SUPPLEMENTARY INFORMATION:**Information Collection Request**

OMB Control Number: 1018–0127.

Title: Horseshoe Crab Tagging Program.

Service Form Number(s): 3–2310 and 3–2311.

Type of Request: Extension of currently approved collection.

Description of Respondents: Tagging agencies include Federal and State agencies, universities, and biomedical companies. Members of the general public provide recapture information.

Respondent's Obligation: Voluntary.

Frequency of Collection: On occasion when horseshoe crabs are tagged and when horseshoe crabs are found or captured.

| Activity | Number of annual respondents | Number of annual responses | Completion time per response | Annual burden hours |
|-----------------------|------------------------------|----------------------------|------------------------------|---------------------|
| FWS Form 3–2310 | 1,160 | 2,750 | 10 minutes .. | 458 |
| FWS Form 3–2311 | 18 | 18 | 95 hours * | 1,710 |
| Totals | 1,178 | 2,768 | | 2,168 |

* Average time required per response is dependent on the number of tags applied by an agency in 1 year. Agencies tag between 25 and 9,000 horseshoe crabs annually, taking between 2 to 5 minutes per crab to tag, record, and report data. Each agency determines the number of tags it will apply.

Estimated Annual Nonhour Burden Cost: None.

Abstract: Horseshoe crabs play a vital role commercially, biomedically, and ecologically along the Atlantic coast. Horseshoe crabs are commercially harvested and used as bait in eel and conch fisheries. Biomedical companies along the coast also collect and bleed horseshoe crabs at their facilities. *Limulus Amoebocyte Lysate* is derived from crab blood, which has no synthetic substitute, and is used by pharmaceutical companies to test sterility of products. Finally, migratory shorebirds also depend on the eggs of horseshoe crabs to refuel on their migrations from South America to the Arctic. One bird in particular, the red knot, feeds primarily on horseshoe crab eggs during its stopover. Effective January 12, 2015, the red knot was listed

as threatened under the Endangered Species Act.

In 1998, the Atlantic States Marine Fisheries Commission (ASMFC), a management organization with representatives from each State on the Atlantic Coast, developed a horseshoe crab management plan. The ASMFC plan and its subsequent addenda established mandatory State-by-State harvest quotas, and created the 1,500-square-mile Carl N. Shuster, Jr., Horseshoe Crab Sanctuary off the mouth of Delaware Bay.

Restrictive measures have been taken in recent years, but populations are increasing slowly. Because horseshoe crabs do not breed until they are 9 years or older, it may take some time before the population measurably increases. Federal and State agencies, universities, and biomedical companies participate

in a Horseshoe Crab Cooperative Tagging Program. The Maryland Fishery Resources Office, U.S. Fish and Wildlife Service, maintains the information that we collect under this program and uses it to evaluate migratory patterns, survival, and abundance of horseshoe crabs.

Agencies that tag and release the crabs complete FWS Form 3–2311 (Horseshoe Crab Tagging) and provide the Service with:

- Organization name.
- Contact person name.
- Tag number.
- Sex of crab.
- Prosomal width.
- Capture site, latitude, longitude, waterbody, State, and date.

Members of the public who recover tagged crabs provide the following information using the online submission
