

photo-identification. Cetacean species may also be harassed during underwater photography and collection of sloughed skin and fecal samples. Surveys may be conducted year-round in all U.S. and international waters in the Pacific Ocean (including Alaska, Washington, Oregon, California, Hawaii, Guam, Marianas Islands, and other U.S. territories) and Atlantic Ocean (including the Gulf of Mexico, western North Atlantic, Caribbean Sea, and Sargasso Seas). The permit expires September 30, 2018.

The amendment authorizes: (1) Increasing takes for some species during aerial and vessel visual surveys to document presence/absence, behavior, and movement of marine mammals before, during, and after Naval training exercise operations, offshore energy installations, oil and gas exploration and production, and pier refurbishment/replacement; (2) collecting biopsy samples to document genetic variation within populations, gender, foraging patterns, and stress levels; and (3) using multiple tag types, including satellite and digital acoustic tags, to document movement and dive patterns, social and population structure, and habitat use. See tables in the permit amendment for numbers of takes by species, stock and activity.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), a final determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

As required by the ESA, issuance of this permit was based on a finding that such permit: (1) Was applied for in good faith; (2) will not operate to the disadvantage of such endangered species; and (3) is consistent with the purposes and policies set forth in section 2 of the ESA.

Dated: January 7, 2016.
