SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for an extension of a currently approved information collection.

The National Marine Fisheries Service (NMFS) collects information about fishing expenses in the American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands (CNMI) boat-based reef fish, bottomfish, and pelagics fisheries with which to conduct economic analyses that will improve fishery management in those fisheries; satisfy NMFS' legal mandates under Executive Order 12866, the Magnuson-Stevens Fishery Conservation and Management Act (U.S.C. 1801 *et seq.*), the Regulatory Flexibility Act, the Endangered Species Act, and the National Environmental Policy Act; and quantify achievement of the performances measures in the NMFS Strategic Operating Plans. An example of these performance measures: The economic data collected will allow

quantitative assessment of the fisheries sector's social and economic contribution, linkages and impacts of the fisheries sector to the overall economy through Input-output (I–O) models analyses. Results from I–O analyses will not only provide indicators of social-economic benefits of the marine ecosystem, a performance measure in the NMFS Strategic Operating Plans, but also be used to assess how fishermen and economy will be impacted by and respond to regulations likely to be considered by fishery managers. These data are collected in conjunction with catch and effort data already being collected in this fishery as part of its creel survey program.¹ Participation in the economic data collection is voluntary.

II. Method of Collection

The economic surveys are conducted via in-person interviews when a fishing trip is completed. Captains of selected vessels by the creel survey are interviewed to report information about trip costs, input usage, and input prices.

¹ The Creel Survey Program is one of the major data collection systems to monitor fisheries resources in these three geographic areas. The survey monitors the islands' fishing activities and interviews returning fishermen at the most active launching ramps/docks during selected time periods on the islands.
