

CCS requests a five-year scientific research permit to harass right whales year-round to monitor demographics, life history traits, habitat use, and behavior in the Gulf of Maine; the majority of effort would be focused in Cape Cod Bay, Massachusetts Bay, and the Great South Channel during the season of right whale residency (December 15 - May 15). Annually, up to 400 right whales of all age classes would be approached by small plane for photo-identification and behavioral observation; up to 350 right whales of all age classes would be approached by vessel for photo-identification, direct observation, and collection of prey; and up to 20 attempts would be made to attach suction cup tags to adult or juvenile right whales from small vessels, with a maximum of 10 successful attachments. Up to 40 cetaceans of other species would be incidentally harassed annually during aerial and vessel surveys, and opportunistic sighting information and photographs would be collected. The results of this research will provide a better understanding of right whale population status, relationship to habitat conditions, distribution and abundance, movement patterns, and interactions with human activities. Data will be provided to management agencies, including NOAA Fisheries and the Massachusetts Division of Marine Fisheries, for near-real-time dynamic management of right whale habitat, and long-term refinement of conservation and recovery plans.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), a draft environmental assessment (EA) will be prepared to examine whether significant environmental impacts could result from issuance of the proposed scientific research permit. Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.
