

Reach 2B, then downstream to Reach 3 via the Compact Bypass Channel. The existing Chowchilla Bifurcation Structure would continue to divert San Joaquin River flows into the Chowchilla Bypass during flood operations, and a fish passage facility and control structure modifications would be included at the San Joaquin River Control Structure at the Chowchilla Bypass. A bifurcation structure would be built at the head of the Compact Bypass Channel to control diversions into Mendota Pool. Fish passage facilities and a fish screen would be built at the Compact Bypass Bifurcation Structure to provide passage around the structure and prevent fish being entrained in the diversion. The San Mateo Avenue crossing would be removed.

Under Alternative C (Fresno Slough Dam with Narrow Floodplain and Short Canal), Fresno Slough Dam would be constructed across Fresno Slough to contain the Mendota Pool, utilizing the existing river channel to bypass the Mendota Pool. Restoration Flows would enter Reach 2B at the Chowchilla Bifurcation Structure, flow through Reach 2B, then downstream to Reach 3 over the sill at Mendota Dam. The Mendota Pool would be contained south of the Fresno Slough Dam. The existing Chowchilla Bifurcation Structure would continue to divert San Joaquin River flows into the Chowchilla Bypass during flood operations, and a fish passage facility and control structure modifications would be included at the San Joaquin River Control Structure at the Chowchilla Bypass. The Short Canal would be built adjacent to the Fresno Slough Dam to convey San Joaquin River water deliveries to Mendota Pool. The Mendota Dam, along with a control structure built at the head of the Short Canal, would be used to control diversions into Mendota Pool through the Short Canal. Fish passage facilities at Mendota Dam and a fish screen on the Short Canal would be built to provide passage around Mendota Dam and prevent fish from being entrained in the diversion. A fish barrier would be built downstream of the Fresno Slough Dam to keep up-migrating fish in Reach 2B and a new crossing would be built at the San Mateo Avenue crossing.

Alternative D (Fresno Slough Dam with Wide Floodplain and North Canal) would consist of building the Fresno Slough Dam across Fresno Slough to contain the Mendota Pool, and utilizing the existing river channel to bypass the Mendota Pool. Restoration Flows would enter Reach 2B, flow through the reach, then downstream to Reach 3 over the sill at Mendota Dam. Mendota Pool

would be contained south of the Fresno Slough Dam. The North Canal would be built to convey San Joaquin River water deliveries to Mendota Pool. The San Joaquin River Control Structure at the Chowchilla Bifurcation Structure would be removed and a bifurcation structure would be built at the head of the North Canal to control flood diversions into the Chowchilla Bypass and water delivery diversions into Mendota Pool. Fish passage facilities and a fish screen would be built at the North Canal bifurcation structure to provide passage around the structure and prevent fish being entrained in the diversion. A fish barrier would be built downstream of the Fresno Slough Dam to keep up-migrating fish in Reach 2B and the existing San Mateo Avenue crossing would be removed.
