *that's* what I'd call Justice!

Thanks for your time,

Regards

Stephen Ingram

The deal with Microsoft giving the option of giving out its "blue prints" and having two versions of Windows (with and without applications) is ridiculous. The only reason that the people want the "blue prints" is so that they can make a product based off windows (a cheap rip off I like to call it). Think if you had to release the "blue Prints" of Windows. The source code will get in the hands of a Anti-Microsoft "terrorist", and they will develop ways of hacking the code, to make it easier to run illegal software on the system. You don't see these people asking all the gaming companies to release thier game's source code. Why? because, if they did, there will be so much more copying of games then there is already. Microsoft may be a little over priced, but I will surely pay for it. I don't NEED windows, I just like how it operates

Subject: Settlement

Dear sir or madam,

I think the microsoft settlements seem to be nothing more than a slap on the wrist, if even that. I cannot believe that this latest settlement is giving them a way to extend their monopoly further, into schools. This is

absolutely absurd. Furthermore, it allows them to claim they are giving hundreds of millions of dollars away, when in reality software has almost zero marginal cost so it costs them next to nothing to give away software. I am really tired of the aggressive tactics that microsoft uses. I am sick of them leveraging their products to extend their monopoly further. It is unfair, and it stifles competition. I am not a competitor of microsoft, just a user who is sick of having products I don't want rammed down my throat, only because I need to run Windows to survive and be compatible with everyone else. I thought the DOJ was going to do something about this, and I am disgusted about how they now have dropped the ball on the case that they first had appeared to have won.

Thank you,

Rob Brown

Actually Bill, No, I Can't

By JEREMY WAGSTAFF

THE FAR EASTERN ECONOMIC REVIEW

As a new Entrepreneur in South East Asia (situated in both Singapore and Indonesia), my choices of OS is severely limited as I continue to choose machines for my business. It is very disappointing that the US gov had such a lenient and, in my opinion, useless outcome of the Microsoft antitrust case.

As Jeremy says, I am 'flabbergasted'. My choices of OS is really not mine. It is Microsoft's.

The US government's choice affects the world. I know it affects small start-ups like mine. There is no choice for OS's in the marketplace because other OS's like Linux and Solaris hardly supports applications like Quicken, Office, etc. Applications which are vital to our business.

As a pro-American business person, I am thoroughly disappointed.

Subject: Microsoft

I would like to express my feeling on the Microsoft case. As a computer professional for 25 years it apparent that Microsoft has a monopoly in the computer industry. As I see it the only real solution to the problem is to require Microsoft to publish the API (Application Program Interface) to windows and office that would allow other Operating system / program vendors (Sun, Linux, Apple, Corel etc) to support software written for Windows. Thais would allow other operating systems vendors to compete. It is also important that the Microsoft be forced to use the same API's as documented by themselves. If Microsoft feels the need to add an API. they could as long as the publish the standard at the time they write it. This would eliminate Microsoft's complaint that the DOJ is stifling innovation.

Subject: State attorney general demands

This is either an ego trip for the attorney generals or a cave to the business interests of the competitors.

This does nothing to aid consumers.

The market determines what products to use. Microsoft gives consumers what they want and that is why it has been so successful. Microsoft products never start out at the top but each revision gets better until their product is the one consumers want. They constantly improve their products where other company's stagnate such as Lotus 123 and Wordperfect which used to dominate their niches. Let the marketplace decide.

I am tired of Windows crashes and when someone produces a better system with applications I will drop windows. However my son says XP is very stable, so maybe I won't have to switch. Microsoft is evolving to a better system itself.

The DOJ is a toothless lion?

MTC-00002773

From: Coffin, Greg
To: 'microsoft.atr(a)usdoj.gov'
Date: 12/6/01 11:08am
Subject: Windows

I use Windows and am very computer savvy but I do believe there should be more competition allowed concerning Microsoft Windows. Below is an article I read today regarding tougher sanction imposed by states. It's clear to me Microsoft, being the dominant force it is, is leveraging itself in every market it can. I firmly believe that these new sanctions would be good for the computing industry.

*Offer PC makers a version of its dominant Windows XP operating system without its instant-messaging service, media player and browser. Critics say Microsoft's inclusion of the features boxes out rival offerings. Justice's settlement requires Microsoft to let PC makers remove access to the features, not the computer code itself. That, critics fear, could encourage programmers to develop applications tailored to those features rather than those of rivals because they would be in every copy of Windows. In addition, Microsoft offers discounts to PC makers whose machines boot up quickly. That could discourage PC makers from including non-Microsoft features that could slow boot times if Microsoft features aren't removed.

*Disclose Windows' code more thoroughly than is required by the settlement. Such disclosure would let rival products work well with Windows.

*Include Sun Microsystems' Java programming language in Windows XP. If applications such as games and word processing are written in Java, this provision theoretically could reduce Windows' dominance.

*Encourage Microsoft to customize its popular Office suite of applications to other

operating systems, such as Linux. Officials believe this could help those systems challenge Windows.

*Notify a special master before it obtains new technologies through acquisitions. Some state officials say Microsoft should be limited in its ability to use "ill-gotten gains" from its Windows monopoly to plow into new markets.

The states' filing is also expected to eliminate what officials consider loopholes in the settlement. For instance, it will likely include tighter restrictions to prevent Microsoft from retaliating against PC makers that ship non-Microsoft products. And the draft proposal asks for the appointment of a special master who could present evidence of violations to a judge. The settlement, by contrast, calls for an oversight committee that reports to Justice but cannot use its findings as evidence.

The proposal also specifies a less limited time horizon for the sanctions than the settlement's 5-year term, say people familiar with the matter. In June, an appeals court upheld a judge's ruling that Microsoft illegally protected its Windows monopoly but tossed out an order to break up Microsoft and ordered Kollar-Kotelly to devise new penalties. Some state prosecutors say the appeals court ruling called for much stricter sanctions than those included in the settlement. For example, the court criticized Microsoft for "commingling" the code of its browser in Windows to fortify its monopoly. And it said Microsoft sabotaged Java by deceiving developers into using a Windows-specific version of the software.

From: Andreas Meyer
To: Microsoft ATR
Date: 12/6/01 11:22am
Subject: Microsoft and school donations

To Whom it may concern:

As someone who is professionally tied to using and administering many computer systems, I find that my concern over the Microsoft monopoly agreement is growing rapidly.

My main concern is that new technology and software is currently easily stifled by Microsoft. This affects me and much of my industry, since it means that high-quality, secure software is harder to obtain. Unfortunately, Microsoft understands that most of the market will reward them more for low-quality, low security software. While there are companies that try to do better, they find that Microsoft is also doing all it can to prevent new companies from offering competing companies.

I don't suppose that the punishment of Microsoft will do much one way or the other to deter them. However, the idea that as punishment, they should offer software to schools is highly counter-productive. Why any punishment is linked to schools at all is pretty unclear to me. However, if they are to be fined by paying for school software, then it should not be Microsoft software. This is saying that as a punishment for abusing monopoly power, they must go out and

extend their monopoly. That is more than a bit perverse.

If the penalty must be linked to school programs, then Microsoft should pay one or more of their competitors to implement to school computer program.

Perhaps one could evenly distribute the money between Redhat, Sun Microsystems, and Apple to implement the school donation program.

Subject: Settlement

Hi,

I was just wanting to let you know that the proposed settlement by Microsoft will do nothing to actually alleviate the problems that they are causing in the computer industry. In fact, in all likelihood, the proposed settlement would increase the monopolistic power that Microsoft wields. I work for a government agency and wouldn't be impacted in the competitive sense one bit (Microsoft isn't too likely to put me out of business), but I am tired of Microsoft using their monopolistic power to barrel into other markets besides the OS market and eliminate the choices that I have as a consumer.

Thanks for your time,
Aaron Picton

Subject: So this is punishment?

Dear Sirs,

I cannot believe with the debut of Windows XP, that Microsoft has been punished at all. Just the opposite has occurred. Microsoft has succeeded in building a program that is even more filled with direct referrals to Microsoft products. I thought they were not supposed to be able to do that anymore.

It is a sad statement for Justice that Microsoft can go on unhindered in its goal of total domination of programs used for PC's. A sad day indeed.

Subject: Microsoft needs to be broken up

It is clear that Microsoft wields too much power in the market place. They need to be broken up. This settlement idea of giving software to kids in schools will not change the fact that Microsoft is a monopoly. In fact, it will only enhance it by getting the children trained only on Microsoft products from the time they are in school. Microsoft has engaged in many aggressive, anti-competitive business practices, and a change needs to be

made. There are many good ideas out there on actions that could be taken against them.
David Bennion.

Subject: Anti-Trust Case
Gentlepersons,

While I am not an attorney I do have an opinion on the anti-trust lawsuit settlement.

This sounds like a normal government debacle. The DOJ has gone after them and gone after them and then settles for nothing.

It is obvious to anyone that uses a computer that Microsoft produces lousy software.

I have operating systems that run on Intel platforms in which uptime is measured in months and years. Not in minutes.

Why does this matter? We always have a choice don't we? No. We don't have a choice. Because of Microsoft's predatory practices and the way they work hard at stifling any competition we no longer have a choice. If a product comes out that works better than theirs they can just bundle their buggy code into the OS and say it's new feature. It's free so people don't want to spend more to get something that really works and they put up with it. The competition then goes out of business due to lack of support. Remember Netscape?

You allow them to keep doing this to competitors and you get what we have now.

Are there alternatives? Yes. But because Microsoft has a fit everytime someone wants to develop software that runs on their OS and a competing OS they throw roadblocks up and start withholding little things that are needed for development.

Subject: Opinion: Consumer vs. Taxpayer
Consumer

I understand the allegations at hand in part focus on benefit/hurt to the consumer. In this category, as a consumer, I have been hurt by Microsoft's market monopoly. As a software purchasing decision-maker, this is my thought process:

I have a problem, which requires either software [x] or [y].

Either will accomplish the job.

[x] will allow me to use the results from [y].

[y] will not allow me to use the results from

[x], based on [x]'s corruption from an original agreed industry standard.

some people are already using [x].

I need to use all software results, so anyone can be my business partner.

I must buy [x].

I.E., I am bullied into buying [x]—Microsoft products—because of their corruption of industry standards.

Taxpayer

If Microsoft can't continue to sell lots of software, the company will be reduced in value.

If Microsoft is reduced in value, the markets will be hurt, negatively impact the

domestic economy, reduce corporate profits, and reduce the corporate contribution to the federal tax base.
I'll end up paying more taxes.

In the end

The only way I won't get hurt is if Microsoft actually changes it's products. If their products are designed in such a way that the products themselves do not use their market saturation to leverage future purchases, then they are no longer using their monopoly to prevent advances in the software industry.

Microsoft could continue to produce, but would be forced to meet the same standards as other companies.

They would have their products compete on an even footing with other software producers. Feel free to contact me if you like

Date: 12/6/01 11:41am
Subject: Settlement is pro-Microsoft

I think the last thing we need to do is assist in the growth of the monopolistic company by allowing them to donate their software to our poor schools. This would only enhance their position and strengthen their hold on the computer industry.

I am a user of Microsoft products, not by choice, but by requirement. As a network professional with more than 15 years experience, my preference would be to use a more open and less expensive architecture. I use both Linux and Windows in my daily life, however, I can't share documents with my clients and employees if I use my Linux system and software. This is solely because of the closed architecture of Microsoft products in that competitors can't create applications that will easily read files created in Word and Excel. As a reseller, I am appalled at the pricing structure of Microsoft products as well. The standard rules of mass production don't seem to apply to Microsoft. They sell the products by the millions and yet the pricing is outrageous. I don't believe developmental costs are as high as they claim, as the products that are released are far from stable. I encourage my clients to wait until the first service pack is release prior to installing the "latest and greatest".

Until other companies can be allowed to compete fairly in the market place, I think Microsoft will continue to grow. Any monopoly is bad for our economy and our citizens. Take the telephone and utility companies as examples. There is no quality of service from any of them here in Southern California. I have clients with problems that are told they need to wait 8 days for a resolution, as that's how long it takes to update the database!

They must be using Microsoft products.

Sincerely,

Darren F. Lenick

Date: 12/6/01 11:46am

Subject: settlement concerns

First, let me state that I earn my living based primarily on my Microsoft specific skills. As a Microsoft Certified System Engineer, my trade is primarily with their products.

With that being said, I fear that Microsoft is getting away with their Monopolistic practices with only a pretend slap on the wrist. In my career, I have seen many great programs, or potentially great programs disappear, or become useless because of direct conflict with Microsoft's whims. Allowing them to settle out of court without addressing their ability to further enforce their monopoly is wrong. We are all adults here, and I think we all honestly know that Microsoft will do what it thinks is necessary to protect their hold on the industry. In true humanistic fashion, if they think it is right for them, they will fail to acknowledge the wrongs it may impose on others.

Please carefully reconsider your objectives with this settlement. As an MCSE, I definitely don't want to jeopardize my future, but justice is not being served in this case.

thank you,

Bryan MacLeod

Subject: Antitrust settlement does nothing to correct the problem

It would appear that the DOJ has caved to political pressure or political payoffs (not sure which). The so-called "settlement" not only lets Microsoft "off the hook", but also provides an opportunity to infest our schools with inferior products. Our poor children will suffer even more than we have, trying to make computers work. Our kids will soon become afraid of computers, and students in every school where Microsoft products have been insinuated into the classroom will believe themselves to be stupid because they can't make poorly engineered software work. We're sacrificing our children's future so that one man can be filthy rich?

I don't think either the DOJ or the courts understand that the real issue is software quality and usability! Microsoft products are inferior, and Microsoft has used it's illegal business practices to prop up the sales of what are and always be inferior products. They don't know how to make them work correctly, so they threaten PC manufacturing companies to force the use of those inferior products. The Windows operating system lacks even the most basic features of what an operating system is supposed to be. It's not surprising since Gates never took a single OS class in college. I was required to take three separate Operating Systems courses before I was allowed to attain my Masters degree in Computer Engineering, and yet I still do not consider myself to be a systems programmer. Windows fails every test of an OS, and Microsoft Office fails even the most minimal Software Engineering principles.

To the lawyers at DOJ I pose this question: If a minimal high school graduate came into

your courtroom, without training, without the ability to find and quote legal references and precedents, and without even the slightest knowledge of "how things are done" in the legal profession, how would you react? In addition, the Judge in the case is being threatened with financial ruin, and is forced to tell you fully trained members of the bar to keep you collective mouths shut and to allow this untrained person to do anything they please in the courtroom, no matter how outlandish, to make a mockery of the legal system... do you begin to understand the problem? I take the damage done by Microsoft to the Software Engineering profession very seriously. And the damage done to the American software industry has set up back almost 20 years. We may never catch up with Europe since they continue to innovate in an environment where business practices are not used as a substitute for good engineering.

Microsoft has, without impunity, inflicted inferior computer science on an unsuspecting public. Why has it been so difficult to clearly state the most obvious point in this case? Microsoft software is bad, it's bad for users, it's bad for programmers, it's especially bad for new computer students, and it's bad for this country's future! I hear people blame hardware, blame users, blame the internet, blame everyone else, for the problems in the the usage of modern PCs, but any honest software developer will tell you the problem lies in the OS. We are losing ground to programmers around the world because our legal and political system is forcing us to use an inferior operating system. And this is being done because, obviously, the DOJ and courts are either afraid of Gates or have been paid off.

I'm sure there's no way to prove it, and the DOJ certainly won't try, but it's pretty obvious to all of us in America that you have been paid off. Meanwhile, good quality programmers in the USA are losing jobs and lives to people in Europe, India, even the far east because they are allowed to use a decent OS for their software development. what a

Subject: The Microsoft deal

To whom it may concern:

This is the deal Microsoft wants: Will give up to 1 billion dollars in free software to schools. The one billion dollars is calculating the street price of the software witch is much higher than it cost them to produce. Then most schools will train the students on windows based software witch will encourage them to buy it for home use too. It sounds to me as the best possible deal for Microsoft since it will start to expose kids to their products at a young age, gaining on the competition by light years.

Can't you see the picture here?. That is a very bad deal for competition, but the best for Microsoft. How many congressmen, senators, judges, and other government officials own Microsoft shares?. What will happen to does shares if Microsoft is penalized?

Do I need to say more?

To: 'microsoft.atr(a)usdoj.gov'
Date: 12/6/01 12:03pm
Subject: you're letting us down

I'm sorry to say that it appears that the DOJ is letting us down. We need you to act on the principles embodied in our laws and not let the letters of the law be twisted to mean something else. The DOJ has a ruling that Microsoft is guilty of monopolistic practices. Act on that. Perhaps you are listening to much to the noisy minority. Rest assured that the majority of our citizens will stand behind a soundly principled resolution and see through all resolutions that are based on shaky reasoning.

It is true that the public is probably uninformed of the issues and rulings with the reasoning behind each. Few really have the time to delve into all of the facts. But your department does and has. We, the people, have delegated that task to you. Please don't compromise that faith that has been entrusted to you.

I have heard it said that part of the settlement is for Microsoft to provide computers to needy and poor school systems. This idea has some good elements but also a dark side. I'm sure that Microsoft, aside from a little whining, readily accepted this proposal. They could see, as you should, that there is a tremendous eventual benefit for them. If in fact they have to be punished, to be punished in such a way that will reap future, perhaps staggering, benefits is very acceptable, eh? It's a little like punishing your child by forcing them to contribute to their savings account. They don't like that their working funds are cut but they also know that one day they will be able to cash in on what has been saved. A true punishment for the child, especially if they took that money from someone else, would be to have them pay back twice what they took.

So what will it be then, a savings account or a punishment?

Letter to Judge Colleen Kollar-Kotelly
From: Fred Gibbons <http://www.venture-concept.com/cv/resume.htm>
Founding CEO
Software Publishing Corporation
Your Honor

Simply stated, today the PC user has in no significant choice of operating system or productivity software such as word processor, presentation graphics, or spreadsheet. This lack of choice harms the consumer by inhibiting innovation. The findings of the courts show the Microsoft market share in these products approaches 90%.

This natural monopoly position occurs because customers and software developers benefit from a standard operating system. By

having one version of the operating system, originally PC DOS then Windows, the independent software community can develop it's programs only once instead of rewriting it for a panoply of slightly different operating systems unique to each personal computer. R&D money can be spent on new products not wasted on conversion. Because of the OS standard the computer "clone" industry emerged where the consumer could freely choose between dozens of personal computers knowing that all the new great application software is available and runs correctly.

Microsoft used it's financial strength coupled with aggressive engineering and marketing tactics, disclosed in the anti-trust hearings, to pursue it's strategy of dominance and control. Much attention is devoted to the "browser" monopoly but like Rosa Parks and the civil rights movement, it is a rallying point for a much larger protest. Consumers no longer have choice in these critical software products. In 1990 WordPerfect in word processing, Borland in spreadsheets, and Software Publishing in presentation graphics won the InfoWorld shoot-out for best of breed products in their category beating Microsoft in ease of use, speed and functionality. Today these products are heard only in whispers.

Competition can only return if there is equal and open access to Microsoft's operating system and applications. This requires Microsoft to unbundle and publish the specifications for the core modules of its operating system and applications such that other companies can compete with plug compatible products. There is precedent for this in the AT&T and IBM decisions where third party phones could connect to AT&T and third party disc drives could connect to IBM mainframes.

The argument against this is that Microsoft will loose control of the standard and all the above mentioned benefits of standardization will be lost to the consumer. Isn't it more likely that the invisible hand of the free market will be smart enough to protect what's good about a standard and innovate where it is not.

My best..FG

Subject: ANTITRUST

Pie Charts Hello, I would just like to share my opinion on this subject. Right now, most public schools teach on Apple computers (I feel these computers are worthless since most companies don't even use this garbage computer. The only thing Apple does right is look "pretty").

In order to fairly show students all OS's (Operating Systems). Some of you "political" types feel only Microsoft is what most corporations run. This is NOT TRUE. Most companies back end systems are Unix or linux based. In my company, Unix and Linux are the Main backend servers, with end users using windows. The education system is truly lacking in teaching computers. Having just one type of OS in schools is not a good idea. You should teach students every OS because each OS is better than the other in certain circumstances. I think you should give Red Hat a chance, and let the students and actual IT community decide what's best rather than some political person who doesn't have anyone's best interest except his own as he collects payoffs from whatever company pays the most for his/her vote.

From: Baffoni, Michael
To: Microsoft ATR
Date: 12/6/01 12:24pm
Subject: My views on the DOJ settlement proposal

I'm disappointed with the settlement reached by the Attorney General with Microsoft Corp. to resolve the charges of unfair business practices. The point of taking a legal action is to first and foremost ensure that any of the criminal activities found to have occurred do not occur in the future: The settlement does very little to ensure that this happens, and the enforcement is minimal and the loopholes to get around the restrictions are big enough to drive a truck through. Secondly, a legal action should ensure that those harmed by the criminal activity are in some (even small) way compensated for those criminal actions: Although the settlement certainly helps those who need it, it does nothing to help those harmed by the unfair business practices of Microsoft Corp, and the "help" that is offered serves more as a marketing expense than a penalty. Not only that, any software offered by Microsoft will show as an inflated amount: when the dollars are totalled to find out how much MS paid out, they will be reporting the list price of their software: However, the actual cost to MS's bottom line is merely the production costs of the

software—they aren't losing sales due to the software giveaway since these are machines the schools wouldn't have had with out the donations, and therefore wouldn't have purchased the MS software without it. Actually they could be making money because it will be a billion dollars (or rather some portion thereof) that they didn't need to add to their marketing budget, and gives them greater market penetration in an area they haven't traditionally overwhelmed.

Without going into details, I see almost nothing to deter Microsoft from its marketing practices which led to the monopoly. They have been successful at preserving almost all of what they wanted to allow them to continue in their ways.

I believe the settlement to be very inadequate.

MTC-00002801

From: Sidereal Designs, Inc.
To: Microsoft ATR
Date: 12/6/01 12:31pm
Subject: Comment on proposed anti-trust settlement

Dear Sirs:

As a professional web developer, I am not satisfied that the proposed settlement will in any way reduce the threat that Microsoft's practices continue to pose to my industry or to my own livelihood. Microsoft's continued de facto ownership of the desktop permits them to use technical decisions to adversely and unfairly impact the industry to their own benefit.

To take an example, Microsoft's failure to include Java in the XP/IE6 package eliminates with one stroke the millions of web sites which have developed Java-based applications, and exerts enormous pressure on web site developers to abandon Java in favor of Microsoft alternatives. Since the Microsoft alternatives are viewed by most web developers as inferior to Java it forces them to accept non-preferred alternatives to the enrichment of Microsoft. The fact that an average user could spend twenty minutes downloading the Java engine in order to view Java-based web sites is a ridiculous defense.

Under the presently proposed settlement, this type of behavior is unchecked and can, given Microsoft's past performance, be interpreted an indicator of the direction in which they will force events in the future.

Thank you for your consideration.

From: Greg Clarkson
To: Microsoft ATR

Date: 12/6/01 12:33pm

Subject: Microsoft Anti Trust??

I'm really disappointed about the outcome of the DOJ anti trust suit against Microsoft. Its clear that Microsoft has used there business practices to stop competing companies. It is also clear about there intention on controlling the market and gouging the consumer, if you look at there new licensing structure for Microsoft XP. I don't mind paying for a product once but, the way Microsoft is licensing XP means I will probable end up paying for it several times on the same computer system. Right now there is no charge for re-licensing XP but what about next year? What's going to happen after XP gets established? I can see the possibility where Microsoft will start recharging. If there where any other product on the market to compete with Microsoft OS I would be using it. The Microsoft products are buggy and in my opinion not worth the licensing fees they want and definitely not worth having to pay for the product more then once. The reason Microsoft can get away with this is because they have stifled the competition. The only alternative for me at this time is Lynx a product of the GNU free software foundation and I'm giving it serious consideration.

And then there is the problem of privacy, everytime I connect the the network for work or play Microsoft down loads a "profile on me". It happens so quickly that nobody is aware of this activity. So what is this for? Licenseing? Marketing? Is this profile being sold to other companies? I realize that by connecting to a web site that I am in some since giving the owner permission to map my activaty but Microsoft has taken this to a point of intrusion. All because they can.

Thanks

Greg Clarkson

Subject: Microsoft Settlement: Dereliction of Duty

DoJ "punted" AGAIN on the Microsoft issue. From what I read DoJ does not understand how the IT industry has fostered a different, more insidious brand of monopolist in Seattle. If you want a perspective from "in the trenches", where we IT folks must factor Microsoft into every single purchase and implementation decision, just ask me.

MTC-00002804

From: Ksmosky@aol.com@inetgw
To: Microsoft ATR
Date: 12/6/01 12:40pm
Subject: tunney act

The proposed settlement does not respond to the cause of the litigation. Bundling or tying computer products together by definition uses the market position of one product [windows] to assist brand new product [explorer, word, office]. Prior to Microsoft's tying products to the operating

system, the public had options and alternative products. Word Perfect was an excellent product with good market share before Microsoft eliminated competition by bundling Word to Windows. The same is true for numerous products that Microsoft has used its market dominance to eliminate from competition.

The proposed settlement does not resolve the issue which caused the case in the first place. Microsoft should be broken into at least 3 companies: operating system, applications and internet. The mere fact that Microsoft has added so many products to the operating system should have given the Justice Department pause to ask—To whose benefit? Not the public if good products with good market share are driven from the marketplace. Microsoft is the only beneficiary.

From: Bob Cloninger
To: Microsoft ATR
Date: 12/6/01 12:41pm
Subject: Microsoft settlement

Microsoft has successfully shifted focus from the right of others to innovate and profit from those innovations to their (assumed) right to conduct business any way they please. Any settlement that allows Microsoft to continue without structural remedy is doomed—they spent the 1990s avoiding terms of their consent decrees, so how can they be trusted now? Please remember this case was brought because Microsoft achieved their monopolistic position by smothering competition with classic, 19th century, monopolistic, business methods. There is nothing innovative about these abusive business practices, and they threaten our technical progress as a nation.

Microsoft only came into being because DOJ filed a similar antitrust action against IBM. Because of that suit, IBM made structural changes and business decisions that finally negated the suit, and allowed the PC revolution to occur. What disruptive technology, like the PC, will fail to take root because DOJ backs away from this equally significant opportunity to be a change agent?

This is not about punishing Microsoft—It is about giving new ideas the opportunity to create their own wealth and power.

To: Microsoft ATR
Date: 12/6/01 12:43pm
Subject: Sanctions

I am a Director of Software Development and fully understand the implications of Microsoft's behavior.

To fully comprehend how we have mostly become Microsoft robots one needs to try operating WITHOUT Microsoft products. How can this test be done?

1. Remove Internet Explorer and install a competitive product for access to the Internet.

2. Remove Microsoft Outlook (any version) and install a competitive product for access to e-mail.

3. Remove Microsoft Java Virtual Machine and install Java from Sun to run web programs.

4. Remove Microsoft Office (any version) and install a competitive product for office automation.

5. Remove Microsoft Media Player and install a competitive product for multimedia content. After removing all of this software just try and make the computer perform the ordinary functions you expect. It isn't possible. Without using Microsoft products it's difficult to even gain access to competitive products! The above are just the consumer products. Microsoft has an even bigger impact on the underlying technology. They are buying technology companies to deepen our dependence upon them.

Trust me, Microsoft is laughing uncontrollably about the settlement.

SOLUTION: REQUIRE THAT MICROSOFT PUT DUAL-BOOT OPTIONS ON ALL SYSTEMS SO THAT CONSUMERS HAVE ACCESS TO ONE OF THE OPEN SOURCE OPERATING SYSTEMS. THIS WILL TRULY PROTECT THE AMERICAN CONSUMER AND OUR COMPETITIVE POSITION IN INTERNATIONAL COMMERCE.

Let them do anything else but require DUAL-BOOT so the consumer can choose at the Desktop. This is the one single settlement they will NEVER accept.

Subject: DOJ/Microsoft Antitrust Settlement
Re: DOJ/Microsoft Antitrust Settlement—
Comment

The MS monopoly has stifled the more stable open source sector. As a result, it is almost impossible for any business to run without MS desktop products. Your settlement does nothing to end that monopoly. Your settlement should require MS to provide the open source community with open source tools including fonts, printer drivers, network interfaces and hardware support drivers to permit third party software developer an EASILY port their software applications to open source, both now and into the future. Thus far, MS has made that task almost impossible.

Very Truly Yours,
Scott Beane

Subject: Law and Order vs. Laws and Orders

Dear Madam or Sir,
While your remedy in the Microsoft antitrust case may appear expeditious I believe it is exactly the opposite.

What will happen to our precious nation when Microsoft has more power than the US Government, if it isn't that way already? Clearly they already control much of the information economy, and DOJ has just patted them on the back and encouraged them to take the rest, which they are blatantly announcing that they will do (look closely at the .NET and PASSPORT strategies). When they have all the information and control its usage what will the government be able to do about it?

Does DOJ really expect competition to survive if Microsoft continues to openly flout the law? How vulnerable will all of us be when national security depends upon our networks being operational? Already our government has been rendered dependent on e-mail and fax because USPS has been slowed to a crawl by the anthrax packages. What happens if the e-mail goes? I am aware that AG Ashcroft's personal beliefs probably do not include Darwinian theory, but the disease model is appropriate here. If a species has the same genes, and a germ comes along that destroys those genes, the species will die. The death of the chestnut trees in this country is a perfect example. They went from towering over the forest to dying off in a few years. When someone concocts a truly evil virus, Microsoft servers and software could do the same thing, leaving us what?

The situation with Microsoft IIS vulnerability is much like that of the airlines on Sept 10, 2001. No one has really tried... yet. Several sites have been compromised, millions have lost their personal and business information due to viruses, but no enormous and widespread catastrophic action has occurred so far. When it does, DOJ will be remembered for letting Microsoft off the leash.

And there are still more questions, like why Microsoft's price-fixing and racketeering activities (with Dell, Compaq, H-P, Gateway, etc.) have gone unpunished and unabated. Ever tried to buy a computer without Windows from one of those vendors? You can't, because they have a contract between them which shuts out all other choices. What's more, that contract is part of the evidence in the DOJ's antitrust suit. Why has nothing been done about it?

So in essence what the DOJ has done is squander a chance to improve our nation's security, punish some odious racketeers who really and openly want to take control of our country, and send a message that bilking our citizens will not be allowed in any form. Instead the message is, as it has always been, "If you're gonna steal, steal big".

One point which I'm sure you've heard before.

What kind of punishment or future deterrent is allowing Microsoft to give away software to schools. The incremental cost of the software to Microsoft is near \$0 and still allows them to claim huge amounts in tax right offs. Make them give the schools something of tangible value such as hardware, or integration services. Make them sponsor teachers, career programs, sabbaticals, whatever. This is a judgment that injures the proxy plaintiff more than the defendant.

This is not even a slap on the wrist, it is a pat on the back.

From: Larry Hansford
To: Microsoft ATR
Date: 12/6/01 1:11pm
Subject: Microsoft Settlement

I firmly believe that the agreed to settlement with Microsoft is not in the best interest of the consumer, especially the business organizations. As a Systems Integrator, I have witnessed first hand the tactics by Microsoft to force expensive upgrades in order to continue “business as usual”, and I believe the settlement will allow Microsoft to not continue those practices but increase the tactics' impact.

I believe that the settlement should be revised to force Microsoft to unbundle their products so that consumers have a choice in what they install or de-install.

Also, the settlement allowing Microsoft to put more of its product in public schools does nothing more than allow Microsoft to further ingrain themselves in consumer homes and businesses. This builds more of a monopoly than Microsoft already has. At the very least, the settlement should be for Microsoft to give the equivalent money to public schools and allow the school administration to buy systems that better

suite their needs—including Apple Macintosh and/or Linux systems.

Subject: Microsoft anti trust ??

I'm really disappointed about the outcome of the DOJ antitrust suite against Microsoft. It is clear that they have used their business practices to stifle the competition. This anti trust suite has done little to change Microsoft's business practices.

If you look at the licensing for XP now Microsoft is using their position in the market to gouge the consumer. I don't mind paying for a product once but now it appears I could end up paying several times. For now re-licensing of XP is free but what about next year? What is going to happen once XP is established? I can foresee a point where Microsoft will place a charge on the re-licensing of XP. My concern here is that if the product were worth the added expense or if the product had changed sufficiently to require re-licensing but the way this setup I can be charged a license fee for no added value. Simply because Microsoft has control of the market and requires me to pay to continue using their product. If there were any alternative OS available I would be using it.

The Microsoft products are buggy and have caused me an enormous amount of problems because of their poor design.

And then there is the problem of privacy. Each time I connect the network whether for work or play Microsoft downloads a profile and my activity. It happens so quickly that most people don't see it but it happens. What is Microsoft doing with this profile? Is it for Licensing or Marketing or just to monitor my activity? Are they selling this information?

Thank you
Greg Clarkson

Date: 12/6/01 1:28pm
Subject: Antitrust Settlement

Hello,

A news letter from Red Hat suggested I send my opinions to you concerning the antitrust settlement with Microsoft.

I approve with the settlement in it's current form, and I would be strongly against any further action against the Microsoft corporation.

In the news letter, Red Hat suggests it would be better to have MS donate only hardware to the underprivileged schools rather than the hardware, software, and services required by the settlement. I believe this would be a mistake. The software Red Hat is offering is already free, and it doesn't include accurate documentation or reliable support. I've been a computer professional for 18 years, and I use software from MS as well as from Red Hat on a daily basis. In my opinion, the software Red Hat would provide the schools is unsuitable for the majority of new computer users which includes teachers as well as students. Imposing this additional level of difficulty on already overworked teachers will very likely cause them to avoid using the systems as much as possible. Additionally, a number of would be teachers from the technical world might change their minds if they believed the software they would be required to use would be unsuitable for the task.

Subject: Re: Microsoft antitrust violations
Re: Microsoft antitrust violations
Dear Sir,

I am writing in regard to the settlement agreement you have reached with Microsoft. I do not feel it is fair to me as a customer since they have damaged their competitors and made it both more expensive and harder to buy software from other sources as well as hurting the development of competing products that would most likely be better.

I would suggest that there be a penalty for their previous actions as well as some form of monitoring their future actions.

I understand that Red Hat Linux offered to give schools free software if Microsoft would give hardware of the value suggested instead of their own software. Giving their own software would be of no cost to them and would help perpetuate their monopoly by putting more of their own product out in the field.

Thanks for taking the time to read this. If you have any questions, please call me at the number listed below.

From: tim dion
To: Microsoft ATR
Date: 11/16/01 10:03pm
Subject: Please protect us from Microsoft

Dear Department of Justice,

I am shocked and dismayed with the terms offered in the Microsoft settlement. I realize that you feel that this case has gone on for too long, and may hurt the economy. But don't the loses of Novell, Netscape, and Sun effect the economy?

As the Department of Justice for the United States of America don't you want to protect the consumers? When you get out of bed in the morning, doesn't it motivate you to get to work so you can protect the rights of the down trodden? You protect us against the criminals in the world, this is your sworn duty, job, and calling.

Microsoft has harmed me, because I can not buy a computer with the operating system of my choice installed. I am a fan and user of the Linux Operating System. Some 30 percent of servicers on the internet run Linux. Yet, there are no major computer sellers who will install and ship a consumer based computer with Linux installed. Microsoft's OEM contracts forbid companies from shipping any consumer operating system without Windows installed. If I want a new computer, I have to pay for the cost of the Windows operating system, than I have to install Linux myself. The terms of the settlement only mention dual bootted systems; however, I have no need for Windows. For a dual boot system, I would still be required to pay for a Windows license.

Now, the courts have declared Microsoft to be a criminal monopolist. At the very least, I would expect them to be punished for their crimes. We, the people, need your protection from Microsoft.

Subject: microsoft monopoly

Dear sir or madam,

I am writing to you in the hope that through your decisions the software industry may become more open and, in turn, serve the public better. I am an educator, currently working on a PhD. in Applied Linguistics. I'm a long time computer user and programmer. Over the last few years, I have been deeply involved in distance education over the WWW. I use, on a daily basis, three different operating systems: Linux, MacOS9 and WindowsME. In my opinion, the early advantages that Microsoft Windows offered have been far outweighed in recent years by their attempts to dominate the operating system market with truly inferior software. Estimates for the cost of time lost in dealing with Windows system crashes run literally into the billions. The lack of competition is in part due to the difficulty of writing software for someone's proprietary OS. The close linkage between MS applications and Windows straps the public with operating systems which always promise to be better, next time, but never are. We're supposed to wait while they get it right, so that we can keep using MSWord.

If competition truly serves the public good, then we need to ask: "Why is it that MS has no serious competition?" Is it possible that there are no worthy adversaries, no one as good as they? Or is it possible that very rich and powerful businessmen are doing a disservice to the nation by maintaining their power not through better products, but through marketing manoeuvres and a tight grip on an early advantage that no one saw as unfair or dangerous at the time.

I respectfully petition you to level the playing field by ending or limiting the close relationship between Windows and MS software in the hope that it may stimulate what was once a vibrant and creative area, software application development. In closing, let me recall the words, "What's good for GM is good for America." Since that pronouncement was made, much has changed for consumers who now enjoy safer, more comfortable and more economical cars. Microsoft tells us it knows what we need and want. I say, give us a choice and we'll decide for ourselves.

Subject: Microsoft Penalty

Hello,

I don't usually send this type letter, but here goes. In my understanding of the ruling (which is probably not great). Microsoft essentially eliminated a competitor by using its size and power in the market. The software I use on a daily basis is directly effected by their actions, because there is no longer any real competition for their internet browser I am forced to use it. The problem is they kill competition from the inside via hardball business practices, leaving the public no choices but to use their products.

Allowing them to "give away" software to under privileged kids, puts an awful nice spin on some pretty nasty business practices. Unfortunately it seems like DOJ is providing MS corp. with a great channel into a segment of the market that they have not been entirely able to take away from another competitor, Apple computer, a company that I am fearful MS would just assume be out business.

Shouldn't the penalty have something to do with the crime? Doesn't the idea that Microsoft has anything to with "distributing "free" software to children" sound a bit funny? It does nothing to prevent them from doing the same thing they that are accused of again, and it could be argued that it actually offers them an inroad to attack Apple in their strongest market with a flood of free hardware and software.

I am not for shutting down MS, they are a good company, but they are to big to be allowed to continue with the "buy them or ruin them" method of business.

Thank you for your time.

Subject: Microsoft Antitrust Remedy

To Whom it May Concern:

This lawsuit speaks clearly to the open source and free software communities, as to how fair our government will deal with them. The Linux movement is a worldwide phenomenon, as Linux represents the absolute cutting edge of high technology. Please don't let this Microsoft deal go through, as it only strengthens Microsoft's anti-open source and anti-free software movement. If Microsoft's proposed agreement goes through, the USA will lose its position as world leaders in the software arena, stuck with offerings handed down by Microsoft, while the rest of the world advances with the cutting edge Linux technology.

The attached file, RHPD.doc, shows that Red Hat Inc., from North Carolina, is willing

to substitute the Linux operating system and Linux-based Office Suite software to every school in America, and provide support longer than the time period offered by Microsoft. Red Hat is the world's leader in the Linux market.

The attached file, Insmod.doc, is an article I wrote for members of the Court Reporting community, to which I belong. It shows how a court reporting firm can obtain a PC and network operating system, Internet connectivity and office suite software absolutely free of charge.

Thank you for your consideration.

Dear Sir,

I watched, with great interest, the developments in the case of US vs. Microsoft. I was not pleased to find out that, in the end, Microsoft will get yet another chance. Microsoft has proven time and again that the letter of the law matters little to it. They will continue their ways, unless you have a sharp set of teeth in this proposal, which I found lacking. I do not begrudge Microsoft the ability to generate money for itself and shareholders. I do, however, take exception at them manipulating and blackmailing users and manufacturers.

Subject: Concern for our future. . . .

While deeply appreciative of the role Microsoft has played in my enjoyment of my computer, I think Microsoft knows that the free society is the best society. What is meant by democracy in the matter of business is that an atmosphere of competition, free of monopoly, be operative to produce the finest products at the lowest cost to the American people. Equally important is the fact that competition stimulates the development of a vast output of products which can help this

nation to stay ahead of the the stiff competition coming from many countries. If we allow one company to rule the roost, finally the rest of the world will catch up and surpass us. Let's keep Microsoft on its toes for we need everyone deeply involved in this pursuit of the best products for home and world consumption. Microsoft will become a better contributor to our society if it is not given unfair advantages. Why can the courts not have the vision to promote the best for our country? We have many great minds involved in the pursuit of excellence in the cyberworld. Let everyone working toward its betterment have a fair chance. We the American people, the economy of the United State of America and all the people of the world will be the beneficiaries if Microsoft is prevented from dominating the market and dumping its often flawed and imperfect products on us because the courts have decreed that it has the right to do so and others do not have the right to compete. Dear US DOJ Rep.

I was just reading about how Microsoft Won the anti-trust computer operating system monopoly case.

It is true that the federal appeals court in June upheld the lower court ruling that the company used illegal tactics to maintain its Windows personal computer operating system monopoly. (quoted from Reuters news clip see URL below). But the result was they won, since the penalty was to do a thing that helps them build there illegal computer operating system monopoly.

Any one knows if you teach the children to use products from only one vender, that this is a big win for that vendor. We need to find an alternative to this. One example comes from a Reuters news clip http://www.reuters.com/news_article.jhtml?type=businessnews&StoryID=391566

Red Hat Inc. RHAT.O, the maker of the Linux <http://www.redhat.com> operating system that competes against Microsoft, proposed on its own offering every school district in the country its own open source software free of charge, while encouraging Microsoft to spend its money on buying more hardware for the schools.

If Microsoft was required to field computers running non-Microsoft software this would teach your future that computers are not Microsoft. That there are other, even better computer operating system, then the microsoft product.

So in this case the money should be spend on hardware, not simply turned into something that costs Microsoft, next to nothing. Since the software is already

written, and making a few copys will cost the software giant penneys, on thousands and thousands of copies.

Please see have it seen to that this illegal monopoly does not get away with self promotion, something they willing spend much more then this and do, as a punishment for being found guilty, in a most important court case.

Open source software is the future. But Open source software is a gift. to the public, and private donators can not afford the PR budget that the monopoly can afford.

Thank you

Subject: Disappointment about the 'settlement'

I understand the country is going through a lot of struggles. However, to not punish a monopolistic company for cheating consumers, businesses, government is irresponsible and showing the lack of justice and shows our current government will allow large business or monopolies to use power and money to change our governmental decisions. (Versus we the people).

Not only were they not punished, but they were given a potential to get out of this with a even larger monopoly, but getting into the school systems. I understand the schools have a "choice" influenced by what they can get from Microsoft. The \$1 billion is only a small part of what they have previously taken from people.

They still have monopolistic licenses in place that don't allow dual boot machines to be sold by various manufactures. They have large issues with the obvious lack of security in their software. All you need to do is think 'e-mail virus' and that is the same as saying a Microsoft Bug.. since it is a VERY old concept that was explained is bad programming, back before Microsoft even understood the internet.

Now they are supporting more issues that don't allow Open Standards or even what most used to call standards. (Standards used to be the protocol that was available to all, everyone had input on, and there was basically one standard. Versus the current model with Microsoft and the card manufacturers). It has held up technology, versus expanded it.

They are supporting a effort that could reduce further competition by making it

imposible to report bugs, security flaws, etc. so that we can get things fixed in a timely manner. And even worse is the discussions of laws that would make it very difficult to continue with innovative projects like GNU and the OpenSource world in general. No Microsoft did a nice job on their MSOffice (minus the internet explorer).

And now with XP and MS.NET, I have further concerns. I hope something can be done in the future about past, present and future monopoly actions by Microsoft and other companies that use unethical tactics to get to a control position, then use their control and money to control goverment as well as, media.

MS owns NBC. I believe they (or VPs/CEO) bought large parts of Apple so they would not go under just before the law suit went to the courts.

Subject: Tip for better solution for the discussion

Dear Justice Office,

I am programmer for 20 years, and CEO of an IT company. My english is very bad, but it is the thought I wish to tell. For the moment there is a high focus on terrorism. But what huge terrorism doesn't we have on internet, or by software that is violating our privacy and our common data. We can not deny, in future, we will be forced to switch over to open source software. When companies are doing E-Business, no company wants that statistics are made based on his activities, done by a software developer. When software is not open, you can not watch in the black box what is hidden behind. On the other side, companies needs to live from software. But it is widly known that microsoft software has a lack of security, a lack of privacy and that microsoft is sneeping inside computers. A good option would be that all elements communicating with the outside, like browsers, components, firewalls, e-mail clients etc should be open source by federal law. Just like the known history of PGP (Pretty good privacy) (It was and is still open source.) This should be a barrier around the black box.

Black boxes are fine for home use, but when they make outside communications, this is dangerous. So if there is still a kernal part running on themselves, without making communications, that's maybe ok for the moment, but communicating particles needs to be open source, that's our right of privacy, and protecting of our own data. Every communicating particle should be explained clearly to public what it is sending out, with a technical sheet, to verify if this is correct for (intrusion detection software, like the open source project www.snort.org) Secondly, every communication should have an identification header of the number of the CPU so it can be traced down by Law Organisations.

Every sold CPU should be registered in a huge internet security company. That ID

should be integrated into the IP protocol, encrypted and coded with a high protection, and only viewable by those offices. This would identify malicious people, who doing all non-legal practices, like terrorism, abuse of children, drugs, hacking of computers, etc etc.

Without those steps E-Commerce will NEVER be possible on a professional, worldlevel schedule. There are too much violations due to people who make profits of the gray zone of unknown, to be on internet and the gray zone of hidden gateways in our software.

If my idea's are worthfull, please consider to invest in our directory engine as return for this information.

Subject: Comments on the proposed settlement of the Microsoft suite
To: U.S. Department of Justice
Subject: Proposed Microsoft Settlement
Dear Sir/Madam:

A recent newsletter from Red Hat Linux asked Linux resellers to send comments regarding the proposed DOJ/Microsoft settlement to this address (microsoft.atr@usdoj.gov).

I am the President of a small firm that is authorized to sell Linux and Unix. We are also a Microsoft Certified Partner. I am in favor of settling this matter as quickly and inexpensively as possible. Speaking as both a consumer and Information Technology professional, Microsoft continues to provide better and simpler solutions than other vendors.

Rather than restrict competition, I now can obtain more non-Microsoft solutions for operating systems and business applications than at any time in the past ten years.

I believe that anyone who charges Microsoft with having unfair business practices is unfamiliar with the world of business. In my opinion, Microsoft's business practices are no more onerous those of other large firms. This includes firms in the IT market such as Sun and Oracle, and firms outside the IT market such as Ford.

Thank you for allowing me this opportunity to express my personal opinion. Please feel free to contact me directly if you would like to discuss this matter.

Sincerely,
Rick Hansen

From: Russell Kohn
To: Microsoft ATR
Date: 12/6/01 2:05pm
Subject: Don't Settle

I am writing today in opposition to settlement with Microsoft Corporation and the terms as I understand them.

My name is Russell Kohn. I am a resident of the city of Agoura Hills, California in the county of Los Angeles. I own a small computer consulting firm that is located in the city of Santa Monica, California, in the country of Los Angeles. I started the business in 1986 and we have employed between 4 and 8 people through the past years.

In our office we have a mix of hardware and software. We use Microsoft software, Apple software, software from Red Hat and other suppliers. We used to resell hardware and software in addition to provide our consulting services. Now we are primarily a provider of custom software development services to small & medium businesses as well as the publisher of a small database utility for FileMaker Pro developers. Our consulting clients include both small businesses and household names including the William Morris Agency, UCLA, and Blue Cross. Our products are used by many consultants at many facilities including some DOD, DOE groups and at many major Universities.

Over the years I have personally and repeatedly experienced incompatibilities with Microsoft software that would not have been tolerated from any other supplier nor maintained structurally within the channel without their monopolistic strength. This has lead to financial costs and inefficiencies that we don't experience in other areas of our practice.

Any settlement that accomplishes further erosion of competitive forces (eg. the Education deal into market currently owned by Apple) or that does not institute real limits on Microsoft monopoly position would be a waste of time and a setback for the American people (as well as the rest of the world).

Now is the time for government to play its regulatory role in this field.

Sincerely,
Russell Kohn

From: J N Katzman-TCM
To: Microsoft ATR
Date: 12/6/01 2:04pm
Subject: Microsoft Settlement

To Whom it may concern;

The settlement in the Microsoft case is nothing more than a win for Microsoft. This gives Microsoft an even larger presence, and more free advertising and publicity than they could ever dream up by themselves. As a developer of software, I would be more than happy to develop something for the schools so that I might be able to have the opportunity to setup a longterm support contract to guarantee income for the rest of my life. Microsoft will have this kind of opportunity on a much larger scale.

Giving the schools Microsoft products now, will only further entrench Microsoft's hold on the market. After all, these students will most likely only purchase Microsoft products since this is what they will be familiar with. This will carry on into the workplace, where these students will become the next generation of purchasers and decision makers

Do not allow Microsoft to donate software as a "punishment". Convert the value to dollars and allow the schools to decide on the technology they need or want.

Sincerely,
Joel N Katzman

From: Paul DuBois
To: Microsoft ATR
Date: 12/6/01 2:48pm
Subject: The anti-trust settlement *rewards* Microsoft

The proposed anti-trust settlement under which Microsoft would donate software and hardware to school districts is a dream come true for Microsoft. Far from actually punishing Microsoft for its predatory and anti-competitive behavior, this proposal would do the opposite by helping it establish a foothold in one of the few areas where it is not the dominant player. In other words, the settlement *encourages* Microsoft to continue its past behavior.

Whoever conceived this proposal clearly did not think it through very much.

A better solution would be to tell Microsoft to donate *cash* to the schools, to let them spend on computing equipment as they wish.

Subject: Microsoft Class Action law suit

I have been following along with this trial since its onset. I believe that these punishments applied to Microsoft in no way discourage monopolistic practices and indeed, encourage Microsoft to continue with these practices in a more aggressive manner. Why? Because a punishment of donating the company's overpriced software to schools is the most absurd form of punishment I could ever imagine. Indeed the creators of the Sherman Antitrust Act would be sick their stomachs about this proposed "solution". Not only is the punishment ridiculous and in no way encourages competition (being the

entire point of this act), it would appear to the American public that this is in fact the complete opposite. By distributing their software packages for free allows for Microsoft to gain a further stronghold in the market by forcing children at these underprivileged schools to use their products. Upon maturing to an age where they will be obliged to purchase software packages, which packages do you suppose that they will choose. ones that they already know and have been forced to learn upon and indeed are already comfortable with or some other package?

The American public knows that Microsoft has gotten away with the murder of unfortunate corporations, why doesn't the DOJ? Maybe a new trial to prove it again should be enforced. The people who seem to have been paid off could then line their pockets a little more. By the time that the DOJ finishes, there will only be fragments of once profitable corporations. Maybe they could combine their collective efforts into a unified company called Anti-Soft!

From: vgerdjk@optonline.net@inetgw
To: Microsoft ATR, Red Hat
Date: 12/6/01 2:59pm
Subject: the micro\$oft pension plan from red hat newsletter.

"Not long after the DOJ settlement, Microsoft announced it had agreed to another settlement regarding a separate class-action suit brought against the company by numerous parties that alleged overpricing of Microsoft products.

The settlement forces Microsoft to donate software, hardware, and services to America's poorest schools. Red Hat responded to the proposed settlement, pointing out that the settlement could simply introduce Microsoft to a market where they could further extend their monopoly. In its counter-proposal, Red Hat offered to provide free software to every school in America if Microsoft provided the value of its donation in hardware costs rather than its own software. "

the first thing i thought of when i heard that micro\$oft was giving hardware and software to poor schools was—let's make micro\$oft a larger monopoly cause we at the DOJ have nothing better to do than take micro\$oft to court every few years my school has over 500 computers and, even with an educational discount, upgrading the OS from micro\$oft every few years on all those machines is very expensive, so you, the DOJ, are going to let micro\$oft in all these poor schools that in a few years are going to need billions to pay for their OS upgrades, that we the taxpayers are going to subsidize, brilliant everytime micro\$oft gives something away it only benefits micro\$oft, no matter how much they say that "we're only giving the consumer what they want," well i don't want to pay into the micro\$oft pension plan with my taxes unless the DOJ gets micro\$oft to give the OS away for perpetuity, we the taxpayers will suffer, because, then, micro\$oft could hold the educational system hostage to any upgrade micro\$oft deems necessary at an enormous financial burden to the taxpayers when a school system decides upon an OS for the computers, they are making a choice, but when the taxpayers are forced to incur the debt of the poorest communities in the country for the largest monopoly in the country, we have lost our freedom of choice could our government be this stupid, it looks like it who said? "the bigger the lie, the more people will believe it"

Subject: Microsoft

As an individual my rights to development were eliminated in the past by the behavior of Microsoft. I have moved to open systems and now I am able to develop the applications that I need. You may read into this that Microsoft has not been monopolistic and does not deserve corrective action. This is not true because my major problem will come when I try to implement my resultant

applications. With Microsoft in complete domination of users I will not have access to them.

Your actions so far have indicated to me that you (as a Washington establishment) want to provide for the dominant monopolist and ignore the rights of the individual developer. If it is your objective to cut off the intellect of individuals then you will have to live the resultant loss of creativity and productivity that comes from your actions.

My work has been in the development of computer applications for education, in particular children with special needs. It will be your inability to provide me equal rights and equal access that will have brought about the future problems.

Subject: Microsoft Settlement

I am disturbed that the people that are supposed to be looking out for the welfare of the general population are allowing a monopolist to essentially escape prosecution without any significant penalty.

I am VERY disturbed that Microsoft may be allowed to actually FURTHER their monopoly in the nation's schools under the guise of settling a class action suit.

As far as we know, Bill Gates never had an original thought in his life, and has become extremely wealthy by A) making profitable use of other people's work B) being in the right place at the right time C) actually having SOME business sense and, mainly D) using unfair and unlawful business tactics to create and maintain a monopoly. Bill Gates SHOULD emerge from this action broke and in prison, not still holding title as the wealthiest man in the world.

Further, although it has never been proven, I suspect that Microsoft DELIBERATELY leaves flaws in their operating systems to make sure everyone will want to upgrade (at considerable expense) when they release the NEXT flawed (but proclaimed to be MORE stable) version.

If Microsoft is going to be allowed to settle any suit by providing something to schools, let's make it ALL the schools, and let Red Hat provide software for ALL the schools as they have offered to do at no charge, to keep the Microsoft monopoly from becoming even larger.

Subject: Opinion

For what it's worth:

My opinion is that Microsoft should be broken up into two or more companies. Both to correct predatory behaviors and to stimulate competition in the marketplace, something Microsoft uniquely stymies on a regular basis. From my perspective Microsoft has clearly harmed consumers by eliminating opportunities for new markets and companies to flourish.

While I have this opinion, at the same time I am fearful that Microsoft has bought the Justice Department, lock, stock and barrel with the election of George Bush to the presidency. I send this opinion in the hope that my opinion does matter and Microsoft does get more than a slap on the wrist for inflicting major damage to our society in general and the technology business sector in particular.

Sincerely,
Paul M. Reilly

Subject: Microsoft DOJ Lawsuit Settlement

Dear Sirs,

I am the president of a small software company. I have worked in the software business for over 20 years and have watched with increasing concern the domination of the industry by Microsoft.

Speaking as an entrepreneur, the dominance of Microsoft is preventing much new technology from being developed. Many promising avenues of research and product development have been terminated due to direct and indirect influence of Microsoft.

The activities of Microsoft found to be illegal by the court are continuing, even accelerating. The settlement does nothing to address the behavior of Microsoft that caused the DOJ to sue in the first place. The settlement actually contributes to increasing Microsoft's dominance by requiring Microsoft to invest in increasing its market share by providing its products to schools.

I cannot object more strenuously to the terms of the DOJ agreement. The industry needs more diversity rather than less. This deal will accelerate Microsoft's dominance. This will be bad for the US software business and cannot be in the country's or consumers' best interests.

Sincerely,
Michael Price

Subject: The Microsoft monopoly will continue.

Dear Sirs,

Any settlement with Microsoft should insure that hardware distributors must provide alternative operating system installation on PC hardware sold. It has been my experience that systems sold via Gateway, Dell, and other large distributors often include Windows OS whether you like it or not. Some hardware, such as Win modems and Win printers, won't work with anything but Microsoft Windows. I happen to use Linux at home and for users of this and other operating systems it's very obvious what a negative impact Windows has made regarding the availability of specialized hardware. Manufacturers have created devices that will only work with Windows or

the drivers for these products only support Windows. Instead of engineering hardware to use generic and open architecture forms of connectivity, many companies form an alliance with Microsoft and produce products that have proprietary interfaces that only work with MS Windows. For OS/2, Linux, MAC OS-X and other operating system users, well, they're left out in the cold.

We live in a capitalist society and the object of a company is to make a profit to sustain itself. Microsoft has crossed the line and gone several steps further by operating outside the law to compete unfairly. Microsoft should be punished for their past practices and somehow restrained from further illegal actions which would give them an unfair advantage against their competitors.

I hope that DOJ won't cave in and let Microsoft off lightly with some symbolic slap on the wrist.

Thank you.

Subject: proposed settlement further monopolizes microsoft

The proposed settlement to allow microsoft to settle anti-trust proceedings by giving away its product to new market areas further INCREASES the microsoft monopoly!!! In my opinion it is a terrible settlement.

The proposed settlement effectively funnels microsoft product into a new market at the publics cost. They designed a tremendous marketing ploy to have the public foot the bill for further use of microsoft product because the public has no choice but to use more microsoft product under this settlement.

Following are some settlement terms which make more sense:

1) Microsoft must fully document and publish at no cost the API and all other interfaces to their products. This includes all file formats, XML structures, etc. They do not need to publish their software, only the means to interface other software and hardware to it.

2) Provision 1 must be ongoing perpetually for new products and revisions of existing products.

3) Damages to the market should be funded by cash or hardware provided for public use. The hardware should be standard, industry compatible product, which can run free software operating systems such as LINUX. Free office products are available from Sun's Star Office freeware.

4) Damages should be further compensated by providing costs for public training classes in general computer use, communications, and operation of free software products. These classes should be supplied by free software companies, NOT Microsoft.

5) Damages should pay for shipping, installation, and high speed internet connections for equipment.

6) All computer purchases should have microsoft product unbundled from the hardware. Purchasers must have the right to purchase computer hardware without software, or with other alternate software products installed at clearly stated prices.

The microsoft marketing and business strategy is very damaging to the computing industry due to coercive market practices and forced bundling of product.

Sincerely,

Daniel Lerner

From: Gregg Givens
To: Microsoft ATR
Date: 12/6/01 3:09pm
Subject: User response to the Microsoft Antitrust settlement my in the long run. We'll end up stronger for it. Ask the europeans, japanese, and chinese why they are favoring Linux over MS windows.—

Gregg Givens—Systems Analyst
Hollins University Computer Services
ggivens@hollins.edu
cases of using a strongly positioned Application helping Microsoft to compete unfairly in the Operating System arena. I would be willing to bet money that if we split up MS into two companies, there would be a Linux version of MS Office Suite within 6 months or less. It would be in the INTERESTS of the MS Applications division to do so. IT is NOT in the interests of the OS division—hence the problem. My contention is that splitting the MS corporation will actually be GOOD FOR THE AMERICAN ECONOMY, contrary to Microsoft's scare tactics. Microsoft seems to make oblique remarks implying that what is good for Microsoft is good for the American economy, and that impeding Microsoft's advance would damage the economy. In fact the exact opposite is true.

Even though more efficient Operating systems such as Linux require less powerful hardware and might be less encouraging of the INTELS, AMDs, and other hardware vendors, the savings for EVERY OTHER COMPANY in America not having to buy new computers every 2 years might help the other 90% of the American companies to make a profit. How much American Corporate profit goes into the land fill every year when they have to scrap their old computers. With more fair competition, maybe more Applications program designers will be encouraged to write more applications—even ones that compete directly with Microsoft's Application division. More competition in Applications and Operating systems might even make superior and MORE RELIABLE AND SECURE computer software, at a reasonable price. (I for one would look forward to days when the servers quit crashing periodically due to undocumented bugs in microsoft's OS. we have Linux and digital unix servers that have not had to be rebooted for most of a YEAR. We must boot our microsoft servers several times a month. I never even leave my MS windows 2000 desktop machine up for more than a day. I rarely if ever reboot my Linux desktop machine. Why do I keep Microsoft machines you ask ? Because our corporate execs DEMAND that we use Microsoft on the desktop. Not enough NON-MS OS applications available that the users are trained to use.)

You may not realize that there are many people who are dismayed by the incredibly

weak response of the current administration to blatantly monopolistic practices by the Microsoft Corporation. Given the more vigorous legal efforts of the previous presidential administration, I don't feel it is completely out of line to question whether monetary influence during the presidential campaign could have something to do with the recent decision to abandon a bargaining position of strength against the Microsoft corporation in favor of a settlement that is actually weaker than that being presented by Microsoft ITSELF prior to the judicial finding of monopoly. At the very least, the current regime in the Department of Justice has some explaining to do against the APPEARANCE of impropriety.

Excluding that issue, we have the result in the marketplace itself. In the past, Microsoft has demonstrated a history of making every effort to avoid any previous remedies that the court has attempted. Either they have ignored the remedy completely or they have complied in the most minimal and unsatisfactory way to adhere to the letter of the law and avoid the spirit. Since the initial attempts to curb their behavior, Microsoft has only succeeded in gaining more unfair leverage and destroying more of their competitors. Don't be fooled that this was only the activity of the market. I have already outlined many ways that MS uses its Desktop OS monopoly to boost market share of its applications. Now that its Office Suite of Applications is stronger (due to the unfair leverage of its OS), it can use the Applications to help the OS maintain its position of dominance in the desktop.

If the USDOJ expects that further litigation will not be fruitful in curbing MS's monopolistic practices that HURT the consumer AND THE ECONOMY, then perhaps other government agencies can attempt another avenue for the remedy. I have heard that the Federal Trade Commission may have jurisdiction and enforcement powers that could be brought into play. Does the BUSH2 administration have the guts and desire to seek real enforcement of powerful remedies for the monopoly finding of the courts? Are they too timid and fooled by Microsoft's scare tactics to attempt such a thing? At this time, NOTHING could hurt the economy worse than it is already. You might drive a few stocks like Microsoft and Intel down for a short while if a strong remedy is attempted, but the long term benefits of increased competition and more efficient use of hardware resources (caused by better written Operating Systems such as Linux) could only help the US econo

From: Tom Garlick
To: Microsoft ATR
Date: 12/6/01 2:57pm
Subject: Concerned citizen against monopolies and unfair business practices

To Whom It May Concern,

Since the U.S. Court of Appeals for the District of Columbia Circuit found that Microsoft is a monopoly and acted illegally to maintain that status, a settlement based on the distribution of more Microsoft software seems truly ironic.

The assumption that Microsoft software in particular benefits schools "to prepare students for the business world" is not necessarily on target. One goal of technology education at the K-12 level aims at teaching software concepts, rather than vocationally training students on particular programs. That is, the same lessons can be learned from any "office suite" or via any "web browser" or on any "operating system" to adequately prepare students.

A true "public benefit" the settlement could provide would be to give the choice to schools, not Microsoft. For example, Microsoft could provide generic resources (e.g. cash, equipment, etc.) that leave the schools free to choose their own software technology.

Thank you.

Subject: Microsoft Settlement seems more like a reward

I am amazed at the approach DOJ seems to be taking in the MS case. The software is crappy, and yet is now possibly being given out to our nation's young people, in the form

of self serving donations from MS to fiscally challenged schools.

This can only serve to advance the product further, into markets that the company might not otherwise ever see.

Giving computers to schools is a noble cause. Making them use the same software published by MS is ironical.

Isn't the forced bundling the issue that started this whole mess in the first place?

To me, a better solution would be:

1. Make MS give hardware only, and take advantage of the offer from Red Hat or any other reputable OS vendor so inclined to donate Linux or another OS to run the computers. or, better yet-

2. Make Microsoft pay cash money in the billions to disadvantaged schools and let the schools decide where to spend the money. To me, letting MS off the hook, and in a sense actually rewarding them for their reprehensible past actions (remember the decision? GUILTY of monopolistic practices) is not going to make anyone outside the MS family proud to be an American. I expect it would bring shame to many inside MS as well, knowing that they have twisted the justice system to their own ends.

Make me proud.

From: Mark D. Hendricks
To: Microsoft ATR
Date: 12/6/01 3:21pm
Subject: Microsoft in schools

Letting microsoft give software and hardware to schools is a very bad idea for many reasons.

1. It builds another generation of americans that think microsoft is synonymous with computing.

(Using Word and Excel is NOT computing—using gcc is!)

2. It allows microsoft to extend their monopoly to those vulnerable.

3. It allows microsoft a huge advantage to promote their products.

4. Microsoft already has a huge stranglehold on business and colleges

5. Homogeneous systems are vulnerable. (viruses, worms etc.) If anything, microsoft

products should be banned from all educational facilities, so that young peoples' minds are not fingerprinted with microsoft's concept of what computing is... that way they could learn to develop their own ideas and systems which would eventually lead to some competition for microsoft—not to mention some quality software.

Maybe the best thing to do is to make Microsoft buy a piano for every school in the country—they don't become obsolete and music has been proven to have an impact on learning, where computing has not... The decision to not break up Microsoft is terrible, Microsoft has effectually killed off all desktop competition and is a monopoly that appears to have brain-washed the Judicial System of this country. Letting Microsoft continue operations without punishment eventually will doom this nation's software industry, because having no choice kills development.

In fact Microsoft hasn't had an idea of there own in 15 years—and has continued to steal ideas, but who will it steal from when all of the competition is out of business?

MTC-00002883

From: B. Spyra
To: Microsoft ATR
Date: 12/6/01 3:22pm
Subject: MS Settlement

To whom it may concern,

my name is Bart Spyra & I am briefly writing to you to state that I oppose the proposed settlement where MS would donate its own operating system along with hardware to schools in America. The reason behind my opposition is that I believe that this is just another means by which MS will be able to gain market share. This case was about anti-trust and MS was found guilty. Now it seems that instead of receiving a punishment they are receiving an award for their crimes. Now MS can legally put its competitors out of business as a "punishment" for illegally doing so. It just makes no sense whatsoever.

On the other hand I do support the idea of helping schools and giving those that are less fortunate a better chance in life. Thus, in my opinion I believe that MS should give the schools hardware of equal value as the software that they were originally going to offer. Red Hat has already offered to provide their open source Linux operating system free of charge to any and/or all schools in America if MS was to provide the hardware. This will support not only the schools and children, but will provide a fair punishment to a company that has been found guilty of seven counts of anti-trust.

Thanks in advance for your time & God bless.

Bart Spyra

*ps remember that Red Hat is an American company as well. Therefore, by supporting them you are also supporting America, American technology and innovation.

MTC-00002884

From: Rubin Bennett
To: Microsoft ATR
Date: 12/6/01 3:10pm
Subject: Proposed Settlement of Microsoft Antitrust case

I would like to share my thoughts regarding both the DOJ Final Judgement, and RedHat, Inc's response to Microsoft's proposed penalty phase.

First, I applaud the DOJ for your handling of this case. I agree with RedHat's point that the "penalty" phase of the judgement must not be used to further Microsoft's monopoly presence in any market, be it schools or otherwise. At the same time, I applaud Microsoft for their ostensibly giving spirit. I think it would be a fine thing if Microsoft wanted to donate PC's to schools. I believe, however, that the PC's should not come with a "Microsoft only" clause.

Asking Microsoft to put in additional monies in lieu of the price tag of the software, however, is not realistic and the folks at RedHat know it. Software licenses are essentially a "zero cost" item—that is, once the operating system is built, the owner of the copyright can make an unlimited number of licenses, and the only additional cost to them is the paper that the license is printed

on. Therefore, asking Microsoft to convert "zero cost" licenses into PC's on a dollar per dollar basis is quite unrealistic.

Taking the argument one step further, while I firmly believe that Microsoft must not be allowed to extend their monopoly by donating their product to schools, they must also not be required to further their competition (isn't fairness in business practices the cornerstone of this case?).

So I propose the following:

Enter a monetary figure as part of the judgement against Microsoft. Let Microsoft donate the computers, minus an operating system. The value of each system will be debited against the total judgement amount. If they wish, they may include as part of the settlement a budgeted amount for each system that may be spent on an operating system and installation. If the OS comes in under budget, then the total value of the donation will be adjusted appropriately. The total must not go over the allotted budget. This amount will also be debited against the total value of the judgement.

If RedHat wishes to install their OS at no cost, (another fine gesture) so be it- the cost of the system to Microsoft (and the amount debited against the total judgement amount) will reflect only the cost of the hardware.

Obviously, Microsoft may not "mark up" any portion of the system (hardware or software). A penalty is not supposed to be a source of profit.

Thank you for taking the time to read this message.

Dear US DOJ Rep.

I was just reading about how Microsoft Won the anti-trust computer operating system monopoly case.

It is true that the federal appeals court in June upheld the lower court ruling that the company used illegal tactics to maintain its Windows personal computer operating system monopoly. (quoted from Reuters news clip see URL below).

But the result was they won, since the penalty was to do a thing that helps them build there illegal computer operating system monopoly.

Any one knows if you teach the children to use products from only one vender, that this is a big win for that vendor. We need to find an alternative to this.

one example comes from a Reuters news clip http://www.reuters.com/news_article.jhtml?type=businessnews&StoryID=391566

Red Hat Inc. RHAT.O, the maker of the Linux <http://www.redhat.com> operating system that competes against Microsoft, proposed on its own offering every school district in the country its own open source

software free of charge, while encouraging Microsoft to spend its money on buying more hardware for the schools.

If Microsoft was required to field computers running non-Microsoft software this would teach your future that computers are not Microsoft. That there are other, even better computer operating system, then the microsoft product.

So in this case the money should be spend on hardware, not simply turned into something that costs Microsoft, next to nothing. Since the software is already written, and making a few copys will cost the software giant penneys, on thousands and thousands of copys.

Please see have it seen to that this illegal monopoly does not get away with self promotion, something they willing spend much more then this and do, as a punishment for being found guilty, in a most important court case. Open source software is the future. But Open source software is a gift to the public, and private donators can not afford the PR budget that the monopoly can afford.

Thank you

Subject: I think that the settlement proposed by the Department of Justice is essentially

I think that the settlement proposed by the Department of Justice is essentially a complete capitulation to Microsoft. They have used their monopoly power to standardize inferior, bug-ridden software in market after market. Only by breaking up the company can this behavior be eliminated.

Subject: Proposed discipline for Microsoft.

I have several possible actions that DOJ could take against Microsoft:

Alternative 1: MS be required to license their software free of charge to any group that can demonstrate that:

A. It is a recognized charity under the laws of that country.

or

B. It is a reconnized not for profit educational establishment under the laws of that country.

This agreement would be binding on MS forever. Such licensing would not enable the recipient to technical support other than access to MS's web site. It would not include media and manuals, but would not prevent the user from duplicating media and manuals on their own. Microsoft could charge a reasonable charge for media and manuals.

Alternative 2: Microsoft be forbidden to sell an OEM version of it's operating systems for a period of 10 years. That is, a computer seller would not be able to preinstall any Microsoft OS. Only the final owner could break the shrinkwrap. (Much like the tags on mattresses and sleeping bags.)

This would have the effect of increasing the chance for competitive operating systems to get a foothold.

Alternative 3: Microsoft be split into two companies, one selling operating systems one selling software packages. The two companies would not be allowed to any directors in common. Any present shareholder owning more than 1/10 of 1% of the outstanding shares would have 1 year to divest themselves of one of the two companies. (This insures that they are separate companies.) For a period of 5 years, no consulting company could do work for both companies.

One of the resulting companies would be required to move outside the Seattle Metro area within 3 years.

Alternative 4: Any person who can demonstrate that they have purchased any version of a MS operating system at any point in the past either by showing:

A. Original installation disk or CD

B. Original license agreement with serial number.

C. Itemized sales receipt.

Be entitled to an upgrade anytime within the next 5 years to whatever OS they choose from MS's line at the time. This would be subject to a small media and shipping fee: Maximum \$20

Subject: The Microsoft settlement.

This is an excerpt from a recent Red Hat newsletter:

"The settlement forces Microsoft to donate software, hardware, and services to America's poorest schools. Red Hat responded to the proposed settlement, pointing out that the settlement could simply introduce Microsoft to a market where they could further extend their monopoly. In its counter-proposal, Red Hat offered to provide free software to every school in America if Microsoft provided the value of its donation in hardware costs rather than its own software." As an independent developer, I

wondered the same question, How does allowing Microsoft to inject their products into the public school system penalize them?

Apple has used the academic field as their introduction point for decades, to their profitable benefit.

Making Microsoft distribute the alternatives systems and software would be a penalty.

Subject: The Microsoft Settlement?

Dear Sir

From what I can make out, this is not a settlement, it is a whitewash. Microsoft has acted in a monopolistic manner and it has not been punished nor has it been prohibited from acting in a like manner again. It has even, cynically, offered US schools product with which to indoctrinate the consumers of the future.

The original judgement which split the company into an operating systems part and an applications part would have offered the world real options. Yes my life as an IT Manager has been greatly simplified by the Microsoft monopoly in the same way as my predecessors was made easy by the dominance of IBM. However, I operate a mix of Windows and Unix machines. If the applications part of Microsoft was broken from the operating systems part, the applications would then be developed on all platforms, creating competition and flexibility for the users.

If this so called settlement is seen to be upheld, what hope does the common man have against the largest companies that can even buy their own justice?

Kind regards
Paul Williams

Subject: Microsoft "remedy" inadequate
I was VP of R&D at a computer security company and were strongly considering producing a version of one of our UNIX-based product for Microsoft windows because of strong interest from existing customers. We decided against it, with Microsoft's history of predatory practices being the crucial factor in determining that the development effort was too risky.

Each of our senior executives had experience at previous employers with Microsoft's predatory behavior towards partners, potential partners, and independent software developers. From what I can tell, the proposed settlement does nothing to change Microsoft's anticompetitive behavior—the few "remedies" appear to be easy for Microsoft to evade.

Public Policy issue: Because of Microsoft's practices, there is a much narrower range of computer security tools for Windows platforms than for UNIX variants. This

results in Windows platforms being more vulnerable to attacks (as has been amply demonstrated recently) which leads to substantial economic losses.

Subject: Antitrust Settlement cut with Microsoft

Simply placing well defined restrictions on Microsoft has never and will never keep this company from using its monopolist power to squash competetion. I know it, the Public knows it, the Industry knows it, and YOU know it.

Microsoft always finds a fuzzy path around any restrictions put on it by the government. At this moment in time it already basically owns the desktop computer software market and soon will control most of the way information is passed around on the Internet. Windows XP is a perfect example of Microsoft thumbing it's nose at the government and it's market competitors, yet the DOJ ignores or chooses not to understand how it will further Microsoft's monopoly hold on the tech sector.

I personally believe that the DOJ has sold out to 'big business'. The DOJ's 'deal' with Microsoft is a disgrace.

Date: 12/5/01 8:33am
Subject: Proposed Microsoft Settlement
To whom it may concern:

I am outraged that the same company that has monopolized operating systems and desktop application development for the past 10 years is being granted, courtesy my tax dollar and the U.S. Government, a new monopoly in our school systems.

Clearly, most of the people negotiating the deal have never sat *FOR DAYS STRAIGHT* (4 days this past week) in front of a Microsoft operating system trying to perform a relatively simple task which simply can't be done due to poor planning on Microsoft's part. "But in our free market economy" (I hear the critics charge), "this would change as market forces would propel them to make changes."

NOT WHEN YOU HOLD A MONOPOLY

And just in case their stranglehold on desktop operating systems is not strong enough, let's allow them to put \$1 Billion dollars of their product in our schools.

. . . oh, and by the way . . . let's see . . . if the OS + Microsoft desktop apps (Word, Excel, etc.) costs (conservatively) \$500 retail BUT the CD and distribution material costs them (in quantity) around \$0.25 (seems reasonable since I can get 1,000 CD's manufactured for less than \$1 each), that means their \$1 Billion settlement is worth 1/2000th of that or \$500,000 in real cash (not "lost sales", REAL CASH!).

Let's see . . . perhaps Bill G., Steve B. and Paul A. can set aside a hand in their weekly poker game to cover the settlement. \$500,000 is a pretty small sum to buy a government sanctioned monopoly in our schools.

Do the people negotiating the DOJ settlement honestly thing this is a good idea?

At a minimum, the \$1 Billion settlement to benefit schools should be for HARDWARE ONLY which each school district or state should get directly. In that way, Microsoft can't use it's \$1 Billion hardware purchase to put the screws to local vendors or make a sweetheart deal with one of the big multinational hardware companies that Microsoft routinely is discovered in bed with making backroom marketing and distribution deals.

In closing, let me add that my company has made its livelihood using Microsoft products for almost ten years. While they do bring some useful offerings to the marketplace, their unembarrassed attitude as they strongarm the industry has resulted in my working LONGER HOURS for LESS MONEY because of INFERIOR MICROSOFT PRODUCTS. Any significant competition is simply silenced by driving them out of business. Is there any other definition of a monopoly?

I feel outraged and frustrated that it is going to take the EU to show the DOJ what backbone is about when it comes to negotiating with the world's largest software monopoly.

Subject: Settlement

Gents,

I am squarely against any settlement in which Microsoft benefits from its predatory practices. Microsoft continues to be a predator and such a proposed settlement

rewards, rather than punishes Microsoft for past deeds. A punitive arrangement would have Microsoft buy Macs for the poorer schools on OS X. Even better, Linux on standard PC platforms. Linux is already free—make Microsoft buy and maintain the hardware. That's punitive. Rewarding Microsoft by extending their monopoly into poorer sectors of education is dumb. If I refuse to pay income taxes will the DOJ punish me by making me tax exempt? Where do I sign up?!

Cheers!

Subject: DOJ/Microsoft Antitrust Settlement

To whom it may concern,

By forcing Microsoft to give away it's software free to anyone does nothing more than perpetrate the monopoly that Microsoft now cherishes. This does nothing more than play into Microsoft's hands.

Please I implore you to think this through before rendering a decision of this magnitude. Most people do not care how a computer works only that they can use it. Microsoft's O/S product offerings are substandard and very buggy. Yes the latest releases are better but let me point to the simple worms and virus that are continually being released which take advantage of Microsoft Windows vulnerabilities. These issues have been with the software for years, Microsoft claims to develop patches for them but NEVER does fix the real problem.

By forcing schools to use Microsoft offerings because they are free would be a huge disservice to those schools and in my opinion puts the Gov't in the back pocket of Microsoft. There are tangible alternatives to Microsoft for Operating Systems (O/Ss) as well as applications that are low cost or no cost. It has been my experience that as often as not that the free or low cost software works as well if not better than the Microsoft alternative. Allow these schools the opportunity to use what they want for an O/S.

What the schools really need is the Hardware and not some 5 year old junk computers that can barely run under today's requirements. If you feel that Microsoft needs to give away something then force them to buy Hardware for these schools!

I live in Washington and am in the technology industry, any kind of judgement that is worth rendering could affect our economy. I say do it, the law is the law and Microsoft broke it. If the products the company offers are as good as they say they are they will be continue, in a true and free market, to be a leading technology provider. Let them prove themselves against real competition.

Sincerely Yours,
Keith Bellows

Subject: Microsoft Settlement
[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]
784 Palo Alto Avenue
Palo Alto, CA 94301
December 6, 2001
Ladies and Gentlemen:

In the interest of saving time, I'll begin with an executive summary. If those conclusions are all you need, you can skip the discussion.

SUMMARY

The proposed settlement in the Microsoft antitrust case is unacceptable, for at least the following reasons:

1. The prohibitions in section III are appropriate and well-intentioned, but suffer from loopholes that allow Microsoft to achieve the effect of the prohibited conduct through other means.
2. Additional constraints are needed to cover other areas which Microsoft uses to protect and extend its monopoly.
3. The Technical Committee as envisioned in the proposal is too weak to carry out its duties effectively.
4. The duration of the settlement is too short.
5. There is no penalty for Microsoft's illegal conduct. Without such a penalty, there is no reason to expect Microsoft (or other offenders) will avoid similar illegal conduct in the future.
6. A truly effective settlement requires much more stringent action now, in order to discourage more Microsoft conduct that is damaging to consumers as Microsoft expands into Internet commerce, entertainment, news, and reference information, as well as acting as a repository for vast amounts of personal data.

DISCUSSION

Concerning the provisions of Section III:

III.A is ineffective, because the volume discounts specifically allowed in III.B can be structured so as to make competing platform software economically infeasible. Microsoft has used similar tactics (e.g. per-CPU licensing) against competition in the past.

III.C will be ineffective as long as Windows continues to be structured so as to promote Microsoft products and services automatically and continually, no matter what changes an OEM may have applied to startup screens and menus. This technique is ubiquitous in Windows XP. (Try it; you'll find that the constraints in III.C.3 are already obsolete.)

III.D. To the extent that MSDN is a for-fee subscriber-only service, it is not acceptable as a distribution mechanism for the documentation described in this section, because the fee schedule and processing of subscription requests are subject to abuse. Microsoft has exploited precisely this technique in the past. Guaranteed open

distribution, without fee, via a website, using data formats that are defined by non-proprietary specifications, would be a better approach. Also, it's not clear that the definition of "Timely Manner" is truly timely; a better one might be based on the completeness of the APIs involved, rather than the beta test of an entire operating system product (which will not necessarily be in synchronization with the development of many of the APIs).

III.E. The definition of "Communication Protocol" is appallingly weak in a technical sense, leaving provision III.E essentially meaningless. The key requirement that you should be targeting here is that Microsoft must provide sufficient documentation for a third party to develop compatible non-Microsoft software for any software component participating in a transaction. A traditional network communication protocol may be a part of this process, but it can also be made totally irrelevant, thus circumventing III.E.

III.F. Due to the loopholes afforded by III.F.2, it is not clear that there are any cases in which III.F.1 could be enforced. Also, III.F.1 specifically does not include critical Microsoft products such as Office, which are also used as instruments of retaliation.

III.H. The provisions of III.H.2 are excellent, however the loophole provided subsequently (in the second instance of III.H.2) renders them meaningless. Microsoft can designate irrelevant, but proprietary, functionality as a technical requirement, thus shutting out competing middleware. As an example, only a few weeks ago it blocked competing browsers from accessing msn.com on grounds that were later revealed to be specious.

III.I. This provision seems carefully designed to sabotage so-called Open Source software projects, which require the freedom to implement standards without royalties or sublicensing restrictions. If this provision is adopted as proposed, it could eliminate much of Microsoft's potential competition at a single stroke. As mentioned above for III.E, the key requirement here is that third parties (including Open Source developers) be able to develop compatible components for use in a Microsoft-based framework.

III.J. By invoking this provision, Microsoft can easily undo the effects of III.D, III.E, III.H, and

III.I. The conditions under which Microsoft can do this may seem well-defined legally, but they are unsound in a software-engineering sense, and thus render much of Section III moot. This is a large topic which I would love to discuss at more length, but time does not permit that here.

Concerning issues not mentioned in Section III:

There is essentially no relief with respect to Microsoft Office, a critical tool Microsoft uses to maintain and extend its monopoly power. At the very least, the data file formats and data exchange protocols used by Office must be available under terms similar to those of the Windows Platform APIs. Otherwise, initiatives such as .NET (which involves tight integration with Office) will simply obsolete the provisions relating to the Windows Platform.

Similar comments apply to .NET itself.

Concerning the Technical Committee described in Section IV.B:

IV.B.2. TC members are required to be "experts in software design and programming," but cannot be employed by Microsoft or "any competitor" to Microsoft, and cannot subsequently be employed by Microsoft or a competitor. Given the scope of Microsoft's presence in the industry, you may find it difficult to find any software expert who is not employed by Microsoft or a competitor. Even academic institutions could be construed as competitors if they are involved with Open Source software development, as is often the case.

IV.B.3. Microsoft selects one TC member, who then has one of two votes in selecting a third. If there was ever a case of the fox guarding the henhouse, this is it. I can imagine few more effective ways to render the TC toothless.

IV.B.9, IV.B.10. The lack of transparency in TC operations is disturbing. There is no way for outside entities (including parties who may have been wronged by Microsoft anticompetitive conduct in the future) to determine whether the TC is acting in good faith or even is well-informed.

Concerning the duration of the settlement: Reviewing the past history of anticompetitive behavior by Microsoft, it is clear that five years is far too short a term.

Concerning penalties:

It is ASTOUNDING that the proposal does not include a meaningful penalty for Microsoft's past behavior. The inadequacy of the proposal must be obvious from this alone. Through illegal actions, Microsoft has destroyed dozens of other companies that were true sources of innovation in the industry, artificially maintained (and in some cases even raised) high costs to consumers, and extended its monopoly power in PC operating systems to acquire other markets. To allow this behavior without consequence is clearly negligent.

Concerning the context of this case:

Today Microsoft enjoys nearly total dominance of the personal computer software market.

Whether or not it achieved this dominance in a legal manner, it has been convicted of maintaining its monopoly illegally. It has certainly shown by its attempts to manipulate legal and political systems that it has no compunction about applying its ruthless competitive techniques in other venues.

Consider that Microsoft already has presences in other significant areas of American life: news distribution (MSNBC), entertainment (XBox), history and reference documents (Encarta). There have already been concerns about Microsoft abusing its power in some of these areas (particularly rewriting history in Encarta).

Consider that Microsoft is moving (through .NET) to establish a central control of business transactions throughout the Internet, and (through Passport) to a central control of personal credit and marketing data.

In most of these cases it is leveraging (in the non-legal sense) its monopoly to obtain critical advantages against competitors.

Consumers have already incurred significant damage from Microsoft's behavior.

If we do not act now to establish an effective firewall against future illegal and unethical activity, I have no doubt that Microsoft will extend its influence to ever larger markets, while reducing the ability of consumers and of governments to limit its abuses.

CLOSING

In sum, I believe the proposed settlement would not be effective in constraining Microsoft's behavior, and probably would encourage future violations of law, as Microsoft would be aware that such violations carry few consequences. Perhaps we will find ourselves in court once again, after Microsoft has used its monopoly illegally to destroy yet more innovative companies; sabotage additional open, public standards; and establish more chokeholds on consumer access to digital information and services. Perhaps we will not, because next time Microsoft will have learned to manipulate the government as effectively as it now manipulates the computer industry.

Subject: Comments on the settlement with Microsoft

Dear Department of Justice,
I am told you are interested in public comment on how the DoJ is handling the Microsoft case. So, in a caring and respectful way, I want to tell how I feel about it. You caved.

You beat them in the court of popular opinion, and you beat them in Federal Court, and you beat them at the Supreme court.

They lied under oath, and they still lost. Why did you stop? Where is the gusto, the passion for justice, the mantle of protecting the people from a big, bad, greedy corporation?

Was it the Bush administration watching out for its corporate constituents? I hope not, because a lot of Microsoft's victims are also companies. They have spend much much more on software that doesn't work, and people to support the software that doesn't work. I can't tell you how many hours I've wasted in the past year trying to get technical support from my friends at Redmond. Those hours come out of the bottom line. Was it a bribe, such as a Microsoft's offer to cover the states legal fees if they would drop the case? Was it the events of September 11th? Was it a lack of computer expertise? God, I hope not: there are thousands of computer experts all over the world that hate Microsoft with a passion and would leap at the opportunity to help you.

I could easily bore you with all sorts of reasons how and why Microsoft software is awful and unoriginal: I'm a computer expert. Are you interested? Start at my web site, <http://www.commercialventvac.com/jeffs/OS-comparison.html>

Sincerely yours,
Jeff Silverman

MTC-00002909

From: Bob Hyland
To: Microsoft ATR
Date: 12/6/01 4:16pm
Subject: My Views

I work in the Information Sciences field and generally believe that Microsoft is a solid company that they follows ethical business practices. However, in a few instances, I believe they have stepped over the line.

In general, I believe that if a company provides a better mousetrap (in this case, an operating system that actually delivers integrated services) then they should succeed and prosper. Some people would argue that Microsoft produces mostly marketing, and that the "mousetrap" itself is inferior. I think this argument misses the point.

However, Microsoft has been heavy handed in a few instances. They are known for signing deals with companies, gaining access to proprietary information and then developing their own product with that insight gained. Examples include: OS/2 —> Windows 3.0 and Sybase —> MS-SQL. These helped establish Microsoft's monopoly. Before this time period, Microsoft was a bit player.

Now that Microsoft does have a strong hold on the market, I believe it is important to ensure that Microsoft do not use their position to crush the competition. For instance, if Microsoft began including, free of charge, Microsoft Money with their operating system, how many people would purchase Quicken?

Intuit represents a \$1.3 billion company with over 6000 employees that Microsoft could snuff-out relatively easily.

Finally, if Microsoft does step across the line and harm another company, I believe that they need to have a strong message sent to them that this behavior will not be tolerated. This is why I believe that any forward-looking agreement must include automatic provisions for future transgressions, and that these provisions need to be scary. Sample scary provision: forfeit 50% of gross revenues for each quarter during which the company engages in <specific activity>. A \$3 Billion-plus "Sword of Damocles" will get the attention of their board and their stockholders (of which I am one).

The bottom line: I believe companies need a great deal of freedom in order to generate revenue and value, and thus stimulate the economy. And, if they can compete successfully and become huge, that is great!

However, we do need to keep a close eye on these giants such that they do not adversely affect competing companies and the customers they serve.

net@inetgw, Roger Anderson

To whom it may concern:
There has been a lot of talk in the past few years about "monopolistic" practices by Microsoft, and I'd like to address these from a slightly different viewpoint than what you may normally hear expressed. First, let me state that I am in no way associated with Microsoft, nor any of the defendants or complainants, nor do I own stock in any of the companies that I am aware of participating in the suit. As a final disclaimer, I am not a lawyer, nor have I been privy to any special information about the case. However, I am a software engineer that has programmed under a variety of operating systems including Windows, various UNIX, and many others over a span of some thirty years.

We have heard it said that Microsoft has a monopoly in the operating systems software market, and that the simple fact of promoting its own operating systems amounts to 'monopolistic and anti-competitive practices'. This argument is seriously flawed, and flies in the face of historical fact.

The various operating systems known collectively as 'UNIX' began in the mid-sixties. It has evolved over time to become one of the finest operating systems ever produced. Because of its proprietary nature, and Federal actions that prevented AT&T from marketing it openly, several "versions" based loosely on the original code were developed by a number of entities. Until the early 1990s, both the hardware requirements (memory & disk space) and software licensing (price) requirements had kept it out of the "mainstream" desktop market. A claim could also be made that the technical expertise required to install, administer and maintain it were prohibitive for most potential users. So, in the early 1990s, a consortium was formed to standardize the system API, and simplify the installation and maintenance of UNIX. However, due to a number of factors (called competition) on the part of Sun, Novell, the X Consortium, and others, the effort never resulted in a serious market penetration in the personal desktop market.

In early 1984, Apple computer introduced the Macintosh and Lisa computers. This

computer system was a quantum leap forward for personal computer users, and, as the court is well aware, heralded a new ease in operating systems for home PC users. However, this also was proprietary operating system, and even the hardware interface was closely guarded (legally) by Apple Computer. It is interesting to note that when the Macintosh made its debut in January, 1984, most of the applications that ran on it had been developed by Microsoft under a contractual arrangement.

I believe Microsoft could see the handwriting on the wall, and immediately set about developing its own system that could compete with the GUI interface of the Apple Macintosh. When I first saw this machine in May or June of 1984, I immediately bought one of the Macs and enrolled as an Apple Certified Developer. Like Microsoft, I realized that this GUI interface was the "wave of the future".

Then, in about 1991, a Norwegian student, Linus Torvalds, began developing a "free" UNIX clone as a consequence of his graduate thesis on Intel 80386 memory management. This operating system, now known as Linux, was not based on any of the original UNIX code, and was brought under the umbrella of the Free Software Foundation's "Copyleft" licensing scheme. What is the point of all this? The point is that the various versions of the Windows operating system have succeeded not due to any monopolistic practices by Microsoft, but by what I believe is gross incompetence, greed, mismanagement by Microsoft's competitors, and, perhaps most importantly, by the choice of the consumer!

In the industry, it is generally agreed that Microsoft Window was not a viable commercial product, nor for business nor on the desktop, until the introduction of Windows 3.0 in mid- to late-1991. What happened to all the competitors' products during that time? Why did they not make any progress on the desktop? Sun had been in the UNIX market for at least all of the 1980s, and 'X' (the UNIX GUI interface now licensed by the X Consortium) had been around for years. Apple had practically mismanaged itself out of existence, tied up tens of millions of dollars in lawsuits against Microsoft and others, and tried to "live on its laurels". And this does not even cover the other companies like Commodore that, in some cases, had superior operating systems, viz. the Amiga. So what happened?

Competition happened, and the consumer spoke. Microsoft won convincingly, in an open market. Is Windows a "superior" operating system? Not in my opinion. It is one of several operating systems I use at home, but my heart is in UNIX. Let's look at what is available.

The cost of licensing UNIX software is prohibitive for home users. While Sun had a period of time where they "gave away" Solaris 7 for the x86 environment, the cost of their compilers are \$3000 and up. And where are all the applications? The cost of Adobe Framemaker is at least \$1000 per seat, and most of the other application software is likewise prohibitively expensive. Most of this software is targeted to the business market, by choice of the manufacturer. In other

words, they have chosen to keep their prices high, or disregard the home market.

The promise of Linux (and Free-BSD and others) may never be realized in the home market, though it has made—and continues to make—real progress in the server market. Companies like RedHat have created "distributions" that make the installation of these UNIX clones available to the desktop user. This operating system software was "free" (to RedHat and others), meaning they do not have to pay any licensing fees. Since I like UNIX, I really like this system, but it does not have the dearth of applications that make an operating system popular, and it is just barely usable by most non-technically savvy users. While Adobe experimented with a beta version of Framemaker for the Linux market, it decided not to market it. Why? It is my belief that management either could not find a way to get customers to pay roughly \$1000 per seat, nor could they find a way to reduce the cost of a product without conflicting with the per seat cost to their business customers. In other words, their price would have to come down to an affordable price. Nor have they apparently felt it desirable to port their other desktop applications to the Linux platform. In addition, there is competition between the GUIs used for the desktop in Linux: Motif, XFree86, GNOME, or KDE. With this kind of confusion, who could blame the consumer—or Microsoft?!

The are, of course, thousands of applications for the current version of the Macintosh. But, where Microsoft tries to maintain a backward compatibility with application vendors (not always possible), the Apple Mac history has been one of changing architectures, higher prices, "evangelism" to lure and keep consumers, and non-compatibility even with their own products. So, what is the complaint against Microsoft? Is it that they gave consumers what they demanded, and that they gave it to them for a price that they willing to pay while others were not? Are we to damn Microsoft for building an empire that the others had a chance to build, even with a head start of a decade or more, but did not or could not build? In my humble opinion, what we are seeing is the result of pure greed and envy on the part of Microsoft's competitors, and a desire to force consumers to pay more by throttling Microsoft.

There are many things that Microsoft has done that I do not like nor agree with. But I am NOT forced to buy their operating system. I can get Sun Solaris, OSI, BSD, Linux, Mac OS-X, ad infinitum, but I cannot get them for the same price as Windows XP, nor any of the other Microsoft operating systems. More importantly, I cannot get the applications that I want on most of the other platforms. Is this what Microsoft is to be "punished" for?

If the court—i.e., you—decide that any company is to be punished for its virtues, you enable the incompetent, the second-handers and the moochers to lay claim to all that they could not or would produce. This is a slap in the face of morality, and one which Nature will not allow the United States to get away with. The court can choose which values it wants to protect, but it

cannot escape the consequences of that decision. If it chooses to reward and protect individual effort, a free market, and the right to act on one's own decisions, then it acts to protect "traditional American values".

If, and only if, Microsoft has threatened its vendors or competitors, which would make the contracts null and void under [at least] ICC 201(g), should the court take action against Microsoft. On the other hand, if the court finds that Microsoft has not done this, it should send the complainants packing "with prejudice".

Thank you for the courts' consideration.

Sincerely,

Alva Anderson, Jr.

Subject: my opinion

Microsoft needs to separate products into these categories: applications

GUI Manager (like) GNOME GUI (X11) operating system

Microsoft should not be allowed to come out with new application unless it runs on the top three GUI and GUI managers.

Microsoft should not be allowed to release any more operating system version upgrades (products that are separately named, advertised and licensed) until they produce GUI/GUI manager that runs on the top three operating systems value added resellers (those that sell hardware and software combinations) should be allowed to control desktop advertising. Operating system vendors and/or GUI vendors should not allowed to be able to control context (advertising icons)

Subject: [Fwd: MS vs DOJ]

To whom it may concern,

Below is my comments regarding the proposed Microsoft Antitrust settlement:

1. The settlement (like the previous settlement) does not punish Microsoft for its past transgressions. It is has monopoly powers, and abuses them.

2. Giving software to schools is a low cost item to Microsoft because it doesn't cost much to burn another CD. It also helps entrench their products, and hinders competitor's products.

3. Years ago I bought a Dell computer. I wanted to buy it without Windows because I ran IBM's OS/2, but was told that I would have to pay more if I didn't get it with Windows. (Does this make sense???) So I bought it with Windows for a lesser price, and then formatted the hard disk, and installed OS/2. Effectively I had to buy Windows, but I didn't want it. This settlement in no way punishes Microsoft for

their consumer unfriendly licensing agreements, nor reimburses me for my having to buy Windows.

4. When I bought Window/ME, it included Internet Explorer, and other applets which I don't want. I use Netscape, and always have. I am being forced to have IE when I don't want it. The other applets that Microsoft includes are shallow in function, and I purchase more robust products when I need them. However, I pay an increased cost for things that I don't want.

5. Microsoft has a practice of initially providing new applets for free—e.g. IE and their multimedia player. (It cost Microsoft \$10million to develop IE, and they gave it away for 'free'—Over charging for other products made up the \$10 million.). This practice either hinders or drives the competition out of business—e.g. Netscape, Apple Quicktime, RealPlayer. Later the applet gets included in their OS-Windows/W2k/XP. We need to keep the OS and applets separate products, and let me buy what I want/need. (If I buy a car, I can get an after market CD player if I want to—I don't have to buy the manufacturer's CD player.)

6. This settlement is a farce, and is a political solution—not a solution mandated by the antitrust laws.

7. The judge overseeing the settlement is inexperienced and unqualified for an antitrust case of this proportions.

8. Microsoft claims to be innovative—they are very innovative at developing ideas of others, and masking unfair their trade practices.

9. What is good for Microsoft is not good for the nation.

10. I urge the remaining 9 states, and the EU to aggressively pursue a settlement worthy of Microsoft's flagrant behavior.

Thank you for hearing me out. I have little faith left in the court system, and that my comments will sway any decision.

Subject: Settlement Will be ineffective
Bill Gates is a smart man, I'll give him that. Smart enough to produce the even more

proprietary Windows XP while in court for anti-trust.

Also, you may want to investigate companies like Qwest possibly getting kick-backs from Microsoft for only supporting their products—for example the Intel PRO/DSL 2100 Modem which is licensed to Qwest and no linux drivers—and when you call qwest or intel about that they give you the run around. Why allow the monopolist to continue to strangle the american public with their far inferior operating system by doing things like this—and also attempting to proprioritize internet protocols, etc. Linux and other operating systems are more robust, more servicable, customizable, interoperable, etc.

What you have done his slap Mr. Gates on the hands and have done NOTHING to him—you have not weakened his monopolistic position, or changed his behavior, he continues to behave in a mopolistic manner, and will continue to do so until he no longer has the market share that he doesn't deserve. The only way to remedy the problem is compulsory support for Linux operating system for all hardware manufacturers and major software firms—including microsoft with their Office and other software suites.

Subject: Microsoft government payoff

The proposed settlement with Microsoft's anti-trust violations amounts to a joke. I understand some may think it may be good for a lagging economy, but those with those misguided thoughts have forgotten why those anti-trust laws were made. They were made to protect commerce and competition. It is common knowledge, not just judicial precedent, that their business model is to stomp on all competition by numerous illegal or barely legal marketing practices that only a financial behemoth could afford to do long enough to put the competition out of business. (they see a good product, copy that idea and make it part of their operating system on the next OS release). They have not innovated or invented any technologies they currently claim as their own. All have been duplicated in operation and function as their competition was marketing as a separate software product, or the competing company has been absorbed into the Microsoft software devouring machine.

Microsoft giving free systems and products to schools essentially gives a whole new generation of computer uses indoctrination to Microsoft products and not a healthy environment of alternatives. What you have essentially done was assist Microsoft in their next underhanded move. How many other competing companies can afford to give free products to schools and such without a major hit to their ability to make a profit? This same technique is what made Microsoft the over powered beast it is today.

A world without a big Microsoft behemoth that squashes all competition and extorts huge licensing fees from it's already locked in customers and instead many competing companies with competing products makes for business and a healthy economy. This country was founded to allow the little guy the ability to live the American dream, not to give a far too powerful corporation the ability to literally control the market (with strong arming and bullying) they are supposed to compete in.

I don't see how you think saying "bad boy" and it's business as usual, is going to help our economy? Punish companies like Microsoft that abuse our capitalistic system by quashing competition. Restore competition and you'll restore the economy to a healthy state.

My final words are this analogy: "What if the computer world were likened to the automobile world? What if there was only one major car manufacturer in the world setting and making all of the standards for the industry? Let's assume you demanded high licensing fees to just be able to drive that car each year? The only competition was various "kit car" groups making specialized and higher quality cars, but unable to compete with the big monopoly which stomps on those that try to compete with

them. Some of these small groups may make money making special addons to increase performance on the monopoly's vehicles. A CEO at the monopoly likes these addons, they reverse engineer the addon or extort the rights to the addon from the small company (by threatening to release one anyway to compete with them or sell to them now to save them time) and offer the addon as a standard inclusion in their next model car and then claim the car wouldn't work without it."—That's Microsoft if they were a car company.

Thank you for your time,

Subject: I believe the DOJ settlement with Microsoft is a farce.

I believe the DOJ settlement with Microsoft is a farce. Microsoft should be broken up, and the browser should be separated from the Operating system. It can be done manually, and I HAVE done it many times on every version of their OS.

Microsoft's claims to the contrary are complete fabrications, and indications of their utter disregard for the truth.

Microsoft eats up or destroys any competition. They DO make standards, which is good. But they smother innovation. All they ever do is add bloat to their programs, and provide little new in the way of stability for their premier product, Windows.

Microsoft's settlement will do nothing. Change that. Separate their business lines.

Regards,
Lou Guerriero

MTC-00002919

From: Paul Kagan
To: Microsoft ATR
Date: 12/6/01 4:45pm
Subject: Microsoft Antitrust Case Settlement
To whom it may concern (if anyone),

I am dismayed at the terms of the Federal Government settlement with Microsoft. Microsoft has shown itself to be possibly the most voracious monopolist since the start of the industrial era, yet the settlement seems to contain neither punishment nor cure. Bill Gates has often claimed that his company has provided the engine for driving down the price of increasingly powerful computers. This is plainly not true. While Intel, Motorola, AMD, and other American innovators have brought us faster and more powerful machines at lower prices, smaller sizes and lower power consumption, the Microsoft component, Windows, has become larger, slower and dramatically more expensive per unit.

Microsoft has trumpeted their innovations, but has in reality offered mostly bundling of market tested ideas and features, developed by true innovators whom Microsoft then engulfed, pirated, or destroyed. Microsoft copied the graphical interface (Apple and PARC), the browser (NCSA and Netscape), the spreadsheet (Visicalc and Lotus Dev.), the high level database language (dBase II), the

current disk file system, disk compression (Stak) and the PC based e-mail client. Where have they innovated? Universal Serial Bus (USB) was available in hardware before it was available in windows, and for the unlucky who had the first version of Windows 95, Microsoft never made an upgrade available; Windows 95 "rev B" and "C" were not available as upgrades, only as OEM new install versions. Therefore the only option was to buy a new OS or a new computer to get this feature, even if your system already had it!

How has this helped American technology?

Microsoft still blares about the "new Technology" in Windows NT, and about the tried and proven NT core in Windows XP. This technology is largely based on the venerable Digital Equipment Corp. OS, VMS, 1980's vintage software. They compete with more inventive "early adopters" in Internet portals (MSN vs. AOL), music distribution (Media Player vs. Real Networks), gaming (X Box vs. Playstation and Nintendo consoles), Internet finance (MS Money vs. Intuit Quicken, et. al.) Web Servers (MS IIS vs. Apache), and hand held organizers (Windows CE vs. Palm OS). In all cases, the Microsoft desktop hegemony is used to hobble other players. The sum total result is that America pays more to get less, and Microsoft enriches its investors at the expense of consumers and the US government.

Now the US Department of Justice is willing to help Microsoft to force its software on schools in the guise of a punishment? I believe those tears MS is crying are crocodile tears. The DOJ is actually helping to shoehorn MS software into a market that has largely chosen to not use it, a market that is well served by Microsoft's only commercial competitor, Apple. I question the DOJ's understanding of this technology market and I challenge the validity of using taxpayer money to comfort an operation that has engaged in such egregious, illegal, and anti-American behaviors.

Sincerely,
Paul A Kagan

Subject: Microsoft Antitrust Settlement
To Whom It May Concern:

This settlement is the worst possible outcome for consumers. I must admit I don't know all the particulars of the settlement but on its face, it sounds like you have performed Microsoft a service. My understanding is that Microsoft was found guilty of violating anti-trust laws. The punishment is for them to spread the Microsoft operating system and software into new markets, i.e., low income school systems. MS will not change its practices and stands to gain tremendous rewards on this deal. I hear the 'free' software is a limited time offer. Five years to be exact. This is not even a slap on the wrist! This is a manicure!

Every poor soul who starts using MS software will be enslaved to endless and useless upgrades. (Useless is a bit harsh; however, I find that most of the upgrades

provide little in the way of features and alot in the way of bugs.) You have no choice but to accept these upgrades if you want to communicate with others using MS products. Backwards compatibility is a joke to MS. Even different versions of Office 97 can have difficulty reading files. MS seems to change file formats endlessly, making older systems obsolete. I have personal experience with this in cases of Word, Powerpoint and Access.

Date: 12/6/01 4:50pm
Subject: Microsoft Anti-trust Proposals

As an unfortunate user of Windows, I have an interest in this whole mess. I can remember a time when I could buy Windows without Outlook, it came as a separate disc. I had no trouble with Windows interfering with my Netscape, and I had fewer system problems overall.

I would love to see a program in place where those of us who do not want Outlook or any of the other linked subprograms [briefcase, wallet and the like] could essentially 'turn in' our version of Windows and in return get a plain, unadorned version of the current windows [I happen to have had 3.11, 95, 98 and now Me.]

I also have to seriously complain about the new Xp version of windows. I have an associate who just bought a brand new computer to replace a damaged computer. She brought it home, and discovered several very disturbing things about it.

Firstly, there is no DOS environment on the machine, so all of her older DOS environment programs will not function. It

has to be plugged into a phone line to even turn it on for the first time and it automatically dials up Microsoft before she could do anything. If she adds a program, or takes one off, it automatically dials up Microsoft and reports in. She couldn't upgrade her Works with a non-XP version of Office, nor could she load the older version of Office—she had to go out and buy a newer version of Works Suite to just get Word on her machine.

To me, this is even MORE of a monopolistic behavior—before you at least could use your older programs in DOS rather than have to go out and buy new programs to have what was in the older machine. ME, I just want plain unadorned Windows, like when I had 3.11! Marilyn Traber

Subject: My Opinion

As a citizen and a customer of Microsoft I do feel that Microsoft is pushing its way into everyone's life and in some cases leaving no possibilities to change to any other O.S. for some people out there.

There are applications that are only available to Microsoft OS's when they should be available to all OS's.

Microsoft also doesn't offer the stability that other Operating Systems do. You'd think that with such a large corporation they'd put in the time and the money to make their Operating System stable, efficient and reliable.

The same reason that people buy cars and trucks. But with vehicles you buy one brand of car and that brand of car can carry people just like all the other cars. You buy a truck and that truck can carry equipment and supplies just like the other trucks. Microsoft Monopolizes by only making things available to their OS and then they don't set up their OS to Utilize the computer fully.

Also making Red Hat Linux available to the schools would show our new generation of students that there is more available to the world than just Microsoft. That there are more possibilities and that computer can be utilized to their full capacities. That not everything is expensive.

Red Hat Linux will also give those in computer programming classes a chance to learn more and explore many possibilities since Linux is the chosen OS for hackers because the OS can be suited to the user and is computer programmer friendly.

Subject: poor judgement

When I read the some what skimpt details of the present D O J settlement, MY first thought was how much did Microsoft donate to political parties to buy this out and out miscarriage of justice.

The LAW WAS OBVIOUSLY ignored by Microsoft and full punishment should be meted out.

Any thought of the present day financial outlook to avoid punishing a obvious law breaker. is simply not acceptable, These actions in the past are the reason for such problems today . The many small companies that were put out of business by Microsoft probably amounts to more job loss than any shut down of Microsoft, but I do not advocate putting Microsoft out of business, how ever it should be broken up just as was done with

the phone companies and the implementing of these large mergers this country is tending to lean to is just more of the same in the works because this settlement simply tells companies "do what you want we aint going to look"

I think "GOVT. BY BUSINESS for BUSINESS against the people has gone on long enough"

Subject: Re: Re: Windows Update Support Request

As you know, I own a registered copy of both WIN98SE, and WIN2K. One would expect backward compatibility on a backup program from either of these two operating systems. I believe all of those who migrate to XP will also share this same frustration, as there is no indication that I know of that tells

you that if you have used MSBackup to make a copy of your data in the QIC format, that once you upgrade to WIN2K you won't be able to restore any of those files.

If I can't get an answer to this problem, I plan to call the Department of Justice, Anti-trust Division, and see what they have to say about this situation. I may also see about filing a class action lawsuit on behalf of so many of us that are in the same situation, both WIN2K and WINXP customers who previously owned WIN95, WIN98, or WINME, and whoever did a backup with those versions.

A response is expected to the question that has been asked now for 2 months without any reasonable response other than to contact the OEM vendor from whom I bought this computer. It is not their problem, it is a MICROSOFT problem that needs resolution.

See below on audit trail of this issue:

Hello Allan,

Thank you for contacting Microsoft.

I apologize for the inconvenience this has caused Allan. Since you have indicated you have been unable to access your case online, I have pasted the entire case history below for you review:

C Important—Severity C

PID: 50637-757-0689417-02704

Before buying a NEW system with WIN2K, I did a full backup using MSBackup on my old system (WIN98SE). The file was saved as a QIC file. Now under WIN2K I can't open this to restore data, mail files under Outlook Explore, and document files, as QIC is not supported in MSBackup under WIN2K Professional. How do I restore files from my WIN98SE MSBackup QIC files created under WIN2K Backup?

Good Afternoon Allan,

Thank you for using Microsoft Web Support.

The Support Professional assigned to your case has determined that your issue pertains to Microsoft Windows 2000, and that you would be best assisted by a Support Professional who specializes in that area.

Please assist us in processing your request by providing the Product Identification Number for your Windows 2000. To locate this number:

1. Click Start, point to Settings and then click Control Panel.

2. Double-click the System icon to open System Properties.

3. Click the General tab to find the 20-digit number under the "Registered to" line.

Once we have this number, we will be able to provide you with the support options available for your copy of Windows 2000.

To add this information, please create a supplement to your case.

Thank you,

Charity

Microsoft Online Customer Representative

51873 OEM 0003461 35834

The files are Word, Excel, Powerpoint, etc files that I need to extract from the QIC files. If you try to tell me to go to the OEM provider of the system, I disagree with that assumption. This is a WIN2K issue no matter where the WIN2K software comes from. This is a SYSTEMS problem in my opinion, and I expect an answer on this, or a vendor to contact that can solve this matter.

Pacific Daylight Time Hello A1,

Thank you for contacting Microsoft.

For your convenience, we have forwarded this e-mail to your Support Professional.

In the future, you may submit updates to your SRZ cases directly.

1. Go to <http://support.microsoft.com/support/webresponse-nc.asp> and select the type of support you used to submit this issue.

2. Highlight your case in the list. At the bottom of the page, click Create Supplement.

3. If you are unable to access your case from this link, please send e-mail to wrhelp@microsoft.com, and we will add your supplement and/or send you a copy of your Support Professional's last log entry.

If you have any additional questions, please let us know by replying to this message.

Thank you,

Ronald

* * * PHONE LOG 23-Oct-2001 09:15:50

Central Daylight Time Good Morning Allan,

Thank you for using Microsoft Web

Support.

We appreciate the additional information you have provided and apologize for the delay in response.

We appreciate that you have taken the time to let us know your feelings about the "OEM" support options. We consider customer feedback an opportunity to improve our business. We have forwarded your comments to the appropriate department.

However, the fact still remains that this is not a retail version of Windows and is an "OEM" version.

Since the letters "OEM" appear in the Product ID number, your copy of Windows 2000 was purchased under an Original Equipment Manufacturer (OEM) license agreement. Under this agreement, the manufacturer of your computer holds the rights to your "out of package" warranty,

which includes offering industry standard support for all hardware and software included in the purchase. OEM software typically comes preinstalled on the computer.

Microsoft does offer support in a secondary capacity. I have included those support options below for your convenience, as well as a list of manufacturer's phone numbers and links to support sites.

Manufacturer's phone numbers and sites:

<http://support.microsoft.com/directory/worldwide/en-us/oemdirectory.asp>

Web-based technical support from Microsoft is available at <http://www.microsoft.com/support/>

If you are unable to resolve your issue using our online self-help services, in order to receive assisted support, you will need to create a new case.

You may submit your technical support issue by going to <http://support.microsoft.com/support/webresponse.asp> and clicking "Submit a Question Using Pay Per Incident (PPI) Support"

If you would prefer to work with one of our Support Professionals by telephone, they are available to assist you at 800-936-5700.

If you have any further questions concerning your issue, please create supplement to your case.

Thank you,

Charity

Central Daylight Time a_white Action

Type: Incoming call

Good Morning Allen,

Thank you for again contacting Microsoft.

According to the information you have provided, your Microsoft products were included with your system.

If this is correct, your copy of Microsoft software was purchased under an Original Equipment Manufacturer (OEM) license agreement. Under this agreement you are using a version of software that was designed to be sold with a new PC and has been licensed to your hardware manufacturer. When the OEM elected to include this product on their machines they also agreed to provide the primary product support for the Microsoft software. When an OEM decides to preinstall software (Microsoft and

most other software brands) on a computer, the OEM makes a licensing agreement for the right to distribute software on their computers. Once the OEM purchases the licensing rights to the software, the majority of the rights of the software are put under the control of the OEM.

This is noted in the End User License Agreement found within your software. Since we are not always able to notify every user directly when changes occur, we publish major changes on our Online Support Web sites. Please visit: http://support.microsoft.com/directory/OfficeXP_Q_A—USAFinal.asp for more information about Microsoft's new support policies.

Available from the Microsoft support web site are several self-help options, including our Knowledgebase, Troubleshooting Wizards and Peer-to-Peer Newsgroups. Our Knowledgebase contains over 90,000 articles written by our engineers, for end users. Your fellow users may have a few suggestions if you post your issue to our Peer-to-Peer Newsgroups.

Our engineers are available 24 hours a day, 7 days a week for most products through our Pay Per Incident Service. To submit an incident to our engineers via the web, please visit: <http://support.microsoft.com/support/webresponse.asp>

Once there select 'Pay Per Incident Support' If you would prefer to speak to one of our engineers over the phone, they are available to assist you at 800-936-5700.

I apologize for any inconvenience you have experienced while trying to resolve your Outlook Express problem. Microsoft will be more than happy to help you resolve your technical issue, within the boundaries of our support guidelines.

In our previous emails, we have provided you with information on how to submit a Pay-Per-Incident support request via phone or Web Response. We have also included information on how to contact your OEM vendor, as well as information on our self-help informational services. I would invite you to utilize any of these options.

By utilizing any of the options submitted to you for obtaining support on this issue, you may assure a more positive experience in the future. I wish you the best of luck in resolving your issue. However, as the primary point of contact for support is the OEM vendor, and not through Microsoft, we have offered options under the parameters of support as it currently stands on your case number SRZ010924000209. I will be happy to forward your comments and suggestions to the appropriate group.

If you have any other questions about your case, please let us know.

Thank you,

C. Loretta White

Subject: Re: Re: Windows Update Support

Request

Hello Allan,

Thank you for using Microsoft Web Support.

Allan, I understand that you would like to know if you can extract the MSBACKUP program from your WIN98SE CD to your WIN2K machine to restore QIC files created prior to upgrading to WIN2K.

I would like to inform you that the warranty support for Windows Update site is limited to site navigation and downloads only. Since your issue doesn't involve any of this, the best option would be to work with your computer manufacturer directly. You may also consider using Microsoft's no-charge information services or submitting a Pay-Per-Incident support request to work with a Microsoft Support Professional. Allan, please note that the support is tied to the operating system and since you are an OEM customer, your first point of contact would be your OEM.

I apologize for any inconveniences this issue may be causing you and understand that it is frustrating.

If you have any additional questions, please let us know by replying to this message.

Thank you,

Vivek

Microsoft Online Customer Representative

Original Message Follows:

It's a pretty simple question, and it's a MICROSOFT issue, as you have created the loss of backward compatibility.

Can you answer the question: Can I extract the MSBACKUP program from my WIN98SE CD to my WIN2K machine to restore QIC files created prior to upgrading to WIN2K.

I find it amazing that you have elected to show the world that the kind of illegal, and immoral business practices Microsoft have proved so expert at, is A OK.

I do understand though, that Microsoft are heavy sponsors of your department and therefore you will not find harshly against them. Another fine example of how easy it is to purchase liberty and expand the definition of freedom for the rich by the US courts. Why am I surprised.

Looking forward to the movie deal—which will no doubt allow micro\$oft to profit further from the illegal actions you condone.

From: Don Ledford
 To: Microsoft ATR
 Date: 12/6/01 5:06pm
 Subject: Settlement

I'm very disappointed with the settlement.

I been through several hi-tech startups and now own a small Software company located in Bellevue, WA. I've watched Microsoft grow from it's inception. Microsoft is a client and I have many friends who work for the company, but MS is clearly an abusive monopoly. It has generated huge profits at the expense of consumers—simply compare the cost/performance of desktop hardware versus software in 1982 and today. And remember software does not have any significant manufacturing costs. The price of most MS software is not controlled by competitive pressure and MS execs would be doing a poor job of managing the company if they did not seek to maximize profits. MS's management will continue to use all of the company's resources to protect its profits and market position.

MS uses its monopoly position on the desktop and huge financial reserves to smother any innovation which might threaten its monopoly. Today all MS has to do to kill a new idea or fledgling company is simply mention a vague interest in that market. Venture capital will dry up immediately. VCs will not try to compete with Microsoft's monopoly and finances.

So—I was stunned with the decision. Excuses such as: "MS has a big impact on the US economy"

"If MS were split up we'd just have 2 big monopolies" are simply wrong.

I'd like to know who's responsible for this decision.

From: John B. Gibson
 To: Microsoft ATR
 Date: 12/6/01 5:18pm
 Subject: Microsoft Settlement
 TO: DOJ
 FROM: JOHN GIBSON

To whom it may concern,

I believe that the settlement should only require price gouging and fair competition be available to all parties. I also think that Microsoft earned their success and should not be denied their own success. Our country is in a recession and hampering the success of Microsoft was the beginning. Microsoft is a technology. Technology is a media for others and a form to communicate one's idea's and share interests. Since it's foundation that has been true, I believe that there should be a board to overlook the practices of Microsoft periodically and those people that do so should be of high integrity.

I trust our department of justice to make the decisions that will be in the best interest of this country and look forward to your decision.

Sincerely,

John Brian Gibson

 Subject: disappointed

I'm a developer. I see the practices of this giant monopoly crush the little guy. I've seen new technologies come along just to have Macrosquash crush them and have the technology disappear. I was excited when the AT case started.

I'm extremely disappointed with the fact that a judge ruled them a monopoly and then our gov did nothing. In fact, all I've seen happen are some stock changes, which have since recovered better than before. Can you do nothing right? Can't you even follow up on your own decisions?

Even now they continue the practices they have followed since the beginning. Innovation is still stifled for half implemented crap.

I truly believe that MS must have paid off those in charge, how else could this obvious travesty of justice occur.

Scott Woods

MTC-00002938

From: Terry Hulseberg
 To: Microsoft ATR
 Date: 12/6/01 5:05pm
 Subject: Microsoft Settlement

Comments:

Please don't allow Microsoft to payoff it debt to society by allowing it to donate \$830 million dollars worth of software. This is hardly a penalty to Microsoft as all it really costs them is media and shipping, maybe \$1 million. (The claimed value is a market value for sales which Microsoft isn't likely to get.)

Additionally, this gift would be anti-competitive to Apple and other suppliers to the school system as it would shut them out of a billion dollars of business with the schools.

Thanks.

Date: 12/6/01 5:22pm
Subject: FW: Under the Brim Red Hat
December 2001

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

Red Hat. Under the Brim. December 2001.
Dear Sirs:

The United States of America, in fact the world at large, will greatly benefit from the existence of more than ONE single home computer operating system. Microsoft created the home computer market and we are all thankful for their accomplishment, but now with Microsoft avidly competing in all three separate computer software areas, Operating System, Operating Software (such as Word), and Internet Browsing Software, the only real choice let to us is which hardware system you will put your Microsoft Computer [sic] on.

Linux is an operating platform that provides that much needed competition. What is even more important is that Linux has additional benefits, such as:

(1) Linux development reflects Americans' do-it-yourself attitudes. Linux is open to be developed by anyone and the source code is shipped with the final product. Microsoft hides its source code. Using Linux is like buying a car directly from Henry Ford and Henry himself is willing to show you how it tinker with it. Using Microsoft OS is like paying for a car that you do not own, that you cannot open the hood to look at let alone touch the engine, and that only Microsoft Gas is guarantee work well in it.

(2) Linux is safer. Unix machines and now their close cousins Linux machines have always been security minded from the first days when they were used to build our national defenses and the atom bomb. Also look at the recent plague of computer viruses, which have at times crippled parts of our industry. Those viruses only attack Microsoft products. In fact Microsoft states in its publications that it uses UNIX machines to produce distribution software CD's to prevent the accidental introduction of Viruses.

(3) Linux is neighborly. Linux will run application software made for Microsoft windows operating systems. Microsoft will not run programs made for Linux machines.

(4) Linux is yours to own and does not come with strings attached. Once you own Linux software it is your property and you can do whatever you want with it. This includes making copies and giving them away to all your friends. It also includes putting a nice label on the Linux copy and selling it for as much as you can. Microsoft products never sell you their software. They allow you to use it for a time period. With

the advent of Microsoft XP, that time period now has a limit and strict use criteria.

Bill Gates, the entrepreneur, saw the value in the DOS software, kept the rights to it in opposition to the corporate giant IBM, and developed it into the bedrock of home and business computing that Microsoft OS is today. Now the tables have turned and Bill Gates, the corporate giant, stands in the way of today's software entrepreneurs. If the early Bill Gates had corporate giant Microsoft standing in his way, the home computer and today's information based lifestyle may never have happened. The question to ask is, "What beneficial changes can the people who see the value in Netscape, Linux, Star Office, and all the other open license software products bring to us if Microsoft's monopoly is broken?"

Please review the Offer that Red Hat Linux has made to you with a favorable eye. Accepting their offer could begin to level the computer OS playing field and teach diversity in our poorest schools.

Stephen Mandas

RED HAT RESPONDS TO MICROSOFT ANTITRUST, CLASS-ACTION SETTLEMENTS

November was a busy month for Microsoft and the US judicial system. It began when the Department of Justice announced it had reached a settlement of the antitrust suit against the company. The DOJ had previously found Microsoft to be a monopolist, but the settlement included no punishment for past actions and left doubt as to its protections against future monopolistic practices.

The DOJ is collecting your letters about the settlement via email. We encourage you to share your opinions, send your letters to: microsoft.atr@usdoj.gov Not long after the DOJ settlement, Microsoft announced it had agreed to another settlement regarding a separate class-action suit brought against the company by numerous parties that alleged overpricing of Microsoft products.

The settlement forces Microsoft to donate software, hardware, and services to America's poorest schools. Red Hat responded to the proposed settlement, pointing out that the settlement could simply introduce Microsoft to a market where they could further extend their monopoly. In its counter-proposal, Red Hat offered to provide free software to every school in America if Microsoft provided the value of its donation in hardware costs rather than its own software.

@ Read About the Class-Action Settlement
@ Read Red Hat's Response

At a hearing on November 27, Red Hat executives testified on behalf of our

settlement counter-proposal. Currently the judge presiding over the case is undecided on whether to proceed with the settlement as proposed.

UNDER THE BRIM CONTEST 26:

SUBLIMINAL MESSAGES III

For last month's contest, we asked you to pull the hidden message out of the following statement given by Bill Gates after the Microsoft settlement.

"The settlement is fair and reasonable and, most important, is in the best interests of consumers and the economy."

Here's what you came up with:

Honorable mention #1 goes to John in Ada, Oklahoma for . . .

"Naa Naa Boo Boo"

Honorable mention #2 goes to Jon from

Texas, who found . . .

"Nail the consumers"

And the winner of Contest 26, hailing from Atlanta, GA . . . Jason, who found what Bill was really trying to say . . .

"Let me resume"

Thanks for playing. Interesting side note: This contest breaks a string of two straight wins by the South African contingent of the UTB audience. Although one now lives in London, it turns out our last two winners grew up going to school together in Port Elizabeth, South Africa. Small world. . .

UNDER THE BRIM CONTEST 27: THE INK BLOT TEST!

We're two.

In this month's Under the Brim Contest, we shift our attention from the subliminal thoughts of Bill Gates to the thoughts of, well . . . you. To participate, all you need to do is read the following subject, then click on the URL below and tell us in 50 words or less what you see.

Subject: A world without Microsoft.

@ Click Here to See Image

The winner receives the latest edition of Red Hat Linux Professional.

Subject: Microsoft Settlement

It would be best for everyone if this case were settled as negotiated without giving special dispensation to the nine states who refuse to agree. Each of those nine states represent special interests in the form of Microsoft competitors and it appears to me their rejection of the settlement is purely politically motivated. Please put this legal morass away so technology may continue to achieve positive growth.

Respectfully,
William Wahl

Subject: Microsoft settlement?

I find the DOJ-proposed Microsoft settlement to be laughable. Now that Microsoft has been found a monopoly, appropriate punishment and safeguards against future monopolistic behavior must be put in place. The DOJ has not done enough, and the steps being taken by the DOJ amount to less than a slap on the wrist. Do your job!

Subject: DISPLEASED with Microsoft Settlement

As a Web Systems Developer, I am very familiar with the technologies and issues at hand. I would like to weigh in and express my extreme displeasure and dismay over the proposed Microsoft settlement.

The settlement offers no real remedy to curb Microsoft's monopolistic behavior, and, quite frankly, would be a total waste of the tax dollars spent to prosecute the case. I am very disappointed with this proposed settlement and hope that the Justice Department takes notice of the 9 states that refuse to support it. These states are doing the only reasonable thing given Microsoft's

history and the mountain of evidence against them.

Please do not let the current state of the tech economy influence decisions on basic fairness and justice. In fact, Microsoft's activities over the last 10 years have substantially stunted the growth of this industry. Without any real competition, the software that has been produced has been riddled with security holes and productivity sapping bugs. The voices of many truly innovative companies have been squashed, their ideas never born to market. The result is a blase fare of sustaining, yet hardly remarkable products.

Now is the time to breath new life into the technology sector and send a message about fair play and business ethics. Please shelve the current settlement proposal and draft one that imposes stricter penalties and restrictions on Microsoft.

Thank you,
Mike Millson

12-6-01

I for one, feel that the justice dept. has sold out the american people in dealing with Micro Soft. Despite what the judge did or did not do, Micro Soft is guilty as sin in being a true anti competitive company. They should be made to split the company, or provide an operating system that is not contaminated with everything else they have added to control the market. They have run a lot of small company's out of business. I would like to be able to purchase an operating system without all the MICROSOFT only add on's, and not have it crash because I want to use some one else's soft ware for applications.

Subject: Antitrust?

You know,

If the USDOJ. is unsure of exactly what their job is, or is supposed to be, I'll remind you on this one case. The court system to include the supreme court had found that Microsoft was a monopolist. It took years, and probably millions of dollars to figure this out. Everyone knew it but they were allowed

to drag this on for that long. This is the second time they have been accused of this crime.

I as a citizen of this country would like to know what the USDOJ is going to do about it, what is the punishment going to be, and what steps are going to be put in place so this does not happen again.

I am not an Open Source Zealot, a Democrat or any thing else. What I am however, is a citizen of this country who has spent most of my life defending it, and for that I paid a heavy price. What I see is something going on that is not legal and needs to be investigated. It gives me a bad taste in my mouth and a sick feeling in my stomach that my government can so flagrantly violate and disregard its own laws.

What on earth is this country coming to.

Sincerely,
Brad Clark

From: John Hightower
To: Microsoft ATR
Date: 12/6/01 5:33pm
Subject: microsoft settlement should be upheld as is

The proposed settlement of the Microsoft anti-trust case should be upheld. In fact, since the case never was about consumers, but about bailing out Microsoft's competitors at the expense of consumers, the settlement is far too restrictive on Microsoft. But this is a case of the lesser of many evils, so it should be upheld in order to end this fiasco and allow the Justice Department to put taxpayers' time and money to better use.

As far as offering a subset of Windows without browser, instant messaging and media player, other Operating Systems have built-in web browsers and Windows should also. Browsers were free before Netscape started charging as much as complete Operating Systems for their buggy, crash-prone product, and Microsoft did us end-users a favor by offering a better product as part of the Operating System, like other OS's have done.

Media Player has been a part of Windows since Windows 3.1, and Microsoft should be allowed to make their products better and more of what the end-users want without being bludgeoned by competitors who can't compete successfully in the marketplace without government interference.

The same principle should apply to Instant Messaging, especially since AOL, ICQ and Netscape Messenger are nothing but advertising delivery systems. MSN Messenger works far better, more reliably, and is a logical inclusion for Windows. All are free, so if AOL wants to extend it's monopoly by excluding competition, it should not be allowed to do so.

MSN Messenger is pro-consumer, and should be allowed to stand as is. If Microsoft's competition wants to flourish, then let them put in the billions of dollars and years of Research and Development that Microsoft has. Let them listen to their end-users as much as Microsoft does, instead of putting their time and money into political donations and subsequent government interventions on their behalf.

Microsoft took a multi-standard competing OS industry and made it

possible for us end-users to benefit from standards that let Windows programs work together instead of crashing constantly, and lowered the price of applications in the process. I still remember when Word Processors alone cost \$300. Now they cost less than \$100, and have more features as well. And are reliable across Windows.

Windows comes from Microsoft's Research and Development, and should be theirs to do with as they want. It's their Intellectual Property, and their competitors shouldn't be allowed to steal the results of their time, effort and billions of dollars. Their competitors didn't put in the time and money, and they shouldn't benefit from a company which did. And as far as Java, why should Microsoft be forced to put Sun's Java, or anyone's Java, in their Operating System? Who cares whether Java is in an Operating System or not? Not this end-user, not this consumer. If I want that buggy, crash-prone thing, I can download it. Again, this is NOT a consumer benefit, it's simply saving competitor's crummy products, trying to force their stuff on consumers who've showed over and over that they don't want them.

As for business discounts for Microsoft customers, other businesses do that, so Microsoft should be able to also. Nobody should be forced to buy Netscape, AOL, Sun, Oracle, or other Microsoft-competitor's products if they don't want them on their computer. Sometimes taking all this crap off computers' hard drives breaks other programs, and cripples the Operating System itself. QuickTime and RealPlayer have both done this when I've uninstalled them in the past, for instance.

The States' remedies only try to make competitors the beneficiaries of Microsoft's Research and Development, plus Marketing, efforts, so their proposed "remedies" should not be given credence. Those are definitely anti-end-user, anti-consumer "remedies" that should not be given any weight whatsoever.

Subject: Please make sure the settlement assures competition for all

Just three quick words on the microsoft settlement:

I'm a bit disappointed that, after six years of struggle, the Justice Department is caving. The proposed settlement doesn't do much for competition. I don't see the connection between donating money to poor schools and preventing monopoly behavior. (At best, it's in the same league as an admitted arsonist donating money to save the dolphins. Letting microsoft donate software would be like letting the arsonist burn down the fleet while claiming to save the dolphins.)

One big problem is that microsoft writes contracts with computer makers that prevent the computer makers from selling any OS except one of the five microsoft makes. The agreement seems to say that they won't be able to do that with any of the big manufacturers. (Maybe . . . This agreement

has so many loopholes scattered through it.) But microsoft can still force smaller manufacturers to be exclusively microsoft shops. That stifles innovation in smaller hardware companies. Another problem is that microsoft's OS is growing by copying functions from existing software by other companies, which breaks the anti-trust rules about extending an existing monopoly, and stifles innovation in other software companies.

Last, I think the shorter the text of the settlement the better. Fifteen pages, or even five, instead of 150. Keep it simple and well-organized so that anyone can read it and see that the law is enforced.

Thanks for hearing me out,

Dave

Subject: I think that the settlement made against Microsoft will not affect their monopolist

I think that the settlement made against Microsoft will not affect their monopolist policy, they will continue doing what they have been doing for years: trying to control the software market, Microsoft is a hungry company, they do anything in order to make profits. Others companies should be allowed to produce more operating systems, they have been producing lousy operating systems and over charging the consumers for years, which is a legal robbery and it is also a crime, the settlement is only a small touch for Microsoft. The intention of investing money in the schools is another strategy of Microsoft continuuig advertising their products and their partners, schools, students and others institution will be exposed to their products which is free advertising, Microsoft is not a philanthropic institution, it is a hawk that want to have everybody under their wings. The public should get more aware of this and stop worshipping their products that are not the best in the market. Linux is a better operating system and it does not cost so much as Microsoft, Red Hat 7.2 is much superior than Windows Xp and it is free in the internet and a boxed set cost \$60.00. They should receive a bigger punishment, not only monetary punishments, they should be denounced publicly of their unfair practice and placed a price control on their products if consumers want to continue using them. I have used all microsoft operating systems from 3.1 to Windows XP, and they all crash. If Linux find a solution to use software modems more people will buy Linux, because not every consumer is willing to pay for DSL and many area do not offer DSL due to the telephone company restrictions and lackness of remote stations, At the present time consumers are leasing Windows XP for \$200.00 and \$300.00. More computers should come with Linux pre-installed.

Subject: Micro\$loth is a threat to the free

market, why are you letting them off the hook & encouraging them further?

Micro\$loth is a threat to the free market, why are you not only letting them off the hook but even encouraging them to further expand their control? The decision (which thankfully isn't final)—in which Microsoft will donate \$1 billion worth of money, software, refurbished PCs, and training to poor schools—is potentially a big blow to Apple. It gives Microsoft an inroad in the education market, where Apple maintains a 50% market share.

As Apple CEO Steve Jobs said regarding the decision, "We're baffled that a settlement imposed against Microsoft for breaking the law should allow, even encourage, them to unfairly make inroads into education—one of the few markets left where they don't have monopoly power."

Gee, that's a stupid idea. They consistently abuse their monopolistic control to drive competitors from the marketplace over the last decade and their penance is to do it some more.

They seldom do anything to advance the technology or the marketplace. Windows started out as little more than an overgrown office suite and that's still how they treat it. Not as a platform for users, like the Mac for example, but purely as a tool to promote their products and services at everyone else's expense. Why isn't Microsoft required to compete on the basis of value with a level playing field like every one else?

And what's this about giving away refurbished computers? Are those old junkers Microsoft was going to toss into the recycling bin anyway? . . .

No, if this is going to happen, Microsoft ought to be compelled to give the best of the best to these schools: top-of-the-line equipment that will last four or five years, not junk that's already obsolete. I'm also not sure where the justice guys came up with the \$1 billion figure. What's that? That's not even one quarter's profits for Microsoft—remember they've gotten as big as they have and made as much money as they have based on illegal monopolistic practices. Even dumber, the company has five years to pay out the billion!

What a sham!

 Subject: Perspective on Microsoft Settlement

I am a 33-year veteran of the computer industry, with a home microcomputer already running and doing business work in 1977. I've followed the industry closely, and have enjoyed the very exciting technical and business environment that has characterized the last several decades.

Microsoft's clear monopoly promises to restrict this excitement by making it very difficult for other organizations to compete in three areas: Operating Systems

Office Applications (Their incorporation of Word, Access, Excel, Visio; Great Plains accounting software, and of course the Internet Explorer)

The integration of Application and Operating System, with particular focus on Internet Explorer.

It is the third area that causes the monopoly to be most restricting, and this condition could be remedied. My own personal view is as follows:

A. Microsoft has a clear monopoly; a benevolent one but with a big stick.

B. Microsoft is a marvelous organization, their products are great, and their

contribution to the whole information technology field has been tremendous.

C. They have exercised their monopolistic position to improperly restrict competition.

D. There is a basis for some compensatory damages to be paid.

E. The settlement, consisting of providing software to schools, is definitely not a heavy penalty for Microsoft to pay.

F. The company should be broken into two organizations, with Windows in one and all applications (INCLUDING Internet Explorer) allocated to the other.

G. While there is a basis for compensatory damages, it does not need to be too punitive (as any of their competitors would probably have done the same thing if as successful in the market!). However, one suggestion is that they commit to, within one year, having all office applications available on Linux (Not as open source—they could and should still make money on these excellent programs). That would hurt, but it would also make sense. This could take the form of splitting the organization into to units as mentioned above; the parent being preserved as the Windows unit, and this unit charged some amount of money to fund the migration of applications to Linux. Now, THAT would be exciting. Please do not hesitate to contact me if there are questions or if I could amplify on any of the points above.

 Date: 12/6/01 5:54pm
 Subject: Why the MS settlement is unequivocal.

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

The following opinions are drawn from personal experience and reflect my opinions only. Microsoft, the software and hardware computer company, based in Redmond Washington, simply put, has become too big for it's britches. This is manifested in several areas:

Non-competitive business practices
 Instigating fear, uncertainty and doubt
 Disregarding previous Court orders to cease and desist

Continued use of illegal business practices.

The freedom to innovate is non-existent

The DOJ must not continue to turn a blind eye to Microsoft. Through all the lobbying that MS does on it's own behalf, trying to instill comfort, they are only holding a knife to the throats of millions of computer users.

Anti-competitive business practices.

MS has defeated many independent software businesses by creating vaporware (software that is advertised via press releases, but never actually in production or development). When MS claims they are going to build a product, most companies see MS putting millions of dollars into it. The smaller business can't spend that kind of money, so they give up, usually do to the fact investors become disillusioned, knowing that MS's product is coming out soon. But then it never does. I have no instances to cite in this case, I'm sure others do. I have been told

however, that another MS tactic in this regard is to "swallow" up the smaller company, usually abandoning further development of the software.

In more recent times, regarding the release of Windows 95, MS continued to hold out critical programming information from independent software vendors (ISV's) until after the release of the new OS. This accomplished a major coup for MS, in that they were able to program all their "tie-in" applications such as Office 95, to the final API because they already knew what it was. Other ISV's were continually given newer API's as the OS development went along, most of which were "not quite right" By the time the OS was released, all MS tie-in applications were also ready, whereas most ISV applications were sorely lacking behind in development because they never received copies of the final API's in time to finish code work. This itself enabled MS to leap ahead of many ISV's almost sending them out of business. This is a clear situation where the applications side of Microsoft needs to be removed from the Operating system side.

The WordPerfect case.

10 years ago, most literate office computer users were secretaries. The people typically did a lot of typing. Ask them 10 year ago what the premier software package was for word processing, and you would have been told "WordPerfect". That is not the answer today. However, the different answer of today is not because of better features or ease of use, it because of product "dumping". 10 years ago, most new computers that came with a Pre-installed version of an MS operating system, also came with a "free" copy of MS Office. One of the components of MS Office was MS Word, a word processor. Most corporate or company accountants and managers did not see a need to purchase "another" word processor when one came readily supplied, no matter what the end-user wanted. After a couple of years of saturating the market in this manner, MS was able to "claim" they had a larger share of installed word processors than WordPerfect. Even if the installed Word was not used, because an end-user had installed WordPerfect, MS was still able to make the claim because they used "installed" numbers, ie. each computer sold had Office pre-installed. WordPerfect corporation soon thereafter sold to another company, who then sold it to a third company who then sold it to Corel. The interim two companies, Novell and Borland, both tried to package an Office suite to compete with MS, however, MS continued to have their suite pre-installed for far less money. Later, when Corel announced they were releasing a new Office Suite with WordPerfect as the cornerstone, and made an announcement of price, MS retorted that Corel could not do that, that it was cutting their own throat, and that Corel would go out of business in a year. Corel took that seriously and never really released the suite at the cut-rate price. Why did MS make that claim? Because they already knew, because that is exactly what they had done with MS Office, they had lost money "dumping" it on the market until the market became saturated. Why is it that I could buy MS Office one year for less than \$100, but to

"upgrade" the very next year would cost me almost \$500. MS found their saturation point, where consumers were engrained in the new status quo and then started charging them for the privilege of having buggy software.

Instigating Fear, uncertainty and doubt.

In summary, Caldera was in the process of litigation with MS regarding the practice of MS to detect installed operating systems and warning consumers that the MS products would not work correctly. Caldera had at one time, reams of testimony and documentation verifying this practice. The fact was, the MS software worked "better" on the competing operating system, but MS didn't want that. MS wanted the consumer to "only" run their operating system, even if it meant their own applications would crash. By installing detection routines, MS was able to know what operating system their program was installed on. Once known, if the OS was a competitor, and most specifically DR-DOS, MS would pop-up a window explaining to the consumer the operating system was "not" MS and cautioning the user the software would not work correctly unless it was running on an MS OS. This was a blatant lie and caused frustration among consumers who had to put up with this "nag" screen until they either uninstalled the software, or switched the operating system.

Disregarding previous court orders to cease and desist.

In the early days of the Operating system wars, MS had contracted with many hardware vendors to have MS OS installed on the vendors hardware. That is innocent enough, that practice is used across a great many products. However, MS, in their contract, required the vendor to pay MS for each "processor" that was shipped. The agreement being that every processor has to have an operating system, and whether or not it shipped with a MS operating system, MS was going to be paid for every processor shipped.

This was found to be an illegal business practice by Courts of law in the United States, and MS was admonished from that practice. However, it was too little too late from the DOJ. Vendors had come into the practice of "only" shipping computer with an MS product. Up until just a couple of years ago, it was almost impossible to purchase a computer "without" an MS operating system. Vendors "refused" to sell consumers, computers that did not have an MS OS installed. And this was certainly years after the DOJ required MS to cease and desist the practice of charging vendors "per processor" for licensing MS OS's. Most recently, when I contacted a computer hardware vendor, I asked why I couldn't buy a computer without an MS OS, and I was told that it was a contractual agreement with MS.

MS has just come down from the whole anti-trust debacle with Netscape and they don't care. MS is still illegally tying products together and are doing so in an even bigger and more anti-competitive way than ever before. And they are waving it in the face of the DOJ, feeling secure they are doing no wrong and that the DOJ will not lift a finger. Well, it really pisses us off.

Windows XP, the latest OS from MS ties more product together than ever before,

putting out of competition, some of the more premier companies of our time. And the DOJ just turns a blind eye. Who suffers? The consumers, why . . . because

The freedom to innovate is non-existent

MS claims they are one of the premier innovators of computer software. To those of us in the industry we balk at that. Apple computer has been way ahead of MS in many ways, but MS uses anti-competitive business practices to saturate the marketplace. Linux has developed more innovation in a fraction of the time it has taken MS.

The fact is, when you become a monopoly, there is no reason to innovate. People will buy the product because it is the only one around, whether it works, or not.

I once had a software programming friend who had an MS employee friend visit him one day. A conversation ensued about the MS memory model, the way MS handles memory for the OS and applications while the computer is running. The employee was complaining how MS had ignored improving the memory model for over 10 years, stagnating the innovation needed to improve the model to protect applications from crashing. This was necessary and prudent innovation that was being purposely ignored by MS. Other companies had to come in and provide certain services to try and "patch" the problem-plagued model. Companies like Stacker, and Norton. Eventually, MS simply "stole" some of that outsider innovation and implemented it in their own OS.

MS-DOS 6.0 was the product. In a tug-of-war court battle,

Symantec claimed that MS had used Symantec proprietary code in some utilities distributed with the OS. MS was found at fault and fined something like \$22M. Likewise, Symantec was fined about \$2M because they had to "reverse engineer" the OS from MS (which is a breach of the EULA). This situation only underscored the fact that MS was no actually "innovating" new software, they in fact were only interested in stealing patches.

So where does that leave the user? At this point, MS has left us with a broken product. I say broken, because 1) they don't supply enough information to outside software vendors for them to effectively program new products against the MS OS, causing them to crash in many cases, both the application and the OS, 2) MS fails to effectively "fix" it's own OS, relying on continued patches that the customer must "buy" in the form of an upgrade. This does not include some patches available for download, however, the point I make is that each successive release appears to include more "whistles and bells" than actual OS fixes.

For example, I am writing this on an MS OS system. I have had to reboot this machine a few times today. Mostly, it will run well for a maximum of about a week before it really starts crashing things and I have to reboot it. Against that, I have three other systems I maintain that use non-MS OS products. Each of them has been running for several months without a reboot, and they typically do a lot more processing than a Windows machine.

My points are all over the map and there just is not enough room to effectively

communicate how displeased I am with MS. I once really believed in MS as a decent Software company, but I can no longer in good conscience believe that. They have stifled innovation, they have driven other companies out of business, never released promised software, or been very late with it, have limited my personal freedoms to choose, through anti-competitive business practices with other vendors, and have generally just been a royal pain in the ass.

It's time to stop this madness. Break 'em up!! I'm so tired of losing time to problem MS products, when their answer to every technical question I have had in the last 10 years has been to "re-install the OS". I'm sorry, but that's just a mark of a bad company, like telling me I have to replace my electric company's transformer every time the power goes out. It's just ridiculous. There has been more than enough litigation, information, testimony, etc. (I followed the whole court battle, this one and others) and I am simply tired of the Federal Government caving in to MS. Break them up! Make MS pull all the "tied" applications out. Make them offer them separately, not bundled, or at the very least, make them go back to small "applets" (programs that gave a "taste" of something, but you'd have to buy the full-fledged program to get all the features) To be honest, I'm not looking forward to MS as Big Brother, which is exactly the direction they are taking with Windows XP. The DOJ has a responsibility to stop that, the DOJ has the responsibility to protect my privacy and freedoms as an individual.

Free giveaways are not the answer, slaps on the wrist are not the answer. It's time to dig up reprimands from the Big Blue era. Let's see what the DOJ did with IBM and start applying some of THAT to MS. Get on the ball.

Sincerely,

Asa Jay Laughton

Manassas, VA 20111

Dear Sir or Madame;

I believe that the remedies in the proposed settlements of the various anti-trust lawsuits are totally inadequate because they do little to reform and nothing to punish Microsoft with respect to its monopolistic behavior. It is well established that Microsoft has a monopoly on operating systems for desktop computers, and that it has used that monopoly to destroy competitors both in the operating system market and in adjoining markets, and thereby extend it's domination. The proposed settlements allow Microsoft to retain it's monopoly, and to continue to drive competitors in other markets out of business by integrating additional application functionality into its operating systems.

It has been proposed to remedy this abusive behavior by splitting Microsoft into an OS and an applications company. Even if this were done, it would not address their abuse of their operating system monopoly. If

the government wishes to actually address the problem, the Microsoft should be split into two operating system companies encompassing the 'professional' products based on Windows NT in one company, and a 'home' computer operating system company based on the Windows 95/98/Me product line in the other. This would create competition in the operating system marketplace, and make actual innovation in that marketplace more likely to the vast benefit of the public. In addition, the 'professional' and 'home' application products should be split out into two more companies, creating a more level playing field across the marketplace.

As to the argument put forth by some observers that breaking up the Microsoft empire would somehow damage the US economy, I think the split-up of the telephone monopoly of AT&T offers convincing evidence to the contrary. In spite of the claims of the apologists for Microsoft, it is well established that competition is good for the economy. Microsoft is hardly the font of creativity: on the contrary, previous lawsuits (such as Stak Electronics vs. Microsoft) have established that Microsoft often steals the technologies that it claims to have innovated. If Microsoft had to compete on a level playing field against the smaller companies which traditionally have represented the source of most of the technological innovation in this country, then more technological innovation would likely reach the marketplace to the benefit of both the consumers and the economy as a whole.

For these reasons I urge you to refuse the proposed settlements, and aggressively pursue the breakup of Microsoft monopoly for the future benefit of the consumers and the economy as a whole. In addition, Microsoft should be forced to pay fines in retribution for their past behavior. Part of those fines should be used to reimburse the various governments for the expenses of litigating these cases, and part should be paid directly to the immediate injured parties (Digital Research, IBM, Apple, Netscape, etc).

To the DOJ and Monoposoft,
Over the past 20 years, I have enjoyed employment as a computer operator, programmer, instructor and lately, end user myself. During the 80s and early 90s, I enjoyed Microsoft products as I did many others. For the last 6+ years, I have sought only to support any product that was not Microsoft, and have found it a virtual impossibility to function as a professional without using Microsoft's overpriced, unwanted, and increasingly obtrusive products. This sad fact is entirely the result

of illegal practices on the part of Microsoft causing the demise of many worthy contenders, and limiting the choices of tired consumers. The freedom to choose our own product purchases is gone.

The recent and overdue finding by the DOJ that "Microsoft is a monopoly" might have provided very small concillation if the punishment were grave enough and restitution to all the victims were enforced. Imagine my dismay to find that no punishment for past actions, no restitution to the victims of their crimes, and no protections against future monopolistic practices are provided for in the DOJ settlement. What a joke!

We are all so proud to be American tax payers. Thanks for your protection.

See ya,

Subject: Microsoft Action

I cannot believe that we as a government could lie down as Microsoft rips through our economy. I watch as Microsoft removes all of their competitors from the market. Not by having a better product but by breaking other programs compatibility with windows and bundling their own ripped copy of the same software with their name on it. By threats and by giving a product away for free until after their competitors are out of business. It was interesting to note that after moving a machine from an older version of windows to the new version other chat programs no longer work, save for Microsoft's messenger service. Your current idea of forcing Microsoft to do give away computers to poor schools is the most ridiculous idea I have ever heard!

You obviously are going to be Microsoft's PR reps huh?

Hey, Microsoft it is ok to forcibly put all of your competitors out of business ... All you have to do is give a few computers away and we the government will turn a blind eye to any illegal actions you take, break the law see if we care.

If this bull goes through, it will be a sad day for America! On that day I will be ashamed to be referred to as American, for we are only telling the world that with a few dollars you don't have to obey the laws of our country. Break up the darn company! Show the world that we will stand up and protect our market, our laws, our principles and our country!

Subject: Views on proposal—Schools

I have just read the basics for the proposed settlement for the DOJ settlement with Microsoft.

I think that the provision ought to be setup, so that Microsoft only provides the hardware. Instead of providing software to the poorest school districts.

This would extend the amount of computer related equipment, that could be obtained, by the schools.

Also, I have been using open source software and have found it to be a worthy development. I have found that it provides the tools needed to allow schools to develop positive educational goals. Without burdening the school system with extra costs for proprietary software.

I have used a few of the open source distributions. I find them great products. But I use the Redhat distribution presently.

Since Redhat software has committed itself to providing free software and also support. Through their Internet accessible network. I think that the students will be greatly aided by the co-operative effort put out by both providers.

Thank you,

Jim

Subject: DOJ MS Settlement

It seems to me that the DOJ settlement is unlikely to curtail MS's monopolistic behavior. I have watched over the years as MS has adopted ideas from outside entrepreneurs, poured massive development effort into making their adopted software better than the original, included it in the OS bundle, and thus put the originator out of business. This has happened time after time.

The problem is not that MS's adopted programs are poor products, but rather that repeated crushing of innovators has resulted in a dearth of really new ideas. MS often says they just want to "innovate"—what they really want is to dominate by whatever means they can find, including what I would term "plagerism".

I think that even breaking up the company into an OS and an application company would fail to solve the problem unless very strong oversight is added to the mix.

In any event I don't believe for a minute that a more drastic remedy would adversely affect the software development business in this country or the general economy. To the contrary both would flourish give a chance for true competition to replace monopoly.

Subject: Microsoft Agreement Not Good

The decision doesn't solve anything. It makes the problem worse. Microsoft will donate everything, but I'm sure at some point Microsoft is going to try to get thier piece of the pie. If the schools are poor to begin with why let Microsoft take advantage of them? If Microsoft is a monopoly why let them extend the reach. I think Red Hat hit the nail on the head. So much more could be done with the money. Let open source software be introduced. Promote competition. That is all you hear about, Microsoft is destroying competition and the you see a ruling like this. This is the opportunity that open source software has been waiting for. Don't take it away.

MTC-00002967

From: Bill Wimsatt
To: Microsoft ATR
Date: 12/6/01 6:43pm
Subject: Microsoft Settlement

I whole heartedly disagree with the settlement with Microsoft. I have been working in the computer industry since 1983 and have found that Microsoft is an

immoveable rock and an untrustworthy partner.

(1) The settlement should not allow MS to provide their software to schools. This will further entrench them into the market; furthermore, it is the one market where they are weakest. So, this solution will give them an astonishing new capability in this segment. Furthermore, they will be able to extol upgrades, and service contracts that will line their pockets once again. The money should be donated to schools or the solution should be Apple, Linux, or Solaris based.

(2) I was involved in the Air Force Desktop IV contract case in which the contract award was challenged on the basis that it was an unfair award. Microsoft and Intel were the big winners in that contract and it was not possible to win without their solutions. Not because they had the best technology, but because they were pervasive in the Air Force and no other solution could topple their strangle hold. During this contract, we had to negotiate with Microsoft for their suite. They would not allow us to put just one part of their suite with our bid. We had to take it all or nothing, even though there were better solutions for calendaring, and presentations. But since we had to use MS Word, and Excel to be even considered during the bid process, we also had to take an inferior PowerPoint and outlook products.

(3) As a developer now, I am continually up against the Microsoft compatibility issue. MS Windows compatibility is required in every effort because MS is pervasive in the industry. I cannot bring a competitive offering to the market because it will not be seriously reviewed unless it is running on Windows or has Internet Explorer as the Browser.

I find it disheartening the DOJ was not able to remove MS's monopoly in the market. MS is stifling the industry and causing impenetrable economic barriers to entry.

I am a resident of australia, however the monopolistic practices of microsoft reach us here too, and I want to comment.

I agree with Red Hat's proposal that microsoft's donations be purely in hardware, partly on the basis that they shouldn't be allowed to spread their monopolistic software (I agree that their browser is probably the best in the industry, but then they've got more money to pay more people), and besides that the value of the donation would be fluffed out by the addition of software, their operating system is overpriced, as is their office software, and I feel that it would benefit school children more to be introduced to unix, as, though most computers are running windows out there, the internet constitutes the largest mass of computing power, and it is primarily running unix, and about 50% of it is linux, and though at this time there is more work in using windows systems, Linux is a young operating system in comparison, and its use in embedded and special purpose systems means that it will eventually become more common. By the time 6-12 year old children are looking for work, unix will be the basis of most computer systems (as it already is within the higher-level government organisations in america, due to it's greater maturity in networking which means it is more secure).

Making Microsoft only provide hardware will mean that a greater number of children will have access to computers, as about 15% of the average computer system cost is microsoft software, that means they will have to provide 15% more hardware than they otherwise would have. Also giving Red Hat the opportunity to provide its software will be a big step towards balancing the lop-sided current situation with respect to just exactly how dominant windows is, especially in the future. Besides this, the average poor family, should it be able to provide the children with a home computer, would be wise to choose a free operating system, as, to use australian dollars, it would mean they could buy an aud\$600 computer, and spend au\$20 on the cd's for the operating system. Otherwise they would be forced to have to cover the cost of a microsoft operating system, most likely win95, which is buggy as hell, but it's also the cheapest at about au\$125. And then there's ms office. Sun's Star office would be the sensible alternative, and where I am at least you can get red-hat linux, star office and even mandrake linux as well for au\$20.

Anyway, I hope that you choose to take up red hat's offer, perhaps though get other companies to contribute operating systems too, like mandrake, caldera, sun etc. as the singular donation from red hat would be favouring them too much.

While I fully understand the need to get the DOJ vs. MS issue out of the way, the current settlement proposition is actually a considerable bonus to Microsoft's monopoly position...in terms of computer users, what could be better for Microsoft than a whole new generation of people raised exclusively with Microsoft products for the 12 (or more, depending on locale) years of school?

Please, rather than settling this in this way, give the money directly to the schools for use in computer departments as the educators (who in the end must learn, support, and teach whatever products are chosen) to implement as they decide what will work best for students.

Thank you,

Subject: Microsoft case

Good day,

I have followed with interest the MS/DOJ case these past few years. I want to say only that I am saddened and disheartened at the direction the case has taken. When company email is found that says they wanted to Cut Off the Air Supply of Netscape, for starters, and they are found to have bullied PC manufacturers and had a very large say in what software gets bundled on new PCs, then something is terribly wrong. The list goes on, and nothing substantial is being levied against the company.

Let me say this: A company that manufactures and sells the operating system to the great majority of the world's PCs has no business being allowed to evolve their OS so that it includes a browser, music-playing software, etc, so that it destroys or greatly inhibits the progress of other companies that market browsers, music-playing software, etc. These are NOT operating system-specific tools. They are add-ons, and Microsoft knowingly and deliberately used their dominance in one market to crush competitors in others.

They deserve far more punishment than I have read they are receiving. Break up the company and make them compete fairly, so that other companies have a fighting chance.

Subject: Microsoft Settlements

To Whom it May Concern,

I am writing to you to voice my concerns over the recent microsoft settlement and to state that in my professional opinion (as a computer programmer which has (for the

past 20 yrs) and continues to use much microsoft technology) the actions that microsoft has continued to exercise in the marketplace are very wrong and counter-active to good fair market development. Given the current situation, if I owned a small company offering a product/service in which microsoft decided to compete, I would immediately try to sell (probably to microsoft) the company while it had any value to speak of. Microsoft has continued it's cycle of waiting for new technologies to arise and then to produce a no cost/low cost product similar (but competing) to the original. Since microsoft can provide the item at no cost (due to bundling and revenue received by the sale of the Operating System itself), why would I want to compete with it on a sales/revenue playing field. They can produce good quality products that often drive the others competitors almost out of business while continuing to expand their software base. People are simply not going to purchase a competing product when they can get good to excellent similar products for free with the Operating System. Even for those products where the Operating System is not directly including it, the price of the product is dropped to run the other company's product into non-sales situations, and then the price is considerably raised when they no longer have enough market share to be a competitive threat. There are numerous examples of this even today. I therefore ask that the company be stopped from it's corporation death squeezing plans and that they be made to live up to a fair market strategy where a technology which they want suddenly can not compete with them.

Subject: why hurt Apple?

Making MS give away PCs and Software will only further crush it's competition by training a new generation of customers to depend on MS tools. This would injure Apple's only remaining stronghold: Education (both Apple hardware and Software which is not PC compatible).

It would be better to force MS to pay a cash settlement and have the government use the money to fund various educational programs! This way MS is not influencing and increasing its already out of control Monopoly.

Thanks,
mark

MTC-00002979

From: Joe Doherty
To: Microsoft ATR
Date: 12/6/01 7:24pm
Subject: Microsoft settlement

I am against allowing Microsoft to "donate" computers with its Windows operating systems to poor schools as part of the anti-trust settlement.

There are three operating systems that are appropriate for use in schools: Windows, Apple and Linux. Of the three Windows is the least adaptable to educational use and the most likely to fail on a regular basis. Apple has a long history of providing support for education, and Linux is a free operating system that will run flawlessly on recycled computers (as well as new ones). Both Apple OS-X and Linux are open-source operating systems, which means that students with a technical bent can write software for them. Windows is not open-source, which is probably just as well because it is a mess.

If Microsoft is allowed to "donate" \$500 to \$850 million dollars worth of software (at an actual cost of, what, \$1 million in duplication expenses?) as part of its \$1 billion settlement, it will represent a near-complete capitulation of this Justice Department. Microsoft should spend the entire \$1 billion on computer hardware, leaving it to the schools to decide which operating system they prefer.

From: Jack Daniels
To: Microsoft ATR
Date: 12/6/01 7:26pm
Subject: Microsoft trial

In my opinion Microsoft is a monopolist, because in the beginning it was the "command line" and there were many Disk Operating Systems (DOS) which made our computer go as far as MS-DOS. I remember when I DR-DOS, IBM-DOS and others were very good, rich, fast. MS-DOS was not bad, but it was not the best. When Windows came out, the use of the PC became more and more easy, and this adventure finished with the issue of Windows 95: the Graphic interface but also an Operating System. Somebody learnt to use a PC with Windows 95 installed, but other refused to learn Windows, because there were nothing to learn, except the use of the "mouse".

Now the Graphical interface seems to be the standard method to use a computer at home, but the use of Servers needs an operating system more transparent, which allows an administrator to set up the whole system, to repair damages. An OS more stable and safe like Linux and other Unix systems.

Now Linux has a GUI even nicer than Window's, the X system, and has been ready to be used by millions of users (who are not "wizards") for several years.

But never happened.

Subject: Microsoft the monopolist
To whom it may concern,

I find it hard to believe that anyone even remotely affected by Microsoft could believe they are not a monopoly. I have several concerns that need to be addressed.

1. The security of the U.S. internet. Many times recently, major losses have been incurred due to the lack of security in the Microsoft software used to interface to the internet. This lack of security is well known to the industry.

2. Microsoft is attempting to hijack all aspects of the public access to the internet through the use of its "Passport" gateway.

3. Microsoft is putting all Windows users on a permanent upgrade escalator using its new software registration policies. This same policy restricts users who often upgrade or otherwise change the hardware platform they run under.

4. Microsofts recent attempt to block alternative browsers access to MSN sites. This is a blatant example of the control they will impose if they succeed in their ambitions. This recent example occurred AFTER the ruling about their monopolistic tendencies.

5. Microsoft is now going after cable internet carriers. I can only imagine what will happen to me as a Linux/Opera internet user as they put up more barriers to the non-windows community.

6. Microsoft is also going after the Gaming community with their x-box technology, we will have to wait and see what kind of mischief they are intending in that arena.

Subject: Microsoft is a monopoly

Microsoft is a monopoly in the pc computer business, which makes up a huge share of the computer business. Their products are good, but the computer business could have been better without Microsoft being the monopoly that it is. Monopolies always hurt innovation and competition no matter how good they look. I believe that you have gone the easy route by settling with them. They control 90% of the PC operating business, which gives them great leverage and power for resources. Either you play with Microsoft the Microsoft way or they crush you. Please break them up so that we can enjoy greater innovation. They are bad for innovation. It's just the way it is. Punish them like you punished AT&T.

Look at how much innovation and lower prices that happened when they were broke up.

Best regards,
Todd Benson

Date: 12/6/01 8:13pm
Subject: Settlement

Thank you for hearing our concerns. In particular I'm concerned about high quality, innovative alternatives to what Microsoft offers as Windows components. Microsoft has closely followed the aftermarket to Windows, and brazenly included features in Windows which effectively kill competition. Microsoft includes, at no extra charge, non-operating system components such as Media Player, Internet Explorer Internet browser, a CD burner, email with Outlook Express, a personal firewall, and other more subtle utilities—all which were preceded by products from small independent vendors who may now be unable to compete. Allowing these products to be included as free features stifles creativity and competition. This results in less for everyone.

These features have been slowly added over several releases of Windows and, for the most part, have reduced competition. Where there was some effective competition, such as Netscape, the resulting Microsoft products have been of a higher quality. However, the longer effect has always been damaging. Netscape did not fare well and never turned a profit, finally selling to AOL. I hope some more thought is given to the actions that should be taken to prevent the kind of oppression Microsoft has created.

Yours Truly,
Bob Becksted

Subject: Settlement Joke

The Microsoft settlement is a joke and an insult to the American consumer. Ordering Microsoft to donate software and hardware to the poorest schools will push traditional educational product providers (like Apple) and completely out of them out of the market. The idea of giving a punishment is to make someone want to stop what they are doing. You're not punishing Microsoft, your helping them tighten their grips on the market. I'm a Computer Scientist. I fear for the computer industry. Every year Microsoft takes over larger segments of the industry. Most of their product are poorly written, large, slow and buggy, but as the consumer, we have no choices. We have to buy what's available, and in most cases that means Microsoft.

I think the DOJ drop the ball on this law suite. No company should have the power Microsoft has. I think Microsoft's punishment should be a 5 Billion dollar fine, all of their Operating System's code should

be made available as open source, and Microsoft needs to be split up. Mark LaForest

MTC-00003002

From: Joseph Venezia
To: Microsoft ATR
Date: 12/6/01 8:32pm
Subject: Microsoft Action

There is no question that Microsoft used its desktop monopoly and a free web browser to destroy their browser opponents. This was down because people enjoyed using the browser interface in lieu of the GUI that is part of Windows, and Microsoft knew that if anyone ever put a different operating system under another popular browser interface, they would lose their desktop monopoly. The only way to rectify this malicious monopolistic act that has and still is wreaking havoc with other browser and operating system purveyors is for Microsoft to release all code for version 5.5 Microsoft Internet Explorer Browser including that for any underlying DLL/OCX's to the public domain. This action would rectify their action with regards to other browsers and operating systems, and any claim of financial harm would be groundless because after all, they claim to offer this product free.

This does not address their latest actions with regard to other products such as media players, but the release of the above mentioned code, and the operating systems that would soon use it, would deal with that problem in due time. The only other area needing addressing is to require Microsoft to publish all the Windows Operating System API so others can develop programs for the operating system. Even if you did not do this, it would not be a problem because the release of the browser code would lead to alternative desktop operating systems making in roads. To date Windows has offered no free Internet Browser for Linux. Its the only thing holding back Linux desktops. They make IE(older versions) for HP and SUN Unix because they know no one uses them for the personal desktop. Microsoft knows that any solution that neglects releasing the browser code to the public domain is a win for Microsoft.

Sincerely,
Joseph A. Venezia

Subject: Microsoft Settlement

To Whom It May Concern:
I understand you're collecting opinions on the settlement, so I thought I'd add my \$0.02. Microsoft is a large corporation—so large, I believe, that for it to be severely damaged would probably adversely impact the economy of the country. This would, obviously, be bad for everybody.

The problem is that our system (which is the best there is) has flaws, and one of them is that Microsoft was allowed to grow to the

size it presently has. That any one company could, by its failure, drag down the whole economy is a failure on the part of the system in its entirety—and of the DoJ and judicial system in particular. You have a responsibility to prevent such things, a responsibility implicit in the antitrust laws (if not explicit), IMHO. Even ignoring the dangers inherent with such an anomalously large corporation, the behavior of Microsoft has been reprehensible in many ways. The court's original ruling (against Microsoft) was heralded as a major victory by most of the technical community, not because of a dislike of Microsoft products or even its pricing (though there are grumbles there, to be sure) but rather because so many fine companies and initiatives have been quashed by the heavy-handed policies of Microsoft.

I write this opinion using Microsoft Outlook, which in turn uses Microsoft Word as its editor. These are two of the finest products of their kind that have ever been, and represent only a small portion of the fine work that has been done by Microsoft. This does not change the fact that unless Microsoft's behavior is changed, and changed radically, the industry as a whole and consumers in general will be impacted in a deeply adverse way. The economy will remain at risk—and the consensus opinion among my peers is that Windows(tm) XP may be the block on which Microsoft finally stumbles. If this product does not destroy the company, it may still damage it to the point that the economy is severely hurt. Now may not be the time for fines of sufficient size to correct the company's behavior—I don't know—but the anti-competitive behavior must be stopped before the rest of the industry is ruined.

Finally, I must add that as an Engineer, I keep up with opinion, feeling, and trends in my industry. I hear from conservatives, liberals, and neutrals; from technophiles and technophobes; from Microsoft fanatics and Microsoft-bashers; from management, labor, and (in short) just about everyone. Nobody with whom I've spoken, or who offers an opinion on the subject, thinks the Microsoft settlement is just. None of my technical acquaintances (even those most enamored of Microsoft) believe that the company's policies are conducive to competition or growth within the industry. I know that such opinions must exist (perhaps among economists?), but I believe they must be taken as shortsighted.

Thanks for your time,
David Lambert, Jr.

From: Brian W. Masinick
To: Microsoft ATR
Date: 12/6/01 8:40pm
Subject: Punitive damages for conviction

The message I get out of the Microsoft case is that if you are big enough and you are important to the economy, you can do almost anything, and even if caught, you will not have any costly consequences. In the case against Microsoft, I understand that Microsoft was found guilty on several counts of Antitrust violations, including modifying operating system software to prevent competition of layered products,

manipulation and coercion, and other questionable and illegal practices—in effect, using their size and power to knock the competition out of other markets.

Though there are supposedly penalties, I question if they will have any effect at all. As compensation for these crimes, I think that Microsoft should be required to open their source code, at least to the specific companies that they offended, particularly those who have virtually gone out of business. Perhaps that would fairly level the “playing field”. Since Microsoft Office is so dominant, maybe requiring Microsoft to completely open up all document formats would be fair and reasonable punishment. That would certainly enable other companies to fairly compete.

From: Bigelow, Scott M NWP
To: 'microsoft.atr(a)usdoj.gov'
Date: 12/6/01 8:41pm
Subject: Short statement about proposed settlement

Hello,

I have been following the Microsoft Antitrust case since its beginning, when I was still using and recommending Microsoft products when I had a choice. It wasn't until I read about the many ways Microsoft was abusing its power that I decided that something needed to change, and that change could start with me, and it has, but very few Americans understand the concept of an operating system, so they have chosen to let Microsoft choose for them. I understand that the proposed settlement to fund schools with technology (including software) does not require all Microsoft software be provided on these systems, but certainly many would, extending Microsoft's monopoly. There are a great number of alternatives for software, including Red Hat, which has made a generous offer to the proposed settlement. Aside from this, however, Microsoft is turning the focus away from their business practices, which continue to this very day as seen in Windows XP, to the poorer schools of our nation. Money will not be a problem for Microsoft for a long time, and therefore not an adequate solution. I hope the DOJ does not let Microsoft choose form them, or turn their attention away from that which matters.

Thank you for your time,

—Scott Bigelow

To: Microsoft ATR
Date: 12/6/01 8:47pm
Subject: Microsoft “Punishment” need to be adjusted, rather changed all together.

I am sorry, but as a red blooded american, I can NOT say I understand the DoJ's position on this settlement. It seems as this solution is a contract, rather than a punishment for Microsoft monopolizing the computer industry. Are we truly to believe that an agreement where public schools are given funding, and a portion of that funding will go to increase Microsoft's monopoly is a good solution? If we really want a settlement which will stop Microsoft from continuing their illegal practices, we have to do something drastic. My suggestion would be to release the file formats and document handlers for Microsoft Office, and have microsoft document how commands are executed (as in POSIX standards for Unices).

I appreciate your taking our comments as this situation develops further.

From: John
To: 'microsoft.atr(a)usdoj.gov'
Date: 12/6/01 8:52pm
Subject: Microsoft settlement

I am dissappointed in the DOJ settlement of the Microsoft Antitrust vs US & States. The settlement provides for a penalty much less than the face value of 1 Billion for several reasons.

1) 1 Billion is MS Software and old office computers to a class of citizens not currently using Microsoft products, resulting in no loss of customers.

2) Except as subtracted out of profit (which won't be realised with low-income families), the 1 Billion represents pennies on the dollar, it's pure hypothetical profit.

3) It does nothing to address the issue of monopolistic practices by Microsoft (tm). Government oversight of monopolies can result in something resembling free markets. I borrowed this from Laura DeAndrea Tyson's book, "Who's Bashing Whom?"

4) A \$500 million dollar writedown, this year to pay down a 5 year commitment to maybe a 10th of the 1 Billion Settlement. That's like a get-out-of-jail card, allowing them to look very profitable Pro-forma, since a writedown excuse large hunks of liability. Buy MS stock on the news of this settlement, I heard. It's a marketing expense disguised as a "off the books" writedown.

This all looks like accounting trickery.

I'd be happy with anything that might help open interfaces, and encourage a thriving software market with diverse sources of interoperable software. That is the core of many government acquisition programs, and a result of much thought. Everywhere this happens, whether it's between hardware, software or in networks, it's an additional technical hurdle for this industry. Lowers productivity, and some say, stifles innovation.

We have to keep an eye on all the players, Sun, Apple, IBM. They have done well so far.

Subject: msn.com now blocking netscape browsers

I've heard reports that MS is now blocking browsers from accessing their websites. I don't have specifics on which sites or which browsers, but it's disturbing. For what it's worth, they have the technical ability to block browsers on ANY item in the string below, or all of them together. "Mozilla/4.78 [en] (X11; U; Linux 2.4.9-13 i686)" In other words, they could block Mozilla, or Mozilla/4.7, or Linux, etc, ad-nauseum. And they can get away with it, cuz most people don't know better, any more than they know that there's arsenic in their water. I think it's your job to insist upon a modicum of fairness, and letting them continue business as usual is inadequate.

MTC-00003012

From: Phil Percival (CSI)
To: Microsoft ATR
Date: 12/6/01 8:44pm
Subject: Opinion on decision against Microsoft

When does a capitalist become a monopolist? When the competition fails to take advantage of the same opportunities. Why should the successor be punished for the continued failings of others. And there's the argument, are the continued failings of the other competitors a result of a conscious effort by Microsoft to stifle or is it a result of something else ... Microsoft have cornered the market by taking advantage of early opportunity, and continuing with a superior marketing strategy. While they may not have the best technical product they do have a more readily available, supportable and presentable product.

Back when the Unix gurus of the world were hiding in main-frame basements churning out enhancements to an already superior operating system, Microsoft was exploiting a virgin personal computer market. If only Red-hat and the other UNIX vendors had been around 20 years ago. If only the conceited, self-absorbed Unix developers of the late eighties/early nineties had been a little more business minded and less ignorant ... Then of course Apple came along with their high priced, rigid operating system and hardware attitudes offering incentives to universities and schools but missing the point when it came to the "average user" market—and still missing the point to this day, surviving only on marketing brilliance in the US.

We owe Microsoft for pushing hardware and software technology forward. That a lot of the momentum of the computer software and hardware technology surge has happened because of them is unquestionable. But that technology is not necessarily owned by Microsoft and thanks in some part to them is available freely to the world—hardly a monopoly. Now is the perfect time for Unix vendors to capitalise on their superior OS technology but first they have to loose their non-constructive "anti-microsoft-Unix-is-GOD" attitudes and produce better software for the laity. They seem to be heading in that direction but with a total lack of standardisation I fear that direction is somewhat non-linear.

I can only hope that it won't take a further twenty years for a "Windows" based Unix OS to be competitive—Red-Hats buggy "MS Windows-like" desktop is almost there—if they could only improve Unix's hardware support and plug-play strategies ... As for Apple I'm afraid they just don't seem to get it, you can only "create" a market for so long; maybe if they combined their existing OS technology with the more versatile Unix technology and concentrated on software rather than hardware they could move with the market rather than tangential to it.

To: Microsoft ATR

Date: 12/6/01 8:52pm

Subject: microsoft anti-trust settlement

I am writing to express my dissatisfaction with the current remedies imposed upon Microsoft for their flagrant unethical and monopolistic business practices over the last 10 years. I have seen product after product eliminated systematically by Microsoft through unfair business practices. Products such as Word Perfect, Quattro Pro, Lotus 123, Netscape, Harvard Graphics, dBase IV all provided significantly better functionality at a substantially lower cost than the Microsoft equivalent product at the time they were eliminated from the consumer market. Since that time, Microsoft has increased prices very significantly in all areas where they have eliminated their competition. I think a remedy for these practices should cause them some financial pain, benefit those they have injured, and make future software development more palatable. Current computer hardware is approaching the price of the computer operating system, a thing unheard of in any other industry. Linux, BeOS, and OS-2 all provided significantly lower cost alternatives before they were systematically eliminated by Microsoft's unfair business practices of pre-installing their operating systems on OEM machines. I think the remedy of providing computer hardware to poor schools and making source code available to competitors would be a significant start to rectify these problems.

sincerely
Mark Eagar

MTC-00003015

From: Jones MV (Michael)—CSC
To: 'microsoft.atr(a)usdoj.gov'
Date: 12/6/01 8:55pm
Subject: Class-Action Suit

I have followed this case very closely, and there is a lot to be argued on either side of the coin. Being a person who works in Information Systems as a Systems Administrator, I will simply share my views and opinions, as I am a user of both operating systems in my line of work, and I like both of them.

Microsoft: For what they have done for the PC industry, my hat is off to them. The monopolistic power they are today, for the majority of the companies' lifespan, was earned. Microsoft, for years, released superior products than its competitors for the PC market. The ease of use and availability is what made Microsoft the company they are today, however when you lead the cow to pasture, you are usually preparing to do one thing, to cut it up once it gets big enough.

Microsoft has flexed its financial muscles much too often in the past 3 to 4 years. I feel the web browser wars were the first signs of it, by flooding netscape out of the market by giving people a free alternative, yet Internet Explorer is still property of Microsoft Inc. It is not open-source. This makes a substantial difference in a technical sense. Its like giving a man a fish, rather than teaching him to fish. Once that fish is gone, you have to go back to the same man who gave it to you, and hope he is feeling generous. Nothing is gained by anyone except Microsoft, and many things have changed in the industry since this occurrence. Microsoft now has limited control over what can and can't be viewed on the on the web by PC owners In order to see certain public web based content, you must now be a Windows user, but moreso than that, a IE user. They offer a free browser, but just for Windows users. They have tools like Active-X, but just for IE. Have you tried getting to MSN.com with a browser other than IE? you can't anymore.

With Windows XP, Microsoft is outlining its OS to be even more slanted towards monopolistic practices by checking against hardware to validate its really you that is using the OS. A person should not have to validate a hardware upgrade to their OS manufacturer to be able to continue to use their product, which they purchased a liscense to use, when their hardware becomes outdated. Microsoft has done a lot, but now they are doing too much, because there are more and more alternatives out there that are exceptional, and as more and more come around, Microsoft is flexing their muscles more and more to make things as incompatible as possible for the competition, while Microsofts competitors do exactly the opposite.

Redhat: Redhat Linux is an Open Source operating system that Intrigues me. It has, in many ways, filled the gaps that Microsoft OS's couldn't fill, during one of the most diffucult times in our industry to do so. What Redhat lacks is exposure. What Microsoft hopes to prevent by its practices is Redhats exposure. This is wrong. I feel the proposal by Redhat to put their operating systems on the computers in order for Microsoft to be able to support more schools is the best thing that could happen for both companies in this situation. In time, it will establish competition in the PC OS market once again. This needs to happen, because as Linux becomes more refined, and more streamlined for less technical end users, it will indeed be a prosperous operating system at the desktop level in 4-5 years to come. Linux, is based on UNIX, which has existed much longer than windows and is important to know in this industry. Learning Linux will give people the ability to diversify their knowledge of computer operating systems on several levels. What better place to do this than at school? There are many breeds of UNIX out there, and they are all similar in nature. Learning Redhat Linux, opens the doors for SUSE, Mandrake, Corel, BSD, Slackware, and many others. This school proposal needs to go down to insure a stable, compatible market for the future.

I consider this point in time, in both hardware and software markets, the

crossroads of PC's future. On one road, we have Open Source, and on the other we have liscensed based. Without breaking Microsoft up, they will program Linux out of the desktop market, because of the percentage they hold. They are bigger in that market, they are wealthier, they have more history in the desktop model than Linux, so Microsoft had something Redhat will not have if nothing happens to stop them, time. Bigger does not mean better, Older does not mean wiser. Reguardless of personal opinion, Redhat has the right to compete, without being driven out by a much larger company with a much bigger checkbook. I've seen many, many efforts by open source companies to work within Microsofts OS, and almost none by Microsoft in comparison. When I see Microsoft Office for Linux, I know then that we will be on an equal playing field, for once, in the PC industry. I am all for standardization, and it is needed in our industry (Standard Document Formats, More Hardware standards, etc), but the tools in which we standardize with need not apply (MS Office, Staroffice, Windows, Linux) If I'm blueprinting a house, weither I use a Paper-Mate pen or a BIC pen does not matter. When I'm blueprinting a house in a CAD program, weither I'm using Windows or Linux shouldn't matter either.

Thank you for your time,

Michael Jones

Subject: Settlement of the microsoft monopoly case

Ladies and Gentlemen:

I am writing to request that stronger measures be used to curb Microsoft's monopoly power in the software market. I am a professional computer programmer with no knowledge of law or economics, but with many years of experience in working with Microsoft produced and other software products, and in working with organizations that have chosen to buy Microsoft products. It is often the case that organizations I have worked for have chosen Microsoft products, not because they thought they were the best, but for fear that significant competitors would be destroyed by Microsoft and that purchasing those competing products would leave them out on a limb in future years.

It also often happens that an organization chooses a Microsoft product because the cost is cheaper than a competitive product. But the low cost may only continue until Microsoft dominates the market. For example, the cost of all word processors and spreadsheets—probably the two most common business applications, has declined for all vendors except Microsoft—which now totally dominates this business and still sells

its Microsoft "Office" package at a high price. SQLServer, Microsoft's database, used to be dramatically cheaper than the Oracle database from Oracle Corporation. It is still somewhat cheaper. However as Microsoft's market share has grown, the cost of SQLServer has significantly increased, while the cost of Oracle has decreased.

Both of these outcomes—selling inferior software to buyers who are afraid that competing products' vendors will be driven out of business, and defying the general trend towards lower prices in the software industry—result from Microsoft's monopoly position. I haven't seen anything in the projected settlement which addresses these issues.

Thank you.

Subject: Microsoft settlement

It is hard to conceive of a proposed settlement for an antitrust case where the defendant is aided in developing a monopoly in another area. Surely there must be a way to help education without supplying a business advantage for Microsoft. Giving cash for technology to school districts would seem to be a better answer.

Subject: Microsoft monopoly

If Microsoft really wants to provide quality software for our schools they will provide some OTHER operating system besides Microsoft windows. Their attempt to fan out their operating system to the schools is nothing short of a HUGE bribe to the country to further extend their monopoly.

Someone in the justice system has got to see that Microsoft is not worthy to provide software to our school systems.

 Subject: Microsoft Settlement

To whom it may concern:

While I do not support any settlement by the DOJ with a company which to any common sense observer is a monopoly, I vigorously object to allowing Microsoft to spread its hegemony by allowing them to establish the incumbent operating system in educational institutions. There are other alternatives such as LINUX.

The DOJ is responsible for maintaining the public trust, and as such, should be held responsible for mistakes and errors in judgement. Please let me know how the DOJ is being held accountable for its actions in this particular case.

I look forward to your response.

MTC-00003022

From: David J. Looney
 To: Microsoft ATR
 Date: 12/6/01 9:26pm
 Subject: Inadequacy of Proposed Settlement with Microsoft

To Whomever It May Concern:

I can find no other word than "betrayed" to describe my feelings concerning the U.S. Government's accommodation of Microsoft's monopolistic practices. If this settlement is approved, it is clear that no software innovation will be safe from assimilation, that consumers will never be given any chance of preloading other operating systems on PC architecture computers by major vendors, nor have any respite from paying for Microsoft operating system software when purchasing laptops, even if they do not intend to use the software at all.

Here is a company that has used pricing practices for over a decade to make it economic suicide for any hardware vendor to offer alternative operating systems (as much as 400% pricing differential in many markets), sneering at the settlement reached in the previous DOJ action (concerning per cpu licensing), continuing to effectively enforce severe penalties through pricing against any company that would offer the consumer a choice.

Here is a company that has routinely precluded development for alternative

platforms (e.g. OS/2 in the past) as a condition of participation in programs for development support, and which currently seeks to prohibit the use of any open source tools in conjunction with Microsoft development tools. Microsoft deliberately introduced seemingly pointless changes to revisions (erroneously termed "upgrades") of the Windows 3.x series to "break" compatibility with OS/2 and to prevent or make difficult the use of DR DOS. While Caldera successfully sued, all of us consumers were still stuck with the inconvenience and left without compensation.

Here is a company which stated in leaked memos that the way to increased control was to subvert standards (the "Halloween" memo), introducing proprietary changes or alternatives, in an effort to control communication over the internet, force adoption of Microsoft server software, over more dependable and "free" software, and generally turn the internet from a public freeway into a corporate toll road. Here is a company that represented fabricated video in court to a U.S. judge as the truth. Here is a company that has also chosen to "borrow", rather than innovate. The basic graphical user interface was clearly inspired by the Apple Macintosh, in turn derived from Xerox. The basic taskbar and menu interface added to Windows/95/98/Me/Xp was essentially a duplicate of the Lotus Smartbar system. When Microsoft wanted disk compression, they stole it from Stac, and didn't even consider doing that until it was first introduced by DR DOS. When Microsoft wanted a browser, they stole it from Spyglass (not paying agreed upon fees), and stole the name from an ISP which they drove out of business over the trademark of "Internet Explorer". Here is a company that loses again and again in court (most recently to a new England software development company over restrictions on software tools) and finds it cheaper to pay than play right. It was laughable to see Microsoft touting implementation of voice controls and an "Internet Desktop", years after a truly internet integrated and voice enabled desktop was introduced in OS/2 Warp. The only innovation introduced by Microsoft has been an incredibly fertile breeding ground for computer viruses and worms, preying upon Microsofts' operating systems fundamental lack of security and ill-considered capabilities built into email clients, browsers, and servers.

Here is a company that, when their browser didn't stack up against Netscape's, made it mandatory, "integrated" with the operating system. When they realized that video real estate on the installed OS screen was valuable, they loaded that icons generally useless and annoying to the consumers, and sought to control even the bootup screen. While initially making some concessions to hardware manufacturers, just how quickly do you think Microsoft will backpedal once they secure the proposed love-pat-on-the-wrist settlement? They've already begun. How long before "SmartTags" reappear, changing the content of the web pages viewed tailored to the tastes of Microsoft, or those who pay Microsoft to

change it, while tracking your every movement on the web, and cross-referencing your internet excursions with your credit card, password, and other information in their Passport database, the use of which is built into WindowsXP.

Their offer to donate software to disadvantaged schools reeks to the heavens of self-service. It is the largess of the cat as it plays with the mouse. The schools are the last place where Microsoft still faces significant competition (Apple). How convenient to be donating completely Microsoft systems. What a "penalty" for them to endure. Why not make Microsoft purchase Apple computers for every school in the US (running MacOS/X), and/or hardware capable of running the Linux operating system, which RedHat Software has agreed to donate free to every school in the country. That would make some sense, and at least show our children that they do have a choice. Do that, and make Microsoft agree to an absolutely open pricing structure, with only some capped volume discounts (i.e. top level over >1000 copies \$\$\$/copy), no special deals or contracts, everyone can buy the same volume for the same price, under penalty of breakup of the company. Ban Microsoft from including restrictive agreements with software developers—let them offer any incentives to develop for Microsoft operating systems they want, but don't allow them to offer disincentives or prohibit developers from targeting other platforms.

Then we would see just how far the quality of Microsoft's software would carry it. I am not a computer professional, and I have no financial interest in any of Microsofts' competitors. I'm just a computer user, who doesn't like Microsoft's software "solutions" or their behavior.

 Date: 12/6/01 9:28pm
 Subject: Don't Settle With Microsoft
 To Whom It May Concern:

I would like to take this brief opportunity to voice my objection to the proposed settlement with Microsoft. As someone who grew up with computers, I've watched quite a bit of technology come and go, not all of it deserving. Names which once carried great excitement, now consigned to history, abound: Stacker, Netscape Navigator, Word Perfect, Amipro, Lotus 1-2-3, OS/2, Telemate and so many more; each of these products fell victim to classic Sherman-style monopolistic predation: using the Windows Operating System monopoly to effectively "squeeze" out competitors. Microsoft quashed Stacker, then the leader of disk compression software, when it included DoubleSpace into MS-DOS and later Windows 95 and up. Microsoft quashed Netscape Navigator when it included Explorer into Windows 95, NT and up. Microsoft quashed Word Perfect my giving Office developers access to critical Windows computer code (Application Programming Interfaces) not available to other companies. Microsoft quashed Ami-Pro the same way.

Microsoft quashed Lotus 1-2-3 the same way. Microsoft quashed OS/2 by predatory licensing practices that punished PC vendors for including non-Microsoft operating systems and by refusing to make other applications, like Office, compatible with OS/2 despite demand. Microsoft quashed Telemate out of existence, and many other serial communications programs, by including Hyperterminal with Windows 95 and up.

The vicissitudes of the software industry over the last ten years has brought improvement, but at a great price: innovation. Consider disk compression alone. During the great Stacker versus DriveSpace competition, compression technology went from non-existent to 2x compression in just a few years. That was 1993. Drive compression technology has not improved significantly ever since. The same can be said for dozens of other market niches.

Keep in mind the story of OS/2. I remember how excited hundreds of independent software vendors, and tens of thousands of consumers, were when Microsoft was before Judge Stanley Sporkin in it's previous anti-trust trial. Many people were excited when Judge Sporkin refused to sign the settlement between the Justice Dept and Microsoft. I also remember how dejected we all became when the Appeal Court intervened. OS/2, a truly innovative Operating System which featured cutting edge technology long before it was incorporated into Windows, soon withered under the dark eclipse of Microsoft's licensing practices.

Bear this in mind:

Most likely you are using a Windows-based PC to read this message. Much of the software included on this machine represents a once-thriving segment of the software industry that no longer exists because Microsoft tied one of it's products, or a product of a company in which Microsoft has an equity stake in, to its Operating System monopoly.

Please, for us tired and weary computer users, reject the agreement lest we be back here again in another five years.

Sincerely although tired,

Zachary Johnson

Subject: Microsoft comment

This is not about Microsoft being bad because they are Microsoft. This is to point out that the Department of Justice is passing up an opportunity to make America a better place by re-introducing competition back into the PC software industry.

If you look at the history of the software industry you will see that whatever market Microsoft has decided to enter, competition dies. Look at spreadsheet software: at one time Lotus (now IBM) ruled the market but had plenty of competitors. Microsoft entered the spreadsheet market and practically took over the market in just a few years. They did the same thing with word processing

software. Wordperfect (now Corel) was the market leader with a healthy quantity of competitors. Microsoft entered the market and most competitors went out of business. The same happened with disk defragmenting software. Many competitors until Microsoft entered the market.

The loss of competition in the office productivity software happened concurrently. What event caused all of this? Bundling of Microsoft applications on new PC's. At first they were not the best but they were "free" and good enough. Why buy the best or even something else? Now everyone sticks with Microsoft applications for "compatibility". Everyone who buys a pre-made PC, as opposed to assembling out of parts, pays a Microsoft "tax". Windows and some kind of Microsoft productivity application are pre-loaded by the manufacturer. There are a few exceptions but none that amount to more than a few percent of the market. Competition is lost. Please take a look at the number of software companies today as opposed to ten years ago. Also look at the average size of the top five companies in each category. Now look at the same information for today. I think you will see a disturbing trend.

Subject: letter to the department of justice

Dear Department of Justice,

In respond to some e-mails I received in the case of Microdoft I would like to point out that I do not agree with the attitude of Microsoft. My opinion is the following:

First of all, I am not a happy costumer of Microsoft. They bring out software that does not work properly, a way of resolving that problem is to download patches or buy upgrades. Since Apple can bring out a quite good OS and Linux works good for free, Why can't Microsoft do the same. They are giving a false illusion of safety by pretending that their software is secure.

second: I really dont like all those stories about Microsoft that I hear. I might be paranoia but I have the feeling that my privacy is at stake if I continue to buy or install software of Microsoft. All those required fields to fill in with questions that actually dont need to be filled in for a working software. With XP I have to online to register my computer. I dont have the need that micosoft knows what I have for computer at home.

Third: The prices... absurd from microsoft to charge that much money for a software that has blue screens of death as standard feature, linux is a far more advanced OS for free. Im sure that the programmers of microsoft has an equal knowledge of programming that those of the linux community. Why the difference in price (?). receive free software that rocks or pay lots of bucks for a software that needs contineous patching and update and still not work good. Easy choice.

Conclusion: Dismantle Microsoft in smaller companies. This should be a solution. That way they will less have the opportunity to monopolise the IT sector.

The computer industry needs concurrence to evolve, monopolizing it would result in a low development rate and always the same software. My trust is in the maerican department of justice. make the right descissions and the world will be gratefull to you.

Sincere regards

Jim

Subject: Concerned about settlement

As a software developer and consultant, I am concerned about the new direction the US DOJ has taken with respect to the case against Microsoft Corp. I think the evidence is clear that Microsoft strongarmed OEM's using anti-competitive and exclusive contract terms, using their dominant market position to back OEM's into a corner with no alternative but to sign on the dotted line.

This kind of arrogant disregard for fair competition needs to be addressed in such a way that Microsoft is taught a lesson. I can't see how that is being accomplished with the current settlement terms.

Subject: Antitrust settlement

I am from a small country which is dominated by Microsoft software. They are, in my belief, stamping out any form of competition in our primary areas of Government and Education. I am appalled by the DoJ settlement because I cannot see any form of punitive action, nor any remedy to prevent the continuation of abuse by this software monopoly. The danger of allowing Microsoft to continue its blatant behaviour is to see the U.S. become isolated technologically from the rest of world, Europe, and Asia in particular. The perception here is that Microsoft is above the law, untouchable, contemptuous of justice, and encouraged by the current U.S. Administration.

I support the states that oppose the settlement. It is a pity that they have to try and do what the DoJ should have done.

Yours sincerely

Subject: My opinion

Dear Sirs:

I have been a computer professional since 1985. I have worked with DOS, OS/2, Apple Computers, Windows, Linux, AIX and Solaris and a few others. In the mid-80's IBM was considered the Evil Empire. Sun would have us believe that they are here to save us;

Linux zealots would have us all work for free; and Steve Jobs and co. would have sitting around in our bare feet making "really cool" graphics with our Macs. I don't believe that any of these groups have the consumers best interest at heart. As bad as they are, Microsoft continuing to operate as described in the settlement agreements is 10 times worse. Microsoft has a continued history of stealing add-on software, breaking it, then jamming it into their core operating systems. Microsoft designs and develops incredible insecure software then makes plans to have all its customers connected to the internet all the time. They simply must be stopped. If microsoft is allowed to continue, it will surely damage America. Their software is responsible for the overwhelming majority of systems outages and lost productivity in operations centers where Windows is in use.

The Commodore Amiga OS was better in 1985 than WinXP is today. Microsoft has not done us any favors. Stop them now.

Subject: Microsoft Anti-trust Settlement

I develop computer software. I never had any intentions of competing with Microsoft. Back in the days of DOS, I was able to get the information that I needed to write software for most any purpose. But, when Windows 3.1 came out, Microsoft made it virtually impossible for me to get access to the information that I needed to write Windows applications. Consequently, my days of developing software came to an end with the introduction of Windows 95 and the death of DOS.

I believe that Microsoft is a monopoly and that they have been a predator. Their operating systems market is unchallengeable. They have destroyed numerous application software developers over the years to enhance their bottom-line. Why is it that you want to let them off with a slap on the wrist?

Subject: PUNISH Microsoft, Don't be tricked into rewarding them!

In having Microsoft donate free software to schools, you are playing right into their hands. This is no punishment at all, all this will accomplish will be to further entrench their software's dominance in the marketplace. Only this time it will be among people who probably never had computer skills before; they had nothing with which to learn. If this goes through, they will be trained to go into the workplace with Microsoft-only computer skill; in other words, only capable of working in some flavour of Windows.

One of the reasons Windows is dominant is because most software is written for it; following a vicious circle:

—third party vendors sell more because Windows is much more popular. (It is absolute crap for the money we pay, BUT SINCE EVERYTHING IS WRITTEN FOR IT WE HAVE NO CHOICE!)

—because everything is written for windows, Microsoft maintain its stranglehold continuously.

No one can buy another OS that has even a tenth of what is available for Windows. Contrary to what Mr. Gates et al spew out, Microsoft is not about choice or innovation, it is about gouging the consumer and maintaining their monopoly and to hell with what consumers want. They just couldn't give a crap. Linux, for example, is free and doesn't crash even 1/100th as often as the most popular Windows. Microsoft has a billion-dollar budget and they can't even debug their own product. Why? PLANNED OBSOLESCENCE. After all, if the old version has loads of bugs (and with Microsoft it always does) they can sell a new version with bug fixes and not even have to.. *GASP*... ACTUALLY EARN THE MONEY THEY ARE GETTING BY GIVING THE CUSTOMER WHAT THEY WANT!!

Yes, for the record I HATE Microsoft and absolutely everything they stand for. When I think of all the money I had to spend on their crappy system it makes my blood boil. No one wants to take a chance on lesser-known OS's so I HAVE NO CHOICE BUT TO USE MS WINDOWS (to my continual chagrin)

Force them to break up. Force them to reveal their source code. Do something to break the death grip they have on the PC industry. I personally want them GONE. But I'd settle for having a choice.

Subject: RE: Microsoft's Position in the OS / PC Market

To Whom it May Concern,

As a PC owner, I am less than thrilled with Microsoft's ability to force me to accept their Windows-XP operating system on my new PC, and with it, their police-state-tactics imbedded in the Operating System. Not only do I feel it a violation of my personal privacy (to allow them to run software on my machine that essentially permits them access to anything and everything I have installed), but I am very annoyed at the performance degradation of all this policing software. I am a law abiding citizen, who does not steal software products, so why should they have the right to force me to accept an agreement to run the only choice any home PC user really has—Windows (in whatever version they choose to provide), and at the same time add all their strong-arm-tactics built into their Operating System! I am truly sorry I did not buy my new PC before they switched over to this new Windows-XP. What does XP stand for? "eXtra Paranoid (Bill Gates)"?

Please view the Microsoft Corporation as the 10,000 pound Gorilla it really is.

Someone needs to protect the customers from their position as the "only game in town—so take it or leave it" attitude. Please force them to back off! To open up their operating system so that customers such as myself can turn off the nonsense that eats up resources (Disk Space, CPU usage, Memory). I suggest you go to your local PC store (Gateway, CompUSA, whatever), and try to buy a PC without Windows-XP. You can't find one—trust me. Then, when you get it home, read the agreement that Microsoft requires you accept, if you want your new PC to work at all after 30 days! Perhaps this will show you what they truly are about.

I wish I had a choice. Thank you for your time,

Sincerely,
Janet Sinclair

Subject: Dear Department of Justice:

Dear Department of Justice:

The present settlement arrangement shows off Microsoft's extensive manipulative ability afforded to them by their monopolistic wealth. It is difficult to believe that this arrangement was not influenced by Microsoft money. The stench of corruption surround this entire settlement agreement, and it definitely erodes faith in the ability of our justice system to make impartial decisions. The ugly, corrupting influence of money appears to have replaced your soundness for decision-making. POINT BLANK- Microsoft is guilty of Monopolistic practices that have hurt/ruined competing businesses, not by shrewd innovativeness, but by deceptive deployment of computer piracy practices. The general public is naive concerning these matters, but anyone with any substantial history/experience in the computer industry is aware of that trend, and the hands off policy adhered to by the justice department. The U.S. Justice system is emulating and reinforcing the backward business payoff methods used in corrupt systems, such as Mexico. ANYTHING for a buck, appears to be the new official slogan of the U.S. Justice department, because it is painfully obvious that there is no priority on what is right, moral, or what is the longterm good for the public.

To: Microsoft ATR
Date: 12/6/01 9:48pm
Subject: Monopoly

Maybe I am not completely clear on the monopoly issue here, but it seems to me that there is no such issue at hand. You should know that I do not solely use Microsoft products. I use many companies products on Microsoft Windows, but I also use many companies products on Red Hat and Mandrake Linux. So, I have used and still do use other operating systems other than Windows. Microsoft does put out incredible products. And, Windows is, in my opinion, the best operating system available. To say that they have a monopoly because they sell

more of their operating system than competitors is ridiculous. They sell more, because the majority of people want it. It is very user-friendly, and that is what most people want. I mean, why not...would you rather get a can of pop that tastes great and just requires that you pull a tab up to open it, or would you take the can of pop that isn't so great tasting and requires that you use a can opener to get it open? It's common sense. And, as far as requiring that Microsoft Windows come standard with other companies products installed is outrageous too. I can't state which one sells more, but let's say for instance that Pepsi sells more per year than Coke does. Does this mean that Pepsi has a monopoly and should be required to provide one can of Coke for every case it sells?

It's not like you don't have a choice either. Even if your computer purchase comes with Windows installed...you still have a choice. You are not required by law to use that operating system just because it was installed. If you don't like it, then remove it and install the operating system that you desire. If Linux ever get's close enough to compare to the user-friendliness that Windows has, then they will get more business. But until then, open source or not, Microsoft deserves what it gets...Money!

Subject: Microsoft Antitrust summary

When I first read Thomas Penfield Jackson's summary on the Microsoft case, I was astonished. Here was a judge who had cut through the maddeningly lengthy arguments, avoided what could have been impossibly tangling technical discussions, and convincingly, summarily, and clearly described the kind of illegal and despicable behavior that Microsoft has engaged in for years.

Here, I thought, may be the beginning of the end of the strangling hold that one company has put on innovation by slowly encroaching on area after area of competition and innovation, using popularity of one product to drive the business out of another area, for over 10 years. My only concern about the proposed settlement was counting the appropriate number of entities that Microsoft should be split into. Instead, the Government not only lost its will to promote innovation and prevent financial gouging of the American public, but has turned a blind eye while Microsoft continues to prevent innovation and increases the cost of entry into its market to ever higher and unachievable levels.

I am sad that the proposed remedies do not prevent this behavior by Microsoft, but rather continue to encourage their particular kind of piracy and hostage taking.

In hopes that you will promote fair competition in future court cases,

Subject: Microsoft Case & Settlement

Greetings,

I had high hopes that the DOJ would stand up for the American citizen during this trial, I was wrong. The DOJ joined others in bowing down to Microsoft and to punish them by forcing their 2nd rate software into schools is no punishment at all!, in fact it's a favor. Has the U.S. Government somehow been bought off by MS ?? I do not have the answer to this, only the evidence that there has been no justice at all.

Please stand up and make Microsoft actually pay for their horrible business practices and dishonorable methodology. Also do not get me wrong, I am for capitalism, making money and the American dream. However when they operate their business in the manner Microsoft did and still does, someone needed to step in and put a stop to it.

Subject: Microsoft settlement

As a fairly consistent Republican voter, I must say that I'm deeply disappointed in the slap on the wrist settlement deal being offered to Microsoft. Free, unrestricted markets are the way to go 99.9% of the time, but when a monopoly such as Microsoft comes along that abuses its advantage to such a degree, I feel that consumers are truly hurt in the long run.

The DOJ should press its advantage as much as possible and retract the settlement offer being considered. If the entire settlement isn't completely rethought, at very least, consider proposals to add some teeth to it—like the one submitted by Apple Computer, Inc.

You have a real chance to benefit consumers and free the tech industry from such an onerous burden.

Subject: Views on Microsoft and Monopolistic Practices

Dear Sir or Madam,

In this email I wish to present my view of Microsoft as it relates to monopolistic practices, the world of computing, and our society. First off, let me say that my opinion of Microsoft is that held with the highest regards. I salute the company for many things, including the advancement of the Internet, helping less knowledgeable people be able to participate in computing, and helping businesses to put their best foot forward with products like Office and the Windows OS. Next, let me say that much of

my success thus far can be attributed to my understanding of Microsoft technologies, like ASP. Currently, I am a Senior Web Developer for Northrup Gruman IT contracting to the United States Air Force. In addition, I run a full service Managed Web Development and Hosting company from my home in Yukon, Oklahoma.

I would like to present what I think is a realistic view of Microsoft and how it impacts our society. First, let's take a look at security. I believe that Microsoft's Flagship Server (IIS) is one of the best static and dynamic content web servers on the market. The problem is that proper testing has not been performed on the product. It is obvious with the amount of patches that need to be applied on an all to frequent basis. From a small business standpoint, I no longer host any of my clients on IIS. Bottom line, I don't trust it's stability. Over the last year, I have been loyal to Redhat Linux and have reaped the rewards. First, Linux introduces you to REAL computing. For a very low cost you are provided with Enterprise level software that is as reliable as the Energizer Bunny. So if you ask me what the best enterprise solution is for our military, school system, and government agencies at all levels, my answer is Linux. You get a better product for a fraction of the cost, which enables you to spend money on things that count like giving pay raises to our nation's teachers, instead of paying another licensing fee.

Forgive me for being a huge sports fan and using an example that relates to sports, but Microsoft reminds me of the star athlete that keeps asking for more money. For fear of what will happen without him/her, the organization keeps paying out more money. Soon, the organization is headed for failure due to lack of funds for new talent. Ever heard of the Dallas Cowboys? While it is true that they won three superbows in fours years over the last decade, it is also true that now that are fighting to stay afloat. I ask you, why is that? The high price they paid for some of their athletes, namely Deon Sanders.

The point is this, Microsoft is Deon Sanders. You might wonder, if Microsoft is Deon Sanders, who is Linux? The answer is Roy Williams of the OU Sooners. If you are not familiar with who he is, you should watch this kid play sometime. He is incredible.

Thanks for your time,
Tom Davis

Subject: Microsoft vs. "the rest of us"

IMHO, requiring Microsoft to donate their own software to schools only further extends their monopolistic control over the personal computer market. The money would be better spent on hardware, as there are a number of open source alternatives to Windows available for free. This would place computers in a larger number of schools.

Microsoft should also be required to change their business practices, as was

required of AT&T years ago. Otherwise, they're no better than a traffic offender that continues to get speeding tickets but never loses their license.

Subject: Microsoft settlement.

In regards to Microsoft's donations of computer equipment to schools, I think it would be a great idea to supply open source Linux software rather than proprietary MS software. For one thing, future upgrades of Microsoft software will be expensive, whereas open source software upgrades are better than free. Furthermore, open sourced software is effectively in the public domain. Thus, no one group or person will profit from this move. Finally, kids will learn more from a Linux box than they will from a Windows box. On a windows machine you learn how to use windows. On a Linux machine you can see the whole computer in front of you. In biology class, we dissected frogs in order to learn about anatomy. This is the kind of thing kids could do with a Linux computer.

Subject: Opinion regarding DOJ-Microsoft settlement

Hello,

As I read the proposal to allow Microsoft to donate software, hardware and services to America's poorest schools as a means for settling this suit, I felt compelled to register my opinion of this proposal. Ladies and Gentlemen, it seems to me, that while this appears to be a noble gesture, let us not forget that this is the same organization that has already been ruled to be a monopoly and/or engage in monopolistic practices. With due respect, since this ruling I've not seen any issuance of any order that seeks to regulate their practices, as we have seen with other monopolies and oligopolies in our society.

As you consider their proposal, I'd encourage you to NOT allow Microsoft to provide software or services, especially their own, as a part of this settlement. This has nothing to do with an anti-Microsoft position, but rather the application of common sense. We, as a people, generally craft our punitive measures in such a way that the guilty cannot continue to harm the injured party. For example, we often take the right to drive away from someone convicted of a crime that involves a motor vehicle. We take away a criminal's right to be a part of society until he has paid his debt to that society. Microsoft should not have a remedy that allows them to further weave its products into the fabric of our society.

Please understand that the issue is far greater than the offer of goods and services. The issue has to do with an indoctrination of school children with computer software technology that sources from a single point. Our children should be given the opportunity

to use products from various vendors. This more accurately reflects the type of an environment in which they will work after they enter the work force.

The proposal, and presumed acceptance of such a remedy, in my opinion, is a thinly-covered ploy to enable Microsoft to extend its reach. This does not even speak to the point that a remedy of donated software would have no real dollar value, since every copy of the donated product is essentially provided to schools at no cost to Microsoft. I realize the products have retail value, but the REAL cost to Microsoft is near zero. I'll bet they will write the costs of this software off in their taxes, and this should not be allowed, either. Please make your remedy have some barbs. The American people expect and deserve no less.

I'd suggest an alternative plan. Let Microsoft provide the goods and services, but let them be products they have to buy (with REAL money), such as Sun Solaris workstations, IBM AIX servers, Silicon Graphics workstations, Linux workstations or servers, Oracle databases, Apple OS-X, and other competitors' products.

Thank you for taking time to listen to the American people as you consider your decision.

Subject: Anti-trust settlement

I think that what ever is being set as a punishment needs to actually be a punishment and not an easy way for Microsoft to enter a market it is still trying to gain market share in. The punishment of providing free software for schools is really a punishment for Apple and Linux vendors, not for Microsoft.

Microsoft has driven a lot of useful improvements in software development, but they have done so at the expense of a lot of other companies.

Subject: Microsoft monopoly

To Whom It May Concern,

Your proposed settlement with Microsoft does not do nearly enough to correct the current market imbalance. I have little doubt that Mr. Gates and company had quite a celebration after the "settlement" was reached. Why did you bother? You should not have started what you didn't intend to finish. Oh. That's right. You didn't start it, the previous administration did. And this litigation was one of the very few things that I could whole-heartedly support from the mostly miserable Clinton administration. The damage you have caused with this settlement will not be really felt for several more years. Eventually, Microsoft will have to be stopped by the government, and due to your inaction at this time, the eventual "clean-up" will be all the more costly and painful for everyone (worldwide).

Thanks for nothing.
Sincerely,
Gary Lowther

Subject: Justice For Whom

This Microsoft antitrust scam has gone on long enough.

The only parties hurt by Microsoft has been their incompetent competitors. They want the government to, in some way, hobble Microsoft since they can't compete in a COMPETITIVE marketplace. I don't think Time/AOL, Sun, Oracle and the rest care about the consumer one bit. The rogue states continuing the campaign either want some sort of recognition or are trying to protect Microsoft competitors located in their state. It is unbelievable that anyone could consider the consumer harmed by almost any of Microsoft's products or services? A free browser; standardization; an easy to use operating system; an excellent office product, etc. etc. etc. If Microsoft doesn't offer products/services customers want, they will buy it from someone else. Let the market decide not a group of zealous attorney's.

Thanks,
Tom Stephenson

From: jpavlo@ilm.com@inetgw
To: Microsoft ATR
Date: 12/6/01 10:10pm
Subject: AtATgram: Lobbying For Smackdown (12/6/01)

Joe Pavlo <jpavlo@ilm.com> is sending you a scene from As the Apple Turns! Scene 3435 follows:

Lobbying For Smackdown (12/6/01)
Remember how Microsoft recently offered to settle a couple hundred private antitrust suits potentially worth some \$12.5 billion by donating \$1.6 billion in refurbished computers, software, and services to the nation's "poorest schools"? Yes, it was a baldfaced attempt to turn what should be a penalty for abusing monopoly power into a cheap and easy grab for yet more market share. As such, that settlement proposal is the latest and most obvious piece of evidence that Microsoft thinks the rest of the world is suffering from massive head wounds. Then again, who can blame them for thinking so? After all, 90% of the world is using Windows; we're hard-pressed to come up with a better explanation for that statistic than widespread cranial trauma. But we digress. You probably also recall that Steve Jobs was among those who found Microsoft's proposal just slightly... incongruous with the whole "antitrust punishment" angle.

Being the quintessential diplomat (at least, when he wants to be), the man generally keeps his yap shut about Redmond antitrust issues, but when suddenly faced with the possibility of a billion-dollar tidal wave of Windows, Office, and Outlook crashing through our schools and wiping out one of Apple's last market strongholds, Steve issued a cautious statement of protest last week, stating that he was "baffled" as to how handing Microsoft a new market on a silver platter constituted any sort of penalty for breaking the law.

Now, see, we thought that was the end of it as far as Apple was concerned—and certainly Steve's short statement attracted a whole mess of media attention, so we figured that Apple had made its point and moved on. Evidently we were wrong, though, because faithful viewer GUMBY informs us that Apple plans to file a supplemental brief tomorrow morning in hopes of persuading the judge to reject the proposal. According to Reuters, one of El Steve-O's big points will be that \$830 million of that \$1.6 billion settlement consists of free Microsoft software—which, in reality, doesn't cost anywhere—near—that much to reproduce.

In his own divine words, "We think people should know that the actual costs to Microsoft for this donated software will likely be under \$1 million." Mmmm, you just—gotta—love that 100,000% markup!

So instead of letting Microsoft get off cheap by donating software valued at full retail price (yet costing only pennies to reproduce), Steve proposes the same idea we rattled off last week: make Redmond cough up the cash and let the—schools—decide what they want to buy with it. By our count, shelling out \$1.6 billion in cash to settle hundreds of cases worth up to \$12.5 billion is still a great deal—especially for a company with pockets as deep as Microsoft's. Heck, if it were up to us, we'd tack another billion or two on there just to smack Microsoft around for proposing such a weasel-headed settlement in the first place. We'll see soon enough if the judge bites.

Subject: RE: Microsoft

Hi,

I think it a sham to let Microsoft donate software to poor schools or any schools for that matter. Microsoft has their software in almost every school in North America now. This proposal gives Microsoft an open door to get students to use "THEIR" software, so naturally when students buy their first computer they will assume that Microsoft is "THE" operating system and software to use without knowing they have a choice or go out into the work force obvious to the fact that the company that might hire them doesn't use Microsoft products and that job opportunity might just fly out the door. Where is the justice in that.

I have used Microsoft's Windows 3.1, 9x and 2000 and I don't like the idea of having to install their Internet Explorer, Outlook Express, etc., when I don't want it installed, because I don't use it. I also feel that their products are highly over priced and highly over rated. An operating system that crashes as frequently as the Microsoft family of operating systems do, is not a great system. I have changed to a Linux OS and haven't had any crash problems what so ever. There are a number of operating systems out there, we have to show people there are alternatives, what you are doing is giving Microsoft the "BRASS RING".

I think you should rethink this problem.

Cheers,

Scoob

From: Chuck Talk
To: Microsoft ATR
Date: 12/6/01 10:17pm
Subject: Microsoft Settlement unjust

Dear Sirs,

I wish to state for the record that the Microsoft settlement is unjust, and only furthers their monopolistic practices. The proposed settlement to "donate" software and hardware to schools is only designed to undermine Apple even further in their traditional school system markets. There is no dealing fairly in Microsoft's business.

I cannot believe that this nation, which has always played fairly would allow this monopoly to continue to crush the innovations of other companies, and continue the unjust licensing practices they have had in place for so long. The future of true value and stability lies elsewhere. The future of computing does not begin Redmond Washington making the few wealthy at the expense of the public.

I pray that the Department of Justice negotiate a settlement to curb the Microsoft businesses which, when seeing someone else's success, ultimately enter that market and destroy it for all others. Would we allow Standard Oil to set the price of Gasoline? No, we did not. Would we allow AT&T to stay

a monopoly? No, we did not. What possible benefit can be gained from allowing this one company (which has had a habit of releasing substandard imitations of others' innovations) to continue to dominate the market through monopolistic practices? I say no benefit other than the personal gains of the officials at Microsoft.

If Microsoft is allowed to do what it wants, Real Networks, Kodak, Symantec, McAfee, and many other companies will eventually be forced to cede their markets to Microsoft through the Windows Media Player (ins't this just another re-hash of the Video for Windows debacle?), the Personal Firewall in XP, the digital photo suites, everything that others built—they copy and destroy. They are also exerting tremendous pressure on OEM's to keep them from delivering Linux-based PC's to consumers. They want to destroy the open-source movement with lies. Scott McNealy has it right—they do not even flirt with the truth anymore.

I pray that you take punitive action and stop them before we have a Government by and for the Microsoft.

Sincerely,
Charles Talk

From: Joe Hoffman
To: Microsoft ATR
Date: 12/6/01 10:17pm
Subject: My comments on the proposed settlement

As someone who has worked in the software development industry for over 20 years, I feel I have a strong opinion about the Microsoft settlement issue.

My biggest concern is living in a world that continues to allow Microsoft Corporation to continue to monopolize the software industry and crush competition. This is wrong both from a legal perspective and a moral perspective. Microsoft has demonstrated a desire and willingness to crush any other company and they have the capacity to do just that. This needs to be kept in mind and addressed in any agreed settlement. For example, allowing Microsoft to donate their products to disadvantaged schools is a farse.

All this will do is further extend their monopoly. Redhat's proposed ideas need serious consideration, however I'm not sure how this compensates companies who have been crushed and ruined by Microsofts anti-competitive practices. Please keep this issues in mind when considering the Microsoft settlement.

Thanks for listening.

To: Microsoft ATR
Date: 12/6/01 10:20pm
Subject: Microsoft Settlement

Dear Sirs:

I write this letter to state that I oppose the negotiated Microsoft settlement. Here are my reasons.

(1) Microsoft is guilty of monopolistic practices, yet the settlement encourages the extension of that monopoly into schools—one of the few areas where they still have non-trivial competition.

(2) The settlement is not punitive. The cost of providing software is negligible to Microsoft and, in the end, they will probably profit by eventually charging the schools upgrade fees for their "free" software.

This is a variation on the scheme they used to corner the spreadsheet, word processing and browser markets.

(3) The settlement does nothing to correct the wrong created by Microsoft's criminal actions, and does little to keep them from doing the same things in the future.

From: Alan Meyer
To: Microsoft ATR
Date: 12/6/01 9:12pm
Subject: Software for schools

Ladies and Gentlemen:

I am writing to ask you to prevent Microsoft from giving away software to our nations' schools.

Giving away computer products to schools is a long standing technique for increasing market share. The children learn to use the products in school, then come home and ask their parents to buy the same products for use at home. The product they used in school is the only one they know and are comfortable with. If Microsoft wishes to give cash to schools, or to donate computers (which they don't sell themselves) to schools, that will not strengthen their monopoly position in software. However if they give away Microsoft software to schools (which doesn't really cost them anything) it will strengthen their position and is very akin to "dumping", and other techniques that harm competition. Also, it is my understanding that Microsoft will only license the software to the schools for a limited time. I have read that, in the Microsoft proposal, after five years the schools must start paying fees.

It seems to me that this proposal by Microsoft shows that Microsoft still doesn't understand that building a monopoly is illegal, harmful to the people of our country, and morally wrong. I ask you not to permit this proposal of Microsoft's to go forward.

Thank you.

From: Mike Combs
To: Microsoft ATR
Date: 12/6/01 10:28pm
Subject: Settlement

I am an avid Linux user, but I am also a systems administrator for 2 Microsoft Windows Local Area Networks in the employ of the U.S. Navy. It is my firm belief that if the United States Department of Justice allows the settlement to include disbursement of Microsoft Windows software, then not only is the Department impotent, it would at that time be propagating the acts of a convicted monopolist and abetting in the expansion of such monopolies.

Look at the facts...Microsoft would be "giving" away free versions of its software to needy schools to teach the next generations how to use computers. This is brilliant for Microsoft in that it is an investment in several ways.

First, it is an investment in that in 5 years, the software would have to be upgraded in order to retain proper taining for the young people of today and tomorrow, but also to retain compatibility. As it stands now, Microsoft, in the near future will no longer provide support for Windows NT4. This will force all businesses that use it, Including the Department Of Defense which uses Microsoft products almost exclusively, to upgrade. Therefore they are investing in a tremendous rush on per seat liscensing to occur 5 years from now...

Secondly, they would be training the next generations to use computers, but not providing them with any other education other than Microsoft Products. And it is obvious to anyone that cherishes reason. Those who are taught to use Microsoft Products as youth will buy those same products as adults because that is all they know how to use, because the free computers and software is all they can afford. (It is acknowledged that the computers and software will go to the less fortunate schools that cannot afford computers to teach their children.

If this is allowed to happen, I fear for free trade everywhere. I hope, as a servant of a great Nation that our leaders, and the enforcers of laws of the greatest Nation on earth will recognize the marketing genius of such a move and stop it before it is too late and they themselves are rendered imptent by a long range corporate marketing scheme.

From: Stephen Nay
To: Microsoft ATR
Date: 12/6/01 10:37pm
Subject: Comments on Microsoft settlement

I am very disappointed in the proposed settlement between the DOJ and Microsoft. Where is any penalty for Microsoft being found guilty of illegal practices in its monopoly position? The remedies in the settlement don't give me any hope that Microsoft will do anything markedly different in the future.

My biggest concern is that the problem of "bundling" other software with the Windows operating system was not addressed directly. With each new version of windows, Microsoft adds new "features" which really have nothing to do with an operating system, but step into the market space of other companies. Because Microsoft includes their features "free" with the operating system, the other companies have little room to try to sell their products and make a profit. I thought that was the original complaint and that it was that very practice that found Microsoft to be illegally using its monopoly position. But I don't see anything close to an adequate answer to this problem in the settlement. How many more companies must fall by the wayside because Microsoft includes their competitive feature for free in the operating system. Features in Windows XP are a direct attack on Real Media and also on Symantec's pcAnywhere.

Those products may not die—they may just wither and limp along like Netscape has since Microsoft started bundling Internet Explorer in with Windows. Since when is a browser part of an operating system?? It's not—it's a separate application. I have no confidence that the DOJ is representing the best interests of American enterprise and consumers in this settlement. On the contrary, it appears to be a complete sell out. I'm a republican, but Bill Clinton's administration was much more effective in this case than the current leaders of the Justice Department. Microsoft is squelching competition, and now they have the government's approval to continue doing so. Sad.

I'm incredibly disappointed. I wish I lived in one of the states that is not going along with the settlement so that I could encourage my own attorney general to keep up the fight. Sell out, plain and simple. You can't even put a good face on it because it's so obvious. Microsoft had agreed to greater concessions a year ago, and our current DOJ can't even get back to that spot. Sad.

Subject: MICROSOFT ANTITRUST SETTLEMENT

Dear Sirs,

I am very disappointed in the settlement of the antitrust suit against Microsoft. There is no question that they have a monopoly. The sorry software that they churn out, including their operating systems which do not work, is perfect proof that their monopoly is not good for the computer industry or consumers.

Their latest offering, Windows XP, is an example of their boldness due to the unwillingness to hold them responsible. The information gathered and sent to Microsoft is nothing short of criminal, not to mention the fact that they are putting everything into place to require a regularly paid ransom to continue to use their software. Quite frankly, the bugginess of all of their software, including their operating systems, shows that it is all way overpriced as is.

Continuing to allow Microsoft free reign is not good for the computer industry, it is only good for one company, Microsoft, and primarily good for one person, Bill Gates. This is not good for the economy or businesses. It is long past time to hold Microsoft accountable. It should be broken up into an operating system company and a software company, and all contracts which remove buyer options for the operating system installed on a new computer should be declared null and void.

Thank You,
Bob Discher

Subject: The splitting of MS
Dear DOJ,

I am thrilled that you did not split Microsoft into two. However, this is where my approval ends. Allowing MS to get away with linking their browser to the Operating System is a travesty, bordering on criminal. Other companies have been punished for attempting this sort of thing in other industries—why does MS get a bye? Most importantly, you have now told them that they can push the envelope between legal/illegal, even farther, further squelching innovation, and improvement in rest of the industry.

It saddens me and angers me that our government is encouraging unethical activities at such a grand scale. Luckily, you have not completely eliminated our great capitalistic system in the US—which will soon take care of MS [one way or the other] without your intervention. In summary, you have proven to be yet another government organization that spends massive amounts of our money, yet provides no benefit. Any legislation, or political candidate that calls for the DOJ demise will get my vote.

I apologize if this sounds emotional. However, I am getting very tired of the suppression of innovation that you clearly support. And splitting MS? What were you thinking? If I have it wrong, or am missing something, I would very much like to be corrected. My expectation, however, will be that you will not respond, or will respond

with something that defends your organization instead of telling me how you are going to start protecting honest, ethical businesses.

Regards,
Jonathan

Subject: Why the Microsoft Settlement Should Be Stronger

Introduction

I am an independent consultant and trainer with over thirty years in the computer industry. I would argue that the currently proposed settlement of the states' and the DOJ's anti-trust action against Microsoft does not address the inequities which the company's monopolistic behavior has created. Further, it is likely to allow the defendant to extend such behavior into new markets by providing it with the opportunity to dominate the software market in underprivileged and underfunded US schools. Further it will not enable competition in key market areas which Microsoft's illegal actions have so far successfully defended against non-commercial competition of a completely legal nature.

Complaint (Competition)

The current proposal for settling the Department's anti-trust suit against Microsoft, as well as private settlements proposed by Microsoft in separate class action suits for overpricing, would have Microsoft donate software to the country's poorest schools.

This cannot be considered a punitive action: the marginal cost to Microsoft of an extra copy of any Windows operating system is as close to zero as makes no difference: development costs have already been amortised many hundreds of time over. Further, since such donated software effectively locks the recipients into Microsoft products for their future purchases, it actually increases the marketplace in which Microsoft is free to act in a monopolistic and anti-competitive way. If the Department sincerely wishes to see Microsoft pay for its illegal behavior then it should insist on remedies which have a measurable effect on the company's net worth. Microsoft should be made to donate the products of other computer industry companies to the schools. Since software to compete with Microsoft products is available at no cost from diverse sources, it would seem more sensible that Microsoft be compelled to donate computer equipment, which could then be provisioned with software chosen by the intended users. The users could choose to provision software at no additional cost using readily-available open source components such as GNU/Linux. Alternatively they might choose to pay for Microsoft software, should they consider it worth the additional cost.

This would also have the advantage that it would create a worthwhile target market for further open source products, against which Microsoft would have to develop new (and hopefully legitimate) forms of competition.

Complaint (Interoperability)

The proposed settlement required Microsoft to provide information to competitors to allow them to interoperate with Microsoft products in far too limited a way. I am particularly concerned that the settlement, as currently proposed, would allow Microsoft to defend the actions they have in the past taken to limit the interoperability of the SAMBA software (www.samba.org), which offers a way for open source operating systems to provide file sharing and printing capabilities to computers which run Microsoft desktop operating systems, avoiding lock-in to Windows 2000 or Windows NT for infrastructure support.

A summary of supporting opinion can be seen at http://linuxtoday.com/news_story.php3?ltsn=2001-11-06-005-20-OP-MS. The major problem appears to be that Microsoft would be allowed to determine the interpretation of certain key clauses in the settlement agreement, which would allow them to create loopholes through which they could continue to deny vital interoperability data to legitimate developers of competing (though perhaps non-commercial) products.

Summary

Ultimately the only way to change Microsoft's behavior, which despite all their protestations *has* been ruled anti-competitive, is to take action which hurts the company (and be extension the stockholders who have profited by its success) in the pocket-book. To do any less it to teach the lesson that anti-trust laws can be ignored with impunity by any 800-pound gorilla that wishes to start making political contributions once it finds itself to be the object of legal action by the DOJ.

Sincerely
Steve Holden

Subject: opposed to proposed Microsoft settlement

My name is Charles Landau. I have been a software engineer since 1968. In my career I have written major parts of numerous operating systems. I have authored several technical papers on operating systems that were published in peer-reviewed journals, and I am the sole inventor of three software-related patents.

I must add my voice to the chorus of outcry over the incredibly lenient settlement that the Department of Justice proposes for the Microsoft antitrust trial.

I'm sure others have detailed the problems with this proposal. This settlement does not include any punishment for past illegal actions. It would be ineffective in protecting against future monopolistic practices. And it has no effective enforcement provisions. To approve this settlement would be a travesty of justice, and a clear signal to Microsoft and others that antitrust law is meaningless.

From: Al Weimer
To: Microsoft ATR
Date: 12/6/01 10:53pm
Subject: Microsoft Settlement

I believe that more restrictions need to be placed on Microsoft for their anti-competitive practices. Little companies like Real Networks will automatically go under when Microsoft is allowed to continue to bundle its Media Player with its XP Operating System. Microsoft can sit back and do nothing but wait for their Media Player to wallop the Real Player even though Real Networks will spend considerable money advertising and developing, etc. I have heard that one

potential option being considered is to force Microsoft to supply a bundle free XP. This makes sense and will allow competition from companies like Real Networks that don't even have \$0.5 billion market capitalization compared to Microsoft's \$350 Billion.

Its time to put a stop to the wallowing Microsoft did to the likes of Netscape, Lotus, and WordPerfect.

Subject: DOJ & MicroSoft Settlement
12/06/2001

Dear Sirs:

The proposed Microsoft settlement is unacceptable. It does nothing to protect consumers from the continuing monopolistic behavior by Microsoft. It does nothing to remedy the damages that Microsoft has already done to competitors, which in turn has and is hurting consumers.

At the very least finical penalties in the area of 20 Billion Dollars should be levied against Microsoft. This would send a clear message to Microsoft, that they broke the law and that continuing to do so will be even more expensive. Also a finical penalty of this size would disrupt Microsoft enough to allow other companies to have a fighting chance against Microsoft and regain their footing in the industry that Microsoft illegal took from them.

In closing, I do not see how this settlement has done anything what so ever to punish Microsoft. In fact it appears to send the opposite message. "Go ahead break the law, the worst that will happen is; you will spend Millions of dollars on legal fees. However while the case drags through the courts you will be making Billions of dollars and furthering your monopoly."

Thank you for your time:

Subject: Reject the Settlement
Gentlemen:

In my opinion, the proposed Microsoft settlement should be completely and utterly rejected. Microsoft has been found guilty in federal court of being a monopoly, and of using its monopoly power to damage its competitors. The proposed settlement:

- Does little or nothing to penalize Microsoft for past actions
- Does little or nothing to prevent future excesses by Microsoft
- Does nothing to address the damage done to Microsoft's competitors

I believe that the proposed settlement constitutes a miscarriage of justice and turns a government victory into a decided defeat. The Justice Department has a responsibility not to cave in to the demands of a large corporation, regardless of its wealth or influence. I believe it is in the best interests of all concerned if Microsoft is decisively and visibly punished for the illegal actions of which it is clearly guilty.

I hope you will give serious consideration to these points.

Subject: Opposition to settling with Microsoft

I have followed this case closely since its inception. Already WindowsXP does exactly with MS was accused of doing in this case. It incorporates more software "into" the OS, at the expense of other independant software vendors. MS is unrepentant, and will not change on its own. And the proposed settlement, does almost nothing to prevent MS from continuing to abuse its monopoly position, it only makes life a little easier for computer manufacturers whom microsoft will no longer be able to bully quite so easily.

The ONLY settlement that I think would have any hope of providing a remedy, and prevent future similar behavior is a break up of MS. MS should be split into two companies:

1. An OS company

2. An applications software company

If this were the result, then there would be incentives on the OS company to produce a platform that is easier to port software to, by making it more POSIX compliant. And the Applications company would have incentives to make the Apps available on other OSes, because it would increase market share. In both cases, the consumer (who has been determined by the court to have been harmed), competition, and industry as a whole would benefit.

It seems to me that the settlement proposed is a major cave-in by the DOJ, that at the very least smacks of the influence of MS campaign contributions to the Bush presidential campaign. I think the DOJ should be ashamed of its cowering before MS. It is very disturbing that a hard won verdict is being tossed away by the DOJ.

Subject: Comments on Microsoft Anti-Trust Settlements

Hello,

I am writing regarding the proposed settlement terms for the Microsoft Anti-Trust suit.

I am in 100% support of Red Hat's counterproposal that Microsoft's donation to the schools be in hardware, and Red-Hat provide free software plus support, for the following reasons:

1) It increases the number of students who can benefit from the donation, by about 5-fold as I understand it. The more students who can be helped by this donation the better for them and for the future of our country.

2) For a company accused of monopolistic actions, to provide them an avenue to secure hundreds of thousands of more mandatory "customers" seems very counter-productive. Microsoft's 5-year time limit on the use of the software is ridiculous.

3) I support the idea of competition in the area of computer software; if students are exposed to an alternative set of software (like Red-Hat) they will be better able to make informed choices in selecting software when they get into the "real world". If all they were taught is Microsoft, how will they know any better?

4) This is not really a dis-incentive to Microsoft to stop future monopolistic activities—the software they wish to contribute really doesn't cost them anything, and they lock in more users.

Best of luck in making this important decision; I don't envy your positions.

Subject: Microsoft Settlement

I wanted to take a second out of my busy day to let you know that I am absolutely flabbergasted that Microsoft is getting out of this horrendously expensive affair with a slap on the wrist. And to allow them to gain further foothold in our schools and call that compensation. What kind of settlement is that? As a grad student, I can say that students would benefit far more with access to an open source OS in their schools. By being able to read, tweak, change and basically fiddle with the operating system, they will build a far greater understanding of the underlying processes that make a computer work. If this software were Linux or BSD, this software is free and without license fees.

In light of the fact that Microsoft has ALREADY been proven to have engaged in unfair business practices, a more fair settlement might be to have Microsoft supply the hardware for underprivileged schools and let an open source vendor supply the software.

Yes Microsoft is dominant now in the industry, lets not reward them for the unfair manner in which they gained that position.

Subject: Microsoft Settlement

Microsoft should have been penalized for its business practices, and current events show that it has not changed its tactics!! Please do not compound this error by allowing MS to invade our public schools with their offer of \$1B of donated software etc (which will really cost them only the cost of producing CD's, but which will be charged at retail, probably a 400 to 1 ratio). Most schools presently use Mac's for learning "keyboarding". Once MS succeeds in having the kids use only MS products, they will never know that there are other alternatives, and MS domination of the software industry will be complete! This offer is nothing more than a "trojan horse"!!

Subject: MS

I do believe Microsoft has created a product like no other and keeps improving. Is MS a monopoly? Yes, but is it because of us the customer. Customers does have a choice of what computer they, and what OS

they have installed. MS had become a standard to the industry making it difficult for Open Source OS like Linux to really get notice. Also there is not alot of software or drivers for Linux. I know because it took me 5 days to found them for my hardware. Windows has every driver I need. So for Linux and other open source to become popular they need MORE drivers and MORE software. Neither of these MS should be blamed for but rather the companies who make the product. Such as a software company like westwood. They make games for windows because They probably would not make any money making that software for Linux. Is this MS fault NO. A driver for my sound card which is available on windows but not Linux. Is this MS fault NO. Therefore MS should not be sued the other companies should get more applications and games by big companies like westwood and correll, and have a more complete drivers list. From the cendors. MS should not be blamed for the actions of vendors and customers.

Subject: Microsoft Settlement

This settlement is outrageous! The department of justice is NOT enforcing any restrictions and the DOJ is helping Microsoft to extend it monopoly into our public education system. This entire case had a basis at the beginning of providing a choice to the consumer. So, why now does the government not only ignore that original goal, but helps to force our education professionals into the corner the average home user has been in for years. This is not an agreement that would in any way, shape, or form, promote a consumer's freedom of choice. If anything this agreement would show that a known monopoly can buy it's way out of court.

Over the past few months I have heard of a few suggested resolutions to correct this very unjust agreement. There is only one that I would say makes any sense. Instead of Microsoft donating \$1billion dollars in software, force Microsoft to donate \$1 billion in cash to be used by the schools and our very competent education professionals to purchase the technology that they choose to be the best for them. This would not only promote freedom of choice for our schools, it would also prevent the onslaught of upgrade costs that Microsoft would surely impose in the years to follow.

Thank you,

Randy Morrow

Subject: Concerned that justice was not given

I've been a software developer for 15 years and at one point I was the biggest MS fan on the planet. I have as a professional witnessed time and time again MS destroying technology companies ONLY because they had more money or dumped on the market to kill the small guy. In 10 years we will be buying robots from Japan or operating systems from Europe. MS it NOT a leader but a follower that hunts down and destroys the competition. How any company can buy another companies software for around 100 million and then put there name on it and dump it on the market as free BOGGLES my mind. Internet Explorer (was Spry Mosaic) was NOT what MS wanted the consumer to do. MS tried to FORCE EVERYONE to use MSN which was in direct competition with Compuserve. When MS made the WRONG decision on the marketplace they SHOULD NOT have been able to FIX IT by FORCING THEIR Netscape CLONE ON THE OPERATING SYSTEM. When MS was smaller they ALWAYS changed DOS to break Lotus 123. Guess which spread-sheet you can buy today?

When MS purchased OneTree which became their SourceSafe (version control software). They sent out within WEEKS to EVERY CUSTOMER that ALL support for any OTHER operating system was being dropped EXCEPT windows. THIS WAS THE NUMBER ONE TOOL FOR OS/2 AND THEY PURCHASED IT AND KILLED THE TOOL ON OS/2!!!

I have a shrink wrapped copy of Word for OS/2 in my cube. When MS LOST TOTAL CONTROL OF THAT operating system to IBM they STOPPED SHIPPING SOFTWARE FOR IT AND IT WAS KILLED!!!! Think I can get support for that product to work with the last OS/2 version IBM shipped? IBM purchased Lotus Notes so they could have a software company to ship applications for OS/2.

IF YOU REALLY WANT TO FIX THIS PROBLEM ... Break MS into two separate corporations. THEIR IS NO OTHER WAY. When you buy their software development tools their was a note in the licesense that you COULD NOT USE THE TOOL TO BUILD PRODUCTS TO COMPETE AGAINST MS OFFICE. If you looked at MS Office the software DLL's they use compared to WHAT

THE GIVE for software developers are COMPLETELY DIFFERENT AND NOT DOCUMENT HOW TO USE THEM. FORCE THE GROUPS TO BE PROFIT CENTERS.

MS has for a long time hired developers that worked for the competition and given them 1 million dollar signing bonuses JUST TO PREVENT other companies from having access to great talent. Look into the author of C# who was the lead developer at Borland and did JBuilder. MS hired him away. WHY WOULD A COMPANY FOCUSED ON RESEARCH HAVE TO PULL A STUNT LIKE THAT? Because they DO NOT FOCUS ON PLAYING FAIR. WIN AT ALL COSTS. If MS has to ship applications that RAN ON EVERY AVAILABLE OPERATING SYSTEM OUT THERE THEN MS would HAVE TO COMPETE! MS owns the OS and the applications. If you can read and write Word files they change the format. If you can load Windows application like OS/2 did they change the API. MS changed a DLL and FORCED IT ONTO THE OEM PC makers to PREVENT "OS/2 for Windows" from working. No feature offered BUT ONLY SABATOGE.

MS has no guilt nor do they have remorse. The consumer WILL NEVER GET A CHANGE TO CHOOSE. Not while MS spends a 100 million to market an operating system and ANOTHER 100 million JUST to make them look good and the government bad.

You SOLD ME OUT! The battle is not over with MS. Now they will just be harder to catch. They WILL NOT CHANGE what they do but only do it in a smarter way to skirt the law. The original ruling that MS should be broken up was valid. What you need to investigate is ALL of the games MS played to make the judge look bad as well as buy the press. Don't you think it is odd that a COMPANY put people on PAY ROLL to write LETTERS to politicians that the COMPANY IS BEING DONE WRONG??? If that action does not show you HOW FAR MS will go to WIN then I don't think you guys justify my tax money. MS is smarter than you and basically owns the market place. How did having MS DUMP software on the schools FIX THEIR MONOPOLY??? So would asking a drug pusher to give away the cocaine he has in storage freely out to everyone SOLVE THE DRUG PROBLEM? YOUR PUTTING SMALL SOFTWARE COMPANIES OUT OF BUSINESS THAT HAVE SOFTWARE IN THE EDUCATIONAL CHANNELS!!! Why wouldn't you make MS put money in a trust for startup company funding for companies to COMPETE AGAINST MS???? WHY NOT GIVE FUNDING TO NETSCAPE LIKE YOU DID THE AIRLINES AFTER 9-11???

What about MS having to give money to operating system companies that were WRONGFULLY DAMAGED BY ILLEGAL ACTIONS??? Sorry guys but the settlement is a joke for anyone who understands technology and knows how MS deals with people. Thankfully the findings of fact that MS IS a monopoly were NOT over turned. I guess if I want to work on leading edge software I'm going to have to move to Europe. They seem to be the only ones doing anything cool. Some of the latest games I've bought have come from their. My favorite

tool TogetherJ is coded in St. Petersburg, Russia. Linux was done by a college kid in FINLAND and it RUNS BETTER than MS Windows. To bad the consumers couldn't fix this by having a CHOICE but noting like a good monopoly to fix the economy. Going to be sad when are OS software is done by Sony or Nintendo because they are the ONLY SOFTWARE COMPANIES left after MS destroys everyone else. No wait MS is going after them to! Hmmm. Maybe MS can just own the planet and we don't have to worry about better software. It will just stink everywhere world wide. <smile>

Date: 12/7/01 12:05am
Subject: Microsoft.
With regard to punitive damages associated with the Microsoft case. If it is ment to be punative then it is a punishment. In a punishment, the only value that one should get is a lesson learned. By allowing Microsoft to donate a billoin dollars to the poorest schools as part of a retrobution, in software ans services, no less, there should be no potential upside for Microsoft. This does not appear to be the case. It appears that although Microsoft will be expending some capital, they will be deriving benefit from this. It will only propagate and increase their already monopolistic stronghold in the industry.

It's like punishing a drug dealer by forcing him to go out and give away millions of dollars in drugs, and then letting the drug dealer develop a new network for retailing his product. Sure, your making him pay up front, but now he's got a whole new market to sell to later on when the free bee runs out. Does not sound very punative to me. What do you think ?

Make them write a 1 billoin dollar check to the poorest schools, and then mandate that those schools use the funds for anything they choose, with the stipuation that they not spend money on any Microsoft products.

I wonder how Microsoft would feel about that. They have bullied their way around the entire computer industry. Make no bones about it, they are ruthless. Business is a competition, I realize that, but if it gets so out of hand that it hurts the public, then the Government should protect the people.

Dont let them push you around.

Subject: Microsoft gets off TOO EASY

This settlement, if it proceeds, is an insult to the American taxpayer, who has funded the protracted legal proceedings against Microsoft, trusting the Department of Justice to take effective action against a proven monopolist. To give software to schools is no punishment at all! Let them pay with what really matters: money. Software has no "hard" value, and costs very little for Microsoft to give away, as has already been shown when they "gave away" Internet Explorer bundled with Windows. And giving to schools, which is one of the only markets they havent completely penetrated, is the perfect way for them to EXTEND their monopoly!

Please do not settle for anything less than a just cash settlement, and upwards of 1 billion dollars would be still nothing to a company whose cash reserves are in the tens of billions. Giving it to the schools is fine, but as cash, not vaporware.

Subject: Proof that IE6 is anti-competitive
Hi,

Just dropping you a line asking you to not sell out to Microsoft. They are using their monopoly to force out their competition. The latest example: Internet Explorer 6. It won't communicate to my email software, even though IE5.5 would! Whenever I click on a mailto hyperlink it used to fire up Eudora mail and I could then use my favourite email client to write my email. Now with IE6 it won't let me. Whenever I click on a mailto link it brings up a horrible box asking me to select a Microsoft Exchange/Outlook express profile, so that I have to use Outlook!

They're doing this to try to stop people from using other email clients! That's being extremely unfair to companies like Qualcomm and Pegasus Mail! Please don't sell out to Microsoft. They need to be split in two, into a operating systems, and an applications software companies, otherwise they will have no incentive to be fair (when they make their operating system) to pure application software companies.

If they are not split now, they will just get worse and worse, until you suddenly wake up one day and find all your (and our!!) computers are running the same defunct systems that are amazingly expensive, and very unreliable! Please don't sell the people of the world out! We are relying on you!

Thank you,
Chris Pearce.

How about requiring Microsoft to provide free user support for windows. Also, require them to send out Windows upgrade disks rather than simply posting (burying) "patches" on their website.

Subject: Regarding the settlement with Microsoft....

It is a joke. It is unenforcable. Who's going to police it, Microsoft? The settlement has done nothing but barely tap the brakes on a full-speed locomotive. I am wholly disappointed. The USDOJ could've quite easily won the entire case had they centered strictly on the unlawful and unethical business practices used by Microsoft.

Subject: settlement = MS free to dominate
The release of features in Windows XP is yet another attempt by MS to use their OS to dominate the next big market segment (not simply gain some leverage). This should send a clear signal (for the umpteenth time) that they simply cannot be trusted to uphold the SPIRIT of any agreement that tries to make them play fair. Now I use their OSes quite a bit but I wouldn't mind some freedom of choice with respect to how to use them. And it is not even the multimedia bundling that scares me most. Forcing users to use the Passport feature for services that previously did not require it is chilling. They're basically beginning to dictate how people do things on the Internet. They will in short order have a user base of several million users for a brand new service that just happens to be the next big Internet offering. Not bad for a new feature. With some luck, the project liberty consortium may blunt the move somewhat but come on, isn't this story getting tiring? I don't even think the folks at MS can help themselves. They're simply addicted to power and control and are in bad need of rehab.

Subject: Microsoft Settlement

Attorneys General and Dept. of Justice,
I am writing to express my displeasure with Microsoft's settlement proposal. Clearly they intend to use this as another opportunity to expand their empire and squeeze rivals, namely Apple, out of the education market. Furthermore, I am sure the 1 billion dollar value they are quoting is retail value. That means their cost must be less than one-tenth of that. Wow, I bet they are terrified of having to pay that.

I thought the intent of this is to punish them. If so, then they should be required to give cash to let the schools choose whatever they want. Since they are accused of squeezing out competitors, it would be even more appropriate to require that the money be spent on competitor's products. Please do something about this.

I happen to like and use some Microsoft products, but I prefer to use a Mac rather than a Windows PC. I never thought breaking them up was a good idea but this settlement is pathetic. Don't let them drive Apple (others) out of business.

Subject: Anti-trust Settlement

I am a technology professional who has been involved in software for over 16 years. I am currently the Vice President of Technical Architecture for a large distribution company (basically the CTO). My comments in this response to the anti-trust settlement proposal currently before the District Court are my own, and in no way affiliated with my company. I only talked about my position, so that you could see that I have some credibility in my comments. Having said that, the following is where I see issues with the proposed settlement. In section III. Prohibited Conduct, it states that Microsoft is prohibited from retaliating against an OEM for shipping a personal computer that either includes a non-Microsoft operating system or can boot more than one operating system. There seems to be a glaring omission here. Under these terms Microsoft could retaliate if an OEM ships a personal computer with only a non-Microsoft operating system. To give a simple example, if I were IBM, and I started shipping personal computers with Linux pre-installed as the only operating system for customers who didn't want a dual boot system, Microsoft could retaliate. The odds of this behaviour would go up substantially, if a large OEM like IBM started selling significant numbers of systems with only a non-Microsoft operating system.

In section III.C.2, it states that Microsoft cannot restrict by agreement any OEM from distributing or promoting non-Microsoft middleware by installing or displaying on the desktop of any size or shape so long as such

shortcuts do not impair the functionality of the user interface. Who makes the judgement about impairing the functionality of the user interface? What constitutes an impaired user interface? If Microsoft just doesn't like the way it looks, can they have the OEM remove it? This raises more questions than it answers. It seems to me, that if an OEM really impairs the user interface, then their customers will be unhappy, and have them fix it, or get their PC's from somewhere else. I know that Microsoft position on this, is that it reflects on them. The truth of the matter is, the OEM handles the technical support for pre-installed copies of Windows, not Microsoft. How many people do you know blame Microsoft when their computer doesn't work? They simply say my computer doesn't work, and if they bought the system from an OEM with Windows pre-installed, they call the OEM. This section should have no exception, and the free market should be left to decide whether an OEM has impaired the user interface or not.

In section III.C.3, it states another user interface exemption for OEMs. This time it says that middleware that automatically launches on boot, can be replaced as long as it displays on the desktop no user interface or the user interface is of similar size and shape to Microsofts user interface. This prevents competitors from creating unique user interface paradigms, that may infact be better than Microsofts. In fact, it limits them into copying Microsofts products, and gives no ability to innovate with the user interface. I don't see how this can foster competition. If both products look and act the same to the user, then you have just removed one of the competitive advantages a competing product may have.

In section III.D, it states that Microsoft has to disclose to ISVs, IHVs, IAPs, ICPs, and OEMs the API's and related documentation that are used by Microsoft middleware. This goes to the heart of the issue alot of people have, which is that Microsoft hides API's that it uses for competitive advantage. This is a very good provision, but it has one very big omission. Today, open source projects create software that needs to interoperate with Windows (e.g. Samba) operating systems. These projects would not be covered by the list above. For this provision to have true meat behind it, Microsoft should be made to disclose the API's publicly to everyone. This will create significantly more competition in the marketplace, because it would allow open source projects to be more easily developed. This section is also incongruent with section III.E, which doesn't limit the disclosure of communication protocols between the Windows client and server. The two sections should allow for disclosure to any and all third parties.

Section III.F.2 seems to be completely meaningless. The exception completely nullifies the behavioural prohibition. Everything from the word except on, should just be removed. Microsoft should in no way be allowed to limit what an ISV can develop or promote that competes with Microsofts own products. This section should be one of the cornerstones of an agreement, and should have no exceptions.

Section III.G.1 also seems meaningless. Again, the exception competely nullifies the

behavioural prohibition. If you are going to eliminate the use of contracts that give consideration to certain entities based on solely supporting Microsofts products, at the expense of competitors products, then the agreement should do that without exception. The current exception takes all of the teeth out of this section.

Section III.H.1 & 2 has all the same problems of section III.C.3 which I stated above. Additionally, Microsoft has the option to have the end user confirm this chose of replacing the Microsoft product with the non-Microsoft product. Of course, this could confuse the user, and make them wary of making such a change. While I understand that a user could do this by accident, based on the provisions of this section, the user can make the Microsoft product the default selection just as easily. Besides that issue, I think that additional teeth should be put into this section in the following way. Microsoft should be prohibited from putting hooks into the operating system that prompts the user to switch back to the Microsoft product everytime the user uses the non-Microsoft product. They could easily do this under the provisions of this settlement, and make it very difficult for the user to use the competing product.

Section III.H.3 makes direct reference to my suggestion of what Microsoft will do to change the configuration to suit their needs and stifle competition. The settlement only prohibits them from changing the configuration that the OEM supplied their customer for 14 days. After that time, they can pepper the user with dialogs that constantly ask them to switch the applications from competitors to theirs! This entire section should be changed to prohibit this behaviour completely. I don't see how this agreement can foster competition with this type of exemption. It also retains much of the power Microsoft has over OEMs. If the OEMs configuration can just be changed by Microsoft after a couple of weeks, it takes much of the value that the OEM can sell to Microsofts competitors away from the OEM. If I was a Microsoft competitor, and I wanted to sign an agreement for an OEM to ship my product versus Microsoft, and Microsoft can two weeks later bother the user to the point that they switch to the Microsoft product anyway, then I wouldn't be willing to pay the OEM very much. OEMs already struggle with margins, because Microsoft and Intel make all of the profit, and the product is a commodity. The only real way for OEMs to differentiate their products is through customization and third-party software bundles. Again, we should let the free market decide, without pestering prompts to switch to Microsoft products (and visa versa).

After section III.H, there are two bullets called 1 & 2, which don't seem to be a part of section H, but give Microsoft additional exceptions. Bullet 2 says, a Microsoft middleware product may be invoked by the operating system when a non-Microsoft product fails to implement a reasonable technical requirement. What is a reasonable technical requirement? The example in the document is hosting an Active-X control. What if the replacement product can implement all of the functionality that a user

needs without hosting an Active-X control? Who determines what is reasonable? These type of exceptions could make the agreement unworkable, especially if it can be argued in court. I see alot of additional wrangling in court to resolve disputes over things like this, and this additional time could be used by Microsoft to continue business as usual while the lawyers fight it out.

Section III.J gives Microsoft another way to wiggle out of disclosing API information. I think it is necessary to state that they cannot disclose the internal working of something that is against the law to disclose. As far as I know, no such cases exist. Actual authentication keys, tokens, etc. would not be apart of a working API, but the format of those would be. The way this is worded, Microsoft could prevent the disclosure of API's and communication protocols, and no one would be able to dispute them because they could argue that disclosure would be required to prove their case. Of course, you could argue that the technical committee could work to see if Microsoft is pulling the wool over everyone's eyes. The flaw in this, is that Microsoft could still fight it and win, and no third party could jump in to help the case without first getting disclosed on the API's and communications protocols. I see this as a catch-22 for enforcement.

Overall, this agreement doesn't go far enough in curbing Microsofts business practices. I think that a better solution is staring us all right in the face. The solution that I think would be better has three simple principles, of which two are captured in this proposed settlement. First, make Microsoft disclose all API's to everyone, without exception. Second, do not allow Microsoft to control other companies use of Windows, whether it be configuration of the desktop, or inclusion or exclusion of non-Microsoft and Microsoft products respectively. And third, allow Microsoft to bundle anything they want into Windows, and its successors, as long as it complies with a recognized open standard. The IETF (Internet Engineering Task Force) model of standardization should apply here. In their model, something does not become a standard until at least two interoperating implementations of the standard are widely deployed. This would make it very simple to monitor compliance, and would allow third parties, including open source projects, to compete head on with Microsoft in every product category.

Thanks for taking the time to read this, and I hope that the settlement can be improved to foster competition in the marketplace for operating systems.

Subject: Microsoft settlement

It was embarrassing enough for the nation to give Microsoft a free ride on the antitrust action but to allow Microsoft to prevail in the class action suit is abominable. Nevertheless, this is an opportunity for the justice department to do something right for a change. Red Hat has offered to provide free software to every school in America if Microsoft provided the value of its donation in hardware costs rather than its own software. It is time for you people to go twist some Microsoft arms.

Open source software will eventually take over the operating system and desktop software markets with or without any action on your part or other parts of the government. This simple proposal by Red Hat would allow our children to become familiar with the software of the future. Ironically, the difference between open source and Microsoft software is getting narrower with time so even if Microsoft software is still the norm on the desktop when these kids graduate, they will be able to cross over without effort. The difference will come when they buy a computer of their own and don't have to purchase the original software and upgrade after upgrade.

Do something right for a change, take Red Hat up on their offer.

The prosecution in this case barely scratched the surface of Microsoft's adverse impacts on every industry where it operates, and on the global economy. In technology markets, network effects overwhelm all other forces. As long as Microsoft remains intact, it controls every market it enters. Had justice been served in this case, Microsoft would have been split into at least three separate companies which are not allowed to

communicate with each other in private. As it stands, they will continue to stifle innovation in computing and networking

From: Pat Walters
To: Microsoft ATR
Date: 12/7/01 1:48am
Subject: Microsoft Settlement

I believe this settlement takes unfair advantage of a great corporation for being an aggressive American competitor in the software market. The very nature of antitrust law is to destroy companies that have harmed consumers, not to make monopolies illegal. This we know already, as there are plenty of legal monopolies that have run our local telephone and electricity.

Every model of a monopoly ever devised by economic theory holds two effects possible: higher cost and less product. This lawsuit was brought against Microsoft over its bundling of Internet Explorer with Windows, and then that Microsoft had set up retaliatory pricing if an Original Equipment manufacturer (OEM) were to sell software that competes with Microsoft on its own operating system. This court case has proven

that there was nothing wrong with innovating the operating system to offer more features to customers, but did address the pricing against OEMs that want to offer competitive software to Microsoft. You cannot accuse Microsoft of being a monopoly in consumer level computers without talking about the complete monopoly enjoyed by Apple Computer company. The interesting thing here is this: Apple was argued out of this case because their monopoly operating system on their monopoly hardware cost on average \$1,000 MORE than a comparable IBM compatible PC running Windows! How is Microsoft a monopoly again?

Microsoft has simply been very successful at recruiting wonderful talent from all over the globe, and driving that talent very hard to deliver products that make our competition look pale in comparison. It is not Microsoft's fault that companies who compete with them cannot achieve the critical mass of great software by litigating against Microsoft, instead of recruiting great talent and then spending the R&D money necessary to better perfect their product. Why should Microsoft have its hands and legs tied behind its back simply because every one of its competitors wants the money that Microsoft has earned? Let me ask that again: WHY should Microsoft not be allowed to freely compete with all of the freedoms that Netscape, AOL Time Warner, Sun Microsystems, Oracle, and Apple do every single day of the year, simply because THESE companies want the money from the market share that Microsoft continues to go out and earn?

Microsoft has agreed to this settlement, but this settlement should be the end of it. The states that chose not to settle with Microsoft simply want to punish Microsoft further than they already have been with this FRIVOLOUS lawsuit, and they should NOT be rewarded for this. In some cases, like California, they simply have Microsoft competitors living in their state and want to put up the "good fight," for their constituents. The economy of the United States is greatly fueled by the technology sector, and it is time to let Microsoft go on to do what it does best: make great software that runs on any device, anywhere, connected to the Internet. Microsoft has undeniably been part of the economic boom we saw in the 1990's, and this case has been part of the reason we are now suffering part of a recession. Let's end this here with this settlement, and accept the terms of it with as much compassion as possible toward the greatest company in the world.

Sincerely,
Pat Walters

Subject: Microsoft Settlement

Please consider the proposal made by Red Hat as a way for the Microsoft settlement. The current settlement appears to ensure that Microsoft has a monopoly on operating systems and allows them to further propagate their products RED HAT COUNTERS MICROSOFT'S EDUCATION OFFER

Microsoft has proposed settling over 100 private antitrust lawsuits by pledging to donate more than \$1 billion in hardware, software, services, and training to the poorest schools in the United States, but Red Hat has put forward a counter-proposal. It will offer its open-source Red Hat Linux operating system to all U.S. school districts free of charge, and has suggested that Microsoft concentrate solely on purchasing new hardware. In this way, more computers could be made available to schools and Microsoft's monopoly would not be extended further into the education sector, says Red Hat CEO Matt Szulik. He estimates that over one million computers could be allocated to schools under the new proposal, compared to 200,000 under the old one. In addition, Szulik says that Red Hat will provide free software upgrades and license renewals in perpetuity, whereas Microsoft would only provide such services for five years. Subject: Settlement? —

Your Honor

I am a personal computer user for 11 years now. I have worked as a programmer, systems manager and instructor. I have watched an industry go from wide open .i.e. one in which any good idea would sell —well—, into one in which it is impossible to sell ANYTHING.

The internet was a great place to explore in the days of Mosaic and Spy-in-a-box. Now with only Internet Explorer as a real contender, I dread firing up the old browser. There are sites that have special non-IE pages. E-mail was fine, then Outlook became the de facto standard and I spent two days trying to disinfect —1— Windows based, Intel compatible PC from an e-mail worm. Never happened to me using Eudora. BUT THE BOSS SAYS USE OUTLOOK.

Old joke: If Microsoft made refrigerators, they would claim they make ice, keep food fresher, & chill drinks to just the right temperature. If Apple made refrigerators, they would say theirs does everything Microsoft refrigerators do, but 5 years earlier.

Microsoft is notorious for taking others' ideas and tweaking them to its own end then claiming it was their idea. Sort of like the Communist regime in the Soviet Union...

The lay press has noted that everyone is afraid to mention what they are developing for fear that if Microsoft gets wind of it, Microsoft will buy more people to work it out faster, and take all the credit. How often has Microsoft waited for Apple to start a new round of firings only to hire leading edge programmers and rework the technology to their own designs?

Microsoft can afford to buy any other software house or competitor. here are two reasons they do not. 1) Keeping the 'competition' around makes it look as though they are not a monopoly. 2) And this was confirmed to me by someone well connected, In order for Bill Gates to know what his next great idea is going to be.

But our question is Are they a monopoly. In that they control over 85 per cent of the GUI systems sold, they most certainly are. In that they have bought out more products just to kill them—non-Microsoft BASIC and dBase come to mind—yes they are. In that they have back doors into their programs which only their programmers can exploit, remember Caldera vs Microsoft?, they definitely are.

Is this a true settlement? No. A fair one would break Microsoft Corporation up into three competitive units, Software Systems (Windows et al), software (Office and Visio et al), services (MSN, MSNBC et al), and certification (digital signatures for software "designed for Windows."

The CEO where I work has noted that No One can make money in a market where the competition is giving it away for free. Maybe that is the true test of whether or not Microsoft is a monopoly. Did not Rockefeller and Standard Oil cut prices to almost free gasoline to shut down competition and ensure their "Market Share Growth"?

Humbly,
Dan Pollack

Subject: Microsoft

Hi there...

I am not liking what you are doing to the software industry. Microsoft continues to distribute its products with a FAKE system for preventing software coping. While Microsoft has done wonders for personal computers in general I still have a very big question.

I have attended a MCSE course where I was basically instructed to not help business. Please read the Microsoft Press course books (1999–2000).... At the MCSE course my Microsoft certified trainer gave me a copy of the 'Trendcenter' software with a Visual Basic crack so one could use this software for free. To make matters worst, I was going to purchase a copy of XP from a shop here in Australia but currently I will not do so. It is cheaper to get copies that are illegal than the real product. Currently in Oz there are 2 or more copies of the new XP system being distributed. I have reported this to Microsoft who has not to my knowledge taken any action...

I surfed into Yahoo chat the other night to listen to music (like napstar) and found that

FireFox and Michael have copies, and they have 'never paid a cent for any product'. To someone who has more than \$10,000 in software, like myself, this really is not good.

Editions of software I have been able to find people giving away are:

Microsoft XP Edition—Corporate
Microsoft XP Office with FrontPage—
Enterprise Edition.

Microsoft XP Business Edition
Microsoft XP Plus

This is just the tip of the ice burg. I wonder if Linux can fight back considering Microsoft personal have made it very clear that they do not like free software. So I guess they are now distributing there software for free, illegally, to wipeout others who have invested in softwares. I am going to send most of the software I have been able to collect to Mr. Gates along with my exam tickets for the MCSE course I was doing. I want servers to run my business and I do not want Administrators to run my servers... This is not productive and does not allow myself to direct funds to areas where funding should be directed. Also I would like to know about the Microsoft Product Life Time Cycle—seems a good way for one to totally disregard the earth. I can only hope if I ever have the same choice that I would not do what is being done.

If you tack onto this the anti-trust case, well is there any point in supporting software makers? This type of terror should be outlawed and is not condoned by myself or others. The question is what are you doing to help? (not a lot from where I stand)

Thankyou for your time

Sincere regards,
Jason Robinson

Subject: Microsoft Settlement

Dear Sir/Ma'am,

After reading the proposed settlement I feel that this would NOT be in the best interest of the American public for the following reasons:

1. The proposed settlement does not prevent Microsoft from bundling web browsers and other application software into its operating system. Illegal bundling and tying practices that were addressed in the Court's 2000 ruling are not in the proposed settlement.

2. The proposed settlement allows Microsoft to benefit from its past anti-competitive behavior. Microsoft has monopolized the web browser market as a result of its anti-competitive actions, but the proposed settlement does not require the company to provide software competitors with the information that they need to ensure product compatibility.

3. The proposed settlement relies too heavily on financially-strapped equipment manufacturers to promote more competition.

4. The proposed settlement does not cover the new generation of web-based, Internet, and multimedia applications. Since the settlement applies only to products that were

in use from 1995–98, it won't stop Microsoft from repeating anti-competitive practices with current and future products.

5. The proposed settlement doesn't cover Microsoft Office, although Office has more than 95% of the market for business productivity software. Non-Microsoft Middleware is not interoperable.

6. The proposed settlement lets Microsoft decide which products are part of the Windows operating system and which are applications.

7. The proposed settlement gives Microsoft control over many enforcement decisions, essentially putting the fox in charge of guarding the hen house!

8. The proposed settlement would not require Microsoft to comply with computer industry standards, or prevent the company from undermining or altering standards, even when the intent is to deliberately deceive competitors.

9. The proposed settlement would allow Microsoft to disable competitive software products, effectively sabotaging any competition. Microsoft has used bullying tactics countless times to ensure their dominant market share & I feel that they should be treated accordingly to ensure that these practices don't continue unabated. They ignore or are slow to respond to MAJOR security flaws in their products which has disrupted the entire internet at times. If they built cars that couldn't be secured & allowed anyone to just get in wreak havoc on the highways, would they not be held accountable?

Yours truly,
Daniel Ehresman

From: Jason A. Van Cleve
To: Microsoft ATR
Date: 12/7/01 4:06am
Subject: Microsoft Settlement

To whomever it may concern,

I am not at all pleased with the outcome of the DOJ case against Microsoft. As a software developer of several years, I have worked with Microsoft products extensively, and I have born witness to many of the unfair and dishonest practices by which the company has been able to step on other software vendors in this race, and over and over again, developers and consumers alike have been hurt by it. Microsoft seems more intent on stifling innovation in other software companies than on innovating anything themselves.

I've felt for some time that the best thing for vendors, consumers and our economy is for Microsoft to be broken up into an OS vendor and an application vendor. I also think it is important that, contrary to the proposal you had previously put forth, Internet Explorer be kept in the "application" division. Microsoft clearly wants to own the Internet itself, control it and exploit it. This would be very bad for all but them, and I believe we must prevent it. Among my concerns here is that if Microsoft's browser is allowed the marketing advantages it has enjoyed so far, eventually no one could justify using a different browser, especially if I.E. were completely integrated into Windows. If few enough people used any

alternate Web browsers, Web developers (like me) would eventually be forced to build sites specifically for I.E. In fact, this already happening. Ultimately this would lead to a deficit in any real innovation—something of which Microsoft has proven itself to be largely incapable. The Internet has an amazing potential, but unless it is practical for companies to create innovative software to compete with that of Microsoft on the ubiquitous Windows platform, the technology will not be driven as it can and should be.

Microsoft now enjoys something like a permanent home-field advantage. Because most people run Windows, Microsoft is more likely to push their software onto our desktops whether it be good or no. The OS is indeed a separate layer of software from the applications it runs, and so, again, if the market is to have a level playing field, Microsoft should be split up. But aside from all that, I have seen some of the ways in which Microsoft has succeeded by devious means both in software and in sales, and the fact that this new settlement does nothing practical to penalize them or restrain them from further foul play, is unacceptable. I am for change, and I am for innovation. This settlement will bring neither.

Thank you,
Jason Van Cleve

Subject: Microsoft Antitrust Settlement
Dear Sir or Madam,

I want, to write down my opinion about the antitrust settlement it cut with Microsoft. The "punishment" for Microsoft is just a laughter. Why do you want to destroy a monopolist by enabling him to conquer more market shares. That's like punishing a kleptomaniac with stealing.

Red Hat's proposal that, in short words, Microsoft should provide the hardware and Red Hat delivers the software and support for free. Is the best punishment I can think of. That would be a hard slap in the face of Microsoft, and that's only just and reasonable. I think my opinion is shared by many others, too. It's because it looks like Microsoft get's along with their strategie, again. They seem to stand far above the american law. It's fact, that the methods they use to push their company in front , are not all legal. So why do you take drastic measures and find a real punishment for Microsoft.

I hope I could help you by finding a solution.

Yours,
Martin Miller

From: Calvin Smith
To: Microsoft ATR
Date: 12/7/01 3:25am
Subject: Microsoft antitrust settlement
To whom it may concern,

I am writing to express to you my profound disappointment with the proposed settlement to the long and expensive legal battle over Microsoft's abuses of antitrust and anti-competition laws. That Microsoft would be allowed to extend their monopoly into the education sector, one of the few areas in which they don't already have a devastating monopoly, is absolutely astounding. I don't understand how anybody (but Microsoft) could think that this is an appropriate remedy. I believe, instead, that a better solution would be to implement Red Hat's proposed solution of allowing Microsoft to donate hardware and allowing Red Hat (or any non-Microsoft company) to supply the Linux operating system and open source software to run on those machines. The Microsoft alternative would have the effect of leaving schools stranded after 5 years when Microsoft stops supplying software, for schools would be unable to afford Microsoft's exorbitant license fees in order to keep the computers functioning and up to date.

The Linux solution encourages competition in the education sector, provides for more hardware and software for schools than the Microsoft plan. I strongly encourage you to consider this matter carefully, as I and many of my fellow software professionals are extremely unhappy at the proposed solution, which looks more like a reward to Microsoft for its past harms to the consumer and to its competitors than an actual punishment or settlement.

Sincerely,
Calvin Smith

Hi,

At what percentage point does a monopoly exist. Is it 100%, 90%, 80%? IE now has over 90% of the browser market. The Microsoft monopoly is self-evident. The settlement forces Microsoft to donate software, hardware, and services to America's poorest schools.

The settlement could simply introduce Microsoft to a market where they could further extend their monopoly.

From: Flash
To: Microsoft ATR

Date: 12/7/01 4:07am
Subject: Microsoft Settlements
To: Honorable J. Ashcroft, US Attorney General

Dear Mr. Ashcroft,

Both as a citizen of this country, and as a knowledgeable scientist who has watched the genuinely criminal behavior of Microsoft that has resulted in not only a worldwide monopoly by this company, but a setting of standards for the world's software that could euphemistically be described as a joke, I am deeply distressed by the settlement conditions set by the office of the US attorney general in its anti-trust suit against Microsoft.

Indeed, this settlement looks in structure not very different from those entered into by the erstwhile Commissioner of Insurance of the State of California, Mr. Quackenbush. It merely creates another opportunity for this marauding company to wear yet further havoc. It makes no sense whatsoever. That Microsoft's famous OS WINXX, through several versions over many years, continues to crash spontaneously is only one the bad jokes among almost all users.

Windows is a perfect example of Microsoft's continuing and longstanding practice of theft. Windows is based on the free X-windows system invented and developed at M.I.T. Microsoft has literally stolen what was given freely, made a few simple alterations, and the proprietized it and its source code. For anyone to assert that technically Microsoft is or stays within the law in this practice is vacuous legalism; it certainly is not justice to allow this to continue. Microsoft has used this pattern of theft with practically every piece of software it sells. The support for their product is another joke: if you can get it at all, it is all true, and totally useless. This pattern of theft can be seen explicitly regarding Java/JavaScript, where it was pilfered from Sun. It can even be seen in MS-DOS which was stolen from, and is an unholy watered down version of UNIX, developed at the then Bell Laboratories. The office of the US attorney general seems unconcerned about the damage that this monopoly does every day. Its power to extort hardware manufacturers and hardware dealers to bundle its simply awful and slipshod programs is legendary, and true. It engages in extortion every day.

In addition to an anti-trust suit, I seriously suggest that a suit under the federal RICO statutes 18 USC 1961, is perfectly appropriate. Anti-trust is the least of what it does. In the real hope that the office of the US attorney general actually does what it should be doing, instead of making some grandstanding show that comes to nothing or worse, I remain,

Sincerely Yours,
William C. Hammel, Ph.D.

Sirs

Although not a US citizen, the findings against Microsoft show a complete disregard for the freedoms which I believe your country stands for—specifically, the use of power brought about by being a monopoly against the individual and smaller commercial organisations. Furthermore, contrary to the claims of Microsoft, it is not at all an innovator, and tends to stifle innovation by imposition of closed interfaces, protocols and APIs. To allow it to proceed unchecked is of serious consequence to the computer industry and to personal freedom, and I would urge you to reconsider the imposition of severe penalties.

To: Microsoft ATR
Date: 12/7/01 4:23am
Subject: My Opinion

I disagree with the Settlement. MicroSoft is a monopolistic company, and your software is not only poor and with bad cality and without any originality :(That is, of course, one of his "monopolistic practices": they get one "de facto standard of the industry", and they create your own standard (and this "standard" is not compatible with "the original standard"). And they say to the costumers: I have made very goods improvements to our product (Improvements? What improvement? The improvement of Sun, Netscape, the University of Michigan, BSD Software....? And an "proprietary version" of this standard, close to integration with third party products of other Software leaders?... It's not any real improvement...only another "monopolistic practice" :())

Some examples: "Microsoft Java Machine" (MicroSoft, the first time says: the Java technology "from" Microsot, the real thing: "from" Sun Microsystems, MicroSoft, the second time says: 100% compatible....the real thing: incompatible, dont exit the compatibility test :(...), Active Directory (LDAP Techonology, from the University of Michigan.....well know LDAP products prior

to Active Directory: Netscape Directory Server, also products from Novell...), "MicroSoft" Kerberos services (available on Unix Systems [Solaris, Linux,...] for years...), MicroSoft IE (and the JavaScript Netscape standard.... MicroSoft change many "object properties", and, with that: One javascript code written with the Netscape javascript standard dont work with IE :(...and also, the "MicroSoft proprietary code" dont work whit Netscape Communicators...only for your "monopolistic implementations" :())

Sorry for my bad english, and thanks in advance.

Jose, from Madrid (Spain).

From: Dave
To: Microsoft ATR
Date: 12/7/01 5:02am
Subject: Another opinion

To whom it may concern,
From the stand point of both an IT professional and a computer user who has been using computers since 1984, Microsoft is a monopoly. The facts in the case were, originally, very clearly defined and laid out, and pointed to this fact. Although I am no lawyer, it seems that the only reason that the original ruling was not upheld is simply for political reasons. The fact that, one week before the judgement is affected, there is an injunction (or some such legal term that interrupted the origianl process), seems to be a clear case of political intervention. Since the intervention was on behalf of Mr. Bush, it speaks to me of big bussiness protecting big

bussiness. If Microsoft is not divided, they will simply continue doing what they have always done: absorb or destroy the competition through partnering and "competitive" practices.

Most people in this industry know Microsoft for the Monopolistic giant that they are. In fact, those of us with longer memories than 15 minutes remember well the suits against Microsoft from many of their previous partners for anti-trust related issues such as copyright infringement, patent infringement, and unfair practices to name only a few. If you reverse the original ruling, you are only giving american bussinesses the right to buy their way out of anti-trust suits. Most people are too ignorant of the histoiry to know the full extent of Microsoft's malicious practices, but those of us in the industry know that for Microsoft to win, they have to blind the public, and the courts. Simply put, if american justice means Microsoft continues unimpeded, american justice is only worth the money and ties it generates.

Subject: Opinion
Hi Sir/Madam,

I would like to say that Microsoft's terror in the software industry made a lot of companies lose their businesses, therefore I support the introduction of RedHat linux in schools since that operating system can learn kids the very basics of computers, microsoft on the other hand will make the kids depend on their easy-to-use software.

This ofcourse enlarges Microsoft's dominancy. Also the pricing of Microsoft's products is way to high considering their enormous profits, they could easily reduce prices by 75% and still make humongous profits since their sales will even enlarge by lowering the prices. Please note that this is not just America against Microsoft, but the world against Microsoft's monopoly. I hope you'll also take my notes in to account, if not, at least I've tried.

Subject: New Computers only with MS ?
Hello,

@first: sorry for my grammar (learned english by unix documentations and manuals ;-) It's nearly 1 Year ago i've shut down the most expensive Operating System forever. Now I see a problem for every customer and firm who will get (a) computer/s without Microsoft Windoze. In germany it's forbidden to sell a computer without a operating system. (in US too?) Most computer sellers can't support free operating- systems and free software (missing skills). And that's the reason why you must get MS-OS too even if you don't want it. So the laws that ever System must sell with a OS is really bad for free systems and helps MS to be a monopolist and that's the reason why the hole world has windows and cracker attacks and virus problemes ... So you have to build a law that everybody can get a operating system by his choice after selling a system without a operating system.

Also try to stop OEM Software boundles with new computers. They also makes MS to a monopolist. I know, the US GOV will find a way for real justice.

Subject: i oppose the proposed settlement

I think the DOJ blew it. You didn't even go into the Operating Systems arena, where you could have nailed Microsoft to the wall. I think that microsoft should not be allowed to restrict an OEM's option to sell machines with other pre-installed Operating Systems.

That has hurt the general public more than any browser issue could. The Netscape browser has not advanced since version 3. If they had focused on it, instead of complaining about Microsoft, they would still be a valid alternative. Microsoft has done more for the industry than any other software company. But they need to be reined in. How that is done, I'm not sure. Opening their "trade-secret" licenses. I'm sure IBM and Gateway would be willing to work with the DOJ on opening that up, provided Microsoft did not retaliate as they did to IBM years ago when they refused to stop selling OS/2.

Subject: Microsoft "Settlement"

Red Hat is right. Microsoft has us right where they want us. With the XP operating system, they are closer to totally controlling the desktop of any consumer who buys their product. This is the first time they have been able to keep a direct communication link—through the Internet—with their Passport requirement. We can't even change a modem without permission from them!!

Here is what will happen. Microsoft will place their systems in all of the schools they can. All the computers will run XP. It will cost the school systems tons of money (people time) dealing with supporting the computers. Microsoft will eliminate all the Apple MacIntosh systems from the last bastion of that company. Apple will disappear. Microsoft will be king of the school systems computer labs, etc. On the other hand, the alternative is to allow open source into the picture to keep Microsoft "honest".

Red Hat, for example, and other Linux OS providing companies, can provide the CD's—that will be their only cost—to allow the

school systems to have as many computers running as they want without worrying about licensing issues. The OS will run on less powerful computers—thus saving money to the schools. Let's get some competition in there. That is the only thing Microsoft understands.

From: Jason Bechtel
To: Microsoft ATR
Date: 12/7/01 7:21am
Subject: Injustice for all

Dear my US Department of Justice, I am a US Citizen (SSN: 187-64-0446) currently studying abroad and I find the current proposed settlement between my government and Microsoft Corporation to be a shameful shirking of responsibility. I believe Microsoft has been demonstrated to be (and has demonstrated itself to be) a monopolistic organization, which abuses its position to unfairly dominate other markets and to stifle competition and innovation. Their actions harm consumers (users) of computer software by limiting their choices and forcing them to pay unreasonably high prices. To allow Microsoft to reinforce its current monopoly position by flooding schools with more Microsoft products, simultaneously avoiding the goal of retribution for its user base, is blatantly avoiding the responsibilities of my Department of Justice. This settlement is cowardly and shows that Microsoft is not only dominating the software market, but also the political arena in my country. I expect my government to stand up for me against aggressive corporations like Microsoft. I expect that Microsoft should be made to set right what it unjustly forced on the citizens not only of my country, but on the entire world. This settlement does not satisfy these expectations in the least. It is a joke and everyone knows it. It only reinforces the impression that many people have been trying hard to avoid for a long time: industry is stronger than government in the United States of America.

Shame on you.

MTC-00003136

From: Michel van der Kleij
To: Microsoft ATR
Date: 12/7/01 7:22am
Subject: Microsoft Antitrust Settlement

Dear Sir, Madam,

I've been trying to keep up with the Microsoft Courcase proceedings as much as possible. The latest news immediately made me feel I ought to share my opinions with you. I feel it that Microsoft is being given the opportunity to make free advertisement for its products by having to "help" schools across the US. Think about it: the products themselves cost next to nothing to produce (price of a CD), millions of kids will learn how to use (inferior) software provided by a "benavolent" company and what are a few thousand PCs to a rich company like Microsoft. So, this is NOT punishment, I call that a firm endorsement!

Instead, I think Microsoft should be made to cough up for the hardware, BUT Open Source software should be provided along with it! The reason for this is not only that this is more of a "punishment" for a proven monopolist, but rather that kids learn how to use technically superior software from which MUCH more knowledge can be gained, thereby really helping the kids on their way!

Take it from a 20-year long IT professional with lots of experience in the Microsoft realm: Open Source software is much better quality, much better value and much more innovative than what Microsoft is pushing us so hard to use.

Kind regards,
Michel J.L. van der Kleij.

Hello,

There are some very wide-open holes in the Microsoft settlement. For example, the "remote administration" exception from documenting their protocols could effectively block future development of tools (like today's Samba) which allow Windows and Unix machines to communicate with each other. These holes need to be patched up. Microsoft should also have to document its file formats—there is very little intellectual property revealed by file formats that is not revealed more clearly by other means, and such documentation would greatly increase consumer choice.

Subject: Microsoft Propaganda should be stopped

Microsoft should be made to stop its false marketing. Making public statements to inflict doubt about other companies, in an attempt to create false confidence in their bloated, over priced products is shameful. Two examples of this are listed below.

Microsoft on Novell—Late this summer Microsoft kicked of an Anti-Novell campaign, and set propaganda to thousands of

companies which stated and I quote, "As a result of the recent Cambridge Technology Partners merger, Novell is shifting it focus from software development to consultancy services. You're left with a server platform without the full support of it manufacturer. Which means increasing costs as it rapidly becomes obsolete, forcing you to implement time-consuming retrofits"

Microsoft on Nintendo/Sony—A few weeks ago Microsoft made a public statement in regards to its game console "Xbox" "Xbox console has sold more units in its first two weeks than any other competing product."

Both of these examples are complete lies, and a direct attempt to eliminate competition through lies and deceit. Novell's server operating system, and Nintendo's and Sony's game machines are the finest products available. Microsoft is simply trying to steal revenue away from these companies through lies, and false marketing. They should be fined heavily, and me made to pay damages to these fine companies for the damage it has done.

Please respond if you would like anymore input.

Scott

Subject: Re: MS settlement

To whom it may concern,

You call this punishment for illegally maintaining their monopoly!!!!? This settlement is a joke! This won't be of any help to consumers. Actually, if this settlement goes through, this could do more damage to the consumer then if you left MS alone in the first place. The settlement, as written is a clear victory for Microsoft! It basically tells them that all the things they did to be declared guilty, they can continue doing because even if another case gets started, they can just buy their way out of it, again. It makes the legal sytem look woefully inadequate. When the breakup was ordered, then the appeal sent it back for a new remedy hearing, I thought, "Well the Justice department did better then anyone expected, and actually increased competition." The only way Linux was able to get the foothold they have, and get the big backers (IBM, SUN, etc.) was because this case was ongoing, and MS had to watch their behavior. If it weren't for the antitrust case Microsoft would have just threatened computer makers and manufacturers by refusing to sell Windows to them. So I felt like the job was done. With the foothold Linux gained there would be real competition in the OS field, and we would finally see some REAL innovation and

price cuts. Then this settlement comes out, and basically tells MS, "Go ahead do whatever, we'll just look the other way." Unbelievable!!

Please reconsider the effects this settlement will have. Just say NO!

Subject: Settlement terms

Good Morning,

I am writing in regards to the Microsoft settlement. From my understanding of the settlement, Microsoft is to donate software to the poorest schools. While I can see how getting technology into the schools can be of benefit, requiring that MS get into the schools allows them to extend their monopoly. Apple, who only has a single-digit market share in the private sector, has a strong presence in the educational market. By forcing MS into the schools, it helps them extend their dominant presence. The same applies to Linux. This is a free operating system that can run well on older hardware, unlike the hardware-taxing Windows 200 or XP. The settlement rewards Microsoft by increasing their presence. Is that supposed to be a punishment?

From: Bruce Hyatt
To: Microsoft ATR
Date: 12/7/01 8:20am
Subject: Anti-Trust suit

To Whom it concerns,

I don't know what the appropriate solution is but something needs to be done to rein in Microsoft's predatory behavior. Splitting up the company is, perhaps, going too far but it's clear that the company will go to any extreme to bury all competition if they think there's any chance they can get away with it.

If I'm not mistaken, it's been established that they program bugs into their operating system that make competitors programs perform poorly or not at all. I believe I've experienced this with their newest operating system (Windows 2000) and their media player. I'm also frustrated that I can't replace Windows Notepad with another, better text editor. It worked perfectly well in Windows 95! They're dictating to me (unnecessarily) what my preferences are going to be!! The Information Technology equivalent of the Nazis!!! And all this has been going on while the DOJ pursues their case.

Please don't paper over this problem with some ineffectual solution just to close the case. We deserve better.

Sincerely,
Bruce Hyatt

Good Morning Microsoft On Line

Professional #?;

Thank you for your response to all of my previous emails.

I am still dissatisfied with your responses, so I will continue to ask for a simple answer to a simple question, and make an introductory statement based upon your last response. I don't believe you offered the OEM vendor a choice of whether to have NTBACKUP or MSBACKUP in their WIN2K OEM version, now did you? The OEM vendor was not advised that they even had a choice of which backup program to order. Nor was I given a choice to utilize either NTBACKUP or MSBACKUP upon installation. I want to know if I can extract MSBACKUP from my WIN98SE disk, and load it on my WIN2K system without destroying something on my system to restore the files I can't get to. Is this too much to ask?

Thank you,

Al Andres

Subject: Re: Re: Re: Windows Update Support Request

Good Morning Allan,

Thank you for using Microsoft Web Support.

I am sorry to hear that you are dissatisfied with the responses you have received to date on this issue. I know these issues can be frustrating, but I would like to assist you in any way I am able. I apologize for any inconvenience you have experienced while submitting this issue. The email address you have written to is monitored by Customer Representatives, not Support Professionals. While we are able to assist with the Microsoft Web Site questions, handle support entitlement issues and direct your support requests, we are unable to provide product-specific support.

At this time, Original Equipment Manufacturer (OEM) versions of Microsoft Software do not qualify for Standard No-Charge Support Professional assisted support. The reason for this is that when the manufacturer of your system purchased the OEM copy of Windows 2000 installed on

your system, they also purchased the right to custom configure the installation to suit their hardware, as well as support this particular installation of Windows 2000. In this case, your manufacturer is your primary support provider for that particular installation of Windows 2000. After researching this issue, I have found a Microsoft Knowledge Base article that may assist you in resolving this issue. The article number is Q155979. If you would like to view this article, please follow the directions listed below:

1. Please connect your browser to the following web site: <http://search.support.microsoft.com/kb/c.asp>

2. Please make sure "All Microsoft Products" is selected in the number 1 option on the web page

3. Please click the radial button next to "Specific article ID number"

4. Please type the article number, "Q155979" without the quotation marks and click "Go"

5. This will bring up a hyperlink to the article and give a short description. Please select the name to view the article.

If you have any additional questions, please let us know by replying to this message.

Thank you,
Alan

Microsoft Online Customer Representative
Original Message Follows:

As you know, I own a registered copy of both WIN98SE, and WIN2K. One would expect backward compatibility on a backup program from either of these two operating systems. I believe all of those who migrate to XP will also share this same frustration, as there is no indication that I know of that tells you that if you have used MSBackup to make a copy of your data in the QIC format, that once you upgrade to WIN2K you won't be able to restore any of those files.

If I can't get an answer to this problem, I plan to call the Department of Justice, Anti-trust Division, and see what they have to say about this situation. I may also see about filing a class action lawsuit on behalf of so many of us that are in the same situation, both WIN2K and WINXP customers who previously owned WIN95, WIN98, or WINME, and whoever did a backup with those versions.

A response is expected to the question that has been asked now for 2 months without any reasonable response other than to contact the OEM vendor from whom I bought this computer. It is not their problem, it is a MICROSOFT problem that needs resolution.

See below on audit trail of this issue:

Hello Allan,

Thank you for contacting Microsoft.

PID: 50637-757-0689417-02704

Before buying a NEW system with WIN2K, I did a full backup using MSBackup on my old system (WIN98SE). The file was saved as a QIC file. Now under WIN2K I can't open this to restore data, mail files under Outlook Explore, and document files, as QIC is not supported in MSBackup under WIN2K Professional. How do I restore files from my WIN98SE MSBackup QIC files created under WIN2K Backup?

Good Afternoon Allan,

Thank you for using Microsoft Web Support. The Support Professional assigned to your case has determined that your issue pertains to Microsoft Windows 2000, and that you would be best assisted by a Support Professional who specializes in that area.

Please assist us in processing your request by providing the Product Identification Number for your Windows 2000. To locate this number:

1. Click Start, point to Settings and then click Control Panel.

2. Double-click the System icon to open System Properties.

3. Click the General tab to find the 20-digit number under the "Registered to" line. Once we have this number, we will be able to provide you with the support options available for your copy of Windows 2000.

To add this information, please create a supplement to your case.

Thank you,

Charity

*** Log # 9

*** PHONE LOG 27-Oct-2001 10:49:56
Central Daylight Time a—cwhite Action
Type: Incoming call Good Morning Allen,
Thank you for again contacting Microsoft.
According to the information you have provided, your Microsoft products were included with your system.

If this is correct, your copy of Microsoft software was purchased under an Original Equipment Manufacturer (OEM) license agreement. Under this agreement you are using a version of software that was designed to be sold with a new PC and has been licensed to your hardware manufacturer.

When the OEM elected to include this product on their machines they also agreed to provide the primary product support for the Microsoft software. When an OEM decides to preinstall software (Microsoft and most other software brands) on a computer, the OEM makes a licensing agreement for the right to distribute software on their computers. Once the OEM purchases the licensing rights to the software, the majority of the rights of the software are put under the control of the OEM.

This is noted in the End User License Agreement found within your software. Since we are not always able to notify every user directly when changes occur, we publish major changes on our Online Support Web sites. Please visit: http://support.microsoft.com/directory/OfficeXP_Q&A_USAFinal.asp for more information about Microsoft's new support policies. Available from the Microsoft support web site are several self-help options, including our Knowledgebase, Troubleshooting Wizards and Peer-to-Peer Newsgroups. Our Knowledgebase contains over 90,000 articles written by our engineers, for end users. Your fellow users may have a few suggestions if you post your issue to our Peer-to-Peer Newsgroups.

Our engineers are available 24 hours a day, 7 days a week for most products through our Pay Per Incident Service. To submit an incident to our engineers via the web, please visit: <http://support.microsoft.com/support/webresponse.asp> Once there select 'Pay Per Incident Support' If you would prefer to speak to one of our engineers over the phone, they are available to assist you at 800-936-5700. I apologize for any inconvenience you have experienced while trying to resolve your Outlook Express problem. Microsoft will be more than happy to help you resolve your technical issue, within the boundaries of our support guidelines.

In our previous emails, we have provided you with information on how to submit a Pay-Per-Incident support request via phone or Web Response. We have also included information on how to contact your OEM vendor, as well as information on our self-

help informational services. I would invite you to utilize any of these options. By utilizing any of the options submitted to you for obtaining support on this issue, you may assure a more positive experience in the future.

I wish you the best of luck in resolving your issue. However, as the primary point of contact for support is the OEM vendor, and not through Microsoft, we have offered options under the parameters of support as it currently stands on your case number SRZ010924000209. I will be happy to forward your comments and suggestions to the appropriate group. If you have any other questions about your case, please let us know.

Thank you,

C. Loretta White

Subject: Re: Windows Update Support

Request

Hello Allan,

Thank you for using Microsoft Web

Support.

Allan, I understand that you would like to know if you can extract the MSBACKUP program from your WIN98SE CD to your

WIN2K machine to restore QIC files created prior to upgrading to WIN2K.

I would like to inform you that the warranty support for Windows Update site is limited to site navigation and downloads only. Since your issue doesn't involve any of this, the best option would be to work with your computer manufacturer directly. You may also consider using Microsoft's no-charge information services or submitting a Pay-Per-Incident support request to work with a Microsoft Support Professional. Allan, please note that the support is tied to the operating system and since you are an OEM customer, your first point of contact would be your OEM.

I apologize for any inconveniences this issue may be causing you and understand that it is frustrating. If you have any additional questions, please let us know by replying to this message.

Thank you,

Vivek

Microsoft Online Customer Representative

Like many others, I'm naturally disappointed at the actions taken by the Justice Dept. over Microsoft's monopolistic behavior. The thing that really angers me is that they flaunted strictures you placed on them several years ago. The appearance now is that Microsoft is untouchable. They can fight the feds and win. It would be much better for the economy if you could at least preserve the appearance that American businesses have to play by the rules.

To: Microsoft ATR
Date: 12/7/01 8:30am
Subject: Microsoft Settlement
To the US DOJ:

I was very unhappy to hear that Microsoft isn't going to be sufficiently punished for its monopolist and anticompetitive behavior. The remedies being discussed only reward Microsoft for acting illegally. There must be a way of insuring that Microsoft can't illegally leverage its desktop monopoly into dominance of other markets. Essentially, this settlement is letting Microsoft say, "oh, we'll be better in the future" without any way of insuring that will happen. Microsoft should not be allowed to bundle new applications into the operating system, or if it does, it should make its relevant source code open to the public. Otherwise, it's the old railroad gauge problem. Microsoft forces everyone to run on their tracks, and the markets lose creative innovation.

Microsoft's pursuit of the Java-killer is just another example of this behavior. Java is used by tens of thousands of programmers, but because Microsoft can't control that language, it's trying to kill it by inventing far less useful languages like C# or J++. Please, I beg you to actually_punish_Microsoft for the billions of dollars it stole from its competitors. The USA is about freedom, the freedom to make the best application and take it to market. Microsoft is all about preventing anyone else from selling an application.

Sincerely,
Sten Westgard

Subject: Anti trust letter
To whom it may concern,
As part of the settlement I would like to see
(1.) RedHats proposal upheld -> give linux to schools open source will aid students far greater than closed source...
(2.) Make Microsoft adhere strictly to protocol standards delivered by others thus enhancing inter platform capabilities ie:- if they use java then it must comply 100% with the Java standards (they CANNOT! add any Microsoft specifics to any standard that is not thier own) and any standards or protocols they produce MUST! be usable by all operating systems NO IF BUTS OR MAYBE'S. All inter computer related communication applications must use

standards available to all operating systems (No exceptions).

(3.) All programs they introduce MUST be backwards compatible with previous versions.

Or they MUST provide free of charge onsite (immediate) file conversions by microsoft staff of all and any company's files thus not forcing any company to upgrade if they choose not to. I feel this is the only way we can allow businesses to truly interact with each other.

From: Mike Greenfield
To: Microsoft ATR
Date: 12/7/01 8:25am
Subject: Options to Microsoft Operating Systems

Friends, ...since Feb1986 I've been in business pretty much by/for myself, operating just 1 computer, and trying to do the same customer tracking job the whole time. The 1986 computer worked fine, but over and over again the MicroSoft operating system has been changed, and my software vendor has chased the new operating system. This made my old system obsolete, ...and pretty soon non-functioning. So, I've been forced to buy new computers, new operating systems and new application software,for ZERO net gain in speed and productivity. There have been no options for a small businessman like me. MicroSoft's repeated ZERO-improvement "upgrades" have been simple extortion by a monopoly player (Microsoft). Kindly do something to return competitiveness to this market, and grand relief to "little guys" like me. It would be much appreciated.

Mike Greenfield,
2437 Magna Vista Dr,
Jackson, WI 53037.

Subject: Microsoft settlement
Sirs:

If the record regarding Microsoft's prior content decree as is I believe it is—one of deception and bad faith on the part of Microsoft, why would any agreement rely in any way on Microsoft's promises? The court must make an honest effort to prevent Microsoft from continuing to expand its franchise by doing what it has done in the past—undermining the ability of competitors to gain profitability, frustrating attempts to establish industry-wide standards that might damage Microsoft's monopoly position, and enagaging in improper sales practices. As I understand the current proposal, it does not accomplish these basic ends. It should never have been accepted.

Subject: Microsoft anti-trust + redhat

I feel as if Redhat is doing the right thing in further reducing the monopoly of microsoft and allow microsoft to provide the hardware that these low-budget schools really need. Without the internet support, many schools today are lacking outside knowledge and a strong resource to work upon.. The internet is growing largely, and so are computers.. Have microsoft provide the software that they need and redhat will be true on their promise, as they have never let any of us down!

Subject: Reward for monopoly

The proposed settlement only rewards Microsoft for their monopolistic tactics. It will further their monopoly by forcing students to learn their software. The cost to them is negligible; they only need pay for the hardware (CD's and books). The only proposal that makes the punishment fit the crime is to take Red Hat's offer to provide software and force Microsoft to pay for the hardware for every school in America. This teaches students alternative operating systems and desktop software. This will create competition in exactly the areas where Microsoft removed competition by their monopolistic tactics. It will surely lead to more innovation as a result.

Curtis Grote

Subject: Monopolisof

Dear DOJ:

In response to notification from the Redhat Linux forums request, i've included below my own experience of M\$ monopolistic practices. First, the standard disclaimer: These opinions are mine and do not reflect the opinion of the company for which employs me. I work for a small company (30+ in all, 6 in this area). Recently a major decision was made within our group regarding technology that was completely driven out of fear of being left behind because M\$ has specified the technology we are to use. M\$ completely controls certain segments of the marketplace and in this particular segment (That will be coming in the future) they want to take control of that

too. They are inline for doing so. So rather than being ourselves creative we are forced to implement what M\$ tells us we have to regardless of our own opinions. It's either get on board or get tillered under.

M\$ and windoze is a dumbing down of American. No more limp wristing them.

Subject: microsoft IS A monopolist!!

microsoft IS A monopolist!!

The settlement forces Microsoft to donate software, hardware, and services to America's poorest schools. Red Hat responded to the proposed settlement, pointing out that the settlement could simply introduce Microsoft to a market where they could further extend their monopoly. In its counter-proposal, Red Hat offered to provide free software to every school in America if Microsoft provided the value of its donation in hardware costs rather than its own software. en this only makes it bigger!!

Subject: Antitrust Settlement

To whom it may concern,

I wanted to let my opinion be known on the Microsoft case. Let me first say that Microsoft has been great for the economy and earned the right to be in such control of the OS market. When they tried to sell their ideas to IBM in the late 80's of home computing, IBM laughed in their face. SUN and Apple also had large egos and refused to allow other hardware makers to use their OS's until it was too late.

The problem is what they did with that power. My first example is Internet Explorer. I'm like the next Joe and love the fact that Internet browsers are now free. However, the way it came about was downright dirty. They included it for free with their OS that everyone was using. Netscape was forced to make their browser free as well. Netscape lost their main source of income and would eventually die out in the R&D battle. Second, Word Perfect used to be the word processing software of choice. Microsoft had told the large computer manufacturing companies that if they bundled any Office software other than Microsoft with their machines they could not bundle Windows. Of course, the manufacturers could not do anything but comply. This eventually caused Corel's product to fall by the wayside.

Now with the settlement, Microsoft is starting again. Packaged with Windows is MSN Messenger. They have been trying to take over this market for a long time starting with a failed acquisition of ICQ. So again, they will use their OS to throw it at people. Let's face it; the majority of the population is not computer savvy. Microsoft is very aware of this and uses their lack of knowledge to the companies advantage.

I do think something should be done about the monopoly. A breakup would be extreme and affect the economy. However, a little slap on the wrist and fines are not enough.

Microsoft is a multi-billion dollar company and can afford any fines that are imposed on them. I am sick of buying software because it is what Microsoft has forced upon everyone and start buying it again because it is the better software. For example, Corel's last version of Word Perfect included dictating software. The majority of the population will not know anything about it until Microsoft bundles it with their software.

Thank you,

Mark Segall

Subject: My biggest problem with Microsoft OS

Hello,

Just a short note to state my biggest concern with Microsoft products. Their license excludes a vendor from shipping a PC with Windows and any other non Windows OS installed at the same time. As a consumer who is ordering a PC from a vendor, I should be allowed to install any mix of operating systems that I wish to pay for. The machine belongs to me, not Microsoft. The Windows OS may be owned by Microsoft, but not the physical hardware. So that is my biggest concern. I should be able to order a PC with any mix of OS installed, and the current Microsoft OEM license prevents that. That license is anti competitive and helps to maintain their monopoly position.

Sincerely,

Douglas Fraser

Subject: Microsoft and the Department of Justice

I am a North Carolina citizen and employee of one the largest U.S. high technology companies, IBM. I am writing this letter not on behalf of IBM, but to voice my personal opinion and complete disagreement with the decision by the U.S. Department of Justice to lighten any punitive damages on Microsoft regarding the anti trust case. Most people who make a living in the technical computer profession would be of the same opinion that Microsoft has, for several years, repeatedly practiced business in a unfair manner. What Microsoft has done to Netscape, not to mention some of IBM's products, certainly exceeds the boundaries of fair play, by anyone's definition. To go virtually

unpunished and only suffer the imposition of some lightweight rules regarding future conduct is like getting lashed with a wet spaghetti noodle. Consumers are not the only ones to suffer at the hands of these predatory business practices, that seem to be standard operating procedure at Microsoft. Sure IBM, SUN, and other corporations are large and diverse enough to endure illegal tactics on a product by product basis. However, many smaller companies typically just have to fold up shop and go home when confronted with these 'dirty pool' techniques.

What current economic or other situation may have influenced a quicker and less severe penalty is thwarting the natural advancement of technology, despite Microsoft's continual claims they would be 'inhibited from innovating'. These DOJ decisions are not in the best interests for technical professionals and entrepreneurs, nor for consumers of software products. In the areas of software development the United States continues to be the dominating and most advanced presence world wide. Many of us are fearful this advantage will be lost eventually should we continue to turn our eyes from these all out assaults on free trade.

Thank you for your consideration in doing what is right and fair on this matter,

Subject: Microsoft Settlement

I think you should not accept the settlement. Microsoft is too large and has used its power to corner the market and stifle competition. While the settlement does restrict some of their activities now, it does little to level the playing field and open the market up to competition. Plus, it does nothing to address the high handed way it deals with customers and its failure to provide bug fixes automatically to registered users. I think the settlement should be rethought and the possibility of breaking Microsoft up into smaller pieces revisited.

Subject: Judgement

To whom it may concern,

As a Canadian Citizen, the impact of my opinion upon any judgement made in a US court is likely minimal. Nevertheless, I would like to contribute my opinion. The recent release of Microsoft Windows XP is a good example of why we should be careful of how they package their products. Microsoft's practice of producing applications for its operating system which compete with other application software vendors gives Microsoft a distinct advantage.

Microsoft considers the workings of its software, including its Operating System, Windows, "Intellectual Property"; however, the interface between the Operating System and Application software is supposed to be defined clearly. Yet, we do not know whether or not Microsoft provides an alternative interface, knowledge and understanding of which rests entirely within the Microsoft organization, which may be included under that umbrella of "Intellectual Property". Microsoft internal developers may utilize this "secret" interface rather than the published one when developing application programs that compete with third party developers.

As a result, this gives Microsoft a potential significant advantage over its competitors who are forced to use the published interface specifications to design their software; an interface which may be significantly inferior to the interface used by internal developers. My suggestion is to order Microsoft to publish its operating system source code, free of charge, and keep the publication up to date. Verification can be made by compiling the source code and comparing the binaries. Copyright can be enforced to protect Microsoft's intellectual property however the material must be released for inspection by competing vendors. This would remove any special advantage Microsoft has over its competitors in the application software market. Applications would then be judged by the consumer on a level playing field. This would substantially increase the availability and variety of reliable and well-designed application software for the Windows platform, to the great benefit of the consumer. Furthermore, designers of poorly designed software would no longer have the excuse of stating that "we can't help it, it's Microsoft's fault" when the software fails.

Thank you for the opportunity to contribute to this critical decision which will have a world-wide impact.

Subject: Microsoft Settlement

As a professional in the computer industry for the last 15 years I have been directly

affected by Microsoft's monopolistic practices and have therefore watched these proceedings with great interest. As I understand it Microsoft was found guilty of unfair trade practices which it used to increase its market share at the expense of its competition. As I understand the settlement Microsoft will be forced by the courts to utilize unfair trade practices (software dumping) to increase its market share at the expense of its competition. I do NOT see this as a punishment or as a way to eliminate their current monopoly. Please consider other alternatives such as requiring Microsoft to purchase hardware and software from other vendors (IBM, RedHat, Apple, Sun, BeOS—I don't care who) and distribute those products to the schools. I am not even going to try to address the issues of the small size of the settlement.

Subject: MicroSoft Settlement Offer

I have read about the Microsoft settlement to provide hardware and software to the nation's poorest schools. I must say that while this offer has a certain appeal, it really does little to get at the heart of the matter, the monopolistic nature of Microsoft. In fact, I do believe that accepting the offer as it was given would only further entrench the operating system and would in fact further reduce competition in the marketplace. As a person who has been involved in education my entire life and who is currently in a high tech university environment, it has been clear to me that providing software to schools at any level has marketing as its main purpose. Allowing a large chunk of the settlement to be encompassed by Microsoft software would be little different than allowing a large part to include simple advertising.

I must say that the base notion has some favorable aspects. The settlement should only include the hardware donations, not the software. This accounting would increase the number of computers contributed from 200,000 to 1,000,000 (14 to 70 systems per school). I also believe that some linkage should be made relative to the Red Hat company's offer to provide free software (with no time limit) to these same schools. Providing an alternative to the Microsoft system to a significant portion of our young people should help increase market competition and as such, the future innovation of America's software. The computer hardware should, in other words, not include devices that were designed in such a manner to exclude non-Microsoft products.

Subject: The settlement

I can't believe that the judicial system in this country would be so spineless in its treatment of Microsoft. As an end user of competing products, I have watched Microsoft systematically force those products and companies out of business. Most of those products, in my opinion, are superior to what Microsoft offers but when faced with the might of Microsoft are not able to compete.

It has been proven that when Microsoft wants a market they will give there software away to collapse the competition. They can afford to give software away because the use income from other products to subsidize. It has been proven that Microsoft will withhold information about the coding of there OS from competing vendors that will allow Microsoft products to work better.

It has been proven that Microsoft will lie to the courts of this country. (ex. The demonstration that Internet Explorer could not be removed from Windows because it was interwoven into the OS. and disproved in court by and independent consultant)

It has been proven that Microsoft has no respect for the our judicial system. The ruling in California ? against Microsoft in the Java suit with Sun Microsystems. In Bill Gates affidavit, he indicated that the ruling did not change the way Microsoft operated at all. In this case, one of Microsoft's tactics was in full swing. Take an open standard software meant to be used by all. Corrupt it so that it will only work with Microsoft products. Then take it over because you have 90% of the desktop computers out there.

Microsoft has been found guilty of being a monopolist. And the courts only seem interested in giving the appearance of punitive action. Offering to provide schools with its product only furthers the stronghold that they already have. And caused further injury to the stability of companies like Apple and others that have a reasonable market share in the education community.

Lets look to the future:

Windows XP is forcing the end user to open there networks to Microsoft for licensing. During this time Microsoft can retrieve any information it wants from the end users computer. It can learn anything from passwords to what other products are installed. Windows XP has features that record credit card numbers during online purchases. These numbers are stored on Microsoft servers. These numbers could be used without the consent of the end user. Microsoft is fully aware of the big brother stance they have taken. Take look at the advertising campaign that they are currently using. The people in the commercial are flying around and the pitch is that Windows XP will give the user freedom and that it is liberating. The compensating hard sell is no doubt intended to disarm the public. While not an expert on the law governing monopolies it seems that the threshold for other companies being considered as monopolies is much lower than has been applied to Microsoft. Don't you get it. You have a problem here.

Subject: Microsoft

I thought we lived in America where you were free to run a business. Don't punish a company because they developed a software package that EVERYONE wants and is good enough to drive the competition out of business. Instead of punishing Microsoft, the government should be encouraging other companies to develop software that will rival Microsoft.

Free enterprise means just what it says. If you end up being the only company out there selling what the people want and need, so be it. If you are so up in arms about this, then do something about it like develop software that will rival Microsoft or just keep your mouth shut.

If this keeps up, we will be punishing the new inventory of "IT" stating that because no one else out there has a product like it, they are monopolistic.

I was pretty sure when I woke up this morning that I was still living in America.

Subject: Microsoft Settlement—Use Linux instead.

I read that you are collecting opinions about the antitrust settlement it with Microsoft. My opinion is that they should not be allowed to put their software in the poorest school districts as a punishment. That action would only allow them to lock in many, many more people to their proprietary system. It's ludicrous, but it is the sort of thinking that has made Microsoft such a great success.

Once these poor students are trained on Microsofts Operating System, they will not switch to anything else—it's just too hard. Then they will be locked in to buying constant upgrades (both software and hardware) forever. Do the right thing! Get Linux into the school system!!!! Students can learn one operating system that they will be able to use for the rest of their lives. The OS itself is free, all of the applications (including a complete office suite and professional drawing programs) are also free, and Linux will run (and run very well) on old, low cost hardware. Lets start thinking about what is best for the students and the taxpayer and do what is right instead of what is easy. obtv: There are Linux user groups all around the country that I believe would be delighted to help teach the teachers at no cost.

Subject: Anti-trust Suit against Microsoft

I want to convey my feelings of the anti-trust litigation against Microsoft. Microsoft is a business and the object of a business is to make a profit. There are many companies that made huge profits because of Microsoft and their innovations, including these companies shouting "unfair business practices".

Everyone has the opportunity to develop their own software and compete against Microsoft. If these companies that are crying foul banned together, made an effort to create an operating system and applications software that was more or just as effective as Microsoft, they could control a great market share. But it seems the easy and cheaper road is to have government intervention (companies do not have to pay for this law suit, it is the American people) that stifles competition, thereby diverting monies that could be used for greater innovations in the Microsoft company to improve the standards of work, education, and life in America.

Microsoft's proposal to place software and hardware in the schools is a great idea, but a better idea was given by the Red Hat Linux corporation. Microsoft provides the same amount in cost of hardware to the schools that was stated they would provide in their software and hardware, while Red Hat provides their software and applications with unlimited support. This would show that Microsoft is serious about helping underprivileged schools and it shows good faith to the American people. At the same time, another operating system and applications are taught to future doctors, lawyers, teachers, professors, etc. This promotes learning of a new style and also adds another company to the software realm that has taken over our way of life in the last 25 years.

Thank you Sir and Ma'am for letting me voice my concerns and proposing another solution.

Sincerely,
Daniel L. Blackmon

Subject: The Microsoft Settlement
Sir or Madam:

Not being an anti-trust lawyer, I have no understanding of the legal intricacies of the Microsoft case. Being something of a power user, I can see what Microsoft has been up to and I can tell you that the proposed

settlement will do nothing to address it. The software that keeps Linux (or any other alternative operating system) on its knees is Microsoft Office, which has become the lingua franca of business, which uses proprietary file formats, and which has tentacles deep into the operating system. The penalties proposed by Judge Jackson and now being explored by the EEC would address these issues. Years of taxpayer money will have been spent on litigation will have accomplished nothing. As usual, the only ones to benefit will be the lawyers. Microsoft? It will take the costs of this litigation out of the pockets of its captive customers.

Date: 12/7/01 9:49am
Subject: Anti-trust Settlement (Updated with some things I forgot)

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

I am a technology professional who has been involved in software for over 16 years. I am currently the Vice President of Technical Architecture for a large distribution company (basically the CTO). My comments in this response to the anti-trust settlement proposal currently before the District Court are my own, and in no way affiliated with my company. I only talked about my position, so that you could see that I have some credibility in my comments. Having said that, the following is where I see issues with the proposed settlement.

In section III. Prohibited Conduct, it states that Microsoft is prohibited from retaliating against an OEM for shipping a personal computer that either includes a non-Microsoft operating system or can boot more than one operating system. There seems to be a glaring omission here. Under these terms Microsoft could retaliate if an OEM ships a personal computer with only a non-Microsoft operating system. To give a simple example, if I were IBM, and I started shipping personal computers with Linux pre-installed as the only operating system for customers who didn't want a dual boot system, Microsoft could retaliate. The odds of this behaviour would go up substantially, if a large OEM like IBM started selling significant numbers of systems with only a non-Microsoft operating system.

In section III.C.2, it states that Microsoft cannot restrict by agreement any OEM from distributing or promoting non-Microsoft middleware by installing or displaying on the desktop of any size or shape so long as such shortcuts do not impair the functionality of the user interface. Who makes the judgement about impairing the functionality of the user interface? What constitutes an impaired user interface? If Microsoft just doesn't like the way it looks, can they have the OEM remove it? This raises more questions than it answers. It seems to me, that if an OEM really impairs the user interface, then their customers will be unhappy, and have them

fix it, or get their PC's from somewhere else. I know that Microsoft position on this, is that it reflects on them. The truth of the matter is, the OEM handles the technical support for pre-installed copies of Windows, not Microsoft. How many people do you know blame Microsoft when their computer doesn't work? They simply say my computer doesn't work, and if they bought the system from an OEM with Windows pre-installed, they call the OEM. This section should have no exception, and the free market should be left to decide whether an OEM has impaired the user interface or not.

In section III.C.3, it states another user interface exemption for OEMs. This time it says that middleware that automatically launches on boot, can be replaced as long as it displays on the desktop no user interface or the user interface is of similar size and shape to Microsofts user interface. This prevents competitors from creating unique user interface paradigms, that may in fact be better than Microsofts. In fact, it limits them into copying Microsofts products, and gives no ability to innovate with the user interface. I don't see how this can foster competition. If both products look and act the same to the user, then you have just removed one of the competitive advantages a competing product may have.

In section III.D, it states that Microsoft has to disclose to ISVs, IHVs, IAPs, ICPs, and OEMs the API's and related documentation that are used by Microsoft middleware. This goes to the heart of the issue a lot of people have, which is that Microsoft hides API's that it uses for competitive advantage. This is a very good provision, but it has one very big omission. Today, open source projects create software that needs to interoperate with Windows (e.g. Samba) operating systems. These projects would not be covered by the list above. For this provision to have true meat behind it, Microsoft should be made to disclose the API's publicly to everyone. This will create significantly more competition in the marketplace, because it would allow open source projects to be more easily developed. This section is also incongruent with section III.E, which doesn't limit the disclosure of communication protocols between the Windows client and server. The two sections should allow for disclosure to any and all third parties.

Section III.F.2 seems to be completely meaningless. The exception completely nullifies the behavioural prohibition. Everything from the word except on, should just be removed. Microsoft should in no way be allowed to limit what an ISV can develop or promote that competes with Microsofts own products. This section should be one of the cornerstones of an agreement, and should have no exceptions.

Section III.G.1 also seems meaningless. Again, the exception completely nullifies the behavioural prohibition. If you are going to eliminate the use of contracts that give consideration to certain entities based on solely supporting Microsofts products, at the expense of competitors products, then the agreement should do that without exception. The current exception takes all of the teeth out of this section.

Section III.H.1 & 2 has all the same problems of section III.C.3 which I stated

above. Additionally, Microsoft has the option to have the end user confirm this choice of replacing the Microsoft product with the non-Microsoft product. Of course, this could confuse the user, and make them wary of making such a change. While I understand that a user could do this by accident, based on the provisions of this section, the user can make the Microsoft product the default selection just as easily. Besides that issue, I think that additional teeth should be put into this section in the following way. Microsoft should be prohibited from putting hooks into the operating system that prompts the user to switch back to the Microsoft product everytime the user uses the non-Microsoft product. They could easily do this under the provisions of this settlement, and make it very difficult for the user to use the competing product. Section III.H.3 makes direct reference to my suggestion of what Microsoft will do to change the configuration to suit their needs and stifle competition. The settlement only prohibits them from changing the configuration that the OEM supplied their customer for 14 days. After that time, they can pepper the user with dialogs that constantly ask them to switch the applications from competitors to theirs! This entire section should be changed to prohibit this behaviour completely. I don't see how this agreement can foster competition with this type of exemption. It also retains much of the power Microsoft has over OEMs. If the OEMs configuration can just be changed by Microsoft after a couple of weeks, it takes much of the value that the OEM can sell to Microsofts competitors away from the OEM. If I was a Microsoft competitor, and I wanted to sign an agreement for an OEM to ship my product versus Microsoft, and Microsoft can two weeks later bother the user to the point that they switch to the Microsoft product anyway, then I wouldn't be willing to pay the OEM very much. OEMs already struggle with margins, because Microsoft and Intel make all of the profit, and the product is a commodity. The only real way for OEMs to differentiate their products is through customization and third-party software bundles. Again, we should let the free market decide, without pestering prompts to switch to Microsoft products (and visa versa).

After section III.H, there are two bullets called 1 & 2, which don't seem to be a part of section H, but give Microsoft additional exceptions. Bullet 2 says, a Microsoft middleware product may be invoked by the operating system when a non-Microsoft product fails to implement a reasonable technical requirement. What is a reasonable technical requirement? The example in the document is hosting an Active-X control. What if the replacement product can implement all of the functionality that a user needs without hosting an Active-X control? Who determines what is reasonable? These type of exceptions could make the agreement unworkable, especially if it can be argued in court. I see a lot of additional wrangling in court to resolve disputes over things like this, and this additional time could be used by Microsoft to continue business as usual while the lawyers fight it out.

Section III.J gives Microsoft another way to wiggle out of disclosing API information. I

think it is necessary to state that they cannot disclose the internal working of something that is against the law to disclose. As far as I know, no such cases exist. Actual authentication keys, tokens, etc. would not be apart of a working API, but the format of those would be. The way this is worded, Microsoft could prevent the disclosure of API's and communication protocols, and no one would be able to dispute them because they could argue that disclosure would be required to prove their case. Of course, you could argue that the technical committee could work to see if Microsoft is pulling the wool over everyone's eyes. The flaw in this, is that Microsoft could still fight it and win, and no third party could jump in to help the case without first getting disclosed on the API's and communications protocols. I see this as a catch-22 for enforcement. After reviewing this entire proposed settlement, there is also one thing missing from the license and agreement restrictions. One of the main things that came out in the trial testimony is that Microsoft makes anyone who uses their development tools restrict the use of the software created with the tools to Microsoft operating systems. This affectively makes it impossible for a developer to take source code and port it to a competing operating system. If you want to restore competition for operating systems it has to be easy to port an application from Windows to competing operating systems. If the developer cannot use their own source code to do this, then it will be next to impossible to get developers to make the investment needed to get applications on competitive operating systems. This is also a case of the tail wagging the dog. Microsoft is controlling another companies intellectual property. This is something that Microsoft has made sure doesn't happen to them in this very proposal!

Overall, this agreement doesn't go far enough in curbing Microsofts business practices. I think that a better solution is staring us all right in the face. The solution that I think would be better has three simple principles, of which two are captured in this proposed settlement. First, make Microsoft disclose all API's to everyone, without exception. Second, do not allow Microsoft to control other companies use of Windows or their own source code, whether it be configuration of the desktop, inclusion or exclusion of non-Microsoft and Microsoft products, or porting their own software to non-Microsoft operating systems. And third, allow Microsoft to bundle anything they want into Windows, and its successors, as long as it complies with a recognized open standard. The IETF (Internet Engineering Task Force) model of standardization should apply here. In their model, something does not become a standard until at least two interoperating implementations of the standard are widely deployed. This would make it very simple to monitor compliance, and would allow third parties, including open source projects, to compete head on with Microsoft in every product category.

Thanks for taking the time to read this, and I hope that the settlement can be improved to foster competition in the marketplace for operating systems.

Subject: some settlement issues

Sir:

"This settlement will promote innovation, give consumers more choices, and provide the computer industry as a whole with more certainty in the marketplace," -Charles A. James, Assistant Attorney General for the Antitrust Division. A shiver runs down my spine when I hear an assistant Attorney General spew Microsoft propaganda phraseology verbatim, in defense of a settlement against the very same company. But lets concentrate substantive and discussible issues:

What can I say about the settlement agreement. I read the agreement and found it very disappointing; it is so bad that one is led to believe that the Justice Department has simply capitulated to Microsoft. Of particular interest is the requirement to publish API (application programming interface) specifications to guarantee the ability of other software manufacturers to make their products inter-operate with those of Microsoft. Microsoft already publishes its APIs. However, software developers argue that they are published with too much delay—giving Microsoft an extra head start—and are not complete—hiding performance enhancing functions from the competition. APIs should be updated continuously for any major or minor release of any major or minor component. Otherwise, the whole exercise is a joke. There are two huge loopholes just to the API issue. The first is that Microsoft is not bound to publishing APIs to products containing intellectual property of other companies. However, with the huge amount of cross-licensing of intellectual property in the software industry, any Microsoft product can be made to fit into that category. The second is that Microsoft is not bound to publishing APIs that may divulge information about encryption algorithms and other security details. However, encryption algorithms are not secret; to be secure, they must not be. Both of these caveats are baseless from any of scientific, engineering, or business point of view. The agreement does nothing more than specify once again to Microsoft to conduct its business fairly and without prejudice. Well, gee wiz, folks. Don't hold your breath. And whatever happened to a consideration for a penalty for Microsoft's criminal convictions? How about taking back most of the \$30 billion stockpile Microsoft is sitting on? It's existence is the most obvious measure of monopoly power; no company can amass such wealth in an open and competitive market. Come on DOJ, do your job!

Finally, a parting shot of reality to those who believe that Microsoft is an entity worthy of their praise: Microsoft is simply a business enterprise out to make a profit for its shareholders; it is not an innovator; it is not a research company; it did not invent the computer; it did not invent DOS; it did not invent the graphical user interface; it did not invent the mouse; it did not invent

programming languages; it did not invent word processors or electronic spreadsheets; it did not invent databases or accounting programs; it did not invent the Internet or the web browser or the web server. It has, through huge profits from its monopoly power, bought companies with innovative products, making those its own; it has lobbied Congress to strengthen copyright law and patent law to its benefit; it has made gargantuan profits year after year, measurable by its \$30 billion stockpile of cash reserves. One might admire Microsoft's success from a strictly business savvy perspective. But, the business savvy of Microsoft or Bill Gates is not the same as, and should not be confused with, someone's meritorious work in the public interest that would justly deserve praise, appreciation, esteem, or admiration, by the general public.

Carlo Moneti

Date: 12/7/01 10:01am
Subject: settlement

Please take the response from Red Hat Linux seriously. Linux is not a college student's project, nor is it only for servers and high end research computing. Linux provides a low cost, highly secure, thoroughly modern computing solution for educational, institutional, governmental, commercial, and personal use. Very few computer viruses are known to affect a properly configured Linux computer.

I believe the settlement should address the key issue with Microsoft's business practices, which are oriented towards one thing, market domination, to the exclusion of all other vendors. Microsoft's offer does not adversely effect the company financially, and is merely a PR stunt. In addition, it secures Microsoft a foothold in the minds of children. It would be far better to require MS to provide all donations in hardware and let Red Hat or other Linux providers provide the operating system and software. This decreases, rather than increases MS's actual and intellectual market share. It also is better deal for schools because they could get more computers, and have them be cheaper and easier to maintain. It would be better for children because of the vast array of software such as office and productivity, C++, Java, html and other development software, servers, graphical design, CAD, CAS, GIS, financial management and other software that could be used in the schools for absolutely no cost.

Microsoft's offer is nothing more than Bre'r Rabbit asking to be thrown into a briar patch. Please do the right thing for America's children, and the world's computer industry.

Thank you for your time

Subject: My opinion of the Microsoft settlement.

I would like to voice my opinion of the settlement that I heard. I heard that Microsoft

would have to donate software, hardware and services to schools. At first I thought this was a good thing since I am in the education setting. Then I got to thinking that my first reaction is wrong. First, by forcing them to donate software, something that costs pennies on the dollar, it doesn't hurt them at all. Second, it is just pumping more Microsoft into the education division and further helping out the Monopoly. Now let me state that my school is a mixed environment. I have about 70% Microsoft Windows computers, 30% Apple and I personally like Microsoft computers better, but I still feel that forcing them into the education market only benefits them. In my opinion, it would be far worse for Microsoft at this case to simple have the DOJ drop the entire case. I would like to see Microsoft donate the money, ACTUAL MONEY, to the schools to be used for technology however they see. It could be Microsoft hardware or software, but it could also be Apple products, Linux products, etc. That would be a fair solution for all, except for Microsoft, because it would actually be a punishment instead of allowing them to make a circus of the DOJ and reaping the benefits of a gift horse.

Thank you for your time.

Subject: Settlement is akin to giving drug dealers access to schools.

Dear DOJ,

Microsoft is almost addictive as heroin. By giving Bill Gates free access to schools you almost guarantee the continuance of his monopoly. Redhat Linux's proposed amendment is a viable alternative. Let Microsoft foot the bill for hardware, but put freely available Redhat Linux (or any other linux) on the computers. I run exclusively linux for my studies and never run into problems. Most windows like software is available for linux, and it comes free with programming (such as C++), graphics and Internet software that Microsoft charges thousands for. Why not give our children everything possible? This will make the settlement a settlement and not a endorsement.

I work in academia, and if anyone runs windows in my field they get laughed at..we don't want to subject our children to ridicule! Granted, Bill Gates had back room deals with the Bush administration to quash this suit even before the election was stolen, but now you must serve the people of the United States, not Bill Gates' bottom line.

From: Leonard Heyman
To: Microsoft ATR
Date: 12/7/01 10:11am
Subject: Settlement

Dear DOJ:

Crimes should be punished. The punishment should fit the crime. Microsoft has been found guilty of committing a very serious crime. The settlement agreement contradicts this very simple concept upon which our criminal justice system is based. Microsoft continues to thumb its nose at the Sherman Act, and rightly so, for it clearly has nothing to fear from the DOJ.

The message sent by the proposed settlement agreement is, no man may be above the law, but corporations are. There is a reason the Sherman Act exists, and it is very important to the stability and continued growth of our economy. Throughout history, it has always been controversial as it always goes against many vested interests in power. However, each time it is employed, it has opened up a whole new industry to competition and has resulted in better products at reduced prices for consumers.

Monopolies are not illegal. Leveraging monopolistic power is. It is obvious to anyone who pays attention to the high tech sector that Microsoft willfully violated the Sherman Act, has done so on a regular basis, and continues, even today, to do so. If Microsoft isn't stopped, we will be asking ourselves in 10 years where was the DOJ when we needed them to stop the rampaging giant that Microsoft is from squashing innovative and important contributions in the high tech sector? Microsoft is currently leveraging its operating system to dominate everything from Internet shopping and site development to palm top PDAs, to console game systems and desktop applications. Make no mistake: Microsoft is not an innovator in these areas. They don't have to innovate. All they have to do is tie their ventures to their desktop software which is given freely to unsuspecting computer users or twist the arms of computer manufacturers and software developers dependent on Microsoft for the software Microsoft controls.

In a case cut and dry as this one (Microsoft already having been found guilty at great taxpayer expense) it should be more surprising to the American people that political pressure has trumped common sense so completely. The sad truth is that the American people know their government has ceased to represent their interests and no longer looks out for them. The great silence you hear is not contentment, but dispare. Continue down this path, and you will be contributing to the ultimate result: a popular revolt against a government dominated by corporate interests.

Subject: a consultant/user's point of view

Thank you for taking the time to listen to us. As a consultant, I am out there every day and I see what works and what doesn't. I deal with small and mid-size businesses. These people are good spenders and need to work. They are not interested in theories.

Microsoft is everywhere. They have done good things, bringing relatively easy use of computers out there but they also have done terrible things. Many of my clients still use Word Perfect and other non-Microsoft products. At the end of the day, Microsoft products, such as Office crashes more Windows computers than other products. The main problem my clients have is that Microsoft software is not stable and very expensive. Many are looking into Linux as a more robust solution and cheaper to acquire.

Microsoft has killed competition. What real choices do people have on the desktop? Windows, Mac/Apple (limited in everyday business use) and Linux with a steep learning curve. Now we are being locked in with having to pay for frequent upgrades which should be updates because Microsoft won't support Windows 95 and soon 98. BEOS was a great alternative but couldn't stand a chance in the market because people are so locked down by Microsoft.

This country is all about opportunities and competition which should give choices. However, when a company gets too big a market share (IBM, Bell), they will buy out the competition, embrace or steal their inventions and bundle them into their platform. This is where the line crosses over to unproductive competition.

The competition should rise to the opportunity but it is hard. This society believes in marketing more than it's consultants.

With all do respect, I do not understand what the DOJ is doing, nor what competency it has in the IT world. Windows is a poor platform whose owners are more interested in shipping it out quickly, make a quick buck and fiddle with security issues later. I do not see a clear plan as to where and what the investigation is aiming at. I do not see who is in charge.

Is the real question, does Microsoft bundle software together to squash competition? Well yes! Where is Netscape now in regards to Internet Explorer? What about Windows Media Player? Word versus Word Perfect? Does Microsoft have the right to do so? Well, heck yes. It's their product. But who protects the end users who makes money to pay taxes and make the whole system go round? We hope it is you. I feel this is the fine line where Microsoft has to be liable. They have been accused and proved of unfair competitive practices more than once in the past. Why are they getting off easier now than before? I fear noone trusts the DOJ to take the proper measures.

Please go to the specialized press, www.nwcomputing.com, www.infoworld.com, arstechnica.com, anadtech.com and see the user surveys which a clearly against not slowing down Microsoft and give more choices out there.

The damage is done but only you can prevent worst in the future. No one wants to see Microsoft go down. We are the people and we want choices. That's what we work for. We are the people and we are the voice that elect our leaders to take actions and protect us.

I feel Microsoft should be restrained and forced to give us a choice. The choices could be Windows without Internet Explorer, Windows Media player, Outlook Express, OEM who can decide according to the market what to bundle in. Maybe even a bare bone more secure operating system which people would pay more. You will find a surge in buying computers as the prices fall and people are anxious to pick up where America left off on September 11th if there is a choice, if people feel you are protecting their rights to choices and if they do not feel locked down by big companies.

Thank you,
Nick Zart

Subject: Microsoft Antitrust Settlement
Sirs;

I am the I. T. Manager for Techspray L.P. located in Amarillo Texas. I have been involved in the Computer industry for over 15 years as a programmer, project leader, and manager. During this time I have kept myself up to date on the events in the industry. I tell you this so that you will have some idea of who I am.

About the Microsoft Antitrust Settlement: I fear that you have done our industry, our country, and indeed the world a grave disservice by giving Microsoft what amounts to a free ticket to continue the dirty, underhanded, bully-boy tactics that has made them famous over the years. They have shown in the past that they will only give insubstantial lip service to honoring their agreement. Do you believe you have the resources or the necessary expertise to actually make them abide by the rules set out? You can bet that they don't think so.

In effect, by accepting this settlement, you have thrown away everything that we spent millions of dollars achieving. Nothing will change. Microsoft will continue to bully the industry, squelching any hope of true innovation or improvement in the state of our software. Their software will continue to be buggy and full of security holes because they know they can use any unethical or even illegal means to crush any competition that comes along and now they have the seeming full blessing of the DOJ behind them.

I am saddened by the lack of backbone, the appearance of complicity, the DOJ has shown by accepting this settlement. It is a sad day for my industry.

Sincerely
Duane Crowley

From: Bill Petersen
To: Microsoft ATR
Date: 12/7/01 10:28am
Subject: Sock it to microsoft

Come on guys. Microsoft, while moving computer technology ahead, has also severely limited competition. In fact, products that are much better than what Microsoft can provide are dropped by vendors because of MS's bullying.

They deserve to pay some steep fines, not to mention cover all of the expenses of this case!

And they should be made to split the OS from the software divisions. Now, lets take another look at things.

If Ford had built and sold products that function as poorly as Microsofts do.

And caused the users of their equipment (cars/trucks/etc) as much expense as MS has, don't you think there would be some pretty large law suits! Oh, there has been. One recent one involved the Firestone tires was it. Now in this case, people died, which is sad. And in MS's case, probably few, if any have died, but companies have lost MILLIONS and probably BILLIONS of dollars because of MS's poor, irresponsible QA.

GET REAL AND GIVE THEM THE PUNISHMENT THEY DESERVE, not just a slap on the rist!

From: Charles Marcus
To: Microsoft ATR
Date: 12/7/01 10:33am
Subject: Microsoft Settlement
Hi,

I am writing to express my concern that this settlement is in fact a sellout.

Microsoft certainly is entitled to develop its own software the way it wants to, but thats not the problem, and thats not what they were convicted of. They were convicted of monopolistic practices. The very worst practices they engaged in consisted of bullying PC manufacturers and distributors by forcing them to sign agreements that prevented them from selling PCs without the MS operating system. This in effect FORCES people to buy their product, whether they want it or not, just to be able to buy a PC. This is the one area that absolutely needs to be addressed in any remedy, or else there will in effect be no remedy.

Microsoft *must* be forever precluded from preventing PC manufacturers and distributors from selling PCs without the MS operating system. I also strongly support penalties, in the form of reimbursing anyone who ever bought a PC and had to pay for the MS OS that did not want it. The only way to make a monopolist stop doing what they are doing is to provide punishment and a remedy if they violate the law. Please, please don't let that entire trial be for nothing.

Best regards,

Subject: Microsoft Settlement
Dear Sirs:

I have been a US computer professional for 30 years, with significant experience in the use of Microsoft operating systems and software, Apple systems and software, Sun systems and software, and Compaq OpenVMS systems and software. Over this long time, I have had plenty of opportunity to witness the transformation of Microsoft from a small technology company with a great business plan into an aggressively monopolistic superpower. While Microsoft management has demonstrated substantial arrogance and lack of self discipline during this transition to the "dark side", I don't really blame Microsoft so much as I blame our government for failing to take seriously its responsibilities for controlling (and where necessary, punishing) Microsoft's monopolistic practices.

World consumers are demonstrating increasing unwillingness to place their future in the hands of a few people in Redmond, Washington. Alternative operating systems exist, and we are already beginning to see other National Governments begin to advocate new approaches to computing, based on open and transparent operating systems such as Linux. This is not being done because of a desire of these governments to become involved in computer software development, but because of serious concerns over their own economic and political security, in the face of the power and the monopolistic business practices of Microsoft. Vigorous action by the US Department of Justice is needed now to create a level playing field in the computer operating system and software development field. Probably the best solution would be a mandated break-up of Microsoft into 3 separate companies, one focusing on the development of a future (more open and transparent) version of the Windows operating system, one focused on business software (such as word processors and spreadsheets), and one focused on networking software (such as internet browsers and e-mail tools). Until such a separation is achieved, there will never be a real business motivation for Microsoft to become a willing player in the development of open standards for communication

between different software tools (such as Java).

I feel that failure to take forceful action in the remedy phase of the current lawsuit could lead ultimately to a complete collapse of the US software industry and this could threaten the US lead in the whole broad area of technology.

Thank you for your attention.

Sincerely,
Douglas W. Muir

From: Richard Finney
To: Microsoft ATR
Date: 12/7/01 10:46am
Subject: You are not hard enough on Microsoft

The judge decided that Microsoft is a monopoly, yet the DOJ wants to surrender to Microsoft and reward them. This is wrong. Microsoft should be broken up and placed on severe restrictions. Their business practices are anti-competitive. Their rhetoric is a pack of untruths. They are not "innovative". They are, in fact, keeping innovation out. Please withdraw from the current surrender and keep prosecuting hard.

The "settlement/surrender" you negotiated with Microsoft is pathetic. There are no real restrictions on Microsoft. Microsoft can still use their monopoly profits to prevent competitors from the marketplace. Computer manufacturers who don't cooperate with Microsoft will be punished and bankrupt by Microsoft. The "viewing of Internet Explorer" code is a joke. Nobody wants to read IE code, especially if you have to become an approved "Microsoft partner" (i.e. agree only to program for Bill Gates) and have to travel to a Microsoft run safe facility.

You left open too many loopholes. Way to many. Did Microsoft lawyers write the agreement? You must close all loopholes so that independents can freely negotiate with computer manufacturers for placing products on the PC without facing retaliation my Monopoly Microsoft.

Go back and fight Microsoft!

From: Danny O'Brien
To: Microsoft ATR
Date: 12/7/01 10:08am
Subject: The Microsoft settlement is a bad deal

Dear DOJ,

The settlement with Microsoft is a bad deal that benefits Microsoft and no one else.

In one stroke, they get:

1. a huge tax deduction
2. massive placement of their marginal technology into schools, which allows them to perpetuate their systems and data-gathering agendas

3. to strike a major blow against competition in the education sector. This deal boosts Microsoft and cheats American citizens of what Microsoft owes us.

Also, why is this monopoly not being broken up? Does the DOJ's lack of trust-busting effort have anything to do with the close alliance Gates has formed with President Bush? What about all that money that Gates gave to the Bush campaign?

This deal does not shed a positive light on a situation that already appears to be corrupt.

From: Thomas Hoffman
To: Microsoft ATR
Date: 12/7/01 11:04am
Subject: I can't believe you are going to let them get away with it

Department of Justice,

I applaud the fact that Microsoft was found to be an illegal monopoly. They've been using their market position to drive smaller competitors out of business for years. Despite the avalanche of negative evidence clearly demonstrating their predatory business practices, it appears they are now going to "get away with it". Recently the settlement has turned toward the soft side and no longer represents the type of action that fits the situation. That is a slap in the face to not only the Justice Department and Judicial system at large, but to the American people who take pride in diversity and freedom of choice. I've used Microsoft's products in the

past and truthfully, I've been very unhappy with them. What concerns me is that I had no choice but to continue spending money on and using their poor quality products despite the fact I was desperate to use something.... anything else. If you're in the business world, you have to use Microsoft's file formats and because of their proprietary nature, no one else has a chance to compete. Reverse engineering is only getting the development community so far. So what choice do you have to continue to pour money into Microsoft's coffers. As far as the settlement, it doesn't approach what the development community was hoping for. In fact, it's a weak slap on the wrist that should embarrass the Justice Department. If you are going to tell Microsoft to make their desktop completely customizable by third parties, by God stick to your guns. Don't agree to let them put even a single icon on the desktop if intermediate parties choose to exclude them. Make them release their proprietary monopolistic Microsoft Office file formats so parties interested in producing competing desktop productivity applications can at least have a chance at compatibility with the vast majority of the market. Take steps to assure that Microsoft cannot leverage their enormous market share to continually put competitors out of business with unfair pricing, embrace and extend, and other monopolistic business practices. The development and business community is watching developments very closely. The Department of Justice cannot afford to drop the ball on a case that affects the lives, choices and freedoms of so many American people and people in the world at large. Don't let us down.

Regards,

Thomas Hoffman

From: Tim Born
To: Microsoft ATR
Date: 12/7/01 11:02am
Subject: Red Hat's counter proposal

I read the news of Red Hat's counter proposal to the Microsoft settlement, in which they offered Red Hat Linux for the schools in place of Microsoft windows. I'm very much in favor of this proposal. My daughters are elementary and junior high age, and when we installed Red Hat Linux and Sun's (free) StarOffice on the PC at home, they had NO difficulty using it. It looks close enough to what they see on other machines, it runs all the software they need for internet, chat (one of their favorites), word processing, etc. If there are any fears of ease of use or interoperability, I think they can easily be addressed by a simple experiment: try it. Having tried it, our household has made the switch and is quite happy, both for the functionality and also for the substantial amount of money I no longer have to pay for Windows & MS Office. And the stability is SIGNIFICANTLY better. Seriously. If the local schools were to adopt Linux, I would be happy to help introduce them to it.

Take Microsoft's offer and leverage to get the maximum amount of hardware you can, to generate the maximum good. Let Red Hat deliver the OS & use Sun's StarOffice.

 Subject: Microsoft still trying to dictate.

I work for a computer manufacturing company, and I can tell you without a doubt, that Microsoft is still trying to eliminate the rest of the software companies by any means possible. There are so many issues with trying to use any other software that it is not even funny. I just spent three days trying to get a Windows compatible driver to work and Microsoft tried to deter me at every turn.

Follow this. I load the software for a database. The database itself is not Microsoft. The front end or access point is Microsoft. By using a different backend, I have a more reliable and faster system. The software for the backend is just plain better than anything Microsoft puts out. And it costs some \$50,000 less, still not free, than what Microsoft charges. The problem is that Microsoft deliberately codes in a refusal with its' frontend, not to accept a connection with the other software. Unless the other software company goes to Microsoft and gets its' approval for the driver involved. Every other software maker in the world, simply tells you that it has not tested the driver and cannot confirm it will work with their software.

An operating system is most useful because of its' compatibility with all the other software we use in computers. It is the hub and the other software provides the spokes to connect with other computers, the internet, printers, etc.... Microsoft continually takes an ax to everyone else's spokes. They are still using every hidden means possible to do this. The last example was an update I was trying to download from Microsoft to fix a known flaw with their system. One of their famous security holes. When I tried to download it I got an error message indicating I had done something wrong. I checked my work and found no errors. I went back to the download point and checked it out thoroughly. Microsoft had put together a loop that took you directly to the error page. There was no download.

The download page told you that if this fix fails you need to buy an upgrade. In other words there is a flaw and we are going to use it to sell you a fix, rather than providing one. And they were using a false error to do it. Sounds like they really are trying to do better huh!

So how much are they paying the justice department to fix their problem? If justice signs off on this I hope every one in the department is forced to wear a shirt that says "Paid for by Bill Gates"

 Subject: microsoft settlement

I, for one, am not satisfied with the proposed settlement. It is too weak. It has absolutely no backbone. Consumers (and the entire world) would benefit from having competing operating systems. This will never happen as long as every company in the industry knows they will either be swallowed or crushed by Microsoft's might hand. Give the industry a climate where ingenuity and great products can come into existence.

 To Whom it may concern:

Following are my opinions about the recent decision to weaken the remedy imposed on Microsoft after a FINDING OF FACT that they violated the Corporate Anti-Trust laws. I contend that nothing short of a breakup of Microsoft between their Operating Systems (OS) and Applications Software divisions into two separate companies will remedy their anti-competitive practices. I am one of the many technically trained people that would like more choice in the marketplace in Computer software and don't have any faith left that your remedy will provide it. Thesis: Microsoft should be split into two companies. The OS division should have to compete on its OWN merits. Likewise, the MS Applications Division's programs need to compete without unfair advantage. Support:

Having a company OWN 90% of the Desktop OS market and still being allowed to compete in the Applications programs business is like having a Car company OWN 90% of the roads in the country and being able to suddenly modify the size and shape of these roads to suit their new car designs, without giving other car makers adequate

specifications in a timely manner and being able to hide hazards in the roads that only the Microsoft cars can avoid. This is a crude analogy, but is similar to the situation Applications and OS designers face when competing with Microsoft in the Desktop computer arena.

I know you are lawyers and know very little about the history of computers, but let me try to remind you of things your own experts should be telling you. Operating Systems were invented so that every Applications software programmer would not have to 'reinvent the wheel' on every new program he/she wrote. The OS was supposed to take care of the primitive tasks like disk file activity, printing, networking, screen updating, so that the Applications designer could concentrate on just his 'high-level' tasks and write a good program. OS's were supposed to have reliable, well-documented calls so that all applications could use them to perform the low-level tasks they needed.

When you have a company that writes the OS AND Applications, you have a simple case of conflict of interest. If an unscrupulous OS company wants its own applications programs to fair better in the marketplace than a competitor, then he might add a few secret calls so that his applications can do things more efficiently than his competitors. He might give out information on changes to the external interface of the OS at a late date so that his Applications people could get out a new working version before the competition. In that case, the old applications of the competitor WOULD NOT EVEN WORK with the new version of the OS. The customer would have to buy a new 'compatible' version of the competitor's software, which of course would not be ready yet. Gee, maybe the customer would buy the OS vendor's software to avoid the hassle! He could also change the interface to the OS periodically without backward compatibility so that the customer would always have to keep upgrading his Applications, just to keep them working AT ALL, much less to fix the myriad bugs that he leaves in through carelessness and hurry. Does any of this sound FAMILIAR ???

Now of course these sneaky practices can't really work well until a company has a HUGE share of the OS marketplace. I think if you research the history of Microsoft, you will see that they weren't that bad in the old days when DOS was still fighting head to head against Apple and Unix. (In fact MS used to produce its own version of Unix called XENIX. After Windows came out, I guess they decided that it was too good of a competitor to Windows, so they dropped it to push Windows.)

Unfortunately, after they began to acquire more and more of the market share of desktop PC OS's, their arrogance grew as well as their bullying and unfair practices. If a split-up remedy had been in place just 5 years ago, you can pretty much bet that Word Perfect would now be the dominant Office Application Suite, rather than MS Office. Ask your older, more experienced secretaries what they used to prefer 5-7 years ago, MS Word or Word Perfect? Likewise, Netscape had probably 80-90% of the Internet Browser

market before Microsoft began to shove Internet Explorer in your face every time you start Windows. (Even if you install Netscape, Windows asks you if you REALLY want it to be your default browser EVERY TIME you start it. If you answer wrong, you get Internet Explorer as your default browser.) Now Internet Explorer has all but taken over. This alone was brazen use of the OS to promote a competing product.

How much market share did Novell have for many years because of a fast, efficient, well-designed product. They used to be in possession of at least 60–70% of the PC server market. Somewhere down the line, MS windows made it so painful to get all of the Novell Networking to operate properly with Windows, that companies began to switch. That is despite the fact that MS Windows Server is only now implementing POORLY, many features that existed in Novell 2 VERSIONS BACK ! Novell can deliver a significantly better performance on LESS powerful hardware than Microsoft. Does that sound like the marketplace picking the best product, or unfair collusion between OS division and Applications Division ? (Don't assume that Novell was poorly managed either. They successfully bested a number of less organized competitors in the shakedown of the eighties. Their training and certification program and support was a model for the industry.)

In another way Microsoft now uses the advantages it has gained in Applications to help its Operating System maintain its monopoly. Now that windows has helped MS Office Suite to destroy WordPerfect's and Lotus's dominance, MS can control what platforms now get MS Word and Office Suite. Since they are now so popular, MS only produces a version of MS Office that is always 1 feature set behind the Microsoft OS version for Apple. That pretty much guarantees that Apple remains alive (barely), but that it never becomes a true competitor to MS OS. MS doesn't offer Office suite for any other competing OS version. Gee, i wonder why ? Could it be that Bill Gates doesn't want a dominant OS player in the server market (Linux) to penetrate the Desktop arena? Could he be afraid? I would be willing to bet money that if we split up MS into two companies, there would be a Linux version of MS Office Suite within 6 months or less. It would be in the INTERESTS of the MS Applications division to do so. IT IS NOT in the interests of the OS division—hence the problem.

There is one last way that Microsoft misuses its power to try to gain unfair advantage in NEW areas. It will subtly alter existing standards of communication, web design, programming languages with 'extensions'. It will offer these 'extensions' in its versions of development software, going against Industry standards developed to insure interoperability. As its products take hold, other vendors must keep changing their own products (always one step behind). An example of this is Microsoft Web page creation software. It has 'extensions' to HTML that, if used, will make Web pages only appear good and sometimes even FUNCTIONAL on Internet Explorer. The same page viewed by netscape will appear

corrupted or may produce errors. Have you ever seen Web pages that say 'This page best viewed using Internet Explorer v.xxx'??? A similar attempt to hijack JAVA programming language resulted in a law suit from SUN for breach of contract.

Did you know that the current version of Microsoft media Player IMBEDDED in the new Windows XP OS will only play mp3 formatted media files in a less quality mode in order to make the new Microsoft Media format appear superior? Of course some versions (you know the ones with the 'extensions') of the MS media format are a CLOSED standard only playable on MS Media Player. To top this off, if you try to make another Media Player your preferred Media player in Windows XP (so that your MP3's sound good), it will interfere with the functioning of other Microsoft Applications bundled with the OS!!! THIS PRACTICE IS GOING ON RIGHT NOW! Windows XP was rushed into production to beat the DOJ Law suit. Possession is nine tenths of the law as they say.

Personally, all this makes me sick. I would hope the USDOJ would be humiliated by the arrogance of Microsoft. Apparently MS does not take USDOJ very seriously. My contention is that splitting the MS corporation will actually be GOOD FOR THE AMERICAN ECONOMY, contrary to Microsoft's scare tactics. Microsoft seems to make oblique remarks implying that what is good for Microsoft is good for the American economy, and that impeding Microsoft's advance would damage the economy. In fact the exact opposite is true.

Even though more efficient Operating systems such as Linux require less powerful hardware and might be less encouraging of the INTELs, AMDs, and other hardware vendors, the savings for EVERY OTHER COMPANY in America not having to buy new computers every 2 years might help the other 90% of the American companies to make a profit. How much American Corporate profit goes into the land fill every year when they have to scrap their old computers. With more fair competition, maybe more Applications program designers will be encouraged to write more applications—even ones that compete directly with Microsoft's Application division. More competition in Applications and Operating systems might even make superior and MORE RELIABLE AND SECURE computer software, at a reasonable price. (I for one would look forward to days when the servers quit crashing periodically due to undocumented bugs in microsoft's OS. we have Linux and digital unix servers that have not had to be rebooted for most of a YEAR. We must boot our microsoft servers several times a month. I never even leave my MS windows 2000 desktop machine up for more than a day. I rarely if ever reboot my Linux desktop machine. Why do I keep Microsoft machines you ask ? Because our corporate execs DEMAND that we use Microsoft on the desktop. Not enough NON-MS OS applications available that the users are trained to use.)

You may not realize that there are many people who are dismayed by the incredibly weak response of the current administration

to blatantly monopolistic practices by the Microsoft Corporation. Given the more vigorous legal efforts of the previous presidential administration, I don't feel it is completely out of line to question whether monetary influence during the presidential campaign could have something to do with the recent decision to abandon a bargaining position of strength against the Microsoft corporation, in favor of a settlement that is actually weaker than what was presented by Microsoft ITSELF prior to the judicial finding of monopoly. At the very least, the current regime in the department of Justice has some explaining to do against the APPEARANCE of impropriety.

Excluding that issue, we have the result in the marketplace itself. In the past, Microsoft has demonstrated a history of making every effort to avoid any previous remedies that the court has attempted. Either they have ignored the remedy completely or they have complied in the most minimal and unsatisfactory way to adhere to the letter of the law and avoid the spirit. Since the initial attempts to curb their behavior, Microsoft has only succeeded in gaining more unfair leverage and destroying more of their competitors. Don't be fooled that this was only the activity of the market. I have already outlined many ways that MS uses its Desktop OS monopoly to boost market share of its applications. Now that its Office Suite of Applications is stronger (due to the unfair leverage of its OS), it can use the Applications to help the OS maintain its position of dominance in the desktop.

If the USDOJ expects that further litigation will not be fruitful in curbing MS's monopolistic practices that HURT the consumer AND THE ECONOMY, then perhaps other government agencies can attempt another avenue for the remedy. i have heard that the Federal Trade Commission may have jurisdiction and enforcement powers that could be brought into play. Does the BUSH2 administration have the guts and desire to seek real enforcement of powerful remedies for the monopoly finding of the courts ? Are they too timid and fooled by Microsoft's scare tactics to attempt such a thing ? At this time, NOTHING could hurt the economy worse than it is already. You might drive a few stocks like Microsoft and Intel down for a short while if a strong remedy is attempted, but the long term benefits of increased competition and more efficient use of hardware resources (caused by better written Operating Systems such as Linux) could only help the US economy in the long run. We'll end up stronger for it. Ask the europeans, japanese, and chinese why they are favoring Linux over MS windows. (They don't like being locked into a expensive, proprietary OS that hides all of its code so that they have no idea what it is doing, and an OS that has a voracious appetite for Hardware upgrades at every new version.

Subject: Microsoft settlement

The settlement that you have developed means that Microsoft wins. The consumer and especially small business (those with not enough clout to get concessions from Microsoft) loses. We urged the state of Utah not to accept the agreement and express our strong disapproval of the agreement you have reached with Microsoft. Many IT departments are finding themselves having to use Microsoft products, not from choice, but because there is no competition. As architects, we need to be able to communicate the information we create with others (we would prefer that this communication and collaboration be done through industry standards rather than dictated by the creator of the desktop operating system). This makes Autodesk products (AutoCAD in its many flavors) almost the defacto products to use. Autodesk only develops for the Microsoft operating systems. They do this because Microsoft has a monopoly and has the vast majority of the desktops. It makes no economic sense for them (Autodesk) to do otherwise unless there is competition restored for the desktop operating system market. It is also feared that should the current settlement stand, that Microsoft will leverage their desktop operating dominance to further promote their server products and in the future make it very hard if not impossible to use a competing network operating system. Given the Microsoft track record on security (as evidenced by Code Red and Nimda) I would hate to be placed in that position. Microsoft is good at marketing and they are shrewd at business.

They do not, however lead in innovation and stability of their products.

Subject: Anti-trust damages

Hi,

The following opinions are mine and do not reflect the opinions of Computer Sciences Corporation, National Aeronautics and Space Administration, or any of the computer forensics groups I am a member of. To let you know what biases I might have, I have a Bachelor of Sciences Degree in Applied Computer Science and have 18 years of professional experience in programming mostly on UNIX systems. I do not own any Microsoft stock directly, but many of the mutual funds I have invested in hold Microsoft stock. I do own stock in Hewlett Packard (100 shares) and SGI (300 shares). Both companies have operating systems that in some markets competes with Microsoft, but both companies also sell systems with Microsoft Windows.

One of the major problems I have in trying to develop computer forensic analysis software for Microsoft products is the lack of documentation. Microsoft does not document file formats or low level system function calls. Reverse engineering can solve these problems, but that is time consuming and is nonproductive. Reverse engineering may also violate the Digital Millennium Copyright Act.

As part of the damages I would like to see that Microsoft be ordered to publish six months prior to release of any product the complete and accurate documentation of all function calls and file formats. For existing products and products about to be released the same documentation be published within six months of the order. If Microsoft is unable to comply, then it will be ordered to electronically publish all of its source code and documentation to released products at a price equal to or less than the price of the product. Microsoft will of course retain copyright to the source code and should be remunerated for any commercial use of their source code.

My goal is to reduce the time it takes to develop computer forensic tools and to eliminate the need to reverse engineer undocumented file formats or function calls.

Subject: Application monopoly

MS has an OS monopoly, we all know that. But this is actually supported by its application monopoly. I'd have moved to Red Hat linux and Star Office years ago but I have no guarantee I will be able to read the files of all the customers I deal with. So the monopoly of MS Office is preventing me changing OS And noone else can guarantee to read MS Word files as they could change the format overnight.

Now, this is all fair and lets face it, it's a commercial world, but we are talking about

an over powerful monopoly here. What chance does another WP supplier (let alone an OS supplier) have ?

Could one remedy of the settlement be to force them to publish sufficient file format info (or provide sufficient back conversion tools) that other WP's can reasonably guarantee to exchange data ? I would like to see

Subject: Settlement with Microsoft
Dear Sir's,

I don't understand why your Representatives let Microsoft off so easy. First of all; Microsoft has been found guilty of monopolistic marketing practices, in which it would force PC makers to only package Microsoft's operating system with every PC sold. Even today if you ask Dell computer to ship a PC Notebook computer it will be with Windows operating system. I have even asked Dell if they could leave the Microsoft windows off the new machine if I order it. I also asked if they could mark the extra charge for windows down. You know that this has happend a lot in the past. Now the decision is to allow Microsoft to be shipped coexisting with other operating systems. Why am I still forced to buy Microsoft products? Your decision has no provision with making refunds to people who don't even use the windows operating system, now or for being forced in the past.

Secondly; Your other decision was to make Microsoft open up their API code to other software manufacturers. This is nothing new. In the past Developers and companies who provided development tools were able to see the new features of windows api's, but only after Microsoft had ample time for marketing their own products.

In conclusion; Given a product atmosphere where there has been a major break through, such as the computer industry. And a situation where a company has been able to dictate who sells their product and blacklist

those who offer other alternatives as Microsoft has done. I have one question. Why don't you stand up and protect America's right to freedom of choice? And why don't you punish those who try to take that freedom away?

Subject: Microsoft settlement offer, Negative
I do NOT agree with the proposed Antitrust settlement offer by Microsoft to place hardware, software, services, and training in schools. This amounts to government sanction for a private business, by placing their software, with great limitations in support and mandatory future update costs (payable to Microsoft) on the backs of our schools systems. Their offer should be limited to hardware only. The offer by REDHAT to provide FREE software, upgrades, and license renewals should be strongly considered. Our schools could better benefit by the receipt of more than a million computers, and the issues that were fundamental to the original lawsuit will be avoided without further conflict.

Subject: Microshaft wins agin

I am a little disappointed (actually allot) about the recent "settlement" your department reached with Microsoft. Why don't you just send them a bonus check rather than wasting the public's resources. Seriously, if you are going to file an anti-trust suite against them at least extract some justice in the process. Microsoft's actions towards both the "software development related" industry and the end-user has been criminal. First their practices rape the industry then rape the end users, now to make it even worse they rape the justice system. Let's not get confused, I use Microsoft products, extensively. Why..? Because I have no other choice and that is the very problem. You know it and I know it; Microsoft is a thief! I guess I expected Microsoft to scheme their way out of this one. I just didn't expect you to be so stupid as to let them.

P.S.

You need to change your name from "Department of Justice" to "Department of Suckers"...

Subject: The settlement is a sham

I have to say that I do not agree one-bit to the settlement that has been offered to Microsoft. The last straw is agreeing to the offer made by Microsoft to offer free software to America's poorest schools. Noble cause indeed... but at what cost. It seems to me that

Microsoft is in fact being helped maintain their monopoly by this settlement. Let me analyze this. There are some other companies which may be offering free software to these schools already. But now cool it guys... these schools have to use MS software because it's a part of the settlement. There is no justice in this world. My only suggestion is stop the suffering. Wake up guys, the only thing MS is innovative about is on how to twist the judiciary to their own benefit. Their software is not innovative. MS has, in fact, been making very lousy software because there do not have enough competition. Its time to let other competes with MS so that they are forced to develop better and more reliable software.

Rahul.

Subject: The Monopolistic practises of MS
Sirs & Madams,

The notion of making MS provide free Software to schools is tantamount to giving them cheap advertising to the most impressionable people and disguising it as a "punishment". The practises of MS in the past have indicated that its philosophy is to 'infiltrate' a system and then make it reliable on continuing MS support and so-called "upgrades". The more deeply one understands the way MS software works, the more one realizes the insidiousness of their practises. I could site many such things, but I'll limit it just to the "register" which MS uses to control the execution of software. A large, unscrutable, and arcane convention which makes it possible only for MS 'gurus' to understand what is going on in the computer and which adds nothing but ham-fisted control to the process of executing a file.

These things coupled with the practise of making software obsolete and incompatible with the new version (e. g. Office 98) assures MS of continuing dependence of its customers on software it might otherwise not need.

My Two Cents Worth, Anyway,
James Kalmadge

Subject: Microsoft Decision

It is appalling that Microsoft has received no real penalty after these years of litigation. They have continued monopolistic practices, and the condition of the settlement will increase them by allowing them to penetrate schools.

Their software is of poor quality, their business practices are beyond dubious, and surprisingly, their customer service, website, and support systems are not at all state of the art. (If you want to see good ones, try IBM, Lotus, Red Hat, Oracle.) As a computer professional, I dislike dealing with most of their products, and it upsets me when corporations as well as individuals are sucked into dealing with Microsoft. The reason we need government to intervene on

behalf of the consumer is that consumers in general do not have the power to deal with large monopolistic organizations, nor the background to seek alternatives. But aside from technical and professional considerations, these people are KNOWN to have broken US laws. So why are they not being punished? I see no incentive for them to improve their behavior.

Those of us involved in technology are doing what we can to encourage competition (this message is being written on a Red Hat Linux machine, for which I paid cash). But the overwhelming presence of Microsoft and its pressure on the consumer tend to make it impossible for other firms to develop and market software, either for the Windows operating system (because Microsoft hides the interface) or for other systems (because of the small size of the remaining market). In the long run this will cause grave harm to the software industry and will remove the motivation of our brightest people to innovate.

Subject: Microsoft Settlement
To Whom It May Concern,

I am writing you as the owner of a small business and a user of Microsoft products. It remains a mystery to me why the competitors of Microsoft continue insisting that they are acting on behalf of the Microsoft users in seeking a more rigorous settlement of the Antitrust Settlement. As one of those users, I would like you to consider my viewpoint as well: No company has provided a better benefit to small business users than Microsoft has with its Office suite of products. I remember the early days when programs did not interact together and the difficulty in putting together a professional document for a business proposal. Today, thanks to Office, that process is simple. The increase in productivity for my company has been nothing short of incredible. Now we can spend our time doing work instead of trying to get the computer programs to work. I do a lot of consulting work with a variety of companies, including Boeing. With Office, I know my documents are all compatible with their systems. We can work together, revise texts, e-mail back and forth and quickly come up with products that meet the needs of all concerned. Whether the materials consist of word processing, slide presentations, or spreadsheets—they work. My colleagues who are also small business owners agree with this contention. Microsoft products have provided us with the tools we need to be successful. I find it frustrating that the competitors of Microsoft have put so much time and money into trying to damage a company that has done so much to help consumers at a very reasonable price. It is even more frustrating to know that their power in the marketplace and the money they have behind their vendetta appears to have given them greater access to the justice department than the users who, indeed, make

up that marketplace. Like many consumers, I don't want them speaking for me. It would be better for all of us if they would concentrate on their own businesses and making the marketplace more productive vs. trying to use the judicial system to destroy another company. I believe that the settlement as it now stands addresses the concerns of all involved in a fair way. I also believe that it is time to move on and put the resources—time and money—of our government into more pressing concerns. Now more than ever, it is important to recognize the value of global markets and the companies that do business in those markets. Looking at this case through blinders constructed by the domestic competitors benefits no one—not even them. We need the reasoned judgement of our judicial system to stand behind this settlement. Thank you for taking time to consider this e-mail. Please approve the settlement as it is and take the steps that will allow pursuing innovation and economic growth. These are difficult times and we need our government to help us move on.

Sincerely,
Judith Hanson

Subject: Microsoft Settlement

I'm tired of seeing multi-billion dollar companies break the law. As the U.S. Department of Justice, you are among the few organizations that can afford to take on a company of this size. I have seen company after company break the law and continue to do so because they now that the benefits of doing so outweigh the cost. As long as a company can make more in revenues from illegal actions than they will lose do to a settlement and litigation, companies will continue to exercise poor decisions that break the law and eventually harm the consumer, environment of the nature of a free market economy (such as Microsoft's case). In my mind that makes the DOJ directly responsible for protecting my rights as a consumer in a free market economy to be able to purchase a superior product at a fair MARKET VALUE. It is your job to make sure that a company that chooses to break the law to build up its bottom line will pay more for doing so than they would make from the illegal actions. In short it is your responsibility to ensure that companies WILL PAY MORE for breaking the law than they will gain from their actions, the cost MUST outweigh the benefits.

Subject: Microsofts web of software

Hello:

Currently Microsoft has a position that gives it almost an unfair advantage over all

of the other competitors. But I beleive in free enterprise, so I think the optimal solution is to separate the operating system from the software company. Currenty, way too many software products are embedded in the software and this is unfair to other companies. Microsoft needs sell or download there products such as IExplorer just like I would have to download Netscape. If they provide IExplorer then they should be required to offer two other browser software packages. They also have the operating system intertwined with their software. This creates problems when one program like Outlook has a problem is can effect Word, Excel, IExplorer and the operating system. They will place things like the IExplorer browser favorite list or the Outlook address book in amongst the Winows operating system folders which is not fair and is not good from the standpoint of backing up data or troubleshooting problems. Because of this, factor I try to use 3rd party address books, email packages and browsers. But Microsoft doesn't make it easy to use other products and that is the root of the problem.

I am not saying stop them, but instead force them to level the playing field. They should have to install their software just like anyone else. The software should have to be able to stand alone without weaving into the operating system. They should make their products, like Excel and Word capable of installing in other operating systems such as Novell Netware or Linux.

Thank you for your time,
Brandon Broderick

Subject: Microsoft ruling

Dear Sir/Madam

I would like to respond to the ruling against Microsoft. This year has been a tough one for the technology industry. I have been involved with purchasing products including Microsoft. Their new licensing agreement seems to co-incide with them getting off of the hook. Their new pricing structure is going to seriously hurt our company due the increased costs. The company that I work for is U.S. based, and since we as many other technology companies have lost money and laid off staff over this fiscal year, the increased cost of Microsoft products makes our bottom line look just that much worse. I strongly believe that the lack of punishment gives them a free reign to continue their anit-trust behaviour that is harmful to the technology industry in general.

Subject: Microsoft Monopoly Settlements

I would like to comment on the Microsoft Monopoly law suits currently in the settlement phase. It is my option that:

(1) Microsoft has used un-ethical buisness practices in the past years to gain and keep a monopoly on certain areas of the software

industry. These practices include the original Windows that competed against the windowing software that IBM paid microsoft to write in the first place, the planned incompatibility of windows with DR DOS, the Netscape Browser conflict, to the current Windows and Microsoft Office monopolies that they have today. This is not good business and if not bennificial to the software developer workforce or the end user, only for Microsoft.

(2) Any time you have an alternative to a microsoft product, it is always a better product, with better customer and developer support. Microsoft has charged many users for customer support where this support actually helped to improve their product.

(3) Microsoft has repeatedly broken the anti-trust rules and should be punished for their disregard for the law; not just told "don't do it again" like they have been told in the past. They knew they were breaking the rules and didn't care. They need to be held responsible for their actions.

(4) Microsoft has repeatedly walked away from standards meetings where software developers can agree on how programs will interact. These standards are important to provide the user with a choice of which software module they want to buy. Without these common standards, microsoft is able to hold and build their majority market share as well as extend it to new products.

(5) The end users and the nations economy benefit from choices. Choices are what make better products and better products make more productive end users. Any settlement must include: punishment for past actions (not access to new markets like schools, but stiff monetary penalties) Open Source Code and Strict Standards to allow any other company to interface at the same level as microsoft is able to (equal access). Microsoft should be broken into several comapnies so they can't continue to extend their existing monopolies into other areas. It is your job to protect the end users and other companies. Don't let Microsoft bully the Justice system like they have the rest of the country. It has been a long road to get to this point. Don't let the chance slip by and do nothing (or worse, give them a stronger possition). Take a strong possition and give the country a future!

Thanks for you time.

Subject: Inadequate Penalties
To Whom It May Concern,

It is a pretty sad state of affairs when the government appears to be incapable of enforcing its own laws. Microsoft has been found guilty of monopolistic activities. They have received no substantive penalty, and from all that I can ascertain from following the media your organization has no intention of calling for or enforcing such penalites. Why?

The settlement in which Microsoft has agreed to donate software, (refurbished) hardware, and services to the nation's poorest schools is disgrace to our justice

system: What should be a penalty for Microsoft is really just an opportunity for them to increase their already dominant and heavily entrenched market position. By "donating" their software to schools they establish a long term dependance on their products which they may (and most likely will) choose to charge for in the future. This "donation" will result in the training of thousands of new and impressionable users to use their products. In addition, the value of this "donation" will be calculated at the MSRP for these software products, while the actual cost to Microsoft will only be for the replication and media.

How can anyone make a cogent argument that this arrangement represents a penalty?

Lastly, Microsoft's current development path, the .NET initiative is a blatant effort to eliminate what little competition they have left. It presents significant invasion of privacy and intellectual property issues, and as far as I can see is not possible to opt out of. To my knowledge no legal challenge to .NET has been forthcoming. As usual Microsoft continues to do whatever they wish, moving so quickly that by the time the legal justice system can take issue with their behaviour they have moved on to a new arena of endeavour. Why does the D.O.J. not take a more active and aggressive role in dealing with the arrogant and combative behaviours of Microsoft? I can only speculate, but I must say that it is a sad state of affairs when a major corporation is allowed to run roughshod over the laws of our country.

I respectfully request that your organization deal with Microsoft in a much more aggressive manner. So far what I see is a corporation found guilty of violating the sherman anti-trust act, and that subsequently has refused to submit to punishment.

I thought it was the job of the D.O.J. to see that the laws were enforced in this type of case. Do I misunderstand the role of the D.O.J. in this? If not then why isn't it (law enforcement w.r.t. Microsoft) happening?

Subject: Microsoft settlement

The proposed settlement that Microsoft should give software to schools in order to settle it's debt is a gross miscarriage of justice. Please consider the following points:

1. Not a Penalty for Microsoft: Apple gave free software and hardware to schools a decade or more ago, and even today, schools represent one of their largest markets. Apple did this as a marketing move, without any incentive from the courts, so it must have had some value to Apple. Assigning this same marketing plan to Microsoft both undermines Apple, and rewards Microsoft.

2. Security: Microsoft has one of the worst track records on in the industry on security. The recent Code Red worm, for example,

exploited a weakness in the microsoft application server. Dozens of other viruses have been written that exploit weaknesses in Microsoft Office applications. Many foreign governments are moving to Linux to avoid these weaknesses. Why force this unsecure software on schools?

3. Closed environment: Microsoft is generally a closed software environment. For higher grades such as high school and college, open systems such as Linux or FreeBSD are much better for teaching the details of what computers do. Also, Microsoft does not support Java—one of today's primary programming languages. Java is supported on the Microsoft platform currently at Sun's expense.

Subject: Microsoft Anti-Trust Case

This is my opinion and not necessarily that of my employer or anyone else. I don't think Microsoft has been properly dealt with and I think that it was too late before the proceeding even started. It's quite obvious that they dominate the desktop computing environment. Go to 98+% of computer resellers and you only have Microsoft options for your OS. They did so by cheating other vendors in any way they could. Just look at the way they cheated IBM with the OS/2 project. You can find all sorts of things that they've done to cheat people. And every time they hide behind their no-warranty policies, their attorneys, and their desire to destroy their competition.

They have hurt the consumer because they choose not to introduce new innovations. I had a decent speech-recognition package on my PC back before Windows was out. They have squelched folks with this and other innovations for years to the degree that decent speech-recognition for a reasonable price still doesn't really exist. Essentially, all they've done for several releases of their products is provide the same functionality with a different look. Not only that, but they drop support on the older versions, forcing you to upgrade to newer versions for support and forcing you to replace hardware that shouldn't need replacing. They have essentially made everyone's expensive computers a 3 year disposable asset. I think surprises most consumers and they don't realize they've been had until it's too late. Only a major monopoly can force people to buy newer products.

They've also reigned in an era where software vendors demand licenses for each individual person using a system. I don't have to buy seat licenses for my car. Why should I have to buy seat licenses for my network? They've twisted the purpose of copyright laws to the point that people don't even consider that they shouldn't have to pay for some of these licenses. I think the government has a lot of work to do to make certain that copyright laws are not abused by companies like Microsoft. I would like to

point out that much of the software industry is like this. They bring litigation unfairly to their customers. They sell their products with poor descriptions of what the licensing requirements even are. Many customers don't properly understand their complicated licensing methods. I believe it's part of their strategy. Once the systems are in place and folks use them every day, Microsoft can pry money out of the company's hand after the fact. They use the court system to generate a profit. Shouldn't they be considered a 'vexant claimant'. They should be required to verify that folks understand their licensing in some way other than a silly prompt that comes up during the install of their OS. In addition, if that is where they choose to put the agreement, you should be able to return the product after the box is opened. You can't look at any of their licensing agreements for which you would disagree without opening the box.

In addition, they've reigned in an era of no responsibility to the consumer. If 1000 people bought lawn-mowers that broke every 4 hours, the people would file a class-action suite and win. For some reason, Microsoft is allowed to provide no warranty whatsoever. Folks at home just can't get things fixed. They pawn it off on the resellers to support their product. That ridiculous for the amount of money they get for the product. For \$250, I should get silver-platter service when I call them. How many times is someone going to have to pay almost \$250 for Windows 2000 after they've already bought a \$1200 PC and watch it crash once a day? The only reason that they can treat their customers this way is because they are a monopoly.

They've brought about an era where the copyright laws are interpreted to not include the consumer in the considerations. They think that the whole world should have to pay tribute to them for their OS. You can't use a damned PC without an OS. They think that every vendor and every consumer should just have to accept their rule over the market at the prices they want. People with greater innovations don't expect that of the world, why should Microsoft get to pervert the copyright laws to do so? Finally, they leave all of their customers with huge security issues without provided free and reasonable support. There are typically thousands of security bugs in any release of their OS. They rarely want to admit their faults, so customers are left open to attacks until they admit the faults and fix them. This costs their customers a lot of money to fix, patch and such. For the money you pay, they should do a much better job than they do. Why is it that they can't be held responsible for a breach of security on their product when the product is used properly. If a safe manufacturer sells a safe and it's properly installed and all you have to do is turn the dial any which way to open it, the safe manufacturer should be liable if someone's goods are stolen as a result. Why is Microsoft free of this obligation to their customers? It's not like the product is cheap.

I think Microsoft needs to be forced to be responsible to their customers. They should be required to provide warranty on their products that actually guarantee the working of the product. They have done more than try

to compete over the years. They've been ought right dishonest and unfair. I think that anyone working on this case can see that if they just open their eyes. If the government is not more harsh with Microsoft, I feel that they will not have fulfilled their responsibility in upholding the spirit of the AntiTrust laws.

I apologize for some of my rambling, but I've been in the industry my entire career and I can't stand the fact that a blind eye has been turned to this for so long. We put folks in office to make sure that these sorts of things get addressed properly. Why do we always have to wait until too late to deal with everything? Please go do something about this.

Subject: Comments on Proposed Settlement
To Whom it May Concern:

I would like to comment on the proposed settlement in the Microsoft antitrust case.

The proposed settlement in its current form is toothless and in many ways actually rewards Microsoft for their misconduct. The trial judge and the appeals court both found that Microsoft engaged in illegal monopolistic practices. In other words, Microsoft committed criminal acts. They broke the law. For this they must be punished.

It is important to keep in mind in discussing any settlements with Microsoft that this is a company that has consistently thumbed it's nose at the US justice system. They have violated previous court orders and agreements. And every time they violate such agreements, they use evasive legalistic tactics to avoid accountability.

It is high time to make Microsoft accountable.

The ideal punishment of a monopoly is to break it up. Perhaps this idea is not politically feasible today. Baring this approach, Microsoft should be forced to pay in an amount that will actually affect their bottom line. The proposal that Microsoft pay for their crimes by giving "free" Microsoft software to schools is absolutely ridiculous. The school system is one of the few places where Microsoft's monopoly does not extend. Are we going to punish them by allowing them to extend their monopoly using shrewd marketing tactics? The software will only be "free" for five years under the current proposal. After this, schools must pay.

There is a better way.

The Department of Justice should implement the proposal made by Red Hat to provide free software to all the schools in the country. Forever. Microsoft can then use the money that would have gone to providing "free" software to provide more hardware. This is a truly winning proposal. Our schools will win by getting much more than they would have under the original settlement. The public will win through increased diversity and competition in the world of PC software.

Microsoft will not win under Red Hat's proposal, though. They will actually have to pay much more because the free software they would be giving to schools would actually cost them nothing. And they will not be able to extend their monopoly into yet another sector. But since Microsoft is the criminal in this proceeding, it is fitting that they be punished.

Thank you for your attention.

Subject: Microsoft Settlement

I am strongly opposed to the current version of the "Proposed Final Judgement" in the Microsoft case. In particular, the definitions in Section III(J)(2) and Section III(D) that allow Microsoft to exclude not-for-profit organizations for access to their source code.

MICROSOFT MUST BE FORCED TO PUBLISH ITS SOURCE CODE FOR ANY PRODUCT THAT INTERACTS WITH THE INTERNET. Specifically, any product that uses IP services must be available for inspection by anyone.

Microsoft is plenty clever (and devious) enough to find ways to keep some of its code secret. That's fine with me, but they should not be allowed to subvert the open protocols that run the internet.

Date: 12/7/01 1:06pm
Subject: Microsoft Settlement
To the Department of Justice:

I would like to point out the great importance of the eventual Microsoft Settlement to higher education, as well as to the general public interest. As I understand the current focus, the settlement mainly addresses the rights of Microsoft's competitors. It is possible that the choices available to higher education and the public will actually be—reduced—under the current Settlement, because critical information will be withheld from developers of Open Source software. Open Source as an alternative to Microsoft products is particularly important in higher education.

Many of Microsoft's major "competitors" are in the Open Software arena, which provides such products as the Apache web server, SAMBA file sharing, and the Linux operating system. The volunteer groups that provide this software are critically dependent on access to the Microsoft APIs and other information that may be provided under this Settlement.

In order to serve the public interest and to redress Microsoft's violations of law, I believe the Settlement should require Microsoft not only to disclose APIs and related information to "qualified" competitor firms, but to disclose them to the public at large. This is the only way that the needs of the open software community can be fairly addressed.

Thank you for your consideration.

Subject: Microsoft Settlement

Dear Justice department,
I am writing to comment on the pending Microsoft antitrust settlement. Please see <http://www.pbs.org/cringely/pulpit/pulpit20011206.html> for some related, though more articulate, thoughts. I am not sure what the "Justice" department has been thinking, but several aspects of the proposed deal fail completely to penalize Microsoft for the predatory behavior they have exhibited in squelching innovation in the computer industry. And for the small part of which they have now, been convicted in court.

(1) 1 Billion dollar program for schools. You realize, of course, that 1 billion dollars is literally a drop in the 36 Billion dollar bucket that is Microsoft's cash reserves. They will use their remaining money to crush other companies in the same or other industries. For instance, witness the X-box program. They lose money on every box sold, and doubtless on every game as well. Does anyone raise an eyebrow? Apparently not, except that this is a classic case of abuse of a monopoly gained in an entirely different industry. I believe at least half of their cash reserves should be sent directly to the government without any further strings attached.

(2) 1 Billion dollar program for schools. The way the program is structured now, Microsoft will contribute software and hardware to schools, further crushing competitors who already sell computer systems to schools and wedding schools to the Microsoft suite of programs and operating systems. This would be disastrous for Apple, among others. Again, the suggested remedy should be in terms of money alone, not products on which they already have a monopoly or wish to gain one.

(3) Shielding of for-profit companies only. From what I read (see web site above), the settlement subjects Microsoft to certain controls over its software businesses, but only in regard to protecting its for-profit competitors. Microsoft has many not-for-profit competitors which should be likewise protected for the greater good of the industry and the general welfare. The web is mostly open-source at this point and it would benefit everyone to keep it that way. Additionally, many competitors no longer exist, such as Netscape as an independent company they were crushed by Microsoft through its ability to take money from its monopoly in other software to offer a competing product entirely for free. This strangled the innovation that was just gaining ground at Netscape and elsewhere to essentially make the web into the computer's operating system. It was this innovation that Microsoft feared, rightly or wrongly, and moved to destroy.

Subject: Microsoft Settlement
Dear Sir,

The proposed settlement with Microsoft seems criminal to me. Competition is a foundation of our economic system. Nothing in your proposal encourages competition to the almost Total Microsoft Monopoly. It still remains almost impossible to obtain Preloaded software other than Microsoft from Major Vendors. Most hardware Manufacturers only provide drivers for Microsoft systems and will not even provide the required technical information to allow independent development of the drivers. While this is not a direct Microsoft action, it is the result of the Microsoft anti-competitive actions due to their Monopoly. Please provide us with some real relief from this Monopoly. Not just publicity. Yes, Microsoft has some value but competition has even a greater long term value. We need to encourage innovation not stifle it with an anticompetitive Monopoly.

Subject: Microsoft extending its reach

I believe that Microsoft's offer to present or donate their software to runs counter to the desired goal of the DOJ and the suit's intent.

In a scholastic environment, children are taught to use computers and software to enhance their learning experience and possibly better enable them to find employment as adults. This is a noble gesture by Microsoft but is unfortunately too self fulfilling and contrived. These children will help extend the Microsoft reach by placing them as many other into a computer user jail where they will become ?Microsoft Centric? and only consider the very computer hardware they work on as an extension of the software it runs, Microsoft.

Giving schools Microsoft product will only result in the furthering of their monopoly. Instead, I suggest they donate the hardware to the schools allowing the schools to load what ever they wish to teach on the systems. Yes, they should donate some software too but there should be a fair mix where kids can have classes that focus on open source and enterprise applications for more advanced students.

Thank you for listening.

From: Trent A. Naumann
To: Microsoft ATR

Date: 12/7/01 1:26pm
Subject: Microsoft Windows Is In Control
My opinion:

There is no operating system option for personal computers other than Windows. Until they are forced to unbundle all of the applications they include with Windows AND make their applications available on other operating systems will the users have a choice. Currently, if I use other office(spreadsheet, word processor, database etc) applications such as Lotus, Star Office etc, then my information exchange with people/colonies is handicapped if they use Microsoft products. Every new release of Microsoft products changes just enough to make the other competing product incompatible. It doesn't have to be that way but it sure works for Microsoft. Please help us to protect this very important resource....Please.

Madams/Sirs:

As you know, Microsoft was found guilty of violating antitrust laws. They've also demonstrated their lawlessness by flaunting the previous consent decree.

As an injured party, I insist that Microsoft be punished in some way commiserate with their crime. Some ideas:

- Radical "casectomy".
 - Reimburse registered customers.
 - Divestment (e.g. MSN, Expedia, all hardware, Xbox, etc.)
 - Apply new accounting rules for employee stock options.
- Thank you for your time.
Cheers, Jason Osgood

Subject: Did the govt. flake out on us?

To whom it may concern,
This latest deal with Microsoft is a joke, kind of like the impeachment process of President Clinton. As any business person would know having Microsoft provide it's own product and USED computers is no real punishment at all.

The cost to Microsoft giving away its software is about 10 cents per disk or less. In addition Microsoft is getting free advertising—money it would need to spend anyway.

Corporations upgrade their equipment all the time, used computers are worth very little. Microsoft should provide new computers as a punishment. Personally I would rather get \$10 from Microsoft rather

than see a great advertising campaign for Bill Gates (Microsoft) as a punishment.

As a citizen I am sad to see our government so flaky or should I say betray the people of United States.

Subject: Microsoft Settlement
To Whom It May Concern,

I would like to register my distaste for the Microsoft settlement.

I admit that I am no fan of Microsoft but it seems that even those who are completely unbiased should be shocked by what the settlement will (and will not) accomplish. Microsoft was found guilty. No one can dispute that fact. Instead of being punished, though, they are being rewarded by being forced to install their software into schools, thus ensuring that future generations will grow up knowing (and buying) only their products.

Another issue surrounding the settlement I find distasteful is the reference by the judge to the September 11 attack. The implication was that a light sentence was rushed through in order to help get the country's economy back on track. The message, then, is that it's okay to break the law if your company is big enough to have a noticeable effect on the US economy.

I have been in the software industry for over fifteen years and I have seen the negative effect that Microsoft's monopolistic practices have had on companies that have tried to compete (and many that haven't even been competitors).

I would not be surprised if the Microsoft executives and lawyers are laughing at what they could get away with. They may be ruthless and monopolistic, but they are not stupid. They will take this settlement as a sign that the Department of Justice is unwilling to stand in their way because their illegal practices provide jobs and taxes. Is this the position of the government and the Department of Justice?

From: Paul C. Daugherty
To: Microsoft ATR
Date: 12/7/01 1:43pm
Subject: Settlement is Inadequate DOJ;

The proposed settlement with Microsoft does nothing to break up the illegal monopoly, does not punish Microsoft for its illegal actions, and does little to prevent further use of illegal monopoly power.

1. To prevent further use of monopoly power, Microsoft should be forced to reveal the code and APIs to software application developers during initial testing, not during final testing as proposed. By allowing MS to keep the Windows code secret until the 11th hour, the Justice Department is giving

Microsoft's own application developers a jump start on the competition.

2. To both punish MS and prevent further user of monopoly power, MS should be broken into 3 separate companies: 1- an OS company, 2- an application company, 3- an internet/entertainment company. The boards of all three companies should have no common members for at least 10 years. For at least 10 years, the three companies should be disallowed from entering into any exclusive business relationship not available to competitors.

3. All future version of Windows should be stripped down to the OS component only. No bundling of any applications should allowed. By allowing continued bundling, the justice department is letting Microsoft shut out smaller competitors.

4. The MS End User License Agreement on server products should be revised to eliminate Client Application Licenses for connections to the server. MS uses these CALs to reap revenue when a competitor's product connects to a MS server.

Subject: Microsoft settlement

Please register my vehement dislike of the currently proposed settlement of the Microsoft case. As a professional in a very large IT department and a home PC user, I have used Microsoft products for years. Microsoft has a monopoly. They do not use that monopoly for anything else other than the intended benefit of Microsoft. Their continuous and blatant disregard for the needs of the customer are only put in abeyance when the customer is so upset with Microsoft that it threatens their ability to pick the customer's pocket again.

Several of these behaviours are their disregard of the need for security built into their products until the public relations became so bad that customers were actively seeking non-Microsoft solutions, and the constant upgrade treadmill that they cause by releasing minimally improved products (unless we count the bundled web browser, imaging, and other software aimed at running their competition out of the business) and the suspension of support for anything but the most recent products.

My solution: make Microsoft a regulated public utility with a guaranteed profit (like the old AT&T). This will allow them to make reasonable ROI as opposed to the obscene ROI to which they have become accustomed. Also, this will allow for a public oversight that would hopefully protect the customer from regular pocket pickings.

Subject: Antitrust agreement?

I'm writing in response to the so-called settlement of the antitrust suit with Microsoft.

I frankly cannot believe that the Department of Justice is even considering Microsoft's offer of educational "grants". I think Microsoft's offer is self-serving and only extends their hegemony further. I'm generally in agreement with Apple or Red Hat's solutions: either have Microsoft provide the money, no strings attached, or have them purchase the hardware and let Red Hat provide the operating system for education. This reminds me the burglar who falls through the skylight and sues for damages. With Microsoft's offer, they come out better than ever, despite the fact that the suit was ruled *against* them.

Subject: Monopolies

I would like to voice my unease at the possibility of Microsoft being allowed to continue with attempts to remove my choice in operating systems and associated software. Most businesses which have customer care as a business principle regard competition as healthy and of benefit to the market. Microsoft appear to attempt to stifle competition so that customers have no choice. The concept that introducing MS products to schools for free is stunning in its arrogance, disregard for competition and the assumption that free equipment and products is a valid means to gain advertising and future customers under the pretence of social support. Software users, like bank customers, rarely change service supplier and, when they do, it's usually with great trauma. Feeding children with MS products is a guarantee that the competition will be effectively excluded.

Subject: microsoft settlement

I am quite unhappy about the Microsoft settlement. This is an aggressive and openly monopolistic company that has destroyed much of the competitive environment within the micro software industry. The settlement does little to nothing to prevent their continued action in that respect in the future, and in fact, their current product releases put them right back into the same old mode of monopolistic operation. If the government settles with Microsoft without forcing a separation of the company into system and

applications areas, there will have been nothing gained whatsoever. This business area could have been broadly based and successful. It still might regain that status, but it is currently an industry in trouble. Please provide us with the relief we had been expecting from all this ongoing legal action. I ask you as a career programmer since the 1960's who has seen Microsoft put 2 of my business endeavors in the trash with their monopolistic actions over the years. Little people like me have no one to protect our interests if you do not take action to save this industry from corporations like Microsoft.

From: Richard Sawey
To: Microsoft ATR
Date: 12/7/01 2:17pm
Subject: Microsoft Settlement

The remedies in the Proposed Final Judgment of the Microsoft case may have the unfortunate effect of harming the growing open source development movement.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..."

There are many open source projects such as SAMBA that use Microsoft calls. The unmodified settlement would appear to give Microsoft the right to effectively kill these products.

Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." Again I find the definitions specify commercial concerns only. Many open source projects require integration with Microsoft's products, this agreement as written will hamper these projects which in turn will reduce the availability of viable alternatives to Microsoft's expensive products. Since Microsoft have been actually found guilty it would be unfortunate if the Judgment ended up crippling one of Microsoft's competitors and inadvertently gave Microsoft a key competitive advantage. Under this deal, isn't the government shut out too? NASA, the national laboratories, the military, the National Institute of Standards and Technology—apparently even the Department of Justice itself—have no rights! Surely this is not what you intended.

Kind Regards

Richard Sawey

Subject: comment against the proposed Microsoft settlement

To:
Renata Hesse
Trial Attorney, Antitrust Division
U.S. Department of Justice
Dear Ms. Hesse,

I wish to comment on the proposed Microsoft settlement. Justice is, in part, a "finalizing" of a situation based on its facts and merits so that all parties may move on. By "finalizing" the Microsoft antitrust case in a way that essentially does not penalize Microsoft for its gross illegal actions, you do not allow the non-Microsoft parties to move on. Instead, this settlement allows Microsoft to keep its ill-gotten gains, which include in part market share, consumer capital, and a technological position based not on their own creative development but the constraint of the creative developments of others. Moreover, this settlement creates an untenable situation where Microsoft may now continue its ill-gotten market position and require every computer user in every U.S. state to send tribute in the form of royalties to Microsoft for years to come.

This settlement does nothing to improve competition; instead, it promotes the Microsoft monopoly. A number of my friends and business acquaintances invested considerable money and portions of their careers in non-Windows computer software believing that there would truly be competition. And their vision made sense; in America we look around and see healthy competition wherever our eyes fall—different car manufacturers and gasoline brands, different cans of soup and boxes of cereal at the grocer, different universities at which to study, different cellular telephone companies, the list goes on and on. Yet this proposed Microsoft settlement negates what we have in America, negates the choice brought by healthy competition, negates the underlying democratic concept of freedom.

I am against the proposed Microsoft settlement. It is unhealthy for America, it is unhealthy for technology, and it is an unhealthy position to be taken by the U.S. Department of Justice.

Sincerely,
Peter Skye

From: Stan Toporek
To: Microsoft ATR
Date: 12/7/01 2:22pm
Subject: Injustice In Microsoft case

To Whom it may concern,
"The DOJ had previously found Microsoft to be a monopolist, but the settlement included no punishment for past actions and left doubt as to its protections against future monopolistic practices." AT&T was broke up, Standard Oil was broke up, and it has been US government policy to break up companies that hold monopolies. Microsoft has been termed a monopoly and should be broken up. Microsoft also feels that they are above the

law and can buy their way out of breaking the laws of the United States of America. No company should be able to violate the laws of the US and get away with it just because they can keep having lawyers come up with excuses that do not even address the wrong doing of the company.

Justice needs to be served and the un-American monopoly of Microsoft needs to end. We have no choice as consumers on what operating systems we can run and what web browsers we can use. Microsoft always manages to fix its software so other company's software stops working. This needs to end.

Thank you for your time,

MTC-00003256

From: Michael Wang
To: Microsoft ATR
Date: 12/7/01 2:23pm
Subject: Microsoft Settlement

The remedies in the Proposed Final Judgment specifically protect companies in commerce—organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against “competing” commercial software vendors like Netscape, and other commercial vendors—computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to

the rest of the commercial portion of the industry.

But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and freeware applications. The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist. Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: “...(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ...”

So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products. Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft “middleware.” In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHWs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only. But wait, there's more! Under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology—even the Department of Justice itself—have no rights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows.

I know, I know. The government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. It is easy to argue that I am being a bit shrill here. But I know the way Microsoft thinks. They probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT.

Date: 12/7/01 2:29pm
Subject: Antitrust Settlement

I must say, with all due respect, that the settlement in its current form is a joke. In it are no penalties for Microsoft's previous behavior, and no real method for preventing any future illegal actions.

The settlement is full of loopholes easily exploitable by Microsoft's legal department. An excellent example is the provision that allows Microsoft to offer versions of Windows with their integrated software at a discounted rate. The settlement is supposed to ban them from charging extra for copies of Windows lacking the integrated components (an excellent idea), but by allowing them to discount versions of Windows carrying the extra components, they can effectively accomplish the same goal of denying competitors entry into the market. They can simply market Windows with integration at a significantly lower cost!

After reading over the language of the proposed settlement, I am made to wonder whether this is truly a settlement that was reached between the DOJ and Microsoft, or if Microsoft simply wrote a settlement and the DOJ agreed to it.

The break-up order should be upheld. That is the only way to allow fair competition in the software industry.

One of the fundamental aims of competition law is to assist free competition by preventing the abuse of monopoly power.

Is there any doubt that Microsoft enjoys monopoly power? Has there ever been a clearer example of a business that has not only abused its monopoly power but done so with such complete and sustained contempt for the law and those charged with enforcing it? Is there any doubt that free competition and all who would benefit from it have suffered harm as a result? It is astonishing what Microsoft has been allowed to get away with by the US competition authorities and the US courts. I hope that the European competition authorities are able to deal with Microsoft more effectively.

From: Chris Cambron
To: Microsoft ATR
Date: 12/7/01 2:36pm
Subject: Microsoft Settlement

I would like to voice my opposition to the current proposed settlement with Microsoft. The current settlement with Microsoft is far too soft on a company that, through its monopoly and unethical practices, has put a damper on innovation in the industry.

While there are many parts of the agreement that trouble me, the most troubling are the donations to schools and the efforts on Microsoft's behalf to undermine legitimate open source companies and products.

By allowing Microsoft to donate software and equipment to schools—which costs them next to nothing—the government is just extending Microsoft's monopoly to an area that Microsoft does not currently control.

I am also concerned about Sections III(J)(2) and III(D) which seem to take legitimate vendors who operate under a different business model out of the game as far as requiring Microsoft's to release documentation, APIs, etc. is concerned.

Overall, this settlement does little to punish Microsoft and will be as ineffective as the previous consent decree in curbing Microsoft's illegal and damaging behavior.

From: William Lewis
To: Microsoft ATR
Date: 12/7/01 2:44pm
Subject: Anti-trust settlement

To whom this my concern, I believe the proposed anti-trust settlement with Microsoft is a farce. It will create a stronger monopoly by seeding the poorest communities with Microsoft products and thus advertising the Microsoft way of doing business. It is nothing more than a bribe. Microsoft's poorly concealed Software Business Alliance demonstrates Microsoft's intent by massive media efforts to intimidate businesses into using Microsoft products. Their presumption is that every business uses Microsoft products. So they have the right to threaten everyone with a software audit. Maybe they should read our constitution. So rather than give in to the software terrorists, consider:

1) Exclude Microsoft from new areas of conquest that would extend their monopoly. For instance the manufacture of hardware such as game boxes and settop boxes.

2) Exclude Microsoft from areas that could become competitors to the PC. For example

games for game boxes, game boxes, television/cable services, and set-top boxes.

3) Force Microsoft to divest MSN.

Otherwise let them keep their 90% market share.

Best regards,
Bill Lewis

Subject: Settlement Proposal

This settlement only serves to extend Microsoft's market dominance into education, which has historically been Apple Computer's major area of market penetration. The suggested remedy would both weaken a competitor, and serve to prop up Microsoft in the long run.

The proposal suggested by Red Hat is a good one, as it would promote the use of Open Source software among young people, and would extend the base of Linux knowledge in schools and among educators. The major advantages to this approach is that Linux makes good use of both new and older hardware, and there are no renewal licenses coming due down the road. There are now excellent word processors, spreadsheets, graphical presentation and database applications available for the Linux operating system. Plus, many excellent computer languages and development environments to train budding computer scientists.

So, restrict Microsoft to supplying the hardware. Open up the schools to Open Source software, beginning with the Linux operating system. .

...“The DOJ is collecting your letters about the settlement via email. We encourage you to share your opinions. send your letters to: microsoft.atr@usdoj.gov”....

Greetings,

I think that this ruling only helps to set precedence for noncompetitive and unethical conduct among a group of corporations that already have little or no accountability for their actions. Unfortunately, Lincoln warned us about corporations before his assassination and our founding fathers built a mechanism for disenfranchising corporations when they did not act ethically and fairly in the marketplace. This action only goes to show that Lincoln, Washington, Jefferson and others were right, now soulless corporations run America with no regard for the best interests of America as a driving ambition. Have Americans now accepted the unethical cut-throat philosophies of big business as acceptable behavior? I guess this proves the point rather poignantly. God help us all.

Respectfully,

Subject: Microsoft Settlement
Greetings:

I am opposed to the current draft of the settlement with Microsoft because it in no way addresses the predatory monopolistic practices of the company. In fact, the settlement, by not punishing Microsoft, gives a seal of approval for these practices.

That being said, specific provisions of the settlement need to be revised. In summary:

1. Those organizations that MUST be allowed access to resources MUST include bona fide development organizations, such as those organizations that are developing Apache, Samba, etc.

2. The 3-person panel empowered to monitor Microsoft MUST have the final determination of what entities are allowed access.

In a little more detail:

1. Microsoft is correct when it states that the standards of anti-trust review are different for the computer industry than for industrial industries. Most of the true innovations in computers have come from outside of the commercial sphere. To limit the judgement to the commercial sphere ignores a major sector over which Microsoft uses its monopolistic powers and ignores a significant sphere of competition to Microsoft. The obvious current competitor base is the open-source linux community. However, the limiting of compliance to only commercial also closes the door to future initiatives, which would could be crippling to our economic progress. The intent is not to make Microsoft respond to every Tom, Dick, and Harry. The intent is to empower those innovative organizations that have a legitimate and compelling need to the details of the Microsoft code.

2. Microsoft has been rightly judged to have used predatory practices. As the settlement is currently written, Microsoft is the final arbiter of the standards for certifying the authenticity and viability of a competitor's business. This only keeps the door open for further abuse by Microsoft because there is no third-party oversight. If there is no oversight, then there is no remedy. Cooloquially, the fox still guards the chicken house. The 3-person panel must have the power to make final determination of these issues, and the panel must be presumed to be acting properly. That means that if Microsoft disagrees with a determination, then (a) Microsoft must bear the burden of proof and (b) must comply pending a ruling to the contrary.

Subject: Microsoft Settlement

What does donating PCs to schools have to do with monopolistic practices by Microsoft? Is this a token slap on the hand and then let them go there monopolistic ways? I'm a staunch support of the Republican party but feel betrayed by Ashcroft/Bush in letting Microsoft off the hook here. Having the OS bundled with all of the apps from the same company is bad for the consumer, no matter who the company is. The only solution is to separate the OS from the Apps side of the business. Then, some real competition can occur which will be better for the consumer and small businessman.

I think that it is an atrocity that Microsoft has been given such Carte Blanche with the business world. I have a perfect example of how the government should handle the Microsoft monopoly which still exists and will continue until the government steps in and kills this evil pig. Look back into history and you will see that in the 50's and 60's Paramount Pictures and a few other large movie makers owned over 90% of all local movie theaters; this meant that "all" producers had to go through the big picture companies before they could make a film that would be given a chance to succeed.

Microsoft is doing the same thing. Any commercial software that succeeds must do so with the blessing of Microsoft. Why? Because Microsoft, even moreso that the studios of the 50's and 60's own's most platforms. Just as the local movie theater was to the big movie makers, so is the Operating system to the software writers. Microsoft does not want to work with the software industry, they want to "be" the software industry.

Please stop this type of corporate behavior that Microsoft has been able to get away with for at least 3 decades now.

Subject: Settlement should not put more monopolist software in publicly subsidized schools

I think the primary punishment would be that the computer consumer should receive rebates for years of overpriced and underperforming Microsoft related software. Perhaps a \$200 per consumer rebate, if one can produce a receipt for any prior microsoft operating system and \$50 per windows related application.

If a socialistic approach is involved, I agree with Redhat's proposal (as only PARTIAL PUNISHMENT to Microsoft for years of corrupt, anti-competitive, anti-innovation monopolist business practices:

—Microsoft redirects the value of their proposed software donation to the

purchase of additional hardware for the school districts. This would increase the number of computers available under the original proposal from 200,000 to more than one million, and would increase the number of systems per school from approximately 14 to at least 70.

—Red Hat, Inc. will provide free of charge the open-source Red Hat Linux operating system, office applications and associated capabilities to any school system in the United States.

—Red Hat will provide online support for the software through the Red Hat Network.

—Unlike the Microsoft proposal, which has a five-year time limit at which point schools would have to pay Microsoft to renew their licenses and upgrade the software, the Red Hat proposal has no time limit. Red Hat will provide software upgrades through the Red Hat Network online distribution channel.

—MY ADDENDUM to Redhat's suggestion: No Microsoft logos or advertizing of any kind should be permitted—i.e. Microsoft should be prevented from taking credit for helping others—this is supposed to be PUNISHMENT!

Subject: give me a break please

I want my OS richer, not poorer. Tell these clown "attorneys" that if they would talk to end users, such as myself, who have no time, no time whatsoever, and neither do we have the training or the likelihood for training, to "create" an enriched OS/apps package from the bare bones they want to stick us with...

An analogy for me is, they don't want any included options on cars so a person purchasing a car has to go to a bunch of aftermarket providers to get the additional products they desire. Of course, each aftermarket provider with have some problem with other items added and insist on either redoing the whole thing at addition huge charges or not doing it at all. Who's stuck here? The consumer, as usual—I don't care if Sun Microsystems is a bunch of whiny pretenders miffed because they aren't Bill Gates.

Clearly the "attorneys" have no clue what the product does. I use MS s/w to make a living and I like it richer, fuller, more compatible and I cannot do that myself. Tell them to get over it, really get over it, find a new industry to mutilate, and leave the s/w users alone. Stronger letter to follow...

Sue Montgomery

From: Powers, John
To: 'microsoft.atr(a)usdoj.gov'
Date: 12/7/01 3:43pm
Subject: Microsoft Settlement

I believe the proposed DOJ settlement with Microsoft represents a brazen and shameless betrayal of the public interest.

Particularly onerous and revealing is the proposal that part of Microsoft's 'punishment' will be to 'donate' software to public schools who could not afford to otherwise purchase it. This is like telling Microsoft it's punishment for illegal behavior which netted it a market monopoly and countless billions of dollars is to print and distribute play money. It will also serve to continue its monopoly by locking yet another user base into its product monopoly at a tender age. A more suitable punishment would be to require Microsoft to purchase a competitor's products and install them in these schools.

DOJ attorneys are either gutless idiots, or have been bought and paid for by Microsoft's political donations. This so-called settlement is a transparent sham, and yet another indication of the extent to which our core political institutions have been infected by the insidious rot of political bribery masquerading under the guise of 'political contributions'.

I am disgusted and ashamed of this legal farce which amounts to nothing more than a license to continue business as usual by one of the most vicious and amoral corporations on earth.

Subject: Microsoft settlement

To whom it may concern,

As a consumer and a computer professional, I am very unhappy with the proposed settlements of the Microsoft anti-trust case. Both settlements are insufficient punishment for Microsoft's behavior. I know that, as both a consumer and a computer professional, I have been harmed by Microsoft's behavior. I can give two examples.

My main line of work is currently with Lotus products. Due to Microsoft leveraging its operating system monopoly to distribute its inferior Internet-related products, I have fewer career opportunities than I might otherwise.

As a consumer, I am practically forced to use Microsoft's e-mail clients. I believe that Microsoft should be fined very heavily, on the order of \$1 million or more, for their behavior.

Subject: Microsoft Settlement
Greetings!

I, a fellow businessman in the computer market, have been following the Microsoft case for quite some time. I was disappointed by the settlement proposal which I too feel would allow Microsoft to dominate in yet another market, which has allowed free choice up to this point. Although I agree that a monetary settlement should be levied against them, I would rather see the schools be given the choice to purchase the systems they choose, rather than having Microsoft software, and remanufactured computers given instead.

It is only with the imposition of monetary fines, and the free will of the schools to decide where to spend it, that justice will truly be served in this matter.

Please do not allow Microsoft to flood the educational system with Microsoft products! Open it up to other manufacturers such as Apple Computer, Inc., and Red Hat software, etc.

Thank you for your consideration,

From: Dave Kennel
To: Microsoft ATR
Date: 12/7/01 3:55pm
Subject: Microsoft Anti Trust settlement—
NO!

Dear Sirs,

Let me state, in the strongest possible terms, the proposed "settlement" with Microsoft is more surrender than punishment. It does virtually nothing to punish their past abuse of monopoly power nor does it prevent future abuse. In fact it seems to legitimize Microsoft's behavior! The fact is that Microsoft was easily convicted of abuse of monopoly power even though not all of the evidence that could have been used was presented. Microsoft has, and will continue to, run roughshod over consumers of all sizes from the corporate entity to the home PC user. Despite Microsoft's marketing they do not provide superior value or superior technology. In many respects Microsoft's products are overpriced and very shoddy.

Microsoft currently has 90% of the PC OS market and 85% of the web browser market. The past year has seen unprecedented virus outbreaks that exploited flaws in Microsoft products. These virus outbreaks cost US businesses millions of dollars every year. What will the economic impact be of a major virus outbreak when Microsoft runs on 85% or more of enterprise servers as well?

Microsoft must be forced to sell Windows licenses to any OEM who asks at the same price. They must be forced to remove Internet Explorer from the OS. OEMs must have the ability to install the programs and icons that they wish on the windows desktop. Microsoft must be forced to spin off the MS Office group into an independent business venture. Microsoft must be forced to obey software and hardware standards. Instead of the anti competitive mantra of "embrace and extend" Microsoft must be put into a position where their mantra becomes "better, faster, cheaper."

The DOJ has the conviction, please make sure that it is accompanied by real reforms.

From: Ted Hopp
To: Microsoft ATR
Date: 12/7/01 3:49pm
Subject: Objection to Microsoft settlement
To the Department of Justice:

The proposed DOJ settlement in the Microsoft anti-trust case is troubling. We are a small company developing Internet-based, cross-platform, educational software products, primarily using the Java language. Microsoft's hostile attitude toward Java has created severe technical difficulties for us in the past, and, frankly, we do not see the proposed settlement as providing any relief to our company in this regard. From a business perspective, we are faced with the choice of either restricting our products to Microsoft-specific platforms or incurring substantially higher development costs and barriers to our products in the marketplace.

We find it sadly ironic that, while we are reading in the news about how the DOJ/Microsoft settlement will help restore competitiveness by forcing Microsoft to disclose interfaces and publish protocols, our company is being hurt financially by recent actions Microsoft has taken regarding access to such information. Microsoft recently announced a nearly 50% increase in the cost of subscriptions to Microsoft Developer Network, our primary source of the technical information we need to maintain our cross-platform product capability. A Professional Subscription (the minimum level we need) now costs about \$1,000 per year. For a very small company such as ours, this is a significant financial burden.

Microsoft also is substantially scaling back their availability of free, on-line information through the MSDN Library. It is distressing to hear that one of the three members of the proposed technical review committee that will monitor Microsoft behavior will be appointed by Microsoft. Giving Microsoft such a powerful lobbying voice in evaluating its own behavior is hardly in the public interest.

The related proposal to have Microsoft donate Microsoft products to school systems will further harm small educational software companies such as ours. The reason is simple: schools will end up using what they are given, instead of purchasing, in the marketplace, the products that best serve their needs.

In the marketplace, our small company can develop a competitive strategy. In the "giveaway" world that is being proposed, we will clearly suffer. If Microsoft were to provide free access to technical information for developers and unencumbered dollars to schools, so that developers and schools could each make the best decisions for their own needs, then this would be reasonable. The goal is to restore a true marketplace, not to replace one set of unfair practices with another.

For these reasons, I urge you to re-evaluate the settlement terms for the Microsoft anti-trust case.

Subject: Settlement Opinion DOJ:

Hi! I am a contractor who use Microsoft products but at the same time feel that Microsoft continually makes its own rules due to its market share and dominance.

They force vendors to include their products (windows and Internet Explorer) or

loose the risk of being able to sell their other products.

They force other vendors out of business by buying up market share or funding some vendors competition. And lastly if this is not enough they don't cooperate most of the time on open standards or if they do they put just enough proprietary features into their version of a standard that it does not work with others.

The bottom line: A little cooperation from Microsoft would go along way to make the industry and technology work better.

Thanks!

Mel Fisher

Subject: Comments on Microsoft Case

Dear Sirs,

I am stunned and disgusted by reports that the Justice Department would allow Microsoft to "donate" 1 Billion dollars worth of software to poor schools as a remedy for their anti-trust conviction. What idiot came up with that proposal? I am sure that Apple Computer, like myself, is not happy with this arrangement. How in the world does flooding the only market not completely dominated by Microsoft with free Microsoft products help anybody but Microsoft?

In addition, will these donations be calculated using retail values or cost values? If the calculation is done using retail values of Microsoft software, in effect Microsoft will suffer a penalty of only a few million dollars. I, for one, am supporting all Attorney's General that oppose the settlement. It stinks to high heaven. I guess it is just another example of political influence buying.

Subject: disgusted

I would like to put just a few comments together for the Justice Dept. I believe that in the past and certainly in the future, there will be dominating companies that strive for the best for everyone. Certainly, that will bring about anti-trust actions to stay ahead in the future. Microsoft has become a dominant player in computers and are trying to become a player in video games. If they become the dominant maker of video games in a year are you going to break up that division on MS and tell it to become a separate company? The Gov't wants people to become better than why pay for farmers to leave crops empty? Why support failing industry's like Tobacco? Let the control be a democracy and let The Free Market dominant and let the USA become a better and stronger country for it!

Thanks,

Steve Behrens

Subject: My opinion on the Microsoft Settlement...

I have been a computer programmer for about 6 years. I have formed an opinion on Microsoft: In my opinion, that Microsoft unfairly monopolizes the market for home-based operating systems is OBVIOUS. But in case it isn't, here's why I believe it: Machines are sold with Microsoft OS's already installed, including Outlook and Internet Explorer; installation/upgrade of Internet Explorer arrogantly defaults your home (start) page to the microsoft web site;

Microsoft's email client, outlook, is also installed with Internet Explorer;

Internet Explorer uses the same system DLLs as the File Explorer (this means that if you try to uninstall Internet Explorer, you may have to reinstall your entire operating system, so entrenched is Internet Explorer in the Windows OS's);

Microsoft is just patching up formerly bad operating systems and getting them to market yearly (windows 2000 was based on NT, 98 was based on 95, which was loosely based on Windows 3.11);

Microsoft has consistently stolen ideas from other, more innovative companies, notably Apple, Netscape, and AOL (even though it may be legal, this establishes Microsoft's bad character). It continues to do this to this very day, stealing Java as J++, and confusing the whole world with what Java, Javascript, and J++ are, just in case you might go in wanting Java and leave, confused, with J++.

That's the hardest evidence for why I dislike Microsoft and would like to see it broken up. The rest of the reasons I dislike Microsoft are just feelings that I have, and I don't have any hard evidence to back these up:

I get the feeling when using Microsoft products that Microsoft knows 'better' than you. There is an arrogant and insulting tincture to applications like Word.

As far as developer applications, I never get the feeling that I'm using a quality product on an efficient operating system. I wonder if allowing for competition within the operating system market might make products better. And I don't mean a little better, I mean a LOT better.

I'd like to see it broken up, true, but I don't believe in litigation. All solutions are in education. If people are made aware of Microsoft's blatant attempt to monopolize the industry; if people are exposed to quality in other operating systems, etc., they will choose non-Microsoft products out of natural choice. Companies such as Apple, Sun, and Netscape, etc. need to be forming partnerships that give them a better competitive edge against Microsoft.

Subject: Microsoft Concerns

To whom it may concern:

I am concerned about this Microsoft monopoly issue. I happen to not like the way that Microsoft does business either and I think they are spoiling computer technology for everyone. Being a self employed mechanical drafting engineer/consultant, who uses computers to do CAD/CAM type of work, I find Microsoft Windows Operating System highly overrated as far as reliability is concerned. I just made a switch from AutoCAD to Bentley MicroStation 95 and VariCAD Professional Computer Assisted Drafting software for the Linux Operating System. The reason for doing this is Autodesk, Inc., who makes AutoCAD, is too blinded by Microsoft's billion dollar empire hype to even think about any other Operating System besides Microsoft. Although Autodesk, Inc. has already developed AutoCAD Release 12 and 13 for the UNIX platforms, which is nearly identical to the Linux Operating System, they resist spending the money to port it to the Linux Operating System. I am unwilling to spend money on purchasing either Microsoft Windows NT, 2000 or XP Operating System(s) to use AutoCAD because it is just unreliable.

What is good about a computer operating system if it crashes 95% of the time. I cannot work like this and there is no good reason for it, other than sloppy programming by

Microsoft. As you may already know, Linux (pronounced with a short i, as in LIN-nucks) is a clone of the I/NIX Operating System, which runs on the Intel 80386, 80486 and Pentium series based computers as well as Sun and several other RISC based computers. Linux supports a wide range of software, from internet web servers to super graphics xwindows applications, such as satellite tracking to simple fun games. Linux is fully equip with several software development compilers, such as the GNU C/C++, Fortran, Perl, lisp, assembler and a lot more compiler programming languages. Linux includes TCP/IP network protocol support and lots more. It's a versatile, bona fide achievement of the UNIX Operating System, which has been freely distributed for many years now by the terms of the GNU, General Public License.

The Linux Operating System can turn a 386, 486 or Pentium series based PC into high-performance true 32-bit multitasking, multithreading, multiuser, reliable workstation. It will give the user the full power of UNIX at their finger tips. Businesses have been installing Linux on entire networks of machines as an alternative to the Windows NT, 2000 or XP operating system(s) to manage financial and hospital records, a distributed user computing environment, telecommunications, internet web servers and much more. Universities worldwide are using Linux for teaching courses on operation systems programming and design, not to mention computer enthusiasts everywhere are using Linux at home, for programming, productivity and entertainment.

Linux recently has gone on the commercial software market to compete with Microsoft Operating System products. Commercial software developers, such as Netscape Communications, Applix, Corel WordPerfect, Bentley Systems, VariCAD and many others are starting to support Linux. However, Linux still needs more recognition to have more commercial software developers and vendors support it.

The Linux Operating System is quite possibly the most important achievement of innovative software since the PC was invented. Currently Linux has a lot more to offer than Microsoft Windows 95, 98, NT, 2000, XP or even industrial UNIX has. Linux now supports multimedia and real-time video over the internet.

However, I find it extremely idiotic that such poorly structured, unstable, over rated Operating System, such as Microsoft Windows 95, 98, NT, 2000, and now XP is so well approved by the industry as stable to use for important tasks. Yet these Operating Systems are being accepted as an industrial standard Operating System for just about nearly all computers in the world. These Operating Systems have more crashes than Stirling Moss when he was sober. :) I cannot believe that businesses, who rely on computers to perform complex tasks, such as CAD/CAM, controlling nuclear reactors, medical research, human life support, etc., are heavily putting extreme trust in such unreliable computer Operatin9 Systems. Yet, I have noticed that people who do not know any better, make vast claim that "Microsoft

Windows NT, 2000 and now XP completes with UNIX/Linux and will soon replace them." I find this claim off the wall and I wonder about people who support it. OK maybe UNIX/Linux X Windows environment does not pop on your computer monitor with a background of a green landscape, blue sky and white puffy clouds with all cute icons on it to click on at will. No big deal. It can be done with Linux too if the user wants it. However, that is not what a well designed, well structured, organized and reliable Operating System is all about. An Operating System is like the foundation of a multi-story building. If the foundation is not designed and built right, then it will not support the buildin9 for long and it will just come crashing down. It seems like Microsoft does not know about sound structure at all, not to mention network security. Instead, their attitude is they just want to have something to entice customers to keep spending money on Windows, whether it works or not. So what if there is broken glass because the foundation and all the rest of the building structure is not sound. Microsoft will make the customer pay for telling them how to sweep it up and buy a new revision of Windows again and again. This is exactly how Microsoft makes it's profits, not because Windows is a fantastic Operating System. The bugs in the structure makes Microsoft that much richer because they have to sell new versions to customers who do not know any better and this beat goes on. This is what puts Microsoft at the top and most people joined the ride unknowing what was going on.

Linux on the other hand is a good example of innovative people teaming up on the internet and showing the world what really can be accomplished with computers with a well designed, well structured, organized, and reliable Operating System. Linux out performs anything that Microsoft has ever marketed or is marketing right now. It makes the most of 386, 486 and Pentium line based PCs with a minimum of 32 to 64 Megabytes of RAM, 2 Gigabytes of hard disk space, and just about any type of graphics card available for the PC. It does a lot less swapping to the hard disk than any of the Microsoft Windows Operating Systems. Linux handles memory much more efficiently, allowing programs to run faster, without crashing and corrupting data. As I mentioned before, the Linux Operating System provides a true 32-bit multitasking, multithreading, multiuser Operating System environment that is stable, crash resistant and built to run continuously to serve it's users. The Linux Operating System includes just about everything to set up a super network server less the hardware. As a workstation Operating System environment, it's excellent! I have worked on a \$53,000 HP-UX based 700 Series solid modeler workstation, which was not as fast as my Pentium 100 MHz box running RedHat Linux 7.1 with 2.4 kernel. So anyone who is using Linux, has a super Operating System worth at least \$8,000. I praise software companies, such as Bentley Systems, Netscape Communications, Applix, Corel WordPerfect, Quarterdeck and others for being open minded and willing to take a chance on supporting the Linux Operating System.

I hope to see more software companies interested in the Linux Operating System and porting and developing new applications for it. This is the only way we are going to gain some ground from Microsoft and make the Linux Operating System even more popular.

However, it is not normal for software to have so many problems as Microsoft Windows for so many versions. One would think that a wealthy software company, such as Microsoft, would develop better software with time, which does not crash so much. However, Microsoft has not shown that in all their versions of Windows since they came out with Microsoft Windows Version 1.00. The truth is that Linux or UNIX is not 100% perfect, but what is? There is really no such thing as perfect bug free software. However, at least Linux runs reliable without crashing in a blink of an eye and offers better performance for little expense. The point is, why do computer users spend \$79—\$87 for either Microsoft Windows 95 or 98 and \$259—\$599 for either Microsoft Windows NT, 2000 or XP and have all problems installing them and once they are installed, they continuously crash? If I spend \$270 on an Operating System, I expect it to work with few problems. Also, why should I pay through the nose to get technical support to find out; oh, I'll need to buy a supplemental version or this is a feature that I'll have to live with, which is really a bug. If Microsoft was committed to writing better software products, I would have more respect for Microsoft. Unfortunately, their only interest is making fast Mega bucks and conning the computer world that their software is the only brand customers should buy. We all should have the freedom of using a specific software package and Operating System without being restricted to market greed. I had my fill of throwing away my hard earned money on Microsoft junk. There is little gained, just to be frustrated when it crashes while I'm working on a complex drawing and having hours of my hard work go poof into no-where. This is where I would like to reboot Bill Gates for every dollar he has snookered out of people who helped to make his bank account swell. I do not envy him and when he goes on TV to be interviewed and says; "Oh, we take great interest in our customer's needs." If Microsoft was the only choice, I might have to stop using computers, I get so annoyed with his double talk. I know for sure that he does not give a damn about improving his products. He is making more money with the bugs in his products than the actual products. Go do the math. If each of his customers is paying \$2.00 a minute for technical support, which fully explains why he has billions. It's a grand con game.

Sincerely,
David A. Smith

Subject: AutoCode Mechanical (c)1994 for AutoCAD 12 DOS.
Date: Sat, 02 Jun 2001 19:54:09 0400
Gentlemen:
I have a demonstration of AUTO-CODE for AutoCAD 12 for DOS and I would like to

register it to enable it as a complete version. I use AutoCAD Release 12 for DOS solely, even though I have AutoCAD Release 13.

Please allow me to tell me a little about myself. I am an engineer and I have a very small business, called Electronic Aides Design, that I own and run in my two car garage. I primarily design special equipment for physically handicapped people. I happen to be physically handicapped myself. I am the president and main design engineer of this small company but I make very little of a cash profit. I guess you could call this a full time hobby than a business. Anyway, I am in the middle of retrofitting a small 2 horse power 2.5 axis manually operated bench top milling machine to a full functional CNC milling machine. I would like to use your AUTO-CODE software, if I may, with my existing AutoCAD Release 12 for DOS software with this CNC milling machine, which uses industry standard G code language. I would like to know if I can still purchase the Authorization code string for this version of AUTO-CODE? This is my own legal registered AutoCAD Release 12 for DOS that I want to use AUTO-CODE with and I intent to respect your copyright agreement by not giving this software away to anyone with the Authorization code string. However, the \$995 [US Dollars] for the first module is a little steep for my small budget, and I was wondering if I could ask you if you would be so kind to reduce the price by at least 50% since it's out dated software by today's standards. I would agree with you that I am not expecting you to in title me upgrade benefits to the current version, except for bug fixes to the DOS AutoCAD version of AUTO-CODE software. This would mean a lot to me if you would agree to this request.

Thank you very much for your help.

Sincerely,
David A. Smith

David Smith,

I am glad that you had an opportunity to look at our software and liked it. Unfortunately we do not support R12 or R13 anymore or have any means to create an authorization code for them. Our AUTO-CODE will only run on R14 and R2000 and soon the R2002 of AutoCAD. The cost has also gone up to \$2750.00 in the last year to help offset the costs associated with the development of new technology in our software.

Good luck with retrofitting your mill and if we can be of service in the future keep us in mind.

Greetings,

Although we understand your situation, please understand that we are also a small company. To provide support for all versions of AutoCAD would greatly increase our support costs significantly. As such, many years ago, we made the choice to only support the current version of AutoCAD plus the previous. This has enabled us to provide software for this industry as a reasonable cost, with quality support. If we provide an authorization code to you, we are obligated to support you (whether you need the support or not) by our own ethical guidelines. That would require building an AutoCAD Release 12 machine with MS-DOS. As you may also know, the selection of operating system is based on Autodesk and not us. As Autodesk went through growth phases in various operating environments we "tagged along". That means that at one time we supported Macintosh, Unix, Sun, HP, MS-DOS, and now Windows. Release 12 ran on many of those platforms and we cleared those machines out several years ago, as many were loaners from the companies involved. All that remains here presently are 32 bit Windows based machines to support the current platforms of AutoCAD. I do hope you understand our situation. In order for you to stay with MS-DOS, I suggest you look at BOBCAM as I think they still support that platform. You may be able to find some software on the web at e-Bay or in a web discussion group. It is still out there, it will just require some searching.

Sorry that we can be of no help to you at present, best wishes in your efforts.

Bill Kramer
AUTO-CODE
73417.2023@compuserve.com wrote:
Dear Mr. David Gibson,

Thank you for your reply. However, the fact that you don't support your DOS version of AUTO-CODE does not help me at all. I loath Microsoft Windows like mad. I personally think it is a lot of nonsense to go through to work with AutoCAD. I find AutoCAD for DOS much easier for me to use than the MS Windows version.

As I mentioned in my previous email message, I have a demonstration of AUTO-CODE V 2.1 10.28.94 for AutoCAD 12 for DOS and I would like to register it to enable it as a complete version. I use AutoCAD Release 12 for DOS solely, even though I have AutoCAD Release 13.

Please allow me to tell me a little about myself. I am an engineer and I have a very small business, called Electronic Aides Design, that I own and run in my two car garage. I primarily design special equipment for physically handicapped people. I happen to be physically handicapped myself. I am the president and main design engineer of this small company but I make very little of a cash profit. I guess you could call this a full time hobby than a business.

Anyway, I would like to use your AUTO-CODE DOS based software, if I may, with my existing AutoCAD Release 12 for DOS software with this CNC milling machine. I would like to purchase the Authorization code string for this version of AUTO-CODE. The check code = 503A-6700-7C86-ACM0. You must have a copy of the software that generates the Authorization code in your

company somewhere. If you don't have a computer to run this software on, then may I purchase a licensed copy for my personal use only? This is my own legal registered AutoCAD Release 12 for DOS that I want to use AUTO-CODE with and I intent to respect your copyright agreement by not giving this software away to anyone with the Authorization code string. I do not want the new Windows version even if I could afford to pay you \$2750.00. I can't use the Windows version and > I don't need a sales pitch to tell me how much better off I'll be with the > Windows version. I know what I need and I have it already. If you want \$1000 for a copy of the Authorization Code Software, I would consider it.

Again, this would mean a lot to me if you would agree to this request.

Thank you very much for your help.

THANK YOU FOR THIS RESPONSE.
HAVING OWNED A COMPUTER STORE, I
FEEL I CAN ADD QUALIFIED OBJECTIVE
STATEMENTS.

1. SCHOOLS ARE HAVING TO SPEND
ALOT OF MONEY REPLACING HARDWARE
AS WELL AS SOFTWARE BECAUSE OF A
DELIBERATE ATTEMPT TO "OUTDATE" !
! IT DOESN'T HAVE TO BE ALL NEW
VERSIONS OF SOFTWARE SHOULD BE
TRULY BACKWARDS COMPATIBLE AND
ALSO TECH SUPPORT SHOULD BE
CONTINUED FOR THAT SOFTWARE FOR
ATLEAST 5 YEARS REGARDLESS.

2. OPERATING SYSTEMS SHOULD BE (&
CAN BE) LIMITED TO COMING OUT ONLY
EVERY 5 YEARS ALSO SO A STUDENT
GETTIN OUT OF SCHOOL WILL ONLY BE
ABOUT ONE VERSION BEHIND WHEN HE
GOES OUT IN INDUSTRY.

3: PROGRAM SIZES SHOULD BE CAPPED
SO THAT WE DON'T FILL UP THE
LANDFILLS AS FAST WITH OLD PARTS.

4. Hard ware suppliers should be
REQUIRED to take back old boards to help
keep the acids, resins, and metals out of the
landfills.

5. last YES, THE WHOLE IDEA OF AN
OPERATING SYSTEM IS TO ALLOW
OTHERS ACCESS TO THAT CODE WHICH
WILL ENCOURAGE MORE COMPANIES TO
GROW AND DEVELOPE NEW SOFTWARE.
THIS HAS TO BE A RESTRAINT OF TRADE
AND NO DOUBT A MONOPOLY WHEN
ALL "PACKAGED TOGETHER" AND ONLY
IF YOU PLAY BALL DOES YOUR DRIVERS
GET INCLUDED.

6. YOU CAN'T EVEN SEE IT YET BUT
WITH THE SAME MAN OWNING THE

MAIN TWO OPERATING SYSTEMS. NO ONE EVEN CARES. THE WAY YOU HAVE ALLOWED APPLE TO WORK. EITHER WAY YOU GO BILL GATES OR HIS FRIENDS WIN !!! TO ALLOW FREE INTERPRISE TO GROW IN THE COMPUTOR INDUSTRY LIKE IT DID YEARS AGO—MICROSOFT MUST BE DIVIDED.

Subject: Microsoft Settlement

I would like to express my dislike of the proposed settlement. There are 2 specific points that I believe undermine the punishment of Microsoft for violating the anti-trust laws. Forcing Microsoft to give its operating system software to schools for free would further enhance its stronghold on the Operating System and office tools markets. Microsoft would be guaranteed to get hundreds and even thousands of new users trained on their software. Microsoft was found guilty of using all its power to stomp out any competition that threatened it. This form of punishment seems to be helping Microsoft further its dominance in the market. This punishment is just as bad as the crime that was committed. It will be guaranteeing Microsoft gets the market share instead of allowing for a fair playing field for any competition.

I am also concerned by the text in Section III(D) as well as Section III(J)(2). One of the biggest and most viable competition to Microsoft's market share has come from the Open Source community. The Open Source community is, by definition, a not-for-profit entity. Section III(D) forces Microsoft to release "the APIs and related Documentation that are used by Microsoft Middleware to inter-operate with a Windows Operating System Product" to "ISVs, IHVs, IAPs, ICPs, and OEMs". It is not forced to release any of this information to any "not-commercial" organizations. This basically gives Microsoft legal grounds to snuff out any and all open source competition. Microsoft has been found guilty of using illegal means to stomp out any competition. Is there any doubt that they will use these new legal means to do so also? How are these sections making the playing field fair for competitors?

Subject: Microsoft Settlement.

So, we have an illegal monopoly that gained undue influence over the marketplace by tying products together and essentially giving their browser away for free.

And to punish them, we're going to ask them to... Give a billion dollars' worth of their products away to schools, for free?

What is wrong here?

First of all, profit margins on software are insanely high. That billion dollars worth of software is not going to cost them a billion dollars. I bet you it doesn't even cost them a hundred million. Development is a sunk cost, so they're just paying for manufacturing and shipping. Second of all, this is just going to tie schools more tightly to Microsoft, making it even harder for competitors to stay in the marketplace. Make them give away a billion dollars to schools, and let the schools make the spending decisions, not just hand out a billion in free marketing materials.

Sincerely,

Brian Covey

From: Pamela Drago

To: 'microsoft.atr(a)usdoj.gov'

Date: 12/7/01 4:44pm

Subject: Hello,

Hello,

Just an interesting bit I noticed in a prior USA Today article regarding Microsoft's request for the EU to accept the conditions of the US antitrust settlement: "Microsoft warned (the EU) against what it called a "sweeping remedy" that it said would enable its largest rivals—such as IBM and Sun Microsystems Inc.—to develop nearly identical "clone" software at relatively little expense." Excuse my naivete, but wouldn't it be in the best interest of consumers to HAVE CHOICES of similar software at competing prices?

Looking at the history of Microsoft, a good number of their software products and systems were based on ideas developed by other companies (eg. Apple, IBM) and then produced by Microsoft for a lower cost to consumers due to their financial abilities to mass-produce. The opportunity for the tables to turn is now here, and Microsoft is decrying the very process that allowed it to become the powerhouse it is today. Competition is necessary for a strong economy and for consumer satisfaction. If Microsoft products are truly the "best" for the customer (rather than just the only ubiquitous choice out there), then they will maintain their stronghold in the industry. However, if consumers find that products from competitors offer greater programming options and overall product stability, then so be it. Either way, it should be up to the consumer to decide-not the company who has the most to lose.

On final note, Microsoft tends to speak on behalf of the consumer quite a bit, stating that we (the consumer) would be "hurt" by the potential consequences of this case. That's like my state senator saying that the residents of Washington state would suffer greatly if she took a pay cut.

Thanks for listening.

Sincerely,

Pamela Drago

 Subject: Microsoft case

Yes! Please see that MS makes simpler programs. It hardly seems fair for the richest man in the world to make money on such crappy software. Having worked with programmers since the 80's, I suspect that MS creators are trying to outdo each other with new bells and whistles that ordinary people don't need. I don't need the whole Office suite, but I have to buy it to get the ones I use. The bells and whistles can't be tested adequately before customers use them.

I am experiencing more and more cases where MS software writes over what I'm doing. When I installed a second Email address for my winter/summer homes, an Outlook Express glitch caused both addresses to overwrite each other. This was verified by my provider's customer service. I even have to re-install Windows 98. MS also interrupted my new home page to ask if I want X service installed. It also creates more icons with "special offers" on my desktop if I install something new. My "Picture It!" software has a bug that has no solution on the MS web site.

From: Heath Jared
 To: Microsoft ATR
 Date: 12/7/01 4:47pm
 Subject: Microsoft Settlement

To whom it may concern:

After reviewing the settlement between the Department of Justice and Microsoft, I am disappointed that a company found to be in violation of abusing its monopoly is actually only slapped on the hand (at best) by the deal. There is no substantial penalty for Microsoft that it cannot weather, and that in itself makes the settlement a laughingstock in the industry (you guys need to read some of the tech journals since this was released). I haven't heard anyone in my software company who thinks Microsoft will suffer any penalty from the deal, and most feel the company should face grave penalties. You really can't be serious, an over-sight committee which can't do anything in the legal system? Can you really believe Microsoft will adhere to this committee when it has no (zero, nada) power?

Actually, I have heard it described as a "get-out-of-jail-free card". I would interpret something such as that as a reward, not a penalty. People will say it is good for the economy. How can this be? Microsoft has already eliminated sectors of its software competition, and is well on its way to

eliminating the rest of its competition. Once no one stands in their way, who is to stop them from cranking up the cost of their services? Microsoft will certainly not fear the government when it choses to exploit everyone: You, the DOJ are in Bill's back pocket already.

Today, we have a big problem in parenting—threats not backed up with action, oftentimes ending up in reward. This leads to children who do not respect authority because their parents never punished them for there mis-doings. I am reminded of a recent visit to a local Toy's 'R Us here in Dallas. A child was waiting at the top of his lungs because his mother would not buy him a specific toy. His mother threatened him several times with spankings, even grounding, but the child never let up. Finally, rather than deal with the child the way she should have, she gave in and bought the child the toy. Rather than punishing him for what he had done wrong, he actually received a reward for mis-behaving!! My mother would have torn me up, right there in the store.

Now, your weak settlement has setup another controversial settlement at the civil level which is yet again not a penalty for Microsoft, but a free-ticket out of trouble and into more Monopoly. I have played the game "Monopoly" many, many times. No one has ever agreed to give me "Boardwalk" in place of "St. James Place", but here we have settlement after settlement where Microsoft is getting an un-believable deal. Had you dealt out a settlement that was reasonable, this would never have happened, and a certain Judicial Committee hearing would not be happening either.

It appears this practice has been adopted by you, the Justice Department in relation to Microsoft. No enforcement of threats. Rewards for those who deserve punishment. Please, let me know when you decide to start rewarding people for breaking laws that apply to me, like the speed limit...I'm willing to negotiate my reward just like Microsoft did....out of court PS-Take a close look at what the strong-willed states presented today...I suspect after Congress and the Court system gets done with Microsoft, the final outcome will be very similar to this new more realistic punishment for a mis-behaving child (Microsoft).

Sincerely,
 Jared Heath

 Subject: Microsoft

Hi,

Can I stick my two cents in regarding the Microsoft cases? I'm a business consultant advising people with home-based Internet businesses. My clients are all over the world—mainly in the USA, but also from many other countries. For these people, the ideal operating system is either Windows 95 or Windows 98—both of which have been abandoned by Microsoft, and both of which need to be returned onto the market.

At issue is this: home-based Internet businesses are the fastest growing sector of

the business world in terms of numbers, rising from almost zero ten years ago to very many millions today. Nobody knows exactly how many there are, but my estimate is around 20–50 million now, and maybe 200–500 million within a few years.

To really flourish, this business sector needs single, simple operating system that accepts java (including javascript). Win9x is ideal. It has the most software, including all the relevant tools; it is well understood by the technical people who provide support; and it contains all the features needed, and none of the unwanted features that Microsoft seems to love so much. Recently, Microsoft withdrew the Win9x product range, with the result that already a market has emerged in both old (legitimate) copies of the range, and new (pirate) copies. I regard it most unsatisfactory that I am compelled to inform newcomers to the field that, if they wish to succeed in their new venture, they must seek first out a Win9x copy, pirate if necessary, because Microsoft will not sell it to them. I ask you to seek that a condition be placed upon Microsoft that they resume supply and support of either (preferably both) Win95 and Win98. I am told for networking reasons that Win NT should be included in this list, but this exceeds my expertise.

With best wishes,
 Lamaan Whyte

From: Carl Friedberg
 To: Microsoft ATR
 Date: 12/7/01 4:50pm
 Subject: Proposed settlement to the Microsoft Antitrust case

Honorable Judge:

I am not a direct party to this action, but I would like to express my dismay that Microsoft has not been punished for violating the anti-trust statutes.

While I am not a lawyer, I am a user of computer products and services. Microsoft has attained dominance in this industry by using methods which have been legally judged to be anticompetitive. What punishment have they received for their actions? What is being done to keep them from doing this again, and again? Nothing has been addressed, for instance, regarding the latest onslaught from Microsoft, "dot net" and Windows XP. Both of these products continue these same practices, and nothing in the proposed settlement will curtail Microsoft's anti-competitive practices. Microsoft, in a separate action, has worked out a settlement of a large number of class action suits against it. The proposed settlement of those cases rewards Microsoft by placing their monopolistic software in many schools which might not be able to afford it otherwise, giving Microsoft yet another non-competitive foothold in a new market. In that case, I understand that RedHat Software has offered to provide free software for every school in the US, with Microsoft's \$1,000,000,000 "fine" being used strictly to purchase hardware. That's more in line with a punishment, than a reward, in my opinion.

Please, consider alternative solutions which will punish Microsoft for violating the

law, and keep them on the path of lawful action.

Sincerely yours,
Carl Friedberg

Microsoft is guilty.

Please repeat that as a mantra while you look over the proposed settlement.

Guilty people should not be rewarded for their crime.

1. Microsoft ran companies out of business so they could take over the market. We can't "punish" them by sending their software into the schools. We must correct the market. We create the market with our laws about patents and trademarks. Microsoft took advantage of that so we should take away their right to those patents and trademarks.

2. Because of the actions of Microsoft, they have very few business competitors. They would make you an offer you can't refuse. You either sold out to them or they put your product into the next version of the operating system and put you out of business. Now their only real competitor is the freeware stuff such as Apache, Perl, and Linux. These non-business entities are cut out of the proposed settlement that says Microsoft only has to share its APIs with "legitimate" businesses. Change it to MS must share the APIs with everyone and you just might protect the freedom required for a good market. Punish the guilty. Don't reward them.

Subject: Microsoft Settlement

To whom it may concern:

I am against any settlement that Microsoft may receive that includes only organized business for profit. Include all businesses, like not for profit or non profit agencies that may have a competing product, but are software that is open source. Excluding open source from the remedies that Microsoft is charged with would be tantamount to giving them a stranglehold on the entire Internet.

I am further against any remedies that allow Microsoft to gain an unfair advantage in our public schools. Apple has long been a supporter of K-12 education and handing Microsoft an advantage into this educational arena would be a mistake. Apple and Linux should be given as much consideration, if not more, in the educational support in the remedies phase. Have Microsoft place the money into an educational trust fund that allows the schools to choose what hardware and software they would like to use. In

addition, Microsoft should have no say in how this trust is administered.

Dear Sir/Ma'am,

I am very very disappointed with the Microsoft settlement. Historically speaking a good argument can be made that Microsoft has been and continues to be the most damaging monopoly in the history of the United States. Microsoft has proven that it will not operate within the law and no organization on earth should know this better than your organization as Microsoft didn't even miss a step after signing previous agreements with your organization.

The job of the US Department of Justice is to enforce the Anti-trust laws. These laws were enacted for very very good reason. When these laws are not enforced something is taken away from all of us...the possibility to start and be successful in a business. Whoever made the decision to settle for an agreement that will have no effect whatsoever on Microsoft is stealing something from you and I and I don't like it at all.

Lastly, I want to know where the decision to give up came from. Was this decision from the President?

Regards,
Nick Morrow

Subject: my thoughts

microsoft has used every trick it can to ensure that other developer's software either does not run or runs poorly on their less than stellar operating systems along with refusing to make the new software incompatible with older versions of the same programs, such as Word, Excel, and such. this marketing focus has:

injured other developers
injured the public using their systems
restricted the availability of good software solutions
produced bad operating systems due to the focus on excluding other developers' programs.

This can only be remedied by the separation of the operating system manufacturing from the software development OR by making any operating system that runs more than 30% of the personal computers OPEN ARCHITECTURE.

Thank you
Arthur T. Nickel

 Subject: microsoft antitrust

Hi,

In the past several years, Microsoft products have completely failed to evolve to growing security threats and are being swallowed by malicious (knowledgeable) people. On one side of the country, IIS(Internet Information Server) Servers are down from code blue or some other DoS exposure, and on the other side of the country confused people are getting hundreds of emails from someone who was using outlook and doesn't open attachments, but since they aren't going to microsoft.com everyday for their updates, they don't even have to open the attachments. Basicly, the only way to make a Microsoft consumer product secure is not to use it, and I believe this is in part because Microsoft has the consumer software market so dominated that they feel no need to provide quality product. Though this is not technically a monopoly, the consumers and the economy do not stand to benefit from it (as may have been implied). In fact, it is my belief that the only people that will benefit from this downgrade of product quality are the associates of Microsoft. I make my living providing tech support for Linux servers and I have to say that I thank god everyday that I am not providing support for Microsoft servers (I would have a lot of explaining to do).

Regards,

Greg—Support

From: Dennis Gies
 To: Microsoft ATR
 Date: 12/7/01 5:44pm
 Subject: Microsoft Settlement.

To Whom it May Concern,

I would like to express my opinion that the settlement reached with Microsoft regarding its anti-trust violations is completely unsatisfactory. In particular, I find that the provisions excluding non-profit software vendors from having the same rights as for-profit companies are completely irresponsible, and in fact will strengthen Microsoft's position in the marketplace rather than place a check on the company's monopolistic expansion. In the past few years (perhaps even decade), Microsoft has efficiently eliminated one competitor after another using tactics which have now been deemed illegal. However, the settlement proposal gives no rights at all to those organizations which are now the primary competitors of Microsoft, specifically the Apache Foundation, the GNU project, and the organizations which develop Sendmail and Perl. Moreover, the settlement gives no rights to those individuals who consist of the primary competition to Microsoft in the O/S space, the developers of the Linux kernel and desktop applications such as KDE and GNOME.

For the Microsoft settlement to be even remotely acceptable, these groups must be given the same rights as for-profit competitors of Microsoft.

 Subject: my opinion

I believe this farce has gone on long enough. The states do not have the right to tell a company how to run their company. The only winners are the attorneys etc. The losers are people who use microsoft products. the states want to weaken the company, most articles & polls that I have seen that the majority of computer people say that the government and the states was wrong to sue MS MS has developed many improvments to PC operations, thru their R & D departments, why should they share that info to other competitors, let them spend their own money for new products. Is MS perfect, probaly not. Over all it has been a good company, they created thousands of jobs, and made a lot money for people. Weak companies don't survive. I think you get the picture.

 Subject: Microsoft Settlement

I would like to submit a comment about the proposed settlement between the Federal Government and Microsoft. In accordance with the Tuney Act, I request that the following comments, and any responses received, be published in the Federal Register and filed with the court.

1. I do not believe that this settlement goes far enough to penalize Microsoft for the crimes it has committed. Microsoft is an illegal monopoly, this is a ruling by the courts of our great country.

2. As a member of the free software community, I would like to make it known that the verbage contained in the proposed settlement, like Section III(J)(2), could possibly eliminate many free software projects. The verbage used is to Microsoft's advantage, they will manipulate their ability to arbitrarily certify the authenticity and viability of a business to crush us (the free software community) like they have illegally crushed other competitors.

These are two of the largest problems I have with the proposed settlement. Let their be no doubt, if this settlement is approved, consumers will not benefit in the long-run, they will be subjected to an even more intense monopoly.

Sincerely,

Joseph Schlecht

From: Jacek Pliszka
To: Microsoft ATR
Date: 12/7/01 6:05pm
Subject: Microsoft Settlement

Hi!

I am a postdoctoral researcher at University of California.

I would like to express my view on the settlement.

It is a very good idea to force Microsoft to develop a fully-featured version of their monopolistic software (defined by example by more than 75% of the market and more than 1 million users worldwide) for 2 or 3 most popular non-MS OSes. This would mean: Linux, MacOS and probably BeOS or BSD. For me this is fully analogical to telecom market: client should have full right to use any (any of the major) long distance providers (Operating Systems) even if in his just one company has monopol for local phone service (Office suite or Internet Explorer monopol).

The second thing concerns API. In order to allow non-profit organisations to compete with Microsoft products—they should be granted the full access to MS OS API necessary for their goals. Non-profit organizations have important impact on our economy: WWW was developed this way as well as Apache (running more than 50% of internet servers).

Such rapid growth, allowing other companies to profit on different kinds of business is unthinkable if WWW protocols and API was kept secret as Microsoft does with its OS interface.

Best Regards,
Jacek Pliszka

From: Sanity in Anarchy
To: Microsoft ATR
Date: 12/7/01 6:13pm
Subject: Microsoft is a T-Rex: King Tyrant Lizard

I'll give you the short story first: Microsoft is a tyrant in the world of computers. Their strategy seems to be "Be sort-of friendly towards customers, and flatten the competition." Their software has almost no compatibility with other formats, whereas other software quite often has to be compatible with Microsoft.

In my experience, Windows is slow, unreliable, and extremely hard to program for compared to Red Hat Linux, but people are forced into writing software for Windows because that's what everybody uses. And people are forced into buying Windows because that's what everybody writes software for.

Let's take another example (and there are more than I'll take the time to write here). There are two word processors that come with Red Hat Linux 7.2. AbiWord can read Microsoft Word files and half a dozen other formats. KWord can read and create AbiWord files, Microsoft Word, and half a dozen other formats as well. I can't check any of the other formats because I'm writing this from an office full of Windows computers, but not one Linux computer. (And why? Because they have to.)

But what can Microsoft Word read? Only what it has to. It can read its own Microsoft Word format and other formats common to

Microsoft Office, Rich Text Format, normal Text and Unicode Text formats, and HTML files if that functionality is installed.

This isn't even mentioning outright illegal practices like bundling Internet Explorer and making it impossible to remove (at least, for the average user). Or stealing such things as the idea for a spreadsheet program. Oh, and by the way—where did Windows come from in the first place? It was stolen from Macintosh. Much of the source code in use today was stolen from Macintosh, but I can't verify that because Microsoft doesn't give away their code.

Yet another reason to use Linux.

The department of justice has essentially provided Microsoft with the opportunity to dump its operating system on the educational system to gain market share. Is this not what the decision against standard oil labled as predatory behavior? Standard oil lowered its prices at local service stations to prices below cost in order to drive local competition out of the market. Then with no other competitors, Standard oil was free to set the monopoly price. The same thing is being proposed as a "remedy" for this situation. Who the hell thought this one up? Mr. Gates?

From: Josie Robinson
 To: Microsoft ATR
 Date: 12/7/01 6:22pm
 Subject: Proposed Microsoft Settlement

My vote is against the settlement as it stands today. I am a professional in the IT industry since computers began on the market and I can assure you that by "forcing" Microsoft to "give" away their software to schools who may be needy is like letting the wolf into the sheep's pen! This will give them a foot hold in the school industry and they will emerge that much stronger in the future. Not only that, the donations can be written off, can they not? So they do not get punished financially either!

I am a system administrator who works on both Microsoft, Unix and some Apple products and can assure you that I know what I am speaking about. Apple has a good foot in the door to the schools nowadays and rightly so as their product is much easier to use than Microsoft products and superior. Why would you want to remove the only remaining foothold that Apple has on the market? This could well push them out of business. Wouldn't it be better to make Microsoft install it's products on other operating systems and other Intel based machines so that they could sample their own medicine? If you have ever tried to configure a product that was not "blessed" by Microsoft you would understand why this would be just deserts! I have watched them chase Netscape out of business, almost, even though Netscape had the better product. How you ask? By giving away Internet Explorer. By then they had enough money that it did not matter if they got any money from their web browser product. Meanwhile, Netscape has to sell their product to stay afloat in business. Didn't Netscape have to merge with AOL?

No, I say stop the cycle now. Some one has to put a stop to Microsoft's bullying ways. You, the DOJ, did a good turn by prosecuting them as a monopoly. Now do the right thing by giving them a true punishment. Please do not give them another opportunity to make yet, more money and tighten their strong hold in the market by pure might.

Thanks for listening.

 Subject: Microsoft Settlement

I believe the Microsoft's proposed settlement is a total sham. They were found guilty of being a monopolist, and should be punished. Allowing them to give \$500M worth of software, and almost zero cost to themselves, to schools is just allowing them to further expand their monopoly into one of the few areas where there is some "Alternative OS" influence. Also, everything possible must be done to protect the public interest by promoting open source software and the developers, like myself, who contribute to and use software developed in that manner.

In order to give competing companies and products a fighting chance, Microsoft should be forced to publish a full list of all windows APIs and transfer protocols so that other companies can, at the very least, build software that can integrate with Microsoft operating systems.

The way MS does business hurts all computer users. Diversity is good.

MTC-00003332

From: Eric Wood
 To: Microsoft ATR
 Date: 12/7/01 6:24pm
 Subject: Microsoft Settlement

Having read articles about the proposed settlement, it is my firm opinion that Microsoft is trying to not only get away with a massive crime with hardly any cost to itself, but to further extend its monopolistic power in the software market!

The idea of this company giving outdated hardware and free copies of software that

cost pennies to produce in order to avoid paying a larger sum from its nearly infinite store of cash is absurd. The best remedy is to force them to, at the very least, include options to remove MSN Messenger, MSN Explorer and Internet Explorer from the Windows XP operating system. Splitting the company up would be even better, as it keeps them from simply replacing every third party software option from their platform, since the platform would no longer belong to those making the afore mentioned software programs.

The second main problem I have with the proposed settlement is the included attack upon open-source software. Microsoft has made a habit of inventing replacements for open standards, and making sure no competitor can use those replacements. In the case of open-source software, I quote from an article by Robert X. Cringely, published online at: <http://www.pbs.org/cringely/pulpit/pulpit20011206.html> And I quote,

"The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist.

"Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: '...(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ...' "So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products."

This directly affects the software I use on a daily basis. Without something like SAMBA, I would have no access to a network with Windows computers. The settlement even attacks the government of this nation. I quote from the same source: "Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft 'middleware.' In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only. "But wait, there's more! Under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology—even the Department of Justice itself—have no rights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows. "I know, I know. The

government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. It is easy to argue that I am being a bit shrill here. But I know the way Microsoft thinks. They probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT."

This outrageous behavior from one of the largest corporations on the planet must be shut down. Please do what you can to correct the wrongs with have been committed. You (the DOJ) were on the right path when you pushed for this company to be broken up. WHY DID YOU BACK OFF? Do not let money or whatever the cause may be stop you from administering justice. May God be with you as you consider what I have told you.

Sincerely,
Eric Wood

Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001
Dear Ms. Hesse:

I am writing to express my concerns that the settlement proposed between the Department of Justice and Microsoft will create serious security concerns for users, businesses, and government entities. This settlement fails to address the main problem that was brought up in the suit, anti-competitive activities by Microsoft. A slap on the wrist for such a huge company will do little to increase competition in the software industry. There are significant problems caused by the monopoly Microsoft enjoys over web browsers, desktop operating systems, and office suites, including lost productivity, reduced innovation, and frustrated computer users.

However, the issue of security has not been given enough attention. Microsoft's anti-competitive tactics have put them in a position where they have had little incentive to improve the virus vulnerability in products such as Microsoft Outlook and Word. Lost time and down networks have resulted from the problems Outlook's design, most famously with the Melissa virus, but continuing with the Goner virus outbreak. When faced with the threat of cyberterrorism, these security problems can no longer be neglected in anti-trust policy. Only by restoring competition to the areas of the software industry where Microsoft has illegally generated monopolies can the nation obtain software that is less vulnerable to hostile agents at home or abroad. Microsoft has repeatedly demonstrated that without competition, they will not take adequate steps to make their products more secure.

Sincerely,
Thomas Klem

From: Joe Ragole
To: 'microsoft.atr(a)usdoj.gov'
Date: 12/7/01 6:29pm
Subject: my view

Microsoft's intention to pay back the people of the USA by donating its products to schools is an obvious marketing tactic. By donating to schools, they make themselves look like a friend of the common man. However, by propagating their products throughout schools, Microsoft's true intention is to expand their monopoly further by introducing impressionable young children to their products. To be completely straightforward, this is the same tactic of which tobacco companies are accused. If Microsoft is allowed to settle its case by donating its products to schools, the US DoJ will be doing a great disservice to the inhabitants of this country by sanctioning a further extension of Microsoft's monopoly.

—joe

Joe Ragole, University of Colorado student of biology and German "Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem too lightly; 'tis dearness only that gives everything its value. Heaven knows how to put a proper price upon its goods; and it would be strange indeed, if so celestial an article as Freedom should not be highly rated." Thomas Paine, 23 December 1776

I am of the personal thought that the currently settlement with Microsoft is one that will not solve the current problems Microsoft has caused but only make issues worse. Under the current settlement Microsoft is still free to exclude open source development projects from having access to windows source code and the tools needed

to make a compatible piece of software for the windows operating system. Microsoft is still being allowed to encode there browser into there operating system in a way that it can not be removed. The current windows Os (XP) is unable to function with out the usage of internet explorer. The recent release of windows XP home edition has yet again proven Microsoft unwillingness to share there operating system with other Os development teams. This time Microsoft has even gone so far as not supporting connectivity to there older operating system forcing users of the older Os to upgrade to there "newest and greatest Os". Microsoft has also continues to exile Macintosh users from the usage of all of there software other the office and even some parts of that can not be used in a Mac OS, Unix and Linux environments. Thus forcing many users over to the windows operating system that they do not want to be using. Look around a office building to those computers users who are running windows; when asked why many users will respond well I have to use windows there no way to use something else these days. Microsoft is now basically being given a free pass and a way to take over even more of the computer world with the current settlement.

Subject: Microsoft Settlement
Hello!

As a user of various operating systems and applications over the years, I recognize the position of Microsoft as the "defacto" standard for software in today's world. However, this does not justify their monopoly position.

Probably the single greatest way to allow Microsoft to continue in an economically viable way that also gives others an opportunity to develop, would be to force Microsoft to open its MS Office and other file formats. This would allow other developers, including "open source" and "freeware" developers, to make software that is 100% compatible with the "defacto" standard for documents, thusly allowing endusers choice in their operating systems, as Microsoft Office is the single greatest driving force behind Microsoft's monopoly.

Please consider this move as a viable portion of the settlement with Microsoft. Allowing Microsoft to simply "buy" their way out of it in the manner proposed simply extends Microsoft's monopoly into an area of personal computing that has traditionally been dominated by Apple.

Thank you for allowing the public to voice concern in this matter, and I hope that level heads will prevail.

From: Joe 'Zonker' Brockmeier
To: Microsoft ATR
Date: 12/7/01 6:34pm
Subject: Microsoft Settlement
To whom it may concern:

I'm writing to express my dismay at the weak and ineffectual set of proposed remedies that the DOJ and Microsoft have agreed to. Microsoft has been found guilty of abusing its position as a monopoly in the software industry, and the proposed remedies do little to actually punish Microsoft for this behavior. In fact, by abiding by this agreement, Microsoft is given free reign to act punatively towards Free and Open Source software projects that compete with Microsoft's own offerings.

I would ask the Department of Justice to reconsider this set of stipulations, and include provisions that will:

1. Protect Free and Open Source software projects by requiring that Microsoft provide complete, timely and accurate documentation of its APIs and file formats to any interested party.
2. Require Microsoft to cease anti-competitive bundling practices with its media player, MSN software and MSN Messenger.
3. Require Microsoft to produce a version of Office for Linux and other UNIX systems.
4. Force Microsoft to divest MSN. It's not in the best interest of the public to allow Microsoft to build MSN by shoving it down the customer's throat. Each new version of Windows locks customers into Microsoft's MSN and Passport system.
5. Force Microsoft to give open access to APIs for its .Net initiative.

The proposed stipulations contain too many loopholes. While breaking the company up into several companies was not a suitable solution, neither is letting the company off with a light slap on the wrist. Microsoft is getting off entirely too lightly for the damage that they've done and continue to do to the software industry. Allowing Microsoft to continue its business practices and a monopolistic position in the market is doing great damage to the consumer and other businesses in the computing industry.

Sincerely,
Joe Brockmeier

Subject: Microsoft Settlement

The settlement with Microsoft has a major defect that will have devastating effects on the software industry. Much of the development effort in areas like Linux, Apache and Samba provide software for free. Microsoft will be able to kill these efforts by

the wording in the settlement. While these efforts are oftentimes funded by major collaborations of typical business entities, the not-for-profit entities that control them do not. Protect these advancements or ruin an industry!!!

Dear Sir/Mme:

I am very disappointed that the DOJ appears to be wimping out in its treatment of Microsoft, to the detriment of us all. The settlement proposed by the DOJ fails to address many important issues, and promises to extend Microsoft's ability to abuse their power as a monopoly to destroy current and potential competitors, forcibly extract revenue from users, and weakening US-based software companies generally vis a vis foreign software developers.

I urge you to reconsider, and to listen carefully to the position of those states which disagree with the settlement proposed by the DOJ.

Thank you,

@doj.ca.gov@ inetgw,...
Date: 12/7/01 6:41pm
Subject: The proposed Microsoft settlements are inadequate

With great disappointment, I was dismayed to hear the terms of the announced settlements that the various states have proposed. How did we go from a proposed Microsoft breakup to a wrist slap within the course of a year? The appeals court unanimously affirmed that Microsoft was indeed a monopoly, which is a lot farther than this court went circa 1998 when similar charges were brought re Windows 95. At that time, Microsoft received a wrist slap with a consent decree and no damages. Again, they are back in court, having aggressively ignored the previous settlement terms.

What changed? The only thing that has happened of note is the year 2000 election.

It is clear that this case is being influenced by partisan politics. The result is that the computer industry has been brought to its knees, while Microsoft continues to grow via its illegal business practices.

The most glaring aspect of the proposed settlements is the utter lack of reparations to damaged parties. I am not just talking about consumers, but competitors, employers (and their stockholders and customers, too), some of whom testified and others provided supporting background evidence and consultation to the legal team at their own expense. The cases of Be, Inc., and Red Hat are two visible examples. As competing OS manufacturers, they suffered the most by Microsoft's multi-boot restrictions, wherein licenses were illegally tied to the exclusion of all other O.S.es. Be even made a public offer to waive the license fees to any OEM that would offer BeOS as an option, with no takers. Red Hat was only able to strike its first OEM deal only after testimony was taken and published that showed these illegal licensing deals. Today, Red Hat is struggling, but is endorsed by partnerships with big name players IBM & Dell, and Be has recently sold off most of its assets at a deep loss to Palm, laying off the bulk of its staff, and will soon liquidate. Both had many employees, stockholders, and customers in California. Be customers will soon, if they have not already, reluctantly purchase Microsoft products because there is simply no other alternative left!

The provision that the settlement is applicable only to companies of significant size (one+ million in sales) is also a slap in the face to competition—that means that new startups have no chance coming out of the blocks! Be and Red Hat would probably not have been beneficiaries of these terms. This is not a "level playing field".

And a time limitation of only five years means that Microsoft will go back to business as usual after that. This lawsuit alone is three years old. If a term limit is somehow necessary, it should be for fifty years or longer, to make worthwhile the long effort plaintiffs have put into this case. If the suggested term is put in place, we might as well file another lawsuit right after the settlement is signed in order to see a continued "level playing field" since obtaining justice has taken so long.

As a taxpayer and damaged party several times over, I am disgusted at the proposed settlement. After years of effort, millions of dollars spent, and all of the *proven* facts in the case established before you, that plaintiffs would settle for pennies on the dollar and a token wrist slap (yet again) is a waste of taxpayer funds. The parties directly and indirectly involved should not have conceded leadership of the suit to Justice if they were to be abandoned so close to the finish as they have been.

Justice has now shown itself to be susceptible to party politics with this drastic change in settlement terms. In my opinion, the time is ripe for States to take control of the suit if Justice does not resume its previous tack. Otherwise, it is very likely the effort will quickly fracture, and individual companies, states/localities, and citizens will have to file suits independently, further

incurring cost, time, and effort in the justice system, and watering down any resulting settlement. I urge you to reject the proposed settlements and continue the suit vigorously to its logical conclusion.

The opinions expressed above are entirely my own, and not necessarily Be, Inc.'s. For further details, please contact the CEO, Jean-Louis Gasse, as he could provide significant further information, at jl@gassee.com.

From: Marian
To: Microsoft ATR
Date: 12/7/01 6:41pm
Subject: Microsoft Settlement

I am sending this email as a comment on the proposed settlement between the US Department of Justice and Microsoft Corporation. The settlement, as it has been published, does not protect the rights of consumers, nor does it impose a remedy that will allow competition in the software markets in which Microsoft has already demonstrated its illegal business practices. As has been amply demonstrated by the consent decree signed by Microsoft to settle a previous anti-trust suit, mere words on paper do not reign in their practices. More strenuous oversight is needed, or any settlement will be shown to be as worthless as the last. The largest competitor to Microsoft Internet Information Server is Apache, from the Apache Foundation. A not-for-profit organization. It, along with Sendmail and Perl, also from not-for-profit groups, are very widely used in Internet applications. My concern is that according to the language of the proposed settlement, these organizations have no rights at all.

Specifically the language in section III(J)(2) says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business, (c) "meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business". This language gives Microsoft the right to deny the very existence, and continue any and all of their anti-competitive practices against Open Source projects, or even any company they do not deem viable.

I also question the advisability of allowing Microsoft to define the criteria of "reasonable, objective standards" as they are the party guilty of violating our nation's laws in the first place. Should not these definitions be imposed by an external body that does not have Microsoft's interests foremost in their minds?

Section III(D), which deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware" contains language which is equally disturbing. In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and

Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only. Under these definitions, Open Source is again shut out, as are government entities and any other not-for-profit group.

I can not accept with any degree of credibility that Microsoft will not exploit any perceived flaw in the actual language of any remedy which is imposed on it. Additionally, the currently proposed remedy will only stay in effect for a period of 5 years. How are we to believe that Microsoft will not simply revert to their current illegal business practices after the 5 years have passed?

The remedy as proposed, is flawed in both its language and scope. I urge the court to seek a more appropriate and stringent solution and hope that it will act in the best interests of the American people, rather than ignore Microsoft's previous flagrant violation of an insufficient remedy.

Thank you.

I strongly disagree with the settlement because it DOES NOT do anything to prevent MS to practice what there had been doing in the pass. I think a lot of you have missed the point on what the real issue is. The real issue is not how MS deal with the OEM venders and others, the real issue is how MS uses the advantage they have on the OS and apply it on their applications by hiding key element on the API and a lot of close standard. Because of that MS have an upper hand on other software houses, that make them hard to compete fairly. One by one they had taken out Wordperfect, Netscape, Realplayer, Borland and many more to come. With Windows XP a lot more companies will be taken out, first on my mind will be Winzip, next will be CD burner software companies and who knows who is next. With their new Passport service, there are coming after you. (U.S. Gov.) Think. They will have access to personal information on the Passport account worldwide. If you know how to think you can see the danger. Stop them before its too late. Thats all I have to say.

 Subject: MS slimy income tactics in small reseller suits

Gentlemen:

I am the victim of one of THOUSANDS of lawsuits that Microsoft has waged over the past few years. I own a wholesale computer hardware company, primarily building servers and workstations custom order for small volume resellers.

In April of this year MS bought 3 software packages from me through an undercover reseller. They took FOUR months to tell me it was counterfeit (yet have never shown me why). The software met ALL the tests I could use for genuineness.

They then sent me a "cease and desist" letter through one of their many law firms. I emailed a response that I would comply and begin to buy through one of the suppliers they authorize that was listed on their cease letter. Exactly ONE day after my email they bought another s/w package, even while I was taking down the information on my website and getting set up with their authorized distributors. A few weeks later they slapped me with a complaint/lawsuit in Federal court!!

I have spent over 7k with my attorney to answer/deny the suit. I have researched other lawsuits and find that HUNDREDS if not THOUSANDS are quite similar. WHY? would MS do this? They aren't interested in stopping the true piracy out there—THEY WANT THE INCOME FROM THESE SUITS, BOTH FOR THEMSELVES AND FOR THEIR ATTORNEYS! IT IS THEIR DIRTY LITTLE SECRET.

I have spoken to several victims of this perversion of the legal process. NO ONE CAN AFFORD TO LITIGATE THESE SUITS, and virtually ALL ARE SMALL BUSINESS PEOPLE WHO ARE FORCED TO SETTLE for HUGE AMOUNTS. I plan on going to court without an attorney and asking for a jury trial. MS is so big, so arrogant, they simply are biting many hands in the channel that have fed them for years.

In all the years I have done business as Horizon Micro Distributors, WE HAVE NEVER EXPERIENCED INSTALLATION OR REGISTRATION PROBLEMS WITH WINDOWS98, OFFICE 2000 OR OFFICE 97, which are the specific programs they claim are bogus.

Any advice you might give us, or any reflection upon the arrogance of Microsoft that would affect the settlement in the big case, should consider their CURRENT ACTIVITY AND ATTITUDE TOWARD SMALL AND LEGITIMATE BUSINESSES.

We cannot have a bully of this size forcing small businesses out of operation.

Thanks
 Dave Fears

No monopoly is good for US consumers. Less competition for Microsoft equals less performance at a higher price for consumers.

If the present "big business" tag team of Bush, Cheney, and Ashcroft are able to discretely fulfill their obligations to Bill Gates and his campaign contributions, the beneficial change for consumers and fairness to competing companies will likely be minimal...

MTC-00003351

From: Paul Pomerleau
 To: Microsoft ATR
 Date: 12/7/01 6:57pm
 Subject: Remedy in Microsoft case

The proposed remedy for Microsoft is a bad one. It does not give rights to not for profits, or private free-software developers. I also suggest that any settlement should act to restrict Microsoft's ability to simply out-spend other companies on legal fees. They should not be allowed to spend a dime more than their opponent on any court case. The above is important, since Microsoft uses it's cash reserves as a weapon. Towards that end, I would also suggest that Microsoft be compelled to keep very little cash reserves, distributing all but 10 million of it to stockholders—always dividending, never saving, since that saving is a war-chest, allowing it to bully it's competitors and its apparent friends alike.

 Dear Renata:

I am writing to inform you of my opinion regarding the proposed Final Judgement in the Microsoft Antitrust case. My background is in the Information Technology Industry and in education. In my current position, I am involved in a statewide project providing assistance to schools as they implement technology in the classroom. I have a clear understanding of the needs of rural, small and low-performing schools being from an area of California where the three are very common.

It would appear from my reading of the proposed final judgement that Microsoft is not being fairly discouraged from future

anticompetitive business practices. The end result is more of a slap on the wrist, rather than an action to promote serious reflection on the part of corporate management and a change in their business practices. Specifically, the portion of the judgement that allows them to get rid of obsolete Pentium II computers to low-performing schools who are already lacking in modern technology will do little to close the digital divide. Given that Microsoft is planning on "giving away" about \$843,000,000 of the \$1,000,000,000 fine in their own software is particularly incredible. It does two things. First, it reduces their actual cost to something much lower than the \$843,000,000. The list price that they are using to develop the estimate is much higher than even the price they current sell to schools. For example, our education price for Microsoft Office 98 was in the \$35/copy range, rather than the \$299 or higher retail price. By allowing them to give away their own product, you are greatly reducing their costs.

Second, you are only perpetuating their monopoly by putting more Microsoft product in place. Regardless of whether the schools receive the initial product for their surplus computers for free, at some point they'll want to upgrade or add additional features, etc., which is going to encourage them to purchase more Microsoft products.

I strongly urge you to reconsider this judgement and the minimal impact it will have on Microsoft or the digital divide. I strongly support the offer from RedHat software for Microsoft to purchase new computers for these schools and RedHat Software will provide the operating system and applications software for free for the life of the computers. Or, as Steve Jobs has suggested, force Microsoft to give cash to a foundation, who can then determine the best way to distribute the funds.

I appreciate the opportunity to make my views known.

Sincerely,
 David A. Johnston

It's a plain as the nose on your face that Microsoft has the muscle to bully its way into anything and anywhere; including the US justice system. Seriously, if the DOJ doesn't put its foot down and make SURE that Microsoft is CUT DOWN TO SIZE, it'll make lot of us think that Justice is on-the-take.

MTC-00003354

From: Brian Fahrlander
 To: Microsoft ATR
 Date: 12/7/01 7:02pm
 Subject: Microsoft Settlement

I've watched as Microsoft overthrew the CP/M operating system back around the late 70's. Early on, it was good thing—more power, more options, more flexibility and every day a new thing for consumers.

But in 1995, Bill Gates was able to tell thousands of hardware people, "Give me details, or get shut out" and while that was an important unifying power, that power went to his head.

Show me a difference, for example, between the different versions of Microsoft Word as it went from 95, 97, 2000, and beyond. Other than fixing a minor bug here or there, it's almost identical throughout the lineage, yet buying a new copy (so you could still communicate with your friends and co-workers who'd already upgraded) each new version was still nearly \$200.

...but thank God they finally killed "Clippy" in Excel, which is the same way. Excel is another example of buy-because-he-says-so. And when they released Access, they released a flawed, bloated, overcomplicated mechanism that would "eat itself" when enough data had been saved.

It's sad. Really, very sad. I've been a supporter for almost 20 years now. But one day after rebooting 20+ times to fix another hardware/software glitch [knowing full well that both were MADE to work together, FCOL], I took up my friend's urging and tried Linux. It was crap, but it was honest crap. Very "old Unix" styled, but that was changing. Not just once a quarter, but every day.

That's been almost 5-6 years ago now. Not one day in that time have I booted Windows software on my desktop. I've been living without Microsoft for that long....IT'S A WONDER I'M STILL ALIVE.:

But think about it—when MS screws up, who can you sue? When there's a bug, what's the resolution? Wait on the 900 number for a minimum of 2 hours and hope they don't say "re-install", like they often do.

Linux is different: There are search engines—just look up your problem by entering keywords. Any problem you have, others have had weeks ago. New versions are available seemingly all the time. And the maintenance of it is SO much easier. No viruses, no BS problems that can't be resolved.

It's not nice, but it IS fair to compare Gates/Microsoft with Hitler: In the beginning he provided unparalleled growth of a third-world country with an inferiority complex and in only 10 years became a world power. But without anyone knowing, several million people were brutally hurt by this power, and it had to be stopped.

LISTEN TO CRINGELY: he's one of the few guys that really understands the problem and writes a column. And if he likes this Steve Satchell guy then he's probably a good, fair, honest, stand-up guy.

As the code is written now, Microsoft isn't penalized by your action, it's strengthened. It can just "secrefy" the code and prohibit anyone from developing with it in the future. Microsoft's become a rude, mean, two-faced machine for hypnotizing people and raking out their pockets. (Why else would viruses still exist in Windows after 18 years and they don't exist in Linux!)

PLEASE, PLEASE reconsider your actions. My life, and millions more will be effected by blind paperwork. (See my signature!)

Subject: Microsoft Windows XP

I am against Microsoft requiring online activation of it's Windows XP product, and the "hardware profile" that this product creates when Windows XP is installed on a computer. The end user is paying a good price for this product, and it's use should not be restricted to just one computer in the household. Recent advances in hardware such as cheaper hard drives of large capacity, new graphics cards, faster processors, and processor upgrades will result in the computer user buying and installing these products, and Windows XP should not require an activation process that requires the user to "call microsoft" and explain why the upgrades are being made. Also, Windows XP, once purchased by the consumer, should be installable on any computer that the consumer has that will handle the memory and processor speed and hard drive space necessary for this operating system to function properly. The restriction that the product can only be used on one machine, and that any Hard Disk with XP installed on it can only be used on that one machine, is unfair.

Simon R. Lewis
16002 Meadowcrest Road
Sherman Oaks, CA 91403-4716
December 7, 2001
Phone: 818-906-7679

I'm a US citizen and live in California. I'm against the proposed DOJ settlement with Microsoft for the following reasons. As someone who bought and uses the OS/2 operating system, I suffered as a consumer when Microsoft violated antitrust law to drive it from the market. As I look to replace my computer, I am suffering again because my choices are being restricted by Microsoft's continuing conduct. A once thriving industry with competition and choice is being undermined.

My suggestion is to consider the Red Hat approach where Microsoft's free computers delivered to schools will all carry the Linux operating system.

By forcing Microsoft to disseminate a multi-platform open system to schools, the remedy (apart from providing schools with genuinely open, new software that stimulates choice and competition) will actually punish Microsoft's anticompetitive conduct.

Such a settlement would help to reintroduce competition, as opposed to the current proposed settlement, which actually rewards Microsoft for its violative conduct.

The proposed settlement actually extends Microsoft's monopoly to a new generation of users, and enables Microsoft to dump unsold inventory. It will be a sad day for antitrust enforcement to see the violator rewarded in this way, not least because the European Community enforcement process (led by the US trained Mr. Monti) appears to understand what our own Justice Department does not.

Thank you,
Simon R. Lewis

Subject: MICROSOFT ANTITRUST

The Microsoft monopoly goes into areas that I think you guys have never dreamed of. One way the monopoly has shown up in force recently is device drivers.

For example, look at a Dell Inspiron 8100 (I purchased one recently). If I desire to use an operating system other than Windows, like Linux or OS/2, drivers are not available. In the past, drivers would become available for other operating systems because some programmer would develop the drivers and release them.

NOW, the information necessary to develop the drivers is NOT being released. Why would a manufacturer like Dell, Nvidia, and Lucent withhold information that would lead to additional sales of their products? The answer is they would lose the blessing of Microsoft (and lose sales) if their products could be used by non-Microsoft operating systems.

The best example of this is the so called Windows Modem, the largest number of which is manufactured by Lucent. There is no technical or cost reason why such a device as the Windows Modem should exist. Ordinary modems (which work on any operating systems) work better and were previously costing less than Windows Modems. Any computer you purchase now will probably have a Lucent Win Modem installed. Windows Modem drivers are only available for Microsoft operating systems. I personally tried to obtain information from Lucent that is necessary for driver development, and they refuse to discuss it. Why? Releasing the information would only result in increased sales. Thus, if I purchase a new computer, I must use a Microsoft operating system, or the modem will not work. Note that if I want to access internet, the modem must be used.

There is nothing about a Windows Modem that makes it unique to Windows. It is just another hardware device.

I can go on and on, but if you are interested, you can contact me.

My opinion on the Microsoft settlement proposal vs RedHat counter proposal

I am definitely concerned that the proposal as endorsed by Microsoft would be a mistake. I support getting more alternative computer education in the public school system as a way of broadening students opportunities, and therefore I am for Redhat's counterproposal, or any proposal which imposes a strict monetary demand on Microsoft without offering them any direct method of recouping their losses, such as furthering their monopoly on desktop computer systems in this country.

Sincerely,
Sean Harbour

Subject: Microsoft Settlement

I just wanted to express my concern over the suggested settlement in this case. The proposed settlement is a farce. It will cost Microsoft very little, and (ironically) actually extend their monopoly by hooking school age users. If Microsoft were truly interested in helping educate children they would donate the money as a lump sum to the schools with no strings attached for the schools to use as they see fit. Schools need better facilities, better pay for teachers, books and many other things more than they need used computers running Microsoft programs. Please, please, please do not be duped by Microsoft—their settlement is no punishment at all. Microsoft is a danger not only to business, but also in many respects to society. Their goal is to completely control technology and content at every possible level in the pursuit of extracting profit—there is no altruistic motive in any Microsoft action. Without going into great detail the result would be that ultimately we will no longer have democracy but technocracy, with all power focused in the monopolistic hands of Microsoft. A real settlement would see Microsoft broken up, permanently and irrevocably. That is in the best interest of all citizens of the United States and the world. I realize this may seem a radical opinion, but truly the ramifications of allowing Microsoft to continue in its current course of operation are frightening. I hope you can at least consider what the future could hold if no action is taken in this regard—at the very least please do more in depth research so that you can truly understand the consequences.

It does not seem that those involved in passing the judgement have done so to an adequate degree.

I again wish to stress my extreme alarm and distress that the given settlement is being seriously considered. I beg you to reject it.

Sincerely,
Jeff Singer

Subject: Microsoft Settlement, I think that Steve Satchell should be on the three

person panel.

Steve Satchell should be on the three person panel. A person with knowledge of the field and who has no stock in Microsoft is the right type of person for the job.

Another thing is that DNA computer programming languages will completely exclude outside development. Microsoft must share the genetic computer algorithms that it develops for the creation of independent applets and executable functions. Bill Gates has funded research into self replicating and self improving computer programs. Programs that quite literally write themselves. The programs are analogous to DNA because of its ability to mutate and reproduce endless quantities of complex code. This data must be shared! Otherwise, we'll be doing the trial again every decade with Microsoft out lasting the Federal Government.

This is what Mr. Gates hopes will happen: You will allow further development at colleges without government supervision of what Microsoft's Millionaires fund privately. These campus researchers will spin off their own companies to be bought up by Microsoft as soon as the programs reach a BETA state.

Subject: Absolutely Ludicrous

It would be a travesty of justice if the ludicrous demands of those several states is actually considered seriously, and even worse if someone was to make it happen. The special stripped down software, compatibility with other operating systems, and compliance masters are all ridiculous. Microsoft is the standard. Period. The operating systems need to make their OS's compatible, and who in their right mind would buy stripped down software. This

would only hurt a valid American success story, and actually hurt competition. Microsoft is a company, not a government agency. If the whiners at Netscape, sub-par OS manufacturer, and others want to realistically compete, then they should do so, but not cripple a great product. Maybe we should take one engine and half the seats out of each airplane to allow for competition to come in. Again, ludicrous. Throw out the state suits and lets move on with life.

Subject: Microsoft Settlement

To allow Microsoft to settle in this manner is essentially giving them exactly what they want. For a very low price tag, they are able to indoctrinate an entire generation of Americans into the Microsoft monopoly. This would be equivalent to settling with tobacco companies by telling them they were required to give children free cigarettes as long as they were in school.

The offer from Redhat Linux Inc. would be the ideal solution, but even it could use some modifications. I'd recommend that Microsoft pay, up front, \$1.5 billion in fines. The money would be divided across as many schools as possible while maintaining the viability of it's use. Redhat would provide the software as they have already offered. This would lead to a far greater number of students benefiting from the settlement, and giving them a chance to avoid becoming entrapped within the tentacles of Microsoft.

Subject: Ideas for solving the Microsoft antitrust issues

Dear Sirs:

Solving the antitrust issues with the plan Red Hat has submitted would most definitely help a lot of poor or otherwise unfortunate school systems gain the computers they need along with giving those schools a different teaching platform that is not helping Microsoft to become even more monopolistic. This would allow those schools in question to receive 1 computers and 2 software that does not teach our young school age students only Microsoft operating systems. Red Hat proposes the following:

Red Hat Proposes to Enhance Microsoft Settlement Offer By Providing Open Source Software to All U.S. School Districts Open Source leader proposes to provide software to every school district in the United States if Microsoft provides computing hardware for the 14,000 poorest school districts RESEARCH TRIANGLE PARK, N.C.??? (BUSINESS WIRE)??? Nov. 20, 2001??? Red Hat, Inc.

(Nasdaq:RHAT—news) today proposed an alternative to the settlement announced today of the class-action lawsuit against Microsoft. Red Hat offered to provide open-source software to every school district in the United States free of charge, encouraging Microsoft to redirect the money it would have spent on software into purchasing more hardware for the 14,000 poorest school districts. Under the Red Hat proposal, by removing Microsoft's higher-priced software from the settlement equation, Microsoft could provide the school districts with many more computers—greatly extending the benefits Microsoft seeks to provide school districts with their proposed settlement. Microsoft had proposed that, in settlement of class-action claims of price-gouging, the company donate computer hardware, software and support to 14,000 poor school districts throughout the United States. Under the proposed settlement, a substantial part of the value provided to schools would be in the form of Microsoft software.

The Red Hat's alternative proposal includes the following:

Microsoft redirects the value of their proposed software donation to the purchase of additional hardware for the school districts. This would increase the number of computers available under the original proposal from 200,000 to more than one million, and would increase the number of systems per school from approximately 14 to at least 70.

Red Hat, Inc. will provide free of charge the open-source Red Hat Linux operating system, office applications and associated capabilities to any school system in the United States. Red Hat will provide online support for the software through the Red Hat Network. Unlike the Microsoft proposal, which has a five-year time limit at which point schools would have to pay Microsoft to renew their licenses and upgrade the software, the Red Hat proposal has no time limit. Red Hat will provide software upgrades through the Red Hat Network online distribution channel. A Win-Win Approach The Red Hat proposal achieves two important goals: improving the quality and accessibility of computing education in the nation's less-privileged schools, and preventing the extension of Microsoft's monopoly to the most-vulnerable users.

"While we applaud Microsoft for raising the idea of helping poorer schools as part of the penalty phase of their conviction for monopolistic practices, we do not think that the remedy should be a mechanism by which Microsoft can further extend its monopoly," said Matthew Szulik, CEO of Red Hat.

"Through this proposal all of the states and all of the schools can win, and Microsoft will achieve even greater success for its stated goal of helping schools. By providing schools

with a software choice, Red Hat will enable Microsoft to provide many more computers to these schools. At the same time, the schools can accept this offer secure in the knowledge that they have not rewarded a monopolist by extending the monopoly. It's now up to Microsoft to demonstrate that they are truly serious about helping our schools." General information about Red Hat's support for education is available at

www.redhat.com/opensourcenow/.

About Red Hat, Inc.

Red Hat is the leader in developing, deploying and managing solutions built on the benefits of an open source platform. The open source platform includes the Red Hat Linux operating system for mainframes, servers, workstations and embedded devices, GNUPro tools for developers, database, e-Commerce, secure web server, high availability server and run-time solutions like eCos and RedBoot. For this platform, Red Hat provides end to end professional services including Professional Consulting, Engineering services, Enterprise Support services, and Global Learning services. Red Hat Network is the premier Internet based service that simplifies and integrates the deployment and management of these offers. More information about Red Hat is available at www.redhat.com. Red Hat is headquartered in Research Triangle Park, N.C. and has offices worldwide. For investor inquiries, contact Gabriel Szulik at Red Hat, 919-547-0012, x439.

Subject: Microsoft Settlement

Having read the proposed Microsoft Settlement, I would like to offer the following comments.

As a consumer, I am disappointed with numerous areas of this settlement. In particular, that this settlement fails to levy any penalty on Microsoft for their past wrong doings. Furthermore, it fails to address Microsoft's failure to comply with agreements reached in a previous settlement with the government. Microsoft is not above the law, nor do they write laws. They have broken the law and they should be punished accordingly! Another area I feel needs to be addressed is the subject of interoperability. Having retired from the U.S. Marine Corps after 20 years of service, one thing that constantly annoyed everyone was the seemingly deliberate way in which Microsoft repeatedly changed it's file formats to force software upgrade purchases because of incompatibility among units. Example. If my squadron in North Carolina was using Word 4 and the Naval Air Systems Command in Washington, DC was using Word 5, we couldn't open any documents they sent us because our version of Word was older than theirs. This problem was further exacerbated by Microsoft designing their products file formats to be incompatible with not only older versions of their own products, but products from other competitors such as Word Perfect. This deliberate planned obsolescence of designing incompatibility with competitors software and older versions of their own software needs to be addressed. Everyone who uses a Microsoft product or a competitors product is routinely punished by Microsoft for failing to upgrade to their newest release or purchase their products over a competitors. This needs to stop! I propose the Department of Justice bring interoperability to the table in it's settlement with Microsoft by requiring Microsoft to "always" disclose to competitors both current file formats as well as all planned changes to the file formats of all Microsoft products. This one step would return choice to the consumer in the products they choose to buy while maintaining interoperability among products and platforms. I cannot stress how important this one issue is for the computing industry as a whole. Software developers would be able to compete with

Microsoft on the merits of their product, unlike today where most fail in the marketplace because few consumers are willing to purchase a product that can't open a proprietary Microsoft document. Companies who do try to compete with Microsoft often don't last long or worse yet. Most never attempt to compete with Microsoft in the first place.

By dropping the barriers to competition, consumers win as well. Consumers could choose the word processor, spreadsheet, database, video player, etc., of their choosing based on features they like, not because of compatibility alone.

In closing, I would like to leave you with this thought. Not everyone who uses a computer is a power user. As such, not everyone needs to own Microsoft Office, Word, Excel, or Access. I'm sure the majority of consumers would be perfectly happy with the features available in a \$79.00 word processor if given the choice. Unfortunately they have little choice at the moment. So they spend over \$400.00 to purchase Microsoft Office for the sake of opening a proprietary Word document someone has sent them or to ensure others can open a proprietary document they've sent. Planned obsolescence, forced upgrades and proprietary file formats are out. Consumer choice is in. Give consumers that choice! We not only deserve it. We demand it!

Respectfully submitted,
Stephen M. Szewczyk

Subject: Micro Soft

Someone (Supreme Court or Congress) should step in and stop the states from tearing down Microsoft.

How can it be to the country's advantage to tear down something that will end up costing many, many jobs that which works so well for the general population? It is easy to say the company is too large and Bill Gates is too rich but the company and Gates got there by being the best and producing the best a consumer could get for his or her money. As the old saying goes it ain't broke so don't fix it. The average person on the street doesn't care how large Microsoft is or how much money Bill Gates makes that he can't spend anyway as long as Microsoft products work for them and Microsoft products do work. Changing Microsoft is like changing Mc Donald's, Kentucky Fried Chicken or Wall Marts and the American people just don't like change for the sake of change. A case in point that was learned very vividly by Coca Cola a few years ago. The States and especially the States Attorneys General just smell fame and fortune and political gain for themselves (I/we took on Microsoft) because the average Joe and Jane will realize nothing for the effort and most assuredly the States Attorneys General could care less about that. Makes one wonder just how much kickback the now less than successful companies are putting up should Microsoft be broken up for the Attorneys General? If the Department of Justice is

finished and the States had a chance to settle and didn't they just should be SOL!

From: Dr. Larry Keller
To: Microsoft ATR
Date: 12/7/01 8:29pm
Subject: Settlement

To Whom It May Concern:

As a Professor of Public Administration, a citizen of the United States and a consumer of computers, I find the settlement with Microsoft (MS) troublesome. The company is nearly a classic example of a predatory company whose main mission is domination. They prefer to set "standards" of their own choosing rather than abide by standards that are set by appropriate bodies. Their products are often inferior to others, and in some cases, such as Apple computer, they even own part of the company.

They not only dominate OS, they control the office market. In fact, they also own part of Corel, a distant second in that market. I can't imagine being a company competing on applications with those who work with the Company that controls the OS. That by definition is not fair competition; in fact, the numbers of sales of applications office products clearly demonstrate it is not competition at all.

They bundle their software so that consumers cannot easily use more powerful third party products without considerable knowledge. Defaults often trigger warnings and similar statements that a casual user of computers, by far the dominant user, would interpret as making it impossible to use any product but MS for a particular purpose. They greatly impede progress in software. In addition, the company also sells hardware. With the immense cash flow MS enjoys they can pick and choose what hardware they will make next. As with software, I have no doubts that MS would use that ability to punish whoever opposed them.

Finally, they sell OEM versions of their products at differential prices. The prices clearly tell companies that MS will not tolerate certain behaviors, especially those that favor competitors.

This is not a picture of a company that should be rewarded. It is a clear call for breaking MS into at least two (2) if not three (3) separate companies. A fitting remedy would be three (3) companies: one for the OS; one for applications; and one for hardware.

Any lesser remedy will not only be a miscarriage of justice but a disservice to national security and consumers of an industry who progress is stymied by the domination of an inferior OS.

Talk to you later.

Date: 12/7/01 9:34pm
Subject: Microsoft Settlement

I am a software developer for a living and
have worked on Microsoft/Sun/Linux/other
platforms.

I could enumerate a lengthy list of
evidence concerning how Microsoft's market
position has hurt innovation and therefore
harmed consumers. I'm sure others have
covered those points and that's not really the
focus, now is it? Microsoft is guilty of the
crimes charged. Period. Guilty.

Ok, so now what? The settlement proposed
in no way penalizes the company for past
deeds. It puts only minor restrictions on
future actions and has loopholes that have
been pointed out in several articles. As a
citizen, a computer user, a professional and
a voter, I believe a much more severe penalty
must be imposed. Funds illegally earned
must be taken away and given to the
organizations struggling to change the
software landscape. Specifically, academic
institutions and non-profit organizations
which contribute to Free Software projects!
Just sit back and imagine a world where
innovations that take place every day in
government funded Universities actually get
investment capital and see the light of day as
Free Software. Free Software has the best
potential for preserving intellectual
investments and preventing future harm of
the kind Microsoft is so famous for.

I'm not saying all software must be Free.
But government has the power, the right and
the responsibility to protect the citizens from
Microsoft by taking the illegal profits and
funding the best source of competition that
exists today. Microsoft can buy almost any
company that threatens to compete with it,
but can not buy a Free Software product with
all the money in the world. I hope I've made
my point without too much redundancy. I
simply can not state strongly enough how
meaningless I find the language in the
proposed settlement.

Sincerely,
Kendall Bailey

From: Bazzani, Nicholas J
To: Microsoft ATR

Date: 12/7/01 8:34pm
Subject: Microsoft Settlement

I believe it is an outright tragedy that
Microsoft has been let off the hook like this.
It is quite obvious from the viewpoint of
someone who works in the IT industry that
the settlement will do nothing to correct
Microsoft's behavior. I would point to the
release of Windows XP, which came bundled
with the new Windows Media Player. The
fact is that they are the "800 Pound Gorilla"
in more areas than the PC-OS arena,
although that is by far their most visible
market. I would say that their practices in the
Enterprise arena are their most blatant
violations. In the arena of Server OS' (e.g. NT
4.0 and Windows 2000), Exchange, SQL, IIS,
etc. . . , they consistently natively integrate
and, in effect, bundle their platforms together
by making "add-on" capabilities for one
product dependent upon licensing and
installation of other Microsoft products. For
example: Microsoft SMS will only work with
a Microsoft SQL back-end—Microsoft
Exchange can only be web-enabled by
installing Microsoft IIS—With Exchange
2000, Instant Messaging is bundled with the
e-mail client and server software. The list
could go on for days, but it all boils down
to the same thing: Microsoft always talks
about "innovation" which is just a shallow
attempt to cover up their consistent and, I
would say illegal, business practice of using
their weight in one market (be it PC-OS,
Server OS, Messaging, Web Servers, etc. . .)
to break into existing markets (such as Instant
Messaging, Media Players, Web Browsers,
Internet Service Providing, etc. . .) by
bundling and making their software
dependent upon their other software
offerings. For example, try uninstalling
Internet Explorer from Windows 2000—the
OS will not allow it. Microsoft is also
notorious in the E-Mail arena for creating
proprietary formats that are unreadable by
non-Microsoft systems (Microsoft Rich Text
and especially the Microsoft Transport
Neutral Encapsulation format of Outlook/
Exchange are unreadable and Microsoft does
not restrict these formats from being sent
over the Internet—which cannot be dealt
with on the recipient end) As one writer for
Wired magazine put it, after the Nimda
outbreak it is apparent that [Microsoft could
be considered a threat to National Security].
They have consistently put "buggy" and
insecure software into the market, and this
fact has been demonstrated time and time
again by 14 year olds who can download
"Virus Development Kits" off of the Internet
and quickly create and send a new virus into
the wild. This, in and of itself, is not such
a threat although it does allow a truly
malicious and technically astute virus writer
to crater or compromise a large numbers of
systems with relative ease—as demonstrated
by Nimda.

As an IT Professional and an Economics
graduate—I had hoped for something more
from our Department of Justice. I firmly
believe that the settlement will have no
impact on Microsoft's anti-competitive
business practices moving forward.

Subject: Microsoft settlement

I am very much concerned about the
current settlement proposals in the Microsoft
antitrust case. I believe they do not place
enough restrictions on Microsoft to
discourage future transgressions. I am
including a letter I sent earlier to
Congresswoman Zoe Lofgren about the
Microsoft antitrust case which gives
technical details as to why I believe this.

In particular:

(1) Making Microsoft give large amounts of
their software to schools only increases their
market share and helps teach more people to
use and depend on their products. This is a
benefit to Microsoft, not a punishment.

(2) Making Microsoft sell their operating
system for less money. This does nothing to
limit the practices Microsoft used to put
Netscape out of business as outlined in the
antitrust case. It also does nothing about their
current practices as outlined in the attached
letter.

I urge you to investigate this and persue a
tougher settlement. Thank You.

From: Martin
To: Microsoft ATR
Date: 12/7/01 8:46pm
Subject: microsoft antitrust and the idea of
fines for microsoft.

Well just to put things in alignment towards fining Microsoft for their unfair practices. You fine Microsoft and they pass the cost on down to their customers. That means I pay for the fines you levy on Microsoft. And so does everyone that owns a PC.

The Fact is this:

When I started my hobby with computers I priced the other O.S. developers. There was Digital Research D.O.S. and Microsoft D.O.S. along with the UNIX environment. To tell you the truth DR. DOS was so buggy and cumbersome that it wouldn't do at all. The UNIX based O.S. world was in the stratosphere with their prices. \$500.00 to over \$1000.00 for a single system. Not to mention the cost of the "supported" hardware! Microsoft O.S. ran on anything and it cost me \$100.00.

Even to this day Microsoft O.S. is still cheaper than any UNIX O.S. I would dare SUN or HP or Novel to make their O.S. as inexpensive as the Microsoft O.S.

As for the UNIX-like open source O.S. like Linux, FreeBSD. What could be better than free! Well, to say the truth, free isn't always the best. I have to admit that Linux looks and acts a lot like UNIX. FreeBSD is more UNIX like than Linux and very stable. To be truthful, I use Linux O.S. in my home network for servers and I have yet to experience serious problems. The Big Drawback is that the UNIX-like operating systems are not for the Newbie! They are to say the least, frustrating and not at all user friendly. The Open Source Community has had it in for Microsoft for a long time. May be they have a legitimate gripe against Microsoft, but I don't see it as far as the Newbie is concerned. Microsoft makes an O.S. that is less expensive than UNIX, much easier to use than UNIX and UNIX-like operating systems and ANYONE can use it with little effort.

Now if the open source community could do what Macintosh is doing, I could say that they would have a competing O.S. for the masses. (Macintosh O.S. version X is the FreeBSD kernel with the Mac GUI.) Wow!

So much for my opinion;

Subject: Microsoft Settlement

To whom it may concern:

I would like to express my concern that the DOJ's recent settlement with Microsoft is ludicrous. Microsoft is a clear monopoly with unprecedented power over the largest growth sector of the US economy. That monopoly must be broken, but the settlement that has been proposed does quite the contrary—in many ways it actually helps to extend that monopoly! The settlement provides Microsoft explicit protective barriers against the one segment of the computer industry that has demonstrated some hope of ability to compete with it, the Free Software/Open Source/Linux community. Rather than rehashing a well written piece on that topic I

will ask that you read this short article by Robert X. Cringely:

<http://www.pbs.org/cringely/pulpit/pulpit20011206.html>

Additionally, the part of the settlement requiring Microsoft to donate computers to schools—that is just as insane. The US school systems are one very small segment of the US computer industry, but one segment where Apple's Macintosh computers have continued to compete successfully with Microsoft due to Apple's superior simplicity, reliability, and the fact that grade schools are not in the "must have Microsoft Office" jail that 99% of all US businesses are. Having Microsoft give computers to grade schools will serve to harm Apple's position in that market, it is in perfect harmony with Microsoft's efforts to destroy Apple's position in that market, and it is giving Microsoft a huge tax break to boot! The government needs to force Microsoft to open source all of its operating system products, which are no different than cable TV or telephone switch standards (OSes are an infrastructure standard), force Microsoft to publicly disclose the file formats for each and every product that it sells, before they are allowed to go to market, force Microsoft to change its software licensing agreements so that they are transferable (create a market for used Microsoft software), and force Microsoft to publicly disclose any additions or modifications that its products make to current and future communications standards (like HTTP, FTP, SMB, etc.) so that other can make products that inter-operate or compete. Remedies such as those will actually accomplish something positive.

Sincerely,

Lester H. Hightower

Subject: Microsoft settlement

I wish to voice my extreme displeasure with the poor standard that too many government representatives consider to be an acceptable settlement of the Microsoft case.

This proposed settlement is on par with the United States taking over Canada, Mexico and the Caribbean island countries by any available means. Then, facing world condemnation for our ruthlessness, we set Cuba free. Far too little, too late, with nothing to stop us from taking Cuba and the rest of the Western Hemisphere the next time we want to grab territory. Certainly this is a ridiculous scenario, but in the computer world, this is exactly what our government is considering. To even consider allowing Microsoft to manipulate such a settlement, you are sending a message to them that the government really doesn't care about the behavior that caused this issue. Just tell them, 3Don't do it again or we'll have to do something mean like ground you for a week. Not terribly effective at preventing a recurrence.

Do what you should, not what is politically expedient! Resolve the damages, then

demonstrate with punitive measures exactly why businesses should NEVER engage in such practices. It worked with ATT decades ago, and it would work with Microsoft. ATT's breakup did not just level the communications playing field. It created an atmosphere that encouraged competition, invention and expansion of the industry far beyond what would likely have happened had other gutless politicians and lawyers behaved to the lower standard this current administration is considering. (BTW, I am a Republican and do use Microsoft products.)

Subject: Break Up Microsoft

The illegal monopolist, Microsoft, threatens the future of technological innovation and the free market in software by leveraging its monopoly in operating system and office software.

Besides national defense, the number two priority of the federal government is to protect our economic system from monopolists. Thus far, the Justice Dept has utterly failed in that charge. Please enforce antitrust laws vigorously!

Thank you for your reconsideration of this important policy matter.

Subject: Break Up Microsoft

Dear Justice Dept:

Your charge is important and underestimated by most Americans. After national defense, antitrust enforcement is the number two charge in our free market system.

The incentive in our free market system is to become a monopolist. Microsoft long ago achieved that status and more than their deserved economic reward for their success. They need to be broken up. To date, the Justice Dept. has utterly failed to protect our economy from this significant monopolist. Please consult knowledgeable economists on this matter and rectify your grievous error in antitrust enforcement.

Thank you for recognizing your errors and correcting them.

Subject: vote of confidence for Dec 07/2001 state proposal

The proposal filed Dec 7, 2001 by the nine U.S. state attorneys seems to have many positive elements, in my opinion.

The previous proposed agreement has many loopholes, and a limited time span (5 years). With the legal resources available to Microsoft, they will be able to stonewall and fight this weak agreement on almost every point, so that the actual impact on their day to day conduct will be essentially negligible.

Please enforce a stronger remedy. The Dec 7 filing seems to have many of the required elements.

I would like to encourage the DOJ to adopt the proposal by Redhat to contribute software and as terms of the monopoly settlement to force Microsoft to provide hardware to

schools. It would be absurd, as part of a monopoly settlement, to distribute Microsoft software to schools.

This simply extends the influence over the market that they were convicted for in the first place. Justice would best be served if Microsoft were forced to distribute an alternative to their software instead and provide hardware as penance for their monopolistic practices.

Subject: Microsoft Settlement

Dear Sir/Madam,

I am a U.S. citizen, working in Australia as a lecturer in Economics. With respect to the proposed settlement in the Microsoft antitrust case, I would like to point out one glaring loophole.

In the settlement, commercial companies are provided with direct protection against some anti-competitive behaviour by Microsoft. However, in many instances, only Open Source Software operating by attracting volunteer labour on a global basis can maintain the developer resources to provide effective alternatives to Microsoft's products. Therefore, in many cases commercial companies rely on, and contribute to, Open Source Software development efforts as a part of their competitive strategy.

There is no protection in the language of the settlements against action against Open Source Software, or indeed any not-for-profit activities (including government activities), and therefore no protection for those companies whose most effective competitive response to Microsoft's aggressive use and abuse of market power is to participate in such activities.

It is therefore important that the restrictive language with respect to activities of viable commercial entities be expanded to include those not for profit organizations that make their work available to commercial entities, whether based on Open Source access, access to participants in joint activities, or otherwise.

I would like to voice my concerns about the recent DOJ settlement with Microsoft. After reading over the settlement, I see several problems.

1. In most cases you allow Microsoft to define the groups that it must work with. You've got to be kidding!
2. You appoint a 3 member board to oversee this agreement, and then allow Microsoft to elect 2 of those positions. You've got to be kidding!
3. You have totally ignored one of the largest segments of the computer software industry, namely, Open Source Software. This is perhaps the only real, current, threat to Microsoft's monopoly. The agreement is written so that the only entities that

Microsoft must present it's API's and other secrets to, are those that can do them no harm. You've got to be kidding!

I have several other concerns, but I believe that these are enough to render this agreement virtually useless.

Thank you,
 Jim Dossey

 Subject: Microsoft Anti-Trust Case

I am one person who believes the Department of Justice has done nothing to prevent Microsoft from extending their Monopoly. In short, you have done nothing to correct past wrongs. You need to punish them financially. Force them to sell a stripped down version of their Operating System. How do you purpose to force Microsoft to reveal to their competitors how their operating systems works, so that all software developers have an equal footing. You should force them to post the source code of the Application Programmers Interface on the internet. At least make a true attempt to curb Microsoft's abuses and maybe open the way for competitors to compete fairly with Microsoft. I feel strongly that every one would have been better off if you had forced Microsoft to split into at least two companys. One to produce software, and one to produce only the operating system. That in it's self would make it a necessity for the operating system company to reveal the internals of how to make applications work with their operating system. The prosperity of the operating system would be dependent on applications working well.

You have done Microsoft a favor. What about the users who must put up with a buggy operating system and companys that would like to compete on an equal footing with Microsoft. A monopoly in the Technology field is not good for individual users, companies, or our country as a whole. You need to re-think what you have done, because the monster still lives. The monster has a right to live, but not to consume all that it sees or desires. Slow it down while you can.

 Subject: Microsoft Settlement

I feel that many of the proposed "settlements" flat out make Microsoft's position better. They have been found guilty of anti-competitive behaviour, and now you are allowing them to compose the terms of the punishment. What is that about?

Specifically, allowing them to give computers and software to schools only servers to further entrench their presence. Fine if they want to do this on their own, but not as part of a punishment.

Allowing them to determine who they get to provide API information to is just ridiculous. Many of Microsoft's own internal documents point to linux as "the long term threat" to windows. Under terms of the settlement, Microsoft only has to provide this information to businesses that live up to Microsoft's standard of a business. Why should Microsoft be allowed to determine who is a good business? Not only does this affect not-for-profit companies like SAMBA and Apache, but could also be manipulated to be anyone that Microsoft sees as a competitive threat. Remember, they are guilty of anti-competitive behaviour. Anti-business. Time and again they have manipulated the wording of contracts to their benefit. Apple made the mistake of signing a contract which Microsoft drew up saying they wouldn't imitate the Apple OS in the then current version of Windows. So Apple got screwed on later versions.

You have to be living in a cave if you are not aware that free software and the open source movement is the biggest alternative to Windows on the home PC market. How many other operating systems can run on your computer at home, especially now that BeOS has been discontinued? Any settlement that allows Microsoft to keep open source companies from receiving the same information that any other developer can access is absolutely flawed. It is, in fact, a settlement—not a punishment. They are guilty, remember. If their OS is as top-flight as they claim, then they should have nothing to worry about from little companies whose yearly revenue don't match MS's advertising budget.

Finally, steps must be taken to ensure that Microsoft is no longer able to exert such incredible control over OEM's. Microsoft exerts absolute authority on what software and/or modifications these computer manufacturers can make to the Window's desktop. They also prevent them from selling multi-OS machines, meaning machines that can boot into more than one operating system.

Remember, Bill Gates is a lawyer's son. Microsoft has reached its position not by developing great software, but by outwitting companies with their contractual law. Typically these companies fail to grasp the nature of the computer software industry. Don't fall into the same trap.

To whom it may concern,
 Are you assisting Microsoft in the elimination of Apple (one of the strongest platforms in school systems)? Who thought this up? Microsoft marketing? It's brilliant. Microsoft gets away with no real penalty and eliminates another pocket of competition by overrunning the school systems. By the way.

Linux is also strong in the schools. Did the government want to damage Microsoft's competitors? Isn't Microsoft supposed to be punished for their behavior? How does this help the consumer? The US government needs to rethink this strategy before more damage is done.

Please consider your actions carefully or at least consider RedHat's counter proposal.

Dear Sirs,
 I am appalled at the proposed settlement with Microsoft. Microsoft is the worst example of a rapacious monopoly that I've ever seen. Because of Microsoft, the rate of development in the PC software industry has been stifled. I am completely in favor of the original breakup plan for the company; the

new proposed settlement will have little or no effect on Microsoft's predatory business practices (see Windows XP, and Windows 2000 Service Pack 2 for example). Because of Microsoft's monopoly, I have had to pay for MS operating systems on my last five PC's—of which only one still has the MS operating system, and only two of which were ever even turned on using the MS operating system.

I am very disappointed in the Justice Department and the current administration.

 I agree completely with Robert Cringly.. see below

He's Not in It for the Profit
 Steve Satchell for Microsoft Anti-Trust Compliance Committee!

By Robert X. Cringly

Two calls came in on the same subject in the same day this week, but from very different perspectives. The first call was from a lawyer working for the California Attorney General. He was looking for somebody like me to testify in the remedy phase of the Microsoft anti-trust case. California, as you know, is one of nine states that have chosen not to go along with the proposed anti-trust settlement between Microsoft and the U.S. Department of Justice. The nine states think Microsoft is getting off too easily. The second call came from Steve Satchell, an old friend from my Info World days, who had noticed deep in the text of the proposed Microsoft/DoJ settlement that as part of the deal, there will be a three-member committee stationed at Microsoft to make sure the deal is enforced. Satch wants one of those jobs.

I think he should get the position. With a background in computer hardware and software that dates back to one of the very first nodes on the Arpanet 30 years ago, Steve Satchell knows the technology. He has worked for several big computer companies, and even designed and built his own operating systems. And from his hundreds of published computer product reviews, he knows the commercial side of the industry. He is glib and confident, too, which might come in handy while attempting to keep Microsoft honest. Sometimes there is a distinct advantage to being the first to apply for a job, so I think Satch should be a shoo-in for one of those compliance gigs. And the boy looks mighty fine in a uniform.

The job will be a challenge, that's for sure. The committee has the responsibility of settling small disputes and gathering the information needed to prosecute big ones. They are supposed to have access to ALL Microsoft source code, and their powers are sweeping. If it goes through, I only hope the court picks three tough but fair folks like Satch.

Meanwhile, there is still plenty to complain about in the text of the proposed settlement, itself. Those who followed the

case closely will remember that one of Microsoft's chief claims during the trial was that times and the nature of business have changed, and that anti-trust enforcement ought to be different today than it was when the laws were first passed in the early part of the last century. This is a fast-moving industry based on intellectual, rather than industrial, capital, goes the argument. Sure, Microsoft is on top today (and every day since it got bigger than Lotus around 1986) but, hey, that could change in a Redmond minute. This argument evidently didn't resonate with the court, though, since Microsoft was found guilty. Keep repeating to yourself: "Microsoft is guilty."

Well, Microsoft now appears to be exacting its revenge, leaning this time on the same letter of the old law to not only get a better deal, but literally to disenfranchise many of the people and organizations who feel they have been damaged by Microsoft's actions. If this deal goes through as it is written, Microsoft will emerge from the case not just unscathed, but stronger than before. Here is what I mean. The remedies in the Proposed Final Judgement specifically protect companies in commerce—organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors—computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry. But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and freeware applications. The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business "

So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products.

Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs),

Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only.

But wait, there's more! Under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology—even the Department of Justice itself—have no rights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows.

I know, I know. The government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. It is easy to argue that I am being a bit shrill here. But I know the way Microsoft thinks. They probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT. Is the Department of Justice really that stupid? Yes and no. They showed through the case little understanding of how the software business really functions. But they are also complying with the law which, as Microsoft argued, may not be quite in sync with the market realities of today. In the days of Roosevelt and Taft, when these laws were first being enforced, the idea that truly free products could become a major force in any industry—well, it just would have seemed insane.

This is far from over, though. The nine states are still in the fight and you can be, too, by exercising your right under the Tunney Act to comment on the proposed settlement. The Tunney Act procedures require the United States to:

1. File a proposed Final Judgment and a Competitive Impact Statement (CIS) with the court.
2. Publish the proposed Final Judgment and CIS in the Federal Register.
3. Publish notice of the proposed Final Judgment in selected newspapers.
4. Accept comments from the public for a period of 60 days after the proposed Final Judgment is published in the Federal Register.
5. Publish the comments received, along with responses to them, in the Federal Register.
6. File the comments received and responses to them with the court.

To make your views known (and to put in a good word for Steve Satchell), there are several options:

Subject: Microsoft Settlement

I object to the proposed settlement being offered Microsoft Corporation after the finding they are guilty of monopolistic activities. Microsoft is simply being given a slap on the hand, and told "bad, don't do that". This is absurd. They have crushed most competition, bought the others, and acted to co-opt any other new and possibly viable commercial enterprises in the software business. They have forced Encyclopedia Britannica to give away their intellectual property by offering a software based product at a price so low that it makes the printed book obsolete, yet charge \$500 for a copy of a spreadsheet and word processor which is simply a re-hash of the older version with a few more bells and whistles they produce for a few dollars.

They have such dominance of the market that they now garner 90% of all profits made publishing computer software.

Microsoft acts aggressively to bring new products to market positioned to dominate targeted competitors. For instance, a niche company like DeLorme, who offers mapping software. Microsoft essentially gives away a map program, literally free with coupons or rebates, until the competitor must reduce their price to the point of loss.

Microsoft has developed an effective way of actually paying hardware manufacturers to ship its products installed on machines, and they have prevented any competition from using similar means of distribution, punishing equipment manufacturers who do not fall in line. Their legal armies have been given all the weapons and money to delay the battle, and to open fronts on every court in the land. At last, they lost.

Microsoft is GUILTY.

Microsoft must be punished in a real fashion. They should be broken apart. The pieces should be fined heavily and constrained in a true fashion, and if they are not, their management will simply pause and continue in the same line of operation. Steve Balmer and Bill Gates are completely arrogant in defending their corporate actions, and although this college dropout is now the richest man on the planet, he contends it is simply good business. This was only good business in the same way that Standard Oil was good business, or that the railroads and coal industry were good businesses. Gates is the J.P. Morgan of his generation, only less benevolent, more overtly aggressive in breaking his competitors.

If the US courts fail to take action to dissolve this software beast, a historic lapse in the U.S. Government's duty to protect consumers and citizens will have been enacted and fortified with legal precedent. Microsoft has about \$36 billion in cash to pay lawyers, lobbyists, and to bribe or influence any commercial interests who can legally accept the forms of bribery and coercion they have perfected.

I urge you to do something to protect the interests of the public in this matter.

Subject: (no subject)

Dear sirs—

I have been repeatedly shocked by the concessions made to Microsoft in the proposed settlement of the current antitrust case. Microsoft's software involves little or no real innovation compared to the rest of the industry, yet costs 2-3x as much as comparable software products. Although I am forced to use the Microsoft operating system and office products because they are mandated by my employer (a large multinational oil company with 100,000 employees worldwide), I believe MS Windows to be technically inferior to IBM's OS/2, Linux, UC Berkeley's BSD, Apple's OS-X, and Sun Microsystems's Solaris OS. Nevertheless, these other companies almost have to give away their software for free in order to compete with Microsoft's monopoly.

The DOJ should show to the court that the need for compatibility, interoperability, and interchange of computer and communications software is so important that even a 70% market share is a tremendous advantage. And, as you know, Microsoft has used this advantage repeatedly to put potential competitors out of business and to extend its monopoly into new markets.

Do not underestimate the American public. We appreciate that a strong monopoly strengthens our dominance of foreign as well as domestic markets. Still, we know that we would benefit more in the long run from stronger controls on, or dilution of, the Microsoft monopoly than we will lose from increased international competition.

Please review the incredible, and obviously illegal, provisions of Windows XP for further regulatory actions under antitrust law.

We, the public, appreciate your work on this in the public interest.

Thank you!

Subject: Settlement is absurd!

To whom it may concern,

I cannot believe what I have read regarding the contents of the Microsoft Anti-trust settlement. This is a blatant attempt to allow Microsoft into the Educational market. I cannot believe that it is even being considered. Preferably, the Justice Department should push for a break up. Since that probably won't happen, I am in favor of Red Hat's counter proposal (make Microsoft pay for hardware and install Red Hat Linux). Better yet, have Microsoft pay to put in additional Macintosh software and hardware in the nation's poorest schools. Remember this penalty is not going to stop the Microsoft. Just look at the "features" bundled into XP. It reads like a target list of software companies to put out of business.

Subject: Microsoft Settlement

I would like to express my extreme displeasure with the settlement agreement reached between the Department of Justice and Microsoft corporation.

Language in the settlement, specifically Section III(J)(2), effectively allow Microsoft to exclude any not-for-profit organizations from the remedies allowed commercial organizations. Since large parts of the Internet are powered by software and applications created by not-for-profit organizations, Microsoft will be able to exclude it's biggest competitors (eg The Apache Foundation/www.apache.org produces the most widely used webserver on the Internet). This settlement does more to stifle competition and empower Microsoft than it does to curb the behaviors which led to them being found guilty.

Subject: Microsoft Anti-trust Settlement

Dear DOJ,

I've watched the case, with all its turns and events over the past months. Microsoft is indeed a huge monopoly with no one's best interest at heart beyond their own pocket books. As a technology professional with years of experience, some pre-dating microsoft, I can only say the the microsoft experience has been unsettling. Microsoft not only destroys small upcoming companies with good ideas, it destroys good ideas. Microsoft constantly re-invents perfectly good wheels, making new wheels with a proprietary microsoft flavor. Left unchecked, they would destroy or subvert anything good in the software and OS world. Their bungled network protocols and complicated OS and application interfaces, together with their over abundance of features bloat software and leave numerous security holes and exploitation opportunities that suck countless hours from offices around the country.

Microsoft needs to be broken up, forced apart into smaller, less monolithic sections that can't use their size to brutishly squelch good ideas that don't fit into their view of how to do things. Microsoft should especially be kept away from the Internet and anything to do with networking standards. Do not fall for the argument that microsoft did a great thing bringing computers to the people. This "gift" was a sales pitch of the grandest proportion, and the gift is far more expensive than most people realize, until they have invested far more than they planned. Counting only the time lost to crashes and blue screens, americans and american corporations have lost millions upon millions of hours and dollars.

I urge you to seek the harshest of settlements for this case, microsoft is no friend of the people, and no friend to the computing industry.

Kindest regards,
William Stevens

Subject: Settlement

I'd just like to let you know that I view the proposed Microsoft settlement as highly insufficient and anything BUT an actual settlement that disables their monopoly over the computer industry. All this proposed settlement does is extend their monopoly. As such I am appalled that the United States Dept. of Justice has agreed to accept it. Such an action clearly shows that either no intelligence was used in coming to that decision or they were influenced in some way by Microsoft's desires to end this case citing an impact on the economy.

That is not a valid reason.

Subject: microsoft

I think the entire antitrust case, and all of its subsequent ramifications, is nothing more than sour grapes on the part of those who cannot keep up. As a programmer working as a contractor, I see and use many products—products whose manufacturers are behind this case. Quite frankly, those products have a lot to worry about. Most are archaic languages or bastardized derivatives of legitimate languages. The reason why Microsoft products are leaders in both home and business is simple—they are better. More functional, easier to use and to learn, more powerful and have capabilities that have barely been tapped. Most of the third party software that would like to see compatibility resolved are really facsimiles of software.

As a point of reference my current project is a nightmare of Microsoft-like forms and frames appearing like, but struggling to achieve, the functionality of the real thing. Operating on source code filled with @ and other symbols that calls itself a 'scripting' code and claims compatibility with everything from HTML to Excel—well, the programming will work, but it isn't pretty. It is cumbersome and, after working with a 'real' language, is almost funny. It is one of IBM's responses to the need for a middle-ware product linking it's mainframe database with PC applications. Perhaps the problem is with the mainframe and it's producer should be striving to make the mainframe compatible vs. forcing a substandard 'link'.

If Microsoft holds a monopoly perhaps it is in ambition, talent and innovation. Please don't make them into an IBM clone—secretive, paranoid and totally devoid of everything that is technology today. See this for what it is—retaliation for being one-upped 20 years ago; retaliation for lacking the foresight to see anything except for what was directly in front of them; and the proliferation of middle-ware software houses continuing to produce substandard knock-offs of software that will only create a lack

of continuity and a deep mire of sludge as all are forced to become 'compatible', to speak the same language. When looking for developer information on a Microsoft product, one can locate hundreds of sources—from the Microsoft site to sites that publish tutorials and development information to easily obtainable resource materials. When looking for developer information on an IBM Partner product where does one go????? If there's something out there that doesn't involve bringing the IBM support consultant on site—let me know because as far as I can see it doesn't exist. There's a wealth of websites all spouting a lot of Marketing chatter, but no real information. You even have difficulty finding resource manuals on their stuff! Now that's monopolizing—forcing their customers to use an 'authorized' IBM consultant 'officially' trained to do one thing. Truly the death of inventiveness! Just another cube farm dweller in a white shirt and a black tie.

My personal analogy is that this case is like half of a football team complaining because one of the team members is working too hard and making them look bad. Rather than see the bar get raised, they want it lowered. Universal compatibility is not going to be better, it is going to limit the capabilities of technology, create confusion and vulnerability, and it is going to be more difficult for the average user to make use of their applications. Maybe IBM will get what it always wanted in the end, computers will be for big business and geeks! I should just say "Thanks for nothing!"

Subject: MS / DOJ Settlement

The settlement terms relating to the provision of aid for US schools clearly provides mere temporary relief. After 5 years, how will these school maintain their systems? The longterm financial burden upon these schools seems untenable, and the opportunity for Microsoft to further extend it's monopoly on desktop operating systems is quite clear. This is not a punishment but a marketing exercise Microsoft might well have ventured regardless.

The RedHat alternat proposal should be given consideration here. Children will benefit more from learning a Unix-style operating system as the GUI skills of using X-Windows will translate to any GUI desktop environment (including MS Windows) and the opportunity for them to learn in depth about the Internet and TCP/IP in general are greatly enhanced. Further, the Unix legacy of the Linux OS provides considerable historical value allowing students to better understand the origins of the Internet and the forces which drive it.

All in all, the RedHat proposal addresses some serious shortcomings in the agreement while providing much better longterm value monetarily and educationally to the schools of America.

 Subject: Microsoft debacle

Greetings,

I am disgusted and embarrassed by the manner in which the Bush administration's Justice department has handled the Microsoft case. As both the owner of small corporation (mailorder/retail; 29 years in business) and as the one-person IT department for same, I am extremely familiar with the Microsoft manipulations.

I find it completely mind boggling that Microsoft continues even TODAY to do business in such a manner that no other company on the planet would be permitted to do.

It seems obvious to me that few or none of the people in a decision making capacity (for this case) have a clear grasp of the insides of the technical issues and business practices involved. HAVE YOU —READ— THE LICENSE AGREEMENT FOR XP?? HAVE YOU —READ— THE AGREEMENT FOR MSN or HOTMAIL?

Because Microsoft's products are so prevalent they are in a position to do extreme damage to the IT infrastructure of this country—and the world—if they are allowed to act in such unfair and manipulative ways.

You may think that all the Microsoft "bashers" are cranks and kooks (and some surely are), however, if you personally had purchase, administer, and use (at a high level, not just for word processing or something), you would quickly come to realize that the situation is getting worse day by day.—

 Subject: Microsoft Settlement

I am very disappointed with the DOJ's treatment of Microsoft. I am a software professional, and frequently use both Microsoft and non-Microsoft products. In the trial the DOJ, and particularly David Boies, did an exceptional job of demonstrating that Microsoft has acted as a predatory monopoly. Unfortunately, the punishment that the DOJ under the new administration has negotiated with Microsoft is far milder than the crime dictates. Microsoft was, and continues to be, a predatory monopoly, with business practices that endanger other companies that seek to compete with it. Microsoft has engaged in a public relations campaign that talks about their freedom to innovate, but how about the freedom of Netscape or Sun? How about the freedom of Linux developers to create Samba, a program that allows

inexpensive Linux machines to act as file servers for Windows computers? How about the freedom of companies that depend upon high quality software to have an alternative to Microsofts overpriced and undertested software?

Our nation's economic strength over the next 20 years will depend to a large extend on our ability to develop computer hardware and software. Microsoft has already hurt the ability of many companies to compete on a level playing field. These are companies that might have created the next revolution, a revolution that may have created taxable income for those companies, and employed Americans who would then earn and spend and pay taxes. This doesn't just hurt those companies, it hurts America itself.

The only proper punishment for Microsoft is to split the company into OS and an applications divisions, but the DOJ has perhaps already announced that it will not try and split Microsoft. Please, seriously consider the idea of forcing Microsoft to sell and support a version of Microsoft Office on Linux, which is probably the last appropriate punishment remaining to the DOJ.

Respectfully yours,
 Rick Muller

 Subject: I support the states newly proposed alternate remedy!

Greetings,

As a software developer, I have encountered first-hand the abuses of power from Microsoft. I have seen their products fail to work with competitors. I have seen them arbitrarily change specifications in order to break the hard work of other companies. I have seen projects rejected, solely on the basis that, "It's in a market segment that Microsoft is interested in, and we can't afford to have their attention turn on us." I have experienced, and suffered through the fear, uncertainty, and doubt that they spread about in order to maintain their commercial position.

I would like to express my support, and strong hope that the alternate remedy plan provided by California, Connecticut, Florida, Iowa, Kansas, Massachusetts, Minnesota, Utah and West Virginia, along with the District of Columbia will be considered as the primary plan.

I feel that it penalizes Microsoft appropriately, and places requirements on them that actually have useful and valuable benefits to the consumers.

Competition improves the consumer landscape. I believe, and many of my coworkers and fellow developers believe, that the alternate remedy plan better provides for competition in the primary field that Microsoft has been abusing its monopoly: the desktop operating system.

The entire software development world, and the majority of people who are technically aware of how Microsoft has abused its power, were aghast at the first proposal which came out of this case. It amounts to absolutely nothing more than a slap on the wrist, and in fact most

technologists believe it gives them MORE access to monopolistic practices in the future.

I strongly, and deeply urge that the recent alternate remedy be adopted as the actual remedy plan. It is better for the consumers, and provides punishments that fit the monopolistic behavior.

Thank you for your time,
 Morgan Schweers
 Software Engineer

 Subject: Microsoft Settlement.
 To: Renata B. Hesse
 Antitrust Division
 U.S. Department of Justice
 601 D Street NW
 Suite 1200
 Washington, DC 20530-0001
 From: Alexander R. McCreary
 2022 N.E. Wasco St.
 Portland OR 97232
 Madam,

I have read parts of and have heard a great deal about the proposed settlement between Microsoft Corporation and the Department of Justice. Being an end user of Microsoft operating systems and also of other operating systems, including Linux, I must say that I do not believe this settlement, in its present form, goes far enough in limiting Microsoft's ability to control the future of software and operating system development.

The first point I would like to discuss is Section III(J)(2).

Microsoft should not be allowed to decide to whom it will describe or license API, Documentation, or Communications Protocols affecting authentication and authorization. If this is allowed to happen, you can be assured that Microsoft will effectively cut off all access to information needed by software developers of companies that it deems to be "Not for Profit" or "Open Source Projects". No one entity should be cut off from this information just because they do not meet Microsoft's "criteria as a business". Allowing this wording to remain intact in the final settlement will be more damaging than having no settlement at all.

The second point I would like to discuss is Section III(D).

This section is even more disturbing when one looks at the footnotes for the legal definition of to whom it will disclose information regarding API's.

API's (application programming interface) provide programmers with coding information that allows them to create "middleware" (software that works on top of the operating system) that will work seamlessly with Microsoft products.

Only those companies and individuals who are writing software for profit (commercial) will be allowed access to the needed API's.

Most "Open Source" and "Not for Profit" software writers need this code for the applications to operate in Microsoft operating systems. There is no legal reason that these companies or personages be denied access to this information other than to allow

Microsoft to further control the development of software by whom Microsoft wishes.

The Department of Justice would do well to remind themselves that the software market is not a typical industry. Many of the programs that allow the Internet to operate are in fact "Open Source" and in direct competition with products from Microsoft. Many "Third Party" programs that are "Freeware" but not "Open Source" are also in direct competition with products from Microsoft. All products, whether "Open Source" or "Freeware" or "Commercial", should have the same protections from Microsoft. All products, whether "Open Source" or "Freeware" or "Commercial", should have the same rights to information concerning API's from Microsoft.

I would like to close by reminding the Department of Justice that Microsoft was found guilty of being a monopoly. In that regard, the actions proposed in this settlement are more damaging than if no action was taken to curtail the illegal activities in which Microsoft has been found to have committed in the past, and which, if this settlement is allowed to stand as written, they will continue to commit.

Thank you for your time.

Alexander R. McCreary

First off, let me say that I wouldn't want your job for anything! I've worked for government for most of my adult life and I know a lot of bright people who work for government and none of them would want the job of trying to defend this settlement as justice.

Microsoft lied in open court when they (Jim Alchin) testified that the video he was presenting to the court was proof that uninstalling Internet Explorer... (you know the rest or can read it in the court transcripts)

If I did anything like that in federal court I would be facing perjury charges as fast as the ink could dry, this settlement doesn't even fine Microsoft for court costs. People, there is no way that this settlement looks like you did your job. Talk about snatching defeat from the jaws of victory. Review Microsoft's compliance with the original consent decree, how do you figure this private commission who can't even talk about their deliberations are going to get it done?

I could go on and on without taking an unreasonable position on why this settlement

is not in the public interest. By now you have hopefully heard from enough people, enough reasons why this should not be approved. Microsoft deliberately and repeatedly has shown nothing but contempt for the judicial system that has convicted them of monopoly and upheld that conviction by a unanimous vote on appeal.

Do the right thing here, punish them for what they have been convicted of and make it sufficient to deter them from similar conduct in the future.

Thank you,

Gary

Subject: Microsoft Settlement

In my opinion, changes need to be made to the anti-trust settlement with Microsoft.

The following quotes from the I, Cringely Column of Dec 6, 2001 exhibit and state a lot of my concerns. The full article can be read at <http://www.pbs.org/cringely/pulpit/pulpit20011206.html> Here are the relevant quotes that peaked my interest and concern.

"The remedies in the Proposed Final Judgement specifically protect companies in commerce—organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors—computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry. But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and

freeware applications. The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist. Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..."

So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products. Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only. But wait, there's more! Under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology—even the Department of Justice itself—have no rights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows.

I know, I know. The government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. It is easy to argue that I am being a bit shrill here. But I know the way Microsoft thinks. They probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT. "

The settlement with Microsoft must protect fair competition. This must include open source and non-profit corporation projects. Please take steps necessary to do this. I agree whole-heartedly with this article and hope changes can be made in the deal. Please protect these very important projects that benefit so many.

thanks

Jeff Davis

Subject: Anti-Trust Settlement

I wish to add my voice to those who have serious reservations with regard to the Microsoft (MS) anti-trust settlement. In

particular the proposal for MS to donate software to educational institutions is an extremely badly thought out proposal. Apple Computers has had a strong foothold in this market and you would be undermining their ability to compete against the might of MS with this move. It will also destroy any hopes that the Linux community have of establishing themselves in this and other markets. Far better that MS be made to purchase the hardware to support other OS platforms. I also applaud the proposals being put forward to make MS license MS Office to other companies.

The settlement is a sell-out by the justice department and I am only glad that some of the states have not been willing to go along with it.

Subject: I like what the 9 states have proposed...

Sirs:

The nine states that are continuing their suit against Microsoft have come up with brilliant solutions to a complex problem. Instead of the slap on the wrist that you guys are planning to give them after your political party received big chunks of cash from Gates. The nine states also appear to have people working for them that know the difference between RAM and ROM. Don't you have equally competent people advising you as to what is a proper solution or have they been bought off as well?

If your current solution becomes the final solution, then expect hackers and geeks to run rampant over the net and through your own servers and files since the Rule of Law will have been ignored by the highest officials in a "bought and paid for" justice department. (and because the only choice you will have will be Microsoft products which have huge security holes that any high school kid could penetrate) Wake up people!!! This isn't some minor computer game squabble. This will mold the future of

the computer industry in the U.S. for decades to come.

If you blow this, fully expect a call for an investigation of the officials in your department who let this happen and what they had to gain by selling out their fellow Americans. Also expect that the computer industry will find a way to brand each of you individually and publically on the World Wide Web for the traitors you will be. End the terrorism in the computer field by clamping down on the 5000 lb. gorilla that is holding the world as hostages to the vision of only one man. Bill Gates. He is the computer world's version of a Bin Laden and your response is to let him promise to behave in the future. Tell that to the thousands of people who lost their jobs because Microsoft ran them out of business. Tell that to their families who watched brilliant ideas get smacked down by Gates and his heavy fisted approach to the "free enterprise system".

Stand up and show the world the value we Americans place on a free market and a level playing field for all. The American dream of giving EVERYONE a chance to succeed is in peril and you must act to restrain monopolists and their terrorist values.

I have been in the software programming business for many years and I can say that you people are harming and slowing down technology and ideas. Ask any of those lawyers what a "cut-down" version of Microsoft Windows will do for them and ask them why and they will all stutter probably. You people are a joke on this issue. Focus on finding thieves and people that kill another, instead of operating systems the government and lawyers know nothing about.

Subject: re: Microsoft

Contrary to popular opinion I believe Microsoft has some wonderful products. I also think they have some great lawyers working for them. I say this because they broke the law and the law doesn't hurt them for doing so. Breaking the law is worthwhile for Microsoft because the proposed settlement makes their breaking the law worthwhile for them. In my opinion that has been the strategy of Microsoft: breaking the law is a cost of doing business. However, the law is supposed to be the law. Maybe Microsoft shouldn't be broken up but they need to pay for breaking the law. There needs to be an incentive not to break the law similar to the death penalty; three strikes and you are out. If they do the crime they must pay for the crime. It needs to hurt. It needs to punish.

Microsoft is unrepentant for its actions. Unrepentant citizens get more jail time. Unrepentant criminals don't get parole. Microsoft should be treated no differently than a citizen. They should not be an exception to our rule of law. Their corporate license is a privilege given by the government and the people of the US. They need to understand they report to their shareholders AND they report to the American voting citizens via the law. The Justice Department can do better than the current settlement.

Please give the American people our justice. Make Microsoft realize that the law is not just another cost of doing business.

Sincerely,
Frank Nickerson

Subject: Microsoft Settlement

Hello,

In accordance with the Tunney Act, I'd like to make some comments regarding the tentative agreement to Microsoft's Federal antitrust case that the U.S. Department of Justice, nine States, and Microsoft agreed to in November.

I'm CC'ing the Attorney General of Minnesota as well as some local media outlets, so they can all know what kind of comments people are making regarding this case. For their convenience, I provide the following URL so they can read the agreement for themselves: <http://www.usdoj.gov/atr/cases/f9400/9495.htm>

I am currently a student attending the University of Minnesota in Minneapolis, MN. I'm focusing on Computer Science, for which I've done a fair amount of programming in Linux and Solaris, Sun Microsystem's variant of Unix. I also work on campus, supporting Linux and Solaris systems at the Carlson School of Management.

Most of my comments are based around part III., the "Prohibited Conduct" portion of the document. In short, I feel that this is a poor agreement that is quite favorable to Microsoft. The Department of Justice and the nine States should withdraw their consent to the agreement or alter the agreement. Failing that, I believe that the Court should reject the agreement and find other remedies.

First off, I was surprised in a number of cases to see what appears to me to be gaping loopholes that would seem to make the agreement almost entirely ineffectual. I may be misunderstanding the precedence of different portions of legal documents, but the statements are unsettling to say the least.

On the second page, in part III.A., the settlement states "Nothing in this provision shall prohibit Microsoft from enforcing any provision of any license with any OEM..." I'm unsure what "this provision" means in that statement, but whatever portion of the settlement it covers, it seems to void. It appears that Microsoft could draw up any license agreement they want with any Original Equipment Manufacturer, and have it go into full effect.

The next paragraph starts off, "Nothing in this provision shall prohibit Microsoft from providing Consideration to any OEM with respect to any Microsoft product or service..." This is coming from a portion of the document (III.A.) that starts off, "Microsoft shall not retaliate against any OEM..." It would seem to be that "Consideration" would be the opposite of retaliation (and, in fact, the definition of "Consideration" at the end of the document seems to reflect this). Microsoft would be, in theory, restricted from retaliating against any OEM. However, they could provide Consideration to any other OEMs. It seems to be basically the same effect, in my view. Again, in III.F.3., similar wording comes up. "Nothing in this section shall prohibit Microsoft from enforcing any provision of any agreement with any [Independent Software Vendor] or [Independent Hardware Vendor]..." It appears that Microsoft has voided another chunk of the document.

It continues. In III.G., the top of page 5 starts with, "Nothing in this section shall prohibit Microsoft from entering into any...joint venture or...services arrangement..." Forgive me for saying so, but this document seems to be turning into Swiss cheese!

I'm just a layman when it comes to legalese, so I may be misinterpreting. Still, this is only the beginning of what I have to say.

In III.A.2., Microsoft is restricted from retaliating against OEMs "shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System." That seems pretty nice, but it leaves out the options of selling computers either with no Operating System at all, or with a single non-Microsoft Operating System.

In III.C.2., OEMs are allowed to distribute or promote "Non-Microsoft Middleware by installing and displaying shortcuts...so long as any such shortcuts do not impair the functionality of the user interface." I think it would be appropriate to try to determine what "impair" means, or set up a structure for determining what that means.

Related to the above, III.C.3. mentions that OEMs could set up certain pieces of software to launch automatically, even if similar Microsoft products exist. However, this is under the condition that the software either has "no user interface or a user interface of

similar size and shape to the user interface displayed by the corresponding Microsoft Middleware Product." How is "similar" defined here? Wouldn't having a similar interface potentially lead Microsoft to attack makers of such software, possibly on the grounds that they had infringed on a Microsoft trademark, copyright, or patent?

Another similar portion is in III.H. The section numbering seems screwed up here, so I'll call it paragraph four on page 6. Microsoft is allowed to let Windows start up a Microsoft Middleware Product when the "Non-Microsoft Middleware Product fails to implement a reasonable technical requirement". Microsoft recently used similar logic to prevent a number of high-quality web browsers from accessing web pages on their MSN network. Microsoft may have had some legitimate reasons for doing so, but there were some documented cases where Microsoft restricted browsers that fully met Microsoft's technology requirements. Letting Microsoft define what this means would be a really bad idea, in my opinion.

There are some portions of the settlement relating to releasing documentation for communication protocols and programming interfaces for Microsoft Operating Systems and their related products. III.D. requires Microsoft to release documentation within 12 months for Windows XP. New documentation will appear for each "new major version" of the Windows Operating System. I would note that the traditional method for specifying a new major version is to increment the number to the left when the version looks like "X.Y". For instance, going from 1.0 to 2.0 or 3.9 to 4.0 would constitute a new "major version". There is no need for Microsoft to do this when they release new Operating Systems. Microsoft Windows 2000 was also known as Windows NT 5.0. At a somewhat low level, Windows XP is also known as Windows NT 5.1. If this practice continues, Microsoft could theoretically keep going up to version 5.999 if they wanted to, and not release any new documentation.

Additionally, I'm concerned about the restrictions Microsoft might place on the use of documentation for their programming interfaces and communication protocols. It appears that Microsoft may only release information through their Microsoft Developer Network (MSDN). What if Microsoft requires people to pay to be part of MSDN? This could prevent developers of Open Source software from building interoperable products. Additionally, licensing terms could be put together that would prevent people from using the documentation in a non-commercial product.

III.J.2. indicates to me that Microsoft does not want to release any information to non-commercial developers. It states that Microsoft can request in a license that the licensee "has a reasonable business need for the API..." and that the licensee "agrees to submit, at its own expense, any computer program using such APIs...to third-party verification, approved by Microsoft..." Certainly, an open source developer would be unhappy to shell out large amounts of money to verify to Microsoft that their software works. Additionally, even many businesses may balk at this idea. I'd wonder

what sort of expense would be imposed upon licensees. In the same area of the settlement, III.J.1. and III.J.2. state that Microsoft does not have to release documentation for security-related portions of programming interfaces and communication protocols. This would restrict non-Microsoft software from being fully compatible with Microsoft software, potentially causing the software to not function at all. I have never seen any documentation for Microsoft's APIs or communication protocols, but I have heard from many people that such documentation is often poorly written or just outright wrong. If Microsoft intends to continue such poor documentation practices, any concessions they make in this settlement will likely have only a small effect on people who wish to make software products that are compatible with what Microsoft distributes.

I find it strange that one of the last lines of the settlement, in VI.U., is this: "The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion." I recall that one of the big questions in this case revolved around what portions of software code could be considered to be part of the operating system. This seems like a strange statement to make, and I would worry that it could cause another protracted court case like this to come up in a few years.

I'm done dissecting the settlement, so now for some more general comments. It would seem to me that the point of this settlement is to prevent Microsoft from repeating past aggression against various vendors in the computer industry. One of the mightiest tools that Microsoft has in its toolchest is the Dollar. It is widely understood that Microsoft has vast reservoirs of cash, and they know how to use it to quickly acquire, in part or in full, other companies that have competing or potentially useful technology.

In my view, Microsoft does not practice innovation, they practice "buiynnovation". So many companies have been assimilated into the company that I doubt anyone has an accurate count. I feel it would be a good idea to reduce Microsoft's ability to acquire new technology in this manner. One possibility would be to impose a monetary penalty on Microsoft. I would certainly hope that flushing the company's bank accounts would change the way it does business. I'm sure there are other ways to slow Microsoft's acquisition of technology.

Microsoft is starting to work its way into many areas that are connected to the software Microsoft makes, but are not software ventures themselves. The Xbox gaming console is one of many examples. It seems that Microsoft would like consumers to live their entire lives in a Microsoft-dominated world, using a Microsoft-approved Internet Service Provider and viewing Microsoft-generated content. This concerns me greatly, and I would love to see something that forced Microsoft to be just a software company again.

Almost at the expense of anything else, Microsoft seems to hold its intellectual property most closely. It recently came out that Microsoft is attempting to stall the European Union investigations into its

activities by saying that much of the requested information is covered under intellectual property rights. Within its new NET strategy, Microsoft has patented a lot of stuff. These patents could come back to haunt the parties in this case, and there are many references to intellectual property in the settlement. If Microsoft desires so greatly to hide behind the shield of patents, I feel they must have an ace up their sleeves. I feel the Court should nullify some of the rights Microsoft has by voiding patents held by the company, at least in certain areas.

I've finally come to the end. I thank the Department of Justice for accepting my comments, and hope the parties involved in this case can come up with a better agreement that addresses the concerns I have.

Sincerely,
Michael Hicks

Subject: Microsoft Settlement

The proposed settlement of the antitrust case against Microsoft is a dismal failure to provide any significant penalty, much less remedy.

First, the present case is predicated in part upon the failure of Microsoft to follow a previous consent decree. Pretending their behavior will materially improve with a second such decree is at best demonstrating a disregard for past events, and at worst collusion.

The presence of a trio of powerless enforcement watchdogs, paid and accommodated by Microsoft, living in the Microsoft culture, is akin to setting a young fox to guard the henhouse; sooner or later, the fox grows up.

Second, allowing Microsoft to settle matters with "charitable" donations of (some) hardware and (much) software demonstrates a clear ignorance of the problems Microsoft presents the industry, as well as a failure to understand simple economics.

Microsoft's power is derived from ubiquity; they gain market power with each additional user on their software, in a powerful network effect. With schools, in addition, they gain the opportunity to influence an impressionable young mind into using their software over another product, creating a lifelong customer. When tobacco companies use these tactics, they are vilified. When Microsoft uses these tactics, it is called charity?

Even setting aside the clear benefits gained from indoctrinating schoolchildren, this "charitable donation" offers no remedy whatsoever to competitors or consumers. They regain no market share, acquire no financial restitution, and gain no benefit from the resources and goodwill they have expended in helping to bring this issue before the court. Indeed, those who have testified against Microsoft are now placed in an exposed position, known to Microsoft as an enemy while they simultaneously depend on knowledge from Microsoft to develop and sell their products on the Microsoft platform.

Finally, any fixed-value donation where the donor sets the value of each item

donated is inherently worthless—should Microsoft choose to set the price of their software at 1 million dollars per unit, for the purposes of this donation, there would be no recourse. That is, of course, an extreme example, but the cost to Microsoft of providing an additional "license" is negligible. Their donation consists of nothing tangible and costs them nothing to offer. It is entirely a sham.

Third, reading the fine print of the agreement as recently published, it is notable that interoperability requirements placed upon Microsoft refer exclusively to commercial enterprises. This is a significant loophole when the "only" competitive threat to Microsoft on the desktop consists of the Linux operating system and associated open-source software. Shall Microsoft be required to provide interoperability information to "commercial competitors" while freezing out Linux (which needs to read Microsoft filesystems), StarOffice and other open-source office packages (which need access to the Office file formats), Apache (which needs to interoperate with Microsoft's Internet Explorer browser), Samba (which provides network file-sharing compatibility for UNIX systems), and other open-source projects?

It is worth noting here that any commercial product whose only competition is free has demonstrated that competition is unprofitable, and hence, impossible to sustain.

Fourth, the antitrust case against Microsoft neglected to examine the entire issue. This is not a case where a single monopoly exists, but rather a network of interconnected monopolies and potential monopolies. I have outlined them below:

1) The operating system monopoly. Microsoft has an unchallenged monopoly on desktop operating systems for the Intel platform. It is impossible to get a single desktop computer from a major vendor of Intel-compatible computers with either a) No operating system or b) any non-Microsoft operating system. The naive will present the Macintosh or Linux as counterexamples. I respectfully request that the Macintosh advocates return when the market agrees with them (we can measure this by allowing them to return when they need to use their toes to count the Macintosh market share percentage). Linux, of course, is a free product and not a commercial venture. As such, its presence as the only "competition" merely reinforces the point that commercial competition with Microsoft's monopoly is impossible.

2) The office software monopoly. Many companies depend on the Microsoft office software suite to run their business. This software is bug-ridden, plagued by security holes, continually increases in cost, and does not reliably interoperate with any other package, including prior versions of itself. Despite this, the software has become a widespread standard, and enjoys the same powerful network effects as Microsoft's operating system.

In the year 1990, there existed a number of viable Competitors offering alternative software packages. By the year 1995, many of these alternatives had ceased to exist. By the year 2001, NONE of those alternatives has

remained profitable, and only one remains in business. Their marketshare remains in the single digits, their product has not been substantially updated in years, and they were saved from bankruptcy by an investment from Microsoft. They exist at the sufferance of Microsoft—a token competitor.

Is this what happens to superior products in a free market? No. Microsoft can use the "taxes" paid by OEMs on their shipping operating system to fund development of their office applications, and offer them as bundles to OEMs at low prices. Exclusivity agreements prevent the OEMs from offering alternatives without paying higher prices overall, and being undercut by their own competitors. Those who prefer not to offer the Microsoft software at all face higher prices for operating system licensing. Users buying a new computer end up paying for a Microsoft operating system (whether they want it or not) and a Microsoft office application suite (whether they want it or not) because it is cheaper for OEMs to play Microsoft's game than try to survive without the ability to bundle Microsoft's software at the market rate.

It is notable that no major OEM provided testimony against Microsoft during the trial; they know that Microsoft knows who its friends are.

3) The browser monopoly. When the internet threatened to shake Microsoft's hold on the market, Microsoft responded by attacking its competition for browser market share (Netscape) fiercely. This was the ONLY major issue the two antitrust actions have attempted to deal with. Both attempts have failed to produce any noticeable change in the pattern of Microsoft's behavior.

4) The potential media monopoly. Microsoft presents a credible threat of leveraging their operating system monopoly to gain a monopoly on software for the display of streaming media (internet video and audio). This is a clear violation of antitrust law. No court has attempted to address this issue.

In conclusion: There is only one remedy which offers any hope of redressing the harm done to the free market by Microsoft's abuse of their monopoly. Microsoft must be split into the following entities, all of which must be forbidden to collaborate with each other:

1) At least 3 companies offering the Windows operating system. These companies must be compelled to offer the Windows operating system with full source code and without any application bundles (Office, Internet Explorer, etc) to all customers at no additional cost. The cost of the operating system must be publically posted, special discounts to individual vendors forbidden, and any references to other software products forbidden. These remedies are nothing more than current antitrust law requires of a monopoly.

2) At least 3 DIFFERENT companies offering the Office application suite, under the same conditions.

3) At least 3 DIFFERENT browser companies offering Internet Explorer, under the same conditions.

The proposed settlement, in its present form and in any conceivable revision, addresses none of the problems and provides

no solutions. It is a gross miscarriage of justice and must not be allowed to stand.

Subject: Re: Microsoft settlement proposal.

To Whom It May Concern:

I am appalled to hear the news of the proposed settlement with Microsoft for their crimes against fair competitive practices and intellectual property violations. In particular the proposed distribution of Microsoft's software to educational institutions seems like another catch by Microsoft to trick even more entities into using their inferior and insecure product.

I do agree that much help is needed by less fortunate educational institutions, but letting Microsoft extend its market will be comparable only to "the first one is for free" policy of drug dealers. There are other and superior alternatives to MS products, Mac and Linux products, to name just two of them. In my opinion Microsoft should indeed pay the proposed \$1 billion dollars in penalties, but the sum should not include any barter of their software.

I cannot help but notice that this evil corporation has a strong grip on our legislators and, what is so sad, on our government. I am carefully watching the proceedings of this case and my future voting decisions, as well as those of many of my associates, will largely depend on the resolution of People vs. Microsoft.

Please note that by "people" I don't mean just the formula but real citizens—those citizens who do realize the extent of damage induced on the industry by the Redmont monster.

Respectfully,
Darius Zelichowski, Buffalo, NY

Subject: DOJ will look foolish

Microsoft is dominating the computer market with windows and will dominate the Internet with the .Net strategy if more effective action is not taken. Microsoft has always beaten the competition with business tactics that would not be acceptable in any market.

If the current plans are taken, the DOJ will turn their opportunity to restore competition

to the marketplace into a big win for Microsoft.

I work in the computer industry as a software developer and the general consensus in this industry is that Microsoft and their powerhouse teams of lawyers have turned an anti-trust case into a big Microsoft victory. Furthermore, the plans for Microsoft to give away PC's loaded with Microsoft Windows to the country's poorest schools should not be allowed to take place. This would only deepen the penetration that Microsoft has in the educational market. OpenSource alternatives should be considered and I believe should be the first choice to helping build a viable alternative to windows loaded PC's. With a combination of Linux (redhat.com), Sun Microsystems's StarOffice (OpenOffice.org), gnome foundation software (gnome.org), the Apache group (apache.org), and many other OpenSource alternatives (opensource.org), a platform without any proprietary Microsoft code could be an effective alternative for students. This would open a door to a powerful Unix-like operating system that has been proven to be very stable and robust in the worlds of scientific and data processing computing. Any settlement that would require Microsoft to pay damages to avoid litigation should strictly prohibit the use of Microsoft Windows as the operating system loaded on those PC's.

There is no mention of Microsoft's strategy to control the Internet with the .Net initiative. This quote from the Microsoft Developers Network (MSDN) is a blatant example of how Microsoft views Standard Organizations. "Microsoft believes very strongly in Internet standards and the standards process, and is committed to implementing appropriate standards when driven by customer demand. However, standards compliance is part of a larger effort that includes many constituencies. By innovating, and driving customer requirements into Internet Explorer and then into the standards groups, we'll make the Internet a richer platform for all users."

They believe in the standards process, as long as they are making them up. If this plan is executed then Microsoft will not only continue to control the desktop market, but will push their way into the server market and dominate the Internet.

If the DOJ does not take more appropriate action, then the world of computing will become a one-man show.

Subject: Microsoft Settlement

Hi. I'd like to comment on the proposed Microsoft settlement. I object to everything in the settlement that says that Microsoft need not disclose its API or communications protocols to anything other than a for-profit business. (Sections III(J)2, III(D), footnotes.) Much of the most successful software using MS's protocols is open source; e.g. Samba. Many, many people including for-profit companies rely on Samba (a piece of

compatibility middleware) to let Windows talk with Unix. If the current language passes, MS would be able to choke off technical information from the Samba group and groups like it, hurting one of the biggest current sets of beneficiaries of interoperability with Windows. Open Source software is MS's biggest competitor, which is likely why they fought for those constraints. The DOJ should not make a bad settlement that would allow MS to hide information from Open Source teams, which are some of the biggest current successes wrt interoperability with Windows.

Sincerely,
Jeff

Subject: microsoft anti-trust case
Hello,

As a citizen of this great country, I agree with providing the poorest and rural school districts a way of improving the children's lives in education. Intellectual property in the private sector and charging a fee for using the product, i.e., software is beneficial for the individual, or company who developed it. The hardware, i.e., circuitry is a one time purchase, but the software costs much more in upgrades and no production other than typing command codes for an output, then not allowing anyone to improve without charging a fee, in the public sector of education is charging the people who instruct America's future, and restricting their abilities by charging a fee for intellectual property, is outrageous; an outcry from the very people, our future leaders, to be hindered by a sum determined not by the public sector, but the commercial sector, appalls the very foundation this country is based upon.

I myself, as a voting citizen agree in part with the hardware portion of the settlement, but denying other commercial, or public entities, who have the same entitlements to provide intellectual property to be included, at Microsoft's cost an opportunity to install, and provide the same or greater level of improvement to our poorest, deprived children who hold the future of us, the retiring public a future also.

The proposal, the open source entity, has a great opportunity to not only improve our children's future but also the life long learning of our citizens who are consumers of the intellectual properties and pay for the right to use, but not improve the software that benefits our lives.

Please include the proposal Red Hat Software has offered in your amended judgment in the settlement, because it's a benefit to the same people whose lives it improves, our poorest citizens and our future leaders

Sincerely,
Clyde Coffey

Subject: Microsoft Settlement

To whom it may concern:

I have some concerns about the proposed antitrust settlement with Microsoft, which I'd like to voice.

First, as I understand it, Microsoft will give its software to schools along with donations of computers. One thing that is important to remember about the software industry is that after the first copy of the software has been sold, it essentially costs \$0 to make the second copy. As a result, it will cost Microsoft extremely little to give its software to schools (except for the cost of media and possibly technical support).

Another important thing to remember is that since Microsoft does not publish their APIs or the file formats for the Office suite, it will be very difficult for the schools to move away from Microsoft products; the documents they may have created using the donated equipment will not be readable with other software products. As a result, the schools will be 'locked in' to Microsoft software, and will be forced to upgrade in the next product cycle. For example, Windows 95 has just become officially unsupported by Microsoft, so Microsoft is not making its software products compatible with Windows 95. Any licenses for Windows 95 that schools may have are now worthless.

If the APIs and file formats were published, then various other companies or open-source projects could guarantee full compatibility with documents created with the Microsoft Office Suite. This would provide an avenue for consumers to move away from Microsoft products, hurting Microsoft's monopoly. Currently, such competing projects attempt to reverse-engineer the APIs and file formats, with very limited success. For example, NTFS (the Windows-NT File System) support on Linux is extremely flaky, and has been threatened with legal action from Microsoft. If the documentation for NTFS was available, Linux would very quickly have full, seamless support for NTFS filesystems. With this support in place, it will provide an avenue for consumers to move away from the Windows NT product line to other operating systems (such as Linux) without destroying all of their important data.

It is important that these data be published without any restrictions. The current settlement gives Microsoft the ability to decide who is allowed to view APIs, Documentation, and Communications Protocols. What would stop Microsoft from preventing some groups from accessing this information?

I believe the settlement should include one or more of the following requirements:

- Put their API and file format documentation in the public domain, without any non-disclosure agreements or other restrictions on usage.
- Fund the development of competing products, such as various open source products (OpenOffice, AbiWord, Gnumeric, the KOffice suite, SaMBA).
- Provide a donation of hardware and competing software to schools. If children only know how to use Microsoft products, it ensures the future success of Microsoft's monopoly. However, if we teach them how to use other products, it will hurt Microsoft's monopoly. Red Hat Software

has publicly supported this option, and offered to provide the software and support for free.

—Force Microsoft to stop using its software dominance to encourage use of its other products (i.e., using the Windows XP installation to advertise Microsoft's MSN network, Microsoft's Passport authentication service, etc.). This is like selling milk with flour built-in, as an integral part of the milk product, in order to bake bread. It simply makes no sense, especially if there is only one brand of milk on the shelves.

Thank you for your time and attention on this topic.

Sincerely,
Brian Pike

Date: 12/8/01 2:33am
Subject: Microsoft Settlement

To Whom it May Concern,

Microsoft has proven to be very adept at locating loop holes in the law, and stretching the business ethics that govern business in the US. While commerce isn't necessarily governed by ethics as much as by law, an argument could be made that there are certain behaviors that deem a reward and other behaviors that require condemnation. Microsoft has been a powerful, positive influence on the US and global economy. Bill Gates has made many personal contributions to charities. But by all indications, Microsoft has no intention, and has never had any intention, of competing in an open market.

Now that they have effectively eliminated any commercial entities that may have produced a competing operating system, who is left to lead the charge? Competition serves not only the financial concerns of the market, but it also serves to push technology forward in many different, unpredictable and ultimately beneficial ways. Any settlement that leaves Microsoft intact, or that allows their input, will only serve Microsofts interests.

Simply revealing the Grand jury disposition of Bill Gates will reveal the combative and elusive nature his company has inherited from his leadership. Make no mistake, Microsoft is no more interest in a fair settlement today than they were three years ago. They will subvert the meaning of any settlement and challenge the courts to years long battles. Microsoft must be stilled now.

From: Paul Rupe
To: Microsoft ATR
Date: 12/8/01 3:03am
Subject: Microsoft Settlement

Upon reading the proposed settlement in the US vs. Microsoft anti-trust case at <<http://www.usdoj.gov/atr/cases/ms-settle.htm>>, I am struck by how little it actually accomplishes. The terms of this lopsided "compromise" truly leave me in doubt of who actually won the trial. While some Microsoft proponents will no doubt claim that any desire to see a stronger remedy demonstrates an envy toward a successful company, I only wish to see a fair marketplace where interoperable products can compete on their own merits.

Below are specific weaknesses in the current settlement proposal and some suggestions for additional remedies:

Section III.J.1: "No provision of this Final Judgment shall: Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems..."

I see two problems with this: First, Microsoft can manipulate the design of their software so every major component is somehow inextricably tied to some security measure. They already attempted to finagle their way through the trial by claiming that their Internet Explorer web browser was an integral part of the Windows operating system and that separating them was technically infeasible. I have no doubt that Microsoft will try to do the same "integration" with DRM or other components protected by this clause in order to close off as much information as possible to would-be competitors. For example, nothing stops Microsoft from adding some trivial encryption scheme to Word documents and then claiming that it is an anti-piracy measure that must be kept secret. No one can license rights to this new "encryption" under this clause, and anyone who attempts to reverse-engineer and discover it on their own risks prosecution under the Digital Millennium Copyright Act (DMCA).

Second, the restriction is completely unnecessary—and in fact, antithetical—to the goal of providing consumers with secure, high-quality software. Instead, it promotes "security by obscurity". History has shown again and again that the most secure protocols are those that are openly available for analysis and critique by unbiased experts in the field. The well-documented Pretty Good Privacy (PGP) system has been around for years without a major security flaw, while

closed, proprietary systems like Microsoft's own access control mechanism in Windows Media Player are cracked¹ with almost laughable ease. Frankly, if merely disclosing the algorithm behind a particular security measure is enough to compromise it, then it is not very secure to begin with. Given the very real costs of data loss and identity theft in today's world, we cannot afford to use anything less than the most robust and well-researched security measures available.

Section III.J.2: "(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business"

This clause conveniently allows Microsoft to exclude all open source development from the benefits of Section III, thus shutting out a major competitor.² Microsoft has publicly stated that they consider the free software movement a "cancer",³ so we can safely assume that the chances of (for example) Linux meeting any such standards they set are zero. The goal of this anti-trust remedy is to restore fair competition to the marketplace. It is a mockery if Microsoft is allowed to pick and choose its competitors.

The only fair thing to do is make all communications protocols, file formats, and APIs publicly available free of all licenses and restrictions. I am very disappointed that Section III.J gets bogged down with terms like "intellectual property." As a software engineer, I can say that there is rarely anything insightful or innovative about file formats or communications protocols themselves. Usually they are simply arbitrary arrangements of fields in a data structure, the result of convenience to a particular implementation rather than clever research or design. Protecting them as if they were groundbreaking inventions serves only as an artificial barrier to interoperability and certainly does nothing to "promote the progress of science and useful arts" as the Constitution states.

The idea that one company can gain exclusive rights to something as basic as a method of arranging data is absurd. It would be like Ford saying no other automaker could put the gas pedal on the right and brake on the left. Ford's actual mechanical implementation of gas and brake pedals may very well be protected, but the left-right arrangement itself should not be. Microsoft's hypocrisy in this regard is particularly astounding. There would not even be a World Wide Web for them to dominate were it not for open standards like TCP/IP and HTTP; yet they want to keep their own communication protocols secret for the sake of "innovation." True innovation comes from competition and competition requires interoperability.

Since Microsoft has deliberately used proprietary data formats and APIs as weapons against the competition, they should have the ability to freely create such

things taken away from them. Forcing them to publicly disclose all such interfaces in advance and without any licensing restrictions would not punish Microsoft unduly nor put them at a disadvantage. It would only level the playing field again and allow other companies to build fully compatible products that can compete on merit alone.

Also missing from this settlement is any remedy for Microsoft's past behavior. The current trial has been going on for years, all the while Microsoft has brazenly used the same monopolistic tactics to tighten their grip on the marketplace. As almost a slap in the face to this trial, the recently released Windows XP has more bundled features and more blatant promotion of Microsoft-affiliated services than ever before. Any remedy that does not address that is an insult to the anti-trust laws and to the American people. As a start, I humbly suggest a large monetary donation to the Free Software Foundation.⁴

Since Microsoft is a repeat offender, the punishment here should have a strong deterrent value. Logically, if the cost to Microsoft of yet another anti-trust trial five years from now is less than the benefit of continuing their anti-competitive practices, then they have absolutely no reason to change. If this happens, then the Department of Justice has wasted its time and staggering amounts of taxpayer money for nothing.

I am pleased that Section III.A finally acknowledges once and for all that the exclusionary contracts between Microsoft and OEMs are unlawful due to Microsoft's monopoly status. But by similar reasoning, should the End-User License Agreements (EULAs) between Microsoft and consumers also be examined? In particular, consider the "as-is" clause that absolves Microsoft of any liability for the damage resulting from defects in their software. Among other things, this prevents consumers from seeking compensation for the billions of dollars in damage done by malicious software such as Code Red, Nimda, and countless e-mail viruses that can exist only because of gaping security holes⁵ in Microsoft's software. Ruling Microsoft a monopoly means that consumers were forced to accept this "as-is" clause under duress, so like the OEM contracts, perhaps it should be voided as well.

Another remedy is inspired by the actions against tobacco companies. When they were deemed harmful to consumers, all tobacco products were required to carry a strongly-worded health warning. Similarly, since Microsoft has been found guilty of hindering free market competition at the expense of consumers, require all of their products to bear a short, factual statement to that effect. Provide consumers with all the facts without any positive "spin" by Microsoft so they can make an informed decision. If this sounds harsh, consider that individuals convicted of serious crimes lose some of their rights and

gain a permanent mark on their record. Microsoft should be no different.

The settlement currently proposed would change very little. It leaves Microsoft with too many loopholes to effectively continue doing business as usual and fails to address the damage already done and continuing to be done even now. I would rather see the trial continue for another year or two and produce an effective remedy than accept a watered-down, short-term compromise that will lead only to another round of violations and court trials in a few years. I hope the Department will truly consider these points and take the time to devise a more substantial remedy, one that seeks less to accommodate a guilty party and more to reestablish meaningful competition in the PC software industry.

Subject: So monopolies are legal.

It is my inexpert opinion that Microsoft is clearly a monopoly. I believe Microsoft should not be allowed to continue their bullying dominance over computing, not just in the United States, but worldwide.

Microsoft's product line continues to expand into markets not related to their "core" business.

Xbox game consoles?

Microsoft Network?

Microsoft is a monopoly as far as the average IT person is concerned, regardless of what their massive legal team would have the media tell everyone to believe.

No matter where you go or what business you are in, as an IT person you are forced to endure their shoddy products. Everyone "demands" them, regardless of how much damage they do to the files or information they process.

The only way such massive influence could exist is through the undeniable fact that Microsoft, by hook or by crook, has become a computing monopoly.

No one company should have such complete control over such a fundamental cornerstone of modern business or society.

If the DoJ does not slow down the M\$ juggernaut, and institute some real controls over what M\$ is or is not allowed to offer as products, then the effort has come to nothing.

Please, do not go easy on M\$.

Their influence is too pervasive in every aspect of computing to be allowed to continue unchecked.

Take appropriate action now.

What saddens me is that most of the DoJ documentation and email is probably prepared on and handled by M\$ products, which makes me think the whole effort of writing was a waste in itself.

Subject: Microsoft settlement

(This is similar to an email I previous sent, but with 2 new points (see 10 and 11) and some more enhancements on previous points.)

I believe that any settlement that would have a chance of restoring competition to the computer industry would require at least the following:

1) All terms must be enforced by a non-Microsoft party with full access to all Microsoft resources, including source code, email, memos, letters, working papers, etc. There is no such thing as a confidential document for Microsoft anymore. Microsoft cannot be trusted to voluntarily comply with any agreement.

2) All communication protocols used by all Microsoft products must be fully documented. Such documents must be made available to any and all parties for any reason, free of any charges or limitations in use. Microsoft is not allowed to change their protocols until 90 days after documentation of such changes are made available to any parties requesting them, free of charge or limitations in use.

3) The previous term must also apply to all Microsoft APIs (Application Programming Interfaces).

4) Microsoft may not keep agreements secret. In particular, the terms of the current OEM agreements, currently protected as "trade secrets" must be disclosed.

5) Microsoft may not use agreements with Computer OEMs to restrict in any way the addition of other software to the computers. In particular, OEMs are not to be prohibited from selling "dual-boot" systems, where the system can be booted into Windows or into some other operating system, such as Linux or a form of BSD or BeOS.

6) Microsoft may not use their licensing terms to stop users or developers from using Open Source software or Free Software.

7) Microsoft may not meddle in the legislative processes of Federal, State or local governments or bodies that make recommendations to them, with their work on UCITA being a prime model of behaviour that is prohibited to them as a monopoly.

8) Microsoft services (such as MSN or hotmail) may not require the use of microsoft software by users wishing to use the service. (Which Microsoft did on MSN, restricting non-MS browsers.)

9) Microsoft services, such as MSN, must not be forced upon users through exclusive contracts with ISPs or LECs (such as currently with Qwest).

10) Microsoft products sold on OEM systems must be priced separately. The same systems must be available to the consumer without the Microsoft products and the price must be discounted by the cost of the microsoft product. "Per CPU" licensing is prohibited. The OEMs are charged proportionally to the copies of Microsoft products they sell. Microsoft cannot charge based on sales of OEM machines that do not have the Microsoft products included.

11) Microsoft is not allowed to use the price of software in calculating the value of any settlement, payment, or in publicity regarding same. (as in the ridiculously inflated value of their proposed aid to

schools in exchange for gvetting private suits dismissed).

Subject: Re: U.S. v. Microsoft: Settlement Information

To Renata B. Hesse (or whom it may concern):

I strongly agree with Steve Jobs' statements against the earlier proposed Microsoft settlement. In particular, requiring Microsoft to donate their products to schools isn't punitive as the cost to Microsoft would be negligible. Worse, such a donation would increase the prevalence of Microsoft products in schools and so make it more likely that exposed students would continue using Microsoft products at home and later, so strengthening Microsoft's monopoly.

Unfortunately, the revised settlement isn't a significant improvement. While it is true that I have not had a chance to thoroughly examine the newly proposed settlement, on first reading, it seems to lack any significant fines or penalties (particularly when considering the economic size of Microsoft but even for a much smaller corporation). Minimally, I think the settlement should include a substantial fine (on the order of several billion dollars per year) over the course of 5 years (or longer).

Further, significant safeguards should be implemented to prevent Microsoft from using their OS monopoly power to take over other markets and force competitors' products off of the market. In particular, care should be taken toward .Net and Passport.

Subject: Harsher penalties are needed!

To whom it may concern,

I just wanted to express my concern that the proposed settlement does not do enough to eliminate the monopolistic practices of Microsoft or promote more competition. Knowing that your time is valuable I will try to keep this short and brief. I recently started to experiment with Linux in an effort to make sure I was not held hostage to paying yearly subscription fees to use my computer. I fear that Microsoft in the near future will resort to annual licenses even to the operating system so that it can maintain consistent revenue. Well in my experiment I tried to access one of my favorite sites

www.cnbc.com. I love and use the personalized stock ticker on that site nearly everyday. It was only then that I realized that I was unable to run that feature using Netscape. I would have to use Internet Explorer. I then realized that I can't get Internet Explorer for any other operating system besides Windows. Finally I noticed that CNBC and ESPN (another one of my

favorite sites) had recently become affiliated with MSN.

It is because of this experience that I don't feel the proposed settlement is adequate. Even if you force them to allow vendors to place other competing products like Netscape on the Windows OS, I would probably still need to use Internet Explorer to get the full benefits of the websites affiliated with MSN. If I need to use Internet Explorer to get the full benefit of my favorite site, why would I install a competing browser? To view sites that aren't affiliated with MSN? I may be wrong but it seems to me the possibility of Microsoft influencing the content of websites to dictate which browser and operating system I use exists. I contend that it is an abuse of monopolistic power and is currently in practice. Your proposal does nothing to eliminate this practice.

I suggest that in addition to your proposed settlement, Microsoft has to open up the web sites it controls, owns or influences to most competing products. Only then will competitors become viable options. Internet Explorer will then truly be competing on it's merits versus being the only option available. Unless this step it taken, I'm afraid Microsoft's monopoly will only grow larger and stronger while competition and innovation become non-existent.

Sincerely,

Michael Harrison

Subject: Microsoft Settlement

The new settlement proposal from the 9 states is much better than the DOJ offering. If third-party-companies can license the Office codebase and release Office for alternative platforms, that helps to remedy one of the chief reasons for bringing the suit in the first place: Microsoft is locking people into a single platform. I would like to encourage the courts to favor the new settlement offer.

I do not feel that any settlement should force Microsoft to give away its software to schools as an act of atonement. This of course would simply kill off what little educational market Apple has left. It would serve to cripple a Microsoft competitor, not help.

Subject: Microsoft Case

Hi. I'm Daniel Kasak, a 25yo Australian. I work for NUS Consulting—http://www.nusconsulting.com—as a programmer & database administrator. I have been following the Microsoft case closely, and am very alarmed with the following points (I'll be concise):

a) Microsoft are not receiving any real penalties for profit /already made/ at the expense of other companies they have ruined. As Microsoft has already been found guilty, there should be a reasonable attempt

made to judge the damage done in dollar terms to other businesses, and Microsoft should be forced to reimburse these companies. I realise this would be difficult and inaccurate, but at least a token effort must be made.

b) The terms of the current settlement exclude Open Source software from the terms of the deal—eg Open Source projects cannot get access information required to make their products work with Windows. Such Open Source projects include:

- * Linux—Operating system described by Microsoft officials as being Microsoft's "biggest threat". <http://www.linux.org>

- * Apache—Web serving software with more than 50% of the overall market. Microsoft IIS's biggest rival. <http://www.apache.org>

- * Sendmail—Email serving software with the most markets share. Microsoft Exchange's biggest rival. <http://www.sendmail.org>

- * Samba—File & print sharing software allowing non-Microsoft operating systems to integrate into a Windows-based network. <http://www.samba.org>

- * StarOffice—Sun's open-source desktop productivity suite. Microsoft Office's biggest rival. <http://www.sun.com/staroffice> & <http://www.openoffice.org>

- * Netscape / Mozilla—Web browser & Email suite. Microsoft Internet Explorer's biggest rival. I believe this is also one of the main reasons why they are in court now. <http://www.netscape.com> & <http://www.mozilla.org>

The list above is by no means exhaustive, but paints an interesting picture of Microsoft's business threats, and gives insights into why Microsoft has chosen to exclude "non-business" entities from the disclosure terms of the settlement. This is a MAJOR flaw in the settlement, and MUST be remedied.

In my opinion the original decision to split Microsoft into 2 companies would have addressed at least part b) of my complaint. I am saddened that this path was not taken. I urge you to reconsider letting Microsoft off so lightly. If they are not stopped soon, they will become so powerful and entrenched into our high-tech society that no court of law, government, or any other organisation will be able to affect them. Or has this already happened? I will wait for your verdict before I pass final judgement.

Thankyou for your time.

Daniel Kasak

Having Microsoft donate software to schools is hardly a punishment, in fact it is quite the opposite. By having their software in schools, for free, they're making sure that children learn to specifically use their software every where. If Microsoft software is all that people know how to use then doesn't that ensure them even more market share? Of course it does. It's a mockery of justice and an insult to the populace for our officials to try and pull a "fast one" on us like that.

Subject: Microsoft

ANY way you cut it Microsoft used their funds to leverage time, time enough to ruin companies competing with them and time to reduce the choices available to consumers.

Is that the environment we want in America?

They claim they need to right to innovate. But, only if Microsoft does all the innovating.

Why don't you ask Intel how they were constantly intimidated by Microsoft about imaging and graphics initiatives.

IT IS DOCUMENTED in InfoWorld, PC Week and others. What about companies like Lattice, Sybase, and Stac who attempted partnerships which was constructed to restrict their innovation to Microsoft's terms.

What viable and equal choices do we have today—NONE.

NOW Windows XP is more stable than Windows 2000? Why don't you get a copy of the launch of windows 2000 and see those claims. I guess Microsoft feels we are a bunch of idiots and have complete contempt for the general public. What about their performance in front of the panel during their anit-trust trial. Does that not say enough?

All they do is shift the problems from one area to another under the belief that all is OK.

Just gloss up and pretty up the desktop and everyone will ignore the problems?

Their software is certainly not worth what they ask for it.

Office Packages—when there was competition an office package was @250.00. As soon as the main players went belly up now the price is mid \$400.00 and up. For what. Why can't I CHOOSE how many features I want and pay appropriately. Since Microsoft claims to be the software giant of the world is this too tuff for them to handle. Or their arrogance just allows them to just charge us what ever they want whenever they want.

Something significant should be done FOR Microsoft STIFLING INNOVATION.

The whole thing stinks for all of US.

Subject: Microsoft Settlement

To Whom this May Concern:

I wish to voice my option on the Microsoft settlement as a University student, a user of Microsoft products, and as a citizen of our great nation. I am strongly opposed to the penalties on Microsoft, there penalties are weak and need to be changed. I agree with the 9 states who are now, seeking there own settlement, but now unfortunately my home state New York has settled.

Microsoft is a monopoly, the operation system market, which yes, is not as important as it is now...is still the heart of the soul of the computer. Microsoft is restricting knowledge and innovation, we are now still working on the same system which for me is the same as Windows 95, now XP comes and has more bells and whistles, yet no innovation.

Open Source, Linux...innovation is key.

I use both OS and I love Linux, personally, but that is not the issue. The issue of Microsoft giving away computers to schools, only degrades the presence of Apple in education. Further strengthening an already powerful company.

Where is the protection for not-for-profit companies?

How many times have I gone onto a web site and saw ".../cgi-bin/...", cgi-bin= perl scripting, simple as that. what is perl, well it was created by not-for-profit companies.

Does a writer compose a book, only to let a person put it on there shelf and make them self's look smart by it?

Does a engineer design a skyscraper, with out an independent body of their PEERS to review there work?

Does a company create a product, which requires other products (which is only available by the company), to do ANYTHING useful, then forces other companies out of business...just because they have a good idea? The computer net we know today, the net of yesterday (ARPANET) and the net of tomorrow has been build on innovation by people of great skill in universities trying in their own way to change the world. The men and woman who created everything we take for grated today are long forgotten is history and a wealthy businessman who took innovation off the backs of others, now intends to stop the innovation which made is vision a reality.

I ask you again, as an American,
Please reconsider your penalty,
John Gerald Casey

From: Viveka
To: Microsoft ATR
Date: 12/8/01 8:26pm
Subject: Microsoft Settlement
Public comment follows:

Any remedy which includes Microsoft giving software away, or committing to write more software for other platforms (such as MacOS or Linux), will merely extend the MS monopoly, and so will be counterproductive. MS currently holds *two* linked and self-reinforcing monopolies—over the OS, and over Office software.

Extending the MS Office monopoly will not help anyone.

As a consumer, I use Office only because I HAVE to. People constantly send me files in MS Office formats, and I need to be able to view and modify them in order to do business. I detest the MS Office interface design, and abhor the lack of stability and security in this software. Despite this, I have paid MS repeatedly over the years for their horrible software.

I would vastly prefer to be able to view and modify Office documents using other software of my choice, such as AppleWorks. However, I cannot, as Microsoft deliberately hide and obfuscate their file formats. This situation does not occur in other areas where MS does not hold a monopoly. I use the software of my choice to view and modify image files, web pages, maps with detailed geographic metadata—because other software vendors hold to the agreed IEEE standards.

The best way to provide competition, thereby benefiting consumers, is to take away

Microsoft's means of preventing *other* companies from making software that is compatible with Microsoft's.

To do this, simply require Microsoft to document its file formats, in a timely and public manner. Straightforward mechanisms for doing this exist, under the auspices of international standards bodies such as the ISO and IEEE.

Other remedies based on the same principle (of reducing Microsoft's ability to raise barriers to entry) also make sense—such as completely removing their control over the desktop (currently held through restrictive license agreements).

The focus of any remedies should be to promote competition in the Office and OS markets, empowering consumers to make real choices, and forcing MS to compete on the quality of their software.

Regards,
Viveka Weiley,
embittered consumer who never wants to have to buy inferior MS software again.

From: Kelly
To: Microsoft ATR
Date: 12/8/01 6:45am
Subject: Microsoft Settlement

The proposed settlement, in a nutshell, stinks.

What about protections for the 'not-for-profit' organizations? Such as any Linux distribution. Moreover

Apache web server software. In other words, software organizations which do not meet Microsoft's definition of a "business," (see Section III (D) and Section III (J)(2)) of the proposed settlement. They are left utterly out in the cold. As you well know Linux, as stated by Microsoft personnel is Microsoft's biggest "threat."

Recommendation: Microsoft be vertically split into three separate commercial companies. Then, the newly created companies would have to compete against each other. Naturally those newly formed companies would be unable to buy each other out or collaborate with each other, etc.

Kid Kelly

"The consequence of apathy is ... tyranny."
