[Docket Nos. CP04-386-000, CP04-400-000, CP04-401-000, CP04-402-000]

Golden Pass LNG Terminal L.P., Golden Pass Pipeline L.P.; Notice of Availability of the Draft Environmental Impact Statement for the Proposed Golden Pass LNG Terminal and Pipeline Project

March 3, 2005.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared a draft Environmental Impact Statement (EIS) on the liquefied natural gas (LNG) import terminal and natural gas pipeline facilities in Jefferson, Orange, and Newton Counties, Texas and Calcasieu Parish, Louisiana proposed by Golden Pass LNG Terminal L.P. and Golden Pass Pipeline L.P. (collectively referred to as Golden Pass) in the above-referenced dockets.

The draft EIS was prepared to satisfy the requirements of the National Environmental Policy Act (NEPA). The staff concludes that approval of the proposed project with appropriate mitigating measures as recommended, would have limited adverse environmental impact. The draft EIS also evaluates alternatives to the proposal, including system alternatives, alternative sites for the LNG import terminal, and pipeline alternatives.

Golden Pass's proposed facilities would transport an average of 2.0 billion cubic feet per day (Bcfd) of imported natural gas to the U.S. market. In order to provide LNG import, storage, and pipeline transportation services, Golden Pass requests Commission authorization to construct, install, and operate an LNG terminal and natural gas pipeline facilities.

The draft EIS addresses the potential environmental effects of the construction and operation of the following LNG terminal and natural gas pipeline facilities:

- A new protected marine terminal basin connected to the Port Arthur Channel that would include a ship maneuvering area, two protected berths, and unloading facilities capable of accommodating up to 200 LNG ships per year;
- A total of five all-metal, double-walled, full containment LNG storage tanks, each with a nominal working volume of approximately 155,000 cubic meters (975,000 barrels) and each with secondary containment dikes to contain 110 percent of the gross tank volume;
- A total of ten shell-and-tube vaporizers, using a closed loop circulating solution and selective catalytic reduction to reduce regulated pollutants;
- Associated LNG storage and vaporization facilities, including administrative, storage, and maintenance buildings, access roads, and a waterline;
- A pipeline system comprised of 77.8 miles of 36-inch-diameter mainline, 42.8 miles of 36-inch-diameter loop, and 1.8 miles of 24-inch-diameter lateral; and
- Associated ancillary pipeline facilities, including interconnections with up to 11 existing interstate and intrastate pipeline systems.
