

when it is most economical to do so. With the implementation of the renewable fuels standard also contained in the Energy Act, the blending of ethanol, in particular, into gasoline is expected to increase considerably, not decrease. Therefore, despite this action to remove the oxygenate mandate in RFG, when viewed in the context of companion energy legislation, overall use of oxygenates is expected to increase in the future. This rule also would allow gasoline retailers to commingle certain compliant gasolines which otherwise would be prohibited from being commingled. This also may have a positive effect on gasoline supplies.

I. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 ("NTTAA"), Public Law 104-113, section 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards.

This proposed rule does not establish new technical standards within the meaning of the NTTAA. Therefore, EPA did not consider the use of any voluntary consensus standards.

VI. Statutory Provisions and Legal Authority

The statutory authority for the actions in today's proposed rule comes from sections 211(c), 211(k) and 301(a) of the CAA.
