

interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Room 755, Office of Polar Programs, National Science Foundation, 4201 Wilson Boulevard, Arlington, Virginia 22230.

FOR FURTHER INFORMATION CONTACT: Nadene G. Kennedy at the above address or (703) 292-7405.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95-541), as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas requiring special protection. The regulations establish such a permit system to designate Antarctic Specially Protected Areas.

The applications received are as follows:

1. *Applicant:* Permit Application No. 2010-016. Philip R. Kyle, Department of Earth & Environmental Science, New Mexico Institute of Mining and Technology, Socorro, NM 87801.

Activity for Which Permit Is Requested

Enter Antarctic Specially Protected Area. The applicant plans to enter Tramway Ridge, Mount Erebus (ASPA 130) measure soil temperatures and fluxes of CO₂ and CO gases as part of the on-going surveillance of the active volcano. In addition, the applicant will undertake a survey of the geothermal features in the summit area of Mount Erebus.

Location

Tramway Ridge, Mount Erebus (ASPA 130).

Dates

December 1, 2009 to January 31, 2012.

Nadene G. Kennedy,
Permit Officer, Office of Polar Programs.

BILLING CODE 7555-01-P

NUCLEAR REGULATORY COMMISSION

[NRC-2009-0425]

Draft Regulatory Guide: Issuance, Availability

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of Issuance and Availability of Draft Regulatory Guide,

DG-8039, "Methods for Estimating Effective Dose Equivalent from External Exposure."

FOR FURTHER INFORMATION CONTACT:

Roger Pedersen, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, telephone: (301) 415-3162, e-mail to Roger.Pedersen@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment a draft guide in the agency's "Regulatory Guide" series. This series was developed to describe and make available to the public such information as methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The draft regulatory guide (DG), entitled, "Methods for Estimating Effective Dose Equivalent from External Exposure," is temporarily identified by its task number, DG-8039, which should be mentioned in all related correspondence. DG-8039 will be a new regulatory guide.

This regulatory guide describes dosimetry methods that the NRC considers acceptable for determining effective dose equivalent for external (EDEX) radiation exposures. These methods provide a conservative estimate of EDEX and may be used to calculate TEDE in demonstrating compliance with TEDE-based regulatory requirements consistent with the provisions in 10 CFR 20.1201(c).

Title 10, section 20.1003, "Definitions," of the *Code of Federal Regulations* (10 CFR 20.1003) defines total effective dose equivalent (TEDE) as the sum of the effective dose equivalent (EDE) (for external exposures) and the committed EDE (for internal exposures). In 10 CFR 20.1201(a), the NRC provides an annual dose limit of 0.05 sievert (5 rem) TEDE and in 10 CFR 20.1201(c) requires that when an external personal monitoring device is used to measure external exposure, the deep-dose equivalent (DDE) must be used as an estimate of the EDE unless the EDE is determined more directly by a dosimetry method approved by the NRC. In using the DDE to estimate the EDE, the assigned DDE must be for the part of the body receiving the highest radiation exposure.

II. Further Information

The NRC staff is soliciting comments on DG-8039. Comments may be accompanied by relevant information or supporting data and should mention DG-8039 in the subject line. Comments submitted in writing or in electronic form will be made available to the public in their entirety through the NRC's Agencywide Documents Access and Management System (ADAMS).

Because your comments will not be edited to remove any identifying or contact information, the NRC cautions you against including any information in your submission that you do not want to be publicly disclosed.

The NRC requests that any party soliciting or aggregating comments received from other persons for submission to the NRC inform those persons that the NRC will not edit their comments to remove any identifying or contact information, and therefore, they should not include any information in their comments that they do not want publicly disclosed. You may submit comments by any of the following methods:

1. *Mail comments to:* Rulemaking and Directives Branch, Mail Stop: TWB-05-B01M, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001.

2. *Federal e-Rulemaking Portal:* Go to <http://www.regulations.gov> and search for documents filed under Docket ID NRC-2009-0425. Address questions about NRC dockets to Carol Gallagher, 301-492-3668; e-mail Carol.Gallagher@nrc.gov.

3. *Fax comments to:* Rulemaking and Directives Branch, Office of Administration, U.S. Nuclear Regulatory Commission at (301) 492-3446.

Comments would be most helpful if received by November 26, 2009. Comments received after that date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received on or before this date. Although a time limit is given, comments and suggestions in connection with items for inclusion in guides currently being developed or improvements in all published guides are encouraged at any time.

Requests for technical information about DG-8039 may be directed to the NRC contact, Roger Pedersen at (301) 415-3162 or e-mail to Roger.Pedersen@nrc.gov.

Electronic copies of DG-8039 are available through the NRC's public Web site under Draft Regulatory Guides in the "Regulatory Guides" collection of the NRC's Electronic Reading Room at

<http://www.nrc.gov/reading-rm/doc-collections/>. Electronic copies are also available in ADAMS (<http://www.nrc.gov/reading-rm/adams.html>), under Accession No. ML091390066.

In addition, regulatory guides are available for inspection at the NRC's Public Document Room (PDR) located at 11555 Rockville Pike, Rockville, Maryland. The PDR's mailing address is USNRC PDR, Washington, DC 20555-0001. The PDR can also be reached by telephone at (301) 415-4737 or (800) 397-4205, by fax at (301) 415-3548, and by e-mail to pdresource@nrc.gov.

Regulatory guides are not copyrighted, and Commission approval is not required to reproduce them.

Dated at Rockville, Maryland, this 3rd day of September 2009.

For the Nuclear Regulatory Commission.

Andrea D. Valentin,

Chief, Regulatory Guide Development Branch,
Division of Engineering, Office of Nuclear
Regulatory Research.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[NRC-2009-0427; Docket No. 030-10491]

Notice of Availability of Environmental Assessment and Finding of No Significant Impact for License Amendment to Byproduct Materials License No. 29-16145-01, for Unrestricted Release of Robert Wood Johnson University Hospital at Hamilton's Clinical Pharmacology Unit Located at #3 Hamilton Health Place, Hamilton, NJ

AGENCY: Nuclear Regulatory
Commission.

ACTION: Issuance of Environmental
Assessment and Finding of No
Significant Impact for license
amendment.

FOR FURTHER INFORMATION CONTACT:

Héctor Bermúdez, Sr. Health Physicist,
Medical Branch, Division of Nuclear
Materials Safety, Region I, 475
Allendale Road, King of Prussia,
Pennsylvania 19406; telephone (404)
562-4734; fax number (610) 337-5269;
or by e-mail: Hector.Bermudez@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory
Commission (NRC) is considering the
issuance of a license amendment to
byproduct materials License No. 29-
16145-01. This license is held by Robert
Wood Johnson University Hospital at

Hamilton (the Licensee), for one of its
facilities located at #3 Hamilton Health
Place (the Facility). Issuance of the
amendment would authorize release of
the Facility for unrestricted use. The
Licensee requested this action in a letter
dated December 10, 2008. The NRC has
prepared an Environmental Assessment
(EA) in support of this proposed action
in accordance with the requirements of
Title 10, *Code of Federal Regulations*
(CFR), Part 51 (10 CFR Part 51). Based
on the EA, the NRC has concluded that
a Finding of No Significant Impact
(FONSI) is appropriate with respect to
the proposed action. The amendment
will be issued to the Licensee following
the publication of this FONSI and EA in
the **Federal Register**.

II. Environmental Assessment

Identification of Proposed Action

The proposed action would approve
the Licensee's December 18, 2008,
license amendment request, resulting in
release of the Facility for unrestricted
use. License No. 29-16145-01 was
issued on September 19, 1974, to
Hamilton Hospital (now Robert Wood
Johnson University Hospital at
Hamilton) pursuant to 10 CFR Part 30,
and has been amended periodically
since that time. This license authorizes
the Licensee to use unsealed byproduct
materials for the purposes of medical
diagnosis and treatment of humans.

The building that houses the Facility
is a single story building located in a
mixed residential/commercial area. The
licensee occupied approximately 12,000
square feet of space in part of the
building, consisting of office space and
laboratories. Within the Facility, use of
licensed materials was confined to
Rooms 102, 103, 104, 126, 154, 180,
195C, 216, 217, 220, 221, and 242.

Routine licensed activities ceased in
2008 and the licensee initiated a survey
of the Facility. Based on the Licensee's
historical knowledge of the site and the
conditions of the Facility, the Licensee
determined that only routine
decontamination activities, in
accordance with the NRC-approved
operating radiation safety procedures,
would be required. The Licensee was
not required to submit a
decommissioning plan to the NRC
because worker cleanup activities and
procedures are consistent with those
approved for routine operations. The
Licensee conducted surveys of the
Facility and provided information to the
NRC to demonstrate that it meets the
criteria in Subpart E of 10 CFR Part 20
for unrestricted release and for license
termination.

Need for the Proposed Action

The Licensee has ceased conducting
licensed activities at the Facility, and
seeks the unrestricted use of its Facility.

Environmental Impacts of the Proposed Action

The historical review of licensed
activities conducted at the Facility
shows that such activities involved use
of the following radionuclide with a
half-life greater than 120 days in
unsealed form: Carbon-14. The Licensee
conducted a final status survey in April
2009. This survey covered all the areas
of use at the Facility. The final status
survey report was attached to the
Licensee's letter dated April 30, 2009.
The Licensee elected to demonstrate
compliance with the radiological
criteria for unrestricted release as
specified in 10 CFR 20.1402 by using
the screening approach described in
NUREG-1757, "Consolidated NMSS
Decommissioning Guidance," Volume
2. The Licensee used the radionuclide-
specific derived concentration guideline
levels (DCGLs), developed there by the
NRC, which comply with the dose
criterion in 10 CFR 20.1402. These
DCGLs define the maximum amount of
residual radioactivity on building
surfaces, equipment, and materials, and
in soils, that will satisfy the NRC
requirements in Subpart E of 10 CFR
Part 20 for unrestricted release. The
Licensee's final status survey results
were below these DCGLs and are in
compliance with the As Low As
Reasonably Achievable (ALARA)
requirement of 10 CFR 20.1402. The
NRC thus finds that the Licensee's final
status survey results are acceptable.

Based on its review the staff has
determined that the affected
environment and any environmental
impacts associated with the proposed
action are bounded by the impacts
evaluated by the "Generic
Environmental Impact Statement in
Support of Rulemaking on Radiological
Criteria for License Termination of
NRC-Licensed Nuclear Facilities"
(NUREG-1496) Volumes 1-3
(ML042310492, ML042320379, and
ML042330385). The staff finds there
were no significant environmental
impacts from the use of radioactive
material at the Facility. The NRC staff
reviewed the docket file records and the
final status survey report to identify any
non-radiological hazards that may have
impacted the environment surrounding
the Facility. No such hazards or impacts
to the environment were identified. The
NRC has identified no other radiological
or non-radiological activities in the area
