**POLICY JUSTIFICATION****Israel – Joint Direct Attack Munitions**

The Government of Israel has requested a possible sale of 1,000 Joint Direct Attack Munitions (JDAM) tail kits, 50 MK-84 inert bombs, testing, spare and repair parts, support equipment, contractor engineering and technical support, and other related elements of program support. The estimated cost is \$27 million.

This proposed sale will contribute to the foreign policy and national security of the United States by helping to improve the security of a friendly country that has been and continues to be an important force for political stability and economic progress in the Middle East.

The proposed sale will contribute significantly to U.S. strategic and tactical objectives. Israel will maintain its qualitative edge with a balance of new weapons procurement and upgrades supporting its existing systems. Israel, which already has tail kits in its inventory, will have no difficulty absorbing these additional kits.

The proposed sale of this equipment and support will not affect the basic military balance in the region.

The prime contractor will be Boeing Company of St. Louis Missouri. There are no offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will not require the assignment of any additional U.S. Government and contractor representatives to Israel.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

**Transmittal No. 02-38****Notice of Proposed Issuance of Letter of Offer  
Pursuant to Section 36(b)(1)  
of the Arms Export Control Act****Annex  
Item No. vii****(vii) Sensitivity of Technology:**

1. The Joint Direct Attack Munition is actually a guidance kit that converts existing unguided free-fall bombs into precision-guided "smart" munitions. By adding a new tail section containing an Inertial Navigation System (INS) guidance/Global Positioning System (GPS) guidance to existing inventories of MK-84 bombs, the cost effective JDAM provides highly accurate weapon delivery in any "flyable" weather. The INS, using updates from the GPS, helps guide the bomb to the target via the use of movable tail fins.

2. Weapon accuracy is dependent on target coordinates and present position as entered into the guidance control unit. After weapon release, movable tail fins guide the weapon to the target coordinates. In addition to the tail kit, other elements in the overall system that are essential for successful employment include:

Access to accurate target coordinates.  
INS/GPS capability  
Operational Test and Evaluation Plan.

3. A determination has been made that Israel can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This proposed sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.
