SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is amending its regulations in § 50.55a of Title 10 of the *Code of Federal Regulations* (10 CFR) to make technical corrections. These changes include adding three inadvertently omitted addenda to Section XI of the ASME B&PV Code to the list of documents approved for incorporation by reference, and correcting a footnote number.

This final rule is necessary to inform the public of these non-substantive changes to the NRC's regulations.

II. Summary of Changes

10 CFR Part 50

Insert Missing Addenda. In § 50.55a(a)(1)(ii)(B), three addenda to Section XI of the ASME B&PV Code that were previously approved for incorporation by reference were inadvertently omitted in the proposed rule and final rule published on November 5, 2014 (79 FR 65776). Historically, the NRC's regulations did not list all the documents approved for incorporation by reference but the November 5, 2014, final rule added all the documents to bring the NRC's requirements into compliance with the Office of the Federal Register's (OFR)

revised guidelines for incorporating by reference consensus standards. The three missing addenda, "1975 Winter Addenda," "1976 Summer Addenda," and "1976 Winter Addenda," are added to § 50.55a(a)(1)(ii)(B).

Correct Footnote Number. In § 50.55a(e)(1), footnote "9" is renumbered as footnote "7."

III. Rulemaking Procedure

Under the Administrative Procedure Act (5 U.S.C 553(b)), an agency may waive the normal notice and comments requirements if it finds, for good cause, that they are impracticable, unnecessary, or contrary to the public interest. As authorized by 5 U.S.C. 553(b)(3)(B), the NRC finds good cause to waive notice and opportunity for comment on the amendments, because notice and opportunity for comment are unnecessary. The NRC also finds good cause to make this final rule immediately effective because these amendments do not require action by any person or entity regulated by the NRC. The amendments identify three addenda to Section XI of the ASME B&PV Code which the Office of the Federal Register (OFR) has previously approved for incorporation by reference. In the November 5, 2014, final rule, the NRC inadvertently omitted these three addenda in its list of ASME Code Editions and Addenda approved by the OFR for incorporation by reference. The amendments also correct a footnote number. The final rule does not change the substantive responsibilities of any person or entity regulated by the NRC, and are of a minor and administrative nature which corrects an NRC oversight in the November 5, 2014 final rule.

IV. Environmental Impact: Categorical Exclusion

The NRC has determined that this final rule is the type of action described in categorical exclusion 10 CFR 51.22(c)(2), which excludes from a major action rules that are corrective, minor, or nonpolicy in nature and do not substantially modify existing regulations. Therefore, neither an environmental impact statement nor an environmental assessment has been prepared for this rule.

V. Paperwork Reduction Act Statement

This final rule does not contain information collection requirements and, therefore, is not subject to the

Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Public Protection Notification

The NRC may not conduct or sponsor, and a person is not required to respond to, a request for information or an information collection requirement unless the requesting document displays a currently valid Office of Management and Budget (OMB) control number.

VI. Plain Writing

The Plain Writing Act of 2010 (Pub. L. 111–274) requires Federal agencies to write documents in a clear, concise, and well-organized manner. The NRC has written this document to be consistent with the Plain Writing Act as well as the Presidential Memorandum, “Plain Language in Government Writing,” published June 10, 1998 (63 FR 31883).

VII. Backfitting and Issue Finality

The NRC has determined that the amendments in this final rule do not constitute backfitting and are not inconsistent with any of the issue finality provisions in 10 CFR part 52. The amendments are non-substantive in nature, and include adding three inadvertently omitted addenda to Section XI of the ASME B&PV Code to the list of documents approved for incorporation by reference and correcting a footnote number. They impose no new requirements and make no substantive changes to the regulations. The amendments do not involve any provisions that would impose backfits as defined in 10 CFR part 50, or would be inconsistent with the issue finality provisions in 10 CFR part 52. For these reasons, the issuance of the rule in final form would not constitute backfitting or represent an inconsistency with any of the issue finality provisions in 10 CFR part 52. Therefore, the NRC has not prepared any additional documentation for this final rule addressing backfitting or issue finality.

VIII. Congressional Review Act

In accordance with the Congressional Review Act of 1996 (5 U.S.C. 801–808), the NRC has determined that this action is not a major rule and has verified this determination with the Office of Information and Regulatory Affairs, Office of Management and Budget.

RIN 2120–AK12

Harmonization of Airworthiness Standards—Gust and Maneuver Load Requirements

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This final rule amends certain airworthiness regulations for transport category airplanes, based on recommendations from the FAA-sponsored Aviation Rulemaking Advisory Committee (ARAC). This amendment eliminates regulatory differences between the airworthiness standards of the FAA and European Aviation Safety Agency (EASA). It does not add new requirements beyond what manufacturers currently meet for EASA certification and does not affect current industry design practices. This final rule revises the pitch maneuver design loads criteria; revises the gust and turbulence design loads criteria; revises the application of gust loads to engine mounts, high lift devices, and other control surfaces; adds a “round-the-clock” discrete gust criterion and a multi-axis discrete gust criterion for airplanes equipped with wing-mounted engines; revises the engine torque loads criteria; adds an engine failure dynamic load condition; revises the ground gust design loads criteria; revises the criteria used to establish the rough air design speed; and requires the establishment of a rough air Mach number.

DATES: Effective February 9, 2015.
