Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
 John Hatch

 Subject: Microsoft Settlement

Sirs:

First, allow me to introduce myself briefly. I, C. W. Medlock, have worked in the "Software" field in a professional capacity for more than 47 years. (My first course in "programming" was taken in 1950 at Purdue University.) I have worked at such stalwarts of this industry as IBM (1960-1966), NCR (1975-1977), etc. At IBM, I was one of the six Architects of IBM's Operating System 360 ("OS/360"), one of the world's first true Operating Systems (1963-64). Also at IBM (1963), I was one of the six members of the joint IBM/SHARE (a users group) team that developed the advanced Programming Language One (PL/I) Although the latter language has fallen into disuse due to more modern advances in such "standard", non?-proprietary languages a COBOL, PL/I indeed was a most powerful language (for both scientific and business computing) that I believe set the stage for the more modern versions of COBOL and other more modern scientific computing languages.

I, from 1982 to 1999, was proprietor of my own software "home-business" Pro/Am Software, where I developed and marketed worldwide several software "tools" for use by the programmer. It was here, as a "lone survivor" of a great group of Information Age professionals, that I first encountered the threats laid down by Microsoft's failure to disclose much-needed facts that would allow entrepreneurs such as myself to develop tools that would directly or indirectly interface with their "Windows" Operating System. (This does NOT mean that I necessarily would have required the source code of Windows, but only a FULL disclosure of Microsoft's file formats, OS interfaces, details of invoking OS functions, etc. This should include such disclosure of these interfaces for all of Microsoft's other products which interface with Windows, as competitors and other users have a need for this information just as well.) A case might easily be made by Microsoft that they should have the full protection of their intellectual property such as source code, where distribution of same would allow many other (foreign?) businesses to easily make copies of same, and, via suitable modifications, each apply their own "Trademarks", "Copyright" notifications, etc. However, I cannot imagine a case in any court where it could be argued that it would be harmful to a legitimate, non-monopolistic business for them to disclose FULLY the interfaces needed by ALL users

(developers and ordinary users alike) to fully use and expand all features of Windows and all of it's associated Microsoft Products! (I can quote more than a few examples of where I and other developers were not able to obtain needed information about files and other data formats that were needed to allow us to develop products which would enlarge the capabilities of the Windows operating system, thereby seemingly even strengthening its place in the market.) Such a relatively "open architecture" has indeed been the norm with such stalwart operating-system providers as IBM, etc. (After all, the original IBM Personal Computer had even it's Hardware and Software totally in the public domain. Microsoft should at the very least provide the "circuit diagram" of their software, so that it could even be repaired more easily, including making expansions and improvements thereto!)

The provisions in any Settlement with Microsoft should NOT be limited to the interfaces with their Windows operating system, but should indeed include ALL interfaces (direct or indirect) with ANY Microsoft product. This is much needed by developers and many consumers, as well!

I would like to help put Microsoft in its proper place in the Software World, and see that the DOJ indeed does not "sell out" to MS!

Most sincerely,
 C.W.. Medlock

From: Nancy Emmert
To: DOJ
Date: 12/14/01 1:08pm
Subject: Microsoft settlement

There are only two things more disgusting than the proposed settlement between DOJ and Microsoft: one is the settlement proposed by the states not party to it and the other is that the suit was brought in the first place.

The very idea that the United States government should have been party to an attempt to deprive ANY party of rights to its' own intellectual property is disgraceful, disgusting and every other kind of "dis-" imaginable.

The only truly just judgment in this case is an order to have members of what they're now calling the "Liberty Alliance" strung up by their collective cajones., but that's probably not an available option.

Therefore, I respectfully ask for an end this economic roadblock and urge acceptance of the agreement submitted jointly by DOJ and Microsoft. The dissenting states and the economic terrorists ought to be told to take a hike.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able

to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Perry L. Staley

Subject: Anti-competitive practices and Lies—Qwest and Microsoft

Dear Qwest, MN PUC, FCC, USDOJ, FTC, and MN AGO:

I am sitting here on December 22, 2001 steaming mad at Qwest and MSN (Microsoft). I should be out Christmas shopping, but I'm hardly in the holiday spirit. It seems as though by partnering with MSN Qwest thinks they have found a nice little loophole to circumvent all the trouble they have found themselves in in the past by using anti-competitive tactics in house.

As the MN PUC should recall they had to impose penalties against Qwest a couple years back for anti-competitive marketing, product pricing, treating their own Megacentral product differently than they treated other ISP's Megacentral product, and for lying to consumers. The PUC at that time penalized Qwest. A safeharbor number was set up for consumers to call run by a third party. Qwest had to provide free modems to ISPs and provide some coop marketing dollars to help correct the harm done. This hardly compensated us for our loses, but at least it brought Qwest, then US West, back in line.

Now they are up to the same antics, but they are getting around the system by

partnering with MSN. Qwest's web site is very misleading and their phone reps flat out lie about pricing and promotions.

(1) On their web site
<http://www.qwest.com/residential/products/dsl/index.html>:

Qwest starts out by favoring MSN with phrases such as, "Get MSN Internet Access or select from hundreds of ISP partners nationwide." Qwest makes it sound like customers will only get free activation and a free modem if they choose MSN.

"Special DSL Offers—Purchase MSN Broadband Powered by Qwest 256 or Deluxe and get FREE activation, FREE use of a DSL modem, and 30 days of FREE service. CustomChoice customers will receive 60 days of FREE service!*"

Markets a package that includes both MSN and Qwest:

"MSN Broadband Powered by Qwest 256 256K/Up to 256K Use for fast web surfing, e-mail and downloading moderate-size files. \$39.95 (Includes MSN Internet Access) Order Now "MSN logo included

And
"MSN Broadband Powered by Qwest Deluxe Up to 640K/Up to 256K Use for online gaming, e-mailing large attachments or downloading large files. \$49.95 (Includes MSN Internet Access) Order Now "MSN logo included We have asked for similar treatment and have been denied.

(2) When customers call in they are lied to frequently. I have enclosed a letter from a existing customer that was moving from one location to another who was told he would only get the promos if he chose MSN. He didn't want MSN so he is switching to cable. I have heard many other similar stories and there are probably countless cases we don't hear about.

(3) If a customer wishes to switch from MSN to us they process is different. Because the system is somehow tied into MSN's the customer first must cancel the service with MSN before they can even order it with us.

(4) The practice of delaying the install of MegaCentral lines for ISPs is still poorly managed at best and maliciously hampered at worst. We ordered a MegaCentral line for St. Cloud, Minnesota. On May 24th, 2001 we received an install due date of June 8th, 2001.

Order Number N91370107

Due Date 6-8-01

Circuit ID 14/HCGJ/95372//ACSO

The circuit was finally installed around October 20th, 2001. That's 4.5 months *overdue*. It is very important to note that this install was in a building that has a common wall with the Qwest CO and there was plenty of fiber running into the building. We selected this site so there wouldn't be problems like this and we are paying a premium in rent for the privilege.

We lost thousands of dollars and lost opportunity because of this. I believe these issues should be looked into by each of you. When we selected Qwest MegaCentral DSL as a product offering to base our services on we were promised we would be treated fairly. This has hardly been the case. I know Qwest thinks that because it's MSN and out of house they can get away with it, but if they are being compensated in the least out of the partnership they are certainly violating the

spirit of the MegaCentral contracts with other ISPs and any applicable tariffs.

As a special note to the US Department of Justice here is yet another example of Microsoft entering into preferred relationships that snub other competitors in the marketplace.

If any of you see this in my light and find Qwest is at fault, please apply a quick and effective punishment and provide for *real* compensation to be paid those of us who have been harmed.

Regards,
Mury Johnson
CEO
GoldenGate Internet Services
763-784-2800
Dear Golden Gate,

I just moved to a new address: 7124 W 113th St, Bloomington MN 55438 phone 952-941-0399. I was planning to transfer my DSL service to the new location. However, Qwest wanted to charge me an installation fee (\$66 or \$99) if I didn't use MSN, and the service would take up to 2 weeks to get running. On the other hand, RoadRunner (cable modem) would give me free installation and come out on the day we moved in. Their bit rate is faster and it costs \$5 less per month than DSL. So I decided to try RoadRunner. I appreciate the great service I received from Golden Gate, but I am sorry that I will not be needing it anymore. Could you please cancel my internet service? Thank you.

Subject: Microsoft Settlement

To those in charge of the Microsoft settlement negotiations: I believe that nothing that has been done to date—specifically including the abandoned plan to separate Microsoft's operating system business from its applications business—has gone to the root of the problem, which is the existence of Microsoft's monopoly of the operating system business. This is not just market dominance but a situation in which meaningful competition for non-niche-market operating system business is effectively impossible.

Given the widely-reported chaos in the negotiations to date, it may be time to introduce a new solution.

There is a remedy that would be highly effective. It would make room for competitors

in the operating system market while also leaving Microsoft viable competitive strategies. What I propose is simply that DOS and Windows (through 98), including all source code, be placed into the public domain. Microsoft would be free to develop its Windows 2000 and XP lines, but other companies would be free to introduce competing developments from the common base of Windows98.

Please give this idea serious consideration.
Sincerely,
Kevin Langdon

Subject: Commentary on Microsoft settlement

I believe that the DOJ settlement is the best offer on the table for the United States as a whole.

Apparently the "other" states want to destroy Microsoft. Don't let this happen.

Despite the personal interest of the people at Oracle, Sun, et. al., Microsoft has propelled the microcomputer industry forward to a standard.

This benefits everyone (including people that don't own computers). I have been a professional programmer since 1989, and while I still prefer the Mac OS, I believe that especially with the current economy we need to SETTLE THIS CASE BASED ON THE DOJ RECOMMENDATION now.

Thanks,
-Chris C.
P.S.

Please tell Larry Ellison to shut up, and tell Sun to submit Java to a standards committee. (tell, not order)

Subject: Microsoft antitrust suit

Dear Sir or Madam;
I strenuously object to the current talk of settlement with Microsoft. They have consistently demonstrated that they are incorrigibly anti-competitive, and have consistently failed to honor the spirit, if not the letter, of previous settlements. I see nothing in the current settlement offered that shows me anything other than a continuation of the current monopoly situation.

Since I am also completely convinced that having the market completely change the operating ground rules every two years is not good for consumers, I am raising my voice to object to the DOJ-Microsoft settlement.

From: L.D. Best
To: Renata B. Hesse
Date: 12/29/01 1:01pm
Subject: Suggestion

I learned long ago that I cannot know everything. I know a bit about how the "law" works because I've been forced to deal with it on my own, without an attorney. I know quite a bit about how computers work, because both my budget and my interests have had me building my own stuff. I also know quite a bit about how software works, and how/why some software doesn't work, because I've had a personal computer for twenty (20) years now. Much of the best software I have—or had—is no longer of much worth to me, because the companies who sold and supported it were either run out of business by Microsoft, or bought out so the software could be "incorporated" into

a Windows bundle ... thus making it unworkable. And being forced to move to Windows means that I've had to move from a '286 machine to a Pentium 4 1.4GHz machine ... a big jump that leaves the majority of the worlds' population unable to make it.

My suggestion is that when it comes to software and computer systems and fairness of any settlement, lawyers do NOT know enough to make the decisions. There are still a few software companies around who might be able to give attorneys a better view of what software should and shouldn't do, what system integration should and should not be, what exclusionary practices should be considered as ongoing monopolistic activities. And there are, of course, "the open source people"—not exclusively Linux—who could explain more clearly the dangers of continuing to allow Microsoft to determine what its punishment should be.

Microsoft's business practices, and the current "settlement" as proposed, are horribly dangerous... and that is NOT a flagrant exaggeration. They released Windows 2000 while publicly admitting there were at least 1,000,000 bugs they didn't want to bother to fix; they released WindowsME with a blare of trumpets, and within weeks were telling any and sundry to NOT upgrade to ME because of too many problems; they released WindowsXP with a promise of the best security and safety of any release to date—and now are having to face the fact that it offers what is possibly the worse system security breach ever found in any software ever used! But that is not the only danger. Because of the way Microsoft has done, and continues to do, business with advertising and hype to grab the public and scores of lawyers to assist in the "legal" theft of the intellectual properties of others, scores of good companies doing good work producing excellent software have been driven out of business, and tens of thousands of people have lost their jobs in the last ten years ... all directly as a result of Microsoft. To allow Microsoft to continue to exert so much influence, to effectively encourage Microsoft to continue doing what they have always done, is going to negatively impact an economy which is still so badly shaken up that no one with ethics would even attempt to forecast what will happen in the next year.

And DOJ has to realize that Microsoft can never be judged by "a jury of peers" because no other commercial enterprise in the history of the world ever managed to get such a stranglehold on the economy of multiple nations; the railroad monopolies, the steel monopolies, the "good ol'" boy clubs" of the last two centuries are all child's play compared to Microsoft. And the "power of the dollar" that Bill Gates himself wields is without equal, or even reference points ...

If the proposed settlement is not scrapped, and the original remedies ordered not implemented, DOJ is effectively placing the security and the economy of our country into the hands of Microsoft.

Not only is that bad business, it's un-Constitutional IMNSHO.

Most sincerely,
l.d.

Ms. Renata Hesse
U.S. Department of Justice, Antitrust Division
601 D Street NW, Suite 1200
Washington, DC 20530

Ms. Hesse:
I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to

select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Betty S. Mayes-Petty

Subject: my 2 cents worth

This settlement is a joke. It allows Microsoft to tie up in litigation new battles until the founder grows old and dies. With this settlement, Microsoft will continue their deceitful practices. Any deviation will take months or even years to settle in a court of law.

Example:

Microsoft puts out information for developers that allow them to use part of the Windows Operating system to develop a product. This is a normal part of any OS development business. Here is what will happen, Microsoft will later change the OS which prevents the developers product from working—while conveniently, however; the new and upgraded OS has a microsoft version of the developers middle ware that works just fine.

This is another way to stamp out competition. If anyone thinks that settlement is fair, it is not. This method of working can only be compared to a drug dealer. The first few are free, suddenly your addicted and its a must have in order to operate.

We have grown dependent on software as a means to operate in our everyday lives.

Microsoft will only tie everything up in court for ever. Here's a good "pin prick" for Microsoft.

Require Microsoft to buy for low income schools competing software of the Schools choice—the choice can NOT be any Microsoft product.

Have it be equivalent to the amount of money damage caused thus far.

How about a billion dollars. No sweat to Microsoft.

Use ANY competing companies—Apple, IBM, SUN, Linux, etc.

PS—Don't let Microsoft gain any money by investing in the companies that it is competing with.

Good Luck!

I'm glad your prosecuting and I hope the US wins.

Ben

In my opinion, the litigation against Microsoft should cease. I have a difficult time understanding why the case was litigated. There seems to be a "punish the proficient" attitude in this case. Microsoft has invested a lot of money to develop products CONSUMERS WANT and they have accepted ALL the market risks (sales, worldwide copyright infringement, and yes, competition).

Let Microsoft get on with their business (which they do well)...the continuing litigation expenses will NOT be paid by Microsoft, it will be paid by consumers of their products. Don Stults donstults@hotmail.com

Hello,

I've been working as a software developer since 1964.

In my opinion, Microsoft has attained their current position is because—

(1) They listen to the requests of Computer Users.

(2) They develop quality solutions based on Users requests.

(3) They provide an integrated platform for Independent and Corporate Developers to provide effective solutions for their clients.

Imagination and Innovation are the keys.

Thanks,
David Drake

The Microsoft settlement is harsh, and more than enough penalty for Microsoft. Prolonging this only benefits a few special interests, for their own greed. AOL is prime for a monopoly investigation, and is campaigning for more against Microsoft to benefit their own interests. The few states protesting were only being more greedy than the rest, looking for a free ride on someone else's money. No one is forced to buy Microsoft or use IE, but do because it is a better product.

Leave them alone.

To: usdoj
Date: 1/1/02 8:15am

Morning,

I am not a big fan of Microsoft. But I will say this take Microsoft and close it down (split it up)how many thousands of people who work for Microsoft lose their job. How many on the outside of Microsoft will lose their job.

The affects of September 11 are felt world wide. People can no longer work because of the changes made to every industry and business. Now we want in the name of

fairness to break up Microsoft. Why because the competition hasn't got the courage to go out and face Microsoft without the governments help.

When it comes to law I don't expect much. It seems who ever has the smarts to make money and be forward thinking will always be open to attach by the greedy and the supposed do gooders (government and lawyers) of this world.

Only in America a country of which I am proud to be a part can the minority change the way of life for the majority. Only in America can one person change a system that can affect thousands even if the thousands don't want the change.

I hear reference to the constitution all the time. But has anyone lately ever truly read it. I don't think so. Every time someone doesn't like something they point to the constitution and say my rights are not being given to me.

As I said at the beginning I am not a fan of Microsoft. Do I use their products? Yes some and others no. That's because as an individual I have choices and if I choose not to use something I can turn it off or not buy it.

Yet the courts and the government in their do good way wish to take choices away from the people and pass laws that say we must use this product or that product.

Freedom of choice on my part I don't think so. Freedom of choice something the government and the courts have forgotten about. They now make the choices for us citizens and there in lies the basic causes of all our problems today.

I know the courts and the government will disagree with me as they must to ensure that they have positions of power and control. Common sense which was once used in this country on a daily basis has been replaced by greed, personal wishes and power of the few (in politics and law) over the many and is supported by the government and the courts.

There are more important things to worry about in our country and the world today. Leave Microsoft alone and let's get this country back on its feet.

Paul

Dear Sirs,

Instead of being harassed by the U. S. Government, Microsoft should be considered as a National Treasure. Its exported products help our economy and expand our capabilities. I think that the court case against Microsoft was totally unfounded. Whatever concessions that Microsoft makes are more than adequate, and in my opinion should not even be necessary. While there are those people (mainly Microsoft's competitors) who want to suppress Microsoft, we believe that Microsoft provides great products and follows up with great support for those products.

Microsoft's products are sometimes released with "bugs." However, Microsoft readily provides fixes via the Internet as soon as they realize there is a problem. Their customer support is outstanding. As an engineer, I recognize that few products that hit the marketplace can be perfect, and that it is impossible to foresee everything that can go wrong, no matter how well you plan. In spite of this, Microsoft does a great job and has provided significant support to the technology and economic health of the industry and our country.

William Engstrom
3110 181 Avenue NE
Redmond, WA 98052-5934

PS, I haven't seen Janet Reno or Joel Klein producing any software or anything else of value to the country lately. Thank God they are no longer with the Government. The main thing that can be said of Joel Klein is that he successfully used the Microsoft suit as a stepping stone to a better-paying job. But he left a wake of destruction behind him.

Date: 1/2/02 1:57pm
Subject: Microsoft Settlement

To whom it may concern,

As a professional engineer that conducts business around the world I can attest to the usefulness of the Microsoft family of products and the increase in productivity these standard products have allowed. Our business helps bring foreign revenue to the US. Our ability to communicate with foreign companies is dependent on using the same software.

While you may consider some of the previous tactics that Microsoft has allegedly used anti-competitive, the net result has been establishing a standard with which the world of business can communicate. For those of us that remember computers of the 80's and early 90's when there were few standards.

At that time I spent most of the time just getting various software packages to run consistently on the computer.

This resulted in a substantial amount of wasted time. Today's programs enable us to conduct business without being computer wizards.

I personally feel that the government has pushed this case well beyond its merits and strongly urge the DOJ to settle this matter as proposed and let us business people get on with life and let Microsoft continue to bring us new and useful products. Let the free market decide the future of Microsoft.

MTC-00032375

From: BillMeelater
To: DOJ
Date: 1/2/02 2:57pm
Subject: Microsoft Settlement—Public Comment

Dear DOJ,

I think the settlement between Microsoft and the DOJ is fair and I believe it is in the best interest of consumers, the country and Microsoft to get on with the business of business and stop this seemingly endless litigation.

Perhaps I am missing something, but as a computer software and hardware consumer for over 20 years, I still fail to see how I've been hurt by the Microsoft Corporation. I have never felt cheated by, or felt forced to buy just their products. They are competitively priced and function very well considering the nature of computers and software.

I think it's safe to say that in this case, the governments actions against Microsoft have slowed a great company's progress towards further enabling consumers, businesses, government, etc. from becoming more productive and efficient. Ironically, the DOJ has done more to hurt people who own Microsoft stock than Microsoft will ever do to stockholders or consumers. While I agree that a big company such as Microsoft can intimidate other start ups and crush competition, one should realize that business, like nature itself, has a natural order and rhythm. At some point in time, Microsoft won't be the 'big gorilla' on the block. In the meantime, by having almost a standard operating system for computers in general, we all benefit from increased productivity. Again, after the big phone company breakup, and the disappearance of

a common long distance carrier, it was (and still is) tough to make long distance calls from phones you don't own. If you've dealt with computers for any length of time, the nightmare doubles in scope without standards in place.

Forgive the rambling. Let's get back to work doing something constructive. The country's economy is not well, and we need to end what I consider somewhat of a—'witch hunt', brought on largely by a few jealous competitors. I repeat—as a consumer of operating systems, browsers, office suites, etc., I have never felt cheated by Microsoft's products.

Sincerely,
Bill Braun

 Subject: Proposed Microsoft settlement
 AMERICA MUST FACE THIS

IMPORTANT ISSUE AND RESPOND CORRECTLY The proposed terms of antitrust settlement with Microsoft to distribute free operating software to education markets is totally unacceptable and should NOT be passed by individual states not the Justice Dept. The proposed action is really not a penalty—it is a benefit to Microsoft.

1. Anyone with an abacus can figure out it doesn't cost \$1billion to press, distribute CDs to schools. This is only a slap on the wrist, and certainly no where close to global community service! It's ineffective action against a known monopoly and poses no penalty for Microsoft's illegal gains.

2. Sending free Microsoft Windows CDs to schools is only forcing educational markets to accept the Windows operating system—a contrived ploy to further perpetuate the very Microsoft monopoly the Justice Department is trying so diligently to eliminate! Schools who use other computing platforms receive no benefit from this proposed action. The proposed settlement is pure nonsense, designed to benefit no one except Microsoft.

Please do not accept this ridiculous settlement proposal. It would be devastating to our economy in the long run, and it demoralizes America's trust in our justice system.

Hundreds of thousands of parents, teachers and students across our nation have already reviewed and rejected this proposal. These folks are now asking and watching to see if individual states and the Justice Department are also wise enough to see the deception behind this proposal and refuse it's acceptance.

Microsoft continues its takeover of existing software companies at an alarming rate. Several more companies have become "Microsoft property" in past several months (incl. Great Plains Accounting). Microsoft apparently fails all reasonable efforts to deploy required self-control measures and

stop it's monopolistic practices. Instead, Microsoft defies judicial orders to halt predatory practices altogether. These uncontrolled (antitrust) practices are a devastating injustice against Americans and computing industry competitors; as such must be halted by the Justice Department. More appropriate settlement terms must be pursued, or Microsoft must be split up.

Please don't turn you back on America. Do not accept the settlement proposal.

From: b_c_dahlberg@msn.com@inetgw
 To: Microsoft ATR
 Date: 1/4/02 3:53pm
 Subject: Microsoft Settlement

To whom it may concern: In my opinion, the entire Microsoft issue is about money and another way for the law profession to "feather their nest". It has nothing to do with antitrust, monopolies or protecting the "John Q Public".

Microsoft does NOT have monopoly on anything. There are several other operating system options available for which the end user can use the browser he or she prefers. As a matter of fact, he or she can use the browser of choice with Windows!

I use Microsoft products on a regular basis. It is my choice to use these products because, as a developer, my customer base also uses Microsoft products and in order for my products to function on my customers equipment, I must produce software that will work on their equipment.

If the customer base used Unix, Apple, or O/S 2, I would probably go that route. Every dollar Microsoft spends to protect itself from frivolous litigation means that I am going to have to spend more for products I use. As with taxes, corporations do not pay for the cost of litigation—their customers do!

The only winners going this route are those folks with "Esquire" after their names. Please end this as soon as possible. "Trickle Down Economics" goes both ways, you know!

Sincerely,
 Robert L. Dahlberg

From: James O'Connell
 To: Department of Justice
 Date: 1/5/02 9:40am
 Subject: Message From a Concerned Citizen
 Dear Department of Justice:

As a principal software engineer who's been working in the software industry for years, I want to express to you how happy I was to see a settlement with Microsoft, thereby ending three years of antitrust lawsuits.

Upon review of the terms, it is evident that the settlement is more than fair. The terms require Microsoft to design future versions of Windows, to make it easier to install non-Microsoft software, and to disclose information about certain internal interfaces in Windows. The terms also promote significant change in the way Microsoft develops, licenses, and markets its software. A committee to make sure that Microsoft abides by the agreement will oversee all of this. Not only are these terms well thought out, but also they obviously benefit all parties involved.

I am sure that there are many other pressing issues to concentrate on rather than continue to focus on Microsoft. The more we delay this process, the more we delay getting our technology industry back on its feet. The global market is an extremely competitive one, and we need to stay on top of the race. Please help support our IT sector by helping to make sure that no further action is taken against the current settlement.

Sincerely,
 James W. O'Connell

Att. To Whom it May Concern
As many others Alternative Operational Systems that have been hurt by the monopolistic policies of MicroSoft. We received the request from the headers of various projects to manifest ourselves and let our minds be known, so here it is, agreeing to the last ii and jj to the requests being made by many users all over the world.

I am part of a worldwide network that is working on getting the BeOS back into the market place, but there is no hope of success if the following issues aren't addressed:

MS Office needs to be opened, so that developers interested in porting it or understanding the document formats can do so either in form of a source code licence or an allowance to see it, check it and "clone libraries", so that applications on non-Windows OSs can read and write MS Office formats for flawless interaction with Windows users.

The Win32 API needs to be made available (incl. undocumented APIs) so that WINE can be successfully ported not only to BeOS but other OS too.

The file system needs to be opened, so that BeOS users can continue to access files on non-BFS partitions.

The ruling must include a "must-carry" rule, so that any OEM Microsoft is supplying Windows with HAS to "dual-boot" an alternative operating system, in this case BeOS, in order to remedy the damage MS has done to BeOS in the past.

Enough is enough! Microsoft provides excellent product support at no charge, while their competitors don't even know what the term means. Microsoft has EARNED their position by savvy marketing, customer support and reasonable prices. The agreement with the DOJ was fair. What the

states want is the destruction of Microsoft so that their home town losers can form a new monopoly of high priced products with lousy service. This is NOT in the best interest of the community of users!

Subject: Microsoft Settlement

I am a Microsoft "Consumer", as well as a Microsoft shareholder in my IRA. I am retired and a Social Security recipient. And I guess that this is my only opportunity to say what I think re the DOJ vs. Microsoft settlement. So here it is.

If Netscape, Sun Microsystems, et al, think that they have been "screwed", how about me? As I recall, Netscape joined with AOL in a deal that paid Netscape appx. four billion dollars. Now isn't that a sad story! But I had Microsoft stock in my IRA for my retirement days (I am now 73 years of age), and I lost 50% of my retirement fund within days of the time that Judge Jackson, extremely biased against Microsoft by anybody's standards, decided to rule that the company that has done more for the U.S. economy than any other in recent history should be split apart. My retirement funds, along with those of thousands of others, were lost apparently because Microsoft's competitors opted to pressure Congress (Orrin Hatch, for one) and the Department of Justice to make their businesses successful, rather than to achieve comparable success through their own brain power and effort.

I owned my own small business and no Attorney General, lawyers or courts helped me. My company provided good products and good service. And when I installed a Microsoft system (that makes me a "Consumer") I did not feel cheated. I was happy with the product I purchased and am still happy with the equipment I still use at home in my retirement years. But my retirement prospects are not nearly such a pretty sight due to this litigation that is going on and on and on and on.

The proposed settlement appears to be a good one for all concerned. My congratulations to both the Department of Justice and Microsoft for that. But what right do those still opposing the settlement have to harm me further for their own selfish interests? Let them get to work, just as I did (on a smaller basis, of course), and make it on their own merits instead of sponging off of someone else's intelligence and hard work.

In this time of national stress this country and all of us need all of the incentive our economy and our stock market can get. Our President is right! Our economy needs a stimulus—and it won't come by cow-towing to limited selfish interests by such as those refusing to accept the proposed settlement and vowing to pursue further litigation. Let's get on with what's best for our country, our elderly (myself and my wife included), and all others with retirement programs of all ages, our military men and women, and those who are just plain happy with their Microsoft products. Enough of this particular hasseling and litigation. Bill and Melinda Gates have set an outstanding example by donating over a billion dollars of their personal income (undoubtedly mostly from Microsoft profits) to very worthy charities throughout the world. How rewarding it would be if some of these litigation-happy competitors would do likewise with even a small fraction of the big bucks they are contributing to big-name trial lawyers!!

God Bless America.
Respectfully Submitted,
S. Ben Riva

I would just like to say that Microsoft should not be broken up by any means. It's not the jurisdiction of our government do define competition as total equality. It would be punishing people who have worked hard to create a product that people like and buy. The government does not have the right to say who prospers or define one's earnings. Now that Explorer is free it forces Netscape to be original, provide the consumer with something new that Explorer does not allow. It forces other people to create, to strive. You do not punish Gates for being successful. Apple computer still has a wonderful product which they sell. The government suppressing individuals ability to create is everything the framers of our constitution would go against. Gates has the right to his property. This is the equivalent of if I owned large amounts of land so I could sell it at lower prices hurting real estate companies, so the government took my land. That says that my property is not mine, but rather everything I own is up to the discretion of the state to take. We do not live in a socialist government, and I fear that this decision would be another attempt for the government to define our lives as a collective regime to help one another. Look the government cannot violate ones property rights. If this decision goes through then that says that says the government can control ones property which is strait communist no doubt. There's no violation of the law unless Microsoft hurts the rights of another.

The constitution says we as individuals have the right in the pursuit of happiness. That does not mean happiness is guaranteed to the individual. Neither does it mean the state has the right to define the level of happiness we're allowed. Please please please do not break up Microsoft.

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on

their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
 Carol A. Kelly

As a concerned citizen and tax payer I urge you to put the Microsoft case to rest. It may have been a nice idea for the Federal Government and State Governments to sue Microsoft when the economy was soaring and the states saw dollar signs....those days are gone. I understand that a few high level government officials are looking for private sector jobs and like to make a name for themselves while they have the unlimited budget of the taxpayer. If we continue to allow a few lawyers seek name recognition at the expense of the corporation we will destroy our free economy.

The governments job should be to protect the greater public interest and allow Americans to pursue their own happiness. It has been made very clear in this case that Microsoft has not damaged the consumer or the public's interest. I appreciate all our government does. Americans truly are fortunate to live here and I am grateful for the Department of Justice and the people who serve there.

In this matter I think we should let the free market solve the competitive issues.

Thank you.

 Subject: Microsoft Settlement
 Dear Sirs;

I was deeply involved with the BeOS operating system at one time and would greatly love to get back into the swing of things with it. However, since Be, Inc. is no more and Palm is hesitant about licensing out the BeOS source code to the BeUnited project (www.beunited.org), I thought I'd voice my opinion.

The main thing that prevented BeOS, or any non-Microsoft operating system, from being shipped on any mainstream OEM computers was the MS licensing preventing OEM companies from being able to install other operating system. There should be no bonus or penalty to an OEM for not installing or installing another operating system on a shipping PC. From what I knew of the deal, an OEM company would loose out on bonuses that Microsoft would award thier OEM purchasers if they installed other operating systems on thier shipping PCs.

And because of the lack of OEM support, hardware manufacturers would often not write drivers for thier hardware for the BeOS. This greatly hurt the momentum of the BeOS to a point that the owners of Be, Inc. had to shift focus to Internet Appliance devices instead of PCs. This also didn't pan out and the IP of Be, Inc. was sold to Palm recently.

Personally, I believe the settlement should prevent MS from using licensing or monetary bonuses to sway OEMs into using only MS products on thier PCs. It should also remove limitation of not allowing any other operating system to dual boot with any MS operating system. Thanks, Jonathan Tarbox

 To Department. of Justice
 Re: Microsoft Settlement

As a private citizen, this case should be closed and left as is. It has cost quite a bit of money to work on this case both from the government (representing the people), the taxpayers who pay the government to perform, and the Microsoft Co. who are the defendants of this case.

The settlement brought forth by the lower courts is a fair one. It costs Microsoft

Company to pay for its transgressions of the law and the Plaintiffs should be happy. The public (taxpayers) are sick and tired of this case dragging over the past two years.

This case has been deemed fair by the courts, let it be. In the interests of justice for everyone concerned it is closed.

 Subject: Microsoft Settlement

In my opinion... the DOJ should back off a little.

I think the DOJ investigation is being driven by competitors of Microsoft. I also think Microsoft's competitors are jealous because they have been unable to duplicate Microsoft's success.

Do you remember what it was like to work with computers in the 70's and 80's??? Proprietary computers running proprietary software. Hardware and software costs were outrageous and maintenance cost weren't much better.

Software programs were not standardized and they didn't always play nice with each other. The philosophy of big computer companies seemed to be, "Do it our way or don't do it". Trying to get different computer to work together was very frustrating (if not impossible).

Microsoft could have played by the same rules as everybody else (in the computer industry). Instead, today we have standards and tightly integrated tools for developing and running software.

I do not think Microsoft is a Monopoly. They do not own the hardware and software (unlike Apple and IBM), and there are many operating systems to choose from. You can run several types of UNIX, Macintosh, OS2, etc... Most people choose MSWindows. It is quite nice to have many tools integrated into the MS operating system.

Because of its size it may be a good idea to keep an eye on Microsoft, but in my opinion they should get a commendation for what they have accomplished. Microsoft has made my job easier and more productive.

 Subject: Anti-Trust Settlement
 To whom it may concern

I feel that if the present settlement is allowed to stand (Microsoft allowed to continue shipping their applications bundled with their operating system) the consumer will have to pay the cost of mitigation. With the clout that the operating system gives Microsoft they will be able to move into any lucrative software market after other firms develop those markets. This pattern is very evident (i.e. Java, Palm, Sun). Eventually most of the other players will be pushed out of the market, and Microsoft will be successful in creating a barrier to the software market. This loss of competition will not serve the interest of the American people. I ask the court to break Microsoft into 2 or more companies.

MTC-00032415

From: Eberhard Hafermalz
 To: Microsoft ATR
 Date: 1/7/02 6:05pm
 Subject: Settlement with MicroSoft

Dear Sir/Madam

Following a request by Helmar Rudolph who is part of the BeUnited Team and with whom a DOJ person has talked on January 4, 2002, I would like to submit my views on what is necessary to remedy the damage done to the market for PC operating systems (OS) by MicroSoft.

I am not a developer but a user of the BeOS, an alternative operating system widely acclaimed for its potential as a desktop OS. I would like to stress that the BeOS never has taken off as a widely used OS on the PC market. Not because it does not have the potential; there is publicly available numerous evidence to the contrary. The BeOS has died because computer makers were not allowed to pre-install this OS on their systems instead of or even alongside a Microsoft OS, thus precluding a broad distribution. It is a known fact that computer makers declined the offer of Be, Inc., the maker of BeOS, to ship their machines with the BeOS pre-installed because this would invoke the respective punitive clauses in the licensing agreement they had with Microsoft.

Further, when installing a Microsoft OS onto a computer already equipped with the BeOS (or any other OS), the Microsoft OS wipes the so-called bootblock, resulting in the computer only booting into the Microsoft OS afterwards. As is well known, Microsoft OSs are prone to get unusable after a short period of time, requiring extensive maintenance which more often than not is easiest done by re-installing the whole system. This obviously invokes the bootblock problem every time a re-install is conducted.

These two issues alone make it almost impossible for the average computer user to (a) acquire a non-Microsoft OS running computer, and (b) maintain a dual-boot system where one of the OSs is a Microsoft one.

The remedy for issue (a) would be to disallow Microsoft in clear terms the use of any contractual clauses in their licensing agreements that restrict the decision of the computer maker on what OS, if any, to ship with the computer they manufacture.

The remedy for issue (b) is to disallow Microsoft the overwriting of the bootblock when Windows (or another Microsoft software) is installed. This is technically possible by giving the user the choice which systems to boot into. Resolving issue (b) is in fact complementary to issue (a) for the reasons explained above; otherwise Microsoft would be allowed to abuse their dominant market position by simply accomplishing at a later point in time what they have been denied at the manufacturer's stage: killing the competing OS on the same computer.

In light of the Microsoft strategy of the past, the above is not the only remedy I think necessary because it would only create a level playing field. Microsoft would be allowed to maintain the fruit of their previous unfair competition practice. Thus it appears justified to require Microsoft to cede proprietary information in areas where it has acquired a de-facto monopoly by way of utilizing advantages from their unfair competitive behavior.

Most importantly, this includes the "office" part of the company's business. Microsoft Office is the standard because Office was pressed onto the consumer as "part of Windows", which—as well as the Internet Explorer—it is not. Microsoft thus utilized the practice described above to eliminate any competitor in this software segment.

In order for rival makers of office software to compete they need the information

required to create translators, software add-ons ("plug-ins" in Windows-speak) that allow the competing software to import from and export files to Microsoft Office (and other) formats. I would like to point out that in order to accomplish this it is not required that Microsoft open their source code of Windows, Microsoft Office, or any other software.

Moreover, I would like to bring to your attention that it is not only Windows, and Microsoft software running on Windows, that needs to be included in a settlement. Microsoft is already showing the same patterns of behavior as before in the market for handheld computers. Also they are obviously trying to delay any remedial action against the Windows monopoly in the desktop computer market until Windows is no longer their main product line. Any settlement that is to create and ensure a level playing field in the longer term not only needs to remove the Windows monopoly but at the same time include any future OS or, indeed, software Microsoft might sell, be it ".Net" software, Windows CE/Stinger, or any other product.

Finally, please revise your stance on the issue of Microsoft's "giving away freely" computers, software, and service for these to schools. This is no remedy but an opportunity. It will create a new market for the company. These days Microsoft's power to abuse their position stems from the very fact that for most people the term "computer" automatically means "Windows", i.e. Microsoft. Letting Microsoft "make good" for their abusive behavior by opening one of the few places where competing OS maker Apple still holds a better than insignificant market share would mean, as we say in Germany, to try to expel the devil with the Beelzebub.

The fate of innovation is at stake. Innovation cannot come from a company that has been holding the monopoly for almost ten years now. There is much better, much more innovative software out there than Microsoft one but it will never have a chance.

Unless Microsoft is forced to give it that chance.

Thank you for your attention.

Faithfully yours

Subject: Microsoft settlement

Dear Sirs,

I understand that there is finally a settlement that has been reached in the Microsoft case and I can only say this:

Why has it taken so long? This entire case was misguided. As an American citizen I cannot believe that we do not have something better to do with our tax dollars than investigate a fine, innovative American company that provides excellent products for reasonable prices to all. What would the world be like without Microsoft's innovation? And what, I ask was their crime? That they were so good at what they did that they had little competition. This was a natural monopoly which sooner or later would have come up against natural competition. It's not the role of government to step in and smash such a company. We should be providing a favorable environment for more US companies to step up their level of innovation and become the next Microsofts. Please go ahead and get this thing over with so we can close the book on this embarrassing chapter of US history.

Sincerely,

Dennis McKenna

Subject: Microsoft Settlement

We think it is a tough but fair settlement—for all parties involved. Stop wasting the tax payers money—competition is wonderful for consumers like our family. We are an average working family who appreciate good quality products at fair prices that Microsoft has made available to us. We don't appreciate our hard earned tax money being wasted on frivolous, vengeful lawsuits. Enough already.

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks

of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Michael Belcher

Subject: It will be very good for the US economy if this case was settled

It will be very good for the US economy if this case was settled prior to the March hearings. The nine states that are holding out are obviously trying to protect their companies in their own state. e.g. Oracle, AOL, Sun Microsystems etc. They are putting themselves above the consumer by delaying the settlement. All they want is their pound of flesh, nothing more. It is getting so obvious that hopefully the judge will see through it. It was a good thing the DOJ made the effort

to settle with Microsoft. The sooner it is over, the better it will be for the stock market and the consuming public.

Thank you for the opportunity to voice my opinion.

Subject: Microsoft anti-trust case

Greetings,

I have been involved in the IT industry since 1981. I watched Microsoft, Apple and others work their way up the corporate ladder with innovative ideas and hard work. They deserve much of the fruits of their labor.

However, in Microsoft's case, they have been doing much more harm than good to the consumer over the past several years. As a graduate of the University of Oregon School of Business Administration, I have watched with fascination the methods with which Microsoft has eliminated competition and coerced vendors into doing business Microsoft's way. All of this while their own products continue to slide, in terms of quality and technical advancement. The result is a two-edged sword. They spend time and resources wiping out competitive ideas leaving little reason or incentive to improve their own.

Then the Government and the courts comes along and "endorses" this approach by mandating toothless laws with little or no enforcement. Microsoft is trying to do this with Linux as well as others. Microsoft is a great company. Bill Gates and crew should be applauded for what they have done for technology. However, Microsoft has become a textbook example of why we have rules governing monopolistic practices in this country. When Billy Graham gets caught speeding he receives a ticket for speeding and he pays the fine. Microsoft got caught and it is time to pay the fine.

Do America and Microsoft a favor and put a stop to the dark side of Microsoft.

Thank you...

Subject: Microsoft Antitrust Case

Dear DOJ, etc.,

I am writing to put my 2 cents worth about the antitrust case against Microsoft Corp.

I feel like Microsoft is using their OS dominance to stifle every bit of competition possible. I totally agree with the 9 states that are fighting this thing to the bitter end. I also don't agree with the current settlement at all. For Microsoft to spend a bunch of money for the schools does absolutely nothing to stop them from continuing to do what they have been doing for years—except try to catch up with Apple, Inc. in the school battles!! I also don't mind spending my tax dollars to do whatever is necessary to make them pay for what they have already done.

We watched them "give away" a browser and all but kill a competitor(s). Tomorrow they start giving away databases, and before long, who knows? If there was a competitor to the government, they would buy them, reduce the price on whatever they were selling to nothing and kill them off too. Once dead, they can raise the price back to whatever they need to.

Do I want Microsoft dead? Probably not, however, I want them to have to use the same playing field as the rest of the businesses in america that don't control 90% of the operating system business. Break them up. Make

them give out their source code to anyone, so we could all make products as quickly as them!

p.s.

I was trying to send this to: microsoft.atr@usdoj as well, but my e-mail package didn't like this. Do you know how I can get a copy of this to them?

Thanks,
Craig Madsen

Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Norm Lee

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S.

v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance ? the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case ? the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. FROM: Ray Kraft
TO: MS ATR
DATE: 1/9/02 11:07am
SUBJECT: Opinion: microsoft settlement does not address problem sufficiently

I would like to voice my concern over the proposed settlement between Microsoft and the DOJ. Given that Microsoft has been founds *guilty* of violating antitrust law and abusing its power in the computer operating system market, I feel that the measures outlined in the settlement will do little to redress this problem. In fact, I believe that some proposed "corrective" measures (i.e. those addressed at scholls) will in fact have just the opposite effect, and will serve to strengthen Microsoft's monopoly position.

I would like to ask that more effective measures be proposed to bring about the changes required to prevent Microsoft from continuing to abuse its monopoly position.

Thank you. Sincerely,

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to

submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,

Emmett Williams

Subject: The current settlement with
MicroSoft is bad for competition and for
the nation

Hello!

MicroSoft is evil. That is a given. Given all the lies they have said in court over the years, you cannot trust anything they say. Thus, how can you trust the settlement?

MicroSoft was probably going to give 1 billion dollars to schools anyways. Then the settlement says they have to, which doesn't make any sense, because they were probably going to do it anyways. MicroSoft has always tried to grab the educational institutions, because when people graduate from high school or college, they will stick with the software they know.

Thus:

1. They were already going to do it anyways.
2. It inteferes with Apple's ability to compete in the education market.

MicroSoft is entirely evil and I would prefer, be destroyed. I would like to see it get destroyed under a competitive market, rather than physicial force. I like to win my battles fairly. Given the current republican administration, please do what makes the most sense for a competitive market, which you should understand since you are republican, and just don't so stuff that benefits the rich fat republicans/corporations who have no regard for our nation, just their pocketbook. I want business to thrive for those who deserve it, not those who are able to bribe/lie/cheat/steal their way into power because they have a lot fo money.

Thanks!
Mark

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed.

Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely, Bill Bryant

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's

programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed.

Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

I believe that the it is in the public interest to settle with the Microsoft litigation. Personally, I find it hard to see how they were in violation at all. As far as I am concerned I always had the choice of using them or not.

However, I do believe that AOL is in some kind of violation in this respect. Whenever I load a program that also offers AOL I refuse the AOL but no matter I still get their program on my screen and it does start to load. I also think that they are in violation when they include free programs in cereals, etc. and send them through the mail. They are bordering on being a nuisance.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry.

It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. Thank you for this opportunity to share my views.

Sincerely,
W.Lawrence Kimber

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee

will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Carol H. Iossa

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after

purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Eileen Flynn

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of

America, on whose behalf the lawsuit was allegedly filed.

Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Steven Brown

To whom it may concern.

I generally do not write E-mails on the behalf of big business. But I find this whole Microsoft saga disturbing. I do not agree with the idea that Microsoft should be punished or broken up. I think that Microsoft is an industry leader, in part because of its aggressive and forward thinking business practices, vital for competition in a very competitive market. I for one am thankful for

what Microsoft has done. I think that the tremendous advances in computer technology can be attributed to Microsoft.

I can assure you that if another company comes out with a product that I read about or try and find it that I like it better than Microsoft's version, I would certainly buy the product that I liked.

If Microsoft feels that this latest judgment is fair, then I would have to agree.

Thank you for your time. John Horlick

From: mercury@crossroadz.com.au@inetgw
To: Microsoft ATR
Date: 1/10/02 1:10am
Subject: Microsoft Settlement

The proposed settlement of the M\$ anti trust action represents a complete failure of the current laws to protect consumers & ensure a level playing field for competition.

Microsoft failed to abide by the original judgement against them, has clearly continued their anti competitive behaviour and has now taken that behaviour to even higher levels with the release of Windows XP.

The issues with XP are far wider & more serious than any previous behaviour & this behaviour is apparently now being condoned by this settlement which provides M\$ with a platform to further promote their products over any alternatives.

Within Australia the pricing issues alone are beyond belief. US Court evidence indicated 50% overcharging of consumers, with exchange rates taken into account the overcharging in Australia has been 200% and now with XP, the removal of Domain login from the basic/home version of the operating system, small business will be forced to move from a \$A400 operating system to an \$A660 operating system. Some 80% of small business is affected & the cost worldwide will run into \$USBillions. The pricing of the M\$ component of any PC price has risen in a market of dramatically increasing volumes, the opposite of normal market behaviour where shipment volumes increase.

This has been possible due to the monopoly position. In some cases the M\$ component is now 50% of PC manufacturing Price. There is also an element of using US PC manufacturers to engage in product dumping into the international market to the detriment of international PC assemblers. The court evidence indicates some US manufacturers purchased NT4 Operating System at \$US20 where local manufacturers in Australia were being charged \$A320 (\$US160) The schools concerned could utilise free open source software rather than waste money on M\$ software & thus free up resources for additional hardware or teaching resources.

Throughout the current case M\$ has been clearly in contempt of the courts in their actions which have been designed to ensure that it was not possible to recall or change products in the field with the browser (as distinct from the HTML rendering engine & communications utilities) embedded in the Operating Systems. The W98SE & Windows ME releases along with various Browser updates have been dubbed "The DOJ releases" with good reason. This case has been a classic example of how a Corporation can use delaying tactics in the courts to their advantage & profit from those tactics.

This proposal for settlement should be withdrawn and a regime which ensures an open standards interface approach is adopted with full disclosure of all API's for application services & network services put in it's place. Penalties which reflect the magnitude of the crime and recover the revenue improperly gained by M\$ during the case should also be put in place In addition to the above a public list of areas in which people believe M\$ has/is acting improperly should be initiated. There are numerous areas in which this has been the case & the current case has only brushed the surface. A public list/discussion board is the only way in which the technical details of how M\$ has acted anticompetitively will ever be fully disclosed or determined.

Competition law will not be treated with any respect by Corporations unless this settlement is revised

Most importantly, this settlement is fair to the computer users and consumers of

America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Tom Friedman

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs.

In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. From: Delmonte, Tom
To: Microsoft ATR
Date: 1/10/02 8:18am

First of all thank you for allowing us to voice our concerns.

My main focus is the pattern that Microsoft has exhibited over the 15 years that I have been involved in the IT arena.

The first negative experience was one which happened with a company called Stacker, in which it was proved that Microsoft had illegally used their file compression scheme, by the time the issue

was settled the company no longer was viable and in fact is no longer in existence.

The next example is the competition between Microsoft and Netscape and how in a variety of actions which I am sure you are familiar made the company loose most of it's relevance in the PC arena, it still has a presence in the Linux arena, but that may change as well depending on how Microsoft handles that or is allowed to handle that arena in the future.

The main problem I see is one of ethical behavior, they do push the limits and go beyond as in the Stacker case in every area that they see is important, and one may think that this is how business is done, the stronger survive. But when it is at the cost of innovation by individuals or small concerns, which Microsoft is eliminating more and more due to it's size and influence, I think that the American public and entrepreneurs have lost incredible opportunities due to what I consider predatory behavior.

The level of excitement due to opportunities available to individuals in the 1980's was palpable across the whole Silicon Valley in which I worked at the time, as the 1990's approached this level of entrepreneurship decreased steadily.

Some of it is due to the maturing of the industry, some of it due to standardization all of which are good. But much of it has to do with Microsoft getting involved in so many areas of the personal computer arena that it left less and less space for the smaller less financially endowed institutions to contribute to the progress of a field that still has wonderful opportunities if this level of entrepreneurship is allowed to flourish again.

Unfortunately much of this has been squelched in the US, but with the arrival of Linux and what it can contribute and has contributed from many areas across the globe there is some activity in this entrepreneur-friendly environment that has received a lot of focus in the last couple of years.

I would suggest that the American technologists would be much more interested in putting an effort again into the IT arena if a more favorable environment was fostered by curtailing some of the more obvious actions that Microsoft has taken, and I am sure that that venture capitalists would support this effort since the rewards are still very high.

What I would suggest is to split the company into separate entities in all senses, applications and operating systems are two of the ones that have been suggested.

And if Microsoft wants to enter a new arena in the computer industry (and that has to be based on a well-defined criteria) then the amount of money they can put in that concern cannot be more than the best financed institution that is already present in that arena. If none are in existence a criteria for that has to be established as well, so that other can compete on equal footing.

Once that concern is established Microsoft cannot contribute any further funds, otherwise it would perpetually be competing in an arena even it's efforts were not successful, creating an artificial concern and hampering competitiveness.

If the company failed they should not be permitted to enter that arena for a pre-

specified amount of time, to allow those who had good ideas to flourish without the annoyance of having another company artificially affecting the competitive environment to that specific arena.

I understand that this may have a short-term (1–2 years) effect on the economy, but the long-term effects would be a healthy, creative, growing and dominating industry for the US.

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, of the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of

Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,

Michelle Alley

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, of the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's

programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. From: Francis Johnson
To: Microsoft ATR
Date: 1/10/02 11:11am
Subject: Microsoft settlement

I have tried to follow the Microsoft case as much as possible and I am appalled with the DOJ for settling that easily. The law states that Microsoft broke the law, why does the punishment not fit the crime. As an individual on the street I start drawing my own conclusions. Did Microsoft pay off somebody etc? When IBM was found guilty of monopoly, they were dealt with accordingly and they could not profit from their business.

When Southwestern Bell (I forget what it was called) was a monopoly, it was dealt with too. Why is the DoJ afraid of dealing with Microsoft. Wrong is wrong.

The proposed settlement is an insult to the "poor under privileged schools." I could understand if Microsoft offered to make all these schools top of the art with new technology/hardware etc. But to offer outdated hardware/software!, all they are doing is using the schools as trash cans, because they have nowhere to put their junk. "give it to them under privileged schools, they should be grateful", and the worst part the DoJ accepted this. This is the United States for pete's sake. we are supposed to offer justice for all. Stop this atrocious settlement.

I use Windows software on my pc and I appreciate the software, it is good and to most extent reliable and easy to use (if you know what you are doing). But I do not think that should get Microsoft special favors/treatment. DoJ act like a department of Justice and not like somebody's lacky.

You read almost everyday that Microsoft is doing something bad here or there. This will continue until someone says "The Buck Stops Here Microsoft, enough is enough". A good example is a simple poll. They tried to rig a poll so that it looks like people want Microsoft, having people voting multiple times, how low can a company go to wipe out competition. Microsoft cannot stand that people like something else other than Microsoft, they are now like dictator governments "Its our way or noones".

DoJ clean up your act and do the right thing.

THANK YOU
FRANCIS

From: EVAN LEE
To: microsoft.atr
Date: 1/10/02 12:13pm
Subject: Microsoft Settlement
DOJ Anti-Trust Division:

I am deeply troubled by the recent DOJ decision to settle the anti-trust case against

Microsoft. Guilty or not, Microsoft is the most dominating presence in the operating system and the software market today. For years they have bought out or pushed out competition not by superiority of the software, but by money and lawyers.

Microsoft does not promote fair competition, their goal seem to be eliminate all competition. Every new technology or company comes up with new and cheaper ways that benefits customers have been targeted by Microsoft as enemies. I do not believe behaviors such as this will be curbed by this settlement, if anything else this gives Microsoft more confidence to destroy their competitors, because what's the worst that will happen? a slap on the hand to microsoft.

What will this settlement accomplish? by making microsoft providing computers to poor schools in the country? How will this punish microsoft? All they have to do is buy in mass quantity refurbished computers which manufactures are gladly to get rid of. The software of course will be windows. This will not punish microsoft, instead it helps them breaking in to previously Mac dominated education market share. This settlement is not punishing Microsoft, it is helping them gaining publicity and market share.

It is amazing to me that this case started hard and heavy in the late 90s when microsoft had no presence in washington. but it ended with less of a whimper after microsoft dumped millions if not billions of dollars in to washington's political arena. I believe this is the wrong decision by the DOJ to settle with Microsoft, and their monopoly will only get worse... I fear the day that Microsoft conquers all.

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of

Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorney general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

I don't believe the public is served when judicial oversight or legislation is made to stifle companies that create technology to the degree that Microsoft has. The main reason we have this predicament in my opinion, is that "weakened" competitors like AOL, SUN Micro, et.al., and their legal teams purposely sought remedy through the courts as a viable competitive marketing tactic. Unfortunately for the consumer, these "do-gooders" have influenced the justice system to prosecute Microsoft for being successful. The band-wagon effect in this is huge with lobbyists, lawyers and those "weakened" competitors all reaping employment and huge sums of money. And then there is Microsoft, trying to exist by selling what we all agree are a great series of products addressing consumer preferences and providing what the market demands, and being punished for being successful at it. Microsoft Settlement

U.S. Department of Justice-Antitrust Division
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

John S. Baitinger, Sr.

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their

products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

 Subject: Microsoft Anit-Trust issue settlement

Dear Ms. Heese:

Your support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation is important.

The settlement is fair and will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

The opposition to the settlement from a small group of political bodies is nothing more than a power-grab and is not in the interest of the American tax payer.

Respectfully,
 Robert Pratt

I am non-plussed at the supposed "remedy" for Microsoft wrong-doing. The "remedy" is to enforce that Microsoft products are given even MORE exposure than previously?? This would give Microsoft an unfair advantage in the National School System.

Microsoft is not, nor ever will be, remorseful in any way. Indeed, the same practices (proprietary) practiced previously, were practiced throughout the Anti-Trust process.

By cloaking it's every pronouncement with "for the good of the Consumers" Microsoft sought to influence everyone that any judgement against Microsoft was anti-consumer and bad for consumers. With the huge market share enjoyed by Microsoft, it's even MORE incumbent upon them to play fair.

This news indicates that Microsoft still seeks to impose it's standards over those of any other company by foul means, rather than fair.

In December, Java was more popular than .Net for building Web services, according to a ZDNet UK poll, but weeks later the position had dramatically reversed; investigation revealed just what lengths Microsoft will go to to promote its products

Microsoft's .Net Web services technology appeared to experience a sudden massive boost in popularity over its rival Java, according to a poll run by ZDNet UK.

By 21 December, more than two-thirds of the respondents (69.5 percent), said they planned to deliver some applications by Web services by the end of 2002, with a large majority of those (nearly half the total sample) planning to use Java. Only 21.5 percent said they planned to use Microsoft .Net—less than the figure (23.5 percent) planning to use neither.

But by the time the poll closed, on 5 January, the position had dramatically changed, with three quarters of voters claiming to be implementing .Net. This apparent sudden change of heart over the Christmas period appears to be the result of a concerted campaign within Microsoft.

ZDNet UK logs reveal rather obvious vote rigging, and prove that it originated from within Microsoft:

A very high percentage of voters are from within the microsoft.com domain.

There is a very high incidence of people attempting to cast multiple votes, even though the poll script blocked out most attempts at multiple voting. The one that wins the prize made 228 attempts to vote. This person was from within the microsoft.com domain.

I submit that the following is as true today as it was in the beginning of the Anti-Trust case:

<http://www.nytimes.com/2001/09/07/opinion/07FRI1.html>

The brunt of the case against Microsoft entailed coercive behavior by the company to force Internet service providers and computer makers to favor Microsoft's browser over Netscape's. Competitors are now complaining of similar behavior by Microsoft to use its Windows monopoly to immunize its newer products from real competition. Just last week European Union antitrust regulators initiated an inquiry into these claims.

In its announcement yesterday, the Justice Department appeared to acknowledge the urgent need for a change in Microsoft's conduct. In addition to calling for "prompt, effective and certain relief for consumers," it said it would use a period of expedited discovery to "investigate development in the industry since the trial concluded, and to evaluate whether additional conduct-related provisions are necessary."

Microsoft has a track record of showing little appreciation in its business dealings for the magnitude of the legal rulings against it. That is all the more reason for the government to remain on the case as the company aggressively seeks to become as dominant a platform for all Internet services as it currently is for PC software.

There is much more evidence out there..the DOJ should make every effort to right wrongs in this case. Please don't short-cut this issue due to the war on Terrorism.

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties

worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change. Sincerely,
Leona Bochantin

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Washington, DC 20530
Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate

and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Respectfully,
Erthel Hines

Hello—

I am writing because I believe that the deal arranged by the U.S. government and Microsoft is a BAD deal for all us consumers.

Microsoft is a criminal company and is a danger to U.S commerce and the future of computing.

I believe it would be in the best interest if Microsoft was broken up into different competing companies.

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in grudging support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Reno's abuse of the DoJ as a political tool should rightfully embarrass supporters of so called anti-trust legislation. It is impossibly broad and famous for the political process used to select victims. Microsoft is only the latest example of what is wrong with the DoJ, DC, and the anti-trust laws that cripple the economy. I am disappointed that some have decided to further pursue this baseless case. But I am certainly not surprised at their avarice, or their willingness to use bad law to line their pockets.

The settlement makes a mockery of the DoJ and american justice in general. The ultimate irony of the "settlement" is that Microsoft has now secured a monopoly on public school children. Institutionalizing a

monopoly is a comic and fitting end to the litigation.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal governments antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. But that wasn't the point.

The point is that Microsoft now pays millions annually in homage to its (now acknowledged) master in DC. It doesn't pay to succeed too well in America. And it's particularly poor practice to not even pay lip service, much less direct graft, to the DC mob. Microsoft made all these mistakes.

Once again, thank you for settling this unfortunate lawsuit. Good luck restoring your reputation.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Judith Murray

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and

resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Subject: Microsoft Settlement

Dear Department of Justice:

It is my opinion that most of charges against Microsoft are very minor and are the type of things companies do to grow there business if there competitors can't compete they whine and sue if things worked that way Studebaker would still be in business if they were protected like Apple Computer in the Education Market!

But the bottom line is certain states and individuals drum up these charges so they can as Robinhood rob the rich!

There would be no such suits if Microsoft didn't have billions in cash! And companies do to weak products or bad management are protected by the government cry to the government that they need protection and money from there more sophisticated competitor Microsoft!

Fax: (202) 307-1454 —OR— (202) 616-9937
To Whom it May Concern:

As a citizen of Washington state, I encourage you to accept the proposed settlement in the anti-trust case involving Microsoft.

I have always believed anti-trust laws were primarily to protect the consumer. As a consumer, I have not been hurt at all. Most of the problems mentioned in the press during this litigation, I have personally solved with little difficulty. I have never heard of the name of the consumer who has been harmed.

This settlement is appropriate and reflects a triumph of the rule of law. Certain Microsoft competitors and other critics of the proposed settlement make the core of their objections a call for more stringent restrictions, ranging from prohibition of what they call "product tying" to breakup of the company. More extreme critics complain that the remedies do not address products that were not even part of the case.

These objections ignore the decision of the Appeals Court that reversed much of Judge Jackson's original findings. The Appeals Court threw out findings on many fronts related to Microsoft's anti-monopolistic behavior. One key area rejected was the basis used for claiming that integrating Internet Explorer and Windows represented monopoly abuse. The court went further to state that any new burden of proof for "tying" would be immense. The court also rejected the breakup order and made it clear such an order moving forward would be difficult to sustain given the court "drastically altered [i.e., reduced] the scope of Microsoft's liability."

One final objection raised by critics is that Microsoft has a past history of consent decree violation so the company cannot be trusted to adhere to a new decree. This is a patently false assertion. The Appeals Court in June of 1998 rejected the very claim that sent the parties into litigation—the Department of Justice claim that Microsoft had violated an earlier consent decree. Furthermore, this settlement takes the extraordinary step of creating an onsite oversight body. There are, therefore, no legitimate grounds for an assertion that a consent decree will not constrain Microsoft's behavior in the ways the court intends.

Rather, the proposed settlement directly and concretely addresses each and every key finding upheld by the Appeals Court, and does so with an undeniably stringent remedy. The areas of violation addressed include requiring OEMs to preserve visible access to Internet Explorer, to preserve the original boot sequence, to preserve all Microsoft-supplied desktop icons; entering into exclusive contracts with Internet Access Providers; threatening companies over support for other middleware technologies; and every other key area identified by the Appeals Court.

In my view, there can be no valid objection to this settlement because every major finding of the Appeals Court is stringently addressed with a targeted remedy that specifically prohibits and prevents the behavior in question. Acceptance of the proposed settlement will send a signal throughout American industry and the country as a whole that in the United States rule of law is alive and well—that defendants face remedies only for those findings against them. Anything beyond this settlement would represent a victory for those who do not seek remedy but rather also unwarranted punishment, and this would be a serious blow to the smooth functioning of free markets and the law that protects them. Participants in the American economy would forever be forced to fear whether the laws they rely upon to safely conduct business will be applied fairly.

I believe in advancing free market competition and this settlement serves the best interests of the American public. It fairly resolves a complex and burdensome anti-trust case that is having severe impacts far beyond one company, a case that is acting as a drag on one of the most vibrant sectors of our economy. Settlement of this case will free the high-technology industry to put its fullest efforts into innovation and creativity, and

will spur competition in a way that will directly benefit consumers.

Thank you for your consideration.

Signed,
John F. Derrig

Subject: Microsoft attempts to affect the trial
Having just become aware of the email message by which Microsoft hopes to sway the Department of Justice—via the public comment period, I certainly hope that anyone analyzing the public comments takes this underhanded activity into account.

For several months, I have been subscribed to (spying upon?) a mailing list called "Freedom to Innovate". The name of the list is particularly amusing since the purpose of the mailing list is to promote the position of Microsoft in various anti-trust motions in our courts.

I have copied today's "Freedom to Innovate" message below. Aside from its humorous aspect, it includes information about how to submit public comment to the Department of Justice. So, if you have opinions on how Microsoft has affected your "freedom to innovate", you may wish to correspond with the Justice department on the topic.

— joe

----- Microsoft message follows -----

A FINFlash Alert: The DOJ wants to hear from YOU!

For nearly four years, your voice has been instrumental in the debate over the freedom to innovate. Tens of thousands of concerned citizens have communicated to their public officials about whether the Microsoft case should be settled or further litigated. Despite the aggressive lobbying efforts of a few of Microsoft's competitors, the federal government and nine states finally reached a comprehensive agreement with Microsoft to address the reduced liability found in the Court of Appeals ruling. This settlement is tough, but reasonable and fair to all parties involved. Consumers overwhelmingly agree that settlement is good for them, the industry and the American economy.

However, this settlement is not guaranteed, and your voice is more important than ever.

The law (officially called the Tunney Act) requires a public comment period between now and January 28th after which the District Court will determine whether the settlement is in the public interest.

Unfortunately, a few special interests are attempting to use this review period to derail the settlement and prolong this litigation even in the midst of uncertain economic times. The last thing the American economy needs is more litigation that benefits only a few wealthy competitors and stifles innovation.

Dont let these special interests defeat the public interest.

----- End Microsoft message -----

This is but a small sample of the unsavory practices Microsoft employs. If the proposed

settlement takes place, Microsoft will have won and at the same time solidified its position and be well on the way to its goal of complete domination of anything having to do with computers or the Internet. Please do not let this settlement be for nothing, which it will if it proceeds as now projected. Should the DOJ in the future, find that the presently proposed settlement did more harm than good (as I am firmly convinced it will) it will be far too late for any remedy and future anti-trust actions will have been forever compromised. The Microsoft 'model' will encourage other companies to follow their lead and so escape any "punishment".

Just one question—I wish someone could explain to me just WHAT so-called "innovations" Microsoft has ever been responsible for? Microsoft merely adapts others work and proceeds to make it Microsoft specific, thereby denying use of it to others by attempting to make its version the defacto default.

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by

lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Robert Smith Jr.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Early in last November, the Department of Justice and the Microsoft Corporation came to an agreement in the three-year-old antitrust lawsuit. I believe that the terms of the settlement are reasonable, and I am therefore lending my support to the agreement that puts an end to this lengthy and extremely costly litigation.

Microsoft did not get just a slap on the wrist, as evidenced by the fact, that the company has been forced to turn over substantial portions of its intellectual property to its competitors. Microsoft will share with its competitors, information about how Windows interacts with other programs and will not retaliate against vendors who sell or use non-Microsoft products. Furthermore, as part of the settlement, Microsoft will be supervised by a technical committee, consisting of three software engineers who will test Microsoft's compliance with certain aspects of the agreement.

I understand also, that other terms were agreed upon that were never even an issue in the antitrust lawsuit. Microsoft, however, accepted those terms based on the view that the United States economy is far more important than pursuing arguments over less significant details.

I completely support the settlement, and would like to go on record as doing so.

Sincerely,
Courtney G. Phillips

From: Vhon Montefrio
To: Judge Kollar Kotelly
Date: 1/14/02 6:53am
Subject: Microsoft Settlement

Hi Judge Kollar-Kotelly,
Good day to you Judge!

I am sending you this email to comment something with regards to the controversial Tunney Act in which passed by the US Congress. This is particularly the Microsoft monopoly issue.

My name is Mr. Andrebon G. Montefrio, Jr., from Philippines. I heard that you are the Independent Judge who will review and approve the Justice Departments proposed agreement.

I believe as a consumer of a product, it is important to have at least two or more options to choose of what to buy or consume. For example, a consumer wanted to buy a car, choosing between five different cars would help him arrive at his decision more handily. As for me, if I wanted to purchase a Computer System, I should have many choices of brands or models before I will buy it. Of course it depends on my budget, preferences, system performance and other factors.

With Microsofts case, I think a lot of many software companies were hurt by it. Microsoft has been into monopoly since the start. And it became more obvious now. With the current OS, which is Windows XP, software applications embedded with it made the other software manufacturers life gloomy. With its many features such as the Media Player, Internet Browser, Utilities, and many more, competition with other companies is never that stiff. What happens now to Netscape? How about the other software makers? All will eventually close down. And who is in the losing end? Not just the other software companies but also the consumers as well. Consumers will not be able to try and test alternative software or even Operating Systems. Other technologies will not be available in the market because no one will try them anymore. What for? Windows XP has it all already. Much more, PC companies would be using the new Microsoft OS for sales growth. So the more PCs will be purchased, the more the Microsoft users there will be. The more the monopoly there will be.

What I am trying to say is, Microsoft should play the field fairly. Give other companies the chance to play the field and for the consumers to have the opportunity to try other options. The more they become bigger, the less the competition there is.

Thank you for your time. I hope I have clearly stated my point here. Please review carefully the agreement before signing it.

More power to you!
Cheers,
Andrebon G. Montefrio, Jr.

Subject: Encourage DOJ to settle Microsoft case

Dear EFF Friends,

As you know, 18 states and the federal Department of Justice (DOJ) have been involved in a lawsuit against Microsoft. Recently, the DOJ announced it has negotiated a settlement agreement with the company (one of America's most successful). The settlement must be approved by the

federal judge in the case before it can take effect, and the DOJ is currently seeking public comment.

The case against Microsoft has greatly harmed Washington citizens. Stock values, not only in Microsoft but in the entire NASDAQ, have dropped dramatically and consumers overwhelmingly agree that allowing the case to end with this settlement is good for them, the industry, and the nation's economy.

Please consider sending a letter, fax or email to the DOJ to let them know what you think about the settlement. The deadline for comment is January 28, 2002. I'm including a sample letter below along with the contact information you'll need. Please feel free to edit it as you see fit, or write your own.

I would recommend sending your comments by email or fax since mail has had difficulties lately. Also, if possible, would you let us know if you decide to send a letter? We'd like to measure the impact.

Thanks very much.

Cordially,

[Sample Letter]

To Whom it May Concern:

As a citizen of Washington state, I encourage you to accept the proposed settlement in the anti-trust case involving Microsoft.

This settlement is appropriate and reflects a triumph of the rule of law. Certain Microsoft competitors and other critics of the proposed settlement make the core of their objections a call for more stringent restrictions, ranging from prohibition of what they call "product tying" to breakup of the company. More extreme critics complain that the remedies do not address products that were not even part of the case.

These objections ignore the decision of the Appeals Court that reversed much of Judge Jackson's original findings. The Appeals Court threw out findings on many fronts related to Microsoft's anti-monopolistic behavior. One key area rejected was the basis used for claiming that integrating Internet Explorer and Windows represented monopoly abuse. The court went further to state that any new burden of proof for "tying" would be immense. The court also rejected the breakup order and made it clear such an order moving forward would be difficult to sustain given the court "drastically altered [i.e., reduced] the scope of Microsoft's liability."

One final objection raised by critics is that Microsoft has a past history of consent decree violation so the company cannot be trusted to adhere to a new decree. This is a patently

false assertion. The Appeals Court in June of 1998 rejected the very claim that sent the parties into litigation—the Department of Justice claim that Microsoft had violated an earlier consent decree. Furthermore, this settlement takes the extraordinary step of creating an onsite oversight body. There are, therefore, no legitimate grounds for an assertion that a consent decree will not constrain Microsoft's behavior in the ways the court intends.

Rather, the proposed settlement directly and concretely addresses each and every key finding upheld by the Appeals Court, and does so with an undeniably stringent remedy. The areas of violation addressed include requiring OEMs to preserve visible access to Internet Explorer, to preserve the original boot sequence, to preserve all Microsoft-supplied desktop icons; entering into exclusive contracts with Internet Access Providers; threatening companies over support for other middleware technologies; and every other key area identified by the Appeals Court.

In my view, there can be no valid objection to this settlement because every major finding of the Appeals Court is stringently addressed with a targeted remedy that specifically prohibits and prevents the behavior in question. Acceptance of the proposed settlement will send a signal throughout American industry and the country as a whole that in the United States rule of law is alive and well—that defendants face remedies only for those findings against them. Anything beyond this settlement would represent a victory for those who do not seek remedy but rather also unwarranted punishment, and this would be a serious blow to the smooth functioning of free markets and the law that protects them. Participants in the American economy would forever be forced to fear whether the laws they rely upon to safely conduct business will be applied fairly.

I believe in advancing free market competition and this settlement serves the best interests of the American public. It fairly resolves a complex and burdensome anti-trust case that is having severe impacts far beyond one company, a case that is acting as a drag on one of the most vibrant sectors of our economy. Settlement of this case will free the high-technology industry to put its fullest efforts into innovation and creativity, and will spur competition in a way that will directly benefit consumers.

Thank you for your consideration.

Signed,

MTC-00032599

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S.

v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Charlotte Worden

Subject: Microsoft Settlement (Support)
Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Joseph Guthrie

Subject: Material relevant to DOJ Antitrust Suit Against Microsoft
Monday, January 14, 2002

Dear Department of Justice,
The following email describing a restriction of browser choice by AT&T Worldnet forcing Microsoft's browser on its customers was sent to AT&T today, Monday, January 14, 2002. It is further evidence of Microsoft's pervasive and dominating influence on the PC that kills competition and impoverishes consumer choices.

Please do something to restrict Microsoft's monopoly.

Thank You
Bruce L. Rosenberg
Here is the letter:
Monday, January 14, 2002
Jerry G., AT&T Support Person,
I find AT&T's answer to the following question quite unsatisfactory.

“ Question:
Why does my browser automatically launch when I connect even though I disabled that feature? How do I stop it?

Answer:
At this time, there is no way to disable this feature.”

This “feature” could be a bug (a programming oversight), because there is/was a check box in the options/advanced to uncheck “Launch Internet Explorer”. Checking or unchecking this box no longer has any effect. Microsoft Internet Explorer launches whether you want it or not!! Gates rules!!!

This “feature” could also have been implemented due to the fact that Microsoft now has such power over the once mighty AT&T that they must bow before them and do their bidding. I believe that Congress and the Justice Department should be made aware of this situation since it is relevant to the anti-monopoly case against Microsoft. It could be considered a restriction of browser choice by AT&T forcing Microsoft's browser on its customers.

In any event, one hopes that this “feature” will soon be “updated” with an improvement which will once again allow AT&T Worldnet ISP customers to chose -not- to launch Microsoft Internet Explorer once the connection is made.

Is such an update in the works? If so, when I might expect to receive it?

Is there any way for me to go back to my previous version of Worldnet software?

I feel that I should receive free internet service until this "feature" is corrected.

Please respond ASAP. Thanks.

Very sincerely,

Bruce L. Rosenberg

ehelp@att.net wrote:

Dear Bruce ,

I received your email concerning our Auto Update. The main objective for this update is to remove the on-screen toolbar that is part of your price plan. There are other changes as well:

Addition of a prompt that tells you that you have been idle for 25 minutes

Auto-start of your browser software

A bug fix to support 10-digit dialing.

After you select "yes" to this update, just follow the prompts you see on your screen. The update will not be applied immediately, but only after you re-start your computer.

I have provided answers below to other questions we're getting about this change. I apologize for any inconvenience this change has caused.

Jerry G.

Question:

Why does my browser automatically launch when I connect even though I disabled that feature? How do I stop it?

Answer:

At this time, there is no way to disable this feature.

Question: Every time I sign on, I get the Auto Update. How do I stop it?

Answer:

The auto update doesn't install itself until you re-start your computer. If you do not re-start, you will be prompted each time you log on. If you choose not to install the Auto Update by saying "no" when asked, you will be prompted again the next time you log on.

Question: Dear AT&T Worldnet

Representative,

After "updating" my AT&T Worldnet ISP connection software yesterday (1/7/02), Microsoft Internet Explorer launches even though it is unchecked on the Options/Advanced window. I am a Netscape 4.79 user. Netscape still launches, but Internet Explorer launches first.

I want to know how to stop MS Internet Explorer from launching.

If you cannot help me, I will be forced to find a new ISP, since I abhor the loss of my choices due to Microsoft's monopoly on the PC. I refuse to be forced to use Internet Explorer by my Internet Service Provider, which is apparently what AT&T have done with this latest Worldnet "update". This update was certainly not an upgrade, it was not obvious to me that any speedup or other improvements occurred after my updating.

All I received in response to the above was an automated response telling me about the

plan switch-over, where the 7/7 or whatever was switched-over to a different plan. I never had the cheap plan with enforced advertising. I had and still have the more expensive plan, \$15/150hours, so I should not have had to update my Worldnet AT&T software. I am angry at having to deselect Internet Explorer each time I get online so I can use Netscape 4.79.

I have emailed my complaint letter to everyone on my mailing list to broadcast my dissatisfaction with Worldnet ISP.

Thank You,

Bruce L. Rosenberg, no longer a satisfied customer of AT&T Worldnet!!

Subject: (Bill Rice) Windows XP Licensing

Dear Mr. Rice:

First off, thank you for your feedback. Microsoft is strongly committed to your satisfaction and we would like to take this opportunity to address your concerns regarding the licensing of Windows XP.

Your first concern is that you were unable to find any information on installing

Windows XP, on more than one computer, on the Windows XP box itself or in a number of other locations. We apologize if this information was not easy to locate. We did include information about this on the back of the Windows XP box—towards the bottom, under the word "Experience". The text states: "For installation and use on one computer (see License Agreement for license terms)". It is further described in the first section of the End User License Agreement (EULA) which must be accepted during the Windows XP installation process. For a detailed description of this on the Microsoft website, please refer to: <http://www.microsoft.com/WINDOWSXP/home/evaluation/overviews/activation.asp>

<<http://www.microsoft.com/WINDOWSXP/home/evaluation/overviews/activation.asp>>

Windows XP licensing information was also included in product reviews done by journalists from many independent magazines and newspapers such as PC World, PC Computing, and ZDNet.com. The "one PC per license" concept has been in the Windows EULA for over ten years and is a condition of almost all products produced by commercial software makers. Nothing about this portion of the Windows license agreement changed with Windows XP.

You mentioned that you would like to put Windows XP on two computers for your children but that it would be cost prohibitive at over \$500. You may have been previously provided with some incorrect pricing information. The Windows XP Home Edition Upgrade currently retails for around \$99 per license. At this retail cost, your children's two computers could benefit from Windows XP at just \$198. Home users with more than one computer in the household may also qualify for a reduced upgrade price of \$84.50 per license; in your case a total of \$169. You can take advantage of this offer by calling Microsoft at 1-888-571-2048 (Press "0" when the call connects to speak to a customer service representative directly).

We value you as a Windows XP customer, however if you are not happy with the terms of the licensing agreement you are free to return the product.

While you are under no obligation to use Windows XP as the primary platform for your personal computers, we hope that you'll consider using the product.

Thank you for providing Microsoft with this opportunity to address your concerns.

Sincerely,

J.K. Weston

Microsoft Corporation

Subject: windows xp

Dear Mr. Gates

I am a long time Microsoft supporter....have bought almost every

upgrade version of Windows, Office, FrontPage...etc !!!!

....I work on as laptop and have a desktop for home, a laptop for my wife, and two desktops for my 2 children.

I recently purchased the latest version of everything available...spending over \$750 before the holidays...

...I have been buying Microsoft products for years.....

I am ABSOLUTELY APPALLED that the XP operating system requires that I purchase an additional license, for hundreds of dollars, for every PC in my house.....(this is not obvious on the purchased product, from the retail salesperson, on the Microsoft website, or in any advertisement...I looked! I didn't have my bi-focals and couldn't read the VERY SMALLEST PRINT)

I have always supported Microsoft...and have not supported the federal and state lawsuits.....

BUT.....I FEEL ROBBED...no salesman warned me that, unlike all previous versions....I would have to buy separate, EXPENSIVE licenses for each computer in my home...(I buy a VCR tape...and use it in all my VCRs.....)....

...so I am sad to say that tonight I am writing to Judge Kollar-Kotally as well as to all of the states attorneys general.... To convey my personal experience...that Microsoft is not playing fair with its market advantage....UNTIL TONIGHT, I WAS AN ARDENT MICROSOFT SUPPORTER.....THERE IS NO CLEAR INDICATION ON THE XP BOX THAT THE UPGRADE WILL ONLY WORK ON ONE COMPUTER.....I feel misled and disappointed.....my children use XP at school and I wanted to use the same operating system at home for projects and homework...but to put the operating system on their PCs costs over \$500 and there is no alternative operating system platform.....

I think the uniformity of platform created by a broadly successful Microsoft has helped propel significant increases in our national productivity. I now believe that Microsoft is taking advantage of the "little guy," and that this pricing scheme may reflect a portion of what others in the technology industry have been complaining about. I didn't understand or appreciate the problem until tonight.

Thanks for taking the time to review these comments.

Bill Rice

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

601 D Street NW, Suite 1200
Washington, DC 20530

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors' consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate

and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement. This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Alan L. Lasnover, M.D.

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state

attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

January 8, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:

Like many people in Texas, I am happy that a settlement agreement has been reached between the Department of Justice and Microsoft. The suit has taken a toll on the IT industry and on consumers of technology

products. The settlement agreement is fair to all the parties in the case and is the result of years of expensive litigation. Information sharing and non-retaliation agreements should be enough to satisfy even Microsoft's harshest critics. Unfortunately, opponents of Microsoft would like to see the lawsuit continue and even be reopened for further action. Three years of litigation have already disturbed the IT industry and the economy too much. Reopening the suit and continuing litigation will only serve to harm the IT industry and the economy.

Now is the time to end the suit and move on. Surely, the Department of Justice has more important issues to deal with and Microsoft needs to move on as well. I hope that the settlement is finalized as soon as possible.

Sincerely,
Suzanne Dodge

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal governments antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,

Subject: Microsoft Settlement (Support)
Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

Dear Ms. Heese:

I am writing to you as one of my last acts as an Oregon Citizen in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet and until now, in this depressed economy, have brought jobs to our family and taxes to you. Well no more. The jobs have vanished and we are leaving the pacific northwest for more prosperous regions of the country where people implement sound economic change and jobs are more plentiful.

In conjunction with my support of the Microsoft settlement, I support big business. I don't want unemployment! I want a job! And I'd like to see the legislators do their job and quit worrying about the next election and stalling valuable legislation. We aren't so dumb that we don't understand what is happening. I will vote against anyone who stalls the economic recovery that is for certain.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

From: Claude Prevots
To: Department of Justice
Date: 1/15/02 4:09pm
Subject: Tunney: Creativity in software engineering

Greetings:

It is not in the public interest to constrain further the creativity and innovation of Microsoft designers and software engineers with additional, legally complex conditions. The remedies already provided by the settlement provisions construct an edifice of legal reasoning and arcane subtleties that will require software developers to get a law degree to cut through this Byzantine complexity. Endless meetings and explanations between lawyers and engineers, not new products, are what will result.

When Attorney General Janet Reno proclaimed her enthusiastic anticipation of the new varieties of DOS engendered by enforcement of antitrust laws, one could only groan in disbelief at her failure to understand how progress in the systems business thrives. In retrospect we find no new varieties of DOS but find that it has almost disappeared.

With Microsoft the consumer is benefited by a culture of excellence that its competitors are unable to match. We need the robust organization of Microsoft to keep its competitors on their toes. An added onset of *elegantia juris* will only stifle further the creative minds that generate the innovation we need to keep the U.S. economy thriving with new functions and features to empower consumers.

Whereas Microsoft has been solely responsible for greatly increasing the total productivity of our nation, they were then penalized with a bogus law suit by Clinton Administration whims. When others saw the government's actions the current recession began.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal governments lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case. Some state attorneys general seem to be interested for their own political self-edification.

The settlement is fair to all. It will allow Microsofts competitors to use Microsofts Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal governments antitrust case against Microsoft. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. It appears to have been the primordium of the fantastic rollercoaster economy that we have had beginning in 1992.

Furthermore, it appears to have been a "political vindetta" because of Microsoft's entrance into the communications field, namely, MSNBC. It was predicted by this writer in the early programming at MSNBC.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Dear Ms. Heese:

I agree with the Justice Department's decision to settle with Microsoft Corp. The holdout state attorneys general and the District of Columbia should follow your lead.

Microsoft's actions, instead of harming consumers, lowered the cost and increased the availability of the software products they sought. Microsoft also made millions of us more familiar with the Internet.

Thanks for deciding to settle this unjust lawsuit.

Dear Ms. Heese:

Below please find the text of a form letter available on the "Capitol Connect" site, supposedly a consumer advocacy outfit of some sort. Please do not believe a word of it.

Microsoft deserves to be slammed in court for their actions and practices, and I would hope that no amount of thoughtless form letters, however prettily formatted, would change that fact.

Regards,
—Cliff ***

Dear Ms. Heese:

I am writing in support of the the state attorneys general and the District of Columbia against Microsoft.

The settlement is a slap on the wrist to Microsoft. It will not guarantee that Microsoft cannot continue to attack small or other large companies through non-competitive means. The Microsoft Windows operating system is only now becoming a true operating system. It still leaves a lot to be desired. Whether or not Microsoft choose to create more mediocre products for the public is not an issue. Whether or not smaller software companies and other companies can play in this market is.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal governments antitrust case against Microsoft. This view point is clearly a misguide stance from a group of people unaware of the speed of changing technology and the options available to them. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions is

detrimental to consumers. The evidence can be seen in the demise of Netscape and the battles against SUN over J++. Microsoft's anticompetitive behavior has limited the high-technology market and have forced users to learn to accept mediocre products.

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Michael Wegman

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

Continuation of the case threatens to prolong the 8-month old recession, as well as increase the severity of the technology sector's 18-month decline. In this time of economic uncertainty, we need businesses that stimulate demand for other products throughout their industry to get back to work, not encounter new obstacles to growth. It is time to put an end to this lawsuit and get back to the business of strengthening our economy

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Subject: MicroSoft Settlement

I just wanted to vent about what is happening with the MicroSoft Settlement. MicroSoft started from nothing and is solely responsible for the PC revolution and a good deal of the other technological advancements we know and enjoy today. It is unfair for this country to penalize success. I think it is great that finally a U.S. company is a world leader and is able to compete with other corporations around the world especially when so many of them are subsidized by their governments.

Please stop playing politics and look at all the good that the company does. Bill Gates donates a lot to charities, pays more than his share in personnel and corporate taxes and provides a lot of jobs. I was disgusted and embarrassed to be an American under Clinton but have regained my pride and patriotism under President Bush. Please do the correct and honorable thing and put this endless litigation to rest. The only people that win are the lawyers.

Thank you,
Bill Klueber

From: Howard Kistler
 Date: 1/16/02 7:33am
 Subject: Microsoft Settlement

To Whom It May Concern,

As a long-time computer programmer and software developer, I am urging the Department Of Justice to consider practical and responsible remedies to the monopoly of Microsoft.

Microsoft has long enjoyed immunity from punishment for its many abuses of power. This is in a large part because those abuses allow it make far more money than is ever levied against it in penalty. In truth, it is hard to calculate how large a fine would be necessary to even impact them. That is why other remedies must be pursued, beyond those of simple fines and behavioral decrees.

I believe that one of the only, if not the only, remedies that would address the monopoly situation is to force Microsoft to open up the Windows APIs for competitive development. This would have multiple positive effects, including the following:

(1) It would allow true competition in the operating system marketplace. Competition in turn is one of the only factors that drive companies to produce a genuinely better product, and to offer those products at reasonable market prices. It is my opinion that this lack of competition is a large part of what has cause Microsoft to offer increasingly problematic and user-hostile products, and at absurdly inflated prices.

(2) It would create transparency in the operating system. This would allow other companies and developers to create products that interface better with the OS, as well as decrease the amount of viruses and other code exploits written which take advantage of the hidden code.

(3) It would spur actual innovation from Microsoft, as opposed to it merely bundling in features which increase its monopoly but

do not add to, and often hinder, the user experience.

The only argument against this remedy that I can see as viable is that this settlement deprives Microsoft of some of their intellectual property. While very probably true, it is also unfortunate that this is most likely the only way in which Microsoft can be brought to terms in the settlement. As a company which has enjoyed a monopoly position for too long, and which has deprived other firms of their intellectual property and market share, and which has flaunted its disregard for previous judgements against it, I believe that opening the Windows APIs is the only option left to the DOJ if it truly wishes to resolve this issue. Otherwise, we can all expect another investigation like this within the next decade, and each decade after until real action is taken against the Microsoft monopoly.

Sincerely,
 Howard Kistler

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal governments lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsofts competitors to use Microsofts Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal governments antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,

Roger Ryder

For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers,

but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

If you will take the time to research it you will see that the stock markets started their downward sperial at about the same time that the law suit against Microsoft started. It has continued to go down since that fateful time. Please, please get off of American businesses back and leave the free enterprize system alone. Every time the government sees fit to intrude on the free enterprize system we end up with nothing but trouble.

Respectfully,

James Hinson

Subject: More on the Microsoft Settlement

Judi,

Your unhappiness with Microsoft represents a need that another company should exploit. If they were any good they would already be doing so. It is not the Governments business to make Microsoft less competitive.

I sympathize with the technical problems you are having. I go nuts when I have them, which is fairly often. Let's face it, personal computer technology is at the Model-T stage of development. The V-8 hasn't been invented yet. Let's hope it happens soon.

There are so many things the Government should be focused on . . . like preserving good manufacturing jobs in America. Why they keep attacking good American companies makes no sense. Where do they think the good jobs are going to come from?

Also, I think the overpayment of Corporate Executives is a National and perhaps International disgrace. I say that as the 18 year President and COO of a mid-sized multinational company (now semi-retired). It is one thing to invest and risk your own capital and make a fortune . . . it is quit another thing to be given exorbitant salaries and lucrative stock option deals. I know all the arguments about creating value, but this value should be shared with the employees and not hogged up by a handful of greedy executives. Anyway, I appreciate you perspective.

All the best!

Bill Pauwels, Sr.

judi b wrote:

A month ago I would hav agreed with you and then some, but then I had an experience. You know that I am legally blind and work on adaptive equipment. I downloaded IE6 and OE6 and they weren't that compatable with my screen reader. I called in a tech for a lot of money and asked him if he could remove IE6 and OE6 and reinstall OE5 and IE5. It was a brutal job but he eventually did it. In short, because there were componants of the 6 family left in the computer that microsoft designed to not be removed the install of the 5 family really messed up my computer. I could not write an Email and I could not write on the net. In other words I could not write on a search engine a subject I wanted to search for. Since I hav thousands of hours of work on this machine and none of it gets anywhere if I don't have Email, which the reinstall of the 5 family left me with, I spent a harrowing weekend wondering if I would ever send out another article. Bill Gates deserves what he has earned and deserves the noteriety for what he has accomplished. However, why does he have this desire to totally take over every computer to the extent that changes cannot be made because the componants in his software can never get out of a system once they get in? Bill, if you buy a house with a garage would it be fair that the only car that the garage could hold be a chevy? I know this analogy is far fetched but there is nothing else that I know of that dominates like Microsoft. The upshot of my problem is that I reinstalled the 6 family and am living with

the inconveniences that occur with my screen reader, its better than having no Email and no ability to search on the net. Judi

The case against Microsoft should be dropped. Microsoft has made GREAT contributions to the well-being of mankind and to its institutions.

The Justice Dept.'s persecution of SUCCESSFUL American companies because their competitors don't like them and/or can't measure-up in the marketplace, is ridiculous.

If the Justice Dept. is looking for something to champion, why not go after the thousands of FOREIGN companies doing business in the USA while violating American Antitrust Laws.

Sincerely,

William A. Pauwels, Sr.

Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Window's operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,

Subject: Microsoft Settlement

I should think that my government would have better things to do with my tax dollars than persecute Microsoft. Big business is a notoriously "hard ball" environment, and other software manufacturers had several years to get their "at bats" while MS was still playing with DOS versions 1 through 4.

Windows didn't really become popular until v 3.0, but the slackers in the industry failed to foresee how popular Windows would become. That's not the fault of Gates et al. As for what MS wishes to incorporate into their OS—that should be up to them. It's their product, and if they want to give away a BMW with the damn thing then that's their call! Nobody in the country is selling web browsers anyway, so what's the big deal? None of the other software publishers is building a competitive operating system/interface to try to loosen the MS hold on the market. They'd rather sit around crying to the DOJ about how they've been beaten up by MS because they failed to forecast the market correctly. I have one word for them—TOUGH! If you want to look into some real monopolizing why not check out Apple—they have no competition in their market for either their operating system or hardware.

Or investigate Intel—whose only real competitor, AMD, is having their share of financial woes. To lose AMD would give Intel the same kind of power that you're

claiming Microsoft has garnered through hard work, outstanding marketing, and yes, occasional pressure. But then, everybody in business uses what power they may have to get the edge on their competitors—that's what makes our system work. Mass producers get lower per unit costs on everything than a Mom and Pop operation gets. That hurts the struggling independent—but nobody seems to care much—except Mom and Pop. It's the way things work!

All large businesses use whatever leverage they have to improve their market share while reducing the market prospects of competitors. Microsoft has just been more successful at it than anybody in the world could have imagined when Gates bought the rights to an unpromising DOS from IBM. Bill Gates is the "Alexander the Great" of product development and marketing. The world has never seen the likes of Microsoft before, and it might never see another such phenomena again. He hasn't done anything patently illegal, and there's no law requiring mercy for those who cannot or will not compete—let him enjoy the fruits of his labors. Please spend my tax dollars on something more meaningful than buying Kleenexes for a bunch of sobbing "big business" tycoons who failed to read the writing on the wall.

ACCEPT THE SETTLEMENT OFFER!

For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by

lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Subject: Microsoft Settlement

Over the years I have seen MS stifle competition by stomping out rivals. I work in the Web Development arena, helping companies to build on line applications. I also use other operating systems besides Windows. I want the freedom to use the platform of choice and this will only continue to be an option if MS has viable competition. This competition will only continue if developers are not scared away from working with other companies by MS.

The settlement MS has proposed only allows them further inroads into a field (education) where they have the only serious competition. Apple has worked very hard to cultivate the education market—fairly!

To give MS unfettered access to that market would only hasten it's demise. Corporations find themselves spending billions to keep up with MS. Conversely, supporting Apple computers in education is a much more cost efficient method of bringing technology to students. Total cost of ownership is much higher with MS operating systems and compatible PC's. Allowing MS to rapidly corner this market, as the current proposal provides, would not only stifle competitors, it would cost education and thus government even more money and not benefit students beyond what they currently receive.

Subject: Microsoft Settlement (Support)
Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Cheryl Engasser

Subject: Open file formats

I would like to comment on the Microsoft case. There should be a push towards opening Microsoft file formats (ea.. Word, Excel) if government doesn't want to find itself in a position where Bill Gates will dictate when and what software to use and how much to put in his coffers. It only make sense that user should be able to use any word processor to open a document, or any spreadsheet program to open a spreadsheet

and so on. You do not have to break company apart to force competition. Just insist that in order to get government software contracts, it has to be open file format.

Subject: Microsoft Settlement (Non-Support)

Dear Ms. Heese:

I am writing in non-support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. I am disappointed in the nine state attorneys general along with the federal government's decision to settle the case. I am very estatic that remaining state attorneys general and the District of Columbia have decided to further pursue this case.

The settlement is unfair to all. It will allow Microsoft's to continue on with an unfair monopoly of the home PC operating systems. I believe they will also continue to abuse loopholes in this agreement to claim their "openess" while behind the scenes they will make changes to users computers to render other company's software products inoperable.

Recently Microsoft released it's newest operating system that threatens every small software vendor in the US. It gives Microsoft the ability to force updates on users computers that could consequently have adverse effects on other non-microsoft software. Once again, I would urge you not to settle this lawsuit against a successful and innovative company.

Re: Microsoft Settlement.

My name is Gem Burke and work in the communications industry as an engineer. I do

not claim to be a computer expert or geek, although I probably know more about computers & software than the average user. I am simply a user of computers and their software and I would like a statement about the "Microsoft Settlement?". I have tried reading at least some of the papers on this action and incorporate that with what seems to be happening in the real world. On this very day, I installed my tax program from Quicken and at the end of it Microsoft's Internet Explorer was installed on my computer. I wasn't asked, it wasn't an option. Then I was asked if I wanted to install AOL. So here it is January 16, 2002 and after all the denials of Microsoft, I'm still getting IE shoved down my throat whether I like it or not. They (Microsoft) are obviously not concerned about anything happening to them in court. This is not the first time Intuit has done this to me and complained to them about this then to no avail.

I could tell you about the site on the internet I logged into that changed all my defaults from Netscape to IE or any of quite a number of other examples of blatant examples of monopolistic behavior but the point I thought important is even on this late date, Microsoft is continuing to muscle out competition confident that it will come through this proceedings unscathed.

I work in the telephone business and one thing for sure, as AT&T was accused of being a monopoly and they were forced to breakup into a dozen smaller companies for anticompetitiveness then, Microsoft should be broken up into 200 smaller companies because not only is Microsoft bigger and stronger, he doesn't even try to hide the fact that he plans to muscle everyone else out. I'm not a lawyer but a blind man could see the blatant anticompetitiveness of Microsoft and the fact that he can use his resources to beat off anybody including the justice department.

01-17-02 Today I tried using Turbo Tax. The first thing to do is update for latest tax information. TT (Turbo Tax) will only allow this to be done using IE (Internet Explorer). Trying to get help or post comments with Netscape only results in error messages.

TT help says: *****
"Internet Explorer is installed to allow TurboTax to quickly and reliably identify your Internet Service Provider(s) (i.e. AOL, Earthlink...) and allow you to connect to the Internet through TurboTax. Access to the Internet is required to update your product, download your state program, and file electronically. Internet Explorer is not configured as your default browser and can be uninstalled from your computer along with TurboTax after you have filed your tax return." *****

Which brings to question, "Why do they need to know who my IP is?" Secondly, I suspect they are really gathering some other kind of information from the computer, illegally, why else would they insist on using this browser? There may be a lot of undocumented features of IE may allow them to do lots of illegal snooping of my records. And it is just possible that Quicken has a backdoor built into their programs that allows them access to all my financial records. If this could be referred to the proper authorities or somebody tell me who I could refer this to.

I believe I have a valid complaint and I would like to see something done about it.

Thank You
Gem Burke

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case. The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
A. Lorenz

Dear Ms. Heese:

To many of us the Microsoft litigation appears to be nothing more than the heavy hand of government in search of more money to squander. The government appears always to search for more money and power, without any increase in its effectiveness. The net effect is to reduce freedom for everyone and increase the cost of government and everything we purchase. We should be reducing the power and intrusiveness of government and get back to the role of government envisioned in the constitution.

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
J.Bryan Mc Duffie

Subject: Against Microsoft Settlement

Dear Ms. Heese:

I am writing in against the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. I disappointed in the nine state attorneys general that decided to follow the federal government's lead and settle the case, I thoroughly approve of the decision by the remaining state attorneys general and the District of Columbia to further pursue this case.

The settlement achieves nothing. It leaves Microsoft in position to use Microsoft's Windows operating system as an unfair leverage against their competitors (such as they did with Netscape) and will leave consumers with less services and products to choose from.

As you are well aware, most, but not all, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. Myself, I thought the initial case did not go far enough. As someone who works daily with the internet and many different software packages, I have seen Microsoft use their knowledge of their own operating system to give themselves an unfair advantage over their competitors. By including more and more options, such as browsers and media players, in their OS and using their financial weight against OEMs (Original Equipment Manufacturers) they have eliminated many competitors. I ask you to reconsider your decision to settle this appropriate lawsuit against a successful and predatory company.

Brian Baumgartner

22365 El Toro Road, #421

Lake Forest, CA 92630

January 17, 2002

Ms. Renata Hesse

U.S. Department of Justice, Antitrust Division

601 D Street NW, Suite 1200

Washington, DC 20530

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking

effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,

Brian J. Baumgartner

I am writing in total support of the recent settlement of the long-running, envy-driven antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless and harmful case.

The settlement is more than fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers like me more services and products to choose from.

As you should be well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, tens of thousands of activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided us with great benefits by lowering the cost, increasing the availability of software products, and opening up an immediate worldwide access to knowledge. We have stressed that Microsoft is a much admired pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a highly successful and innovative company.

Respectfully,

James Braly

January 17, 2002

Ms. Renata Hesse

U.S. Department of Justice, Antitrust Division
601 D Street NW, Suite 1200

Washington, DC 20530

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense,

and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Candy Scott

Dear Ms. Heese:

We are writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though we applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, we are thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitor to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like ourselves have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, we thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Igor and Maria PALLEY

Ms. Hesse:

Hello! I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this

agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Viva la evolution, viva green party! reality
Thank for your attention and time.

Sincerely,
james m nordlund

Date: 1/18/02 9:00am
Subject: Microsoft lobbying opportunity . . .
Gentlepeople:

Public comment on the Microsoft anti-trust case officially closes January 28th. If, like me, you wish to make your "two cents worth" heard, simply email your comments to Attorney General John Ashcroft's anti-trust office at: microsoft.atr@usdoj.gov. You can also let Microsoft read your comments by emailing Microsoft at: fin@mobilizationoffice.com . Here are my comments.

Dear Attorney General Ashcroft:
From the beginning I have regarded the anti-trust case against Microsoft as bogus, just another tiresome example of socialist religiosity imposing their dogma of business virtue in the form of "perfect competition."

As a Tolerant Party supporter, I, of course, am a critic of unlimited government, of letting government do more than impose the limited virtue of peace through enforcement of universal, natural, human, individual rights.

There is no right to be kept competitive, or to have others kept less competitive than one's self. The only legitimate competition-related rights are those of freedom from fraud and defense of one's property rights. Bundling evermore software programs into one's browser, and not giving equal access to other firm's software, is a browser owner's property right rather than a violation of such.

I hope that in this age of global terrorism by Al Qaeda's vice and virtue squads you and other government leaders can relearn the virtue of limited government. Just as we must defund terrorists by legalizing the drug usage from which they derive so much illicit income, we must stimulate the American economy by legalizing freedom of competition. It is time to stop imposing our ruling elite's religious convictions about unlimited perfection of society with their wars on drugs, unfair competition, pornography, poverty, ad nauseum.

The militarization of society in pursuit of unlimited moral perfection leads to the destruction of such societies. When Rome abandoned their tolerant religious policies and began forcing every Roman to worship their new emperors as deities, Christianity became uniquely important a resistance force to Roman oppression as Christians alone refused to worship Rome's new emperor gods. Christians were actually persecuted as "atheists" because of their anti-emperor-deity attitude. If Rome's decline into unlimited "virtue" by government decree, the destruction of Imperial Japan, Nazi Germany and the Soviet Union's similar decline should be instructive. However, Taliban Afghanistan's theocracy shows how few rulers learn this history lesson.

Sincerely,
Robert Bakhaus

From: Daniel Bakstad
To: Attorney General John Ashcroft
Date: 1/18/02 10:40am
Subject: Microsoft Settlement
January 18, 2002

Dear Mr. Ashcroft:

As one of America's largest employers, Microsoft has been unwisely targeted in this antitrust dispute, especially when you consider the current state of the American economy. Microsoft is a successful company, built by the standards of the American dream. The attack on this company is an attack on the American dream.

The settlement that has been reached is a good one in spite of the rather harsh terms that Microsoft will be complying with. For example, Microsoft has agreed to document and disclose for use by its competitors various interfaces that are internal to Windows' operating system products-first in an antitrust settlement. The most important thing, at this point, is just to get this litigation behind us so we can focus on more important issues.

Thank you for all that you have done in bringing about this settlement. Your decision to settle has shown true foresight and wisdom on your part. Hopefully, the remaining nine states still pursuing litigation will soon see the wisdom of this settlement. Thank you.

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Roger Cooper

Subject: Microsoft Settlement

To Whom It May Concern:

I understand that the address to which this email is being sent is the proper address for making comments relative to the DOJ proposed antitrust settlement with 9 states and Microsoft.

I believe that the proposed settlement is adequate and sufficient to complete any dealings between the DOJ and Microsoft. It seems to me that the provisions of the agreement are tough, reasonable, and more than fair to all parties involved. I believe completing this settlement is in the public interest and certainly in my personal interest. It is time to let Microsoft get on with their business and improve their products, of which I am a continuous user. I believe it is time to allow Microsoft to stop expending massive funds paying lawyers to defend itself against these suits and allow those funds to be used for the improvement of Microsoft products.

As a Microsoft stock holder, I believe that settlement of this action will improve my equities position.

The proposed settlement is in my interest and the public interest. The District Court reviewing the case should so find.

Thank you,

Stuart Holoman

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance—the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

Prior to the September 11 terrorist attacks, Osama Bin Laden had already carried out numerous attacks against U.S. embassies and military installations. However, prior to September 11, the United States was spending more money chasing Bill Gates than it was chasing Osama Bin Laden. IS IT NOT TRUE THAT BILL GATES GIVES MILLIONS OF DOLLARS TO CHARITY AND OSAMA BIN LADEN IS A TERRORIST? I AM VERY DISAPPOINTED THAT MY GOVERNMENT SPENT MORE MONEY TRYING TO DESTROY BILL GATES THAN IT DID TRYING TO DESTROY A MURDERER NAMED OSAMA BIN LADEN!

Who's more dangerous? A businessman pursuing the American Dream, or a guy that runs a terrorist organization aimed at killing Americans? I think the majority of Americans would agree that a terrorist is more of a threat.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit

during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Benjamin Gronke

The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case—the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Honorable Judge Koller-Kotally:

We are writing this as a concerned citizen to express our concerns in regards to the Microsoft Proposed Final Judgement.

This Judgement does not deal with any of the three points with which

Microsoft was viewed as having violated.

1. Their illegal monopoly
2. To deny Microsoft the fruits of its past violations, nor
3. To prevent any such future anti-competitive activity.

Microsoft should not be granted a government mandated monopoly.

Therefore we urge you not to accept the Proposed Final Judgement.

Sincerely,

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,

William Barrington

601 D Street NW, Suite 1200

Washington, DC 20530

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid

the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,

Bruce Butts

Gentlepeople:

I find it very disturbing that in the midst of being found a monopoly, Microsoft demonstrated that even while under the close scrutiny of the court it cannot resist trying to corner another market segment: the schools. While it's true that this ploy was rejected by the court as merely a hooded effort to knock Apple and others out of the arena (in the guise of doing something for poor children and at almost no real expense to Microsoft), I wonder if the court can continue to be eager to not split Microsoft up, given that kind of brazen disregard for the laws concerned with predatory behaviors that can destroy competitors and damage the interests of the public, both consumers and organizations.

Please reconsider your earlier backing away from dividing MS into at least two entities, with tight monopoly controls. We deserve competition, not what it appears we may get.

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue
Washington, DC 20530

Dear Mr. Ashcroft,

I have been a supporter of Microsoft from the very start of these investigations and I am very gratified to see that the Justice Department has finally decided to settle their antitrust suit. I think it is about time we complete this case and move forward, as three years was just too long.

I hope that the Justice Department appreciates how much that Microsoft has sacrificed in order to reach a settlement and bring this proceedings to an end. By giving up access to its software with out recrimination as well as agreeing to design future versions of Windows easier to use with competitors products, Microsoft is forgoing an enormous amount of potential profit. Anyone who thinks that the suit should continue after seeing the terms of this settlement must be out to profit off of Microsoft's hard work.

It is a shame that nine states still refuse to settle. By trying to support their own state budget shortfalls, they are hurting their own constituents. I hope that their voters will make them realize the error of their ways directly in order to end any further litigation against Microsoft.

Sincerely,
Richard M. Durand

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid

the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

I also believe the cost of this lengthy litigation should come out of the monies Microsoft is paying in this case. The State will settle their disputes faster if they know the longer they resist the less money they will receive from the settlement pot!

Sincerely,

Robert Martin

Ms. Hesse:

The message below was composed by Citizens Against Government Waste and seems to be based on the idea that it cost a lot of money to sue Microsoft Corp. I believe it was money well spent and it is misguided to let them off so lightly, with a settlement that is so favorable to the company. You can read the message if you like but DO NOT APPROVE the settlement.

Brendan Wehrung

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance ? the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case ? the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer

manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement. This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. In the Competitive Impact Statement, section I, Nature and Purpose of the Proceeding, I quote the following:

The Proposed Final Judgment will provide, certain and effective remedy for consumers by imposing injunctive relief to halt continuance and prevent recurrence of the violations of the Sherman Act by Microsoft that were upheld by the Court of Appeals and restore competitive conditions to the market.

Now, it doesn't take a legal genius to read the text of the Proposed Final Judgment and then have some serious doubt about the accuracy of the above statement. My review of the Revised Proposed Final Judgment, RPFJ, yields a great deal of confusion caused by questionable definitions, exceptions, loopholes and other assorted legal maneuvers that may or may not be relevant.

While I see the RPFJ as a great big expensive joke that does nothing for the micro-computer business nor for the larger society, as an ISV, Independent Software Vendor, I feel qualified to state that the RPFJ does nothing to limit the enormous power of Microsoft and its control over the business. While the object of these proceedings is the punishment of Microsoft for past anti-trust violations and prescription for future activity necessary to restore competition, one should never lose sight of the tremendous

contribution Mr. Bill Gates and company have made to the development of the PC business.

Let me repeat, one should never lose sight of the tremendous contribution Mr. Bill Gates and company have made to the development of the PC business. With a few exceptions, most everyone in the business has operated within the shadow of Microsoft, which means that, in addition to the many benefits, we've also been aware of much of Microsoft's suspect activity, and we also were very well aware of the consequences of "whistle blowing". It should be understood that this general atmosphere of fear is more important in limiting competition than any of the overt activity that is the object of these proceedings.

I think that most people would recognize that the entire PC business has grown as a function of and in the image of Microsoft. But, it has outgrown even the imagination of Mr. Gates. It must be broken free to allow growth in areas and ways that may be contrary to his philosophy. Mr. Gates has done a remarkable job, we have made him a very rich man, but it is time for others to get into the game. It would be nice if Mr. Gates would allow the transition to occur peacefully, he should have negotiated a settlement with Judge Jackson long ago, but since he continues to resist the inevitable, it's up to you, Judge Kollar-Kotelly and you, Mr. Charles A. James.

I want to emphasize that this entire proceeding has suffered from non-participation by members of the PC business. I can imagine the personnel of the Department of Justice being more than a little piqued by the lack of qualified support from the industry. Yet it is easy to understand the reluctance of industry members to pitch in, what with careers on the line if the government lost this case. It would seem, when one views the complete capitulation of the Department of Justice, that the industry members have made the right choice. If the Revised Proposed Final Judgment is accepted by the court, the people will have every right to conclude that Mr. Bill Gates and company are more powerful than the United States Government. Hey folks, you must not allow that to happen!!!!

Plaintiff Litigating States' Remedial Proposals Plaintiff Litigating States' Opposition to Microsoft Corporation's Motion to Amend the Scheduling Order Exhibits to Plaintiff Litigating States' Opposition to Microsoft Corporation's Motion to Amend the Scheduling Order Now, here are three legal documents that I can understand. I refer to all three since each has a way of describing things that helps promote understanding. Not being a legal expert maybe it's something like programming, you need the program and then you need the documentation to explain what the program does and how to use it.

It would be far too easy to say that I support the Litigating States and end this document right here; however, I want to compare my conclusions, as expressed in a previous post with the "Exhibits" conclusions on a couple of very key, to me, points. One example: (my thoughts) (From definition of Non-Microsoft Middleware

Product) A Non-Microsoft Middleware product is any product that both meets the definition of Non-Microsoft Middleware and has at least one million copies distributed in the United States within the previous year* * *

* * * Without limitations on the definition, any software developer would be able to claim that any software product was middleware and thereby insist on exercising options and alternatives provided by the Proposed Final Judgment.

Correct me if I'm wrong, but it seems that I cannot expect protection from Microsoft illegal tactics against my "Middleware" application purely because it is new and therefore did not distribute one million copies last year. (29) (from Exhibit) the RPFJ's middleware definitions are drawn too narrowly, excluding from protection competitors of Microsoft in critical middleware markets and excluding from the restrictions of the judgment important Microsoft products—for example, (a) software cannot qualify as a "Non-Microsoft Middleware Product" unless at least one million copies were distributed in the U.S. in the previous year, meaning that by definition nascent or developing middleware threats receive no protection under the user configuration flexibility remedy,* * *

Another Example: (my thoughts) Subsection HI.C.3. requires that Microsoft permit OEMs to configure their products to launch Non-Microsoft Middleware automatically at the conclusion of the first boot sequence* * *

The only limitation Microsoft may impose on OEMs in this circumstance is that any Non-Microsoft Middleware the OEM configures to launch automatically cannot display a user interface that is not of similar size and shape* * *

This really doesn't make much sense as the primary purpose for any competitive product might very well be to present a whole new user interface. (10) (from Exhibit) the RPFJ imposes unjustifiable qualifications in the provisions that appear to provide for flexibility in product configuration (e.g., (i) Microsoft can limit the addition of icons, shortcuts and menu entries for non-Microsoft products to only those places where Microsoft has decided to promote a Microsoft product with similar functionality (thus blocking such additions if Microsoft does not make that decision and/or does not offer a competing product), and (ii) the automatic launching of competing software may be prohibited if such software displays a user interface that is not of a similar size and shape to the interface displayed by the equivalent Microsoft Software or a Microsoft product would not otherwise launch automatically)

Critique of Remedial Proposals "

I don't pretend to have the knowledge and expertise to critique the legal aspects of this document.

I do, however, have substantial engineering background and programming experience to allow me to comment on some portions of the document and to emphasize things that I perceive to be logical shortcomings.

Definitions

This section may appear at the rear of a legal document; however, since all else

depends on proper definitions, I want to discuss this subject first.

“Applications”—Programs that perform specific tasks, such as accounting, word processing, or communications or any other task that the user might require from a computer. Applications connect to the operating system by accessing or calling APIs.

“API” or “Application Programming Interface”—Program elements, routines or sections of program code that are callable or otherwise accessible by other program elements and/or applications for the purpose of performing specific steps or portions of a task. Since one API can call other APIs they may range from the very simple to the very complicated, but, it should be emphasized that APIs are never accessed by end users. (Some method of controlling acceptability of APIs is required—see some of the discussion below)

“Operating System”—Program that controls the low level processes of a computer and mediates between the application program and the drivers that control the computer hardware. The operating system schedules and controls the use of the system’s hardware resources. These hardware resources may include memory, disk drives, printers, and CRTs. The Goal of a good operating system is to simplify the use of the computer by providing a common set of practical, easy-to-use commands (APIs) that bridge the gap between the application programs and the actual physical processing of the computer.

“Middleware”—A non-Microsoft application that, in addition to performing specific tasks, exposes its own APIs for use by application developers. For the purpose of these proceedings, the definition of middleware must necessarily be short and specific. If one does a search of the Internet, one will find that the term has many meanings, and thus becomes meaningless for legal purposes. In addition, Microsoft should not be allowed to use the term to describe any Microsoft software because that only clouds the issue of ownership or source of a specific API. In other words, all APIs that Microsoft chooses to release should be considered part of the operating system.

“Interpreter”—An application that can perform specific tasks under control of a separate document or script. Basic started as an interpreted language, but with the development of compilers, that Basic script is generally converted into a binary coded program. Internet Explorer, Netscape Navigator and Java are more properly classified as Interpreters. Since a script can only give instructions to an interpreter, I suppose that Java might be called middleware if the script is compiled into a program that is actually run and then calls APIs itself. The distinguishing characteristic is determined by which segment is executed under the control of the computer’s central processing unit, cpu.

“Operating System Product”—This is actually a collection of files that make up the Operating System, some associated applications and other related files. Since the basic operating system is useless to the user, some applications must be included, thus the

need for this definition. And since Microsoft has chosen to obfuscate the meaning of operating system by its philosophy of “integration”, it has become necessary for the court to decide the meaning of this term and control its future usage.

I don’t intend to rewrite all the definitions, but, if one accepts the above definitions, one can readily visualize the impact on the balance of the court proceedings. Let’s look at some interesting information, developed by installing various Microsoft operating systems, in turn, on the same machine.

Sorry, Windows XP would not install on this machine since it requires 64 Mb memory and this machine only had 32 Mb and an additional 32 Mb would have cost \$100. (there’s a limit to my contribution to these proceedings) Besides, these numbers allow me to make my point. Microsoft should have settled these anti-trust matters years ago and they would have been able to pursue business without governmental interference. Instead they chose to fight and they lost. Legally, they are a monopoly and they have violated the law. Their unwillingness to settle on reasonable terms necessitate that they become a regulated monopoly. They must be required to document all those files and directories so that a base point can be established to firm up the meaning of “Operating System Product”. Future additions to the basic definition must be controlled by some kind of regulating body.

Using the above definitions, MS-DOS is an operating system, Windows for Workgroups might have been classified as an application because the machine was booted in MS-DOS and W4W was run separately; however, since it exposes APIs and is a Microsoft product it thus becomes an operating system. Windows 95/98/2000/XP are operating systems (after determination of a base point) because the machine is booted directly into the respective system.

If we use Windows 95 to determine the base point, Internet Explorer, an application by definition, is not part of the operating system since it was introduced separately and then included with Windows 98. In summary, Microsoft lost the right to “integrate applications into the operating system”, by violating the law. If not this, then other application developers deserve the right to have their similar applications integrated into the operating system also.

Mandatory Disclosure to Ensure Interoperability

This section of the Remedial Proposals needs considerable work in that it fails to recognize the existence of Microsoft Development Network, MSDN, and more importantly, it fails to deal with the quality of such disclosure. It should be understood that Microsoft distributes all (I think) technical information to subscribers dependent upon subscription level. In other words, you purchase the level of information you require, no matter your other relationship to Microsoft. I see this as satisfactory, if the court determines that Microsoft personnel also use the MSDN documentation. The difficulty with the present system is the method of developing APIs. It is obvious to developers using MSDN that many APIs were developed for Microsoft

application use and then documented and added to MSDN. This, of course, means that Microsoft personnel have been using the API for considerable time before outsiders have had access.

A well controlled monopolist should be expected to develop APIs for broad usage and let inside programmers determine usage the same as outside ones. The broad usage requirement should be interpreted to mean that the basic lowest level API must be documented. I quote from “MFC Programming with Visual C++ 6 Unleashed”, copyright 1999 by Sams Publishing. The Microsoft Foundation Classes are an excellent example of how an object-oriented approach to packaging software functionality can lead to code reuse, reduced application complexity, and in the end, a more efficient software development environment.

MFC has been around for seven years now. The first version of MFC was release with version 7 of Microsoft’s 16-bit C/C++ compiler, and it represented little more than a wrapper around the Window GDI (Graphics Device Interface) call. The author goes on to emphasize the benefits of MFC to the programmer and de-emphasize the costs to the ultimate user.

Programs, including code stored in associated files, are larger (amount of memory required) and operate slower. Microsoft has developed additional features/dialects (?) such as COM, ATL, .NET aimed at the benefits to the programmer without much consideration for the user, after all, additional memory and disc space is cheap and faster computers are being developed all the time. Microsoft has tended to use these higher level approaches in their applications, and then document the higher level APIs. If the propose of these proceedings is to restore competition, Microsoft must be forced to document the entire structure of a higher level API, which means that the basic API should be demonstrated in a sample program written in C/C++ without all the frills.

As a matter of fact, the sample program should be capable of compiling with a competitive compiler. One should be aware of the hidden advantage Microsoft accrues with this programming philosophy. The more an individual programmer and a programming organization ties itself to MFC and these other dialects the more “locked in” they become and the more their programs look and feel like Microsoft programs. True competition with Microsoft can only occur at the basic API level.

Internet Browser Open-Source License
This provision is unnecessary since the Browser APIs are now available through MSDN. What is required, however, is more control over the size of acceptable segmentation. Any programmer could take a complete application, enclose it in a DLL, dynamic link library, set up the call linkage and then call it from a skeleton application. The application now becomes middleware; but, the purpose has been compromised. Calling the resultant API would be no different than running the original program. The segmentation, must be small enough to allow another programmer to use some of the APIs to build a distinctly different application.

What is needed about Internet Explorer is better segmentation. For example, there is an API, Navigate, part of Web Browser Control, that includes both the access to a web page and the display of that web page. The net effect of this shortcoming is to prevent a programmer from controlling the access to the Internet. In other words, use of this API might very well allow Microsoft to include Internet access desired by Microsoft without the users, or the programmers knowledge. Oh, Microsoft might argue my point as some of the Internet calls are available for examination; however, they will have to explain why *ALL* of the calls are not available.

Internal Compliance

The Remedial Proposal devotes considerable words to the subject of compliance including the appointment of a Special Master. I only wish to add to these recommendations by pointing out a way of developing a measurement mechanism that can be used to establish goals and measure progress towards those goals, assuming that the big broad general goal is to improve service to the customer.

The philosophy is simple;—execution, well, that may be another thing. A proper amount of “encouragement” from the court should turn the trick.

All that is required is a monitored, measured, Internet support forum/s. There are all kinds of forums and chat groups on the Internet right now, some monitored, others unmonitored. I am speaking about monitoring by qualified, empowered, personnel, qualified to answer many questions and empowered to get answers from more qualified personnel if necessary.

But, far more important is the measurement mechanism. Since each request/question/complaint is a single document, it can be classified by the submitter, dated and timed by the computer. The response can be classified by the respondent, dated and timed by the computer. The software can then keep track of response times, quantities entered, closed and still open, by category, on a daily, weekly or monthly basis. This type of system could replace the Periodic Reports called for in the Remedial Proposal.

Windows Operating System Licenses

Mandatory Disclosure to Ensure Interoperability

Intellectual Property Rights

These sections seem to be unnecessarily complicated, using terms like OEM, Covered OEM, Third-Part Licensee, which are all meant to exclude. I would think that subscription to MSDN could be the sole determinant controlling licensing and the distribution of technical information. Subscription to MSDN at the Operating System level or above should include one copy of each current operating system with the right to purchase, and re-sell, additional copies according to a discount schedule based upon yearly quantity. Many computers are assembled by small companies that should be able to re-sell licenses to the operating system.

In addition, a “fair use” type of clause should be required in software licensing that would permit installation on multiple

machines used by a single or limited number (family) of individuals. Most companies allow this since enforcement is very difficult, but Microsoft has chosen to restrict this kind of use with very intrusive procedures. I recognize that this might be a matter for Congress, but, I wanted to bring up the subject anyway. Under the title of “Equal Access”, Microsoft is allowed to restrict access to information about any bona fide joint development effort. I would think that joint development efforts should be restricted to applications only and even then be under very strict control. This exception is too large a loop hole to be allowed a monopoly.

Obviously the structure and pricing of MSDN should be controlled by the court.

Respectfully submitted:

Doug Skoglund

P.S. Bill Gates is wrong, wrong, wrong, wrong, wrong!!!!!! Have I got your attention???????

First, I don't pretend to be some sort of all knowing guru with the things that I have written or will write. I do, however, claim to be pretty good at distilling the wisdom out of things that other people have said and written. Let me illustrate: The following from a column by Jim Rapoza titled “Microsoft Still Suffers Insecurity Complex”, posted on eWeek web site, January 7, 2002.

When Microsoft introduced active content in Outlook, we, along with many in the security community, said it would create a security risk. But Microsoft blew these warnings off as theoretical and, instead, touted the gains that would be made by making mail more automatically responsive... I think that worries about potential security risks will always be pushed aside to make way for latest cool, new feature. True, Jim, but one might say that Microsoft knows what sells. Next, let me set the framework for further discussion. I can imagine that most every business person has contemplated the question of honesty vs. success. She/he discovers very early that when a business is small, fighting for survival, total and complete honesty will get you nowhere. Growth requires aggressive action to get that next larger contract or chunk of business.

And that aggressive action means the acceptance of a few small lies (or information not disclosed). I'll bet that the early relationship between Microsoft and IBM had its share of less than 100% honesty. I don't need to beat the honesty point to death, except to say that we will get disagreement all over the place before we settle down and except the wisdom of the above.

The point that is missing is that the requirement for honesty increases with success, and that is the critical point that Bill Gates has missed. He continues to act as though he believed that strategy as a successful company must be the same that was necessary to become successful.

Of course, boiling this all down to honesty is far too simple. That's the reason for using the security example above. During the growth process, it's the cool, new feature that sells. What Bill Gates fails to recognize and

that Jim Rapoza, as one member of the business, is saying is, “Microsoft, it's time to truly start considering the needs of your customers. Security is important, and you can't continue to ignore the warnings”.

To emphasize my point, I think that we have to see these anti-trust proceedings for what they really are. Most people would concede that Bill Gates could have settled this whole thing a few years back and that Microsoft would be free to conduct business without much governmental interference. Remember, the anti-trust laws exist to protect the consumer and that the government really does represent the people. The government had to step in because Mr. Gates failed to transition his company from aggressive corporate fighter to good corporate citizen. He has had all kinds of notice, if he had only mined the wisdom from the words of his critics instead of viewing everything through his paranoid tinted glasses.

As a matter of fact, Mr. Gates can still wake up and settle this matter, but he must allow the government to win. There is no question that Microsoft has the power and resources to beat the government in the short run, but Mr. Gates must recognize that he is really flipping the finger at the consumer if he does. Remember, the government is us, the people, the consumers. I suspect that we will get the last laugh over a longer period of time. Since settling as spelled out in the RPFJ is a win for Microsoft, the settlement must be according to the Plaintiff Litigating States' Remedial Proposals, with my revisions, of course. There is nothing in these proposals and revisions designed to hurt Microsoft.

On the contrary, they are only detailing changes necessary for Microsoft to become a good corporate citizen. All of these things should have been incorporated by Microsoft over the years in what should have been a natural transition to a more honest, ethical operation.

One final point, the market wants a single, stable, reliable, secure operating system, under the control of a strong, honest, ethical, reliable monopoly. True competition in applications requires nothing less. Microsoft could fill that need; however, past performance indicates that the Microsoft monopoly needs to be regulated. The Department of Justice, the litigating Attorneys General and the Courts must get that point across to Mr. Bill Gates and company. The previous does not mean that there is not room for other operating systems. There will always be niches open to other approaches and nothing to stop alternatives from out-performing the established monopoly. After all, the non-monopolies have more freedom of action. That, of course, is the idea behind controlling a monopoly.

Do I have a dog in this fight??—You betcha!!

Of course, I have a vested interest in the outcome of these proceedings, but then, who doesn't?? I believe that my Personal Digital Multimedia ScrapBook, PDMSB, is an application that is built upon an engine that, in the hands of Microsoft or a competitor, could open a whole new generation of application development on the desktop. The RPFJ contains exclusions that would inhibit the growth of this engine as a true contender;

however the Remedial Proposals seem to provide protection for any potential competitor.

I said previously that Bill Gates was wrong. His present emphasis on the Internet seems to have left the industry with the attitude that Microsoft owns the Desktop and that further development in this area is over. Wrong, the Internet, while very important, will never replace the Desktop in the minds of the average user. After all, the whole (DeskTop) is equal to the sum of its parts (Internet activity vs. Local activity). I repeat, the PDMSB engine in the hands of someone like AOL Time Warner, for example, could open a whole new generation of application development on the desktop.

Because PDMSB is still a work in process, the basic software has been available at <http://www.pdmsb.com> for some four years, while copies of various contact attempts have been available at <http://www.ifihadmyway.com>. If anyone would like an interesting view of the status of the PC business I would suggest interviewing some of addressees of those contact attempts, (under oath, maybe?).

Obviously, Microsoft has every right to make incorrect decisions. The difficulty comes from the fact that as the monopoly supplier of the dominant operating system, the entire industry is dragged in a direction they may not want to go. Just as the Remedial Proposals require Microsoft to support old versions of operating systems, MSDN must be required to support the basic APIs to allow application developers to develop competitive applications. Whether I'm right or wrong is of no matter, what does matter; however, is that present Microsoft dominance prohibits open debate of my and/or many other ideas. Of course, I want to sell my software, but I'm just small potatoes, how many others might have a dog in this fight also?? Even the top management of AOL Time Warner were unwilling to investigate my proposals. I would hope that the business could be more open than that. Rejection after evaluation is one thing, being ignored is another!!

Washington, DC 20530

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance ? the war against

terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case ? the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Deanna Tachna

Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my feelings about the recent events in the Microsoft anti-trust litigation. I am glad to see that a settlement has finally been reached. However, I can't understand how this case could be prolonged any further. The settlement was negotiated with the help of mediators provided by the courts, so obviously the settlement should be fair.

Microsoft did have some problems, but they are now being resolved by way of this settlement. They are allowing their competitors to use the technologies that they invented, creating a more competitive environment. They are also allowing computer makers to install other products on Windows when they distribute the computers. All of this seems more than reasonable. I used Microsoft's products in my job as a Research Scientist and now use them at home. I like the fact that all of my programs are compatible with one another and that I can easily manipulate them. Why would I want to change that by using a combination of competitive products that aren't even compatible?

Please do your part in ending this lawsuit, for the interest of consumers and the entire economy. Thank you.

Sincerely,
R. Suter Hudson

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case. The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have

stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of

America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
JamesPatrickLeydon

Dear Mr. Ashcroft:

It is my belief that the Microsoft Antitrust case should never have been brought to court. Microsoft's innovations and marketing techniques have allowed this company to climb to the top of its industry and the success that Microsoft has accomplished is well deserved. We would not have seen the tremendous growth of the Internet and the great numbers of home computers without the innovations and uniformity of the Windows platforms. For the past three years, litigation has stunted Microsoft's business potential a great deal and to carry this case on further would be a highly unnecessary course of action. Litigating Microsoft does not come at an easy cost as this case has been very time-consuming and cost a great deal of money. In some very key issues, I believe it has caused more harm than good as would anyone who is familiar with computing prior to the great growth of Microsoft.

The Department of Justice and Microsoft have disputed this case for over three years now with the intent to appease all of the parties involved. Microsoft has agreed to several terms beyond the scope of this case in order to continue new product development, which shows Microsoft's willingness to compromise. Some specific terms range anywhere from allowing computer makers to promote the competition within the Windows configuration to supplying the competition with necessary interfaces and protocols that will enable software compatibility.

These agreements have come as a result of heavy dispute and much compromise and will serve the best interest of all involved. Thank you for consideration for the public good.—

Sincerely,
Susan Wilson

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Three years of lawsuits against Microsoft and a settlement has finally occurred in the antitrust case. I am glad to see that Microsoft will not be broken up, but I do think that the terms of the settlement are too harsh. Microsoft has demonstrated no monopolistic tendencies since it has always delivered quality products at reasonable prices. It has also not infringed on my rights as a consumer, since I have on occasion bought other software that I thought was better.

The terms of the settlement are more than fair and should appease all parties involved in dispute. Competitors will now be granted broad new rights to configure Windows so they can promote their own products and they will be given internal interfaces and protocols that Microsoft has for its Windows operating systems. These concessions and more represent a huge advantage to competitors and so there is not need for further litigation. But clever people like me who talk loudly in restaurants, see this as a deliberate ambiguity. A plea for justice in a mechanized society.

It is in the best interests of the American people for the settlement to be finalized and to allow the competitors to duke it out on the playing field. Please make the right decision in the coming months. Thank you for your time. Ecce homo ergo elk. La Fontaine knew his sister, and knew her bloody well. But is suspense, as Hitchcock states, in the box. No,

there isn't room, the ambiguity's put on weight.

Sincerely,

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal

government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. I personally have benefited from Microsoft's technology and windows...making it easy for me, an older computer user, to attempt expanding into computer research and use. I think the attack on Microsoft has hurt consumers and the economy of our state. If you attack the most innovative companies, how will the economy grow?! Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Leslie Griffin

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case. The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

Dear Ms. Heese:

My wife and I support of the recent settlement of the antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. We appreciate and applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case; however, we are extremely disappointed that remaining state attorneys general and the District of Columbia have decided to continue, with no apparent basis, to pursue this case.

We truly believe that the settlement is fair and just to all concerned and possibly affected. The settlement allows Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and gives consumers (like me and my wife) more services and products to choose from.

As you are well aware, or should be, Citizens for a Sound Economy, of which my wife and I are members, have been continually opposed to the federal government's antitrust case against Microsoft. It has done nothing but hurt our economy, especially in the markets of computer technology. For nearly 3 years, activists like myself and my wife have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but instead provided consumers like us with great benefits by lowering the cost and increasing the availability of software products. Microsoft is a pioneer in the high-technology market and I can't imagine a world without what Microsoft has made available to us. Microsoft has only benefited the consumer!!!

Thanking you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

To: Department of Justice
Date: 1/21/02 3:40pm
Subject: Message From a Concerned Citizen

Dear Department of Justice:

Dear Official: It is most accurate to say that my dismay at the attacks on Microsoft in the form of Anti-Trust prosecution was profound. In America the moral of the day is "take everything you can get," and this time they will "get" it from a company that has given more to the consumer than most. Microsoft had the goal to succeed. Quite frankly, the other companies could not compete because their products were not as favored by the consumer. During my training to become a real estate agent I became appalled that I could not talk to other agents about fees, because that would violate anti-

trust. At that time I realized that anyone who excels too much is in danger of being cut down thru anti-trust prosecution. When this happened to Microsoft, I was not surprised, just appalled. I realize that you must operate within the law. It is simply important that you know how the citizens, of which I am one, believe and feel on this subject.

Sincerely,
Ara Leigh

Date: 1/21/02 4:52pm
Subject: Settlement Problems

I am sorely disappointed with our Justice Department for obvious lack of judgement in creating such a soft and ineffectual settlement against Microsoft. This settlement has little more effect than the previously issued injunction against Microsoft, which they flagrantly violated. This current settlement does nothing to address this serious defiance of the American Justice system, does not address the demonstrated contempt of the American Justice System, and does nothing to remedy the half decade of damage to the American public that Microsoft's dramatically illegal behaviour caused.

Furthermore, because this settlement fails to declare remedy for these past serious abuses of our laws, it will prove to be no more capable of restraining Microsoft's behaviour. Indeed, it can be found that Microsoft's newest operating system, Windows XP, may already be in violation of the settlement, by requiring consumers to subscribe to Microsoft services on the internet in order to get full use of features of the software.

I would consider this rather prejudiced against other middleware providers that already offer these services that Microsoft is requiring subscription to. I continue to be astonished at the short-sightedness of elements in our Justice system concerning this case. How can anybody seriously think that such a minor settlement will do anything to prevent future violations against the American public, considering past behaviour. Does the DOJ care nothing that Microsoft

violated the previous consent decree within months of its issuance?

I would also like to point out that the form of this settlement requires a rather expensive on-going enforcement by State and Federal agencies. This will prove to be dramatically expensive to the American taxpayers in the long run. Would not a firm and definitive remedy that provided an automatic mechanism of future competitive operations (split up) prove to be much less expensive to the American people? With the enforcement mechanism currently provided for in this settlement, the American people can expect a protracted period of history of expensive court proceedings, remedies, judgements, filings, etc., and even an entire government agency just for the maintenance of this one settlement.

Though Jackson's behaviour was deplorable, I can't see that the breakup judgement could be set aside so easily. This only proves that our judges are not blind to subjectivity. One spoke out, the other one who turned it around so quickly made just as loud a statement. There is no difference in the lack of objectivity of either of the judges involved.

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Ralph Hintze

Washington, DC 20530

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of

America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to access a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,

Herbert O. Aburn, Jr.

Dear Ms. Heese:

Quite frankly, I don't even know who you are or how you fit into the Microsoft suit. The words below drafted by the Citizen group express well enough why the suit should be settled immediately and I can only assume you have some influence on the outcome.

I would like you to consider the fact that people need to be responsible for their own actions—everyone has a choice. It is not your job nor that of any politician to make decisions for individuals.

Please allow people to run their own lives without government interference. At the end of the day just ask yourself how you contributed to the real personal accountability and responsibility of Americans. If you didn't, you should be ashamed. This is a small issue in the scheme of things but the trend is definitely in the wrong direction for a strong future for America.

I support the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

Dear Mr. Ashcroft:

I am writing because I support ending the antitrust case against Microsoft. Though I have not intensely followed the case, I know about the pending settlement. I would like to see the settlement finalized.

Microsoft is a great company that makes products that have become important to peoples' lives and businesses. Microsoft should be allowed to function properly according to the terms of the settlement. By disclosing its internal Windows computer codes to its competitors, who will also be free to add their own software to Windows and remove Microsoft's Microsoft has gone a long, long way to help its weaker competitors. The longer the case is active the more the American economy suffers, which affects more than the company itself. Please end the suit against Microsoft. It has been going on long enough.

Sincerely,
Alexander Ramm

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers,

but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
John Cosman

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted. The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after

purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Robert C. Reinhardt

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Joyce E. Hughes

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Subject: Microsoft Settlement (Support)

Dear Ms. Hesse:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Colleen Wise

enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
William P. Whitley

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Thomas Simmons

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which

will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As

noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Sterling E. Haskell

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers

and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Richard G. Chappell

As a senior citizen and a member of the voting public I deplore the intrusion of state governments into a rational Justice Department settlement of the Microsoft litigation.

Surely they've been aggressive—isn't that the nature of competitiveness in the business world? I feel that the states are not so much seeking redress for their constituents but rather are hopeful of a financial windfall. Enough, if you please!!!

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken

up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Leo A. Caissie

Ms. Hesse:

I do not need someone to write messages for me any more than I need the lawyers living off the DOJ to decide what is good for

me. I liked the telephone service that worked! So it cost a bit more but the phones could fall from the second story and still work. Now we have junk phones from China and God knows where which need replacing each year. Thank you DOJ! The "hodgopog" called service must also be from China. Now the student lawyers want to kill the organization that made the computer operation possible for almost any age group. AND YOU USE MY MONEY TO MAKE MY LIFE MORE DIFFICULT. I wonder just what is taught in law school these days. It sure isn't to defend the ordinary people. I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. when all appeals from continuing the litigation would finally be exhausted.

Sincerely and Thank you

Date: 1/22/02 2:39pm

Subject: Microsoft Settlement

I am writing to you with the hope that one honest voice may be heard above the shouting and screaming of special interest groups across the nation. I'd like to start by stating that I have no financial interest in Microsoft whatsoever, nor do I belong to any organization that has said interests. I am coming to you, specifically, as a freedom-loving American consumer.

Microsoft has, time and again, created the cheapest and most efficacious software available in its industry. I use Windows daily, and have found it both easier and faster than alternative products I have used (and there are many). Microsoft's software is, in a single word, superior. Microsoft is currently being penalized by a lawsuit raised, not by the consumers, but by those who failed to compete with them fairly, and seek special help from "Uncle Sam" to force their own software into the market. I don't want their slow and unreliable software, and as an intelligent, (mostly) free human being, resent the fact that you are attempting to remove yet another choice from me.

Success and innovation should be rewarded in our nation, not penalized. Bill Gates is an icon of the American dream, and to steal/destroy/control his property is an affront to civilized society as a whole. It is your job to protect his, and the other Microsoft shareholders, rights, not to ingratiate upon them. Please, take this opportunity to show the citizenry that the government of our proud nation will protect the rights of its people, and not give in to lobbyists and talking-heads. Please, preserve our freedom.

Sincerely,
Jared Nuzzolillo

U.S. Department of Justice, Antitrust Division
601 D Street NW, Suite 1200
Washington, DC 20530
Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented

enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Raymond W. Morrison

From: Erik Hanson
To: Ms. Renata B. Heese
Date: 1/22/02 3:42pm
Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Erik Hanson

greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted. The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Paul C. Walker

Ms. Hesse:

Please see the comments at the end (from a friend of mine who I agree with in this instance) that are in addition to the next text.

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change. BELOW IS THE ADDITIONAL TEXT.

If the premise of the final sentence is true, then this seems like a reasonable question:

Two men, both billionaires. One develops relatively cheap software and gives hundreds of millions of dollars to charity. The other sponsors terrorism and is probably responsible for the deaths of thousands. That being the case, why is it that the US government has spent more money chasing down Bill Gates over the past ten years than Osama bin Laden?

Sincerely,
Phil Corwin

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this

agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted. The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Perry Lewis

From: John Lunkes
To: Ms. Renata B. Heese
Date: 1/22/02 6:30pm
Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
John Lunkes

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the

original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
ALLAN G. HANSON

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of

America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement. This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
 June Hillyer

 Subject: Message From a Concerned Citizen
 Dear Department of Justice:
 Dear Sir;

I believe you are making a serious error in judgement in going after Microsoft in this manner. I believe their competition is trying to break Microsoft. Giving codes and strip down versions of windows and other programs will weaken the abilities of Microsoft to create new programming, and this will hurt the consumer. Microsoft developed windows and should be able to keep the codes that they created. It seems to me that you would be stripping the company of a product they basically created, and continue to develop. I do believe that there should be a choice of browsers and programs independent of using Microsoft software. Linux seems to be one and I'm sure there could be others. The problem is that windows is owned and operated by Microsoft and was their invention to start with and to give away secret codes would put not only Microsoft at risk of piracy(sp) but every other company in the world at risk. Why develop a product and share all the workings only to have it stolen by a rival under the guise of unfair business.

Sincerely,
 Mike Silva

From: Aloma Blaylock
To: Ms. Renata B. Hesse
Date: 1/22/02 7:50pm
Subject: Microsoft Settlement (Support)

Dear Ms. Hesse:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

Microsoft has given us programs and operating system that is easy to access and use. No one has forced me to use their operating system. Competitors who have fallen behind in innovation should stop complaining and get to work. Are you going to make General Mills package a little Special K with their Cheerios if they get a high percentage of the cereal market?

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Aloma Blaylock

Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Carolyn Lovern

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national

significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Ronald C Newton

January 22, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The recent antitrust settlement between Microsoft and the US Department of Justice has been a long time coming. I feel that the lawsuit was unjustified in the first place. Microsoft has done wonderful things for our nation. It has created jobs, made technological breakthroughs, and contributed to our education systems. The Windows operating system for all practical purposes is the standard for the industry without which we would not have most of our application software if there were no "standard" in place. In part, the state of our depressed economy was brought about by this suit that has had a negative impact upon the PC industry.

Yet, the government wants to bring it down. It seems that if one succeeds then that entity must automatically be evil. The terms of the settlement reflect the intense lobbying efforts of Microsoft's competitors. For one, all the concessions are geared towards helping the competitors gain an edge that they would not have achieved on their own. Microsoft is giving them technological information such as interfaces and protocols. Microsoft is also agreeing not to retaliate against computer makers and software developers who promote non-Microsoft products.

Although flawed, the settlement should be realized because the alternative of further litigation would be too much for our country to bear. We need Microsoft to be creating new products for the public's best interests. Why do we so mistrust the judgment of the public who has voted with their pocket book by purchasing Microsoft products?

Sincerely,
Joan Frost

Ms. Hesse:

Joining many other Americans, I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million. I have studied the terms of this ruling, and I strongly feel that this final approval is clearly in the public interest.

Our greatest boon in this settlement: the Department of Justice and the settling states will AVOID ADDITIONAL COSTS and now be able to focus their time and resources on matters of greater importance: the war against terrorism, and homeland security. As noted by Judge Colleen Kollar-Kotelly, who pushed for a settlement after the September 11 tragedy, "it's vital for the country to move on from this lawsuit." I can readily see that the terms of the settlement offer a fair resolution for all sides - the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft need not be broken up and can continue to innovate and provide new software and products. Software developers and Internet Service Providers, including competitors, will now have access to Microsoft's programming language and thus be able to make Microsoft programs compatible with their own. It's good to know that competitors also gain as computer manufacturers are free to uninstall any Microsoft application or operating system and install other programs. And...Microsoft cannot retaliate against computer manufacturers, ISPs, or other software makers for using products developed by Microsoft competitors. ALSO: a Technical Committee will work out of Microsoft's headquarters for five years, at the company's expense, to monitor Microsoft's compliance with the settlement. That, too, is acceptable.

This settlement is fair to the computer users of America. Consumers will be able to select from a variety of pre-installed software on their computers, even find it easier to substitute competitor products after purchase.

This case was supposedly brought on behalf of American consumers, and we certainly "paid our way"—the cost of litigation—through our taxes. Even our investment portfolios have taken a hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change!

Sincerely,
Alfred C. Lehman, MS, MSC

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Larry Scott

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ,

the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

MTC-00033141

From: thom
Date: 1/23/02 5:09am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior, nor will restore any competitive nature to the high tech market place. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's anti-competitive business practices, and I fear because of this settlement, in the future Microsoft will put the U.S. economy at risk, AND cause a significant problem with our national security.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior remains un-changed, if not even more anti-competitive. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, with an immediate large fine (\$5+ billion) is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

In every sense, the USDOJ has failed by signing the proposed settlement.

Thank you,
Thomas H. Dieterich

From: Chris Worley
To: Microsoft ATR
Date: 1/23/02 6:21am
Subject: Microsoft Settlement
Sir/Ma'am,

I find the proposed Microsoft antitrust settlement to be just short of an apology to Microsoft.

It will do nothing to stop their anticompetitive behavior. It will do nothing to spur competition in the software industry. It gives Microsoft carte blanche to continue to run roughshod over consumers and competition.

The media has well documented that every key provision in this settlement has an "opt out" loophole that allows Microsoft to continue its anticompetitive behaviors. The future of high technology is at stake. If you allow Microsoft to remain unchecked, then we are entering a new "dark ages" where a small minority will control the information vital to innovation. The part of the proposal I'm most concerned with is the "security" "opt out" in the "open protocols" section...

"Security" has become a buzzword associated with terrorist acts, allowing Microsoft to portray competing vendor's software compatibility with authentication software as an act of treason. It's just not so. "Security through obscurity" has never stopped hackers with ill intent, it only keeps those being attacked "in the dark". It's much like human viri: we want to know what can infect us, how to keep from getting infected, how to detect the infection, and how to stop the infection (even if it can't be stopped). This information is key to our longevity. For example, the recent anthrax terrorist acts have shown that public information is critical to detection and cure, and the lack of information led to unnecessary infection (of postal workers) and panic among the uninfected, and did nothing to stop the perpetrator.

Software viri/worms require the same publicity to protect and inform the population.

I'm afraid Microsoft has negotiated this loophole in the settlement for a reason other than protecting consumers: they're stopping compatible products from competing under the guise of stopping terrorism. For example, a software package called "Samba" competes with Microsoft NT file servers: file servers compatible with the protocols that provide you with your "network neighborhood". If Microsoft can hide the authentication protocol, then the competing file server software can't compete: if you have to have an NT server to authenticate users, then you might as well use that server to serve files and not use Samba at all (IT departments, in order to simplify their task, would prefer not to run servers with different OSes). For Samba to compete, it must be able to perform all the necessary protocols for Microsoft's network file services. It's all or nothing; it does consumers and competition no good for only part of the protocol to be published. This is similar to their behavior with APIs. By not exposing key OS interfaces, they've been able to create special "hooks" into the OS that only their applications can use, allowing their applications to have features that the competition can't have. It's the same old trick with a new twist, under the guise of "protecting consumers". This settlement is a ruse. It's a trap. And, the DOJ seems overly willing to fall for it, to the detriment of competition and consumers.

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by

District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement. This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Jane Magliacane

From: Joyce L Gorham
To: Ms. Renata B. Heese
Date: 1/23/02 7:21am
Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case. The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Joyce L Gorham

The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was

allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
 Rocky Oliver

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against

Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

I develop for various platforms, including Palm and PocketPC. I see Microsoft as the best tech company around, it is in fact so well = positioned that it had already crossed the line of being useful and is = dangerous.

As much as I like and admire their business genius, I believe it wasn't = a settlement that needed to be done, but a split. I even believe that = would have been for their own (in addition to everyone else's) interest = in longer run.

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own. Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in

the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
alma teuscher

This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change. As a lifetime executive in the computer industry I KNOW that Microsoft are in a lead position because of the skills and competence.

Their opponents — Apple, Sun, etc. are trailing because of their incompetence and their attempts, unlike Microsoft, to monopolize the industry. Apple sought to sell both hardware and software, and wouldn't allow anyone else to participate, result !% of the market. Sun attempts the same and is losing market share. Go into any store and see the myriuar of computes and software with names other than Microsoft— all there BECAUSE of Microsoft.

Sincerely,
Brian W. Pollard

Date: 1/23/02 10:21am
Subject: Microsoft Settlement (Support)
Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case. The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet. Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,

Subject: Microsoft Settlement —CC: On letter to the Americans for Technology Leadership
January 23, 2002

To Americans for Technology Leadership:
I find it absurd that you request a letter from our chamber of commerce for the expedited settlement of the Microsoft case when your mission states that you are "dedicated to limiting government regulation of technology and fostering competitive market solutions to public policy issues affecting the technology industry." Our business have many diverse opinions, and I would bet they would not side with your slanted view.

Microsoft is like big brother and seeks to squelch all and any competition. Tell me, how this is going to "foster competitive markets"? They have a history of squeezing competitors while it makes memory and size

gobbling, inefficient programs. Consumers can demand higher quality, but Microsoft will dish out what it wants—there's no one else to get the milk from! As a degreed Systems Analyst and experience as a beta tester for Microsoft, I tell you that it's worth the money to pressure them. When the government gives in, who else will be able to move the giant? Don't be stupid and influenced by the money. There are principles involved and the future of truly fostering technological innovation is at risk.

This is the note I'll send to the Ms. Hesse.

Respectfully,
Kathryn Clancy

I would like to comment on the potential resolutions to the Microsoft situation.

I am familiar with the marketing practices of Microsoft, and believe that there are two reasonable ways to dispense with this monopoly:

(1) An open formats solution

(*) Force Microsoft to document (openly, or for a reasonable fee) the complete input, output, and/or file formats of all its individually salable components. This would include, but not be limited to:

- (*) File formats such as .doc, .xls,
- (*) APIs such as their device driver API
- (*) Wire formats such as file sharing

protocols, etc.

Other companies do this, and the public is the better for it. Other companies do this and still make a profit.

Microsoft leverages the fact that their left hand and right hand are synchronized, and this yields a large part of its power to monopolize the desktop. If, for instance, they fully described the format of .doc files, and made sure that any file of that format was readable in Word, and that Word created files of only that format, then people could migrate to and from Microsoft products AS BEST SUITS THEM. This would allow market forces rather than monopoly forces to dominate.

(2) A vertical split of the company

(*) Force Microsoft to be vertically split at the OS and Office levels. Give the source code for Windows/NT, Windows/ME, Windows/2000 to three different companies, and allow no one to hold positions on more than one BoD, etc.

The competition between the three OS firms for the Office business, as well as vice versa, would (hopefully) yield more opportunities for the non-MS alternatives. I believe the first one is a far better solution than the second, but the second would be acceptable. The current proposed solutions are weak, in that they attempt to fix the problem with long-term enforcement, rather than changing the rules today so that the market solves the problem later. Microsoft's solution: giving lots of Software and Hardware to Schools, is laughable. It would increase their market share and mindshare without actually hurting the company or reshaping it in any significant way. I strongly urge that this opportunity to fix the monopolistic practices of

Microsoft be taken seriously, as subsequent attempts will be at a great disadvantage if this fails.

—Jeff

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after

purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Cecilia Maisel

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of

this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Margaret C. Reichard

From: Eric Thomas
To: U.S. Department of Justice
Date: 1/23/02 11:46am
Subject: Microsoft Settlement
U.S. Department of Justice,

Regarding the Proposed Final Judgment in United States v. Microsoft, I would like to express my concern that this proposed settlement is unacceptable in several key areas. Among them are the following:

1. Microsoft would be allowed to continue many anti-competitive practices aimed at preventing other vendors from including their products in OEM packages.

2. There is no way to enforce the judgment, other than more and more drawn-out legal proceeding.

I hope that the Department of Justice and the court will pay heed to the many voices pointing out the problems in this settlement and look for stronger remedies that will better serve the marketplace and the public interest.

Regards,
Eric Thomas

From: Harvey and Charlene Knowles
To: Ms. Renata B. Heese
Date: 1/23/02 12:35pm
Subject: Microsoft Settlement (Support)

Dear Ms. Heese:

I am writing in support of the recent settlement of the long-running antitrust lawsuit between the U.S. Department of Justice, state attorneys general and Microsoft Corporation. Though I applaud the nine state attorneys general that decided to follow the federal government's lead and settle the case, I am thoroughly disappointed that remaining state attorneys general and the District of Columbia have decided to further pursue this baseless case.

The settlement is fair to all. It will allow Microsoft's competitors to use Microsoft's Windows operating system to incorporate their software programs and will give consumers more services and products to choose from.

As you are well aware, members of Citizens for a Sound Economy have been

unrelenting in our opposition to the federal government's antitrust case against Microsoft. For nearly 3 years, activists like myself have called, emailed, visited, and sent letters to the U.S. Department of Justice and to state attorneys' general offices explaining that Microsoft's actions did not harm consumers, but provided them with great benefits by lowering the cost and increasing the availability of software products. We have stressed that Microsoft is a pioneer in the high-technology market and that their products increased our familiarity with the Internet.

Once again, I thank you for your decision to settle this unfortunate lawsuit against a successful and innovative company.

Respectfully,
Harvey and Charlene Knowles

Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest.

Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ,

the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
W. Robert Bloyer

Subject: Microsoft Settlement

I am against the proposed settlement of the DOJ suit against Microsoft. Although Microsoft claims that they have innovated, those of us more intimately aware of the truth are not fooled. In fact, they have squashed far more innovative competitors with the kind of illegal actions of which they have been found guilty. Even worse, they have lowered accepted standards of reliability greatly, with the result being tremendous loss of productivity internationally as their operating systems crash and are compromised by numerous viruses. Any settlement needs to prevent Microsoft from continuing on this path of anti-competitive behavior. The proposed settlement seems far too weak to accomplish this necessary goal.

From: larry@euglug.net@inetgw
To: activism@euglug.net@inetgw
Date: 1/23/02 1:30pm
Subject: Microsoft Settlement

There are several issues that the proposed settlement needs to address, in order that Microsoft not walk away unpunished for their CRIMINAL behaviour.

1. Protecting Open Source

The proposed final settlement offer contains language intended to let Microsoft itself determine who is qualified to have access to the technical information intended to allow other operating systems to interoperate with Microsoft software. In point of fact, the language specifically claims their right to require that those party to interoperability information be businesses. This is clearly intended to discriminate against the MANY software projects that are run entirely as volunteer efforts. The court should require that any technical information that Microsoft is required to disclose must be available to the public, so that the public itself might act in redressing the harm created by Microsoft's illegal tactics.

2. Closed File Formats Are A tool of Monopoly One of the most insidious tactics used by Microsoft in the construction of their monopoly in business productivity and personal computing software is the creation of incompatible, undocumented file formats. In addition the tactic of making new versions of their software produce files that were incompatible with their old software led to their being in effect able to require users of their software to upgrade their systems on their schedule.

The fact that Microsoft's file formats were undocumented has meant that competitors were effectively locked out of providing equivalent services to consumers who had unwisely chosen to use Microsoft products and that those consumers were themselves harmed in that their property was held hostage to Microsoft's software and would need to be either abandoned or (at great expense) converted to some other format.

3. Security Needs Of Consumers and Appropriate Liability

A further issue that could be addressed by the court is Microsoft's liability for the millions of person-hours of time wasted in dealing with the inadequacies of their operating system and of their email products.

A clear statement by the court that consumers had at a minimum an implied warranty of functionality, including an expectation of data privacy in the form of mechanisms to prevent both Microsoft itself and others from altering, destroying or illicitly copying data without it's owners permission; would set a clear precedent that software is the same as any other class of product and should not be allowed to exempt itself from product liability through specious End User License Agreements. In that a product sold in exchange for value should meet a reasonable buyers expectations for functionality and safety.

From: Glen W. Mabey
Date: 1/23/02 1:39pm
Subject: Microsoft Settlement

To whom it may concern: I would like to comment on the Proposed Final Judgment in the United States vs. Microsoft case.

My concern relates to the absence of requirements for Microsoft to disclose file formats used by its programs. This issue has been established as a part of the Applications Barrier to Entry in Findings of Fact paragraphs 20 and 39.

The pervasive use of Microsoft Office products has rendered their respective file formats as the de facto standard for normal office document interchange. However, since the format of these documents is unpublished, there is no reason to believe that this monopolistic situation will change any time in the near future.

Only a legally mandated disclosure of these file formats can hope to restore a competitive nature to this aspect of computing. Furthermore, I believe that given previous behavior by Microsoft, the following stipulation is also necessary: that any inaccuracy in the published specification for these file formats result in a punishment which is;

- *) severe,
- *) automatic, and
- *) that the consequences for doing so be also stipulated in the Final Judgment.

Respectfully submitted,
Glen Mabey

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufactures, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

This case was supposedly brought on behalf of American consumers. We have paid the price of litigation through our taxes. Our investment portfolios have taken a hard hit during this battle, and now more than ever, the country needs the economic stability this settlement can provide. This settlement is in the public interest, and I urge the DOJ to submit the revised proposed Final Judgment to the U.S. District Court without change.

Sincerely,
Jean Noonan

Subject: Microsoft Settlement

The provisions of the agreement are tough, reasonable, fair to all parties involved, and go beyond the findings of the Court of Appeals ruling; however the settlement is not guaranteed until after the review ends and the District Court determines whether the terms are indeed in the public interest. Ms. Hesse:

I would like to express my support for the revised proposed Final Judgment in the U.S. v. Microsoft case. This lengthy litigation has cost my fellow taxpayers and me more than \$35 million, and after reviewing the terms of this Judgment, final approval is clearly in the public interest. Perhaps of greatest benefit to the American people, the Department of Justice (DOJ) and the settling states will avoid additional costs and now be able to focus their time and resources on matters of far greater national significance: the war against terrorism, including homeland security. As noted by District Court Judge Colleen Kollar-Kotelly, who pushed for a settlement after the attacks of September 11, it is vital for the country to move on from this lawsuit. The parties worked extremely hard to reach this agreement, which has the benefit of taking effect immediately rather than months or years from now when all appeals from continuing the litigation would finally be exhausted.

The terms of the settlement offer a fair resolution for all sides of this case: the DOJ, the states, Microsoft, competitors, consumers and taxpayers. Microsoft will not be broken up and will be able to continue to innovate and provide new software and products. Software developers and Internet service providers (ISPs), including competitors, will have unprecedented access to Microsoft's programming language and thus will be able to make Microsoft programs compatible with their own.

Competitors also benefit from the provision that frees up computer manufacturers to disable or uninstall any Microsoft application or element of an operating system and install other programs. In addition, Microsoft cannot retaliate against computer manufacturers, ISPs, or other software developers for using products developed by Microsoft competitors. Plus, in an unprecedented enforcement clause, a Technical Committee will work out of Microsoft's headquarters for the next five years, at the company's expense, and monitor Microsoft's behavior and compliance with the settlement.

Most importantly, this settlement is fair to the computer users and consumers of

America, on whose behalf the lawsuit was allegedly filed. Consumers will be able to select a variety of pre-installed software on their computers. It will also be easier to substitute competitors' products after purchase as well. The Judgment even covers issues and software that were not part of the original lawsuit, such as Windows XP, which will have to be modified to comply with the settlement.

Department of Justice:

During my 25-year span as a computer professional, I have watched Microsoft grow. I continue to be appalled that Microsoft has been able to sell unreliable, defective products using the following practices:

- Advertising non-existent products to kill legitimate competition.
- Buying companies in order to kill them
- Forcing large distributors to install Microsoft, only.
- Covering defective product internals with glitter and gold.
- Licenses that give them immunity to damage from defective products.
- Large campaign contributions to buy protection from government.

The result has been:

- Many innovative companies have been destroyed.
- The world-dominant operating system (Windows) is defective,

- Users have come to expect that software crashes are normal.
- Due to licensing practices allowed in our (and other) countries,
- Microsoft is the only business of its size that is unaccountable
- for damages due to defects in its products.
- Windows is a serious threat to national security and to businesses.
- Now under investigation, they STILL continue these practices.
- Even the US government seems unable to touch this monopoly.

I ask that you do what needs to be done with Microsoft. Please protect our national security, and give technological users and innovators a chance.

I started to write to the DOJ and ended up getting too angry to form sentences what you are seeing is your dept of justice about to do injustice...so it goes you can't fight city hall but you can be sure none of your assets go to mr big bad scared little boy billy boy gates in times of justice he would go down in a hail of bullets, forget pies yes...let's watch our DOJ at work in the mean time...sell all your redhat stock and buy kmart stock...before monday and, ponder why peak is not just dialup...JUST!!!
