Abstract: This Information Collection Request (ICR) includes ambient air monitoring data and other supporting measurements reporting and recordkeeping activities associated with the Ambient Air Quality Surveillance Rule, 40 CFR part 58. This data and information are collected by various State and local air quality management agencies and Tribal entities, and reported to the Office of Air Quality Planning and Standards within the Office of Air and Radiation, EPA.

The data collected through this information collection consist of ambient air concentration measurements for the seven air pollutants with National Ambient Air Quality Standards (i.e., ozone, sulfur dioxide, nitrogen dioxide, lead, carbon monoxide, PM_{2.5} and PM-10), ozone precursors, meteorological variables at a

select number of sites and other supporting measurements. Accompanying the pollutant concentration data are quality assurance/quality control data and air monitoring network design information.

The EPA and others (e.g., State and local air quality management agencies, tribal entities, environmental groups, academic institutions, industrial groups) use the ambient air quality data for many purposes, including informing the public and other interested parties of an area's air quality, judging an area's (e.g., county, city, neighborhood) air quality in comparison with the established health or welfare standards (including both national and local standards), evaluating an air quality management agency's progress in achieving or maintaining air pollutant levels below the national and local standards, developing and revising State Implementation Plans (SIPs) in accordance with 40 CFR 51, evaluating air pollutant control strategies, developing or revising national control policies, providing data for air quality model development and validation, supporting enforcement actions, documenting episodes and initiating episode controls, air quality trends assessment and air pollution research.

The State and local agencies and tribal entities with responsibility for reporting ambient air quality data and information as requested in this ICR submit these data electronically to the EPA's Air Quality System (AQS) database. Quality assurance/quality control records and monitoring network documentation are also maintained by each State and local agency, in AQS electronic format where possible.

Respondents/Affected Entities: State and local air pollution agencies and Tribal entities.

Respondent's obligation to respond: Mandatory.

Estimated Number of Respondents: 168.

Frequency of Response: Quarterly, but may occur more frequently.

Total Estimated Annual Hour Burden: 1,790,021 hours. Burden is defined at 5 CFR 1320.3(b).

Total Estimated Annual Cost: \$194,490,047. This includes an estimated labor cost of \$126,733,274 and an estimated cost of \$13,090,237 for operations and maintenance and \$54,666,536 for equipment and contract costs.

Changes in the Estimates: There is a decrease of 700,331 hours in the total estimated respondent burden compared with that identified in the ICR currently approved by OMB. This decrease reflects EPA's consolidation of monitors

into fewer sites, termination of unnecessary monitors, and more efficient procedures for measuring and reporting data.

Director, Collection Strategies Division.
