Title: Market Risk.

OMB Control No.: 1557-0247.

Description: The Office of the Comptroller of the Currency's (OCC) market risk capital rules (12 CFR part 3, subpart F) capture positions for which the market risk capital rules are appropriate; reduce procyclicality in market risk capital requirements; enhance the rules' sensitivity to risks that are not adequately captured under the current regulatory measurement methodologies; and increase transparency through enhanced disclosures.

The information collection requirements are located at 12 CFR 3.203 through 3.212. The rules enhance risk sensitivity and include

requirements for the public disclosure of certain qualitative and quantitative information about the market risk of national banks and Federal savings associations. The collection of information is necessary to ensure capital adequacy appropriate for the level of market risk.

Section 3.203 sets forth the requirements for applying the market risk framework. Section 3.203(a)(1) requires national banks and Federal savings associations to have clearly defined policies and procedures for determining which trading assets and trading liabilities are trading positions and specifies the factors a national bank or Federal savings association must take into account in drafting those policies and procedures. Section 3.203(a)(2) requires national banks and Federal savings associations to have clearly defined trading and hedging strategies for trading positions that are approved by senior management and specifies what the strategies must articulate. Section 3.203(b)(1) requires national banks and Federal savings associations to have clearly defined policies and procedures for actively managing all covered positions and specifies the minimum requirements for those policies and procedures. Sections 3.203(c)(4) through 3.203(c)(10) require the annual review of internal models and specify certain requirements for those models. Section 3.203(d) requires the internal audit group of a national bank or Federal savings association to prepare an annual report to the board of directors on the effectiveness of controls supporting the market risk measurement systems.

Section 3.204(b) requires national banks and Federal savings associations to conduct quarterly backtesting. Section 3.205(a)(5) requires institutions to demonstrate to the OCC the appropriateness of proxies used to capture risks within value-at-risk models. Section 3.205(c) requires institutions to develop, retain, and make available to the OCC value-at-risk and profit and loss information on sub-portfolios for two years. Section 3.206(b)(3) requires national banks and Federal savings associations to have policies and procedures that describe how they determine the period of significant financial stress used to calculate the institution's stressed value-at-risk models and to obtain prior OCC approval for any material changes to these policies and procedures.

Section 3.207(b)(1) details requirements applicable to a national bank or Federal savings association when the national bank or Federal savings association uses internal models

to measure the specific risk of certain covered positions. Section 3.208 requires national banks and Federal savings associations to obtain prior written OCC approval for incremental risk modeling. Section 3.209(a) requires prior OCC approval for the use of a comprehensive risk measure. Section 3.209(c)(2) requires national banks and Federal savings associations to retain and report the results of supervisory stress testing. Section 3.210(f)(2)(i) requires national banks and Federal savings associations to document an internal analysis of the risk characteristics of each securitization position in order to demonstrate an understanding of the position. Section 3.212 requires quarterly quantitative disclosures, annual qualitative disclosures, and a formal disclosure policy approved by the board of directors that addresses the approach for determining the market risk disclosures it makes.

SUPPLEMENTARY INFORMATION: The OCC is requesting OMB approval for the following information collection:

Title: Domestic First Lien Residential Mortgage Data.

OMB Control Number: 1557-0331.

Description:

Comprehensive mortgage data is vital to assessing and monitoring credit quality and loss mitigation activities in the residential mortgage market and the federal banking system. This data is important and necessary to support supervisory activities to ensure the safety and soundness of the federal banking system.

The Dodd-Frank Wall Street Reform and Regulatory Improvement Act of 2010 requires that this data be collected. 12 U.S.C. 1715z-25.

This data collection is being revised to include aggregate values to be calculated from data that is currently reported in loan level format. These aggregate values will be industry standard measures of portfolio performance, including but not limited to: Outstanding loan count and unpaid principal balance; delinquency and liquidation ratios; and the number of loss mitigation actions completed. Aggregate values generally will be reported at the total portfolio level, with some values also reported by portfolio segments including, but not limited to: borrower credit class and type and execution date of loss mitigation action.

The reported data items will still be calculated from loan level data that includes: Bankruptcy or foreclosure status; and other detailed loan information. Banks would not be required to report this data to the OCC monthly, but would be required to provide it upon OCC's request.

Type of Review: Regular review.

Affected Public: Businesses or other for-profit.
