

competitive harm to the survey respondents. EIA uses nonconfidential survey information in its products and may also make the information publicly available in individually-identifiable form.

EIA's proposed policy would eliminate the use of disclosure limitation methods on information displayed in statistical tables based on confidential historical electric power survey data if the survey data is at least 3 years old. EIA believes that because the data are old, this policy would not cause substantial competitive harm to the competitive position of any electric power survey respondent. This policy would expand the electric power information that could be provided in EIA information products by eliminating the requirement to withhold sensitive cells and other nonsensitive cells necessary to ensure protection of sensitive information.

III. Request for Comments

The public should comment on the actions discussed in item II. The questions below are general issues on which EIA is seeking public comments.

General Issues:

A. Is the proposed policy appropriate for EIA's confidential historical electric power survey data?

B. Is the assumption that the proposed policy would not cause substantial competitive harm to the competitive position of any survey respondent reasonable?

Comments submitted in response to this notice will be considered during development of EIA's final policy regarding the use of disclosure limitation methods for information in statistical tables with confidential historical electric power survey data. The comments will also become a matter of public record.

After EIA has completed development, a **Federal Register** notice will be issued announcing the policy.

Abstract: The information is collected from applicants/recipients of EPA assistance to monitor adherence to the programmatic and administrative requirements of the Agency's financial assistance program.
