SUPPLEMENTARY INFORMATION:

Background

Restoring endangered or threatened animals and plants to the point where they are again secure, self-sustaining members of their ecosystems is a primary goal of our endangered species program. To help guide the recovery effort, we are working to prepare recovery plans for most of the listed species native to the United States. Recovery plans describe actions considered necessary for the conservation of the species, establish criteria for downlisting or delisting listed species, and estimate time and cost for implementing the recovery measures needed.

The Endangered Species Act of 1973, as amended in 1988 (Act) (16 U.S.C. 1531 *et seq.*), requires the development of recovery plans for listed species unless such a plan would not promote the conservation of a particular species. Section 4(f) of the Act requires that public notice and an opportunity for public review and comment be provided during recovery plan development. Information presented during the public comment period has been considered in the preparation of this final recovery plan, and is summarized in the appendix to the recovery plan. We will forward substantive comments regarding recovery plan implementation to appropriate Federal or other entities so that they can take these comments into account during the course of implementing recovery actions.

The California red-legged frog (*Rana aurora draytonii*) occurs from sea level to elevations of about 1,500 meters

(5,000 feet) in its range. It has been extirpated from 70 percent of its former range. The California red-legged frog requires a variety of habitat elements with aquatic breeding areas embedded within a matrix of riparian and upland dispersal habitats. Breeding sites of the California red-legged frog are in aquatic habitats including pools and backwaters within streams and creeks, ponds, marshes, sag ponds, dune ponds, and lagoons. California red-legged frogs frequently breed in artificial impoundments such as stock ponds. Potential threats to the species include elimination or degradation of habitat from land development and land use activities, and habitat invasions by non-native aquatic species.

The objective of this recovery plan is to delist the California red-legged frog through implementation of a variety of recovery measures including: (1) Protection of known populations and reestablishment of populations; (2) protection of suitable habitat, corridors, and core areas; (3) habitat management; (4) development of land use guidelines; (5) research; (6) surveying and monitoring; and (7) public participation, outreach, and education.

Authority

The authority for this action is section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).
