Carrie Hubard or Patrick Opay, (301)713-2289.

SUPPLEMENTARY INFORMATION: The subject modification to Permit No. 1236, issued on October 10, 2000 (65 FR 62709) and modified on April 17, 2001 (66 FR 21912) is requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

Permit No. 1236 authorizes the permit holder to conduct two sea turtle research projects, one in the Chesapeake Bay and coastal waters of Virginia and the other in the U.S. Virgin Islands (USVI). The USVI project focuses on the habitat utilization of juvenile hawksbill (*Eretmochelys imbricata*) turtles at the Buck Island Reef National Monument off St. Croix. The Chesapeake Bay project studies the inter-nesting movements of sea turtles in Virginia via satellite telemetry and to assess the effects of beach replenishment on turtle

activities. Both studies capture, handle, tag (PIT, flipper, satellite, radio and acoustic), collect biological samples (via humeral bone biopsy, blood samples and laparoscopy) and release loggerhead (*Caretta caretta*), green (*Chelonia mydas*), Kemp's ridley (*Lepidochelys kempii*), hawksbill and leatherback turtles (*Dermochelys coriacea*). Permit No. 1236 expires on July 31, 2005.

The permit holder requests authorization to hold a maximum of 20 of the loggerhead turtles that are already subject animals in the Chesapeake Bay project for up to one week to study turtle interactions with whelk pots. In an effort to reduce entanglement by sea turtles in the whelk pot fishery, VIMS proposes to test the ways in which turtles interact with various whelk pot designs. Healthy turtles will be transported to VIMS and maintained in indoor tanks until testing. During experimentation, a single turtle will be placed in an outdoor tank with one of the whelk pot designs, rigged and baited to imitate the fishery protocols. Observers will be present at all times to record turtle behavior. If a turtle becomes entangled for more than five minutes, the observer will disentangle the animal and the experiment will be concluded for the day. Turtles will have a day's rest between experiments and thus will interact with three designs over the course of a week. Turtles will be fed, examined, and monitored by a staff veterinarian. Once the experiment is complete turtles will be released. Currently VIMS is authorized to sample 100 loggerheads annually. The twenty turtles used in the whelk pot study will be a subset of those turtles. There is no increase in the number of loggerhead turtles captured under the permit. This modification would be valid through the life of the permit.

SUPPLEMENTARY INFORMATION: On March 12, 2004, notice was published in the **Federal Register** (69 FR 11839) that a modification of Permit No. 1231, issued May 31, 2000 (65 FR 36666), had been requested by the above-named individual. The requested modification has been granted under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

This modification will allow the permit holder to obtain additional information about green sea turtle movement patterns and their utilization of habitat. The permit holder will attach a transmitter and time-depth-temperature recorder to 14 green (*Chelonia mydas*) sea turtles using a tether and track them. Turtles will be also be sampled, measured, weighed, and tagged before being released. This research will take place in waters of the east coast of Florida for the remaining duration of the permit which expires on March 31, 2005.

Issuance of this modification, as required by the ESA was based on a finding that such permit (1) was applied for in good faith, (2) will not operate to the disadvantage of the endangered species which is the subject of this permit, and (3) is consistent with the purposes and policies set forth in section 2 of the ESA.
