SUPPLEMENTARY INFORMATION: The subject modification to Permit No. 10022, issued on April 29, 2008 (73 FR 23195) is requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 et seq.) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

Permit No. 10022 authorizes the permit holder to conduct research off the northwest coast of Florida for 5 years. Researchers may capture up to 40 loggerhead (*Caretta caretta*), 600 green (*Chelonia mydas*), and 110 Kemp's ridley (*Lepidochelys kempii*) sea turtles using strike-net or set-net capture techniques. Animals may be weighed, measured, photographed, skin biopsied, flipper and passive integrated transponder (PIT) tagged, and released. The permit holder requests authorization to use satellite telemetry to assess habitat use of sea turtles and study whether relocation distances for sea turtles captured in relocation trawlers are appropriate. The permit holder would attach transmitters to up to 12 green sea turtles captured by their project by research nets in St. Joseph Bay, Apalachicola Bay, and St. Andrews Bay. The permit holder would also attach transmitters to up to 25 green, hawksbill (*Eretmochelys imbricata*), Kemp's ridley, and loggerhead sea turtles (any combination) already legally captured by relocation trawlers in the St. Andrews Bay area. These animals would also be flipper and PIT tagged, measured, photographed, tissue

sampled and weighed before release. The activities authorized by the modification would occur over the course of the permit through April 30, 2013.

Dated: September 24, 2009.
