

whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Send comments to Anne O'Connor, CDC Assistant Reports Clearance Officer, 1600 Clifton Road, MS-D24, Atlanta, GA 30333. Written comments should be received within 60 days of this notice.

Proposed Project: Data Collection and Analysis to Determine the Reliability and Validity of Current and Proposed Oral Health Questions, Behavioral Risk Factor Surveillance System—New—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

The National Center for Chronic Disease Prevention and Health Promotion, Division of Oral Health, proposes to support data collection and analysis to determine the reliability and validity of current and proposed Oral Health questions for the Behavioral Risk Factor Surveillance System (BRFSS). At the request of the Association of State and Territorial Dental Directors

(ASTDD), the Division of Oral Health (DOH) provided technical assistance in standardization of questions to monitor the oral health of adults. Three questions appeared on the BRFSS core in 1999, and were included again in 2002; They permit state dental programs to track progress toward *Healthy People (HP)* objectives for adults (HP 2010: 21–3, 21–4, 21–10), to monitor reported use of a key preventive service for adults (teeth cleaning), and to examine the relationship of oral health indicators to general health status, conditions, and behaviors.

As more state dental programs consider the oral health of adults, states have requested that a bank of additional standardized questions be created to monitor other oral health indicators. CDC/DOH has been reluctant to provide additional technical assistance, without firm data on the reliability and validity of questions. Because all BRFSS questions require self-report by respondents about their own oral health status or behaviors, recall bias and errors in perception exist. To accomplish estimates of response error, answers to existing and proposed BRFSS questions (limit = 10 content questions, plus 7 demographic questions) must be compared to the “True” situation of that individual, *i.e.*, that is found in patient charts or other clinical records.

The proposed data collection and analysis will be conducted through the Alliance of Community Health Plans by research foundations affiliated with two dental plans, Kaiser Permanente Northwest, Portland, OR and Health Partners, Minneapolis, MN. The proposed telephone survey, similar to BRFSS, of a convenience sample of 400 dental plan members (200 from each respective HMO) would occur only once. Neither published studies nor informal discussions with dental researchers regarding work in progress uncovered any information that would eliminate the need for this data collection. All work on this project, including linkages between health plan records and responses to the BRFSS questions, will be conducted at the research foundations associated with the respective health plans. CDC will receive only a report on the validity of the questions, and will not have access to the database constructed for the contract.

Study findings will allow CDC to respond to state requests for inclusion of additional standardized questions in an optional oral health module for BRFSS and ensure that any such questions are reliable, valid, and useful for state program planning and evaluation. There is no cost to respondents.

| Health plan respondents | Number of respondents | Number of responses/respondent | Average burden/response (in hours) | Total burden (in hours) |
|-------------------------|-----------------------|--------------------------------|------------------------------------|-------------------------|
| Kaiser Northwest | 200 | 1 | 15/60 | 50 |
| Health Partners | 200 | 1 | 15/60 | 50 |
| Total | | | | 100 |

Dated: May 10, 2002.

Nancy E. Cheal,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control and Prevention.

Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and

Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498–1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503. Written comments should be received within 30 days of this notice.

Proposed Project: National Public Health Performance Standards Program State Public Health System Assessment—New—Public Health Practice Program Office (PHPO), Centers for Disease Control and Prevention (CDC).

Since 1998, the CDC National Public Health Performance Standards Program has convened workgroups with the National Association of County and City

Health Officials (NACCHO), the Association of State and Territorial Health Officials (ASTHO), the National Association of Local Boards of Health (NALBOH), the American Public Health Association (APHA), and the Public Health Foundation (PHF) to develop performance standards for public health systems based on the essential services of public health. In the fall of 2000, CDC conducted field tests with the state public health survey instruments in Hawaii, Minnesota, and Mississippi.

CDC is now proposing to implement a formal, voluntary data collection, based on the lessons learned during field testing, to assess the capacity of state public health systems to deliver the Essential Services of Public Health. Electronic data submission will be the method of choice when state and

territorial health departments complete the public health assessment.

An estimated 33 percent of the 59 state and territorial health departments

are expected to participate in the National Performance Standards Program during the first year. In year

two, an additional 25 percent and in year three, 22 percent. The total burden hours are estimated to be 720.

| Data collection period | Number of respondents | Number of responses per respondent | Average burden per response (in hrs.) |
|------------------------|-----------------------|------------------------------------|---------------------------------------|
| Year 1 | 20 | 1 | 15 |
| Year 2 | 15 | 1 | 15 |
| Year 3 | 13 | 1 | 15 |

Dated: May 10, 2002.

Nancy Cheal,

Acting Associate Director for Policy, Planning, and Evaluation, Centers for Disease Control and Prevention.

Proposed Project: National AIDS and STD Hotline Survey of Callers (OMB No. 0920-0295)—Revision—National Center for HIV, STD, and TB Prevention (NCHSTP), Centers for Disease Control and Prevention (CD). The purpose of this request is to continue active and passive data collection from people who call the CDC National AIDS and Sexually Transmitted Disease (STD) Hotlines. The mission of the CDC National AIDS and STD Hotlines is to provide the general population of the United States, its territories, and Puerto Rico with highly visible and readily accessible resources for accurate and timely information on HIV/AIDS and other STDs. The CDC is seeking OMB approval for renewal of the data collection with one proposed change and one proposed system enhancement,

both aimed at improving the management and evaluation of collected information.

The change is the ability of CDC to survey every 15th caller, instead of every 30th caller, to the hotlines. The information gathered will assist CDC in the improvement of HIV and STD services, particularly to high-risk populations. Before the integration of the National AIDS and STD Hotlines in 1998, every 15th caller was surveyed in the AIDS hotline, and every 30th caller was surveyed in the STD hotline.

The National AIDS Hotline responded to a maximum of 1.6 million calls per year during the 1980s and early 1990s. Throughout the period, the calls have decreased to approximately 650,000 calls per year due to changes such as treatment advances, a more knowledgeable audience, and access to information on the Internet. However, the number of callers selected for the survey has increased to assure that a substantial amount of data can be submitted to CDC regarding information about the callers who contact the hotline. Respondents (callers) will be the general public, and only the callers to the hotlines will be affected.

The enhancement to the data collection is the employment of a partially integrated system that will allow CDC Information Specialists to answer calls about HIV/AIDS and STDs using the same toll free telephone system. The telephone system will be designed to display telephone numbers for both the AIDS Hotline and the STD Hotline. Thus, when a caller contacts the hotline for AIDS information, the phone for the AIDS Hotline will appear on the caller ID. If the caller wants additional information about STDs, the same Information Specialist can respond to the call rather than requesting that the caller place a separate call to the STD Hotline. This process will also allow for an integrated data collection system for AIDS and STD caller information and service evaluation, as well as allow CDC to provide a more efficient and effective

means of addressing the needs of its constituents.

In addition, since both hotlines will still retain their separate telephone numbers, the call volume can be monitored separately with distinct extrapolation of data. This integrated system began in August 2000. The integrated system also supports strategies in the *CDC HIV Prevention Strategic Plan Through 2005*, which also states that HIV prevention must be integrated with STD prevention.

Data will be collected on an active and passive basis for both hotlines. The active data collection method occurs while the caller is on the phone. It allows the Information Specialist to gather information about caller demographics such as age, race, ethnicity and education through a short survey administered at the conclusion of the call. The passive data collection instrument allows the Information Specialist to capture more specific information about the characteristics of the caller such as the callers primary topic for discussion, gender, level of concern of caller. The Information Specialist enters this information into a database once the call is completed.

To assist in completing the surveys and providing accurate data responses, the hotlines will be using the CDC Federal Telecommunications Service (FTS) 2001 telephone systems; call length data from the Integrated Information Program (IIP), which is a computer interface. The hotlines will also be using the Automated Call Distribution (ACD) program which allows the calls to be distributed to the correct numbers (AIDS or STD) and Symposium software which can assist the hotlines in several areas, including quickly (1) determining what happened to a call that may be in the queue,(2) compiling a geographic distribution table of all calls throughout the United States, including ages of callers,(3) and routing calls to the English, Spanish or TTY service.

For the AIDS and STD integrated English service, the estimated number of persons surveyed for the active survey
