

opportunities, especially hunting and fishing, further protect threatened and endangered species, and control invasive species.

After the 30-day review and comment period ends, we will analyze, address, and consider all comments received and prepare a final CCP. Availability of the final CCP will be published in the **Federal Register**. The Director must approve the proposed refuge boundary expansion before the Regional Director considers approving the expansion.

All comments, including names and addresses, become part of the official public record. Requests for the public record of this plan will be handled in accordance with the Freedom of Information Act, the Council on Environmental Quality's NEPA regulations, and other Service and Departmental policies and procedures.

Final Environmental Impact Statement/Non-Native Deer Management Plan Point Reyes National Seashore; Marin County, CA; Notice of Availability

SUMMARY: Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969 (Pub. L. 91-190, as amended), and the Council on Environmental Quality Regulations (40 CFR part 1500-1508), the national Park Service, Department of the Interior has prepared a Final Environmental Impact Statement (FEIS) identifying and evaluating five alternatives for a Non-Native Deer Management Plan for Point Reyes National Seashore administered lands. When approved, the plan will guide the NPS in managing the herds of non-native deer over the next two decades on all lands administered by Point Reyes National Seashore. Through the FEIS, the potential impacts of a "no action" alternative and four "action" alternatives are assessed and, where appropriate, mitigation measures are applied to reduce the intensity of the potential effect or to avoid the potential effect. Five other preliminary alternatives were considered but rejected because they did not achieve the objectives of the non-native deer management plan or were infeasible.

Planning Background

Axis deer (*Axis axis*) are native to India and European fallow deer (*Dama dama*) are native to Asia Minor and the Mediterranean region. Axis and fallow deer were introduced to the point Reyes area in the 1940s and 1950s by local ranchers, before establishment of the Seashore. Between 1976 and 1994, the NPS controlled the populations of the herds by shooting the deer and more than 2,000 non-native deer were culled during this 18-year period. Culling was discontinued in 1994 in response to budgetary and public concerns. For the past 16 years, the NPS has not actively managed the non-native deer and their numbers and overall range have increased to, or surpassed, pre-control levels. Seashore staff estimates current numbers of axis and fallow deer to be
