**SUPPLEMENTARY INFORMATION:**

*Title:* National Health Protection Survey of Beaches (OMB Control No. 2040-0189; EPA ICR No. 1814.02; expiring 01/31/03).

*Abstract:* Bacterial and other microbiological contaminants continue to pose potentially serious human health problems for the Nation's recreational waters, including bathing beaches. These adverse effects have been one of EPA's long-standing concerns. They are directly related to such Clean Water Act responsibilities as water quality standards and surface water quality, and to the Agency's efforts to ensure that the waters of the United States are "fishable" and "swimmable." In response to this concern, EPA initiated its annual National Health Protection Survey of Beaches (Beach Survey) starting in 1997. This voluntary nationwide survey collects, and makes available to the public, information related to beach water quality including: monitoring agency and organization, monitoring and public notification procedures and responsibilities; water quality standards; advisories and closings; and reasons for advisories and closings.

Currently, all beach information collected by EPA is obtained through the Beach Survey. However, EPA plans to significantly reduce the amount of information collected through the survey and instead obtain this information through grants to state and local governments awarded under the authority of the Beaches Environmental Assessment and Coastal Health (BEACH) Act. Since the information will be collected either through the Beach Survey or BEACH Act grants (but not both), there will be no duplication of effort and the net burden will be the same.

An Information Collection Request for the BEACH Act grant program has been approved by the Office of Management and Budget (EPA ICR Number 2048.01, OMB Control Number 2040-0244). Congress passed the BEACH Act in October 2000. The BEACH Act amended
