

telephone number: (919) 541–2910; fax number: (919) 541–0516; email address: melton.lula@epa.gov.

SUPPLEMENTARY INFORMATION: This action removes subparagraphs 6.1.1.1, 6.1.1.2, 6.1.1.3, and 6.1.1.4 in Performance Specification 2. These four subparagraphs are no longer necessary due to revisions that were made to paragraph 6.1.1 in the final “revisions” rule dated August 30, 2016 (81 FR 59800).

Section 553 of the Administrative Procedure Act (APA), 5 U.S.C. 553(b)(3)(B), provides that, when an agency for good cause finds that notice and public procedure are impracticable, unnecessary, or contrary to the public interest, the agency may issue a rule without providing notice and an opportunity for public comment. We have determined that there is good cause for making this technical amendment final without prior proposal and opportunity for public amendment because only simple publication errors are being corrected that do not substantially change the agency actions taken in the final rule. Thus, notice and public procedure are unnecessary. (See *also* the final sentence of section 307(d)(1) of the Clean Air Act (CAA), 42 U.S.C. 307(d)(1), indicating that the good cause provisions in subsection 553(b) of the APA continue to apply to this type of rulemaking under section 307(d) of the CAA.)

List of Subjects in 40 CFR Part 60

Environmental protection,
Administrative practice and procedure,
Air pollution control.

Dated: July 25, 2017.

Sarah Dunham,

Acting Assistant Administrator.

For the reasons stated in the preamble, the Environmental Protection Agency corrects title 40, chapter I of the Code of Federal Regulations as follows:

PART 60—STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

- 1. The authority citation for part 60 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Appendix B to Part 60 [Corrected]

- 2. In appendix B to part 60, in “Performance Specification 2—Specifications and Test Procedures for SO₂ and NO_x Continuous Emission Monitoring Systems in Stationary Sources” remove sections 6.1.1.1, 6.1.1.2, 6.1.1.3, and 6.1.1.4.

RIN 0648–XF577

Atlantic Highly Migratory Species; Atlantic Bluefin Tuna Fisheries

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; inseason General category retention limit adjustment.

SUMMARY: NMFS is adjusting the Atlantic bluefin tuna (BFT) General category daily retention limit from four large medium or giant BFT per vessel per day/trip to two large medium or giant BFT per vessel per day/trip for the remainder of the 2017 fishing year. This action is based on consideration of the regulatory determination criteria regarding inseason adjustments, and applies to Atlantic Tunas General category (commercial) permitted vessels and Highly Migratory Species (HMS) Charter/Headboat category permitted vessels when fishing commercially for BFT.

DATES: Effective August 5, 2017, through December 31, 2017.

FOR FURTHER INFORMATION CONTACT:

Sarah McLaughlin or Brad McHale, 978–281–9260.

SUPPLEMENTARY INFORMATION:

Regulations implemented under the authority of the Atlantic Tunas Convention Act (ATCA; 16 U.S.C. 971 *et seq.*) and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*) governing the harvest of BFT by persons and vessels subject to U.S. jurisdiction are found at 50 CFR part 635. Section 635.27 subdivides the U.S. BFT quota recommended by the International Commission for the Conservation of Atlantic Tunas (ICCAT) among the various domestic fishing categories, per the allocations established in the 2006 Atlantic Consolidated Highly Migratory Species Fishery Management Plan (2006 Consolidated HMS FMP) (71 FR 58058, October 2, 2006), as amended by Amendment 7 to the 2006 Consolidated HMS FMP (Amendment 7) (79 FR 71510, December 2, 2014), and in accordance with implementing regulations. NMFS is required under

ATCA and the Magnuson-Stevens Act to provide U.S. fishing vessels with a reasonable opportunity to harvest the ICCAT-recommended quota.

The base quota for the General category is 466.7 mt. See § 635.27(a). Each of the General category time periods (January, June through August, September, October through November, and December) is allocated a “subquota” or portion of the annual General category quota. Although it is called the “January” subquota, the regulations allow the General category fishery under this quota to continue until the subquota is reached or March 31, whichever comes first. The subquotas for each time period are as follows: 24.7 mt for January; 233.3 mt for June through August; 123.7 mt for September; 60.7 mt for October through November; and 24.3 mt for December. Any unused General category quota rolls forward within the fishing year, which coincides with the calendar year, from one time period to the next, and is available for use in subsequent time periods. On December 19, 2016, NMFS published an inseason action transferring 16.3 mt of BFT quota from the December 2017 subquota to the January 2017 subquota period (81 FR 91873). For 2017, NMFS also transferred 40 mt from the Reserve to the General category effective March 2, resulting in an adjusted General category quota of 506.7 mt (82 FR 12747, March 7, 2017).

Adjustment of General Category Daily Retention Limit

The default General category retention limit is one large medium or giant BFT (measuring 73 inches (185 cm) curved fork length (CFL) or greater) per vessel per day/trip (§ 635.23(a)(2)).

Thus far this year, NMFS adjusted the daily retention limit for the 2017 January subquota period from the default level of one large medium or giant BFT to three large medium (81 FR 91873, December 19, 2016). NMFS closed the January 2017 fishery on March 29 (82 FR 16136, April 3, 2017). NMFS adjusted the daily retention limit from the default level of one large medium or giant BFT to four large medium or giant BFT for the June through August 2017 subquota period (82 FR 22616, May 17, 2017).

Under § 635.23(a)(4), NMFS may increase or decrease the daily retention limit of large medium and giant BFT over a range of zero to a maximum of five per vessel based on consideration of the relevant criteria provided under § 635.27(a)(8). NMFS has considered the relevant regulatory determination criteria and their applicability to the General category BFT retention limit for

the remainder of the June through August 2017 subquota time period. In addition, because NMFS normally prepares a **Federal Register** notice to adjust the daily retention limit for the remainder of the year in early August, NMFS simultaneously is taking action to adjust the retention limit for the September, October through November, and December subquota time periods from the default level that would otherwise take effect September 1, 2017. These considerations include, but are not limited to, the following:

NMFS considered the catches of the General category quota to date (including during the summer/fall and winter fisheries in the last several years), and the likelihood of closure of that segment of the fishery if no adjustment is made (§ 635.27(a)(8)(ii) and (ix)). Commercial-size BFT are currently readily available to vessels fishing under the General category quota. As of July 31, 2017, the General category has landed approximately 268.3 mt, which is 57 and 53 percent of the annual base and adjusted 2017 General category quotas, respectively. Landings since June 1, 2017, are 160.6 mt, representing 69 percent of the General category subquota for the June 1 through August 31 period. If current catch rates continue with the four-fish daily limit, the available subquota for June 1 through August 31 period could be reached or exceeded, and NMFS would need to close the fishery earlier than otherwise would be necessary under a lower limit.

Regarding the usefulness of information obtained from catches in the particular category for biological sampling and monitoring of the status of the stock (§ 635.27(a)(8)(i)), biological samples collected from BFT landed by General category fishermen and provided by BFT dealers continue to provide NMFS with valuable data for ongoing scientific studies of BFT age and growth, migration, and reproductive status. Prolonged opportunities to land BFT over the longest time-period allowable would support the collection of a broad range of data for these studies and for stock monitoring purposes.

NMFS also considered the effects of the adjustment on BFT rebuilding and overfishing and the effects of the adjustment on accomplishing the objectives of the FMP (§ 635.27(a)(8)(v) and (vi)). The adjusted retention limit would be consistent with the quotas established and analyzed in the BFT quota final rule (80 FR 52198, August 28, 2015), and with objectives of the 2006 Consolidated HMS FMP and amendments, and is not expected to negatively impact stock health or to

affect the stock in ways not already analyzed in those documents. It is also important that NMFS limit landings to the subquotas both to adhere to the FMP quota allocations and to ensure that landings are as consistent as possible with the pattern of fishing mortality (e.g., fish caught at each age) that was assumed in the projections of stock rebuilding.

Another relevant criterion is the effects of catch rates in one area precluding vessels in another area from having a reasonable opportunity to harvest a portion of the category's quota (§ 635.27(a)(8)(viii)). NMFS anticipates that some underharvest of the 2016 adjusted U.S. BFT quota will be carried forward to 2017 to the Reserve category, in accordance with the regulations, later this summer when complete BFT catch information for 2016 is available and finalized. This increases the likelihood that General category quota will remain available through the end of 2017, provided retention limits are managed accordingly. Last fall, General category landings were relatively high due to a combination of fish availability, favorable fishing conditions, and higher daily retention limits (five fish per day for June 1 through October 8, four fish effective October 9 through October 16, and two fish effective October 17 through November 3). Given these conditions, NMFS transferred 125 mt from the Reserve category (81 FR 70369, October 12, 2016) and later transferred another 85 mt (18 mt from the Harpoon category and 67 mt from the Reserve category) (81 FR 71639, October 18, 2016). Nevertheless, NMFS had to close the 2016 General category fishery effective November 4 to prevent further overharvest of the adjusted General category quota. For 2017, NMFS again intends to provide General category participants in all areas and time periods opportunities to harvest the General category quota without exceeding it, through active inseason management such as retention limit adjustments and/or the timing and amount of quota transfers (based on consideration of the determination criteria regarding inseason adjustments), while extending the season as long as practicable.

Another principal consideration in setting the retention limit is the objective of providing opportunities to harvest the full General category quota without exceeding it based on the goals of the 2006 Consolidated HMS FMP and amendments, including to achieve optimum yield on a continuing basis and to optimize the ability of all permit categories to harvest their full BFT

quota allocations (related to § 635.27(a)(8)(x)).

Based on these considerations, NMFS has determined that a two-fish General category retention limit is warranted for the remainder of the year. It would provide a reasonable opportunity to harvest the U.S. quota of BFT without exceeding it, while maintaining an equitable distribution of fishing opportunities, help optimize the ability of the General category to harvest its available quota, allow collection of a broad range of data for stock monitoring purposes, and be consistent with the objectives of the 2006 Consolidated HMS FMP and amendments. Therefore, NMFS adjusts the General category retention limit from four to two large medium or giant BFT per vessel per day/trip, effective August 5, 2017, through December 31, 2017. Depending on the level of fishing effort and catch rates of BFT, NMFS may determine that additional adjustments are necessary to ensure available quota is not exceeded or to enhance scientific data collection from, and fishing opportunities in, all geographic areas.

Regardless of the duration of a fishing trip, no more than a single day's retention limit may be possessed, retained, or landed. For example (and specific to the limit that will apply through the end of the year), whether a vessel fishing under the General category limit takes a two-day trip or makes two trips in one day, the daily limit of two fish may not be exceeded upon landing. This General category retention limit is effective in all areas, except for the Gulf of Mexico, where NMFS prohibits targeting fishing for BFT, and applies to those vessels permitted in the General category, as well as to those HMS Charter/Headboat permitted vessels fishing commercially for BFT.

Monitoring and Reporting

NMFS will continue to monitor the BFT fishery closely. Dealers are required to submit landing reports within 24 hours of a dealer receiving BFT. General and HMS Charter/Headboat vessel owners are required to report the catch of all BFT retained or discarded dead, within 24 hours of the landing(s) or end of each trip, by accessing hmspermits.noaa.gov or by using the HMS Catch Reporting App. If needed, subsequent adjustments will be published in the **Federal Register**. In addition, fishermen may call the Atlantic Tunas Information Line at (978) 281-9260, or access hmspermits.noaa.gov, for updates on quota monitoring and inseason adjustments.

Classification

The Assistant Administrator for NMFS (AA) finds that it is impracticable and contrary to the public interest to provide prior notice of, and an opportunity for public comment on, this action for the following reasons:

Prior notice and an opportunity for public comment is impracticable because the regulations implementing the 2006 Consolidated HMS FMP, as amended, intended that inseason retention limit adjustments would allow the agency to respond quickly to the unpredictable nature of BFT availability on the fishing grounds, the migratory nature of this species, and the regional variations in the BFT fishery. Based on available BFT quotas, fishery performance in recent years, and the availability of BFT on the fishing grounds, adjustment to the General category BFT daily retention limit from the default level is warranted.

Delays in adjusting the retention limit may result in the available June 1 through August 31 subquota being reached or exceeded and NMFS needing to close the fishery earlier than otherwise would be necessary under the

lower limit being set for this period. Such delays could adversely affect those General and HMS Charter/Headboat category vessels that would otherwise have an opportunity to harvest BFT if the fishery were to remain open for the duration of the subquota period. Limited opportunities to harvest the respective quotas may have negative social and economic impacts for U.S. fishermen that depend upon catching the available quota within the time periods designated in the 2006 Consolidated HMS FMP, as amended. Adjustment of the retention limit needs to be effective as soon as possible to extend fishing opportunities for fishermen in geographic areas with access to the fishery only during this time period.

Prior notice and an opportunity for public comment is also impracticable for the retention limit adjustment to two-fish for the September-December subquota periods. By adopting the two-fish limit for the remainder of the year through this action, NMFS avoids confusion that would arise for the regulated community from two inseason actions adopting the same limit.

Delaying implementation of the two-fish retention limit for the September-December subquota periods could also result in temporary reversion to a one-fish limit under the default regulatory provisions, which would further confuse the regulated community. Avoiding delay in implementation will also allow fishermen to take advantage of the availability of fish on the fishing grounds and of quota. Therefore, the AA finds good cause under 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment. For these reasons, there is good cause under 5 U.S.C. 553(d) to waive the 30-day delay in effectiveness.

This action is being taken under §§ 635.23(a)(4) and 635.27(a)(9), and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 971 *et seq.* and 1801 *et seq.*

Dated: August 2, 2017.

Alan D. Risenhoover,
Director, Office of Sustainable Fisheries,
National Marine Fisheries Service.
