

Glacier Bay National Park and Preserve (Christine M. Gabriele, Principal Investigator) (File No. 945-1776) requests a 5-year permit to continue population studies on numerous cetacean species with a particular emphasis on humpback, minke, and killer whales. The research would focus on gathering data to study ecology, behavior and population status to enhance management objectives for these species in and around the Glacier Bay National Park and Preserve, Alaska. Takes would occur by close approach by vessel survey for photo-identification, behavioral observation, passive acoustic recording, collection of sloughed skin and feces, prey sampling, and incidental harassment. Research would take place in waters of and around Glacier Bay with the main study area including a 70-mile (113 km) radius centered at the mouth of Glacier Bay (58°20'N 13°00'W.). Research would mainly take place annually primarily during the months of April-November.

Amendment Requests

Permit No. 782-1719-00 issued on June 30, 2004 (69 FR 44514) authorizes NMMLthe Holder to take all species of cetaceans under NMFS jurisdiction during stock assessment activities throughout U.S. territorial waters and the high seas of the North Pacific Ocean, Southern Ocean, Arctic Ocean, and the territorial waters of Mexico (Gulf of California only), Canada, Russia, Japan and the Philippines. The Permit specifically authorizes close approach during Level B harassment (aerial surveys, vessel-based surveys, observations, and photo-identification), and Level A harassment (biopsy sampling and attachment of scientific instruments). Activities are authorized for all age and sex classes with the exception of biopsy sampling of calves less than 6 months of age and accompanying females. The Holder now requests authority to increase the number of humpback whales to be biopsy sampled to 500 in the Western North Pacific stock, 2000 in the Central North Pacific stock, and 1000 in the Eastern North Pacific stock. The Holder also requests that NMFS reconsider its earlier decision and allow biopsy sampling of large whale calves less than 6 months of age (with the exception of neonates) and attending females. The Holder has submitted additional information and justification for this activity. The Holder also requests authority to increase the number of humpback whales to be biopsy sampled to 500 in the Western North Pacific stock, 2000 in the Central North Pacific stock, and 1000 in the Eastern North

Pacific stock. The amendment, if issued, would remain valid until the permit expires June 30, 2009.

Permit No. 1000-1617-01 issued to Whitlow Au, Ph.D. on June 22, 2001 (66 FR 34155) authorizes behavioral observations, photo-identification, genetic sampling, and suction-cup tagging of small cetaceans in Hawaii and California, focused primarily on spinner dolphins. The objectives of the research are to investigate population structure, genetic variability, dispersal patterns, social structure, and foraging and diving behavior. The Permit Holder is now requesting a 5-year amendment to expand the small cetacean research by increasing the number of individuals of each species that can be suction-cup tagged from three to 80. Furthermore, the Holder wishes to add a new project that will focus on large whale behavior and use of the acoustic environment by studying humpback whales, killer whales, and Cuvier's and Blainville's beaked whales (*Ziphius cavirostris* and *Mesoplodon densirostris*). Males and females of all ages and reproductive status of requested species would be closely approached by vessel for photo-identification, behavioral observations, underwater observation and videography, and passive acoustic recording. For biopsy sampling and suction-cup tagging, males and females of all ages would be sampled or tagged, with the exception of calves under 6 months of age and females attending such calves. In the case of humpback whales only: the suction-cup tags, with a desired attachment duration of 6 hours, may include an acoustic transponder. The tag would emit a high-frequency pulse, above the theoretical hearing range of the whales, to assist the researchers in tracking the tagged individual. Research would take place in U.S. and international waters off Hawaii and California. The amended permit, if issued, would be valid for 5 years.

SUPPLEMENTARY INFORMATION

I. Abstract

The United States Patent and Trademark Office (USPTO) administers the Trademark Act, 15 U.S.C. 1051 *et seq.*, which provides for the Federal registration of trademarks, service marks, collective trademarks and service marks, collective membership marks, and certification marks. Individuals and businesses who use their marks, or intend to use their marks, in commerce regulable by Congress, may file an application with the USPTO to register their marks. These individuals and businesses may also submit various communications to the USPTO, including requests to amend their applications to delete an originally-identified statutory filing basis, such as the "intent to use" basis. Registered marks remain on the register for ten years. However, the registrations are canceled unless the owner files an affidavit with the USPTO attesting to the continued use (or excusable non-use) of the mark in commerce. The applicant may withdraw his or her application. If an application becomes abandoned, the owner may petition the USPTO to revive the abandoned application. The registration may be renewed for periods of ten years.

The rules implementing the Act are set forth in 37 CFR Part 2. These rules mandate that each register entry include the mark, the goods and/or services in connection with which the mark is used, ownership information, dates of use, and certain other information. The USPTO also provides similar information concerning pending applications. The register and pending application information may be accessed by an individual or by businesses, to determine availability of a mark. By accessing the USPTO's information, parties may reduce the possibility of initiating use of a mark previously adopted by another. The Federal trademark registration process may lessen the filing of papers in court and between parties.

The USPTO is proposing to add five paper requirements into this collection:

Request to Delete Section 1(b) Basis, Intent to Use, Request for Express Abandonment (Withdrawal) of Application, Request for Permission to Withdraw as Attorney of Record, Change of Owner's Address Form, and Other Petitions. The electronic versions of these first four requirements were additions to the collection recently approved by OMB on December 2, 2004. Other Petitions is a new paper category being added to encompass all other miscellaneous petitions that are submitted after prosecution of the trademark application. Other Petitions does not have an electronic equivalent; petitions are submitted on paper.

At this time, the USPTO is proposing to split this collection into five separate collections based upon the lines of the Trademark business processes. The proposed five groups are Applications for Trademark Registration, Substantive Submissions Made During Prosecution of the Trademark Application, Submissions Regarding Correspondence and Regarding Attorney Representation (Trademarks), Post Registration (Trademark Processing), and Trademark Petitions. The USPTO believes that splitting this extensive collection into smaller, more manageable, information collection requests will allow for a more efficient updating and renewal process.
