

coverage of the CPI-U from 89% to 94% of the U.S. population. The CPI will rotate its sample to new geographic areas on a continuous basis, over a 4-year transition period, until all new areas have been brought into the sample. A few of the notable methodological changes are the sample classification structure will change from four Census regions (Northeast, Midwest, South, and West) to nine Census divisions (New England, Middle Atlantic, East North Central, West South Central, South Atlantic, East South Central, West South Central, Mountain, and Pacific); PSU area definitions have been updated using the Office of Management and Budget's (OMB) Core-Based Statistical Areas (CBSAs) definitions; and the number of sampled PSUs in the CPI will be reduced from 87 to 75. This change will increase the average number of price quotes per index area.

The continuation of the collection of prices for the CPI is essential since the

CPI is the nation's chief source of information on retail price changes. If the information on C&S prices were not collected, Federal fiscal and monetary policies would be hampered due to the lack of information on price changes in a major sector of the U.S. economy, and estimates of the real value of the Gross National Product could not be made. The consequences to both the Federal and private sectors would be far reaching and would have serious repercussions on Federal government policy and institutions.
