Proposed Project

CDC Cervical Cancer Study (CX3)(OMB No. 0920-0814, exp. 6/30/2012)—Revision—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The National Breast and Cervical Cancer Early Detection Program (NBCCEDP) is the only organized national screening program in the United States. The program offers breast and cervical cancer screening to underserved women. Given resource limitations, the screening standards for cervical cancer in the program include an annual Pap test until a woman has had three consecutive normal Pap tests, at which time the Pap test frequency is reduced to every three years. HPV DNA testing has been approved in the U.S. as a secondary screening tool for ASCUS (Atypical Squamous Cells of Undetermined Significance), and as a primary screening tool for women 30 years of age and older, but it is not currently a reimbursable expense under program guidelines. Adopting HPV testing along with Pap testing in women over 30 could help the program better utilize resources by extending the screening interval of women who are cytology negative and HPV test negative, which is estimated to be 80–90% of women. In 2005, the NBCCEDP convened an expert panel to determine policies on reimbursement of the HPV DNA test with the Pap test (co-test) for primary screening. The panel recommended that the program not reimburse for the HPV DNA test but instead requested that pilot studies be performed to measure the feasibility, acceptability and barriers to use of the test.

A pilot study, the CDC Cervical Cancer Study (CX3), is currently being conducted in 15 clinics in the state of Illinois. A total of 2,246 women between the ages of 30 and 60 who visited one
