FERC-567, [Gas Pipeline Certificates: Annual Reports of System Flow Diagrams and System Capacity]

OMB Control No.: 1902-0005.

Abstract: The Commission uses the information from the FERC-567 to obtain accurate data on pipeline facilities and the peak capacity of these facilities. Additionally, the Commission validates the need for new facilities proposed by pipelines in certificate applications. By modeling an applicant's pipeline system, Commission staff utilizes the FERC-567

data to determine configuration and location of installed pipeline facilities; verify and determine the receipt and delivery points between shippers, producers and pipeline companies; determine the location of receipt and delivery points and emergency interconnections on a pipeline system; determine the location of pipeline segments, laterals and compressor stations on a pipeline system; verify pipeline segment lengths and pipeline diameters; justify the maximum allowable operating pressures and suction and discharge pressures at

compressor stations; verify the installed horsepower and volumes compressed at each compressor station; determine the existing shippers and producers currently using each pipeline company; verify peak capacity on the system; and develop and evaluate alternatives to the proposed facilities as a means to mitigate environmental impact of new pipeline construction.

18 Code of Federal Regulations (CFR) 260.8(a) requires each major natural gas pipeline with a system delivery capacity exceeding 100,000 Mcf¹ per day to submit by June 1 of each year, diagrams reflecting operating conditions on the

pipeline's main transmission system during the previous 12 months ended December 31. These physical/engineering data are not included as part of any other data collection requirement.

Type of Respondent: Applicants proposing hydropower projects on (or changes to existing projects located within) lands owned by the United States.

Estimate of Annual Burden: The Commission estimates the annual public reporting burden for the information collection as:

FERC-567—GAS PIPELINE CERTIFICATES: ANNUAL REPORTS OF SYSTEM FLOW DIAGRAMS AND SYSTEM CAPACITY

	Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden hours and cost per response ²	Total annual burden hours and total annual cost	Cost per respondent (\$)
	(1)	(2)	(1)*(2)=(3)	(4)	(3)*(4)=(5)	(5)÷(1)
FERC-567 Applicants	93	1	93	3 \$216	279 \$20,088	\$216

FERC-587, [Land Description (Public Land States/Non-Public Land States [Rectangular or Non-Rectangular Survey System Lands in Public Land States])]

OMB Control No.: 1902-0145.

Abstract: The Commission requires the FERC-587 information collection to satisfy the requirements of section 24 of the Federal Power Act (FPA). The Federal Power Act grants the Commission authority to issue licenses for the development and improvement of navigation and for the development, transmission, and utilization of power across, along, from or in any of the streams or other bodies of water over which Congress has jurisdiction.³ The

Electric Consumers Protection Act (ECPA) amends the FPA to allow the Commission the responsibility of issuing licenses for nonfederal hydroelectric plants.⁴ section 24 of the FPA requires that applicants proposing hydropower projects on (or changes to existing projects located within) lands owned by the United States to provide a description of the applicable U.S. land. Additionally, the FPA requires the notification of the Commission and Secretary of the Interior of the hydropower proposal. FERC-587 consolidates the information required and identifies hydropower project boundary maps associated with the applicable U.S. land.

The information consolidated by the Form No. 587 verifies the accuracy of the information provided for the FERC-587 to the Bureau of Land Management (BLM) and the Department of the Interior (DOI). Moreover, this information ensures that U.S. lands can be reserved as hydropower sites and withdrawn from other uses.

Type of Respondent: Applicants proposing hydropower projects on (or changes to existing projects located within) lands owned by the United States.

Estimate of Annual Burden: The Commission estimates the annual public reporting burden for the information collection as:

FERC-587—LAND DESCRIPTION (PUBLIC LAND STATES/NON-PUBLIC LAND STATES [RECTANGULAR OR NON-RECTANGULAR SURVEY SYSTEM LANDS IN PUBLIC LAND STATES])

	Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden hours and cost per response ²	Total annual burden hours and total annual cost	Cost per respondent (\$)
	(1)	(2)	(1)*(2)=(3)	(4)	(3)*(4)=(5)	(5)÷(1)
Hydropower Project Applicants	137	1	137	1 \$72	137 \$9,864	\$72

¹ "Mcf" is an abbreviation denoting a thousand cubic feet of natural gas.

² The estimates for cost per response are derived using the following formula: Average Burden Hours

per Response * \$72 per Hour = Average Cost per Response. The hourly cost figure comes from the FERC average salary. Subject matter experts found that industry employment costs closely resemble

FERC's regarding the FERC-567 information collection.
